SOCIETY

begin 870 m. from the sea. The delta extends 175 m. along the coast, and is crossed by above 50 channels. The tide is felt for 270 m.

The Orinoco at Caicara.

Orioles. True orioles are tropical Old World birds, in general appearance resembling the American orioles, which belong to a distinct family (*Icteridæ*). The Golden Oriole visits England. American orioles build pendent nests. The Mexican Troupial is celebrated for its melodious, clear notes. Most of the species are S. American. See BALTIMORE ORIOLE.

Orion. In Mythology, hunter, blinded or slain, and finally placed among the stars.

Oriskany. Village of Oneida co., N.Y.; scene of a battle between 800 Americans under Gen. Herkimer and a force of Tories and Indians, Aug. 6, 1777.

Oriskany Sandstone. Bed at the base of the Devonian, chiefly in N. Y. and Pa. It is thin but widespread, and contains a somewhat peculiar fauna. See DEVONIAN.

Orissa. Former state of e. India, now part of Bengal. Pop., 1891, 3,865,020.

Orizaba. Volcanic peak in Mexico, between the capital and Vera Cruz. Ht. 18,314 ft.

Orkian, 1290–1360. Son and successor of Othman, founder of the Turkish empire; Sultan from 1326. He took sundry Greek towns in Asia and Europe, and organized the Janissaries.

Orkney Islands. Numerous group n.e. of Scotland, 29 being inhabited; called Arcades by classical writers; conquered

Orkney Islands.

by Norwegians 876; annexed to Norway 1098, to Denmark 1397, and to Scotland 1468. Area 375 sq. m.; pop., 1891, 30,453.

Orlando. See ROLAND.

Orleans. City of France, on the Loire, 75 m. s.s.w. of Paris; besieged by Attila 451; twice plundered by Northmen; besieged by the English 1428–29, but relieved by Joan of Arc; prominent in the Huguenot wars and in that of 1870. It had a university 1312–1789, and has a large trade. Pop., 1891, 63,705.

Orleans, BASTARD OF. See DUNOIS.

Orleans, DUKES OF. CHARLES, 1391–1465; French commander at Agincourt 1415; prisoner in England till 1440; lyric poet; father of Louis XII.—JEAN BAPTISTE GASTON, 1608–1660; third son of Henry IV.; Duke 1626; busy in intrigues against

Captivity of the Duke of Orleans in the Tower.
(From an Illumination in the Royal MS.)

Richelieu and Mazarin.—PHILIPPE, 1674–1723; grandson of Louis XIII.; able general and notorious debauchee; Regent from 1715.—LOUIS PHILIPPE JOSEPH (ÉGALITÉ), 1747–1793; revolutionist, deserting his order and voting for the king's execution; guillotined; father of King Louis Philippe.

Orleans, MAID OF. See JOAN OF ARC.

Orleans, TERRITORY OF. Louisiana; so termed 1804–12.

Orley, BERNAERT VAN, 1490–1560. Flemish painter, historically important as one of the first transmitters of Italian influence.

Orloff. Russian family: Gregory, 1734–1783, planned the murder of Peter III., which was executed 1762 by his brother Alexis. Their nephew, Alexis, 1787–1861, was a noted diplomatist.

Orloff. See HORSE.

Orlop. Deck of a ship on which the cables are stowed.

Ormerod, ELEANOR, b. ab. 1835. English entomologist. *Insect Life*, 1884.

Ormolu. See COPPER, METALLURGY OF.

Ormonde, JAMES BUTLER, FIRST DUKE OF, 1610–1688. Earl 1632; Commander in Ireland 1640–43; Lord-lieut. 1644; active royalist; made Duke 1660; Viceroy of Ireland 1662–69 and 1676–85.—His grandson and namesake, 1665–1746, 2d duke 1688, Lord-lieut. of Ireland 1703, held command against France and Spain 1711, and was impeached and attainted 1715.

Ormulum. Series of homilies on the Gospel history, in Semi-Saxon verse, by Orm, ab. 1220: in the Bodleian library at Oxford; discovered 1659, pub. 1852.

Ormuz, STRAIT OF. Passage connecting Persian Gulf with Sea of O., which is an arm of the Arabian Sea or Indian Ocean.

Ormuzd, ORMAZD, or AHURA-MAZDA. Chief deity of Zoroastrianism, source and representative of good, opposed to the evil Ahriman.

Ornithadelphia. See PROTOTHERIA.

Ornithichnites. Footprints of birds, found chiefly on slabs of the Trias.

Ornithology. Natural history of birds. The extant portions of Aristotle's works treat of 170 species of birds. No further contributions of importance were made until the time of Turner, 1544, Gesner, and Belon; but the foundations of the science were not laid until 1676, by Willughby and Ray. The binomial classification of Linnæus was introduced 1735 and improved by Brisson 1760. Buffon introduced 1783 the conception of variation of species. In 1812 Merrem started the modern system of classification. In 1831 Swainson developed the conception of Evolution, and Nitsch sought a natural classification. In 1835 Sundevall began to recognize the importance of internal structure as furnishing classificatory characters. This conception was supported by the paleontological discoveries of connecting links between Birds and Reptiles, begun 1861, worked out by Owen 1863, Huxley 1867, Milne-Edwards 1871, Marsh 1872, and fully developed in the latter's *Odontornithes*, 1880. These data have stimulated Sclater to present a revised system of the Birds. Besides the authors above mentioned, the following, with main date of publication, are the most important. Catesby, 1731; Brünnich, 1764; Forster, 1771; Fabricius, 1780; D'Aubenton, 1780; Pennant, 1785; White, 1789 (Nat. Hist. of Selborne); Bartram, 1791; Barton, 1799; Le Vaillant, 1801; Bewick, 1804; Tiedemann, 1810; Illiger, 1811; Naumann, 1817; De Blainville, 1820; Audubon, 1827; Wilson, 1828; Bonaparte, 1831; Keyserling and Blasius, 1839; Gervais, 1856; Parker, 1860; Coues, 1884; Ridgway, 1887.

Ornithophilous. Flowers which are cross-fertilized by birds, which carry the pollen of one to the pistils of another. The Humming Birds are especially active in this process.

Ornithorhynchus. Duck-billed water-mole of Australia, also called Platypus; brown aquatic mammal, 18 in. long, with webbed feet. It burrows into muddy banks and feeds on shellfish, etc. Its jaws are ensheathed by a duck-like bill: four horny molar teeth are present. The tail is short and flat. The

Duck-billed Water-mole (*O. anatinus*).

males have movable spurs on the hind legs, perforated and connecting with poison glands. These creatures resemble birds still more in their internal anatomy. A well-developed coracoid bone is present; there is a cloaca, and the young are born from eggs. Epipubic bones are present, but no marsupial pouch.

Ornithosauria. Flying Reptiles, now extinct, but abounding in the Jurassic period. The limbs were specialized to hold a web, as in bats, except that the little finger was greatly prolonged, to support the anterior edge of this patagium, the other fingers being free, and the thumb rudimentary. The head was like that of modern birds; even the jaws were incased in a horny beak, which usually bore teeth. The shoulder girdle was avian; the pelvis was saurian. The bones were provided with air-sacs; the blood was warm, but no feathers were present. In size the *Pterodactyls* ranged from that of a sparrow to that of a condor. One from the Kansas chalk deposits had a spread of wing of 25 ft. They inhabited both continents. It is probable that none of their descendants now remain. The Birds are descended from the *Dinosaurs*, which belong to the order *Ornithoscelida*. See PTEROSAURIA.

Ornithoscelida. Order of extinct Reptiles whose hind limbs, etc., show bird-like characters. Here are included the *Dinosauria* and *Compsognathus*. In the latter the head is bird-like, the neck vertebræ are long, the anterior ribs short, the posterior long, and the astragalus is fused with the long tibia. The pubis and ischium are elongated downward, and the ilium extends forward.

Orobanchaceæ. Natural family of flowering plants, of the class *Angiospermæ*, sub-class *Dicotyledons*, and series *Gamopetalæ*, comprising 12 genera and ab. 150 species, scattered through the temperate and warm regions of Europe, Asia, Africa, and America; called the Broom-rape family.

Orography. Department of Geology which considers the structure, geological history, age, and mode of formation of mountains of every kind and size, including all elevations above the general level of a country. See MOUNTAIN and MOUNTAIN STRUCTURE.

Orohippus. See EQUIDÆ.

Orontes. River of Syria, flowing n. to Antioch and thence w. to the Mediterranean; now Nahr-el-Asi. It was originally

Valley of the Orontes.

called Typhon, from a mythical dragon who is said to have traced its course with his tail, but later after Orontes, who built a bridge across it. Length ab. 240 m.

Orosius, PAULUS. Spanish presbyter of 5th century, whose 7 books of *History against the Pagans*, extending to 417, were much valued in the Middle Ages, and tr. into Anglo-Saxon by Alfred.

Orozco y Berra, MANUEL, 1816–1881. Mexican historian.

Orpheus. In Greek Mythology, Thracian musician of extraordinary gifts. Apollo gave him the lyre, and the Muses taught him its use; by its strains he tamed wild beasts, made trees follow him, and won back his wife Eurydice from Hades, but lost her again because he could not refrain from looking back at her before reaching the upper world. Many hymns and poems are credited to an Orphic fraternity, which existed till ab. 300.

Orpiment. As_2S_3. Natural ARSENIOUS SULPHIDE (q.v.), of yellow color, occurring in small quantity and usually as a product of alteration of ores containing arsenic.

Orpine. See LIVE-FOREVER.

Orr, JAMES LAWRENCE, 1822–1873. M.C. 1849–59; Senator C.S.A. 1862–65; Gov. of S. C. 1865–68; Circuit Judge for S. C. 1870; U. S. Minister to Russia 1872.

Orrery. Machine constructed for the purpose of showing

George II.'s Orrery.

the motion of the planets round the sun, and of the satellites round their primaries. Made by Rowley for the Earl of Orrery

in 1715. Though not accurate it gives a general notion of the way in which the planetary motions are performed.

Orris-Root. Rootstocks of certain species of *Iris*, natives of s. Europe, smelling strongly like violets and used in perfumery.

Orsay, ALFRED GUILLAUME GABRIEL, COUNT D', 1801–1852. French "glass of fashion and mold of form," long prominent in London.

Orsini. Princely family, long prominent in Rome; Guelphs and enemies of the Colonnas. Two of them became popes, 1277 and 1724.

Orsini, FELICE, 1819–1858. Italian fanatic, bred to conspiracies; sentenced to the galleys 1844, pardoned 1846; deputy 1849; imprisoned 1855; executed in Paris for killing and wounding many persons in an attempt on the life of Napoleon III. Jan. 14.

Ortega, CASIMIRO GOMEZ, 1740–1819. Director of the Botanical Gardens in Madrid. *Tabulæ botanicæ*, 1773.

Ortel, ABRAHAM, 1527–1598. Flemish geographer. *Theatrum Orbis Terrarum*, 1570; *Thesaurus Geog.*, 1578–96.

Orth, GODLOVE STONER, 1817–1882. M.C. from Ind. 1863–71, 1873–75, and from 1879; U. S. Minister to Austria 1875–77.

Orth, JOHANNES, b. 1847. Prof. Göttingen 1878; writer on pathology.

Orthez. Town of s. France, near which Wellington defeated a French army under Soult Feb. 27, 1814. Pop. ab. 4,800.

Orthis. Palæozoic Brachiopod genus, containing numerous species; originally distinguished by the straight hinge line.

Ortho Acids. Usually the ordinary form, derived from normal acids by the abstraction of one or more molecules of water; *e.g.*, normal phosphoric acid, $P(OH)_5$, by loss of one molecule of water becomes orthophosphoric acid, H_3PO_4.

Orthoceras. Straight chambered Palæozoic shell, allied

Fragment of *Orthoceras crebriseptum* — Cincinnati Group, North America, of the natural size. The lower figure is a section showing the air-chambers, and the form and position of the siphuncle.

Restoration of *Orthoceras*, the shell being supposed to be divided vertically, and only its upper part being shown. *a*, Arms; *f*, Muscular tube ("funnel") by which water is expelled from the mantle-chamber; *c*, Air-chambers; *s*, Siphuncle.

to the nautilus; sometimes in the Cambrian and Silurian attaining a length of 15 ft. There are many species, from the Silurian to the Liassic. See TETRABRANCHIATA.

Orthoclase. $KAlSi_3O_8$. Common FELDSPAR (q.v.); distinguished from quartz by its pearly cleavage, and from mica by its greater hardness.

Ortho Compounds. Wherever this prefix is used, see the main word; *e.g.*, for ortho-toluidine see toluidine. See META and BENZENE HYPOTHESIS.

Orthodox School of Political Economy. Group of economists who have followed with comparative closeness the teachings of Adam Smith, Malthus, Ricardo, and the other early English economists.

Orthodoxy. Correct religious opinions, as opposed to heterodoxy or heresy; variously defined according to the point of view.

Orthoepy. Branch of grammar dealing with pronunciation.

Orthognathi. Division of mankind having slightly projecting jaws and teeth, as in the European races. They have a high facial angle. See MAN and CRANIOMETRY.

Orthogonal. Right angled: operations such as transformation, projection, etc., and their results, in which the movement is at right angles to a fixed base.

Orthogonal Transformation. From one set of rectangular axes in space to another having the same origin. Point distances from origin are unchanged, and the transformation is automorphic.

Orthographic (ORTHOGONAL) **Projection.** That in which points or lines are projected by lines or planes perpendicular to the base of projection.

Orthography. Correct spelling; of increasing importance as the number of words increases and the standard of education rises; formerly optional in England, especially with proper names.

Orthoneura. See TÆNIOGLOSSA.

Orthopedic Surgery. Branch of surgery dealing with operations and mechanical appliances used to correct deformities; *e.g.*, club-foot, curved backs from spinal disease, primarily in children.

Orthoptera. *Insecta* with incomplete metamorphosis, with two pairs of wings, which in the *Pseudoneuroptera* are membranous and alike (with close nervures), and cannot be folded; but, in the *Orthoptera genuina*, the anterior pair are small and hard, the hinder ones are broad and membranous and can be folded together longitudinally beneath the anterior pair. The jaws are fitted for biting. The genuine *Orthoptera* comprise the tribes *Cursoria*, *Gressoria*, and *Saltatoria*. The *Pseudoneuroptera* comprise the tribes *Physopoda*, *Corrodentia*, and *Amphibiotica*. Grasshoppers and Dragon-flies are illustrations of the two main groups respectively.

Orthostichous. Straight row of leaves or other organs.

Orthostyle. Straight row of columns detached and not forming a portico.

Orthotropous. Straight ovule, *i.e.*, one not bent nor curved; also called Atropous.

Orton, ARTHUR (alias THOMAS CASTRO), b. 1834. Claimant in the TICHBORNE CASE (q.v.), 1871–72; tried for perjury 1873–74, and sentenced to 14 years with hard labor. In 1895 he confessed the imposture.

Orton, EDWARD, LL.D., b. 1829. Prof. Antioch Coll. 1865–73; Pres. Ohio State Univ. 1873–81; state geologist of Ohio, assistant and chief, from 1869; author of reports and numerous papers on the Geology of Ohio. His principal work has been upon the Coal and Gas fields of Ohio.

Orton, JAMES, 1830–1877. Prof. Vassar Coll. from 1869; explorer in S. America 1867–68, 1873, and 1877. *Andes and Amazon*, 1870–76; *Comparative Zoölogy*, 1875.

Ortygia. 1. Island in Bay of Syracuse, Sicily, occupied by part of the city. 2. Delos.

Orvieto. Ancient town of central Italy, noted for its cathedral, built 1290–1580; resort of many popes in distress. Pop. 7,900.

Oryx. Several species of African Antelopes, characterized

Oryx (*Oryx beisa*).

by very long, nearly straight, upward growing horns, with rings near the base. The hair is yellowish, variegated with

black marks on the head, flanks, etc. The forequarters are strongly developed as compared with the hindquarters.

Orzeszkowa, ELIZA, b. 1842, m. 1858. Polish novelist and essayist.

Osage Indians. Southern Sioux of Kansas; originally ab. 5,000. They sided with the Confederacy 1861, and are now ab. 1,000, on a reservation in n.e. Indian Territory.

Osage Orange. *Toxylon pomiferum.* Thorny tree of the Mulberry family, native of the s. central U. S., bearing a large, yellow fruit, the color and size of a very large orange; also called Bow-wood, and entensively planted for hedges.

Osage River, or MARAIS DES CYGNES. Right hand branch of the Missouri, rising in Kansas, and flowing e. through Mo.; navigable for 50 m. Drainage area 15,262 sq. m.

Osaka, or OZAKA. Seaport of Japan, on s.e. coast of Niphon at the mouth of Kamagawa River, which intersects it with streams and canals; important for its commerce; once

Osaka.

capital of the empire; site of the mint since 1871. Its castle, built ab. 1583 by Hideyoshi, is notable, and contained a fine palace, burned 1868. Pop., 1893, 483,600.

Osborn, LAUGHTON, 1809–1878. American poet.

Osborn, SELLECK, 1783–1826. American poet and journalist.

Osborn, SHERARD, R. N., 1822–1875. Arctic explorer, in search of Franklin 1849 and 1852; prominent in the Crimean and Chinese wars; Admiral 1873. *Arctic Journal*, 1852; *Sir John Franklin*, 1860.

Osborne House. Marine residence of Queen Victoria, built 1845 by Cubitt, on the Isle of Wight, near Cowes.

Osbourne, LLOYD, b. ab. 1865. Stepson of R. L. Stevenson, and his collaborator in *The Wrong Box*, 1889, *The Wreckers*, 1893, and *The Ebb Tide*, 1894.

Oscan. Italic dialect, spoken by Samnite and other tribes, and still important in the time of Ennius; represented only by inscriptions, which go back to 4th century B.C.

Oscanyan, HATCHIK, b. 1818. Armenian novelist, resident in America from 1855. *The Sultan and his People*, 1857.

Oscar I., 1799–1859. Son of Bernadotte: King of Sweden and Norway 1844; publicist and musician.—His son, OSCAR II., b. 1829, king 1872, is noted as a poet and orator. *Works*, 5 vols., 1875–94.

Osceola, 1804–1838. Chief of the Seminole tribe of Indians, who, in retaliation for the enslavement of his wife, began war in Fla. 1835; captured by treachery 1837.

Oscillariaceæ. Order of *Cyanophyceæ*, minute blue-green *Algæ* comprising forms with motile filaments, divided by septæ into numerous tabular pseudocysts.

Oscillating Engine. Steam engine in which the end of the piston-rod fits upon the crank-pin, and the excursion of the crank-pin on both sides of a given diameter of its circle is admitted by causing the cylinder to swing upon trunnions. There being no connecting-rod, the engine is much more compact. The live steam and exhaust pass in and out through the trunnions, and the valve is either moved by being linked to the fixed frame, or else the rocking of the trunnion surface causes ports to be properly opened and closed. Leakage at the stuffing box and trunnions is a great source of annoyance. These engines have been used for marine practice, especially

Oscillating Engine.

in side-wheel vessels, where the cylinder can be under the shaft. See MARINE ENGINES.

Oscines. Singing birds; divided into *Spizognathæ*, with conirostral beak, as the Weaver, Finch, Crossbill, and Sparrow, and the *Coracognathæ*, of which the Wagtail, Thrush, and Crow are dentirostral, the Lark and others conirostral, the Honey-eaters (*Meliphagidæ*) tenuirostral, and the Swallow fissirostral. See PASSERES.

Oscott. R. C. college near Birmingham, Eng., founded 1752, enlarged 1835; for education of priests only since 1889.

Osculating Circle. One having the highest order of contact with a curve at a given point. Its radius is called the radius of curvature.

Osculating Circle in Space. One which passes through three consecutive points of a curve in space. Its center is the point where the line of section of two consecutive normal planes cuts the osculating plane.

Osculating Conic. In coördinate geometry, the conditions under which the general conic osculates with a curve of given order can be established, and the specific character of the conic determined, by examining the (invariant) criterion of the general conic in connection with the coördinates of the point of osculation.

Osculating Plane. One coincident with three consecutive points of a curve.

Osculation. Highest order of curve contact.

Osculatrix. Curve having a higher order of contact with a given curve than any other of its kind.

Osculum. Exhalent opening of the sponge. Many of these are not the same as the oscule of the simpler sponges, which represents the exhalent opening of the embryo sponge. Sometimes this opening, simple or branched, becomes reduced to irregular canals that lead to a special set of small pores, secondarily developed in the cortex of the sponge. Such openings are pseudoscula or pseudoprocts.

Osgood, EMMA ALINE, b. ab. 1852. American singer, known chiefly in England since 1876.

Osgood, FRANCES SARGENT (LOCKE), 1811–1850. American poet.

Osgood, SAMUEL, 1748–1813. Delegate to Congress 1780–84; Commissioner of Treasury 1785–89; U. S. Postmaster-gen. 1789–91.

Osgood, SAMUEL, D.D., LL.D., 1812–1880. Pastor in New York 1849–70. *Milestones*, 1855.

Osgoodites. Millenarian sect in N. H., now extinct.

O'Shaughnessy, ARTHUR WILLIAM EDGAR, 1846–1881. English poet.

Oshkosh. Capital of Winnebago co., Wis.; on Fox River, at its mouth in Lake Winnebago. It has large manufactures, especially of lumber. Pop., 1890, 22,836.

Osiander, ANDREAS, 1498–1552. German reformer and theologian, prof. Königsberg 1549. He modified the doctrine of justification by faith in a mystical direction, which was supposed to bring it nearer to the R. C. view. His followers were

driven from Prussia 1567; their leader, his son-in-law, FUNCK, was beheaded for alleged treason 1556.

Osier. See WILLOW.

Osiris. Chief deity of ancient Egypt; brother and husband of Isis; slain by Set, and avenged by his son Horus; judge of the dead.

Osiris.

Osler, EDWARD. 1798–1863. English hymnist; ed. *Church and King*, 1836–37.

Osler, WILLIAM, M.D., b. 1849. Prof. McGill Univ. 1874, Univ. Pa. 1884, and Johns Hopkins Univ. 1889; medical writer.

Osler's Anemometer. Square plate of metal exposed perpendicular to the wind, whose pressure upon it is resisted by springs.

Osman. See OTHMAN.

Osmanli. See TURKS.

Osman Pasha, b. 1832. Turkish general, distinguished at Plevna, where he blocked the Russian advance Aug.–Dec. 1877.

Osmic Acid. See OSMIUM OXIDES.

Osmiridium. Alloy of osmium and iridium, found in nature and made artificially for tipping gold pens. See OSMIUM.

Osmium. Os. At.wt. 190.8, sp. gr. 22.477, sp. ht. .031, valence II., IV., VI., VIII. Infusible; discovered by Tennant 1803; heaviest of all metals; rare. It occurs in platinum ores as an alloy of iridium. When heated, or treated with nitric acid, it is converted into the peroxide, OsO_4, the vapors of which are poisonous. It is not used in the arts, but an alloy of osmiridium, which is not attacked by acids, is employed for tipping gold pens, and, since it is not oxidizable and non-magnetic, is sometimes used for the bearings of the mariner's compass.

Osmium Chlorides. $OsCl_2$. Dichloride. Brownish-black powder, soluble in water, with a dark-violet color; made by heating powdered osmium in a current of dry, air-freed chlorine.—$OsCl_4$. Tetrachloride. Red substance, soluble in water; made by heating the dichloride in a stream of chlorine.

Osmium Oxides. OsO. Osmium monoxide. Grayish-black, insoluble powder.—Os_2O_3. Osmium sesquioxide. Black powder, insoluble in acids.—OsO_2. Osmium dioxide. Masses, of a coppery luster.—OsO_4. Osmium tetroxide. Usually called osmic acid; formed by heating finely-divided osmium. It sublimes in transparent needles, which are readily soluble in water, yielding a colorless liquid, which does not affect litmus and possesses a burning and caustic taste. It has a powerful, penetrating odor suggestive of chlorine, is very poisonous, and acts violently and seriously upon the eyes.

Osmium Sulphides. OsS_2. Disulphide. Yellowish brown precipitate, obtained on passing hydrogen sulphide into a soluble osmium salt.—OsS_4. Tetrasulphide. Precipitated by hydrogen sulphide from a hydrochloric acid solution of the tetroxide.

Osmosis, or OSMOSE. Diffusion of a liquid through a membrane. See ENDOSMOSIS and EXOSMOSIS.

Osmundaceæ. Order of Ferns, of a small number of species, growing mainly in bogs; including the common Royal fern or Flowering fern and the Cinnamon fern.

Osnabrück. Town of Hanover, on the Hase, 75 m. s.s.w. of Bremen; founded 772; seat of a bishop from ab. 810. Here the peace of Westphalia was signed 1648: George I. of England died on the way to it 1727. It has some manufactures. Pop., 1890, 39,929.

Osorio, MANOEL LUIZ, MARQUIS OF HERVAL, 1808–1879. Brazilian general, distinguished in wars with Uruguay and Paraguay; Senator 1877, Minister of War 1878.

Osphradium. Olfactory organ of Mollusks; patch of sensory cells near each gill.

Ospina, MANUEL, 1803–1885. Pres. of Colombia 1856–61; then in exile till 1872.

Osprey (PANDION HALIAETUS). Falconoid bird, widely distributed, abundant along U. S. Atlantic coast, where it nests in old trees. The rarer European Osprey prefers cliffs near inland waters. Length 2 ft., color dark brown, the head and under parts white. Bill sharply hooked; tarsus long, feet large, with outer toe reversible, and with strong equal claws, adapted

Osprey.

for holding fish; a strong flyer. Eggs 2–4, closely blotched with brown.

Ossa AND **Pelion.** Mountains in Thessaly; the giants in their war with the gods attempted to scale heaven by piling them on Olympus.

Ossein. Organic material composing one-third of the substance of bone, identical with collagen. Collagen is the substance of which the white fibers of connective tissue are composed.

Ossetish. Iranic language spoken by the Ossetians of the Caucasus. The sound of *h*, common in Iranian, is absent.

Ossian. Gaelic bard of 3d or 4th century, to whom were ascribed many legends of much later date, probably 1100–1500. These were collected and expanded by JAMES MACPHERSON (q.v.), 1760. Their origin was the subject of much discussion.

Ossification. Process by which bone-tissue is produced. A formation of cartilaginous substance precedes that of the bone, and in this the deposit of the lime-salts takes place making the bone. It is deposited from centers extending by additions in the various directions needed for the shape of the bone. Where there are cavities in the bones, these are formed by the absorption of bone-tissue, the process of ossification being continuous, and, when the individual has attained maturity and there is no further absorption, the proportion of bony material increases, rendering the bones brittle in age. Ossification is also applied to the deposit of calcareous matter in other tissues, as ossification of the arteries or of the heart.

Ossoli, SARAH MARGARET (FULLER), MARCHIONESS, 1810–1850, m. 1847. American author, of much influence with the Boston transcendentalists.

Ostade, ADRIAN VAN, 1610–1685. Dutch genre painter, who affected low life-subjects with great success.—His brother, IZAAK, 1621–1649, was of less note.

Ostend. Seaport of Belgium, 14 m. w. of Bruges; well-known watering-place. Pop., 1886, 22,602.

Ostend Manifesto. Drawn up Oct. 1854 by U. S. ministers to Britain, France, and Spain, J. Buchanan, J. Y. Mason,

and P. Soulé, favoring the purchase or seizure of Cuba. It was ineffective.

Ostensory. See MONSTRANCE.

Osteolepis. Crossopterygian lepidoganoid, with smooth, rhomboidal scales; one of the first discovered armor-clad fish of the Old Red Sandstone (Devonian).

Osteolite. $Ca_3P_2O_8$. Bone-phosphate; earthy variety of calcium phosphate, allied mineralogically to apatite, but constant and definite in chemical composition.

Osteology. Branch of Anatomy which treats of the bones and skeleton. When the homologous bones of different animals are compared in a systematic manner, it is Comparative Osteology.

Osteostraci. Group of Cephalaspidian fishes (?) whose shields show true bony structure.

Osterwald, JEAN FRÉDÉRIC, 1663–1747. Swiss theologian, pastor at Neûchatel.

Osthoff, HERMANN, b. 1847. Prof. Comparative Philology at Heidelberg 1877.

Ostia. Openings in the walls of sponges, etc. Exhalent ostia pass water out of the system; inhalent ostia draw it in.

Ostia. Port of ancient Rome, at mouth of Tiber; once populous and important; supplied with a new harbor ab. 50; in

The Walls of Rome. The Ostian Gate.

ruins by 830; excavated partially 1783, and more fully since 1855.

Ostiaks. Finnish and Mongolian tribes of n. Siberia, on the Obi and Yenesei Rivers, numbering ab. 27,000; some are mixed with the Samoyedes. They are of medium stature, dark skinned and brachycephalic. They are gentle, honest, and skillful. A few are Christian, but Shamanism is prevalent.

Ostiole. Orifice of the sexual conceptacles in certain *Algæ* and *Fungi*.

Ostrach AND **Stockach.** Villages in Swabia, scenes of victories March 25, 1799, of Archduke Charles over the French under Jourdan.

Ostracion. See PLECTOGNATHI.

Ostracism. Provision in the Athenian constitution, devised ab. 509 B.C. by Cleisthenes, to prevent any citizen from becoming too powerful. The citizens first carried a popular decree directing its use; then, on an appointed day, cast their votes by tribes, each writing upon an oyster-shell the name of the person whom he considered most dangerous to the state. The man having the highest number of votes, if at least 6,000, was banished for ten years, or, later, for five. Confiscation was not involved.

Ostracoda (WATER-FLEAS). *Entomostraca*, completely inclosed in a bivalved shell, resembling the mussel. There are seven pairs of appendages, which function respectively as antennæ, jaws, creeping and swimming legs. The body is short and unsegmented. A paired, median eye is present, and sometimes a heart also; this is wanting in *Cypris*.

Ostracostei. See PLACODERMI.

Ostreidæ (OYSTERS). Family of Lamellibranchs, belonging to the section *Monomyaria*. The right valve of the shell is smaller and flatter than the left, on which the animal rests. The adductor muscle is nearly central, and is called the heart or eye by oystermen; the heart lies just in front of this. Organs of vision are supposed to be rudimentary if present at all; certain pigment spots at the edge of the mantle may be taken as such. The posterior end of the shell is the nib furthest from the hinge, which here is anterior, and not dorsal as in other groups. The French Oyster (*Ostrea edulis*) is hermaphrodite and viviparous, and produces as many as 2,000,000 young. The American Oyster (*O. virginiana*) is bisexual, the eggs being fertilized and undergoing development after being spawned. As many as 60,000,000 eggs may be produced from one female, only one or two of which ever reach the market as mature oysters. The mortality is great, especially in the early stages, when the young is but the one-five-hundredth of an

French Oyster.

Oyster, lying in left valve: *a*, hinge; *b*, lips, surrounding the mouth; *c*, points just below the region of heart; *d*, gills; *e*, dorsal edge of mantle; *f*, muscle; *g*, posterior end of shell.

inch in diameter. The oyster spawns from May to August in waters n. of the Chesapeake; the spawning season is more prolonged in southern waters. Both sexes spawn together, so that the water becomes milky with suspended eggs and milt. The eggs sink at the rate of a foot per hour. The majority have settled into the mud by the time segmentation has begun, unless the flowing tides produce whirling currents. The best temperature for development is between 80° and 90° F. In ab. 12 hours the young embryo has advanced as far as the gastrula stage, swimming by means of cilia. This locomotor stage lasts for several days, and finally a shell of two equal valves is formed, and two muscles, anterior and posterior, are developed. The anterior adductor never comes to a further development. Then the young oyster, now resembling a clam, settles on a clean object and cements itself by its left side. In further development the body rotates so as to bring the front end under the back (hinge) area, and the two shell valves grow differently. See OYSTER CULTURE.

Ostrich (STRUTHIO). Three or four closely related species of large Ratite birds of African and w. Asiatic plains. *S. camelus* is the common ostrich. It has powerful legs, with only 2 toes (3d and 4th), of which the outer is relatively little devel-

Ostrich Farm in California.

oped. It can outrun and exhaust a horse. The feathers are plumes, forming no true web. The wings are small, and cannot be used in flight. The syrinx is imperfectly developed, but the voice (seldom used) is a lion-like roar. The female and young are brownish-gray, the male black, with white wing and tail plumes. A ht. of 7 ft. and wt. of 300 lbs. are attained. They defend themselves by kicking. They are naturally monogamous. The eggs, 6 in. long and equal to 24 hen's eggs in capacity, are laid every other day. When ab. ten are laid, the sexes take turns at the incubation. Ostriches have been domesticated by African tribes from remote periods. The English began ostrich-farming in s. Africa 1865. This profitable branch of agriculture has been introduced into both Americas. See RHEA.

Ostrogoths. See GOTHS.

Ostrovski, ALEXANDER, 1824–1886. Russian dramatist.

Ostrowski, TOMAS ADAM RAWICZ, COUNT, 1739–1817. Polish statesman.—His son, ANTONI JOANNES, 1782–1847, served under Napoleon, and bore part in the rising of 1830–31.

Osuna, PEDRO TELLEZ GIRON, DUKE OF, 1579–1624. Spanish general, Viceroy of Sicily 1611 and Naples 1616; imprisoned from 1620.

Oswald, ST., ab. 605–642. King of Northumbria 632, which he Christianized; killed in battle with pagans.

Oswald, HEINRICH SIEGMUND, 1751–1834. German hymnist.

Oswego. Capital of O. co., N. Y., on Lake Ontario, at mouth of O. River; taken July 14, 1756, by Montcalm, and by the British May 6, 1814; chartered 1848; site of a State Normal School. It has numerous flour mills, iron works and grain elevators. Pop., 1890, 21,842.

Oswego-Tea. *Monarda didyma.* Odorous herb of the Mint family, native of N. America, often cultivated; known as Bee-balm.

Osweo, or OSWY. King of Northumbria 642–670. He conquered Penda of Mercia 655, and called the council of Whitby 664, which committed England to Roman Christianity.

Otariadæ. Family of *Pinnipedia*, including the Eared Seals or Sea Lions; *e.g.*, the Alaskan Fur Seal (*Callorhinus*).

Otfried. German poet of 9th century, author of a versified paraphrase of the Gospels.

Othman, ab.575–655. Son-in-law of Mohammed; 3d caliph 644.

Othman, or **Osman**, AL GHASI, 1259–1326. Founder of Ottoman empire; commander under Sultan of Iconium 1280; ruler of Bithynia 1299. Conqueror of much of Asia Minor.

Othman II., 1604–1622. Sultan 1617; deposed and slain by janissaries.

Othman III., 1700–1757. Sultan 1754.

Otho, MARCUS SALVIUS, 32–69. Comrade of Nero; Gov. of Lusitania 58–68; noted for vigor and profligacy; sharer of Galba's revolt; Emperor for 95 days; defeated and slain by Vitellius.

Otho (or OTTO) I., "THE GREAT," 912–973. Son and successor of Henry I.; King of the Germans 936; crowned as Emperor at Rome 962. He waged many wars, extended his empire widely, and with it the nominal dominion of Christianity.—His son, OTHO II., 955–983, Emperor 973, was an active ruler and conqueror.—His son, OTHO III., 980–1002, succeeded him.

Otho III.

Otho IV., 1175–1218. Son of Henry the Lion; emperor of Rome 1198–1212.

Otho, 1815–1867. Son of Louis of Bavaria; King of Greece 1832; deposed 1862.

Otho of Freising (BAVARIA), ab. 1114–1158. Bp. 1137; grandson of Henry IV.; author of two Latin histories, *Two States* and *Deeds of Frederick.*

Otis, FESSENDEN NOTT, M.D., LL.D., b. 1825. Prof. New York Coll. of Physicians and Surgeons 1871; writer on urinary diseases.

Otis, GEORGE ALEXANDER, M.D., 1830–1881. Surgeon U.S.A. from 1861; professional writer.

Otis, JAMES, 1725–1783. Patriot at Boston, eminent for oratory and resistance to search-warrants; permanently injured 1769 by British officers. *Rights of the Colonies*, 1764.—His nephew, HARRISON GRAY, 1765–1848, was M.C. from Mass. 1797–1801, U. S. Senator 1817–22, Mayor of Boston 1829, and a noted orator.

Otitis. Inflammation of the ear in any part. The most frequent seat of the disease is the middle ear, as the earache and gatherings in the ear so frequently noticed, especially in children. It frequently accompanies diphtheria and scarlet fever. The condition is always a serious one, apt to terminate in a chronic discharge (otorrhea) or in difficulty of hearing, and not infrequently will cause death. A disease of such danger cannot be safely left to domestic remedies. It is unwise to drop fluids in the ear, especially if one of the ingredients is a vegetable or animal oil. A douche of hot water, the application of cloths wrung out of hot water or a Japanese handstove to the external ear will usually relieve the intense pain. The discharge should be washed away by gentle syringing with a warm boric-acid solution. Further treatment than this is unsafe unless directed by a physician.

Otocardia. See MOLLUSCA.

Otoconia. See OTOLITH.

Otocyst. Capsule, or spherical chamber, in *Medusæ*, etc., containing otoliths.

Otolith. Calcareous nodule, usually lying loose in an otocyst, suspended in a fluid and in contact with certain hairs that connect with nerves. They serve both as organs of hearing, transmitting vibrations, and of equilibrium, by giving various stimuli of pressure according to the position of the body.

Otoporp. Meridional extension of nettle-cells from the bases of the tentaculicysts to the exumbrella of certain of the *Scyphomedusæ* (Jelly-fish).

Otsego Lake. Source of the Susquehanna, in O. co., N. Y.: celebrated in Cooper's novels. Length 8 m.

Ottawa. Capital of Canada, in Ontario, on s. bank of the O. River; founded 1826, and called Bytown till chartered

Canadian Parliament Buildings, Ottawa—The Main Building.

1854; seat of government since 1858; divided by the Rideau Canal. It has an extensive lumber trade. Pop., 1891, 44,154.

Ottawa Indians. Canadian Algonquin tribe, near Lake Huron; driven w. of Lake Superior by the Iroquois 1649–80, befriended by the Objibways and driven back e. by the Sioux. There are now ab. 1,000 in Canada, and a few with the Shawnees in Indian Territory.

Ottawa River. In Canada, rising in the highlands between the Great Lakes and Hudson's Bay, and flowing into the St. Lawrence near Montreal. Length ab. 800 m.

Ottendorfer, OSWALD, b. 1826 in Moravia. Partaker in German revolts 1848; in New York from 1850; ed. *Staats-Zeitung* from ab. 1859; active in reform and beneficence.

Otterbein, PHILIP WILLIAM, 1726–1813. German Reformed missionary in America 1752; founder of the United Brethren in Christ 1800.

Otterbein University. Founded 1847 at Westerville, Ohio, by United Brethren. It offers preparatory, classical, and philosophical courses, and has 15 teachers and ab. 300 students.

Otterburn. Village of Northumberland, where Henry Percy (Hotspur) fought the Scots under Douglas Aug. 19, 1388. This battle is celebrated in the ballad *Chevy Chase.*

Otters. Animals of genus *Lutra* and family *Mustelidæ;* aquatic, fish-catching *Carnivora*, with webbed feet, burrowing in the banks of ponds and streams. The Old World otter

Otter (*Lutra vulgaris*).

(*L. vulgaris*) is 2 ft. long, and has been trained to catch fish for man. The American otter is 4 ft. long, exclusive of the long, flattened tail. It is brown, and has a peculiar pad on the nose.

Otto. See OTHO.

Ottocar, 12th cent. German chronicler.

Ottocar II., ab.1230–1278. Son of Wenceslas I.; King of Bohemia 1253; conqueror of Prussia and Hungary; defeated and slain by Rudolph.

Ottoman Empire. See TURKEY.

Otto of Roses. See ATTAR OF ROSES.

Ottrelite. Hydrous aluminium iron silicate, occurring in the form of hard crystalline scales in many clay schists.

Ottumwa. Capital of Wapello co., Iowa, on the Des Moines, in a coal region. It has extensive manufactures. Pop., 1890, 14,001.

Otway, THOMAS, 1651–1685. English dramatist, eminent in tragedy. *Don Carlos*, 1676; *The Orphan*, 1680; *Venice Preserved*, 1682.

Ouabain. $C_{30}H_{46}O_{12}$. Poisonous glucoside from the wood of *Carissa shimperi*, growing in Africa. It acts on the heart like digitalis. One of the arrow poisons.

Oubliette. Doorless dungeon, reached by ropes from above.

Oude, or OUDH. Ancient state of n. India, long subject to Delhi; annexed by Gt. Britain 1856; prominent in the Sepoy mutiny 1857. Area 24,217 sq.m.; pop., 1891, 12,650,831.

Oudenarde. Belgian town, on the Scheldt; scene of a French defeat, July 11, 1708, by Marlborough and Prince Eugene.

Oudinot, CHARLES NICOLAS, 1767–1847. French general, distinguished at Ostrolenka, Friedland, Wagram, and the Beresina; Marshal and Duke of Reggio 1809; Peer 1815.—His son, CHARLES NICOLAS VICTOR, 1791–1863, led the French expedition against Rome 1849.

Oudry, JEAN BAPTISTE, 1686–1755. Painter of the French School. At first he painted historical subjects and portraits.

The Wolf at Bay, by Oudry.

then devoted himself to painting animals, especially dogs. He became court painter to Louis XV.

Ouida. See DE LA RAMÉ, LOUISA.

Ouless, WALTER WILLIAM, b. 1848. English portrait-painter; Academician 1881.

Ounce. Leopard-like animal of genus *Felis*, inhabiting the mountain heights and colder parts of Asia. It is 4 ft. long, besides the long tail. The color is yellowish gray, with black spots and rings. A mane is present.

Ounce. Twelfth of a pound in Troy weight, sixteenth in avoirdupois.

Ouray, 1820–1880. Chief of the Uncompahgre Utes in Col.; civilized, pacific, friendly and useful to U. S. Government.

Ourique. Town of Portugal; scene of a defeat of five Saracen kings and a great Moorish army, July 25, 1139, by Alfonso, who became king.

Ouseley, SIR WILLIAM, LL.D., 1769–1842. English Oriental scholar, who published a number of works upon Persian and Arabic literature and history. *Travels in Persia*, 1819–23.—His son, SIR WILLIAM GORE, D.C.L., 1797–1866, diplomatist and author, was long in S. America.—His cousin, SIR FREDERICK ARTHUR GORE, 1825–1889, Prof. of Music at Oxford 1855, founded a college for choristers, composed oratorios and anthems, edited several music books, and wrote on harmony, counterpoint, and fugues.—His father, SIR GORE, 1770–1844, diplomatist and Orientalist, wrote on *Persian Poets*, 1846.

Outbye. Passage leading from a mine.

Outcrop. Ledge or mass of rock at the surface or above it, generally forming the edge of a stratum or mineral deposit, which from that point disappears beneath other formations.

Outlaw. One adjudged to be out of the law's protection. In the U. S. this punishment is confined to traitors.

Outlier. Outstanding mass of rocks resulting from circumdenudation.

Output. Yield of a mine, estimated by day, month, or year.

Outram, SIR JAMES, 1803–1863. British officer, in India from 1819; defender of Hyderabad 1843; commander in Persian war 1856–57; associated with Havelock in relieving Lucknow Sept. 1857, and Sir Colin Campbell in its recapture March 1858; Lieut.-gen. and Knight 1858.

Outside, or OUTER EDGE. Figure in skating, in which the skater rolls on the outer edge of the runner, and thus describes curves and circles.

Ouvarovite, or UVARAVITE. $Ca_3Cr_2Si_3O_{12}$. Variety of garnet containing chromium; chrome-garnet.

Ouvrard, GABRIEL JULIEN, 1770–1846. French contractor and financier, imprisoned 1808–13 and 1823–28. *Mémoires*, 1826.

Ouvrard, LÉON FRANÇOIS, 1767–1826. French ethnologist.

Ouvrier, PIERRE GUSTAVE, 1765–1822. French traveler in America. *Hist. des Etats-Unis*, 1819.

Ouzel, or OUSEL. Originally, European Blackbird (*Merula*). It has a yellow bill. The Ring-ouzel (*Turdus torquatus*) is a

Thrush (*Turdus musicus*) and Ring-ouzel (*Turdus torquatus*).

thrush, black, with a white collar, living in mountainous regions. The Water-ouzel (*Cinclus*) or Dipper is a diving Os-

cine bird, related to the wrens: it seeks its food on the bottom of swift brooks. Species of this genus occur in both hemispheres.

Oval. 1. Re-entrant curve having two foci, the distances from which to any point in the curve have a constant relation. The noteworthy ovals are the Cartesian and Cassian, each having several peculiar specific forms. 2. Figure formed by intersecting arcs of circles.

Ovalo AND **Cavetto.** Molding whose outline is the quadrant of a circle: when convex it is an ovalo, when concave a cavetto.

Ovampo. Bantu people of w. Africa, in the German territory, s. of the Cuanene.

Ovando, NICOLAS DE, 1460–1518. Governor of Hispaniola 1502–9. He refused shelter to Columbus in a storm, and nearly exterminated the natives.

Ovariotomy. Operation to remove an ovary. It is indicated when it is diseased (*i.e.* ovarian tumor) or when there is a reflex neurotic condition due to a hyper-sensitive condition without evidence of organic change in the organ. Ephraim M'Dowell, of Ky., first removed an ovarian tumor 1809. The removal of the ovaries and Fallopian tubes is now a frequent operation and is generally successful.

Ovary. Lowest portion of the pistil of flowers, containing the ovules.—Organ in animals which produces the eggs, or ova. In a woman there are two, 1½ in. long, ¾ in. wide, and ½ in. thick, on either side of the uterus, to which they are connected by the Fallopian tubes, through which the ova pass to the uterus. At the time of menstruation the ova pass into the ovary by the rupture of the Graafian follicle in the cortical coating of the ovary, in which they mature. This coating is estimated to contain 30,000 ova. The ovaries are analogous to the testes of the male, and the ova are impregnated in the uterus. They are endowed with a generous nerve supply, and are frequently the cause of obscure nervous affections.

Ovate. Leaves or other organs which resemble in outline the longitudinal section of an egg, being broadest below the middle and not more than twice longer than wide, as in the Apple leaf.

Ovation. The Romans honored a victorious general either with the TRIUMPH (q.v.), or by the Ovation, wherein the general entered the city on foot, clad in a magisterial robe and wearing a myrtle crown. A sacrifice closed the ceremonies.

Oven. Chambers in which objects are baked by artificial heat. The early Egyptian oven was a crock sunk in the ground and heated by a fire built inside. The old type of baker's oven was a brick chamber, domed. Fire was made inside, and when the oven was sufficiently heated the ashes were raked out and the dough put in with a long wooden spade. Now most ovens are heated by fires built in a firespace, by superheated steam in pipes, or by gas. Loaves found in a Pompeiian bakery indicate that the name of the meal was stamped on bread.

Overbeck, FRIEDRICH, 1789–1869. German religious painter, important historically but weak as an artist, although distinguished for beauty of composition, simplicity of expression, grace, and deep religious feeling.

Christ Blessing Little Children, by Overbeck.

Overbeck, JOHANN ADOLF, b. 1826 at Antwerp. Prof. Leipzig 1858; writer on Greek art and antiquities.

Overbeek de Meijer, GILLIS VAN, b. 1831. Prof. Utrecht 1877; medical writer.

Overberg, BERNHARD, 1754–1826. German R.C. theologian.

Overburden. In Mining, superficial waste rock that has to be removed in open workings.

Overbury, SIR THOMAS, 1581–1613. English author, knighted 1608; imprisoned in the Tower, and poisoned there. *Characters*, 1614.

Overhand. Operations in which the miner stands under the rock he is excavating.

Overland Route. 1. From Europe to Asia, via Egypt, before opening of Suez Canal, as opposed to the voyage around Africa. 2. To California by the plains, prior to construction of Pacific R.R., as against the voyage around Cape Horn.

Overlap. In Geology, when the newer or more recent members of a formation extend beyond the beds below, of the same series, the former are said to overlap the latter.

Overproduction. Excess of production in certain lines, or production the ready distribution of which is prevented by some imperfection in the organization of exchange.

Overreaching. Said of a horse when he throws his hind foot against the heels or sole of the forefoot. Long hoofs or large toe-calks on the fore feet will cause the trouble.

Overshot Water Wheel. Water wheel or motor in which a wheel of large diameter is mounted on a horizontal axis, and the water is laid on without head at a point just below the upper end of the vertical diameter in the direction in which the wheel is to turn. The water acts therefore by its weight alone to turn the wheel, since it comes to it without shock. The buckets on the periphery of the wheel should nearly fill with water, and should be of such a shape as not to be emptied too soon on the lower part of the arc. The length of the wheel varies with the amount of power required and water available; the diameter depends on the height of the fall of water. This type of wheel is cumbrous and costly, and slow-moving. It has been largely replaced by the turbine wheels. Its efficiency is from 70 to 90 per cent. One at Laxey, England, is 72½ ft. in diameter and furnishes ab. 150 H.P.

Overshot Water Wheel.

Overskou, THOMAS, 1798–1873. Author of Danish comedies, and historian of the *Danish Theater*, 7 vols., 1854–76.

Overstone, SAMUEL JONES LOYD, LORD, 1796–1883. M. P. 1819, Baron 1850; writer on Bank of England.

Overt Act. Attempt to commit a crime.

Overtones. So-called partial tones which accompany the fundamental tone in the complex sensation known as a clang. They are caused by the partial vibrations of the body whose complete vibration gives the fundamental tone. The number and variety of the overtones give the distinguishing quality or timbre to tones, voices, or musical instruments. They include the harmonic overtones or harmonics, and may include certain tones which are inharmonic.

Overture. Opening musical piece of a drama, especially a lyric drama or opera. Originally it was vocal, and the first instrumental introductions were written in the vocal style. In its perfection it adopted the sonata form, and this was maintained in the overtures whose themes were borrowed from the operas which they introduced. The best of the overtures of Beethoven, Wagner and others seek to convey the emotional contents of the dramas with which they are associated.

Overweg, ADOLF, 1822–1852. German explorer of central Africa.

Overyssel (TRANSISULANIA). Dutch province e. of Zuyder Zee; formerly an independent state. Its coinage was abundant 1560–1770, as was that of its cities, Zwolle, Campen, and Deventer, in 17th century. Area 1,291 sq. m.; pop., 1893, 302,508.

Ovicell. 1. Case containing ova, especially during development; *e.g.*, oœcia of *Bryozoa*. 2. Synonym for ovum.

Ovid (PUBLIUS OVIDIUS NASO), 43 B.C.–18. Latin poet of the court of Augustus. Here he associated with the writers of the Golden Age, and composed his chief works. Falling into disfavor with the Emperor, he was banished to Tomi on the Black Sea, where he died. While less dignified and reverent than Virgil, he had great versatility and recognition of outward beauty. The *Metamorphoses* and *Heroides* give many charming mythological stories, and the *Amores*, *Tristia*, *Epistles*, and other minor works are graceful and sensuous.

Ovidæ. Sheep family of the Cavicorn Ruminants, including the Goat (*Capra*), Ibex, and Sheep (*Ovis*).

Oviduct. Passage through which the ovum leaves the ovary; it leads to the uterus in mammals.

Oviedo. Ancient town of n.w. Spain, 20 m. from Bay of Biscay. It has a fine cathedral, begun 781, and a university, founded 1574. Pop. ab. 43,000.

Oviedo y Valdez, GONZALO FERNANDEZ DE, 1478–1557. Historian of the Spanish conquests in the New World, 1526–35, tr. 1555.

Ovipara. Group of *Diptera*, including *Coarctatæ* and *Obtectæ*.

Ovipositor. Appendage at end of abdomen of female insects, by which the eggs are deposited. It is often long and adapted for piercing into the tissues of plants and animals in which the larvæ are parasitic; it is then called a terebra. Or it may be adapted for sawing (serra), or be a sting (aculeus).

Ovisac. Sac-like structure in which many Invertebrates carry their eggs after they are extruded.

Ovolo. Convex molding having an egg-shaped outline: especially applied to the Doric capital.

Ovotestis. Reproductive organ which produces both ova and spermatozoa, as in certain snails.

Ovoviviparous. Producing young alive which originally are derived from eggs; word now restricted, since all viviparous animals are also egg-producers. Oviparous indicates that the development of the young takes place outside the body, the eggs being laid or spawned before the young are hatched, as in Fishes and Reptiles. But in these groups there are exceptional species in which the young develop within the maternal body; to such the above term strictly applies.

Ovules. Embryonic seeds contained in ovary of flowers.

Ovulist. One who believed that the ovum is the essential germ and the spermatozöon merely stimulates this to development. Now we know that fertilization is the union within the egg (which is a cell enlarged by being filled with food for the embryo) of two similar and equal nuclei, one derived from the body of the female, the egg nucleus, and one from the male, the spermatozöon. See FERTILIZATION and POLAR GLOBULES.

Ovum. The cell secreted by the ovary, consisting essentially of protoplasm and a nucleus.

Owen, DAVID DALE, M.D., 1807–1860. Son of Robert; in U. S. from 1828. He began 1837 the Geological Survey of Indiana; pub. 1839 a work on the mineral lands of Iowa; conducted 1848–50 a survey of Iowa, Wis., and Minn.; also of Ky. 1854–57 and Ark. 1857–60.

Owen, JOHN, 1560–1622. English author of Latin *Epigrams*, 1606, tr. 1619.

Owen, JOHN, D.D., 1616–1683. English Puritan of high repute; Chaplain to Cromwell 1649, Dean of Christ Ch., Oxford, 1651–60, Vice-Chancellor 1652–57; author of 80 books. He declined the presidency of Harvard 1670.

Owen, JOHN, d. 1896. English author. *Evenings with Skeptics*, 1881.

Owen, JOHN JASON, D.D., LL.D., 1803–1869. Teacher in N.Y.; editor of Homer, Xenophon, and Thucydides.

Owen, SIR RICHARD, LL.D., D.C.L., F.R.S., 1804–1892. English comparative anatomist and paleontologist, knighted 1883. Besides *Fossil Organic Remains*, *Odontography*, 1840, *Hist. British Fossils, Mammals, and Birds*, 1846, and *Fossil Reptiles*, 1849–51, he wrote much on extinct animals of the principal British colonies.

Owen, RICHARD, LL.D., 1810–1890. Son of Robert; in U. S. from 1828; engaged in survey of N. W. Territory 1848; State Geologist of Indiana 1860; prof. Univ. Indiana 1864–79. His chief geological work consisted in seismic investigations and speculations on the land masses of the globe.

Owen, ROBERT, 1771–1858. Welsh social reformer; cotton manufacturer in Scotland, where he introduced many reforms in the treatment of his employés. In his works, *New View of Society*, 1812, and *New Moral World*, 1836, he advocated advanced socialistic views, which he endeavored to put into practice at New Harmony, Ind., 1824. He failed in this, and in subsequent attempts in England. His opinions were shared by his eldest son, ROBERT DALE, LL.D., 1800–1877, who remained in the U. S., became M.C. 1843–47, Minister to Naples 1855–58, and a prolific writer. *Footfalls on the Boundary of Another World*, 1859, and *The Debatable Land*, 1872, are in the Spiritualist interest.

Owens, JOHN EDWARD, 1824–1886. Anglo-American actor and manager, best known from 1864 as "Solon Shingle."

Owens College. At Manchester; named from John Owens, its founder, who died 1846, bequeathing nearly £100,000 as endowment. It was opened 1851 for arts, science, law, and medicine, and imposes no religious tests. A local Workingmen's College was incorporated with it 1861. It affiliated with others in the Victoria Univ., chartered 1880.

Owen Sound. Town of Ontario, Canada, at the head of a long bay of the same name off Georgian Bay. Pop., 1890, 7,500.

Owen's River. In s.e. Cal., flowing through a desert valley, discharging into O. lake, whose water is strongly impregnated with salt and carbonate of soda. The lake has no visible outlet.

Owls. Raptatorial birds of family *Strigidæ*, including 100 species and numerous genera. They have large eyes, looking forward, encircled by stiff feathers, and with vertical pupil. Most are nocturnal and see poorly by day, but *Surnia*, the Hawk Owl, and *Nyctea*, snowy owls of arctic regions, feed by day. Their food consists of rodents, insects, birds, vermin, and fish. The Great Horned Owl (*Bubo virginianus*) attains a wt. of 8 lbs., and attacks poultry. Owls hear well; some, *e.g.* *Asio otus*, have a well developed feathered concha. The long ears, by which *A. otus* is known, refers to the horns of feathers, developed above the eyes. Owls fly noiselessly, owing to their soft plumage. The feet have usually a feathered tarsus; the outer toe is reversible, and in the Fishing Owl the toes are

Snowy Owl (*Nyctea scandiaca*) and Bearded Owl (*Syrnium lapponicum*).

Osprey-like. The female is the larger. The size ranges from 6 in., Pygmy Owl (*Glaucidium*) of tropical forests, to 30 in., Great Gray Owl (*Syrnium*) of northern regions. Reddish brown is predominant, but dark and light colors may be exhibited by a single brood. The eggs are spherical and pure white. Some species breed before the snow has gone, and their eggs hatch a few at a time. *Athene noctua*, the Little Owl of Europe, is the symbol of learning. *Speotyto*, the Burrowing Owl, lives in the burrows of Prairie-dogs of N. America, or Cavies of S. America, on whose young it feeds, in part, while Rattlesnakes associate with both as a common enemy. *Aluco flammeus*, the Barn Owl, differs from other owls in lacking a manubrium to the

sternum, and in having its clavicles joined as a furcula to the keel.

Ownership. Legal right to a thing, or interest therein, to the exclusion of all others.

Ox. See BOVIDÆ.

Oxalic Acid. COOH.COOH. Simplest organic dibasic acid, occurring in many plants, *e.g.* the oxalis, as potassium salt, and in others, *e.g.* rhubarb, as a calcium salt; white needles, which decompose on heating. The sodium salt is prepared by fusing together sawdust and caustic soda. The commercial acid is prepared from this salt. It is used in dyeing and calico printing, and is poisonous.

Oxalic Ether. $(COO)_2(C_2H_5)_2$. Ethyl oxalate; liquid; bpt. 186.1° C. (cor), having an aromatic odor; prepared from oxalic acid and alcohol.

Oxalis. Wood-sorrel. Genus of small, showy-flowered herbs of the Geranium family, of wide geographical distribution. Some of them are cultivated for ornament.

Oxaluria. Name given to a supposed diseased condition in which calcium oxalate is present in the urine. A distinct disease is denied by many, and the abnormal condition of the urine is asserted to be but a symptom of some form of dyspepsia. As it occurs largely in the nervously depressed or gouty, this probably is the correct view.

Oxalyl. Group or radical. C_2O_2; derived from oxalic acid by the removal of two OH groups.

Oxamide. $(CONH_2)_2$. White crystalline powder, which sublimes and partially decomposes on heating; made by treating oxalic ether with ammonium hydroxide.

Oxea. Spicule, which is a rhobdus pointed at both ends; found in the sponge genus *Rosella*.

Oxenden, ASHTON, D.D., b. 1808. Bp. of Montreal 1869–78, rural dean of Canterbury 1879–84; author of many popular devotional books.

Oxenford, JOHN, 1812–1877. English dramatist and translator; dramatic critic of the London *Times* from 1846.

Oxenham, HENRY NUTCOMBE, 1829–1888. English R. C. divine from 1857. *Atonement*, 1865–81; *Eschatology*, 1876.

Oxenstierna, AXEL, COUNT, 1583–1654. Chancellor of Sweden 1611; powerful under Gustavus Adolphus; negotiator of several treaties; head of the Protestant League 1633; guardian of Queen Christina; ablest statesman of his time.

Ox-Eye. Yellow-flowered coarse herbs of the genus *Heliopsis*, of the Composite family, natives of e. N. America.

Ox-Eye, SEA. Shrubs of the genus *Borrichia*, natural family *Compositæ*, growing on the seacoast of the s.e. U. S. and the W. Indies.

Ox-Eye Daisy. See DAISY.

Oxford. City of Oxfordshire, on the Thames (or "Isis") and Cherwell, 52 m. w.n.w. of London; long famous for its university, chartered 1201. Here Latimer, Ridley, and Cranmer were burned 1555–56. Pop., 1891, 45,741.

Oxford, ROBERT HARLEY, EARL OF, 1661–1724. M.P. 1690; Speaker 1701; Sec. of State 1704; Chancellor of Exchequer 1710; Earl and High Treasurer 1711–14; impeached 1715, and in prison till 1717; at first a Whig, later a high Tory; founder of the Harleian library or collection.

Oxford University. There was an academy here in 802, but organized teaching cannot be traced back of 1133. It was chartered by Henry III. 1248, by Henry VIII. 1510, and incorporated by Elizabeth 1570. It has 23 colleges, of which 14 antedate the Reformation, and 6 halls. University Coll., founded 1249, is accounted the oldest, but Merton was the first to receive its statutes, 1264, and has the oldest library in England. 1858 saw many reforms in both Oxford and Cambridge; 1871, the abolition of religious tests, and 1877, the removal of nearly all remaining discriminations against dissenters. The number of undergraduates increased from 1,526 in 1862 to 3,365 in 1896; at the last date it had 95 on the teaching staff. Local examinations were initiated 1858; University extension began in Cambridge 1867.

Brasenose College, Oxford—The Quadrangle (showing also Spire of St. Mary's and Dome of Radcliffe Library).

Ox-gall. Bile or bitter fluid secreted by the liver of the ox. It is used for scouring cloth, cleansing carpets, and, when refined, by artists in mixing colors.

Oxidation. Union of oxygen with other substances. In a wider sense the term is applied to chemical changes resulting in the addition of negative radicles, simple or compound, to elements or compounds; or a decrease in the relative quantity of the positive radicle of a compound, whether or not accompanied by the substitution of negative radicles.

Oxide, ORGANIC. $(CH_2)_2O$. Regarded as derived from water, H_2O, by replacement of the two hydrogen atoms by two similar or different radicals. Other oxides are known as ethylene oxide. See ETHERS.

Oxides. Compounds formed by the union of oxygen with some other element. Acid oxides are those which, when treated with water, yield acids (anhydrides); *e.g.*, sulphur trioxide. Basic oxides, when treated with water, yield a base; *e.g.*, sodium oxide.

Oxidizing Agent. Substance which will readily give up its oxygen to another substance.

Oxley, JAMES MACDONALD, b. 1855. Canadian author of law-books and stories for boys.

Ox-Lip. *Primula elatior*. Showy-flowered herb of the Primrose family, native of Europe; cultivated for ornament.

Oxus, or AMOO DARIA. River of w. Asia. It heads in the Hindu Kush Mts., and flows n.w. to the sea of Aral. Length 1,600 m.

Oxyacids. See HYDROXYACIDS and ACID.

Oxydactylia. Tribe of *Phaneroglossa*, including forms with the toes pointed. Two groups are distinguished: *Raniformia* (Frogs), and *Bufoniformia* (Toads). The *Ranidæ* are Water Frogs with webbed toes and hind feet formed for jumping. The *Pelobatidæ* are Land Frogs, which resemble Toads, but have teeth on the maxillaries: *Bombinator* is an example. Toads (*Bufo*) have no teeth, are of clumsy form, the legs nearly equal in length, and the skin warty.

Yellow-bellied Frog (*Bombinator pachypus*).

Oxygen. O. At. wt. 16, sp. gr. 1.105, valence II. Discovered by Priestley 1774: colorless, odorless, tasteless gas, slightly soluble in water, forming eight-ninths of water, one-fifth of the air, and almost half of the solid earth; first obtained by the decomposition of mercuric oxide by heat. This is a convenient way of preparing it in small quantities; a better and cheaper method consists in heating a mixture of one part of manganese dioxide and two of potassium chlorate. It is made in large quantities for use in the oxyhydrogen-blowpipe, Drummond Light, etc. It combines with all elements except fluorine, and is a constituent of almost all acids and all bases. It is liquefied at —118° C. and 50 atm.; the liquid is bright blue, sp. gr. .9.

Oxygenated Water. See HYDROGEN DIOXIDE.

Oxyhemoglobin. HEMOGLOBIN (q.v.) containing a definite quantity of oxygen in loose combination, giving it a bright red color. It is found normally in the red blood-corpuscle and more abundantly in the arterial blood. The change of color, after the blood has gone through the capillaries and entered the veins, is due to some of the oxyhemoglobin giving up its oxygen in the tissue for the various bio-chemical processes and becoming hemoglobin, which again changes to oxyhemoglobin in the lungs. It requires an amount of oxygen equivalent to 1.76 c.c. at 0° C. and bar. 760 mm. to change one gm. of hemoglobin to oxyhemoglobin, and this proportion is constant. See CIRCULATION OF THE BLOOD, BLOOD, and RESPIRATION.

Oxyhydrogen Blowpipe. Apparatus for producing intense heat. The oxygen and hydrogen are led from two different sources to a jet consisting of a tube for the delivery of the oxygen, with a larger tube around it, the hydrogen being brought in through the annular space. Sometimes the gases are mixed in the body of the blowpipe. Invented by Dr. R. Hare in 1801. See DRUMMOND LIGHT.

Oxyrhyncha (MAJACEA). See CRABS.

Oxystomata. See CRABS.

Oxytricha. Genus of *Hypotricha*. It has cilia and bristles on the under side, by which it can walk over the surface of submerged objects, as plant stems.

Oxyuris. Pin-worm infesting the rectum of children. The females are larger than the males. See ASCARIDÆ.

Oyer. Hearing an instrument read on which an action was brought.—OYER AND TERMINER. Court of original jurisdiction over important crimes.

Oyster. See OSTREIDÆ.

Oyster-Catcher (HÆMATO PUSPALLIATUS). Shore bird (see LIMICOLÆ) having short bright-colored legs, toes three-webbed at the base, a bill 3 in. long, and body 18 in. The upper parts are blackish, white beneath. It feeds on crustacea, not on oysters.

Oyster Culture. Artificial rearing of oysters for the market dates from the Roman period or even earlier, but only in America has it assumed vast proportions; 28,263,847 bushels, worth $16,152,257, being marketed in 1892, four-

Dredging for Oysters.

sevenths from Maryland and Virginia. The natural bed where the oyster matures of itself is a bottom containing shells or gravel to which the young can attach themselves, and is so situated as to receive the washings of rivers at every low tide, bringing food (principally diatoms) into the sea, for the oysters. These beds are public, and any one can take oysters from them: the consequence is that they are fast being destroyed. At present the oysters taken from them are too small for market, being less than a year old. They are seed, which the oyster-planter procures and places upon designated areas to fatten for market. Large market oysters are four or five years old, and have been in the planter's care three or four years. The discovery by Brooks of the bisexuality of our oysters, makes it possible to breed them as we do fishes. See PISCICULTURE. The attempt to raise oysters from the eggs dates from the experiments of Coste in France 1858, although earlier experiments were known. As the French oyster, *Ostrea edulis*, is hermaphroditic and viviparous, it is possible to get a catch of spat on submerged sticks, tiles, or shells, only by planting this cultch near spawning oysters. A similar method of catching oyster spat is practiced on a large scale in the waters of Long Island Sound, oyster shells being planted as cultch. This method is resorted to as fast as the natural seed beds are depleted. It has been successfully introduced into Virginia waters. The American oyster, *O. virginiana*, is diœcious and oviparous; the germs of both sexes being spawned into the water to shift for themselves, great loss of possible seed results, so that experiments have been made to utilize this spawn by more artificial methods (especially by Claire-culture). The experiments have been successful, but oystermen have not yet applied these methods on a commercial scale.

Oyster-Plant. See SALSIFY.

Oyster-Shell Bark-Louse (MYTILASPIS POMORUM). Insect parasite of apple and other fruit trees, introduced into America from Europe. It lives under an oyster-shaped scale, $\frac{1}{8}$ in. long, of same color as the bark. Eggs hatch in spring, when a wash of strong soapsuds or kerosene spray may be employed as a remedy.

Ozanam, ANTOINE FRÉDÉRIC, 1813–1853. French historical writer and critic; prof. Sorbonne 1841. *Dante*, 1839; *Civilization in 5th Century*, 1845, tr. 1868; *German Studies*, 1847–49.

Ozark Hills. Area of broken country, rising in places to ridges and hills of considerable height, in s. Mo., w. Ark., and s. Indian Territory; most important in Ark., where they consist mainly of abrupt e. and w. ridges of quartzite, 1,000 to 3,000 ft. high.

Ozena. Form of nasal catarrh accompanied by an offensive discharge. The disease is disagreeable to possess and difficult to cure. It is the form largely dwelt upon in the circulars and advertisements of the venders of nostrums for catarrh.

Ozerof, VLADISLAS ALEXANDROVICH, 1770–1816. Russian tragic dramatist. *Œdipus and Athene*, 1804; *Fingal*, 1805; *Dimitri Donskoi*, 1807; *Polyxena*, 1809.

Ozokerite. Mineral wax; natural paraffin; substance consisting of carbon and hydrogen, and resembling wax or spermaceti in appearance, being nearly white when pure, but usually darkened by foreign matter. It was found in Moldavia 1833, in a bed of coal. Boryslaw, in Galicia, has been since 1859 the chief source of supply. Large deposits exist in Utah. It is widely used in the arts as a substitute for bee's-wax and in the manufacture of electrical insulators and candles.

Ozone. Allotropic form of oxygen, the molecule of which has the formula O_3; discovered by Schönbein 1840; blue gas of characteristic odor, occurring in minute quantities in the atmosphere, especially during electrical storms; made by passing a series of electric sparks through an atmosphere of oxygen; much more active than oxygen; strongly irritating to the throat membranes. At 270° C. it is converted into oxygen. It condenses to a blue liquid at —106° C.

Ozone Tests. Chemically prepared paper which, upon being exposed to the air, is changed in its tint if any ozone is present. Thallium hydroxide is turned brown, and faintly acid litmus paper with potassium iodide is turned blue.

Ozonometry. Art of measuring the quantity of ozone in the atmosphere.

P

Paca, WILLIAM, 1740–1799. Delegate to Congress 1774–79; signer of the Declaration of Independence; judge of Md. courts 1778–82; Gov. of Md. 1782–86; U. S. District Judge from 1789.

Pacchionian Bodies. Little bodies formed in connection with the middle membrane covering the brain (Arachnoid), which frequently contain chalky concretions that produce little depressions on the under side of the skull by their pressure.

Pace. See GAITS.

Pacheco y Osorio, RODRIGO, MARQUIS OF CERRALVO, d. ab.1650. Viceroy of Mexico 1624–35.

Pachomius, ab. 292–348. Egyptian monk, founder of the first monastery, on Tabenna in the Nile, ab. 340, and of the first nunnery. Before his time each monk was solitary. 7,000 of both sexes were under his care.

Pachuca. Mining town of Mexico, 56 m. n.e. of Mexico. Here Medina in 1557 discovered and used the patio process for the extraction of silver. The silver mines here were worked before the Spanish conquest. Pop., 1889, 32,800.

Pachydermata. See DIPLARTHRA.

Pachyglossa. See CRASSILINGUIA.

Pachymeres, GIORGIOS, 1242–ab.1310. Byzantine historian.

Pacificator, THE. Name given to PAUL FERRY (q.v.).

Pacific Ocean. Largest body of water on the globe, stretching from America to Asia and the E. India islands, a distance of 12,000 m., and from Bering Strait to the Antarctic Continent. Its area is ab. 67,500,000 sq. m., its mean depth ab. 2,500 fathoms, and maximum depth 5,000 fathoms. It contains vast numbers of small islands, some of which are volcanic in origin, others the work of coral polyps. It was first seen by Balboa at Darien 1513, and named by Magalhaes, who first sailed it 1520.

Pacific Railways. See RAILWAYS.

Pacini, GIOVANNI, 1796–1867. Italian composer of ab. 90 operas, popular only at home.

Pacinotti, ANTONIO, b. 1841. Italian electrician. The inventor 1860 of a dynamo-electric machine similar to that used later by Gramme.

Pacioli, LUCAS, d. 1510. Italian Franciscan, author of the earliest printed book on arithmetic and algebra. *Summa Arithmetica Geometria proporzioni e proporzionalita*, 1494.

Pacinian Corpuscles. Oval bodies about two mm. long in which a nerve fiber terminates. They are found in greatest abundance in those parts of the body where the sense of touch is most developed.

Packard, ALPHEUS SPRING, M.D., b. 1839. Prof. of Zoölogy and Geology in Brown Univ. 1878; most eminent as an entomologist; prolific writer.—His father, ALPHEUS SPRING, D.D., 1798–1884, was prof. Bowdoin Coll. from 1824, and its historian 1882.

Packer, ASA, 1806–1879. Builder and pres. Lehigh Valley Railroad; M.C. from Pa. 1853–57; founder of Lehigh Univ., to which he gave or bequeathed $2,500,000.

Packer, WILLIAM FISHER, 1807–1870. Gov. of Pa. 1858–61.

Packing. In Mechanics, materials used to prevent leakage where a moving piece has different pressures on the two ends of its surfaces of contact. For packing of pistons and plungers see those titles. For rods and valve-stems some form of fibrous material made from cotton is usual, either by itself or in conjunction with rubber, which gives elasticity. This is pressed in upon the rod by conical surfaces (see STUFFING BOX), with just pressure enough to give it a fluid tight contact with the moving rod, and yet without excessive friction. Metallic packings are also much used, and, when well taken care of, work satisfactorily. They are usually alloys of the type of Babbitt metal, and get pressure from springs and conical contacts. Cotton lamp-wick, canvas and rubber, paper and asbestos fiber, are bases of numerous packings.

Pack Wall. In Coal Mining, wall of stone or rubble, built along a gob road to hold up the roof; also used in the

Pack Wall.

anthracite regions synonymously with the English term chocks or nogs.

Pact. In Roman Law, agreement: if so made as to be legally obligatory, it was a contract; otherwise it was nude or naked. In English Law, a nude pact is an agreement without a legal consideration.

Pactolus. Brook of Lydia, w. Asia Minor. Crœsus was supposed to have been enriched by the gold-dust which it bore down from Mt. Tmolus.

Pacuvius, MARCUS, ab. 220–130 B.C. Roman dramatist, whose works were mostly adaptations from the Greek. Fragments remain.

Paddock, ALGERNON SIDNEY, b. 1830. U. S. Senator from Nebraska 1875–81 and 1887–93.

Paddock, BENJAMIN HENRY, D.D., 1828–1893. P.E. Bp. of Mass. from 1873, and historian of the diocese 1885.—His brother, JOHN ADAMS, D.D., 1825–1894, was P.E. Bp. of Olympia, Wash., from 1880.

Padella. Shallow vessel of metal or earthenware used in illuminations.

Paderborn. Old town of Westphalia, 50 m. s.w. of Hanover. It has a fine cathedral dating from 1163, and had a R. C. university 1614–1819. The coinage of its bishops was extensive ab.1600–1789. Pop., 1890, 17,986.

Paderewski, IGNACE JAN, b. 1860. Polish piano-forte virtuoso and composer; known in Europe since 1887. He made concert tours in America in 1891–92, 1893, and 1895–96.

Padilla, JUAN DE, d. 1521. Gov. of Saragossa; leader of a revolt against governmental oppression; hero of Spanish legends and plays, with his wife, MARIA, d. 1531.

Padishah. Title of Turkish and Persian sovereigns.

Padua. Ancient city of n. Italy, on the Brenta, 22 m. w. of Venice; birthplace of Livy; subject to Rome from 215 B.C.; twice sacked by Goths and Huns in 5th century; held by Venice 1405–1797, and then by Austria. Its university, founded 1221, has ab. 70 teachers, 1,400 students, and a library of 160,000 vols. The city has many old and fine buildings: its palace was completed 1219. Pop., 1892, 79,500.

Paducah. Capital of McCracken co., Ky., on the Ohio and Tennessee rivers; scene of battle, March 25, 1864, between Union troops with gunboats and 6,000 Confederates under Gen. Forrest. Pop., 1890, 13,076.

Pæan. Joyful or triumphant song, originally a hymn to Apollo.

Pædobaptists. Those who practice infant baptism; *i.e.*, the vast majority of Christians.

Pædogenesis. Production of young, parthenogenetically by a larva; observed by Wagner 1860, with a species of *Cecidomya*, which lives under the bark of trees. During the summer eggs develop parthenogenetically within the body of the larva, and the young consume their mother. Several summer-generations of this sort are succeeded in the fall by winter-generations, which attain sexual maturity. The cycle is begun again by the survivors the following spring.

Pæonine. See ROSOLIC ACID.

Pæonius, probably 5th cent. B.C. Sculptor of the *Victory* found at Olympia 1875.

Paër, FERDINANDO, 1771–1839. Italian composer of 43 operas; court conductor at Dresden 1802–6; imperial chapel-master in Paris under Napoleon.

Paesiello, GIOVANNI, 1741–1816. Italian composer of over 100 operas.

Pæstum. City of Lucania, s. Italy, on the Gulf of Salerno; colonized as Posidonia by Sybarites ab. 624 B.C.; held by Rome from ab. 272 B.C.; famed for its roses in time of Augustus; destroyed by Saracens in 9th century. Now noted for its ruins

Temple of Neptune at Pæstum.

of three Doric temples, first made known 1755; that of Neptune, so-called, is one of the oldest known, dating from 6th century B.C. These are the only remains of Greek temples in Italy in any fair state of preservation.

Paez, JOSÉ ANTONIO, 1790–1873. Pres. of Venezuela 1831–35 and 1839–43; imprisoned 1849–50; dictator 1861–63; long in U. S. *Autobiografia*, 1867.

Paganini, NICCOLO, 1782–1840. Most famous of violinists; b. in Genoa. His life was full of adventure. His studies and concert-pieces are still the high-water mark of technical accomplishment on the violin.

Paganism. Aggregate of religions which do not, with Christianity, Judaism, and Mohammedanism, acknowledge a personal God as historically revealed in Israel.

Page. Juvenile attendant on a prince or noble; formerly in training for higher service; now infrequent and merely ornamental.

Page, DAVID, 1814–1879. Scottish writer of popular and educational books on geology.

Page, DAVID PERKINS, 1810–1848. Principal of Albany Normal School, N. Y., 1844. *Theory and Practice of Teaching*, 1847.

Page, THOMAS NELSON, LL.D., b. 1853. Virginia author, eminent for negro dialect stories, especially *Marse Chan* and *Meh Lady*. *In Old Virginia*, 1887; *Two Little Confederates*, 1889; *The Old South*, 1892.—His great-grandfather, JOHN, 1744–1808, was M.C. 1789–97 and Gov. of Va. 1802–5.

Page, WILLIAM, 1811–1885. American painter of rare endowment and literary acumen. He did not wholly shake off Academic methods, and in these he lacked color harmony; but his work is always serious and masterly. He was an authority on portraits of Shakespeare, and his interest in the Kesselstadt death-mask brought it public appreciation.

Paget, SIR GEORGE EDWARD, M.D., LL.D., D.C.L., F.R.S., b. 1809. Medical prof. at Cambridge 1872; knighted 1885.—His brother, SIR JAMES, LL.D., b. 1814, was made Baronet 1871, and pres. College of Surgeons 1875. *Surgical Pathology*, 1853; *Clinical Lectures*, 1875.

Paget, VIOLET ("VERNON LEE"), b. 1857. English author, living in Italy. *Belcaro*, 1882; *Ottilie*, 1883; *Euphorion*, 1884; *Baldwin*, 1886.

Pagina. Surfaces of leaves and other organs.

Pagoda. Indian form of temple, generally square below, with a tower-shaped top, consisting of a sequence of stones of diminishing size and somewhat resembling a slender pyramid. In India and adjacent countries of e. Asia it is frequently in connection with a temple. Originally raised over relics of Buddha, the primal object has been lost sight of in China and

Pagoda at Tanjore, India.

Japan, where it has become an adjunct to certain native superstitions connected with geomancy. The pagoda at Tanjore is 182 ft. high.

Pahlavi, or PEHLEVI. Dialect of the Iranian or Persian family, with many Semitic elements. A version of the *Avesta* is preserved in this tongue. Its literature dates from the 3d century.

Pailleron, ÉDOUARD JULES HENRI, b. 1834. French dramatist and poet, Academician 1882. *Le monde ou l'on s'ennuie*, 1881.

Pain, BARRY, b. 1864. English humorist. *Stories and Interludes*, 1892.

Pain and Pleasure. Modifications of consciousness which defy accurate definition, but which, as some degree of feeling, probably accompany every state of mind and tend to produce characteristic volitional impulses. *E.g.*, pain arouses a tendency to repel, get rid of, or move away from the object or state which causes it, while pleasure causes an impulse to retain the pleasurable object or state. Physiologically, pain and pleasure depend distinctly upon modifications of the nervous system. The more important conditions giving rise to pain are excessive stimulation of sense organs, inflammation, and interference with natural appetites and impulses, while moderate sense stimulation and activity within certain limits are, as a rule, distinctly pleasurable. Sudden cessation of pain must also be regarded as a cause of distinct pleasure. Intellectual pains and pleasures depend not so much on nervous adjustment as on the relation of the painful or pleasurable percept to the individual's previous experience.

Paine, ELIJAH, LL.D., 1757–1842. Judge Vt. Supreme Court 1791–95; U. S. Senator 1795–1801; U. S. District Judge from 1801.—His son, MARTYN, M.D., LL.D., 1794–1877, prof. Univ. New York 1841–67, pub. *Institutes of Medicine*, 1847, and other works.—His brother, ELIJAH, 1796–1853, Judge N. Y. Superior Court from 1850, pub. *U. S. Circuit Court Reports*, 1827–56, and *Practice in Civil Actions*, 1830.

Paine, JOHN KNOWLES, b. 1839. American musician, prof. Harvard 1876; composer of an oratorio, *St. Peter*, several symphonies, a mass, performed 1867, cantatas, overtures, symphonic poems, chamber music, organ music, and incidental music to *Œdipus Rex*, performed at Cambridge 1881.

Paine, ROBERT TREAT, 1731–1814. Delegate to Congress 1774–78; signer of the Declaration of Independence; Atty.-gen. of Mass. 1780–90; Judge of Mass. Supreme Court 1790–1804.

Paine, THOMAS, 1737–1809. Radical writer on politics and religion, who came from England to America 1774, and pub. *Common Sense*, a pamphlet advocating independence, 1776; *The Crisis*, a periodical widely influential, 1776–83, and *The Rights of Man*, 1791–92. He was elected to the French National Convention 1792; was imprisoned by the terrorists nearly a year; resumed his seat in Convention after his release; issued *The Age of Reason*, 1795, and returned to the U. S. 1802. His deistical opinions alienated the sympathies of the religious public, and his last days were passed in obscurity. His memory has been rehabilitated by M. D. Conway, 1892, who has also edited his works, 4 vols., 1894–95.

Paine, WILLIAM H., 1828–1890. Captain of engineers 1861–65; resident engineer of construction of the Brooklyn suspension bridge.

Pains and Penalties. See ATTAINDER.

Painted-Cup. *Castilleia coccinea.* Scarlet-bracted herb of the natural order *Scrophulariaceæ*, native of e. N. America.

Painter, WILLIAM, ab.1525–ab.1595. English translator and compiler. His *Palace of Pleasure*, 1566–75, was taken from French and Italian sources, and was of use to Shakespeare.

Painter's Colic. Colic from lead poisoning; so called because frequently attacking painters. An OCCUPATION DISEASE (q.v.).

Painter's Cream. Mixture applied to oil paintings to prevent drying during the interruption of the work, and afterward washed off with water. It consists of mastic, nut oil, lead acetate and water.

Painting. The historical decorations of the ancient Egyptians are the oldest examples of painting known. Their paints were water colors with added gum and included red, blue, yellow, green, brown, black and white. The Babylonian and Assyrian ornamentation was similar to the Egyptian; it was decorative, but entirely void of perspective. The Greek painters were skillful with the pencil, but their coloring was primitive. Their paints were ground in water, with glue or yolks of eggs added and their pictures were protected by subsequent varnishing. With the ancient Romans the art did not progress. Fresco painting with tempera or water colors on wet plaster in mural decoration was well done as the remains of Pompeii indicate. Jan Van Eyck and his brother Hubert first employed oil colors with a colorless varnish in the latter part of the 14th century. Antonello da Messina carried the art to Italy in 1465. From this time the use of oil colors extended both in the north and south of Europe, the Venetian school developing great technical skill and knowledge of coloring, though the most perfect works were produced by the Dutch painters. Water-color resembles fresco though it cannot be used for mural painting. From 700 to 1300 the art was religious and ornamental, with childish drawing and bright colors. In the next two centuries the drawing and coloring improved greatly and in the 16th century genre painting was more practiced. This was the era of the great Masters. In the 17th century genre painting reached perfection in the north of Europe. In the 18th century there was more portrait painting and pictures of cotemporary life, followed by the development of landscape painting, which in the present century has reached a high standard. Paris is now the great school of painting in the world, but the art has lost any national character and become cosmopolitan. See ENAMEL, ENCAUSTIC PAINTING, FRESCO, and ART, ORIGIN OF.

Paints. Mixtures of insoluble colors or pigments with some vehicle as oil or water, which permit it to be applied with a brush to the surface of the article to be painted. Paint is used to decorate, and to close the pores, thereby to protect the surface from air, water, and fire. See LUMINOUS PAINT.

Paired Bacteria. See COCCUS BACTERIA.

Paisiello, GIOVANNI, 1741–1816. Italian composer of numerous operas and masses.

Paisley. Town of Scotland, 7 m. w.s.w. of Glasgow. It has large manufactures of cotton, muslin, and silk, and more

The Abbey Church of Paisley.

notably of shawls. In 1163 a Clugniac priory was founded here, which was raised to an abbey 1219. The town contains many fine statues and buildings. Pop., 1891, 64,379.

Paiute Indians. See SHOSHONES.

Paix des Dames. See CAMBRAY.

Paixhans, HENRI JOSEPH, 1783–1854. French officer, inventor of the Paixhans gun 1824; this was a cast-iron cannon for firing shell; military writer.

Pakenham, SIR EDWARD MICHAEL, 1778–1815. Irish officer, distinguished in Spain; Major-gen. 1812; defeated and slain at New Orleans.

Pakfong. Alloy of copper and arsenic, made in China: formerly much used in Europe for philosophical instruments, now replaced by alloys of nickel.

Palacio, RAIMUNDO, b. ab.1840. Pres. of Venezuela 1890–92; defeated by Crespo.

Palacky, FRANCIS, 1798–1876. Historian of Bohemia, 5 vols., 1836–67.

Paladilhe, ÉMILE, b. 1844. French composer of operas (*Le Passant* 1872, *L'Amour Africain* 1874, *Suzanne* 1878, *Diana* 1885, *Patrie* 1886), symphonies, masses, etc.; most widely known by his trifle *Mandolinata*.

Palæarctic Province. Zoölogical region including n. Asia, Europe, and Africa n. of the Atlas Mts. Characteristic animals found are: Bears, Sheep, Goats, Catarrhine Monkeys, and Pheasants.

Palæaspis. Pteraspidian fish found 1883 by Claypole in the Onondaga shales of Pa. It is the only representative of this group of fishes yet known from America, and, except *Onchus pensylvanicus*, the oldest American fossil vertebrate.

Palæmon. See CARIDIDÆ.

Palaemon, QUINTUS REMMIUS, 1st cent. Latin writer on grammar.

Palæobotany. Paleontology of the vegetable kingdom; study of fossil plants. Great progress has been made during recent years in the study and elucidation of their structure and succession in time. In this field the chief laborers have been Heer, Saporta, Williamson, Sohns-Laubach, Lesquereux, Newberry, Dawson, and Ward.

Palæocarida. See GIGANTOSTRACA.

Palæocrinoids. See CRINOIDEA.

Palæologus. Last Byzantine dynasty, 1260–1453. Another branch held Montferrat 1305–1533; a third governed Morea 1380–1460. See LASCARIS.

Palæonemertea. Group of nemertean worms, characterized by absence of both the deep lateral fissure on the side of the head and the stylets on the proboscis. The mouth lies behind the brain.

Palæoniscus. Heterocercal lepidoganoid fish, chiefly Carboniferous and Permian, with highly ornamented rhomboid scales and a single dorsal fin.

Palæophoneus. Scorpion recently found in the Upper Silurian rocks of Gothland, Sweden; oldest air-breather known.

Palæospondylus. Fossil found 1894 in the Lower Old Red Sandstone of Scotland. It is only ab. 2 in. long, but is considered by Traquair to be an ancient representative of the lampreys.

Palæotheridæ. Family of *Perissodactyla*, comprising fossil Ungulates from the Eocene and Miocene Tertiary, varying in size from a sheep to a horse. All the feet are three-toed.

Outline of *Palæotherium magnum* (restored), after Cuvier.

The canines are longer than the other teeth: the animals seem to have had a proboscis like the tapirs. *Palæotherium* is an example found in the Eocene.

Palæotheriodont Dentition. Upper molar teeth of the amœbodont-lophodont series, having outer tubercles of the crowns, crescentic and longitudinal, the inner tubercles united to them by oblique-transverse ridges, as in *Palæotherium*.

Palæotherium. See PALÆOTHERIDÆ.

Palæozoic. All fossiliferous strata below the top of the Permian. See COLUMN.

Palæozoölogy. Science of the distribution of animals in the strata of the earth's crust. The oldest strata (Archæan or Laurentian rocks) represent the Azoic period, when living things had not yet appeared, or if they lived, their remains have not been preserved. Next comes the Palæozoic period, characterized by fossil forms most different from species now living. This age includes the following periods: the Cambrian, Ordovician, Silurian, Devonian (Old Red Sandstone), Carboniferous or coal-age, and Permian. The great classes of animals up to and including *Ichthyopsida* had become evolved in these periods. The next age is the Mesozoic (secondary period), including the Triassic, Jurassic, and Cretaceous rocks. The *Sauropsida* became established during these periods. Finally, the Kainozoic (Tertiary) Age includes the Eocene, Miocene, Pliocene, Post-Pliocene (Post-Tertiary), including the present (Quaternary) period. During this age the *Mammalia* became established. The most SYNTHETIC TYPES (q.v.) are always found in the earlier formations. See PALEONTOLOGY.

Palæphatus. Greek compiler of legends; probably of 2d century B.C.

Palafox y Melzi, JOSÉ DE, 1780–1847. Spanish officer, famous for his defense of Saragossa, 1808–9; prisoner in France till 1813; Duke of Saragossa 1836.

Palagonite-Tuff. Fragments of palagonite intermixed with basaltic lava. It occurs in Sicily, Iceland, and Eifel, Germany.

Palaihnihan (or PALAIK) **Indians.** Indians living along Pit River in Cal. They are very degraded, due to the inroads of the Modocs and their warfare with the whites. The women are purchased in marriage and polygamy is common. When persons die of unknown diseases they are cremated, otherwise buried in a sitting posture.

Palais Royal. In Paris, built by Richelieu, who bequeathed it to Louis XIII. Louis XIV. gave it to the Duke of Orleans, in whose family it remained until 1848. The Théâtre Français is at the s.w. angle.

Palamedes. Greek who, when Ulysses feigned madness, detected him by placing his infant son before his plow; in later times, said to have invented lighthouses, measures, scales, and dice.

Palanquin. Asiatic vehicle for conveyance of a single passenger by four bearers.

Palaprat, JEAN, 1650–1721. French comic dramatist, collaborator of D. A. de Brueys.

Palate. In Botany, projection from the lower lip of the personate corolla of certain flowers.

Palate. Roof of the mouth, anteriorly of bone, bounded by the gums, the hard palate; posteriorly of a muscle membrane-like structure, the soft palate; terminating in the uvula, which is sometimes inaccurately called the palate.

The Mouth widely opened so as to show the Palate:

1, 1, the upper, and 2, the lower lip; 3, 3, the hard palate; 4, 4, the soft palate; 5, the uvula; 6, 6, the arches of the soft palate; 7, 7, the tonsils; 8, the tongue.

Palatinate (PFALZ). Former state of Germany, consisting of two sections, Upper and Lower. From ab.1100 till 1648 they were governed by an elector of the empire. By the treaty of Westphalia the Upper fell to Bavaria. The two were united 1777–1801, when the Lower was parceled out between several neighboring states, France getting the territory w. of the Rhine. This was restored to Germany 1814–15, Bavaria getting the greater portion.

Palatine. Officer at first attached to a sovereign's court; later, representing him in a district. In England, Cheshire was a county palatine ab.1080–1540, Durham till 1836, and Lancaster 1451–1873.

Palatine Hill. Central hill of the seven on which Rome was built; supposed site of the original city, and, in later days, of the residences of emperors and wealthy patricians.

Palato-Quadrate Bar. Cartilaginous bar in the skull of embryo vertebrates, which is replaced by the different bones that form the upper jaw, as the maxillaries and palatines. It represents, in part at least, the first visceral arch of the primitive vertebrates.

Pale. See ENGLISH PALE.

Pale, IRISH. See ENGLISH PALE.

Pale, JEWISH. In Russia, along the frontier from Baltic to Black Sea; established 1786. It lately contained over 3,500,000 Jews, who were forbidden to enter Great Russia.

Paleæ. Flat setæ of Annelids.

Paleaceous. Organs resembling palets, or bearing palets or chaff.

Paleario, AONIO, 1500–1570. Italian humanist, twice accused of heresy; burned by the Inquisition. *Immortality*, 1526; *Passion of Christ*, 1542; *Actio in Pontificco Romanos*, 1606.

Palembang. Old city of s.e. Sumatra, on the Moesi, 50 m. from Java Sea; long commercially important; now capital of a Dutch residency. Pop. ab. 50,000.

Palenque. In the state of Chiapas, Mexico. It contains the ruins of five remarkable buildings, remains of a city supposed to have been abandoned before the coming of Cortez.

Paleography. See DIPLOMATICS.

Paleolithic Man. The presence of rough stone implements in the early drift in caves and along river courses, associated with the remains of the Cave Bear, Hyena, Elephant, Mammoth, and Rhinoceros, in Europe, and similar remains in America, shows that man was widely distributed over the globe at the close of the glacial epoch, following the retreating ice northward, and perhaps living and hunting like the Eskimo, though there is doubt if the modern Eskimos are related directly to that race.

Paleontology. Science that treats of fossil remains, both animal and vegetable; now often restricted to the former. It has risen to so high a position for accuracy that it is the main dependence of the geologist in determining the age of strata. The fossil faunas of the different systems are so well known that the geologist in a new country need only collect its fossils and compare them, in order to ascertain their horizon. Much time and labor are thus saved. From Paleontology we learn that a regular gradation of organic life has existed among fossils, and that this gradation corresponds closely with that of the existing world of life, indicating a steady progress in development from the beginning. But it has not yet found any of the earliest forms. In the lowest Cambrian, from which the oldest intelligible fossils have been obtained, all the great subdivisions are present except the vertebrates. The first chapter in the evolution of the organic world is consequently yet unknown. See PALÆOZOÖLOGY.

Palermo. Seaport and largest city of Sicily, on the n. coast; anciently Panormus; held by Carthage till 254 B.C.; capital of the Saracens 830–1071, and of the Normans and their

Palermo.

successors till 1269. It has some fine old buildings, a good harbor, a large trade in fruit and wine, and a university, founded 1447, with ab. 65 instructors and 1,300 students. Pop. 1892, 273,000.

Palestine. Holy Land, the Promised Land of the Israelites; in w. Asia, between the Mediterranean and the deserts of Arabia. It measures ab.150 m. from n. to s., with an area w. of the Jordan of ab. 6.000 sq. m., and in all perhaps 11,000. The Jordan valley is greatly depressed below sea level: Lake Gennesaret is 682 ft., and the Dead Sea 1,292 ft., below the Mediterranean. The region was occupied by Canaanitish or Phenician tribes till conquered by the Hebrews ab.1400 B.C.;

from ab. 587 B.C. was held successively by Babylonians, Persians, and Greeks, and from 65 B.C. by Romans. Saracens conquered it 634. Crusaders held it 1098–1187, and portions of it till 1291. Since 1517 it has been a part of the Turkish empire. Present pop. perhaps 500,000, of whom 43,000 are Jews. A railway from Joppa to Jerusalem was opened Sept. 1892.

Palestrina. Italian town, 22 m. e. of Rome; anciently Præneste; prominent in the Latin war 340 B.C.; sacked by Sulla 82 B.C.; long held by the Colonnas; notable for its remains of antiquity. Pop. ab. 6,000.

Palestrina, GIOVANNI PIER LUIGI DA, 1524–1594. Most illustrious of church music composers in the 16th century. His most famous work is the *Missa Papæ Marcelli.*

Palets, PALEA, or PALE. In Botany, bracts which occur in a capitate inflorescence on the axis or receptacle, as in Teasel; also inner scales or glumes of the flowers of grasses; chaff.

Paley, WILLIAM, D.D., 1743–1805. Archdeacon of Carlisle 1782, prebendary of St. Paul's 1793, sub-dean of Lincoln 1795. *Moral and Political Philosophy,* 1785; *Horæ Paulenæ,* 1790. His *Evidences of Christianity,* 1794, and *Natural Theology,* 1802, were long in general use as text-books, though their viewpoint was utilitarian. The latter applied the argument from design in Nature, and its adaptations, to prove the existence of God. —His grandson, FREDERICK APTHORP, LL.D., 1816–1888, entered the R. C. Ch. 1846, and edited sundry Greek classics.

Palfrey, JOHN GORHAM, D.D., LL.D., 1796–1881. Prof. Harvard 1831–39; ed. *N. American Review,* 1835–43; M.C. 1847–49. *Evidences,* 1843; *Jewish Scriptures and Antiquities,* 4 vols., 1833–52; *Hist. New England,* 4 vols., 1858–64.—His daughter, SARA HAMMOND ("E. FOXTON"), b. 1823, pub. *Herman,* 1866, and several volumes of verse, especially *Sir Pavon and St. Pavon,* 1867.

Palgrave, SIR FRANCIS, 1788–1861. English historian, of Jewish parentage (orig. COHEN), knighted 1832; keeper of records from 1838. *English Commonwealth,* 1832; *Corporations,* 1832; *King's Council,* 1834; *History of Normandy and of England,* 4 vols., 1851–64.—His son, FRANCIS TURNER, b. 1824, Prof. of Poetry at Oxford 1886, editor of the *Golden Treasury of English Lyrics,* 1861, has written *Essays on Art,* 1866, and several vols. of poetry.—His brother, WILLIAM GIFFORD, 1826–1888, was an officer in India 1847–53, a Jesuit priest till 1864, a consul in Asia and elsewhere, and Minister to Uruguay from 1884. His dangerous journey through Arabia was described in a *Narrative,* 1865. *Hermann Agha,* 1872; *Dutch Guiana,* 1876; *Ulysses,* 1887.

Pali. Calcareous and vertical rods encircling the columella in some corals. They are not united to the septa.

Palikao. In China, below Peking; scene of an Anglo-French victory 1860. For it the commander, Gen. Cousin-Montauban, 1796–1878, was made Count P. and Senator. He became Premier of France and Minister of War shortly before Napoleon III.'s fall.

Pali Language. Dialect derived from the older Sanskrit, becoming in time the sacred language of the Buddhists, and still used by Buddhist writers in Burmah, Siam and Ceylon.

Pali Literature. That of the Buddhist sacred texts, and all other works by Buddhist authors. It is still used in Ceylon, Burmah, and Siam. See PALI LANGUAGE.

Palimpsest. Vellum or other material from which the writing had been erased, that it might be written on anew. Sometimes the erasure has been so imperfect that the original writing can be deciphered or restored, as in an old painting: this has led to the recovery of many mediæval texts, especially MSS. of 600–900.

Palindrome. Sentence spelled the same, forward or back, as "Madam, I'm Adam"; common in Latin, unfamiliar in Greek and in modern languages.

Palingenesis. PARALLEL VARIATION (q.v.) without CENOGENY (q.v.).

Palinode. Song or poem repeated; thence, denying or retracting a previous one.

Palinurus. Æneas' helmsman, who fell into the Tyrrhenian Sea; thence a promontory of Lucania, s. Italy.

Palisa, JOHANN, b. 1848. Astronomer at Vienna, discoverer of 66 asteroids, Aug. 1889.

Palisade-Cells. Layer or layers of cells, placed, with their longer diameters vertical, immediately under the upper epidermis of leaves. They contain much chlorophyll, and so cause the upper surface of most leaves to be greener than the lower.

Palisades. Cliffs on w. bank of Hudson, in N. J., extending 20 m.; ht. ab. 300 ft. They are outcrops of trap-rock.

Palisot de Beauvois, AMBROISE MARIE FRANÇOIS JOSEPH, BARON, 1752–1820. French botanist. *Flore d'Oware et de Benin en Afrique,* 1804–7; *Fructification des Mousses et des Lycopodes,* 1811; *Essai d'une nouvelle agrostographie,* 1812.

Palissot de Montenoy, CHARLES, 1730–1814. French playwright and satirist. *Les Philosophes,* 1760; *Œuvres,* 6 vols., 1809.

Palissy, BERNARD, ab. 1510–1589. French potter of genius, inventor of a process of enameling; twice imprisoned as a Protestant. He died in the Bastile. His best-known pieces

Rustic Plate, by Palissy.

are those decorated with snakes and lizards in relief, colored to closely resemble nature, and were probably molded from the animals themselves.

Palladic Chloride. $PdCl_4$. Made by dissolving the metal in aqua regia, similar to platinic chloride; unstable, decomposing into palladous chloride, $PdCl_2$, and chlorine.

Palladio, ANDREA, 1518–1580. Italian architect, chiefly at Vicenza and Venice. His book, *Dell' Architettura,* 1570, had wide circulation and great influence.

Palladium. Pd. At. wt. 106.6, sp. gr. 11.8, sp. ht. .058, mpt. 1,500° C., valence III., IV., VI. Rare metal, discovered by Wollaston 1803. Its chief source is a Brazilian gold-ore, from which it is obtained by melting it together with silver, then treating with nitric acid, which dissolves the silver and palladium; the latter is precipitated as the cyanide, which upon ignition yields palladium. It resembles iridium and platinum in appearance. The most characteristic property is its power to absorb hydrogen (see PALLADIUM HYDROGEN). It is soluble in nitric and hot concentrated sulphuric acids, is not affected by air and is used for graduated scales and, alloyed with silver, for tooth-fillings.

Palladium. Image of Pallas Athene, supposed to have fallen from heaven, on which the safety of Troy depended; stolen by Ulysses and Diomed; said to have been preserved in the Acropolis at Athens. The Romans claimed that it was taken to Italy by Æneas and kept in the temple of Vesta.

Palladium Bromides. $PdBr_2$. Brown substance, soluble in aqueous hydrobromic acid; made by dissolving palladium in a mixture of bromine hydrate and nitric acid. A tetrabromide occurs in double salts, but has not been isolated.

Palladium Cyanides. $Pd(CN)_2$. Palladous cyanide. Yellowish-white, slimy substance, soluble in ammonium hydroxide; made by precipitating a palladous salt with potassium cyanide.—$Pd(CN)_4$. Palladic cyanide. Present in the blood-red solution obtained by shaking finely divided potassium palladium chloride with a solution of mercuric cyanide.

Palladium Hydrogen. If metallic palladium be placed in an atmosphere of hydrogen, it absorbs 960 times its volume of the gas. This substance acts as an alloy, and is an excellent reducing agent.

Palladium Hydroxide. $Pd(OH)_2$. Dark-brown precipitate, obtained by adding sodium carbonate to a palladium salt, and heating.

Palladium Iodide. PdI_2. Horn-like substance, soluble in ammonium hydroxide and potassium iodide; made by precipitating a palladous salt with potassium iodide.

Palladium Nitrate. $Pd(NO_3)_2$. Long brownish-yellow rhombic prisms, obtained from a solution of the oxide in nitric acid.

Palladium Oxides. Pd_2O. Suboxide. Black powder, obtained by igniting palladium carbonate.—PdO. Palladous oxide. Gray to black powder of metallic luster, soluble with difficulty in acids; made by gently heating palladium nitrate. —Pd_5O_6. Hexoxide. Bright-brown powder, obtained by heat-

ing palladium sulphosalts with potassium nitrate and hydroxide.—PdO_2. Dioxide. Black powder, obtained by precipitating the chloride with hot caustic potash.

Palladium Sulphides. Pd_2S. Subsulphide. Whitish-gray substance, not attacked by acids; obtained by heating the higher sulphides.—PdS. Palladous sulphide. Bluish-black powder, obtained by heating the metal with sulphur, or by precipitating a palladic salt with hydrogen sulphide.—PdS_2. Disulphide. Crystalline powder, made by decomposing sodium sulphopalladate with hydrochloric acid.

Palladius, ab.368–431. Bp. in Bithynia and Galatia. His *Hist. Lausiaca* (Lives of Monks) was pub. 1616.

Palladius, 7th cent. Greek medical writer.

Palladius, St. Traditional Irish or Scottish bishop ab. 430.

Palladius, Rutilius Taurus Æmilianus, 4th cent. Latin writer, whose *De Re Rustica* was tr. 1803. Book 14 is in verse.

Pallas. See Athena and Minerva.

Pallas. Second asteroid, discovered 1802 by Olbers.

Pallas, Peter Simon, 1741–1811. German naturalist, who traveled in Asia 1768–74 under Russian auspices. *Reise*, 1771–76; *Flora Rossica*, 1784–88; *Southern Provinces*, tr. 1812. He lived in the Crimea from 1796.

Pallasite. Meteorite consisting largely of iron, but also containing interspersed grains of chrysolite or some similar mineral.

Pallavicino, Ferrante, 1618–1644. Italian satiric poet, executed at Avignon.

Pallavicino, Sforza, 1607–1667. Italian Jesuit, prof. at Rome 1639, Cardinal 1659. Of his many works the most noted is a *Hist. Council of Trent*, 1656–57, offered as a substitute for the too liberal one of Sarpi.

Pallial Line. Line on interior of clam's shell, along which the mantle is attached by means of muscle fibers.

Palliata. See Tectibranchia.

Pallice. French harbor outside Rochelle, opened 1889.

Palliobranchiata. See Brachiopoda.

Palliser, Sir William, 1830–1882. Irish officer, inventor of projectiles and of methods of improving guns; M.P. 1872; knighted 1873.—His brother, John, b. 1817, explored wild parts of n.w. Canada 1857–60. *Solitary Hunter*, 1853; *Report*, 1861.

Pallium. Mantle of Mollusks.

Pallium. Woolen stole, adorned with black crosses, worn by the pope, and sent to a new archbishop, as necessary to his complete investiture and institution.

Pall Mall. Street in London, near St. James's Park; named from a game formerly much played there, which consists in driving a ball through an elevated hoop with a mallet of peculiar shape.

The Game of Pall Mall.

Palm, Johann Philipp, 1768–1806. Bookseller of Nuremberg, shot by Napoleon's order for circulating a pamphlet reflecting on the French invasion. His execution was both a crime and a blunder, and did much to stir up a national spirit in Germany.

Palma. Capital of the Balearic Isles; on s. coast of Majorca. It has fine old buildings, some manufactures, and a fair trade. Pop. ab. 61,000.

Palma. One of the Canary Islands. Area 330 sq. m., pop. ab. 40,000.

Palma, Giacomo ("Vecchio"), ab.1480–1528. One of the greatest Venetian painters. The *Daughters of Palma* in Dresden and the *Saint Barbara* in Venice are his best known works.—His great-nephew, Giovane, 1544–1628, was an inferior painter.

St. Barbara, by Giacomo Palma.

Palma, Ricardo, b. 1833. Peruvian author.

Palmaceæ. Natural family of flowering plants, of the class *Angiospermæ* and sub-class *Monocotyledons*, comprising ab.129 genera and 1,100 species, mostly trees and shrubs, widely distributed throughout tropical and warm regions; called the Palm family.

Palma Christi. See Castor-Oil Bean.

Palmate, or Digitate. Arrangement of principal veins of a simple leaf or leaflets of a compound leaf in a radiating manner from a point, as in the Geranium and Horse Chestnut.

Palmati. Swimming legs of birds, having a posterior toe and three anterior ones, the latter united to their tips by a web.

Palmatiped. Palmately cleft leaves or other organs.

Palmblad, Wilhelm Fredrik, 1788–1852. Swedish novelist, geographer, historian, and compiler; prof. Upsala 1835. *Dict. of Biography*, 23 vols., 1835–59.

Palmellin. Red pigment contained in certain minute organisms of *Palmellaceæ*.

Palmer. Pilgrim in crusading times, returned with palms from the Holy Land; later, any pilgrim.

Palmer, Benjamin Morgan, D.D., LL.D., b. 1818. Pastor at New Orleans from 1856; ed. *Southern Presb. Review* from 1847. *The Family*, 1876.

Palmer, Edward Henry, 1840–1882. Explorer in Palestine 1868–70; prof. Cambridge 1871–81; killed by Arabs in the Sinaitic peninsula. *Desert of the Exodus*, 1871; *Arabic Grammar*, 1874; *Persian Dictionary*, 1876–83; tr. *Koran*, 1880.

Palmer, Erastus Dow, b. 1817. American sculptor, distinguished for reliefs of ideal and allegorical subjects. His bronze statue of Robert R. Livingston is in the old Hall of Representatives in Washington.

Palmer, James Shedden, U.S.N., 1810–1867. Captain 1862, Commodore 1863, Rear-admiral 1866; distinguished at Vicksburg, New Orleans, and Mobile.

Palmer, John McCauley, b. 1817. Brig.-gen. U. S. Vols. 1861; Major-gen. 1862–66, serving chiefly in Tenn. and Ga.; Gov. of Ill. 1869–73; U. S. Senator 1891–97; National Democratic candidate for Pres. 1896.

Palmer, John Williamson, b. 1825. American author, as is his wife, Henrietta (Lee), b. 1834.

Palmer, RAY, D.D., 1808–1887. Pastor at Albany, N. Y., 1850–66; sec. Cong. Union 1866–78; author of *My Faith Looks up to Thee*, 1830, and many other favorite hymns.

Palmer, ROUNDELL. See SELBORNE, LORD.

Palmerston, HENRY JOHN TEMPLE, VISCOUNT, 1784–1865. M.P. 1806; Sec. of War 1809–28; Foreign Sec. 1830–41 and 1846–51; Home Sec. 1852–55; Premier 1855–58 and from 1859; Tory till 1828, then Whig. He was a plain but effective speaker, and one of the most popular of British ministers.

Palmetto. Several species of palms, natives of Florida and West Indies.

Palmetto Leaves. Leaves of the Palmyra palm, found in India. They are used in the manufacture of hats and mats.

Palmieri, LUIGI, 1807–1896. Prof. Naples 1847; director Vesuvius Observatory 1854; writer on meteorology.

Palmistry, or CHIROMANCY. Art of divination by examining lines in the palm of the hand; said to have come from India. It is to be distinguished from chirognomy, which deals with the supposed indications of the general shape of the hands. The principal lines of the palm are designated respectively as those of Life, the Head, the Heart, Saturn or Fate, the Liver, and Sun or Fortune. The prominences or depressions at the base of each finger also are regarded as highly significant, and are called by the names of the planets: Jupiter, Saturn, Mars, Mercury, Venus, Apollo (the Sun), and the Moon. These are referred to the tastes or passions. The lines are interpreted according to their depth, color, and length, and their relations to the prominences or Mounts. The lines of the wrist, called Rascettes, or bracelets, are believed to indicate the duration of life, each line representing thirty years. A belief in palmistry exists in China and Japan, and is known in Japan as Te-no-suji-mi, or Hand's Line Looking. Great significance is there attached to the fine lines at the inner joints and on the palmar surfaces of the fingers. Those across the inside of the first finger indicate skill and thrift; at the first joint of the thumb wealth, and on the palm below the thumb wisdom. Lines on the palm below the little finger indicate children, as many as there are lines; the lines below these refer to success in matrimony. If the fine lines on the palmar surface of the middle finger are in the form of a circular spiral, it is a sign of skill in handwriting. These indications refer to the left hand; another series is supposed to apply to the right. The Line of Life receives the same name as in Europe, and is also known as the Line of Earth or Mother, while that of the Heart is thought to represent Heaven or Father, and that of Head, Man, or the individual himself. The relations of these lines, forming the cosmical Trinity, are believed to be of the highest importance. See CHIROMANCY.

A, will; B, logic; C, mount of Venus; D, mount of Jupiter; E, mount of Saturn; F, mount of Apollo; G, mount of Mercury; H, mount of Mars; I, mount of the Moon; K, the rascette; *a, a*, line of life; *b, b*, line of head; *c, c*, line of heart; *d, d*, line of Saturn or fate; *e, e*, line of liver or health; *f, f*, line of Apollo or fortune; *g, g*, the girdle of Venus; R, the quadrangle; *m, m, m*, bracelets of life.

Palmitic Acid. $C_{16}H_{32}O_2$. Mpt. 62° C. White, solid, crystalline acid, prepared by the decomposition of palmitin by water. Its sodium salt is one of the main constituents of soap, and is prepared by the action of caustic soda upon palmitin. It is also prepared from its soap. It occurs in palm oil, animal fats, olive oil, and Japanese beeswax.

Palmitin. $C_3H_5(O.C_{16}H_{31}O)_3$. Tri-palmitin. Mpt. 66° C. Combination of the glyceryl group with palmitic acid; white plates; chief constituent of palm oil, and present in most animal and vegetable fats. Caustic alkalies decompose it, forming glycerin and palmitic acid salts or soaps.

Palm Oil. Semi-solid yellow fat, prepared by boiling the fruit of certain palms with water. It consists mainly of tripalmitin, but also contains palmitic and sebacic acids. It is used in soap-making. It is exported from Africa.

Palms. Aborescent endogens, chiefly inhabiting the tropics, distinguished by their fleshy, colorless, six-parted flowers inclosed within spathes and rigid, pinnated, articulated leaves. They produce wine, oil, sugar, salt, thread, utensils, weapons, sago, etc. The most common species is the cocoanut. The stems furnish a great variety of wood which is used for cabinet and marquetry work and for billiard cues. See PALMACEÆ.

Palm Sunday. Sunday before Easter, so called from the R. C. Ch. ordering palm branches to be carried in procession in imitation of those strewn before Christ when he entered Jerusalem. It is customary to consecrate palm branches, which are afterward distributed to the congregation, in R. C. churches on this day.

Palm Wine. Alcoholic beverage used in India, Africa, and Chili; prepared from the sap of the palm tree.

Palmyra, or TADMOR. City of e. Syria, in an oasis; said to have been built by Solomon. It attained its greatest splendor under Hadrian, who renamed it Adrianopolis, ab.130. Here Zenobia ruled 266–272, when Aurelian took the city and destroyed it. The ruins became known to Europeans 1678.

Triumphal Arch at Palmyra.

Palo Alto. Battlefield in s. Texas, where 2,300 Americans under Gen. Taylor defeated 6,000 Mexicans, May 8, 1846.

Palo Alto. In Cal., 30 m. e. of San Francisco; seat of Leland Stanford, Jr., University.

Palos. Seaport of s.w. Spain, whence Columbus sailed 1492. Pop. ab.1,200.

Palpicornia, or HYDROPHILIDÆ. Swimming beetles with pentamerous tarsus and a pair of short, club-shaped antennæ; the maxillary palps are often longer than the antennæ. They feed on plants.

Palpitation of the Heart. A consciously rapidly beating heart. It may indicate disease of that organ, but is often caused by a disordered stomach.

Palpocil. Delicate hair-like process of a cell used for purposes of touch.

Palps, or FEELERS. 1. Distal joints of the endopodite in the mandibles and maxillæ of arthropods. 2. Certain tentacles on the heads of annelids.

Palsy. Loss of sensation or motion of any of the muscles of the body (see PARALYSIS). That form of paralysis accompanied by involuntary movements or shakings is frequently meant when this word is employed.

Paltock, ROBERT, ab.1699–1767. English author of *Peter Wilkins*, 1750, a curious romance of flying islanders, anonymous till 1835.

Paludan-Müller, FREDERIK, 1809–1876. Danish poet, dramatist, and novelist. *Adam Homo*, 3 vols., 1841–49; *Kalanus*, 1854; *Ivar Lykke*, 3 vols., 1866–73; *Adonis*, 1874.—His brother, CASPAR PETER, 1805–1882, prof. Copenhagen 1872, was a historical writer.

Paludicolæ (ALECTORIDES). Group of *Grallæ*, including the *Macrodactyli* or *Rallidæ* (Rails) and the *Pressirostres* or *Gruidæ* (Cranes).

Paluli. Pillars in corals, surrounding the columella; independent of the septa.

Palustrine. Plants and animals growing naturally in marshes.

Pambour's Theorem. "In a heat engine, moving with a uniform periodical motion, the mean effective pressure of the fluid is equal to the total resistance per unit of area of piston."

Where the resistance is known, the mean velocity of the piston of such an engine will be found from the formula: $Ns = \frac{r^1hW}{rpA}$. In this, N = strokes using steam per min.; s = stroke length; r^1 = apparent ratio of expansion, and r = the real ratio when clearances in the cylinder are allowed for; h = the available heat of combustion in foot-lbs. for one lb. of coal; W = the lbs. of coal burned per minute; A = area of piston in square inches, and p = pressure equivalent to the expenditure of heat. r and p have to be calculated from other formulæ; the others are matters of observation. The principle was first applied by Count de Pambour in his *Theory of the Steam Engine* and *On Locomotives.*

Pamir. Plateau in w. Asia, ab.13,000 ft. above sea. On the south is the range of the Hindu Kush, and from it radiate the Karakorum and the Thian Shan. It is a desert region, sparsely populated, and controlled by Russia. The mountain ranges rise 4,000 to 5,000 ft. higher, and some reach an altitude

View in the Little Pamir.

of 25,000 ft. The valleys vary in length from 10 to 80 m., and from 1 to 6 m. in width. G. N. Curzon (1894) holds them to be of glacial origin. This region covers ab. 37,000 sq. m., and is sometimes called the Roof of the World.

Pamlico Sound. On coast of N. C.; ab. 75 m. long and 20 ft. deep.

Pampas. Plains of S. America, especially Argentina. See LLANOS.

Pampas Grass. *Gynerium argenteum.* Large grass of s. S. America, forming plumes ab. 2 ft. long which are used in

Pampas Grass (*G. argenteum*).

decorating; much planted for ornament. The leaves are from 6 to 8 ft. long and the stem from 10 to 14 ft. The cultivation and preparation of the plant form a considerable industry.

Pampas Indians. Nomadic shepherds of s.w. Brazil, Paraguay, etc., formerly hunters. They are warlike, proud, and independent, despising agriculture and navigation. Some of the tribes practice polygamy. The s. Pamperos are dark-skinned, strong, and skilled in throwing the bolas. They secure their wives by purchase. Infanticide is greatly practiced.

Pampero. Dry cool w. or s.w. wind, blowing over the plains of Argentina and of Brazil. The approaching change from e. winds to the Pampero is announced by long arches of rolling cloud, followed by squalls of wind and rain. See LINE SQUALLS.

Pamphilus, ab. 240–309. Presbyter at Cæsarea; founder of a library there; author, with Eusebius, of an apology for Origen, whose writings he did much to disseminate. He was martyred.

Pamphlets. Tracts or small books, usually unbound; long important in political and theological controversies.

Pamphylia. Coast region of s. Asia Minor, with Mt. Taurus on the n.e.; anciently occupied by Greeks and barbarians, with a mixed language.

Pamplona, or PAMPELUNA. Town of n. Spain, on the Arga; founded 68 B.C. by Pompey; capital of Navarre 907; held by French 1808–13. Pop. ab. 27,000.

Pamprodactylous. Bird having all the four toes turned forward, as in true Swifts. Their relatives, the Swiftlets, makers of the edible birds' nests, have the first toe directed backward, and are hence anisodactylous.

Pamunkey River. Virginia river full of sand bars, formed by the junction of the N. and S. Anne River flowing s.e., and with the Mattapony forms York River. Length 75 m.

Pan. Greek (especially Arcadian) god of forests and meadows; represented as man above, goat below; inventor of shep-

Pan with the Tibia Vasca.

herd's flute; thought to suggest panic terrors, such as are felt in lonely places; afterward identified with The All, as in the words, "Great Pan is dead," an omen of the fall of Paganism.

Pan. 1. Shallow sheet-iron dish, used in prospecting for gold. The sand or gravel is stirred with water, the worthless matter is removed from the top, and the gold is found at the bottom. 2. Piece of gold-mining machinery, in which the rock is ground with mullers and the gold collected by amalgamation at the same time.

Panacea. Remedy vaunted to be able to cure a number of diseases; a cure all.

Panæsthetism. Doctrine that consciousness is or may be connected with other forms of matter besides protoplasm.

Panætius, 185–112 B.C. Roman stoic philosopher, author of a treatise on virtue, which influenced Cicero in the production of the *De officiis.*

Panagia. In Eastern Ch., Virgin Mary; also Eucharistic bread.

Panama. City and seaport of Colombia, on s. coast of the Isthmus of P., at s. terminus of the P. R.R. and of the projected ship canal. Pop. ab. 25,000.

Panama, BAY OF. Small arm of the Pacific, washing s. shore of Isthmus of P.

Panama, ISTHMUS OF. Narrowest part of the American Continent, connecting link between N. and S. America, 32 m. wide, with a minimum elevation of 290 ft.; crossed by a railway, 47½ m. long, opened 1855.

Panama Canal. Ship canal, 46 miles long, proposed across the Isthmus of P. and partially constructed 1880–88 at an expenditure of $178,000,000; abandoned owing to financial difficulties and improper management. It was originally designed to be a sea level canal, but later plans contemplated 4 locks of large size. The U. S. Government had made careful surveys at the isthmus 1872–75. A concession for constructing a canal was obtained by a Frenchman, Lieut. Wyse, 1877. A company was organized, the concession purchased, and the work of excavation begun 1881. The company failed 1889, after making a navigable channel for ab. one-fourth of the whole distance, and that the easier portion. See LESSEPS, FERDINAND DE.

Panama Ship Canal.

Pan-American Congress. Proposed by J. G. Blaine; held at Washington Nov. 18, 1889–April 19, 1890, by representatives of various American countries, who discussed matters of international interest, and recommended reciprocity treaties and uniformity of coinage, weights, and measures. The gathering had no important results.

Pan-Anglican Synods. Conferences held at Lambeth Sept. 1867, July 1878, and June 1888; attended by English, Colonial, and American bishops, the Abp. of Canterbury presiding.

Panard, CHARLES FRANÇOIS, 1694–1765. French author of many songs and vaudevilles, partly pub. 1764 and 1803.

Panas, PHOTINOS, b. 1832. Greek surgeon in Paris, writer on diseases of the eye.

Panathenæa. Quadrennial Attic festival in honor of Athena, the patron deity of Athens. Games were celebrated, and the sacred peplus or robe was carried in procession. This is represented in the frieze of the Parthenon.

Panchatantra. Oldest collection of Sanskrit stories; extant in varying texts, whence translations have been made since 550 into sundry Oriental and European languages.

Pancoast, JOSEPH, M.D., 1805–1882. Prof. Jefferson Medical Coll., Phila., 1838–74. *Anatomy*, 1844; *Operative Surgery*, 1844–52.—His cousin, SETH, M.D., b. 1823, besides medical books, pub. *Cabala*, 1877.

Pancras, ST., 290–304. Phrygian boy, martyred at Rome; regarded as the avenger of false oaths.

Pancreas. Gland found in abdomen, connected with small intestines, secreting pancreatic fluid, which is complex in its composition and supplies the digestive ferment for intestinal digestion. It acts upon albumen, starch, and fat. The pancreas of ruminating animals is used as food, called sweetbread.

Pancreatin. Active elements of the pancreatic juice and more especially that separated from the pancreas of animals to be used to assist weak digestion or to peptonize food before it is eaten.

Panda (WAH). *Ailurus fulgens;* one of the *Procyonidæ*,

Panda (*Ailurus fulgens*).

inhabiting the mountain heights of the Himalayas; called by Cuvier "the most beautiful of quadrupeds." They resemble a cat, but have larger ears and bushier tail. The fur is thick and soft, deep black beneath, faun color behind, and cinnamon-red above, with white on the head; the tail is ringed alternately with red and yellow. It is plantigrade: the soles of the feet are covered with wool. It is bear-like in its feeding and habits.

Pandanaceæ. Natural family of flowering plants, of the class *Angiospermæ* and sub-class *Monocotyledons*, comprising 2 genera and ab. 80 species, mostly trees and shrubs, growing in the tropics of Asia, Africa, Oceanica, the Indian Archipelago, and Australia.

Pandean Pipe, or PAN PIPES. Survival of the Greek syrinx, and possibly of the Hebrew organ; series of tubes of various lengths, closed at the bottom and open at the top, lashed together side by side. The sounds are produced by blowing across the open ends.

Pandects. Digest of the writings of Roman jurisconsults, made by Justinian's direction; issued Dec. 533. From that time the citation of any passage in the juristic writings, not found in the Pandects, was forbidden. They contain over 9,000 excerpts from 39 authors, classified under 429 titles and grouped in 50 books.

Pander, CHRISTIAN, 1794–1866. Russian geologist, founder of our knowledge of the Silurian formations of Russia; best known in connection with the discovery of the *Conodonts*. *Geognosy*.

Pandiones. Section of Raptatorial Birds, including the OSPREY (q.v.) or Fishing Eagle.

Pandit. See PUNDIT.

Pandora. In Greek Mythology, first woman, made of earth by Hephæstos, and gifted by each of the gods with some power by which to work the ruin of man. She opened a box containing all human ills, but shut it in time to prevent Hope from escaping also.

Pandorineæ. Family of minute, green, multicellular, free-swimming, fresh-water *Algæ* of the order *Volvocaceæ*, increasing by both propagative and reproductive processes.

Pandours. In 18th century, Austrian infantry of Servian descent, lawless and fierce; levied in Hungary.

Pandulf, d. 1226. Roman legate to England to negotiate with King John, whose homage as vassal of the Pope he received 1213; Bp. of Norwich 1218.

Panel. In Coal Mining, large rectangular block of coal, laid out for working independently of the rest of the mine.

Panel. Primarily, a piece of wood recessed and surrounded by projecting pieces in a door, wainscot ceiling, or piece of furniture, but applied also to all recessed parts similarly framed, whether in woodwork or masonry.

Panel. Space between two vertical posts of a truss; distance between two joints of a chord of a truss. Its length is usually slightly less than the depth of the truss. The floor beams which support the roadway are attached to the chords at the panel points.

Pange Lingua Gloriosi. First line of two famous Latin hymns, one on the Passion, by Venantius Fortunatus, 530–609; the other, Eucharistic, by Aquinas, 1225–1274.

Pangenesis. Theory of Darwin that the generative cells are collectors of spores (gemmules) thrown off from all the cells of the body throughout life. During development the gemmules produce their corresponding tissues again. Prof. W. K. Brooks has suggested certain modifications: 1. The generative cells are direct descendants from the egg which produced the body of the parent, and therefore the gemmules of each egg can develop a child resembling the parent. 2. New gemmules are received especially from tissues that are subjected to strain through ill adaptation to environment. 3. These gemmules hybridize the old gemmules of like kind, and so the resulting tissue receives an impulse to vary. 4. The male gametes are specially differentiated to receive new gemmules; hence the male leads in progress. Thus variations are produced when and where they are needed, and the very long period required for evolution, according to Darwin's theory, may be greatly shortened. See NATURAL SELECTION and LAMARCKIANISM.

Pangolin (MANIS). Scaly Anteaters; several species of Edentates of Africa and s.e. Asia. The hind feet are plantigrade; of the fore feet, the animal walks on its knuckles. On the back and tail the hairs of these mammals have become modified into broad overlapping scales, the whole resembling

a pine cone. When alarmed they roll into a ball, like the hedge-hog. They burrow rapidly, and lie concealed by day.

White-bellied Pangolin (*Manis tricuspis*).

Their stomach is gizzard-like; even stones are swallowed to aid digestion.

Panicale, MASOLINO DA. 1378–1415. Italian painter, chiefly at Florence.

Panicle. Compound flower-cluster, with loose and numerous branches, as in many grasses and *Liliaceæ*.

Panics. Severe commercial crises. Such have occurred in the U. S. 1837, 1857, 1873, 1893; in England 1793, 1814, 1825–26, 1847, 1866; in Australia 1892.

Panini. Sanskrit grammarian, probably of 4th cent. B.C. His work was pub. at Leipzig 1886.

Panipat. Town in the Punjab, n. India; scene of 3 decisive battles: defeat of the imperial forces of Delhi by Bábar on his invasion of India 1526; overthrow of an Afghan army 1556 by Akbar, grandson of Bábar; and defeat of the Mahrattas by Ahmed Sháh Durání, Jan. 7, 1761. Pop. ab. 25,000.

Panizzi, SIR ANTHONY, 1797–1879. Italian refugee, in British Museum 1831–61; chief librarian 1856; knighted 1869; ed. Ariosto 1834.

Panjab. See PUNJAB.

Pannini, GIOVANNI PAOLO, ab.1695–1768. Italian painter, eminent for views of Roman ruins and historic architecture. Picturesque effect rather than literal accuracy was his aim.

Pannonia. Roman province ab. 8–430, s. and w. of the Danube, n. of Illyricum; now mainly in Hungary.

Pannose. Surfaces of leaves and other organs when covered with felt-like, matted hairs.

Panopolis. Ancient Egyptian city on the Nile. Its metropolis was unearthed 1884.

Panorama. Kind of extended painting invented 1788 by R. Barker of Edinburgh, and long exhibited on movable cylinders. The diorama and cyclorama are varieties.

Panormitanus. See TUDESCHIS.

Panormus. See PALERMO.

Pan-Presbyterian Councils. Held at Edinburgh July 1877, Philadelphia 1880, Belfast 1884, London 1888, Toronto 1892.

Panslavism. Movement looking to the union in one confederacy of all the Slavic races. Panslavic congresses met at Prague 1848 and Moscow 1867.

Panspermy. Theory that all living forms have been produced only from pre-existent living forms.

Pansy. Large-flowered forms of *Viola tricolor*, plant of the Violet family, native of Europe, widely cultivated as a garden flower. Garden pansies are not preserved or propagated

Pansy (*Viola tricolor* and *V. odorata*).

without great difficulty, as they easily relapse to their wild form.

Pantænus. Head of the Catechetical School at Alexandria 180–203, preceding Clement. Only fragments of his writings remain.

Panthays. Mohammedan community occupying the s.w. of China, who asserted their independence in 1855. They are the descendants of Arab immigrants who settled here soon after the Hegira, and of Mongol soldiers led here ab.1250. The Chinese government recognized them 1866, but suppressed their empire 1872.

Pantheism. Theory which reduces all the phenomena of the universe, whether mental or physical, to modes or activities of the absolute, emanations from the substance of God; assumed to be incompatible with the immortality of the soul. Identification of God with the universe. It existed anciently in Indian and Greek philosophy, and was revived by Bruno (d. 1600) and Spinoza.

Pantheon. Only perfectly preserved building of ancient Rome. It is dome-shaped and fronted by a Corinthian portico, supporting a pediment. The interior dome is 142 ft. high, with the same diameter, and is lighted by an orifice at the center.

Pantheon of Agrippa.

It is supposed to have been designed as part of the Baths of Agrippa, who began its erection 27 B.C.; after completion it was transformed into a temple for the gods of the conquered nations. It became a Christian church 610 as Santa Maria Rotonda. It is the burial-place of Raphael.

Panthéon. Of Paris; Church of Ste. Geneviève, built in form of a Greek cross, 276 by 370 ft., with a central dome 272 ft. high. It stands on the site of a church built by Clovis, was

begun 1764, and dedicated by the Convention to the illustrious men of France, but since restored to Christian worship.

Panther. See LEOPARD and PUMA.

Pantodonta. See AMBLYPODA.

Pantograph. Instrument for copying a drawing, and at the same time enlarging or reducing its size.

Pantoja de la Cruz, JUAN, 16th cent. Spanish portrait-painter.

Pantomime. Dramatic representation conducted without spoken words. It began at Rome under Augustus, was popular and often objectionable during the Middle Ages, the players wearing masks: these being removed, facial contortions were added to movement and gesture. In England it still has great attractions for children at Christmastide.

Pantopoda. See PODOSOMATA.

Panyasis OF HALICARNASSUS, d. ab.457 B.C. Greek epic poet; uncle of Herodotus; put to death by Lygdamus, the tyrant of Halicarnassus.

Paoli, PASQUALE, 1726–1807. Corsican patriot, who overthrew the Genoese 1755 and ruled the island wisely till 1769; expelled by the French, to whom it was sold 1768; thenceforth (except 1789–96, when he was Gov. of Corsica) in England, where he was pensioned and highly honored.

Paolo, FRA. See SARPI, PIETRO.

Paolo Veronese. See VERONESE, PAOLO.

Papacy. System under which the Pope is supreme head of R.C. Ch., involving till 1870 temporal as well as spiritual power.

Papal States, or STATES OF THE CHURCH. Former domain of the Pope, in central Italy, touching both seas, but of irregular form, bordering Naples on the s., and Tuscany and the Austrian territory on the w. and n. The boundaries have varied greatly, but at their greatest extent included ab.16,000 sq. m., with over 3,000,000 inhabitants. The claim of the Holy See was built on a grant of Pepin the Short to Stephen II. 755, confirmed by Charlemagne. These states formed a part of France 1808–14. Most of their territory was added to the kingdom of Italy 1860, and Rome itself Sept. 1870, the Vatican and Lateran palaces only remaining under the Pope's direct control.

Paparrigopoulos, CONSTANTIN, b. 1815. Modern Greek historian. *L'Histoire du peuple grec*, 6 vols., 1862–77; *l'Histoire de la civilisation hellénique*, 1878.

Papaveraceæ. Natural family of flowering plants, of the class *Angiospermæ* and sub-class *Dicotyledons*, comprising ab.19 genera and 80 species of herbs, distributed throughout the temperate and subtropical regions of the n. hemisphere; called the Poppy family.

Papaw. *Carica papaya.* Small soft-wooded tree of the natural family *Caricaceæ*, native of tropical America; cultivated in warm countries for its large, yellow, edible fruit.

Papaw, NORTH AMERICAN. *Asimina triloba.* Small tree of the natural family *Anonaceæ*, bearing large, edible fruits, native of the s.e. U. S.

Papayotin. Amorphous hygroscopic powder precipitated by adding alcohol to the juice of Carica papaya. It transforms proteids into peptones.

Paper. Manufactured from PAPYRUS (q.v.); it was in use in Egypt 4,000 years ago, and in Europe till 12th century, when paper made from cotton began to take its place. The Romans made a stout brown paper from the bark of trees 300–600. The Aztecs used the fibers of the maguey plant for the same purpose. The Arabs had paper-factories ab. 600, using raw cotton as the material, having learned the art from the Chinese. By the Arabs it was taken to Spain, whence it spread to other European countries. Italy started its first paper-mill 1250, Germany 1290, France 1340, England ab.1500, America 1690, at Roxborough, now in Philadelphia. The materials of which paper is made are numerous; the most important are linen and cotton rags, hemp, jute, straw, esparto and wood fibers. After cleansing by boiling with lime, the paper stock is reduced to fine fibers in water by the beating engine, consisting of a cylinder with knives revolving on a plate also furnished with knives, contained in a trough. The bleaching is done with chloride of lime, the excess being removed by washing and hyposulphite of soda. For sizing, a mixture of rosin, caustic soda, and alum is added to the pulp, and for colored papers the aniline colors are largely used. Much of the paper is loaded with mineral matter which is mixed with the pulp, the most common being china clay. The prepared pulp is suspended in water, strained, and run upon the paper machine. In the preparation of pulp from straw or wood, the material is subjected to the action of caustic soda in hot water under pressure, which dissolves the silica and interfibrous matter; for wood pulp sulphite of lime is used, in the same manner, to a

Paper Making in China.

large extent. The finest writing paper is made from linen rags. It is estimated that three-fourths of the paper is used for printing. In 1890 Europe produced ab. 1,049,800 tons of paper, valued at $150,000,000, and the U. S. produced 1,200,000 tons.

Paper Car Wheel. Wheel having the main body of compressed cardboard, while the hub, tire, and sides are of cast iron or steel.

Paper Hangings. These were used in Holland and Spain for wall and ceiling decoration before 1555. They are made by cylinder printing; the finer kinds are printed from wooden blocks. Velvet paper is printed with varnish and flock shearings of woolen cloth dropped upon it.

Paper-Mache. Paper pulp, paper in sheets with paste or glue, or pasteboard are pressed in molds. After drying, the articles are polished and ornamented. The art is ancient in the East.

Paper Money. Either certificates convertible on demand into coin, or inconvertible notes. The latter may be issued by the government as a fiscal measure, or may be notes originally intended to be convertible but which have lost that character through subsequent exigencies. First made by the Hollanders 1574.

Paper Shell. Spherical shell of cartridge paper containing a bursting charge of powder and combustible compositions for the production of pyrotechnic display; usually fired from an 8-in. smooth-bore mortar.

Paphlagonia. State of n. Asia Minor, on the Euxine; conquered by Crœsus; under Roman rule, part of Galatia.

Paphos. Two towns on w. coast of Cyprus. One was a chief seat of the worship of Venus, who was said to have risen from the sea near it. At the other St. Paul preached before Sergius.

Papias, d. ab.163. Supposed disciple of St. John; Bp. of Hierapolis in Phrygia; author of an *Exposition of Oracles of the Lord*, of which fragments remain. His doctrine was millenarian in character.

Papilionaceous. Irregular polypetalous flowers of plants of the Pea family (*Leguminosæ*).

Papilionidæ. Family of *Lepidoptera*, including Butterflies. They have knobbed antennæ and erect wings when at rest. Their pupa is a chrysalis. They fly by day only. There are 5,000 species.

Papin, DENIS, 1647–ab. 1712. French scientist, who invented the loaded safety-valve ab.1680, and in 1690 constructed a working model in which first appeared the idea of having steam move a piston in a cylinder. The safety-valve was an attachment to P.'s DIGESTER (q.v.), in which he studied the effects of heat upon confined vapor, and of which the principle is retained in certain processes for treating animal matters in the arts.

Papineau Rebellion. 1837–38 in Canada; improperly named from Louis Joseph Papineau (1789–1871), leader of the French party. It was promptly suppressed: 180 were sentenced to be hanged; some were executed, some banished, and some pardoned. A general amnesty was declared 1840. Papineau came back from France 1847, and was later in the Canadian Parliament.

Papinianus, ŒMILIUS, d. 212. Most eminent of Roman jurisconsults; high official under Septimius Severus. From his 59 books 595 passages were admitted to the Pandects.

Papin's Digester. See DIGESTER.

Papoose. North American Indian child, usually fastened upon a board and carried on the back of the mother or hung up out of harm's way.

Papoose.

Papoose-Root. See COHOSH, BLUE.

Pappenheim, GOTTFRIED HEINRICH, GRAF VON, 1594–1632. Marshal of German empire; distinguished at Prague 1620; associated with Tilly and Wallenstein in the Thirty Years' War; killed at Lützen.

Pappus. Crown of hairs, bristles or scales which surmounts the achenes of plants of the Composite family, being the modified teeth of the calyx.

Pappus, OF ALEXANDRIA. Greek mathematician, probably of 3d century. His *Collection*, in 8 books, but lacking the first and part of the second, was pub. 1876–78.

Papuans. Natives of New Guinea and Melanesia, of NEGRITO (q.v.) blood; resembling the Australians. They tattoo by cutting and scarring the skin, use bows and arrows, paint their bodies, dye their hair, which is abundant and receives great care, and hang huge ornaments in ears and through the nasal septum. Their toes are partly prehensile. Their clothing is but a fringed girdle and a head dress. Cannibalism is practiced. They use communal houses, erected on piles over water and reached by boats. They are head-hunters like the DYAKS (q.v.). They cultivate land, but have no private ownership, and depend mainly on hunting and fishing. They love to barter. Trial by fire and witchcraft obtain among them, and rude wooden images of the dead are prayed to.

Papyrus. *Cyperus papyrus.* Sedge or reed, native of Asia and Africa; formerly growing in marshes of the Nile valley, 4 to 6 in. in diameter and 8 to 12 ft. high; still found in some parts of Nubia and Abyssinia, the Jordan valley, and Sicily. The Romans cultivated it in some wet lands of Italy, but obtained their chief supply from Alexandria. It was used by the Egyptians in the manufacture of various articles, as

Papyrus.

boats, cordage, sandals, and writing paper. This last was made by placing one layer of the pith crosswise upon another and uniting them by a diluted gum and pressure. A sheet might be 7 to 16 in. in width, or several sheets might be glued end to end. Even in Egypt it was so dear as often to be used a second time (see PALIMPSEST). In the British Museum is a papyrus over 135 ft. long.

Par. In Business Arithmetic, sign of equality between apparent and real values, or between values expressed in different monetary units.

Para. City of Brazil, on the P.; commercially important. Pop. 40,000.

Para. S.e. outlet of the Amazon, after receiving the Tocantins; 20 to 40 m. wide; separated from the main stream by Marajo Island.

Para. Turkish coin of copper or base silver; fortieth of a piastre.

Parabasals. See DICYCLIC CRINOIDS.

Parables. Comparisons; especially our Lord's illustrations of the kingdom of heaven by brief narratives, fictitious in form, or by references to familiar human relations or natural processes. This mode of teaching was used by none of the Apostles.

Parabola. See CONIC.

Parabolas, GENERAL. Curves whose equations have the form $y^m = 2px^r$.

Parabolic Comets. Comets whose orbits as determined do not differ appreciably from parabolas. They comprise 200 out of 270 computed orbits.

Parabolic Governor. See GOVERNOR.

Parabolic Semaphore. Semaphore signal whose arm is bent to a parabolic curve, so as to reflect along the track the light of a lantern placed in the focus of the curve. It is arranged to show red when in a horizontal position, and white or green when inclined at the position of safety.

Parabolic Spindle. Solid formed by revolving a parabola about a double ordinate perpendicular to the axis of the curve.

Parabolic Spiral. One defined by the equation $\rho^2 = a\delta + b$, where a and b are arbitrary constants; or $(\rho - r)^2 = 2p\delta$, where r is the radius of a fixed circle and 2p the constant of a parabola.

Paraboloid of Revolution. Solid formed by revolving a parabola upon its axis: its volume is one-half that of a cylinder having the same base and altitude.

Parabranchium. Gill-like organ on left side of neck in Prosobranchs, near the true ctenidium. It represents the olfactory organ (osphradium) of the original right side.

Paracellulose. Modification of cellulose, soluble in cupro-ammonia after treatment with dilute acids.

Paracelsus (PHILIPPUS VON HOHENHEIM), 1493–1541. Swiss physician and philosopher, who read and traveled widely in search of medical learning. He introduced new remedies and methods of treatment; taught a sort of pantheism, combining the Cabbala with natural science; and was a mixture of charlatan, investigator, and reformer. *Chirurgia Magna; Hermetic Writings*, tr. 1894. See CHEMISTRY and ALCHEMY.

Parachordals. Cartilaginous bars, one on each side of the anterior end of the notochord, in Vertebrate embryos.

Parachute. Large umbrella-like apparatus, by means of which a man can descend from a balloon, the velocity of fall being not dangerously great. The top is sometimes 16 ft. in diameter, and has an aperture in the center, through which the air rushes and thus prevents any oscillations which might cause accident.

Parachute.

Parachute. In Mining, attachment above a hoisting cage, to prevent fall in case of breakage of the cable, and to protect persons on the cage from falling bodies.

Parachute. Fold of skin on each side of the body of Flying Squirrels, etc., which, during their soaring leaps, is stretched between the fore and hind limbs and acts as an aeroplane.

Paracme. That part of the life of an organism from maturity to death; characterized by the gradually increasing effects of senesence.

Para Compounds. When used as a prefix, see the main portion of the word; *e.g.*, for Paratoluidine see Toluidine. See META COMPOUNDS.

Paractiniæ. See MALACODERMATA.

Paracyanogen. Polymeric modification of cyanogen. $(C_2N_2)_n$. Black solid, obtained by heating mercuric cyanide. By heating strongly it is converted back to cyanogen.

Paradise. 1. Garden of Eden. 2. Abode of the blessed; either heaven or intermediate state.

Paradise, BIRDS OF. Gorgeous passerines of the Malaysian region. The Great Bird of Paradise is 18 in. long, of rich brown and purple. In the male the head is yellow above, green below; the feet are pink; in the tail are two cirri, 3 ft. long; under each wing is a golden plume, 2 ft. long. The

Bird of Paradise (*Paradisea rubra*).

female lacks plumes and varied colors, and, as is usual among animals, the young males resemble the females. In other species the side plumes are crimson. In the King-bird of Paradise they are fan-shaped. Some species have wonderful crests, and their plumage glows like brilliant gems.

Paradise, or PARVIS. Open space surrounded with a coping of masonry in front of a cathedral or other important building.

Paradise Lost. Milton's purpose to write a great epic was formed as early as 1639. On his return to England from the Continent he was occupied in the choice of a subject. A list of those considered remains; 61 were Scriptural, 38 from British History. The first on the list was finally chosen. For a time he wavered between a dramatic and an epic treatment. During the 20 years of his controversial life the poem was laid aside. It was taken up 1658, and was nearly finished 1663. It appeared 1667 in 10 books; the 2d ed., 1674, had 12, books VII. and X. being subdivided, and 8 lines added in books VIII. and XII.

Paradise of the West. See SUKHAVATI.

Paradox. Apparent contradiction in terms, usually conveying a weighty truth; *e.g.*, "He that findeth his life shall lose it."

Paradoxides. Middle Cambrian Trilobite, sometimes attaining a length of 20 in.

Para-Epididymis, or PARADIDYMIS. Remains of posterior part of Wolffian body in the male, near the epididymis. See VASA ABERRENTIA.

Paraffin. Sp. gr. 0.87, mpt. 50°–60° C., bpt. 370° C. It separates as a solid from the heavy oils which are obtained by the distillation of the high boiling portion of petroleum. It is also obtained from wood tar, and by the distillation of shales and brown coal. It consists of $C_{22}H_{46}$ to $C_{28}H_{58}$ hydrocarbons, and is used for making candles, as a wax for coating insulated wires, and in chewing gum. Crude Pa. petroleum contains ab. 2 per cent. It occurs in the mineral OZOKERITE (q.v.). It is a white solid, soluble in naphtha, ether and oils; also in hot alcohol, but separates in crystalline needles on cooling.

Paraffins. Hydrocarbons corresponding to the symbol C_nH_{2n+2}. So marsh gas, CH_4, is a paraffin; also texone, C_6H_{14}, and solids, as $C_{28}H_{58}$. The paraffins are also called alkyl hydrocarbons.

Paraflagellum. Flagellum of small size and secondary importance, situated on a flagellated Infusorian which has one or more large principal flagella.

Parafuchsine. $C_{19}H_{20}N_3ClO_4$. Pararosaniline hydrochloride; prepared as in the case of fuchsine, except that para compounds alone are used in connection with aniline, and that less toluidine or nitrotoluene is used. It is similar to fuchsine, and can be used for the same purposes. It is especially used in the manufacture of dye-stuffs.

Paragaster, or PARAGASTRIC CAVITY. Cavity of a simple sponge, single or branched, before any special differentiations of the endoderm cells arise; primitive cavity of the sponge gastrula.

Paragastric Canals. Two canals that open from the bases of the primary radial canals of Ctenophores, on each side of the œsophagus. They pass to and end blindly near the mouth.

Paragastrula. Peculiar gastrula found in sponges. It originates from an amphiblastula by invagination of the flagellated cells, leaving the granular cells outside to become the elctoderm.

Paraglossæ. Secondary pieces borne on the sides of the glossa or ligula of insects.

Paragonite. Mineral resembling common mica, but containing sodium instead of potassium. It gives character to the rock known as paragonite schist.

Paraguay. Republic of S. America, between Brazil and Argentine Republic; 22°–27° S. lat. and 54°–64° W. long. The surface is hilly in the north. In its middle portion it consists of forested plains, while in the south it becomes low and marshy. Its area is ab. 142,000 sq. m. The capital, Asuncion, was founded 1536. In 1620 P. proper was separated from

Ranch in Paraguay.

Buenos Ayres, and both put under the vice-royalty of Peru. In 1776 Buenos Ayres was made a vice-royalty and P. placed under its jurisdiction. It declared its independence of Spain 1811, but became a despotism 1814 under Dr. Francia. C. A. Lopez came to power 1841. His son, F. S. Lopez, engaged in destructive wars 1864–70, from which P. has since been slowly recovering. Pop. ab. 400,000.

Paraguay. River tributary to the Parana or Rio de la Plata, rising in Brazil and forming part of the Bolivian boundary; discovered by Cabot 1526. Length ab.1,800 m., partly navigable.

Paraguay Tea. See MATÈ.

Paraheliotropism. In Plant Physiology, movement of leaves into a position parallel with the rays of light.

Parakeets, or PARRAKEETS. Old World Parrots, with long wedge-shaped tail. In the New World is the corresponding family of MACAWS (q.v.). *Conurus*, the Carolina Parrot or Parakeet, is now restricted to Florida and in danger of becoming extinct. Its general color is green: the head is yellow, the forehead red.

Paraldehyde. $C_6H_{12}O_3$. Colorless liquid, boiling at 124° C.; produced from acetaldehyde by bringing the latter in contact with sulphuric acid. It has a disagreeable taste, but is largely used as a soporific.

Parallactic Angle. Angle at a star, formed by arcs of great circles drawn to the pole and zenith.

Parallactic Inequality OF THE MOON. Change in the sun's disturbing effect upon the moon's motion, due to variation of the sun's distance. Thus when the moon describes

that half of its orbit nearest the sun, the effect of the latter is greater than while the other half is described.

Parallactic Orbit OF A STAR. A star which has a measurable parallax appears to describe a small orbit with a period of one year. The orbit is an ellipse whose semi-major axis is equal to the annual parallax. The motion is only apparent, being due to the earth's annual motion about the sun.

Parallax. Difference in apparent position of a body as seen from two points. The diurnal parallax of a planet is the difference in apparent position as seen from the center of the earth and a point on the surface. The annual parallax of a star is the angle at the star subtended by the radius of the earth's orbit. The equatorial horizontal parallax of the sun or a planet is the parallax when seen in the horizon from a point on the earth's equator.

Parallax of a heavenly body M.

Parallax, SOLAR. Angle at the center of the sun, subtended by the earth's equatorial radius. Various methods have been employed for measuring its value, the most important being by transits of Venus across the sun's disk, by observation of Mars near opposition, and by the velocity of light. Some of the values which have been found for this constant are as follows: Ptolemy 3′, Cassini 9.5″, Encke 8.5776″, Newcomb 8.848″. Most recent determinations about 8.79″. Calculated from this the distance of the sun from the earth is about 93,000,000 m.

Parallax of Fixed Stars. Only a few cases have been found of measurable value. A few of the most important are as follows:

Star.	Magnitude.	Right Ascension.	Declination.	Authority.	Method.	Parallax.
Polaris.	2.	1h. 22m.	88° 46′	Peters.	Meridian Circle.	0″.073
Sirius.	—1.4	6h. 41m.	—16° 35′	Gyldén.	Meridian Circle.	.193
				Gill & Elkin.	Heliometer.	.380
Castor.	1.5	7h. 28m.	32° 6′	Johnson.	Heliometer.	.198
Procyon.	1.	7h. 34m.	5° 29′	Auwers.	Micrometer.	.123
Groombridge.	6.5	11h. 7m.	38° 32′	Mean of 5 values.	Micrometer.	.114
Arcturus.	1.	14h. 11m.	19° 42′	Peters & Johnson.	Mer. C. & Helion.	.132
α-Centauri.	1.	14h. 33m.	—60° 25′	Gill & Elkin.	Heliometer.	.750
α-Lyræ.	1.	18h. 34m.	38° 41′	Mean of 6.	Various.	.161
61 Cygni.	5.5	21h. 2m.	38° 15′	Mean of 8.	Various.	.421

Parallel. Having the same direction. Parallel lines or planes have no finite intersection and are everywhere equidistant. In Modern Geometry they are considered as meeting at infinity, lines in a point, planes in a line.

Parallelism. Peculiarity of Hebrew poetry, which has neither meter nor rhyme, but repeats the same thought in slightly varying clauses.

Parallelism, CONDITIONS OF. The geometrical conditions for parallelism of two straight lines are modifications of the definition. If two lines be perpendicular to a third: or both parallel to a third: or make alternate interior angles equal, or the sum of the interior angles on one side of the transversal equal to two right angles, they are parallel. If the lines are given by their equations, they will be parallel when their slopes are equal; $y = mx + b$, $y = m^1x + b^1$ are parallel if $m = m^1$.

Parallelism, PLANE. Two planes are parallel when, their equations being solved in respect to one variable, the coefficients of the other two coördinates are respectively equal.

Parallel Motions. Systems of pivoted linkages, by means of which one of the points of the rods is compelled to move in a straight line; used to guide the end of piston rods of steam engines in cases where a crosshead and its guides would be inconvenient. The best known of these linkages are Watts' parallelogram, the "grasshopper," and Evans' motions, and their modifications. The Peaucellier cell and the White hypocycloidal gear (the latter also as modified by Tchebischeff of Russia) make elegant constructions, but have not been much used in practice. Such linkages are restricted in U. S. to vertical beam engines for pumping purposes.

Parallelogram. Quadrilateral having its opposite sides parallel: they are also equal. The area of a parallelogram equals the product of its base and altitude, or the product of two adjacent sides and the sine of their included angle.

Parallelogram of Forces. If two forces can be represented in magnitude and direction by the two adjacent sides of a parallelogram, the diagonal of the parallelogram colinear with the two forces will represent their resultant in magnitude and direction. The case is applicable to two velocities or two accelerations, and so we have the parallelogram of velocities and that of accelerations. In general, the principle can be applied to any two directed quantities whatever.

Parallelogram of Forces.

Parallelopiped. Prism the bases of which are parallelograms. If the lateral edges are perpendicular to the base, it is a right parallelopiped: if in addition the bases are rectangles, it is rectangular. The volume of a parallelopiped equals the product of its base and altitude. The name Cuboid has been suggested for the rectangular parallelopiped.

Parallels. Open earthen trenches parallel to the front of the fortification against which siege operations are to be conducted. In the conduct of actual sieges five or more have been found necessary.

Parallel Sphere. Celestial sphere as seen by an observer at the pole, where all the heavenly bodies would appear to describe circles parallel to the horizon.

Parallel Variation, or ANALOGOUS VARIATION. Form of variation in which two independent lines of descent mimic each other in various divergent lines of development; *e.g.*, (1) where similar eyes are produced in the widely separated descendants of an eyeless ancestor; (2) dentition of the marsupials, which in Australia shows Insectivorous, Carnivorous, Rodent, Herbivorous, etc., groups, analogous to similar groups forming other phyla of Mammals.

Paralogism. Fallacy in reasoning which deceives the subject; distinguished from a sophism, which deceives others only.

Paralysis. Complete or partial loss of function of any muscle or sets of muscles caused by the disease or injury of the nerve energizing the muscles. Either motion or sensation, or both, may be affected.

Paramagnetic. See MAGNETISM.

Paramaribo. Capital of Dutch Guiana, on the Surinam, 18 m. from its mouth. Pop., 1890, 28,831.

Paramastoid Process. Jugular process; eminence on each occipital.

Paramecium. Genus of holotrichous *Infusoria*, shaped like a slipper twisted slightly about its longitudinal axis, and of size just visible to the naked eye. The mouth is in one edge near the middle. The front end is the heel of the slipper. There are two contractile or pulsating vacuoles, a macronucleus or endoplast, and a micronucleus (endoplastule). A definite proctal region is present. The cortex (ectosarc) contains

trichocysts. In conjugation, this animalcule shows itself hermaphroditic. During the temporary copulation of two similar individuals, the macronucleus of each breaks up and disappears, the micronucleus of each becomes four, two of which are

Paramecium aurelia. Two individuals conjugating.

lost and one of the remaining migrates into the other *paramecium* and unites with the residual nucleus forming a zygote, the process being mutual. Each zygote divides into a macro- and a micronucleus.

Parameres. 1. Right and left halves of a metamere. 2. Actinomeres of a radiate. 3. Similar parts that are repeated in any appendage, as the fingers or toes. The last is the best usage. See ANTIMERE.

Parameters. Constants which determine the specific character or position of a locus: any specific locus may be designated by its parameters: the line whose equation is $2x + 3y + 4 = 0$ may be named as the straight line (2, 3, 4).

Paramitas. Virtues of Buddhism: Charity, moral conduct, patience, fortitude, meditation, and wisdom. Also truth, steadfastness, kindness, and imperturbability.

Parana. River of S. America. It rises in e. Brazil, flows w. and s.w., forming the e. and s. boundary of Paraguay, then s. through Argentina, after joining the Paraguay, and with the Uruguay forms the Rio de la Plata. Length ab. 2,000 m., drainage area ab. 1,200,000 sq. m.

Paranahyba. See PARNAHYBA.

Paranoia. Form of mental disease. While there is a defective nervous organization from birth, the manifestations of mental alienation are frequently so slight as to mislead an expert. Youthful precocity, some eccentricity of conduct, or a slight morbidness may be the only manifestation. Many of the enthusiasts and cranks of the world, who are able to carry on complex affairs to a successful termination, are but illy-balanced paranoiacs. Were it not that the disease tends to chronicity and not to cure, and, as it progresses, seizes its victims with delusions leading to crime, it may be to homicide, it might be classed as a harmless affection.

Paranucleolus. In Plant Cytology, secondary nucleolus.

Paranucleus. Secondary nucleus, sometimes seen in different cells, outside the principal nucleus. In *Protozoa* it is the micronucleus or endoplastule; in eggs it is the yolk nucleus. Accessory nuclei are present in nearly all sorts of cells, but are probably not homologous structures.

Parapet. Low wall rising above a roof, anciently used for defense and crenellated for that purpose, but in modern buildings serving only to protect persons on the roof from falling. It is a common feature in mediæval and modern architecture.

Ornamented Gothic Parapet.

Parapetalous. Stamens at the sides of petals.

Parapets. Earthen covers to protect artillery and infantry troops and material from the fire of the enemy, and arranged to permit an effective fire to be delivered upon every point in their front. They should be at least one and a half times as thick as the penetration of the projectiles fired against them.

Paraphernalia. Apparel and ornaments of the wife, which have been furnished by the husband and belong to her, over and above her dower. The Roman *parapherna* corresponded to the wife's separate estate under modern statutes.

Paraphlegia. Loss of motor power in both legs. See PARALYSIS.

Paraphragm. Process of the endosternite, which passes outward, upward, and forward to unite with the endopleurite of its own and the preceding segment, in the endophragm of lobster-like *Crustacea*.

Paraphrase. Expansion of a text of whatever length; intended to elucidate it.

Paraphrases, SCOTTISH. Versifications of Scripture, prepared by order of General Assembly 1742–45, and authorized for private use 1751; revised 1781, when 22 were added. They were widely used and drawn upon. The chief authors were W. Cameron, M. Bruce, and J. Morison; some are by Blair, Blacklock, Ogilvie, and others; 8 are anonymous.

Paraphyllum. Leaf-like expansion or appendage, not a true leaf.

Paraphyses. Barren filaments accompanying the reproductive organs of many of the lower plants.

Paraplegia. Paralysis affecting the lower extremities.

Parapodia. Bristle-bearing, unjointed appendages, borne on the sides of the segments of a chætopod worm.

Parapophysis. Ventral portion of the transverse process, in the rib-bearing (dorsal) vertebræ; it is short, close to the centrum, and articulates with the head (capitulum) of the rib.

Parapterum. See SCAPULARS.

Pararosaniline. $(C_6H_4.NH_2)_3C.OH$. Triamidotriphenylcarbonol; made by the oxidation of paraleucaniline. Its properties and derivatives are analogous to those of ROSANILINE (q.v.), made by oxidizing a mixture of aniline and paratoluidine with arsenic acid.

Parasang. Persian measure of distance, according to Herodotus, equal to 30 stadia, or ab. 3½ English miles.

Paraselena. Bright spot on either side of the moon as seen in lunar halos, similar in origin to the Parhelia.

Parasites. Plants existing on the juices of others, which they obtain through their sucking roots. Green parasites, as

Dodder (*Cuscuta glomerata*).

the Mistletoe, are able to form some organic matter, but the pale parasites, containing no chlorophyll, must obtain their food already elaborated: such are the Beech Drops and Dodder. Animal parasites are divided into ectoparasites (Louse, Bedbug, etc.), and endoparasites (Tapeworm, Trichina, etc.). See ENTOZOA and PEDICULIDÆ.

Parasitica. See ANOPLURA and APTERA.

Parasitic Diseases. Those induced by vegetable or animal parasites. Animal parasites are such as trichina, tick, scabies, lice, tapeworm, etc. Vegetable parasites include thrush, ringworm, and actinomycosis.

Parasphenoid. Dagger-shaped bone which covers the under side of the cranium in the frog, fish, and other *Ichthyopsida*.

Parastamen. See STAMINODIUM.

Parastichies. Secondary spirals, occurring in some methods of alternate leaf-arrangement.

Parauchenia. Sides of the neck in birds.

Parcæ. Three goddesses of Fate, sisters of Fortune, of whom Clotho puts the wool on the spindle, Lachesis spins it, and Atropos cuts the thread (of man's life). They are conceived both as birth and as death-goddesses.

Parc aux Cerfs. Deer-park laid out at Versailles by Louis XII.—Also a beautiful retreat of Mme. de Pompadour.

Parcenary. Common-law estate by descent to co-heirs. Modern legislation in the U. S. has changed it to a tenancy in common.

Parchesi. Ancient Hindu game, played upon a board in the form of a cross by two or four players, each with four men. In India, in the game called Pachisi or Twenty-five, from which the American game is borrowed, the moves are made according to the throws with Cowrie shells. In our game dice are employed; the corresponding Hindu dice game is called Chansar. From internal evidence it appears that pachisi was originally cosmical and divinatory, the four arms of the cross being referable to the four directions. An almost indentical game was played by the ancient Mexicans under the name of Patoli. The latter is regarded by many as conclusive evidence of the Asiatic origin of Mexican culture, but is likely to have developed independently in Asia and America. Pachisi is widely diffused in Asia, from the Philippine Islands to Syria, where it is known as Edris. It was introduced into the U. S. 1865.

Parchment. Dried skin, brought into use ab. 190 or 160 B.C. at Pergamus in Asia Minor, as a substitute for papyrus, the exportation of which from Egypt had been prohibited. The skins are unhaired, stretched, dried, planed and rubbed with pumice stone. Sheep-skins are used for diplomas; calf-skins are used for drum heads.

Parcimony. Law of economy in explanation of phenomena, requiring the fewest possible causes necessary to an effect. Two or more causes should never be supposed when one is adequate to the result.

Pàrcvantha. Deity worshiped by the Jains, regarded as the 23d Tirthankara, personages corresponding to Buddhas. He was born in Benares, and is said to have died at the age of 100 years in 823 B.C. His color is blue: a serpent is his emblem.

Parcvantha.

Pardee, ARIO, 1810–1892. Capitalist at Hazleton, Pa.; owner and operator of coal mines; benefactor of Lafayette College.

Pardessus, JEAN MARIE, 1772–1853. Prof. Paris 1810; deputy; writer on commercial law.

Pardo, MANUEL, 1834–1878. Banker of Lima; pres. of Peru 1872–76; exemplary and highly useful; murdered while pres. of senate.

Pardo Bazan, EMILIA (SIGNORA QUIROGARICHE), b. 1852, m. 1868. Spanish realistic novelist and critic.

Pardoe, JULIA, 1806–1862. English novelist, descriptive and historical writer. *Louis XIV.*, 1847.

Pardon. Relief of an offender from his penal liabilities: in the U. S. generally regulated by constitution and statutory provisions.

Paré, AMBROISE, 1517–1590. French army-surgeon, inventor of ligatures for the arteries in amputations; surgeon to Henry II., 1552, and to his successors; important as a reformer of surgical practice and benefactor of humanity. *Chirurgie*, 1562.

Paredes, JOSÉ GREGORIO, 1779–1839. Peruvian scientist and statesman.

Paredes y Arrillaga, MARIANO, 1797–1849. Mexican general and revolutionist.

Paregoric. Camphorated tincture of opium of the Pharmacopœia, containing 0.4 per cent of opium; a soothing medicine.

Parenchyma. Proper substance of a tissue after differentiated parts are excluded. Its cells are usually numerous, and quite similar.—In Botany, vegetable tissue composed of cells but little longer than broad, and with thin cell-walls, forming the softer portions of plants, such as leaf-pulp, pith, and certain layers of the bark. *Algæ* are entirely composed of it.

Parenchymatous. Resembling or consisting of parenchyma.

Parenchymula. Mouthless planula, whose segmentation cavity has become filled with endoderm cells.

Parent and Child. The parent has a legal right to the custody, discipline, and services of his unmarried minor child, and is under a legal duty to maintain, protect, and educate him.

Parepa-Rosa, EUPHROSYNE DE BOYESKU, 1836–1874. Concert and opera singer in Great Britain and the U. S. Her father was a Wallachian, her mother English. She was married to Carl Rosa 1867.

Paresis. See GENERAL PARALYSIS.

Paresthesia. Abnormal sensation, as formication, a feeling as if ants were crawling over a person; also produced by aconite poisoning.—Also abnormal sensations of cold or heat.

Parfait, NOEL, 1814–1896. French author and deputy.

Parga. Albanian town, opposite Corfu; connected with Venice 1401–1797; then held by Turkey. Its people revolted, and in 1819 most of them removed.

Pargeting. Decoration of plaster work by stamping before the material has dried and set.

Parhelion. Bright spots right and left of the certical plane through the observer and sun as seen in complete halos; due to the reflection of the sunlight from a number of small

Parhelion, or Mock-Sun, in the Polar Seas.

planes. They are usually seen at angular azimuths from the sun of ab. 20°, 25°, 46°, 50°, 90°, or 120°; that which occurs at 180° is the Anthelia.

Pariahs. Lowest caste in s. India, with whom members of the higher castes refuse intercourse.

Paridigitata. See ARTIODACTYLA.

Parietal. In Botany, ovules or placentæ borne on the wall of the ovary.

Parietal Bones. Two upper bones of the skull of vertebrates.

Parieto-Splanchnic. Ganglion in bivalve Mollusks, on the posterior adductor muscle.

Parieu, ESQUIROU DE, b. 1815. French economist, Minister of Public Instruction 1849; writer on taxation, finance, and currency.

Parima. 1. Branch of the Rio Negro, in n. Brazil. 2. Mountains of Guiana and e. Venezuela.

Parini, GIUSEPPE, 1729–1799. Italian poet, prof. at Milan from 1773. *Il Giorno*, Part I., 1763; II., 1765; III., IV., 1801.

Paripinnate. Pinnate leaves with an even number of leaflets, arranged in pairs, as in the wild Senna.

Paris. Capital of France, on the Seine, 110 m. from the sea. After London and New York, it is the largest city in the world. It is regularly laid out, with many broad and well-paved avenues and numerous public parks. Its sewage system and water supply are excellent. It contains many magnificent public buildings and institutions of learning and arts. It was mentioned by Cæsar; was long confined to an island of the Seine, but was extended by Romans to either bank. It was occupied by Clovis 506; decayed under Carlovingians; was besieged by Northmen 885; became the residence of Hugh Capet 987; was enlarged and greatly improved under later kings; was the scene of the massacre of St. Bartholomew 1572, of several sieges and many revolutions. The university was founded ab. 1200, the Sorbonne 1252, the Academy 1666. Louis XIV. changed the old ramparts into boulevards, established drainage and sewerage, and various public institutions. The Reign of Terror, 1793–94, was most terrible here. After the Revolu-

tion Napoleon added new quays, bridges, markets, and other improvements, and embellished the city with the fruits of his conquests. The progress arrested by his downfall was resumed by Louis Philippe. Under Napoleon III. P. was transformed. Long streets were constructed connecting the finest squares,

Paris, as seen from the Church of St. Gervais.

public buildings, and a double circle of spacious boulevards. The plans interrupted by the Franco-German war have since been further carried out. Many fine buildings were destroyed by fire during the outbreak of the Commune; most have since been restored. The exhibitions of 1855, 1867, 1878, and 1889 took place here. Area 30 sq. m.; pop., 1891, 2,447,957.

Paris, or ALEXANDER. Son of Priam; brought up as a shepherd. He adjudged the golden apple to Venus, and so drew on Troy the hatred of Juno and Minerva. By carrying off Helen, wife of Menelaus of Sparta, he brought on the Trojan war.

Paris, ALEXIS PAULIN, 1800–1881. Prof. Coll. of France 1853–72; prolific writer on French literature.—His son, GASTON BRUNO PAULIN, b. 1839, Academician 1896, succeeded to his chair and carried on his other labors. *Charlemagne*, 1866; *Poetry of the Middle Ages*, 1885.

Paris, DECLARATION OF. See DECLARATION OF PARIS.

Paris, JOHN AYRTON, M.D., D.C.L., 1785–1856. English scientist, inventor of the tamping-bar. *Pharmacologia*, 1819; *Medical Jurisprudence*, 1823.

Paris, LOUIS PHILIPPE ALBERT D'ORLEANS, COMTE DE, 1838–1894. Grandson of Louis Philippe; on Gen. McClellan's staff in Va., with his brother and uncle, 1861; Deputy 1871; Legitimist heir to the throne from 1883; exiled 1886, and thenceforth in England.

Paris, MATTHEW, ab. 1200–1259. English Benedictine and Latin chronicler. His *Historia Major* extends to 1259.

Paris, PLASTER OF. See CALCIUM SULPHATE.

Paris, UNIVERSITY OF. Originated 1109 in a school of logic taught by William of Champeaux, who was succeeded by Abelard. By 1150 there were said to be more students in Paris than citizens. Soon after 1600 its 40 colleges were deserted; but it was soon revived. It suffered from the strifes of Jesuits and Jansenists, and was suppressed with other institutions 1793.

Paris Green. Copper arsenite. $CuHAsO_3$; used as a pigment; made by precipitating a solution of copper sulphate with sodium arsenite.

Paris Yellow. See LEAD CHROMATE.

Parish. Smallest division of territory under an established Ch.; in England the officers administered the poor-laws and had charge of the highways, but these functions have been largely transferred to other Boards; in America, aggregate of persons and interests in a local religious society.

Parish Clerk. Minor ch. official in England.

Park. Piece of ground in an untilled state used as a game reserve or for walking or driving; also a tract of land kept for ornament and public recreation. The Egyptians had parks at a time much earlier than the records on the monuments show. Parks then were little more than a cluster of gardens. The Romans attached parks to their villas. Pompey and Hortensius among others had large parks. In England the first great park particularly mentioned is Woodstock, formed by Henry I. 1125. The following are some of the best known parks: Fairmount, Philadelphia, 2,740 acres; Bois de Vincennes, Paris, 2,075; Phœnix, Dublin, 2,000; Bois de Boulogne, Paris, 2,000; Prater Gardens, Vienna, 1,500; Golden Gate, San Francisco, 1,100; Central, New York, 862; Druid Hill, Baltimore, 600; Hyde, London, 598; Prospect, Brooklyn, 515; English Garden, Munich, 500; Regents, London, 472; Victoria, London, 300; Thiergarten, Berlin, 200; Bois de la Cambre, Brussels, 124. See YELLOWSTONE PARK.

Park, EDWARDS AMASA, D.D., b. 1808. Prof. Andover 1836–81; ed. *Bibliotheca Sacra*, 1851–84.

Park, MUNGO, 1771–1805. Scottish explorer in Africa 1795–97 and 1805; drowned in the Niger, after descending it ab. 1,500 m. *Travels*, 1799.

Parke, JOHN GRUBB, U.S.A., b. 1827. Brig.-gen. U.S. Vols. 1861, Major-gen. 1862–66; Col. of Engineers 1884; Supt. at West Point 1887–89. *Rivers and Harbors*, 1877–87.

Parker, AMASA JUNIUS, LL.D., 1807–1890. Vice-chancellor of N. Y. 1844–47; Judge of N. Y. Supreme Court 1847–55; Lecturer in Albany Law School. *Criminal Cases*, 6 vols., 1860–68.

Parker, FOXHALL ALEXANDER, U.S.N., 1821–1879. Captain 1866; Commodore 1872; Supt. Naval Academy 1878. *Fleet Tactics*, 1863; *Naval Howitzer*, 1865–66.

Parker, GILBERT, b. 1862. Anglo-Canadian novelist. *Chief Factor*, 1891; *Trespasser*, 1894; *Seats of the Mighty*, 1895.

Parker, HORATIO WILLIAM, b. 1863. Prof. Yale 1894; organist, and composer of cantatas. *Hora Novissima*.

Parker, SIR HYDE, R.N., 1739–1807. Captain 1763; knighted 1779 for the capture of Savannah; Rear-admiral 1793; commander in the Baltic 1801.

Parker, ISAAC, LL.D., 1768–1830. M.C. 1797–99; Judge Mass. Supreme Court 1806; Chief-justice from 1814; Law Prof. Harvard 1816–27. His decisions were praised by Story.

Parker, JAMES CUTLER DUNN, b. 1828. American composer of 3 cantatas, *Redemption Hymn*, *St. John*, and *The Blind King*.

Parker, JOEL, 1795–1875. Judge N. H. Supreme Court 1833; Chief-justice 1836; prof. Dartmouth 1847, and Harvard from 1857; legal writer.

Parker, JOEL, LL.D., 1816–1888. Gov. of N. J. 1863–66 and 1871–74; Judge N. J. Supreme Court from 1880.

Parker, JOSEPH, D.D., b. 1830. Minister of the City Temple, London, since 1874. *Ecce Deus*, 1868; *Ad Clerum*, 1870; *People's Bible*, begun 1885.

Parker, MATTHEW, D.D., 1504–1575. Dean of Lincoln 1552, Abp. of Canterbury 1559, being regularly consecrated at Lambeth by four bishops. See NAG'S HEAD.

Parker, SIR PETER, R.N., 1721–1811. Captain 1747, Baronet 1782. He attacked Charleston, and bore part in the taking of New York and R. I.—His grandson, SIR PETER, R.N., 1786–1814, destroyed much property along the Chesapeake, and was killed at Chestertown, Md.

Parker, PETER, M.D., 1804–1888. Missionary in China 1834–40 and 1842–55; U. S. Commissioner there 1855–57.

Parker, SAMUEL, D.D., 1744–1804. Rector of Trinity Ch., Boston, 1779; P.E. Bp. of Mass. 1804.

Parker, THEODORE, 1810–1860. Pastor in Boston from 1837; leader of the radical Unitarians; a man of genius, who by his sermons and publications exerted great influence on religious thought. *Works*, 12 vols., 1863–65.

Parker, WILLARD, M.D., LL.D., 1800–1884. Prof. New York 1839–83; pres. N. Y. Inebriate Asylum, Binghamton, 1865; eminent as operator, teacher, and discoverer.

Parker, WILLIAM KITCHEN, F.R.S., 1823–1890. Prof. London 1873–83; writer on anatomy.

Parkersburg. City of W. Va., 63 m. n. of Charleston, at the junction of the Ohio and Little Kanawha rivers. It is the outlet of the petroleum region and has a number of oil refineries. Pop., 1890, 8,400.

Parkes, SIR HARRY SMITH, 1828–1885. English ambassador to Japan 1865–83, and then to China.

Parkes, SIR HENRY, b. 1815. Premier of New South Wales 1872 and later.

Parkesine. Name given to celluloid, it having been first made by A. Parkes.

Parkhurst, CHARLES HENRY, D.D., b. 1842. Presb. pastor in New York since 1880; pres. Soc. for Prevention of Crime 1891. His fearless activity in reform led to an investigation of the N. Y. Police Department by the Lexow Committee 1894, and in the fall to the most memorable political upheaval in the history of any American city. *Our Fight against Tammany*, 1895.

Parkhurst, JOHN, 1728–1797. English author of a *Hebrew Lexicon*, 1762, long used, and of a *Greek Lexicon to N. T.*, 1769.

Parkinson, JOHN, 1567–1650. English herbalist. *Paradisus Terrestris*, 1629; *Theatrum Botanicum*, 1640.

Parkinson-Fortescue, CHICHESTER SAMUEL, b. 1823. M.P. 1847; member of several cabinets; Baron Carlingford 1874; Lord Privy Seal 1881–85.

Parkman, FRANCIS, 1823–1893. American historian of high rank. His chief works relate to the French period in colonial history, and are noted for their full research, entire fairness, keen insight, and graphic style. *Oregon Trail*, 1849; *Conspiracy of Pontiac*, 1851; *Pioneers of France in the New World*, 1865; *Jesuits in N. America*, 1867; *La Salle*, 1869; *Old Regime in Canada*, 1874; *Frontenac and New France*, 1877; *Montcalm and Wolfe*, 1884; *A Half Century of Conflict*, 1892.

Park Range. Part of the Rocky Mountain system in Colorado and s. Wyoming, standing as the west wall of the series of Parks. Its peaks range from 13,000 to more than 14,000 ft. in height.

Parley, PETER. See GOODRICH, SAMUEL GRISWOLD.

Parliament. Legislative body, especially that of Great Britain, consisting of the sovereign, the House of Lords, and the House of Commons. The latter is elective and contains (1896) 670 members—465 for England, 30 for Wales, 72 for Scotland, and 103 for Ireland. The other comprises 549 lords temporal and 26 lords spiritual. Of this the Lord Chancellor is always Speaker. Of the lords temporal 16 Scottish peers are elected for each parliament and 28 Irish peers for life. Its duration was fixed 1716 at 7 years. It is generally in session

London—The Houses of Parliament, as seen from Lambeth.

from about Feb. 15 to end of Aug. in each year. In case a majority of the Commons votes against the Government, the ministry resigns or dissolves parliament and orders a new election. It is the successor of the *Witenagemote* of early Saxon times. *Magna Charta*, 1215, provided for the convening of Parliament whenever money was to be raised. Writs are still in existence by which in 1265 Henry III. summoned the knights and burgesses. The division of Parliament into two houses dates about a century later. See LONG PARLIAMENT and RUMP PARLIAMENT.

Parliamentary Law. According to the rules and usages of Parliament or to the established rules and practices of legislative bodies. Usually in the U. S. the rules and practices of Congress are followed.

Parliaments, IN FRANCE. Law courts. That of Paris was the chief law court of the realm, charged with registering the royal edicts. In 1789 there were 13 parliaments in France, differing in extent of jurisdiction, that of Paris covering a third of the kingdom.

Parlor Cars. Length about 60 ft., width 10 ft., weight 60,000 lbs., cost $10,000, seating capacity 32. Nearly all the parlor and sleeping cars of the U. S. are owned by the Pullman and Wagner Companies, and used by the railroads under contract.

Parma. City of n. Italy, on the P., 12 m. s. of the Po; built by Etruscans; subject to Rome 183 B.C.; capital of a duchy 1545–1731 and 1814–60. Its university, founded 1599, has ab. 40 teachers and near 300 students. The palace contains some fine paintings and a library of 214,000 vols. Some of the churches are notable. Near here an Austrian army encountered the allied forces of France, Spain, and England, June 29, 1734, and Russians under Suwarrow routed the French under Macdonald June 19, 1799.

Parma, DUKE OF. See FARNESE and CAMBACERES.

Parmenides, 5th cent. B.C. Greek philosopher of Elea in Lucania, famous for the doctrine that there is only one eternal unchangeable substance, and that change is an illusion.

Parmigiano (GIROLAMO MAZZOLA), 1504–1540. Italian painter.

Parnahyba. River of n. Brazil, flowing n.e. to the Atlantic. Length ab. 750 m., drainage area 150,000 sq. m.

Parnassiens. French school of poets ab. 1866, who gave almost exclusive regard to form.

Parnassus. Mountain n. of Delphi, chief seat of Apollo and the Muses; sacred also to Dionysus. The Castalian Spring

Parnassus and Helicon, with the Gulf of Corinth.

issued from between two cliffs above Delphi. The highest peak was the scene of the orgies of the worship of Dionysus. Altitude 8,068 ft.

Parnell, CHARLES STEWART, 1846–1891. M.P. 1875; founder and first pres. of Irish Land League 1879; leader of Home Rule party 1880; taken into alliance by Gladstone 1886, who attempted to pass a Home Rule bill with his aid; vigorously attacked by *London Times*, which published certain letters alleged to be his, indicating complicity with acts of violence on the part of the Irish peasantry, but afterward proved to be forgeries of one Pigott. For this libel he obtained $20,000 damages. In Nov. 1890 he became co-respondent in a suit for divorce and later married the woman in the case. His leadership was consequently refused by the majority of the Home Rule party, but a section adhered to him till his death.

Parnell, THOMAS, 1679–1717. Irish poet; archdeacon of Clogher 1705. A volume containing *The Hermit* and other well-known poems appeared 1722, and another, of doubtful authenticity, 1758.

Parodies. Facetious imitations of well-known productions, usually in verse. They were found among the Greeks ab. 550 B.C., and form part of every national literature. Among the most notable modern examples are some of H. and J. Smith's *Rejected Addresses*, 1812, Aytoun & Martin's *Ballads by Bon Gaultier*, 1851, Calverley's *Fly-Leaves*, 1871, and in prose Bret Harte's *Condensed Novels*, 1867, and Burnand's *New Sandford and Merton*, 1872.

Paræcious. Mosses in which the archegonia and antheridia are borne in close proximity.

Par-of-Exchange. Amount of money which has to be paid in one place for a bill of exchange of a certain face value, payable at another place.

Parole. Promise of a prisoner not to escape, go beyond bounds, or resume hostilities, according to the degree of liberty granted him; esteemed sacredly binding in military circles.

Parol Evidence. Not in writing; inadmissible to vary or contradict a written instrument. The exceptions to this rule are numerous.

Paro-ophoron. See VASA ABERRENTIA.

Paropamisus. Range of mountains in n. Afghanistan.

Paros. One of the Cyclades, in the Ægean Sea; noted for its marbles, called Parian. Pop., 1890, 3,048.

Parostosis. Ossification in the dermis, forming exoskeletal bones.

Parotid Gland. Largest of the salivary glands, seated under the ear and near the angle of the lower jaw. It weighs 1 oz. and discharges its secretions into the mouth opposite the second molar tooth in the upper jaw

Parotitis. Infectious disease attacking children and young persons most frequently, in which the parotid and other salivary glands become swollen. Treatment consists of regulation of diet, mild purgatives, and vegetable acids as lemonade as a beverage. In males the testes and spleen often swell and in females the ovaries and mammæ. Suppuration of the glands scarcely ever occurs. It is also called Mumps, and in Scotland Branks.

Parovarium. See EPO-OPHORON.

Parquetry. Flooring of oak and other wood, laid in blocks to form a mosaic.

Parr. See SALMO.

Parr, CATHERINE, 1512–1548: 6th wife of Henry VIII., married at 12 to Edward Borough, who died 1529; at 17 to Lord Latimer, who d. 1542: to the king July 1543; and 1547 to Sir Thomas Seymour. She was distinguished for her learning, especially of religious subjects.

Queen Catherine Parr, Painted by Holbein.

Parr, SAMUEL, LL.D., 1747–1825. English teacher, in his time of great fame for learning, which his works, 8 vols., 1828, fail to support.

Parr, THOMAS, 1483–1635. English marvel of longevity, called "Old Parr." See LONGEVITY.

Parrhasius, 4th cent. B.C. Most famous of Greek painters, except perhaps his rival Zeuxis.

Parricide. In modern acceptance, murder of a parent; in Roman law, that of any near relative, and peculiarly punished.

Parris, ALBION KEITH, 1788–1857. M.C. 1815–19; Gov. of Me. 1821–26; U.S. Senator 1826–28; Judge of Me. Supreme Court 1828–36.

Parris, SAMUEL, 1653–1720. Minister at Salem, Mass., 1689–96; promoter of the witchcraft delusion, which began in his family 1692, and of 20 judicial murders caused thereby.

Parrish, JOSEPH, M.D., 1779–1840. Practitioner in Phila. *Hernia*, 1836.—Of his sons, JOSEPH, M.D., 1818–1891, was noted as an alienist and for the care of inebriates; EDWARD, 1822–1872, an eminent pharmacist, was pres. of Swarthmore Coll. 1868–70.

Parrish, STEPHEN, b. 1846. American landscape painter and etcher.

Parrot Coal. Cannel coal, which makes a crackling noise in burning.

Parrots. Order PSITTACI (q.v.), including 430 species, 9 families, and 45 genera, nearly all tropical. Some are brilliantly colored, some very plain. The size ranges from that of the sparrow-like LOVE-BIRDS (q.v.) to the MACAWS (q.v.). They associate in flocks in forests, are vegetarian, and have harsh voices, but some are good imitators of sounds. The Kaka of New Zealand has taken to eating mutton, attacking even live sheep, from which it tears the flesh. See also COCKATOOS and PARAKEETS.

Parrott, ENOCH GREENLEAF, U.S.N., 1814–1879. Distinguished on the Atlantic coast 1861–65; Admiral 1873.

Parrott, ROBERT PARKER, 1804–1877. U.S. officer 1824–36; inventor of rifled cannon and projectiles.

Parrott Gun. Cast-iron, muzzle-loading, rifled gun, having a wrought-iron band shrunk over the breech in rear of the trunnions. They were extensively used during the Rebellion in the field, siege, and seacoast artillery, up to 300 lbs. They were not always reliable, for some would burst after a few rounds, while others would stand the full service life of 1,000 rounds.

Parrott Projectile. Elongated cast-iron projectile arranged to take the rifled motion by means of a brass band cast on the butt of the projectile. Upon being fired the powder gas expanded the band and drove it into the grooves of the rifling, thus causing the projectile to take the rifled motion.

Parry, CHARLES CHRISTOPHER, M.D., 1823–1890. Botanist to several Western surveys; writer on botany.

Parry, CHARLES HUBERT HASTINGS, b. 1848. English composer. Prof. Royal College of Music. *Art of Music*, 1893.

Parry, SIR WILLIAM EDWARD, R.N., 1790–1855. Arctic explorer, knighted 1829, Rear-admiral 1852. In 1820 he won £5,000 by going farther west than any before him; in 1827 he reached 82° 45′ N. lat., the highest till 1876. *Journal*, 1824; *Narrative*, 1828.

Parry Sound. Village in the district at the e. extremity of P. S., an inlet of Georgian Bay. Pop. 1,500.

Parsees. Remnant, in Persia and w. India, of the adherents of Zoroastrianism, the ancient religion of Persia. They worship one god, specially symbolized by fire, and are eminent for activity, business capacity, thrift, and probity. They refuse to eat food prepared by one of a different faith, do not bury their dead, but place them on towers that the birds may clean the bones, which are collected and buried. They number ab. 8,000 in Persia and 85,000 in India, chiefly at Bombay. See GUEBERS and DISPOSAL OF THE DEAD.

Parsee Hotel Keeper.

Parsley. *Petroselinum sativum.* Herb with finely cut leaves, of the Carrot family, native of the Mediterranean region, widely cultivated as a flavoring herb.

Parsley, FOOL'S. *Æthusa cynapium.* White-flowered, poisonous herb of the Carrot family, native of Europe; introduced as a weed into N. America.

Parsnip. *Pastinaca sativa.* Yellow-flowered, coarse herb of the Carrot family, native of Europe, extensively cultivated for its edible roots, and introduced as a weed into N. America. Parsnips are occasionally grown as a field crop, solely as a cattle food. They are especially valuable for milch cows. The cultivation is essentially like that given for beets, though care must be taken that the seed is fresh and vigorous. The common parsnip easily runs wild, when it becomes an unsightly and troublesome weed.

Parsnip, MEADOW. Plants of the genus *Thaspium*, yellow-flowered herbs of the Carrot family, natives of e. N. America.

Parsnip, WATER. Marsh herbs of the genus *Sium*, natural family *Umbelliferæ*, natives of the n. temperate zone.

Parson. Parish priest of English church; so called because by his person the church is represented. He is a corporation sole, holding legal title to the temporalities of his parish.

Parsons, ALFRED WILLIAM, b. 1847. English landscape artist. *Notes in Japan*, 1895.

Parsons, or **Persons,** ROBERT, 1546–1610. English Jesuit, much dreaded by Elizabeth; missionary at home 1580–81; founder of schools in Spain and France; rector English College at Rome 1598–1610. His *Christian Directory*, 1583–91, was revised by Dean Stanhope 1700; other books of his were considered treasonable.

Parsons, SAMUEL HOLDEN, 1737–1789. Brig.-gen. U.S.A. 1776; Major-gen. 1780; Judge of Northwest Territory 1788.

Parsons, THEOPHILUS, LL.D., 1750–1813. Chief-justice of Mass. Supreme Court from 1806.—His son, THEOPHILUS, LL.D., 1797–1882, was prof. Harvard Law School from 1847. *Law of Contracts*, 1853; *Maritime Law*, 1859; *Partnership*, 1867; *Marine Insurance*, 1868.

Parsons, THOMAS WILLIAM, 1819–1892. American poet. Tr. Dante's *Inferno*, 1867.

Partative Force. Greatest weight a magnet can support. That of a saturated horseshoe magnet may, according to Hücker, be given by the formula,

$$P = a\sqrt[3]{p^2},$$

in which p is the weight of the magnet, and a a coefficient depending for its value upon the nature of the steel and the method of magnetization.

Parthenius, OF NICÆA, 1st cent. B.C. Greek writer of prose and verse. Some romances survive.

Parthenogenesis. Formation of sperm cells by asexual processes; known in both vegetable and animal kingdoms; development of eggs without fertilization. Every egg which the queen-bee lays either is fertilized or is not: the former develop into workers (females), the latter become drones (males). The males are therefore parthenogenetically produced. In other cases, as in Plant-lice, the parthenogenetic generations are usually females.

Parthenon. Temple of Athene Parthenos (virgin) on the Acropolis at Athens, built at command of Pericles by Ictinus and Callicrates 444–438 B.C. The temple platform measures 228 by 101 ft., having 15 Doric columns 35 ft. high on either side and 8 on each end. The sculptures of pediment, metopes, and frieze were wrought and placed under direction of Phidias. In the cella was his world-famed chryselephantine statue of

The Parthenon.

the goddess. In the Middle Ages the Parthenon became a church dedicated to the Virgin, and then a mosque. It was nearly destroyed by an explosion of gunpowder 1687, during the siege of Athens by the Venetians. Many of the remaining sculptures of the pediments and frieze were wrenched from their position by Lord Elgin, and are now in the British Museum. See ARCHITECTURE.

Parthenopean Republic. In Naples, Jan. 1799; the Bourbons were reinstated the following June. Parthenope was an ancient town on the site of Naples, named from one of the Sirens, whose tomb was shown there.

Parthenosperms. Reproductive bodies borne by certain *Algæ* of the order *Conjugatæ*, resembling zygosperms, but produced independently of the process of conjugation; parthenospores.

Parthia. Country of Asia, s.e. of the Caspian, whose warriors were famed for their skill in horsemanship and archery; subject to Persia and the Greek kings of Syria until Arsaces moved a revolt and set up an independent monarchy ab. 255 B.C. The Parthian empire was established ab. 174 B.C. by Mithradātes I., who conquered Media, Susiana, Persia, Babylonia, and Bactriana. Mithradates II., "the Great," 124–87 B.C., extended the empire in several directions, but lost Armenia. A Roman expedition against P. under Crassus, 54 B.C., was a bad failure. The Parthians defeated the Romans again 51 and 40, and made themselves masters of Syria, but were checked 39 in an attempt to conquer Asia Minor. Antony's great expedition, 36 B.C., ended disastrously. From this time for 150 years there were no more open wars with Rome, but in 114 A.D. Trajan conquered a large part of the Parthian empire, to be surrendered however 117. P. became dependent on Rome 165, and the empire came to an end 226 through a revolt of the Persians. At its height, it extended from the Indus and the Ocean to the Euphrates and the Oxus.

Parthian Arrows. Discharged by horsemen in apparent retreat.

Partial Contraction. Stream of water issuing from an orifice and contracted only on one or two sides, owing to rounded edges of the orifice or to a wall on one side. The contraction is then said to be partially suppressed.

Participation in Profits. See INDUSTRIAL PARTNERSHIP.

Participle. Adjective formed from a verb. When active, it often carries the force of both parts of speech.

Particle. In Mechanics, smallest mass upon which force may be supposed to act. A particle may have a motion of simple translation, but as it is assumed to occupy the volume of a geometrical point only, it cannot rotate. Indeed, since in many problems particles are assumed to have different masses, the idea of non-rotation or zero volume seems to be the most important.

Parting. Layer of slate, dirt, or other valueless material, occurring in a seam of coal.

Partition. Division of property between joint or co-tenants, so that each may have exclusive possession of his share. It may result from the mutual consent of the parties or be adjudged in a legal action.

Partition, WALL OF. Wall in Jewish Temple, beyond which none but Jews were allowed to go, on pain of death. St. Paul declares that Christ has broken this down, by admitting all believers in Him to equal privileges.

Partnership. Relation subsisting between persons carrying on a business in common with a view of profits. Whether this relation exists in a particular case is generally determined by the intention of the parties, as evinced by their acts. Each partner is a general agent for the firm and may bind it by acts within the apparent scope of his authority. A person may make himself liable as a partner by holding himself out as such, and thereby inducing others to become creditors of the supposed firm. The liability of partners for firm debts is joint, and for firm torts joint and several. The entire fortune of each partner is liable for firm obligations; the equity rule, however, for distributing to firm and separate creditors is to give firm creditors the preference in the firm estate and separate creditors priority in the separate estate. Each partner is bound to exercise the utmost good faith toward his associates, and cannot introduce another into the firm without consent of all its members.

Parton, JAMES, 1822–1891. American author of English birth; biographer of Greeley, 1855; Burr, 1857; Jackson, 3 vols., 1860, and others. *Captains of Industry*, 1884–91.—His wife, SARAH PAYSON ("FANNY FERN"), 1811–1872, was a sister of N. P. Willis, whom she satirized in a novel, *Ruth Hall*, 1854, and a once popular writer.

Part Ownership. Title in two or more to personal property, without right of survivorship or right to force partition.

Partridge, WILLIAM ORDWAY, b. 1861. American sculptor; author of the Shakespeare in Lincoln Park, Chicago, a bronze Hamilton, and an equestrian statue of Grant in Brooklyn; noted also for portraits and ideal subjects.

Partridge-Berry. *Mitchella repens.* Low evergreen plant of the Madder family, bearing red berries, native of e. N. America; also Wintergreen.

Partridge-Pea. *Cassia chamæcrista.* Yellow-flowered herb of the Pea family, native of N. America.

Partridges. Different genera of the family *Tetraonidæ.* The most common of the Old World is *Perdix*, the Gray Part-

Partridge (*Perdix communis*).

ridge. The Snow Pheasants of the heights of the Himalayas may exceed 6 lbs. in wt. The Gray Partridge of India is not

palatable as food, but, being very pugnacious, is kept for fighting; the male has two spurs on each foot. There are 9 genera and 45 species of American Partridges, among which are the Mountain Quail of Cal., the Bob-White of e. U. S., called Quail north and Partridge south, while the RUFFED GROUSE (q.v.), *Bonasa umbellus*, is called Partridge north and Pheasant south. It is shy and forest-loving; the male makes a drumming sound by vibrating its wings. Its tarsus is feathered half way, the head crested, and plumage variegated. Length 18 in. The tail consists of 18 soft, broad feathers. See SAND GROUSE and QUAILS.

Parts of Speech. The earliest forms of language seem to have been (a) pronominal and (b) verbal: a combination of these produced the verb and its differences of person, to which number, tense, and mood were added. The noun, or substantive, and the adjective were early developed from the root. with endings to express case, gender, and number. Verb and substantive (covering, of course, pronoun and adjective), therefore, with their varieties of inflection, include all the original parts of speech. Adverbs are either fossilized cases (*e.g.*, *whilom* is a dative plural, *while* an accusative singular, of the noun *while*), or are made by a suffix, such as *-ly*, from an older equivalent of *like*. Prepositions, as the name implies, were once prefixes of the verb. Conjunctions are of later origin; thus *that* in "I see that you are blind," was once "You are blind, I see that." Interjections hardly count as parts of speech, and stand outside of syntactical relations.

Part Song. Musical composition, in three-voiced harmony or more, generally of a secular character, homophonic, and sung without accompaniment.

Party Wall. One standing on or near a real property line, in which the adjoining proprietors have rights in common.

Parveyance. Obsolete right of buying provisions and other necessaries for use of government at an appraised valuation, and without regard to the consent of the owner.

Parvin, THEOPHILUS, M.D., LL.D., b. 1829. Prof. Jefferson Medical Coll., Phila., 1883. *Obstetrics*, 1886.

Pasadena. City of Cal., 10 m. n.n.e. of Los Angeles; winter resort. Pop., 1890, 4,882.

Pasargadæ. Ancient capital of Persis, said to have been founded by Cyrus on the site of his victory over Astyages; its ruins are near Murghab.

Pascagoula. River of s.e. Mississippi, flowing s. to a bay on the Gulf. Length 85 m., drainage area 8,980 sq. m.; navigable.

Pascal, BLAISE, 1623–1662. French philosopher, theologian, and mathematician, famous for his attack on the Jesuits in the *Provincial Letters*, 1656, in defense of his friend Arnauld and the Jansenists, and for his paradoxical and half skeptical

Blaise Pascal.

doctrines in the *Thoughts*, 1669; writer on Conic Sections, 1640; first to determine the properties of the cycloid; founder of the doctrine of mathematical probability, and discoverer of the weight of the air and the existence of a vacuum.—His sister, JACQUELINE, 1625–1661, was a nun at Port Royal from 1652.

Pascal's Principle. See HYDROSTATICS.

Pascal's Theorem. A hexagon being inscribed in a conic and the pairs of opposite sides being produced, the points of intersection lie in the same straight line.

Paschal I. Pope 817–824. Also an antipope 687, d. 694.—II. RANIERI, ab. 1050–1118; cardinal ab. 1076, pope 1099. He excommunicated Henry IV. of Germany, and was imprisoned by Henry V.—III. Antipope 1164–68.

Paschal Controversies. Between East and West, as to the time and manner of Easter observance.

Pasha. Turkish title, first of princes, since of governors, officers, or favorites; of three degrees, 1, 2, or 3 horsetails being the standard and emblem of rank.

Pasini, ALBERTO, b. 1820. Italian-French painter.

Pasiphäe. Wife of Minos, King of Crete: mother of Ariadne, Phædra, and the Minotaur.

Paskevitch, IVAN FEODOROVITCH, COUNT OF ERIVAN, PRINCE OF WARSAW, 1782–1856. Russian Field-marshal; active against the French 1812–14. In 1825 he conquered Persian Armenia, taking Erivan; in 1828–29 he took Kars and Erzerum from the Turks. He crushed the Polish revolt 1831, and was Gov. of Poland, joined the Austrians to quell the Hungarian insurrection 1848; and was defeated by the Turks 1854.

Paso del Norte. Mountain pass, which is the chief thoroughfare between Mexico and New Mexico.

Paspatis, ALEXANDER GEORGE, LL.D., 1814–1891. Greek author, who wrote also in French and English; once a Turkish slave; educated in America and France; physician in Constantinople 1840–78; prof. at Athens 1878.

Pasqualis, MARTINEZ, 1715–1779. Jewish cabalist, active among French Freemasons; founder of the Martinists.

Pasque-Flower. *Pulsatilla patens*, and other species of showy-flowered herbs of the Buttercup family, natives of the n. hemisphere. The leaves are narcotic, acrid, and poisonous, and

Pasque-Flower (*Pulsatilla pratensis*).

contain anemonine. The extract is a favorite medicine of the homœopathists. It bears blue bell-shaped flowers, the petals of which are used to color Easter eggs purple.

Pasquino, ANTONIO, d. ab. 1500. Tailor in Rome, noted for his quips and witty sallies. His name was given to a broken statue found near his stall, to which anonymous lampoons were affixed by night. Hence pasquinade.

Pass. Mill or opening left in the deads through which ore falls to loading place.

Passagians. Semi-Jewish sect in Italy, condemned 1184.

Passaglia, CARLO, 1812–1887. Prof. at Rome 1844–57, and at Turin from 1861; expelled by Jesuits 1859 for attacking the temporal power and urging Italian unity; Deputy 1863.

Passaic. City of P. co., N. J., 11 m. n.w. of Jersey City; on the P. It has some manufactures. Pop., 1890, 13,028.

Passaic River. In the n.e. of N. J., flowing e. then s. past Paterson and Newark into Newark Bay.

Passamaquoddy Bay. Between Me. and New Brunswick, at mouth of Bay of Fundy; ab. 10 m. by 15.

Passarowitz. Town of Servia, 40 m. s.e. of Belgrade. Here a treaty was signed July 21, 1718, ending the Turkish war against Venice, and securing part of Wallachia, Servia, and Bosnia to Austria. The Turks held the Morea. Pop. ab. 10,000.

Passau. Old town of Bavaria, on the Danube, Ilz, and Inn. By a treaty signed here Aug. 1552 toleration was granted to the Lutherans. It was an old Roman camp and has strong

fortifications and considerable manufactures and trade. Pop., 1890, 16,633.

Passau.

Passavant, JOHANN DAVID, 1787–1861. German painter, head of the Städel Institute at Frankfort; author of an important *Life of Raphael*, 1839–58.

Passavant, WILLIAM ALFRED, D.D., 1821–1894. Lutheran pastor at Pittsburg 1844–55; ed. *Missionary* 1848–61, and *Workman* from 1880; founder of hospitals, orphanages, and of the Chicago Theol. Sem. 1891; introducer of deaconesses for hospital work 1849. Much of his work is carried on by his son and namesake, b. 1857.

Passenger Cars. Length 60 ft., width 10 ft., weight 60,000 lbs., cost $5,000, seats 60. The average life of passenger cars is 16 years. In U. S. 1895 there were 26,419 passenger cars.

Passerat, JEAN, 1534–1602. French poet and satirist; prof. Coll. of France 1572.

Passeres (CORACOMORPHÆ, INSESSORES, PERCHERS). Order of Birds containing many of small size, generally good flyers, using their feet mostly for perching; when on the ground they usually hop. The beak is horny, without cere; the young are altrices. A vocal apparatus (syrinx) is usually present. They have been artificially grouped into the *Oscines*, or singers, and the *Clamatores*, or shriekers; but similar varieties of beaks occur in both groups, according to which we have five tribes: LEVIROSTRES, TENUIROSTRES, FISSIROSTRES, DENTIROSTRES, and CONIROSTRES (q.v.). They are monogamous, migratory, gregarious, and build skillfully constructed nests. The Levirostres are frequently placed with the CUCULI (q.v.).

Passeroni, CARLO GIOVANNI, 1713–1803. Italian lyric poet.

Passifloraceæ. Natural family of flowering plants, of the class *Angiospermæ* and sub-class *Dicotyledons*, comprising 27 genera and ab. 235 species, all growing in the tropics and warm regions bordering thereon; called the Passion-Flower family.

Passion. Desires or affections when uncontrolled by the reason or by moral rules.

Passion-Flower. Vines of the genus *Passiflora*, natural family *Passifloraceæ*, of wide geographical distribution, often

Passion-Flower (*Passiflora cærulea*).

cultivated for their beautiful flowers and in the tropics for their fruits, which are edible, especially those of the genus *Granadilla*.

Passionists. R.C. order founded 1720 in Piedmont, confirmed 1741, introduced in England 1842, and 1852 in the U.S., where they now have many houses.

Passion Play. See MYSTERIES, MIRACLE-PLAYS, and OBERAMMERGAU.

Passion Week, or HOLY WEEK. Last of Lent, preceding Easter. Strictly this is Holy Week, the preceding being Passion Week.

Passion Music. Settings of the history of Christ's passion, as drawn from the Gospels and performed in the service of Holy Week in the German Church. By the 4th century the recital took on a quasi-dramatic character; the story was chanted dialogue interspersed with choruses. In the Western Church ab. 1200–1570 the recital was divided between three deacons, one of whom sang the words of the evangelist, the second those of Christ, the third those of the apostles and spectators, plain chant melodies being used. Subsequently the cries of the people were set to simple polyphonic music in Italy, and ab. 1690 in Germany the ch. chants were set aside and the entire Passion was set to original music, which led to the masterwork of its kind, Bach's *Passion according to St. Matthew.*

Passive State. Condition of iron when immersed in concentrated nitric acid, probably due to the formation of a thin layer of protosesquioxide of iron. On this state depends the possibility of a zinc-iron battery.

Passover. Chief festival of the Israelites, commemorating the deliverance from Egypt, when God passed over their homes smiting the firstborn of the Egyptians; celebrated 14th of the month Nisan, first full moon after vernal equinox. For every household a paschal lamb was sacrificed, and eaten by the family accoutered as for hasty departure. No leaven could be found in any house throughout the week.

Passow, FRANZ LUDWIG KARL, 1786–1833. Prof. Breslau 1815; author of an important Greek lexicon, 1819–24, much drawn on by Liddell and Scott.

Passport. Document useful and often necessary in foreign travel; issued or signed by officers of government.

Pasta, GIUDITTA (NEGRI), 1798–1865. Italian singer, prominent in opera at Paris and London 1822–34.

Pasteboard. See CARDBOARD.

Pastel. Crayon for drawing on parchment or rough paper.

Pasteur, LOUIS, 1822–1895. Physician in Paris from 1857; Prof. of Chemistry at the Sorbonne 1867; famous for his treatment of hydrophobia by inoculation. *Memoire sur les corpuscules organisés qui existent dans l'atmosphère*, 1862; *Fermentation*, 1863; *Études sur la maladie des vers à soie*, 1870; *Les Microbes*, 1878. His Institute in Paris, opened 1888, has relieved patients from all parts of Europe, and been the model of similar establishments in America. Courses of lectures on the related subjects are also given here.

Pasteurized Milk. See STERILIZED MILK.

Paston Letters. 1,000 or more documents written by or to William Paston of Norfolk and his relatives 1422–1509; of historical value. Vols. I. and II. were pub. 1787, III. and IV. 1789, V. 1823; reprinted, 3 vols., 1872–75.

Pastoral Epistles. I. and II. Timothy, and Titus.

Pastoral Letter. Addressed by a pastor to his flock, by a bishop to his diocese, by the House of Bishops after General Convention, or by a synod to its congregations.

Pastoral Poetry. Begun among the Greeks by Theocritus in his idyls, it passed to Rome, as in Virgil's eclogues; was revived in Provence, and in Italy by Petrarch and Boccaccio, and later in dramatic form; was cultivated in Spain, France, England, and Germany; became a part of every national literature, and is now somewhat out of favor.

Pastoral Staff. Commonly called Crosier; curved and ornamented, borne by bishops, mitered abbots, and abbesses, one cross-bar denoting episcopal, two archiepiscopal, three patriarchal or papal rank.

Pastoral State. That stage in the progress of mankind in which cattle and other animals are domesticated and furnish the principal part of subsistence. It represents a decided advance on the hunter state, but is still far below the agricultural state.

Pastoral Theology. Branch of the seminary course, treating of parish work and the cure of souls.

Pastorals, or PASTORELLS. Disorderly mobs of would-be crusaders, who infested France 1251 and 1320.

Pastorius, FRANCIS DANIEL, 1651–1719. German Quaker, head of a company of emigrants 1683; founder of Germantown, Pa.; celebrated in Whittier's *Pennsylvania Pilgrim.*

Pastoral Staff.

Pasture. Land devoted to grasses or forage plants, upon which domestic animals are grazed.

Patagium. Fold of skin which stretches between the limbs on the sides of the body of bats and flying squirrels.

Patagonia. S. part of S. America; region of high mountains and desolate plains, inhabited by roving savages; recently appropriated and apportioned between Chili and Argentina, the former holding the portion west of the Andes and that bordering on the Strait of Magellan and the latter the portion east of the Andes. Araucanian nomadic tribes, living by fishing and hunting, numbering 4,000, inhabit w. P., and Patagonians, numbering ab. 7,000, e. P.

Patagonians (TEHUELT INDIANS). Noted for their physical development: the men average 6 ft., but the women are much shorter. They are powerful, brachycephalic, dark yellow, have long, coarse, abundant hair, Roman noses, and intelligent expression. They are cleanly, but paint and hang trinkets

Group of Patagonians.

in their ears: tatooing is practiced. They live by hunting from horseback, using the bolas; their houses are tents of skins. Honest among themselves, they steal from and deceive strangers. The wife is won by courtship. They worship the moon; the dead are buried in stone cairns in a sitting posture.

Patapsco River. In Md., flowing e. through Baltimore into Chesapeake Bay. Length 80 m.

Patay. Town of France, 13 m. n.w. of Orleans. Here the French under Dunois and Joan of Arc defeated the English under Talbot June 18, 1429.

Patch, ABBOTT LAWRENCE, b. 1861. American meteorologist.

Patch, SAMUEL, 1807–1829. American athlete, who leaped Niagara safely, and was killed at Genesee Falls, Rochester, N.Y.

Patches. Used by ladies ab.1600–1725 to set off their complexions.

Patchouli. Perfume derived from *Pogostemon patchouli*, a small shrubby plant, native of Penang and Malacca. In India it is used to scent tobacco and as a perfume for the hair. It is also used to keep insects from linen and woolen articles.

Patella. See KNEE.

Patellidæ. See CYCLOBRANCHIATA.

Patelliform. In Botany and Zoölogy, organs or organisms shaped like shallow saucers.

Paten. Round plate to hold the bread for Holy Communion.

Patent. Governmental grant to an inventor, securing to him the exclusive enjoyment of his invention. The subject is regulated by statutes. In the U.S., the national government has exclusive jurisdiction of patents. Each grant of patent is for 17 years; or, if previously granted in a foreign country, it expires simultaneously with the latter. The fee for filing is $15 and issuing $20. In 1895, 22,057 patents were granted; from 1831–96, 566,615 patents were issued by U.S.

Patent Hammer. So arranged that several stone chisels can be clamped together to form its head; used for dressing stone after the surface has been roughly formed by the common hammer.

Patent Medicines. Medical compounds for the sale of which the proposer obtains an exclusive privilege from the Government. His invention must be registered in the Patent Office, hence it differs from a secret and proprietary medicine.

Pater, JEAN BAPTISTE JOSEPH, 1695–1736. French painter, pupil and follower of Watteau.

Pater, WALTER HORATIO, 1839–1894. English author, noted for delicacy of thought and purity of style. *The Renaissance*, 1875; *Marius the Epicurean*, 1885; *Imaginary Portraits*, 1887; *Appreciations*, 1889; *Plato and Platonism*, 1893; *Gaston de Latour*, 1896.

Paterculus, VELLEIUS, ab.19 B.C.–ab.31. Roman courtier and historian; prætor 15. His book was first pub. 1520.

Patereros. Small pieces of ordnance worked on swivels. Used on board ship, mounted on the gunwale to throw nails, etc., into the enemy's ships.

Pater-noster. Lord's Prayer in Latin; used in nearly all liturgies.

Paterson. City of Passaic co., N. J., 14 m. n.w. of Jersey City; on Passaic River, which here falls 72 ft.; settled 1791, chartered 1850; noted for its manufactures of silk. Pop., 1890, 78,347.

Paterson, JOHN, 1744–1808. Col. of Mass. troops 1775; Brig.-gen. 1777, Major-gen. 1783; M.C. from N.Y. 1803–5.

Paterson, ROBERT, ab.1715–1801. Original of Scott's "Old Mortality."

Paterson, WILLIAM, 1658–1719. Scottish projector of the Bank of England, 1694, and of a colony at Darien, which failed disastrously 1698–69; M. P. 1708; free-trader and advanced financier.

Paterson, WILLIAM, LL.D., 1745–1806. U.S. Senator 1789–90; Gov. of N.J. 1791; Justice U.S. Supreme Court from 1793.

Pathogenic Bacteria. Those that produce disease. See DISEASE GERMS.

Pathology. Branch of medical science investigating the character of the changes of the tissue in disease and of the modifications of the function of any organ due to disease.

Pathology (MENTAL). See LUNACY.

Patience. The habit of mind which enables one calmly to endure afflictions or await what one wishes for.

Patkul, JOHANN REINHOLD VON, ab.1660–1707. Livonian negotiator of the alliance of Russia against Sweden; given up to Charles XII., tortured, and executed.

Patmore, COVENTRY KEARSEY DEIGHTON, 1823–1896. English poet. His *Angel in the House* includes *The Betrothal*, 1854, *The Espousals*, 1856, and two more parts, 1860–63. He ed. *The Children's Garland*, 1862.

Patmos. Island in the Ægean Sea, s. of Samos, to which St. John was banished, and where it is supposed he wrote the

Cave in which St. John the Divine was imprisoned.

Revelation. It is 28 m. in circumference, and is divided into n. and s. parts by a narrow isthmus. The population is entirely Greek and mostly sponge fishermen, numbering 4,000.

Patna. City of India, on s. bank of the Ganges, 140 m. e. of Benares. It has a Mohammedan college, considerable manufactures, and a large trade. Pop., 1891, 165.192.

Patois. Provincial dialect used by the illiterate.

Patok. Corean pebble game, corresponding with the Japanese game called So, and the Chinese game of Enclosing. The Corean board is peculiar in emitting a musical note when a piece is played.

Patolli. Game of the old Mexicans, played upon a cross-shaped diagram with pieces or men, according to the throws with certain objects, for which beans are said to have been

employed; practically identical with the Hindu Pachisi, and regarded by Prof. Tylor as evidence of the Asiatic origin of Mexican culture. The development of the game, which was originally cosmical and divinatory, may be traced in America, and there is no indication of its foreign origin. See GOOSE.

Paton, JOHN GIBSON, D.D., b. 1824. Scottish missionary to New Hebrides 1858-62 and since 1865. *Autobiography*, 1890.

Paton, SIR JOSEPH NOEL, LL.D., b. 1821. Scottish painter, chiefly of figures and historical scenes; knighted 1867.

Patras. Greek town, on the Gulf, 81 m. w. of Corinth; anciently Patræ; commercially important. Pop., 1890, 33,529.

Patria Potestas. Power of the *paterfamilias*, in Roman law, over all members of the family, slaves, children, wife. It included originally the power of life and death, the power to sell, and the right to all their acquisitions: this was much limited under the emperors.

Patriarch. Title of Abraham, Isaac, and Jacob; applied in N.T. to David, and in the Roman Empire to the Bishops of Rome, Constantinople, Alexandria, Antioch and Jerusalem; borne by some other modern bishops, as of Venice and Lisbon.

Patricians. At Rome, original free citizens, who long monopolized all rights of government and allowed no share therein to later settlers until forced to yield, after a century and a half of agitation, which several times threatened to destroy the state.

Patrick, ST., ab. 372-465. Apostle of Ireland, where his work began 432; b. in Scotland; taken in a raid ab. 388, and a slave till 395; said to have been ordained and consecrated ab. 417 in France. He belongs alike to history and to legend.

Order of St. Patrick.

Patrick, ST., ORDER OF. Instituted by George III. in 1783. It consists of 22 knights with the sovereign and the lord-lieutenant of Ireland.

Patrick, SIMON, D.D., 1626-1707. Bp. of Chichester 1689, and of Ely 1691. *Works*, 9 vols., 1858.

Patriotism. Love of one's country, especially as shown by sacrifices in its behalf.

Patripassians. Species of Monarchians in 2d and 3d centuries, who, for fear of dividing the Godhead, taught that the Father suffered in Christ.

Patristics. Branch of Historical Theology treating of the writings and influence of the Ch. Fathers.

Patroclus. Friend of Achilles, in command of whose troops he drove the Trojans back to their walls, but was slain

Achilles bandaging the wound of Patroclus.

by Hector. Achilles in revenge slew Hector and dragged his body behind his chariot.

Patronage. Power of appointing clergy to Ch. livings; partly allowed to founders or benefactors, in part incident to the feudal system; variously resident in popes, bishops, corporations, and laymen of wealth or station. Its survival in the English Ch. is often objected to: under the voluntary system it cannot exist. In U.S. politics, the nominations for government positions by members of Congress.

Patrons of Husbandry. See GRANGERS.

Patroon. Grantee in N.Y. or N. J. under the Dutch W. I. Co., exercising manorial privileges, with right of entail. He was to plant a colony of 50 in New Netherlands within 4 years of 1629.

Patten, SIMON NELSON, b. 1852. Prof. Univ. Pa. since 1885. *Premises of Political Economy*, 1885; *Consumption of Wealth*, 1889; *Stability of Prices*, 1889; *Principles of Taxation*, 1890; *Economic Basis of Protection*, 1891; *Theory of Dynamic Economics*, 1892.

Patterson, DANIEL TOD, U.S.N., 1786-1839. Distinguished at New Orleans 1814.—His son, CARLILE POLLOCK, U.S.N., 1816-1881, was connected with the Coast Survey from 1861, and its head from 1874.

Patterson, ROBERT, 1792-1881. Born in Ireland; served in war of 1812. Major-gen. U.S. Vols. 1846 and 1861, serving in Mexico and Va.

Patterson, THOMAS H., U.S.N., 1822-1889. Lieut. 1861, serving on the Atlantic coast; Commodore 1871, Admiral 1877.

Patteson, JOHN COLERIDGE, D.D., 1827-1871. Missionary in New Zealand 1855; Bp. of Melanesia 1861; killed by natives.

Patti, ADELINA (ADELEA JUANA MARIA), b. 1843. She sang in concerts as a child, but effected her operatic dêbut at the Academy of Music, New York, as *Lucia* 1859; went to Europe 1861, and did not return to America till 1881. In 1868 she was married to the Marquis de Caux, and in 1886 to the tenor NICOLINI.—Her sister, CARLOTTA, 1840-1889, devoted herself to the concert stage, and in 1879 was married to the violoncello virtuoso De Munck. They were of Italian parentage.

Pattison, MARK, 1813-1884. Rector of Lincoln Coll., Oxford, from 1861; contributor to *Essays and Reviews* 1860; biographer of Casaubon 1875, and Milton 1879. *Memoirs*, 1885.—His sister, DORA WYNDLOW, 1832-1878, joined an Anglican sisterhood 1864, and was eminent in philanthropic work.

Pattison, THOMAS, U.S.N., 1822-1891. Lieut. 1862; at Memphis, Tenn., 1863-65; Commodore 1877; Admiral 1883.

Patton, FRANCIS LANDEY, D.D., LL.D., b. 1843. Pres. Princeton Coll. 1889. *Inspiration*, 1869.

Patuxent River. In e. Md., flowing s.e. and entering Chesapeake Bay to the n. of the Potomac. Its oyster beds are very valuable.

Pau. Town of s. France, on the Gave de P., near the base

The Valley of Gavarnie, on the Pau.

of the Pyrenees; once capital of Bearn; birthplace of Henry IV. and Bernadotte. Pop., 1891, 32,111.

Paul, ST., ab.1-ab. 65. Originally Saul; Benjamite Jew, b. in Tarsus; Roman citizen; trained in Jerusalem, under the famous rabbi Gamaliel; violent persecutor, converted 36 into the most effective of the apostles; arrested ab. 58, confined in Jerusalem and Rome, and then beheaded. He stoutly opposed Jewish exclusiveness, opened the Church to the Gentiles, and by his epistles has supplied the main material for the development of Christian doctrine.

Paul, ST. VINCENT DE. See VINCENT DE PAUL.

Paul I. Pope 757-767.—II. PIETRO BARBO, 1418-1471, Pope 1464.—III. ALESSANDRO FARNESE, 1468-1549, Pope 1534. He made his grandsons cardinals, excommunicated Henry VIII. 1538, instituted the Society of Jesus 1540, strengthened the Inquisition 1542, and called the Council of Trent 1545 —IV. GIOVANNI

PIETRO CARAFFA, 1476–1559, Bp. of Chieti 1507, Abp. of Brindisi 1518, Cardinal 1536, Pope 1555. He founded the Theatines 1524, issued the first full Index librorum prohibitorum 1559, and was

a severe and not wholly successful ruler.—V. CAMILLO BORGHESE, 1552–1621, Cardinal 1596, Pope 1605. He had a long quarrel with Venice, founded several orders, and promoted foreign missions.

Paul, 1754–1801. Emperor of Russia 1796; son of Peter III. and Catharine II.; feeble and inconsistent; slain by conspirators, who meant to force his abdication.

Paul, HERMANN, b. 1846. Prof. Munich; one of the founders of the younger school of German philologists, ed. *Grundriss der germanischen Philologie. Principles of Language*, 1880.

Paul, HOWARD, b. 1835. American actor and playwright.

Paul, JEAN. See RICHTER, J. F.

Paula, ST., d. 404. Roman lady of great wealth and illustrious family, who, with her daughter Eustochium, was won by St. Jerome to the ascetic life in Palestine. Her day is Jan. 26.

Paulding, JAMES KIRKE, 1779–1860. American novelist; Sec. Navy 1837–41. *Salmagundi* (with Irving), 1807–19; *John Bull and Brother Jonathan*, 1812; *Dutchman's Fireside*, 1831; *Westward Ho*, 1832; *Life of Washington*, 1835.

Paulding, JOHN, 1758–1818. Captor, with I. Van Wart and D. Williams, of Major André, Sept. 23, 1780.—His son, HIRAM, U.S.N., 1797–1878, became Captain 1844 and Admiral 1862.

Pauli, GEORG REINHOLD, 1823–1882. Prof. Rostock 1857, Tübingen 1859, Marburg 1867, and Göttingen 1870. He wrote *King Alfred*, 1851, tr. 1852, and other books on English history.

Paulicians. Mediæval sect of Eastern dualists, who, in their dislike of Judaism, contended that St. Paul was the only genuine apostle; founded by Silvanus ab. 660; severely persecuted by Theodora ab. 850. Their doctrines survived, as among the Cathari.

Pauline Congregation. See PIARISTS.

Pauline Epistles. See ROMANS, CORINTHIANS, etc.

Paulinus, PONTIUS, 353–431. Bp. of Nola, s. Italy, 409; author of poems and letters.

Paulinus, d. 644. Roman missionary to Britain 601; bp. 625; titular Abp. of York 633.

Paulist Fathers. R.C. order established by Rev. Isaac Thomas Hecker in N.Y. 1858; devoted to church work in various forms.

Paul of Samosata. Bp. of Antioch ab. 260–272. He taught that the Godhead in Christ was rather a power than a person.

Paul Pry. Name given to an inquisitive and meddlesome fellow; from a comedy of that name by John Poole, 1825.

Paul's Cross. Originally of wood, on n. side of old St. Paul's, London; replaced ab. 1480 by a stone cross and pulpit which were removed by order of Parliament 1643. Sermons were preached, religious disputations held, and papal bulls promulgated here.

Dr. Bourne Preaching at Paul's Cross.

Paul's, ST. (CATHEDRAL). See ST. PAUL'S.

Paulsen, FRIEDRICH, b. 1846. Prof. Berlin 1878. *Ethik*, 1889; *Einleitung in die Philosophie*, 1892.

Paulus, HEINRICH EBERHARD GOTTLOB, 1761–1851. Prof. at Jena 1789, Würzburg 1803–8, and Heidelberg 1811; rationalistic commentator on the Psalms 1791, Isaiah 1793, and N.T. 1800–4. *Life of Jesus*, 1828; *Handbook of Gospels*, 3 vols., 1830–33. He denied the supernatural.

Paulus, JULIUS, 3d cent. Roman jurist, from whom the Pandects draw largely.

Paulus, LUCIUS ÆMILIUS, ab. 230–160 B.C. Proconsul in Spain ab. 185; Consul 181 and 168; conqueror of Macedonia 168 B.C.

Paulus Ægineta. Greek physician, probably of 7th century. His *De Re Medica* was repeatedly tr. and widely read.

Paulus Diaconus, ab. 720–ab. 800. Historian of the Lombards to 744; author or compiler also of a *Hist. Romana* and other works.

Paul Veronese. See VERONESE.

Pauncefote, SIR JULIAN, b. 1828. British Minister to the U. S. 1888; knighted 1874.

Paunch, or RUMEN. First and largest division of the ruminant stomach. It receives the vegetable food in bulky, half-chewed condition.

Pauperism. Dependence on public support, through poor-rates or otherwise, of those without means of support through their own industry or individual assistance.

Paupers. See IMMIGRATION and POOR LAWS.

Pauropoda. Order of *Myriapoda*, including only *Pauropus*, a white, minute, ten-jointed insect, with nine pairs of legs, eight of which are borne on four segments. The antennæ have only five joints, and there are no maxillipedes, as in the *Chilopoda*. Tracheæ are absent.

Pausanias, d. ab. 470 B.C. Spartan, nephew of Leonidas; commander of the allied Greeks at Platæa 479 B.C.; conqueror of Cyprus and Byzantium. Dazzled by success, he aimed at becoming tyrant of all Greece by aid of the Persian king, was proved guilty of treason and starved in a temple.—His grandson, PAUSANIAS, d. 385 B.C., was King of Sparta.

Pausanias, 2d cent. Greek writer, of w. Asia Minor. His *Itinerary of Greece*, tr. 1793 and 1886, is extensive, reliable, and of great value to the classical antiquarian.

Pauw, CORNELIS DE, 1739–1799. Dutch scholar, canon of Xanten. He wrote on the American Indians 1768, Chinese and Egyptians 1774, and Greeks 1788.

Pavement. Roadbed of loose stones compacted and rolled, or of cubical blocks set on a solid foundation. The Roman road pavements were made of polygonal blocks of basalt set on a very solid foundation of rubble and concrete. Broken stone pavements were first used in France ab. 1750, and soon after 1800 greatly developed in Great Britain by McAdam and Telford. Wooden pavements have been mainly used in the U. S., but have not proved successful. Brick pavements, introduced ab. 1870, are proving excellent for light traffic. In 1892 there were in 51 U. S. cities 2,402 m. of stone pavement, 736 of wood, 421 of asphalt, 88 of brick, and 1,446 of broken stone. Stone ranks highest for heavy traffic, and asphalt for light traffic in towns, while broken stone is the cheapest and best adapted to country roads. McAdam roads cost from 45 cts. to $1.70 per sq. yd.; brick $1.00 to $2.35; wood $1.15 to $2.65; Belgian blocks of trap rock $2.00 to $2.50; granite blocks $2.00 to $4.50; asphalt $2.65 to $4.60. This depends largely upon the foundation for the pavement.

Pavia. City of n. Italy, on the Ticino, 21 m. s. of Milan; the ancient Ticinum; Lombard capital 573; pillaged by the French 1500, 1527, and 1796. Francis I. of France was defeated

Visconti Palace at Pavia (restored).

and made prisoner under its walls 1524. It fell to Austria 1814, but became a part of Italy 1859. Its university, traditionally founded by Charlemagne and really organized 1361, has ab. 60 instructors and 1,100 students. Pop. ab. 37,000.

Paving Stone. Stone blocks for paving streets are of trap, granite, or sandstone, the first being the toughest, while the others are better for horses' hoofs. They are 6 or 8 in. in depth, laid in courses across the street, the joints being filled with asphalt or cement.

Pavlov, NICOLAI, 1803–1865. Russian essayist, novelist, and poet.

Pawl. See RATCHET.

Pawn. Lowest piece in chess, usually regarded as representing a foot-soldier, probably its original form. In Burmah effigies of soldiers with shields are still used. The pawn is generally called soldier, except in Siam, where it is called bia, cowrie shell, probably from cowries having been used for this piece.

Pawnbroker. One engaged in lending money on the security of personal property pledged to him. His business is generally regulated by statutes. Business of great antiquity. The three balls sign is from the armorial bearings of the Medicis.

Pawnees. Indians originally of the Platte River region. They are agriculturists, but the wife, who is purchased, is made to do all the work. There are now ab. 2,500 on reservations in Nebraska and Indian Territory. The Arickarees or Rees, and Wichitas, ab. 1,000, belong to the same stock. They are unfriendly toward the whites.

Pawtucket. City of Providence co., R. I., on Blackstone River, 4 m. from Providence. Cotton manufacturing, begun here 1790, is the paramount industry, for which there is abundant water power. Pop., 1890, 27,633.

Paxillæ. Spines with brush-like ends, produced upon some of the dermal plates of star-fishes.

Pax Romana. General order and tranquillity which under the Roman empire displaced the tumults and wars of preceding times.

Paxton, SIR JOSEPH, 1803–1865. English gardener and architect; designer of the Crystal Palace 1851; knighted 1852; M.P. 1854. *Magazine of Botany*, 1834–49; *Botanical Dictionary* (with John Lindley), 1840–68.

Pay OF U. S. ARMY. The allowances are quarters, and forage for horses used in the public service. The yearly pay is as follows: Major-general, $7,500; Brigadier-general, $5,500; Colonel, $3,500; Lieut.-colonel, $3,000; Major, $2,500; Captain (mounted), $2,000; Captain (not mounted), Regimental Adjutant, and Quartermaster, $1,800; First Lieutenant (mounted), $1,600; First Lieutenant (not mounted), and Second Lieutenant (mounted), $1,500; Second Lieutenant (not mounted), and Chaplain, $1,400. All officers, except the generals, receive 10 per cent increase of pay for every five years additional service, up to 40 per cent; except that the maximum pay of a colonel and lieut.-colonel does not exceed $4,500 and $4,000 respectively. The private soldier receives $13 per month during the first and second years, and $14, $15, and $16 for the third, fourth, and fifth years respectively of his first enlistment; afterward $1 extra per month for subsequent enlistments. The pay of the non-commissioned officers ranges from $15 per month to a corporal for the first year of his first enlistment to $34 per month to first sergeants of engineers, ordnance and signal corps for the same year. The highest pay per month for the first year of enlistment is $60 to the chief musician of artillery or cavalry. The enlisted men in addition to pay proper are lodged, clothed, and fed. Full pay is the total pay to which the officer or soldier is entitled by law; half pay is given when an officer is on leave beyond the time for which he may draw full pay.

Pay Department OF U. S. ARMY. Under the direction of the Secretary of War this has charge of the payment of the army, and comprises one Paymaster-general with the rank of Brigadier-general, two Colonels, three Lieutenant-colonels, and twenty-two Majors.

Payer, JEAN BAPTISTE, 1818–1860. Fellow of the Paris Institute. *Familles naturelles des plantes*, 1848; *Botanique cryptogamique*, 1850–68.

Payment. Money or its equivalent, received in discharge of an obligation.

Payn, JAMES, b. 1830. English novelist; ed. *Chambers' Journal*, 1858, and *Cornhill Mag.*, 1882–96. *Lost Sir Massingberd*, 1864; *Carlyon's Year*, 1868; *Literary Recollections*, 1884.

Payne, JOHN, b. 1842. English poet and translator.

Payne, JOHN HOWARD, 1792–1852. American poet, playwright, and actor; U.S. Consul at Tunis from 1841. The song, *Home, Sweet Home*, occurs in *Clari, or the Maid of Milan.*

Paysandu. City of Uruguay on the left bank of the Uruguay River, 280 m. n.w. of Montevideo. It contains large

Ruins of the Principal Church.

slaughter houses and exports tinned meats, especially tongues. It was visited by an earthquake 1865.

Payson, EDWARD, D.D., 1783–1827. Pastor at Portland, Me., from 1807. His *Sermons*, 1828–31, were widely read.

Pay Streak. Portion of a vein in which the richest ore occurs.

Pazmani, PETER, 1570–1637. Abp. of Presburg, Hungary, 1610. Cardinal 1629; eminent preacher, author, and persecutor of Protestants; founder Univ. Budapest, which is reprinting his works in 14 vols.

Paz Soldan, MARIANO FELIPE, 1821–1886. Peruvian statesman and historian.

Pea. *Pisum sativum.* Climbing herb of the natural family *Leguminosæ*, native of s. Europe; widely cultivated in many varieties for its nutritious seeds. Peas are not grown in field culture in the U. S., except occasionally with oats or barley as a meslin crop. The climate is too dry and hot for their best development. When grown with oats or barley, the resulting fodder makes an excellent food for milch cows.

Pea (*Pisum sativum*).

Pea, EVERLASTING, or VETCHLING. Plants of the genus *Lathyrus*, natural family *Leguminosæ*. Many of them bear showy flowers, and some are cultivated for ornament.

Peabody. Village of Essex co., Mass., 2 m. w. of Salem; called South Danvers till 1868; birthplace of George Peabody, who founded an institute and a library here. Pop., 1890, 10,158.

Peabody, ANDREW PRESTON, D.D., LL.D., 1811–1893. Prof. Harvard 1860–81; ed. *N. American Review* 1852–61. *Christian Doctrines*, 1844.

Peabody, ELIZABETH PALMER, 1800–1894. American educator, author, and reformer. Her sisters were the wives of Nathaniel Hawthorne and Horace Mann.

Peabody, GEORGE, 1795–1869. American merchant, in London from 1838; distinguished for his munificent philanthropy. He founded and endowed institutes at S. Danvers and Salem, Mass., and at Baltimore, Md., the last with $1,000,000; gave $150,000 each to Harvard and Yale, and smaller sums to other institutions; a fund of $3,500,000 to aid education in the South, and $2,500,000 to build lodging-houses for the London poor, besides numerous other donations.

George Peabody.

Peabody-Martini Rifle. Breech-loading rifle invented by Peabody, an American, and improved by Martini, a Swiss, and until recently the arm used by the English under the name of the Martini-Henry rifle. The breech block rotates around an axis at right angles to the bore and in rear of the block; used by the Turks during the Russo-Turkish war.

Peace. In International Law, the relation between states which are not at war; in Municipal Law, freedom from serious disorder among citizens of a state. The London Peace Society was founded 1816, and similar organizations have been established in other European states and in U. S. A Peace Congress was held in Paris 1889.

Peace-Offerings. Sacrifices of thanksgiving and supplication, including a sacrificial repast; whereas in the Burnt-offering the victim was entirely consumed.

Peace of God. Ab.1000 an effort was made by the clergy in France and Normandy to repress violence. To this end oaths were exacted by the bishops from rulers and subjects. The "Truce of God," first established perhaps by the Synod of Tuluges May 1027, ordained that warfare should cease from noon of Saturday till Monday morning. A later synod (1041) greatly extended this surcease of hostilities. During the Advent and Lenten seasons, *e.g.*, it was to last from Wednesday evening to Monday morning, and so on various festivals. Soon the custom spread over most of w. Europe. Special courts punished violations of the Peace by excommunication and exile for 7 or 30 years. The church, the wayside cross, and even the plow, insured protection. This Truce had great influence throughout Europe during the 12th century, but began to decline in the 13th.

Peace of the Dames. See CAMBRAY, PEACE OF.

Peace River. River of Athabasca, Canada, rising in Rocky Mts. and flowing ab. 600 m. e. and n.e. to the outlet of Lake Athabasca, where it joins (or becomes) the Slave.

Peach. *Amygdalus persica.* Small tree of the natural family *Rosaceæ*, native of China; widely cultivated in warm, temperate regions for its delicious fruit.

Peach, CHARLES W., 1800–1886. English geologist, first to discover fossil remains in the slate rocks of Cornwall, thereby establishing their Devonian age. He afterward labored successfully among the Devonian rocks of Scotland.

Peach Curl. Disease of peach leaves caused by the minute parasitic fungus, *Exoascus deformans.* Spraying with a 40 per cent of sulphate of iron solution will destroy the parasites.

Peach-Tree Borer (SANNINA EXITIOSA). The adult is bluish in color and resembles a small wasp. The eggs are deposited on the ground near the tree trunk. The young larva bores into the tree in early summer, and in a year has reached maturity. Whitewash containing Paris-green applied to the trunk of the tree removes it.

Peach Yellows. See YELLOWS.

Peacock. Male of genus *Pavo*, native of India and Ceylon, but domesticated all over the world. The wild Pea-fowl

Japanned or Black-shouldered Pea-fowls.

are gregarious, omnivorous, and prefer to live in mountainous regions. The gorgeous tail of the male is formed of the upper tail coverts, and is not fully formed until the third year.

Peacock, THOMAS LOVE, 1785–1866. English novelist and poet; clerk in India House 1819–56. *Headlong Hall*, 1816; *Melincourt*, 1817; *Nightmare Abbey*, 1818; *Maid Marian*, 1822; *Elphin*, 1829; *Crotchet Castle*, 1831; *Gryll Grange*, 1860. His works are short satirical extravaganzas. They were repub. 1875.

Peacock-Ore. See BORNITE.

Pea-Fowl. See PHASIANIDÆ and PEACOCK.

Peale, CHARLES WILLSON, 1741–1827. American painter, noted for portraits of Washington and other worthies.—His son, REMBRANDT, 1778–1860, N.A. 1826, was successful on the same lines, a good colorist, and author of several books. *Graphics*, 1841.

Peanut. *Arachis hypogæa.* Herb of the natural family *Leguminosæ*, native of America; widely cultivated for its nutritious, edible, subterranean fruit; also called Ground Nut, Earth Pea, and Goober. The kernels yield 20 per cent of non-drying oil, sp.gr. 0.918, used in dressing wool, as a lubricant, and for soap.

Peanut, HOG. *Falcata comosa.* Woodland vine of the Bean family, bearing edible tubers, native of e. N. America.

Pear. *Pyrus communis.* Tree of the natural family *Rosaceæ*, native of Europe; widely cultivated in many varieties for its delicious fruit. The liquor called Perry is fermented pear juice.

Pear, ALLIGATOR. See ALLIGATOR PEAR.

Pear, ANCHOVY. *Grias cauliflora.* Tall tree of the Myrtle family, native of the W. Indies, valued for its large fleshy fruit.

Pear, PRICKLY. Cacti of the genus *Opuntia*, and others, bearing prickly, edible fruits, natives of America. *O. puntio* is the common e. American species, known as Indian Fig.

Pearce, CHARLES SPRAGUE, b. 1851. American painter.

Pearce, JAMES ALFRED, 1805–1862. M.C. from Md. 1835–39, 1841–43; U.S. Senator from 1843.

Pea Ridge. In Benton co., Ark., scene of Union successes March 6–8, 1862.

Pearl. Sp. gr. 2.6. Rounded masses of calcium carbonate with some animal matter formed around some particle in some mollusks, the shells of which are lined with the same substance. The best pearls are found in the pearl oyster in the Indian seas; they are also obtained off the coast of Australia. Black pearls are found off Lower California. Pearls are round, oval, and pear-shaped, the former being most and the last the least prized. They are sold by the diamond-carat weight, 3.168 grains. A diamond-grain is $\frac{1}{4}$ of this. The best pearl, of a

diamond-grain weight, is worth $2.25. 4 gns. $34, 20 gns. $750; this is about proportional to the square of weight in diamond grains.

Pearlash. Potassium carbonate of commerce.

Pear-Leaf Blight. Yellowish or reddish spots upon pear leaves, marked in the center by minute black pimples. The disease is due to the fungus *Entomosporium maculatum.*

Pearl Fisheries. Practice of taking shellfish which produce pearls, especially the pearl oyster, in tropical countries. Originally only the pearl was sought for but now the shell is

Pearl Fishery in Ceylon.

also utilized, the shells being worth from 200 to 300 dollars a ton. In Ceylon the hours during which fishing may be carried on are regulated by law, the shellfish being obtained by diving.

Pearl Mussel. See AVICULIDÆ.

Pearl River. In Mississippi, flowing s.w. and s. to the Gulf of Mexico, and forming part of the La. boundary. Length ab. 250 m., drainage area 8,964 sq. m.

Pearl Spar. Variety of dolomite with a striking pearly luster.

Pearlstone. Feldspathic rock of volcanic origin, possessing a peculiar enamel-like appearance, due to an arrangement of its component minerals in small spherules.

Pearl White. See BISMUTH BASIC NITRATE.

Pearlwort. Diminutive herbs of the genus *Sagina*, family *Caryophyllaceæ*, of wide geographical distribution.

Pearson, JOHN, D.D., 1613–1686. Prof. Cambridge 1661; Bp. of Chester 1672; esteemed the greatest divine of his age. His *Exposition of the Creed*, 1659, is still used as a text-book. *Minor Works*, 1844.

Pear-Tree Borer (SESIA PYRI). Insect resembling the PEACH-TREE BORER (q.v.). The eggs are, however, deposited on the tree-trunk, and, after hatching, the small white larvæ eat into the sap-wood, causing wart-like swellings. Kerosene applied to these swellings kills the grub-like larvæ.

Peary, ROBERT EDWIN, U.S.N., b. 1854. Arctic explorer of the Greenland coasts June 1891–Sept. 1892, reaching lat. 82° N. on e. side. He sailed again July 1893 and July 1896.

Peasant Proprietorship. Ownership of agricultural land by its actual cultivators; system in which land is divided into small farms, and these are owned by their occupiers.

Peasants' War. Uprising of peasants in Germany 1525, influenced by the example of the Swiss and inflamed by the teachings of Luther and their own martial exploits in Italy. They committed the wildest excesses, plundered monasteries and castles, made Heilbronn the capital of their new empire, and were dispersed with great slaughter by the nobles. Thomas Münzer, a religious enthusiast, the soul of the uprising in Thuringia, set up his New Jerusalem in Mühlhausen. At Frankenhausen the peasants were overthrown by the princes May 25; 5,000 were slain: Münzer was executed.

Peaslee, EDMUND RANDOLPH, M.D., LL.D., 1814–1878. Prof. Dartmouth from 1842, and in New York; specialist in gynæcology. *Histology*, 1857; *Ovariotomy*, 1872.

Peat. Natural product of decomposition of vegetable matter that forms and accumulates slowly in bogs and marshes. It has a recognized value as a fuel and a fertilizer, and is finding increased use in the arts in several directions. It contains small and very variable amounts of nitrogen and phosphoric acid, but is chiefly valuable as adding vegetable matter to soils lacking it, and, when dry, as an absorbent of the liquid and volatile parts of animal manures. When the vegetable matter

Peat Bog near Dordrecht, Holland.

is but slightly decomposed, it may be used as fuel, as largely in Ireland.

Pea-Weevil (BRUCHUS PISI). Beetle ⅛ in. long, black in color, with white T-like spots. Eggs are laid in the pod, and each larva enters a pea, in which it spends the winter. *B. obsoletus*, the bean-weevil, differs from this in that many grubs enter each bean. To destroy these insects the seed should be fumigated in a tight box with bisulphide of carbon, or else soaked a day in water before planting.

Pebble. Pieces of rock crystal used in jewelry or in the making of lenses for eye-glasses.

Pebble Powder. Large grained powder, generally cubical in form, first proposed by General Rodman ab.1860 for use in heavy guns, the object being to bring a less strain upon the gun during the first period of ignition than by the use of the quick-burning smaller grains; the size of the grains range from $\frac{1}{16}$ of an inch to 2 inch cubes.

Pecan-Nut. *Hicoria pecan.* Large tree of the Walnut family (*Juglandaceæ*), native of the s.e. U.S. Its nuts are collected in large quantities and form an important article of commerce.

Peccaries. S. American small wild pigs, differing from swine in having only one pair of teats and bearing at most two young. They have but four upper incisors: the stomach has three compartments. Metapodials III. and IV. unite into a

Peccaries (*Dicotyles torquatus*).

cannon bone, and the outer toe is reduced to a splint. They live in herds, and defend themselves ferociously. They secrete a very offensive odor, ravage cultivated fields, hide in thickets when pursued, and are best hunted from trees. Length 3 ft., height 16 in.

Pecchio, GIUSEPPE, COUNT, 1785–1835. Italian author, in England from 1823.

Pecchio, GIUSEPPE, 1785–1835. Italian writer on political economy.

Pechili, GULF OF. Arm of the Yellow Sea, extending into China.

Peck. In England and America, fourth of a bushel; in Eng., the Imperial, 554.55 cubic inches; in U.S., the Winchester, 537.6 cubic inches.

Peck, JOHN JAMES, 1821–1878. Brig.-gen. U.S. Vols. 1861, Major-gen. 1862; distinguished at Yorktown and Williamsburg; defender of Suffolk, Va., 1863.

Peck, TRACY, b. 1838. Prof. Cornell 1871, Yale 1880; ed. several Latin classics.

Peck, WILLIAM GUY, LL.D., 1820–1892. Prof. Columbia from 1857; author of text-books on mathematics.

Peckham, RUFUS WHEELER, 1809–1873. M.C. 1853–55; Judge N.Y. Supreme Court 1859–70, and Court of Appeals from 1870.—His son and namesake, b. 1835, became associate Justice U.S. Supreme Court 1895.

Pecock, REGINALD, D.D., ab.1390–ab.1460. Bp. of St. Asaph's 1444, and Chichester 1450. His theological writings, though in part against the Lollards, caused wrath by their moderation and by being in English: he was condemned as a heretic 1457, and confined in an abbey. *On Faith*, ab.1456.

Pecora, or COTYLOPHORA. Section of selenodont (Ruminant) Ungulates including the families MOSCHIDÆ, CAMELOPARDELLIDÆ, and CERVIDÆ (q.v.).

Pecos River. Branch of the Rio Grande, flowing s. and then s.e. through an arid region of New Mexico and Texas. Though ab. 800 m. long, it runs nearly dry through much of the year.

Pecquet, JEAN, ab.1600–1674. French anatomist, first to trace the course of the lacteal vessels in man.

Pectase. Ferment found with pectose in fruit tissues which transforms pectose into pectin in the process of ripening.

Pecten. Vascular process of the choroid, projecting through the retina into the hinder chamber of the eye in birds. See PROCESSUS FALCIFORMIS.

Pectic Acid. $C_{16}H_{22}O_{15}$?. Insoluble gelatinous substance produced by boiling an aqueous extract of carrots with sodium carbonate and precipitating with hydrochloric acid.

Pectin, or PLANT JELLY. $C_{32}H_{48}O_{32}$?. Substance present in fruits, etc., which causes their juice upon evaporation to form a jelly; soluble in water, but insoluble in alcohol, and precipitated from water by its addition; little known.

Pectinate. In Botany and Zoölogy, organs with numerous narrow segments, resembling the teeth of a comb.

Pectines. Comb-like organs born by the second abdominal segment in scorpions.

Pectinidæ (SCOLLOPS). Lamellibranchs without a siphon, with nearly equal symmetrical valves to the shell and a straight hinge line. The valves are united by one adductor muscle and are usually fan-shaped, ribbed, or scolloped. The edge of the

Pectinidæ (*Pecten pleuronectes*).

free mantle-lobes bears many tentacles and eyes. The foot secretes a byssus for attachment of some species; others swim about by rapidly opening and closing the shell. Some are edible, and are even more esteemed than oysters.

Pectinobranchiata. See PROSOBRANCHIATA and CTENOBRANCHIATA.

Pectoral Fins. See FINS.

Pectoral Girdle. See SHOULDER-GIRDLE.

Pectoriloquy. Speech or voice coming from the chest. Phenomenon presented by consumptive individuals when their chests are examined with the stethoscope. It does not always indicate a cavity in the lung, as a portion of the lung may have solidified and produce the same noise.

Pectose. Substance found in unripe fruits and other vegetable organs.

Pectosic Acid. Gelatinous product produced by the action of pectase upon pectose. Its composition is unknown.

Peculiar. In England, chapels royal, Westminster Abbey, and others not subject to episcopal jurisdiction.

Peculiar People. English sect, founded 1838; faith-healers, except in surgical cases.

Pedagogics. The science of education, including the subjects to be taught, the arrangements of these subjects, and the methods to be employed.

Pedal. In the organ, keyboard played upon with the feet; also mechanical contrivances (combination pedal) for drawing a group of stops by foot pressure; on the pianoforte, a lever for the foot for lifting all the dampers off the strings at once, shifting the action so that the blow is given to only one or two of the unison strings, or the force of the blow is lessened (piano or soft piano), or prolonging the sound of a desired tone or group of tones, by preventing the fall of the dampers (sustaining or sostenuto pedal); on the harp, a lever for raising the pitch of the strings.

Pedal Ganglion. Nerve centers (brains) in the foot of Mollusks. They form part of a short circumœsophageal system, which in the cerebral ganglia is united with another longer visceral system composed of the pleural, abdominal, and parieto-splanchnic ganglia.

Pedalinaceæ. Natural family of flowering plants, of the class *Angiospermæ*, sub-class *Dicotyledons*, and series *Gamopetalæ*, comprising 15 genera and ab. 40 species, natives of the warm regions of the earth; especially numerous in Africa.

Pedal Point. See ORGAN POINT.

Pedata. Holothurians with many ambulacral feet, either in regular zones or irregularly distributed. They are fusiform and somewhat flattened on the side on which they lie. Respiratory trees are present. The oral tentacles are arborescent in the group DENDROCHIROTÆ, and shield-like in the ASPIDOCHIROTÆ (q.v.).

Pedate. In Botany, leaves and other flat organs palmately parted into narrow segments.

Pedder, JAMES, 1775–1859. Ed. Boston *Cultivator* from 1844. *Farmer's Land Measure*, 1854.

Pedersen, KRISTIERN, 1480–1554. Danish author and reformer, canon at Lund. Tr. N. T. and Psalms 1529–31.

Pedes. Feet of birds, distinguished as P. gradarii and P. vadantes. Of the former we have P. adhamantes, scansorii, fissi, ambulatorii, gresorii, insidentes. Of the latter are P. grallarii, divided into colligati, semicolligati, cursorii, palmati, semipalmati, fissipalmati, lobati, stegani. See each of these.

Pedesis, or BROWNIAN MOVEMENT. Dancing motion of very small particles, suspended in a liquid, as seen under high magnification. No satisfactory explanation of this movement has yet been given; but it appears probable that the vibrating molecules surrounding the body do not bombard it with equal force on all sides at any given instant; hence the particle is jostled in different directions.

Pedestal. An erection for the support of a statue, vase, or other ornamental object.

Pediastreæ. Sub-order of minute fresh-water *Algæ*.

Pedicel. Stalk of a flower in a flower-cluster.

Pedicellariæ. Little snapping jaws set on stalks on the surface of starfishes and sea urchins.

Pedicellina. See ENDOPROCTA.

Pediculati. Sub-order of *Acanthopteri*, including scale-

Fishing Frog (*Lophius piscatorius*).

less fishes having elongated rays, less than four in the pectoral fins, gill openings that are mere foramina behind these fins,

first dorsal spine modified, and with very odd shape of body. LOPHIUS (q.v.), the Fishing Frog, is an example.

Pediculidæ (LICE). Insects of the group *Aptera*, order *Rhynchota*. *Pediculus capitis* is the head-louse of man. It sucks blood, has hooked joints on its feet, and lays its eggs on the bases of the hairs. The young undergo no metamorphosis, and are sexually mature in eighteen days after hatching, which occurs a week after the eggs are laid. Numerous eggs are produced in a short time by each female: in the case of the body louse, *P. vestimenti*, ab. 5,000 in eight weeks.

Pedimana. See ENTOMOPHAGA.

Pediment. Gable of classic architecture, or the triangle formed by the cornice of the entablature and that which denotes the outline of the roof. It is always of low pitch and in the classic temples was a principal field for the display of sculpture.

Pedipalp (MAXILLARY PALP). Clawed CHELICERÆ (q.v.) of Arachnids, or more especially of the Scorpion-spiders.

Pedipalpi, or PHRYNIDEA (SCORPION-SPIDERS). Large *Arachnida*, with jaws provided with claws; the anterior pair of legs are slender and antennæ-like. The abdomen has eleven or twelve segments; unlike the scorpions, but like the spiders, it is clearly marked off from the thorax. The term, in a broader sense, includes the Scorpions.

Pedometer. Instrument which, when carried by a pedestrian, counts his steps, and thus enables him to determine approximately the distance traveled. See ODOMETER.

Pedrarias Davila, ab.1460–1531. Gov. of Castilla del Oro (Darien) 1514–26, and then of Nicaragua. He imprisoned Balboa 1514, put him to death 1517, and founded Panama 1519.

Pedro, "THE CRUEL." 1334–1369. King of Castile and Leon 1350; defeated and slain by his brother Henry.

Pedro I., 1798–1834. Son of John VI. of Portugal, who became king 1816; in Brazil from 1807; Regent 1821; Emperor 1822, independence being secured. He inherited the throne of Portugal 1826, resigned it to his daughter Maria, abdicated 1831, went to England, and procured the deposition of the usurper Miguel and Maria's restoration.—His son, PEDRO II., 1825–1891, Emperor 1831–1889, was a good ruler, much respected everywhere for his character and enlightened views, but was deposed on the proclamation of the Republic. He traveled much in Europe, and visited the U.S. 1876. Slavery was gradually abolished in Brazil 1871–88.

Pedro Sancho, or SANCHO PEDRO. Game like All Fours, in which the five of trumps, called Pedro, counts 5 points, and the nine of trumps, called Sancho, 9 points.

Peduncle. Stalk, either of a single flower or of a flower-cluster.

Pedunculata. Group of Barnacles, characterized by the presence of a stalk by which the animal is fixed; six pairs of

Goose-barnacle (*Lepas anatifera*).

feathery feet; a mantle in which hard plates are developed, viz., a carina, a pair of scuta, a pair of terga. *Lepas* (Goose-barnacle) is an example.

Peel, SIR ROBERT. 1788–1850. M.P. 1809; Sec. for Ireland 1812–18; Home Sec. 1822–27 and 1828–30; leader of the Commons; mover of Catholic emancipation 1829; Prime Minister 1834–35 and 1841–46. Mainly a Conservative, he accepted the repeal of the Corn Laws, and at last was more Whig than Tory.—Of his sons, SIR ROBERT, 1822–1895, M.P. 1850, was Sec. for Ireland 1861–65; ARTHUR WELLESLEY, b. 1829, became M.P. 1865 and Speaker 1884.

Peele, GEORGE, ab.1558–ab.1598. English poet and dramatist. *Arraignment of Paris*, 1584; *Old Wives' Tale*, 1595; *David and Bethsabe*, 1599.

Peeping Tom. Character in the Godiva story, represented as a tailor who thought to have a peep at Lady Godiva, and was punished by the loss of an eye. See GODIVA.

Peep-of-Day Boys. Irish insurgents of 1784, later known as ORANGEMEN (q.v.).

Peepul. *Ficus religiosa*. Sacred fig of India, and Bo-tree of Ceylon. Vishnu is supposed to have been born beneath it.

Peerlkamp, PETER HOFMAN, 1786–1865. Prof. Leyden 1822–49; classical rationalist, who applied a destructive criticism to Horace, Virgil, and Tacitus.

Peers. British dukes, marquises, earls, viscounts, and barons, having (with the bishops or lords spiritual) seats in the House of Lords. The French House of Peers, 1814–48, was arbitrarily constructed.

Peesash. Hot, dry land wind in n. India, like the sirocco, and possibly of a föhn-like character.

Peet, STEPHEN DENISON, b. 1830. Ed. *American Antiquarian*, 1879–88. *Picture Writing*, 1885; *Primitive Symbolism*, 1887.

Peewet (LAPWING). European plover.

Peewit (PEEWEE, etc.). Phœbe; olive-green Tyrant fly-catcher.

Peganthidæ. Family of *Narcomedusæ*, including Jelly-fishes, without radial canals or stomach-pouches in the sub-umbrella, but with a ring-canal which is festooned with separated pouches. The tentacles project up, and OTOPORPS (q.v.) are at the bases of auricular tentacles.

Pegasus. Winged horse which sprang from the blood of Medusa; steed of the Muses. A blow of his hoof on Mt. Helicon evoked their fountain, Hippocrēnē. By his aid Bellerophon conquered the Chimæra.

Pegmatite. Varieties of granite which are very coarsely crystallized.

Peiho. White River of China. It is a tributary of the Han Kiang. Length ab. 124 m.

Peine Forte et Dure. Brutal punishment occasionally employed in England ab.1400–1741, by loading the offender's body with heavy weights, to force him to plead; abolished 1772; heroically endured 1692 at Salem, Mass., by Giles Cory, accused of witchcraft, to avoid the forfeiture of goods and impoverishment of his family.

Peipus. Double lake of w. Russia, s. of Gulf of Finland, ab. 87 m. long; area 1,356 sq. m. The s. part is Lake Pskoff.

Peirce, BENJAMIN, LL.D., 1809–1880. Prof. Harvard from 1833; Supt. U. S. Coast Survey 1867–74; of high authority as astronomer and mathematician; author of sundry influential text-books. *Analytic Mechanics*, 1855.

Peirce, BRADFORD KINNEY, 1819–1889. Ed. *Zion's Herald* (Boston), 1872–88; religious and biographical writer.

Peirce, CYRUS, 1790–1860. Promoter of Normal Schools; head of the first opened in U. S., at Lexington, Mass., 1839–42 and 1844–49.

Peixoto, FLORIANO, 1839–1895. Brazilian general; Vice-pres. 1890, Pres. 1891–94. He crushed a dangerous rebellion 1893–94, which had threatened Rio Janeiro.

Peixoto, IGNACIO JOSÉ DE ALVARENGA, 1748–1793. Brazilian poet, condemned 1792 for insurrection.

Peking, or PEKIN. Capital of China; 100 m. from the sea and 120 ft. above sea-level; area inclosed 24½ sq. m. It consists of a Tartar and a Chinese section; the imperial palaces are in the former, the Temple of Heaven in the latter. It was

rebuilt by Kublai Khan 1265, visited soon after by Marco Polo, and has been sole capital of the empire since it was restored

The High Street, Peking.

and walled 1409–37. The English and French forces entered it 1860. Pop. ab. 500,000.

Pela, or PEHLA. White wax prepared by the Chinese from the secretions of *Coccus sinensis*, an insect of the cochineal family. It resembles spermaceti and is used in candle making. It melts at ab. 81° C.

Pelagia. See SEMÆOSTOMEÆ.

Pelagianism. Doctrine supposed to deny original sin and divine grace, as teaching that men sin merely by imitation, and may reform of their own will; condemned by the Church, led by Augustine.

Pelagic. In Botany and Zoölogy, organisms inhabiting the deep seas.

Pelagic Zone. See BATHYMETRIC DISTRIBUTION.

Pelagius. British heresiarch, in Rome ab. 400; perhaps a monk, but never ordained; banished 418. His doctrine was urged by Cœlestius, and condemned 431.

Pelagius I. Pope 555–60.—II. Pope 578–90.

Pelargomorphæ. Order of birds equivalent to a part of the *Grallatores*, including Herons and Storks. See HERODII.

Pelargonic Acid. $C_9H_{18}O_2$. Mpt. 12.5° C., bpt. 253° C. Colorless, oily liquid which turns yellow by age, occurring naturally in oil of rose-geranium. It is made by heating oil of rue with nitric acid.

Pelargonic Ether. Bpt. 216°–219° C. Ethyl ether of pelargonic acid. It gives the odor to the quince.

Pelasgi. Race, prob. Aryan, apparently first to occupy the coasts of Greece, islands of the Ægean, and s. Italy. The oldest architectural remains of Greece are ascribed to them.

Pelayo, 8th cent. Traditional Spanish king or chief, in conflict with the Moors.

Pelecypoda. See LAMELLIBRANCHIATA.

Pele's-Hair. Form of cirrus cloud.

Pele's Hair. Variety of glassy lava from the Hawaiian Islands, spun by wind action into fine threads.

Peleus. King of Phthia, Thessaly; argonaut; husband of Thetis and father of Achilles.

Pelew Islands. Group in the Pacific, s.e. of the Philippines; discovered 1543; held by Spain. Area 170 sq. m., pop. ab. 10,000.

Pelham, HENRY, 1696–1754. Brother of the Duke of Newcastle; Sec. for War 1724; Prime Minister from 1743.

Pelicans. Twelve species of tropical and subtropical steganopodous birds, having a tail of 24 soft feathers, and a long bill, beneath the mandible of which is a distensible pouch

Pelican (*Pelecanus onocrotalus*).

for carrying fish. The Pelican of N. America goes north into temperate regions in summer, and at its breeding time (May) a deciduous excrescence develops on top of the beak.

Pelides. Achilles, as son of Peleus.

Peligot's Salt. $KClCrO_5$. Formed by the action of concentrated hydrochloric acid upon potassium dichromate; red prismatic crystals.

Pelion. Range in e. Thessaly. See OSSA.

Pelissier, JEAN JACQUES AMABLE, 1794–1864. French general 1850; commander in the Crimea 1855; made Marshal and Duke of Malakoff for storming a fort near Sebastopol; Ambassador to England 1858–59; Gov. of Algeria from 1860.

Pella. Macedonian capital, ab. 15 m. n.w. of the Thermaic Gulf; birthplace of Philip II. and Alexander; important in their times, but it disappeared before 600 A.D.

Pellegrini, CARLO, 1838–1889. Italian cartoonist, in London from 1868.

Pellew, GEORGE, 1861–1892. Anglo-American journalist and author. *Castle and Cabin*, 1888; *Life of Chief-justice Jay*, his great-grandfather, 1890.

Pellico, SILVIO, 1789–1854. Italian patriot, author of tragedies and of *My Prisons*, 1833; imprisoned by Austria for alleged political offenses 1820–30; sentenced to death 1822.

Pellitory. Herbs of the genus *Parietaria*, of the Nettle family, natives of the n. hemisphere.

Pellitory (*Parietaria officinalis*).

Pelly River. Right branch of the Yukon, in British Columbia.

Pelmatozoa. Group of Echinoderms, including stalked and mostly fossil forms, of the classes CRINOIDEA, CYSTIDIA, and BLASTOIDEA (q.v.).

Pelobatidæ. Family of Toads, including *Scaphiopus*, the Spade-foots. These live underground, burrowing to a considerable distance. They appear in June during rains, to lay their eggs in temporary pools. They are very noisy. Most of the stories of finding toads in the midst of rocks during blasting operations are probably based on finding them either in hard soil or in rock clefts. See OXYDACTYLIA.

Pelopidas, d. 364 B.C. Theban patriot, associate of Epaminondas. Banished 382, he overthrew the Spartan power and expelled the polemarchs from Thebes 379; led the Sacred Band at Leuctra 371; was Ambassador to Susa 366, and was killed at Cynocephalæ.

Peloponnesian War. 431–404 B.C.; between Athens and the s. Greek states, supported by their colonies. The destruction of the Athenian fleet and army at Syracuse 413 was fatal; and the war ended most unfortunately for civilization with the capture of Athens by the Spartans 404. Its history was brilliantly written by Thucydides.

Peloponnesus. Peninsula of Greece; now Morea.

Pelops. Son of Tantalus; king of Elis; father of Atreus and Thyestes; honored above all heroes at Olympia.

Peloria. Condition of monstrosity, especially in certain plants of the Snapdragon family, in which, instead of only one lobe of the corolla being extended into a spur, as is the normal state, the other four lobes are also spurred; also, more broadly, regular forms of flowers which are normally irregular.

Pels, ANDRIES, 17th cent. Dutch dramatist and poet.

Peltate. In Botany, leaves or other organs having the stalk inserted on the lower surface of the lamina, instead of at the base, so as to become shield-shaped.

Peltier's Effect. Thermo-electric phenomenon, first observed by Peltier. Consider a junction of two metals, A and B, such that, when this is made the hot junction in a thermo-electric circuit, the current is from A to B. If now a current from some external source be made to pass through that junction from A to B, the junction will be cooled; while if the direction be from B to A, it will be heated. A similar phenomenon was observed by Thomson to take place within a single metal, and in this case is known as the Thomson effect. *E.g.*, hot iron is thermo-electrically positive to colder iron, and hence a current made to pass in either direction tends to exaggerate the existing differences of temperature. This is reversed in the case of copper.

Peltry. Skins of wild animals undressed except by drying; dressed skins being called furs.

Pelusium. City on e. mouth of the Nile; key of Egypt. Here Cambyses defeated Psammetichus III. 525 B.C. It surrendered to Alexander 333, was taken by Persians 309, by Antiochus 173, by Mark Antony 55, by Octavian 31 B.C., and by the Saracens A.D. 638.

Pelvis. Lower part of the trunk; a basin-like cavity formed by the union of the innominate bones with the lower end of the spinal column. It furnishes a foundation for the contents of the abdominal cavity and attachments for the muscles forming the abdominal walls.

Adult Human Pelvis, *in situ;*
a, lumbar vertebra; *b*, sacrum; *c*, coccyx; *d*, ilium; *e*, head of femur in acetabulum; *f*, pubis; *g*, ischium.

Pemba. Coral island 30 m. n. of Zanzibar, belonging to the British protectorate of Zanzibar. It produces excellent timber. Area 227 sq. m., pop. ab. 10,000.

Pemberton, JOHN CLIFFORD, 1814–1881. U. S. officer 1837–61; Brig.-gen. C.S.A. 1861, Lieut.-gen. 1862–63; defender of Vicksburg against Grant May-July 1863.

Pemberton, MAX, b. ab. 1860. English romancer; ed. *Cassell's Mag.* 1896. *A Puritan's Wife*, 1896; *Stories of Old Paris*, 1897.

Pemmican. 1. Dried venison or buffalo meat, used by Indians. 2. Preparation of beef for Arctic expeditions.

Pemphigus. Inflammatory disease of the skin marked by blisters from the size of a pea and upward, forming successive crops. The blisters may break and form scabs and leave a dark spot, rarely a scar, when healed. The disease is sometimes fatal, especially when of long duration.

Pen. Writing instruments of two general kinds, those which scratch and those which use ink. The former are the more ancient and consist of a stylus made of bone or metal and employed upon a leaf, a waxed tablet, a sheet of lead, a stone, etc. The pen with which ink was applied was made 40 centuries since of a reed, which continued until ab. 500, when the quill came into use. The pen was used to write on bark, leaves, papyrus, skins, and paper. Modern pens are made entirely of metals. A bronze nibbed pen was found at Pompeii. The steel pens are made by a succession of stamps and dies and carefully tempered. Birmingham, Eng., is a large manufacturer; U. S. has several factories, producing one and a half million gross, and imports half a million gross.

Penæaceæ. Natural family of flowering plants, of the class *Angiospermæ* and sub-class *Dicotyledons*, comprising 4 genera and ab. 20 species, natives of s. Africa.

Penal Colonies. England sent convicts to Virginia 1619–1770, when the colonists refused to receive them longer; subsequently Botany Bay, Sydney, Tasmania, North and West Australia, and British Guiana were utilized in a similar way till about the middle of the 19th century. Russia sends the majority of her criminals to the mines in Siberia. France sent convicts to French Guiana 1853–64 and Communists to New Caledonia 1871. Other European states have gotten rid of many of their convicts by transportation.

Penal Servitude. Punishment introduced in lieu of transportation beyond the seas. See PRISONS.

Penalty. Punishment imposed either by law or by contract; excessive penalties are forbidden by U. S. Constitution.

Penance. Self-mortification of any kind, inflicted as expiation of sin; in R. C. Ch., a sacrament. In the Middle Ages penances were various, heavy, and constantly in evidence.

Penances, or FORFEITS. Children's game. Penances are properly the sequence of forfeits. The players are required to perform certain feats, and failing, give forfeits. These are later redeemed, one player acting as judge and one as forfeit-crier, who stands behind the judge and holds up the forfeit. The judge, without seeing the forfeit, passes sentence, to which the owner of the article must submit in order to redeem his property.

Penang, or PRINCE OF WALES ISLAND. W. of Malay peninsula, at n. end of Strait of Malacca; held by Britain since 1785. It is covered with forests of palms and other tropical

Penang.

plants. It produces rice and sugar. Tin ore is also found. Georgetown or P. is the only town. It is situated on the strait which divides the island from the mainland. Area 107 sq. m., pop. ab. 100,000.

Penātes. Guardian deities of the Roman household, and of the state as a union of households. Their images were kept in the penetralia, or central part of the house; the fire on the hearth was sacred to them. See LARES.

Peña y Peña, MANUEL DE LA, 1789–1850. Member of Mexican Supreme Court 1824, and long its head; acting Pres. of Mexico 1847–48.

Pencil. Collection of rays, either of radiant energy or other form of wave motion. It may be convergent or divergent.

Pencil. Plumbago inclosed in a small wooden cylinder, used as early as 1565. The plumbago is mixed with clay and water to form a dough, pressed through perforations in a metal cylinder, dried and baked. The rods thus formed are then incased in cedar. Colored pencils are made by mixing pigments or aniline colors with clay: 250 million pencils are made annually at Nuremberg, Germ., Faber being a noted maker. There are large makers in U. S.

Pencil, AXIAL. Figure composed of planes, all embracing the same straight line, which is the axis of the pencil.

Pencil, FLAT. Figure formed by straight lines in the same plane, proceeding from a common point.

Penda. King of Mercia, England, 626–655; and champion of heathenism. He subdued East Anglia, Deira, and Wessex, defeated and killed Edwine of Northumbria 634, and was Bretwalda. The extinction of heathenism followed his death; slain by Oswes.

Pend d'Oreille, LAKE. In n. Idaho, on Clark's Fork of the Columbia. Area 130 sq. m.

Pendent. In Gothic Architecture, the keystone of a vault when projected from the ceiling and decorated; also applied to the protrusion of the hammer-beam in timber construction.

Pendentine. Curved and inward sloping spandrel between two arches which support a circular or polygonal dome. It is a feature of frequent occurrence in the Byzantine, Saracenic, and Renaissance styles; in fact, a necessary feature in all architecture which admits a classical construction.

Pendent-Post. In timber roofs, the straight pieces placed against the wall to receive the hammer-beams.

Pender, WILLIAM DORSEY, 1834–1863. Major-gen. C.S.A. 1863; mortally wounded at Gettysburg.

Pendergrast, GARRETT JESSE, U.S.N., 1802–1862. Captain 1855, Commodore 1862. He commanded the *Cumberland* off Norfolk 1861, and saved the U.S. vessels there from capture by threatening the city.

Pendleton, EDMUND, 1721–1803. Delegate to Congress 1774–75: Pres. Va. Chancery Court 1778 and Court of Appeals from 1779.—His nephew, NATHANIEL, 1756–1821, was a Judge in Ga. and N.Y.—His grandson, GEORGE HUNT, 1825–1889, was M.C. from Ohio 1857–65, Democratic candidate for Vice-Pres. 1864, U.S. Senator 1879–85, and U.S. Minister to Germany 1885.

Pendleton, LOUIS BEAUREGARD, b. 1861. American novelist.

Pendulum. A simple pendulum consists of a heavy particle, called the bob, suspended by a weightless cord from a fixed point, about which it can oscillate without friction. If the bob have a uniform circular motion in a horizontal plane, it constitutes a conical pendulum. If T be the time of a complete oscillation to and fro, l the length of the pendulum, and g the acceleration of gravity; then $T=2\pi\sqrt{\frac{l}{g}}$ (1). A compound pendulum is any rigid body fixed at only one point o, and capable of oscillating about this point under the action of gravity. The point o is called the CENTER OF SUSPENSION (q.v.), and a straight line through o perpendicular to the plane of vibration is called the axis of suspension. If m be the mass of a compound pendulum, a the distance from the center of suspension o to the center of gravity c, and M its moment of inertia about o, then $T=2\pi\sqrt{\frac{M}{mag}}$ (2). Evidently the length L of a simple pendulum that oscillates in the same time is $\frac{M}{ma}$, or equal to the moment of inertia divided by the static moment. The point o^1 in a compound pendulum in the line of o and c at a distance L from o, is called the CENTER OF OSCILLATION (q.v.); the straight line through o^1, parallel to the axis of suspension, is called the axis of oscillation. The points o and o^1 are mutually interchangeable without affecting T, a principle discovered by Huyghens; the product of their distances from the center of gravity c, is k^2, where k is the radius of gyration. The point o^1 is sometimes called the CENTER OF PERCUSSION (q.v.), since there is no reaction at o if the pendulum be struck at o^1. L is sometimes termed the radius of oscillation. If in equation (1), we substitute T=2 seconds, then $l=\frac{g}{\pi^2}$, which is the length of a pendulum that makes a single vibration in one second. This is called a seconds pendulum. A cycloidal pendulum is one the bob of which, by simple mechanical means, is made to describe the arc of a cycloid instead of that of a circle. It has the advantage of being strictly isochronous, while a circular pendulum is not even approximately so except for small amplitudes.

Pendulum, BALLISTIC. Instrument invented about 1765 by Robins for determining the initial velocity of a projectile. It consists of a pendulum having a strong and heavy bob to receive the impact of the projectile. From the relation of the momentum of the projectile before impact to that of the pendulum and projectile after impact the velocity of the projectile at the instant of striking is readily deduced.

Penelopē. Wife of Ulysses, King of Ithaca; during his absence of 20 years, besieged by importunate suitors, whom she put off by saying she must first finish a shroud for Laertes. Every night she undid the work of the previous day.

Peneus. Chief river of Thessaly. It flows through the vale of Tempe.

Pengelly, WILLIAM, 1812–1894. English geologist, engaged for 13 years in exploring KENT'S CAVERN (q.v.), Torquay. His reports conclusively established the coexistence of man with many of the extinct mammalia.

Penguins. Natatorial birds of the Antarctic Ocean. They show many features of a primitive type. The vertebræ are opisthocœlous, the wings fin-like, the feathers scale-like; the three short metatarsals are partly separate; the hallux turns forward and is webbed with the other three toes; the feathers are narrow and cover the body uniformly. The leg is short and placed far back; the foot is plantigrade. On land they sit

King-Penguin (*Aptenodytes pennanti*).

bolt upright and progress by a waddling gait, except the Rockhopper, which moves both feet at a time. In diving the feet are used as rudders: they have no quills in their wings, which they use in water as paddles, moving them alternately. One white egg, 3 by 4½ in., is laid in Oct. and incubated by both sexes for six weeks. They blow and scream like geese. A heavy layer of blubber exists beneath the skin. The voice of the Jackass Penguin resembles a bray. The King Penguin is 3 ft. high.

Penhallow, SAMUEL, 1665–1726. Colonist at Portsmouth, N. H., ab.1690; Chief-justice from 1717. *Indian Wars, 1703–26*, 1726.

Penicillate. In Botany and Zoölogy, organs or organisms tipped or margined by tufts of slender processes or hairs.

Peninsular and Oriental Company. Chartered by Great Britain 1840 to carry mails and passengers between Great Britain and Australia, China, and India. It has about 60 vessels.

Peninsular War. 1808–14, between the French and the combined forces of Spain, Portugal, and England, mainly under Wellington; ended by the victory of Toulouse, the French being driven out of the peninsula. It was caused by Napoleon's attempt to seat his brother Joseph on the throne of Spain.

Penitential Psalms. 6, 32, 38, 51, 102, 130, and 143; so designated from ab. 200.

Penitentiary. See PRISONS.

Penn, JOHN, 1741–1788. Delegate to Congress from N. C. 1775–77 and 1779; signer of the Declaration of Independence.

Penn, WILLIAM, 1644–1718. Founder of Pa. He received the grant of the province 1681 in compensation for a debt due his father, Admiral Penn, and was made proprietor of the colony, which he twice visited, 1682 and 1699. His administration was distinguished by the magnanimity and justice of his treatment of the native Indians. He was twice imprisoned as a Quaker, once in the Tower, 1668, where he wrote *No Cross, No Crown*, and 1671 in Newgate, where he composed *The Great*

Cause of Liberty of Conscience. His character and motives have been violently assailed by Macaulay, and vindicated by

The Penn Mansion, Philadelphia.

later writers.—Two of his grandsons, JOHN, 1729–1795, and RICHARD, 1735–1811, were lieut.-governors of Pa.

Pennæ. Contour feathers; they have stiff shafts and a firm vexillum or vane.

Pennant, THOMAS, LL.D., F.R.S., 1726–1798. Welsh traveler, antiquarian, and scientist. *British Zoölogy*, 4 vols., 1765–77; *Tours in Scotland*, 3 vols., 1771–75; *Tours in Wales*, 1778–81; *Arctic Zoölogy*, 1785–87; *Literary Life*, 1793.

Pennatulidæ. Sea-feathers or Sea-pens. Family of alcyonarian Polyps, aggregated in colonies, supported on a common stem, and having a horny, flexible skeleton. *Renilla* belongs here; it, however, has no axis. It is a pinkish, heart-shaped disk with a short fleshy stem; the upper surface is covered by the white polyps, among which a certain amount of differentiation of structure and function obtains.

Pennell, MRS. ELIZABETH ROBINS, b. 1855. American author and traveler. With her husband, JOSEPH PENNEL, the artist, she has written much descriptive matter.

Pennine Alps. See ALPS.

Penninerved. Pinnately veined leaves.

Pennington, WILLIAM SANFORD, 1757–1826. Justice N. J. Supreme Court 1804; Gov. of N. J. 1813–15; U. S. District Judge from 1815. *N. J. Supreme Court Reports*, 1803–16.—His son, WILLIAM, 1796–1862, was Gov. of N. J. 1837–43, M.C. 1859–61, and Speaker 1860.

Pennsylvania. One of the e. States; rudely rectangular in form. Its area is 45,215 sq. m.; its surface is very broken. The s.e. part is a rolling plain: the middle portion is made up of narrow parallel ridges running n.e. and s.w., being the continuation n.e. of the great Appalachian valley. This is succeeded on the n.w. by the Allegany plateau, which from an abrupt escarpment slopes gently n.w. toward lower country. This plateau has been so eroded by streams as to present the appearance of a rugged mountain region. The State is well watered, but the only navigable streams are the Delaware, on the e. boundary, as far as Trenton; the Ohio, in the w. part, to Pittsburg, and its n. fork, the Allegany, for a long distance above Pittsburg, while the Monongahela has been rendered navigable by means of slackwater navigation to the boundary of W. Va. The surface geology of the State is almost as varied as its topography. The Allegany plateau is almost entirely composed of the Carboniferous formation, and this appears in several localities in the valley country s.e., interspersed with outcrops of Devonian and Silurian. The lower and more rolling country is largely Triassic, with occasional outcrops of older rocks. The industries of P., while very varied, are characterized by the extensive mining of coal, both anthracite and bituminous, and of iron, and by the extensive manufacture of iron and steel. Practically all the anthracite coal of the U. S. is found in this State, in a few small localities toward its n.e. part. Bituminous coal is mined very widely over the Allegany plateau and in many localities in the valley section. The State has a very extensive railroad system, which had in 1895 a mileage of 9,661. The population in 1890 was 5,258,014, of which ab. ¼ were of foreign birth. Of its total population, 2,152,051 may be classed as urban, living in cities of 8,000 inhabitants or more. The principal cities are Philadelphia, on the Delaware, at the mouth of the Schuylkill; Pittsburg, at the junction of the Allegany and Monongahela, and its suburb, Allegany. P. was a part of the territory of which the Dutch took possession 1623. In 1681 a charter was granted to William Penn, and P. was governed as a proprietary colony by Penn and his family until the Revolution. A dispute between Md. and P. as to the boundary between the two provinces was settled by Mason and Dixon's establishment of the line which bears their name. P. was one of the foremost colonies in the Revolution in resisting the British, and some of the most important battles were fought on her soil. During the Civil War it was the only northern State invaded: one of the most decisive battles was fought at Gettysburg 1863. In 1890 there were 18,364,370 acres in farms; the value of farm products in 1889 was $121,328,348. The mineral production in 1895 was: bituminous coal, 51,813,112 tons; anthracite coal, 58,126,345 tons; coke, 6,355,813 tons; iron ore, 697,985 long tons; pig iron, 4,701,163 long tons; steel, 3,883,280 tons; cement, 400,998 bbls. (300 lbs.); roofing slate, 376,068 squares (100 sq. ft.); other slate, 2,942,999 sq. ft.; petroleum, 18,231,442 bbls. of 42 gals.; natural gas, value $5,852,000.

Pennsylvania, UNIVERSITY OF. At West Philadelphia; chartered 1779; united 1791 with the College and Academy of Philadelphia, chartered 1755, which had been developed from a charity school started 1740. Its medical department, the oldest in America, dates from 1765; it has offered a 4-years' course since 1893. The law school was founded 1789. In the college departments (1896) are 106 instructors, in all 251; with 871 collegiate students, 172 in philosophy, 313 in law, 873 in medicine, and 2,632 in all. 450 courses are offered. The libraries contain 135,000 vols. Women are admitted to graduate courses. The work is organized in 13 departments, the college being one (subdivided in 10 courses), and occupies 23 buildings. It was removed to its present location 1872.

Pennsylvania College. Established 1832 at Gettysburg, Pa.; under Lutheran control. It has 15 instructors and ab. 250 students, including the preparatory department.

Pennsylvania Dutch. Dialect developed among immigrants to Pa., on a s. German basis. It has a limited literature, including poems by H. Harbaugh and C. C. Ziegler.

Pennsylvania State College. At State College, Pa.; began as Farmers' High School 1859: named Agricultural College 1862, and State Coll. 1874. It is organized in 7 schools, and offers 12 full and 8 short courses, mainly in the applied sciences. There are 52 instructors. General library, 10,500 vols., with special libraries in the departments.

Penny. English silver coin, first struck ab.700. Its value declined till ab. 1560, and has since been $\frac{1}{12}$ shilling. Copper

Penny of William I.

half pence and farthings have been minted from 1672, pennies since 1797. The Scotch coinage was of much lower value.

Penny, VIRGINIA, b. 1826. American writer on employments of women, 1863–68.

Pennycress. *Thlaspi arvense.* Herb of the Mustard family, native of Europe, introduced as a weed into America; known as Mithridate Mustard.

Penny Postage. See POST-OFFICE.

Pennyroyal. *Mentha pulegium.* Herb of the Mint family, native of Europe, cultivated for its pungent volatile oil.

Pennyroyal, AMERICAN. Low odorous herbs of the genus *Hedeoma*, of the Mint family, natives of America. The common e. species is *H. pulegioides*, and has nearly the taste and odor of the true Pennyroyal. *Mentha canadensis* has similar properties and is also called Pennyroyal. These are used as a domestic medicine.

Penny Weddings. Seventeenth century practice in Scotland. The invited guests contributed a small amount of money, seldom more than a shilling, to pay the general expenses of the wedding. It was denounced 1645 by an Act of the General Assembly.

Pennyweight. In Troy weight, 24 grains. See WEIGHTS and MEASURES.

Pennywort, WATER. Low marsh herbs of the genus *Hydrocotyle*, natural family *Umbelliferæ*, of wide geographical distribution.

Penobscot. Chief river of Me. It heads in the w. part of the State, flows e. and s.e., and then s. to P. Bay. It is navigable to Bangor. Length ab. 300 m., drainage area 8,934 sq. m., discharge 2,438 cu. ft. per second.

Penology. See PRISON DISCIPLINE.

Penry, JOHN (AP HENRY), 1559–1593. Welsh Puritan, unjustly executed.

Pensacola. City of Escambia co., Fla., on P. Bay. It has a good harbor and considerable commerce. It was an old Spanish settlement, held for a time by the British, taken by Jackson 1814, and annexed with Fla. 1819. The Navy-yard near by was seized by Confederates Jan. 1861, but regained 1862. Pop., 1890, 11,750.

Penshurst. Town in Kent, England, at the confluence of the Eden and the Tun, 4½ m. w.s.w. of Tunbridge. It is noted

Front Entrance of Penshurst Palace.

for its old homes. P. Palace is the birthplace of Sir Philip Sydney 1554. Pop. 2,000.

Pension. Sum paid from time to time by government, or a former employer, in consideration of past services. June 30, 1896, there were 970,678 names on the pension rolls of U. S.: War of 1812, 7 survivors, 3,287 widows; Mexican War, survivors 11,800, widows 8,017; Indian Wars, survivors 2,718, widows 4,237; War for the Union, 1861–65, invalids 749,530, widows, etc., 191,082. The total disbursements for the year ending June 30, 1896, were $139,280,075; from 1861–96, $1,997,515,154.72. The amount paid for pensions by Great Britain annually for army, navy and civil lists is ab. £7,500,000.

Pensionary, GRAND. Sec. of Holland till 1795. His duties were largely financial and diplomatic. Barneveldt made the post eminent.

Pentacarpellary. Ovary of five carpels.

Pentacle. Five-pointed figure used as a symbol of mystery, perfection, or of the universe by Gnostics, Neoplatonists, and Pythagoreans. In the Middle Ages it was used to keep off evil spirits and witches.

Pentacrinites. Group of Crinoids with pentangular stems.

Pentacrinus. Most common of living species of CRINOIDS (q.v.); stone-lilies.

Pentactine. Sponge spicule, produced from a hexactine by suppression of one ray.

Pentadelphous. Flowers whose stamens are united into five sets, as in the Basswood.

Pentads. In Chemistry, elements having a valence of V.

Pentagon. Polygon of five sides.

Pentagynia. Order of plants which have five pistils.

Pentagynous. Flowers with five pistils.

Pentamera. *Coleoptera*, with five-jointed tarsus. Here are included most of the Beetles, such as the Spring-beetles (*Elateridæ*), *Lamellicornia*, *Palpicornia*, Swimming-beetles (*Dytiscidæ*), Tiger-beetles (*Cincindelidæ*), and the great family of Running-beetles (*Carabidæ*). See these terms.

Pentameron. Fifty Neapolitan stories by G. Basile 1637. Thirty-one of them were tr. 1848.

Pentamerous. Having five similar parts; *e.g.*, arms of a Starfish, and joints in the tarsus of certain beetles.—In Botany, flowers constructed on the plan of five members of each circle of parts, or the quinary plan.

Pentameter. Verse of five feet; abridged hexameter, common in Greek, Latin, and modern poetry.

Pentamethyl Pararosaniline. See METHYL VIOLET.

Pentandria. Linnæan class of plants, comprising all those which have five separate stamens, as in Forget-me-not, Potato, Cowslip, Violet, and Flax.

Pentandrous. Flowers with five stamens.

Pentane. C_5H_{12}. Amyl hydride; known in three forms; which are liquids boiling 9°–37° C.; present in crude petroleum, and a considerable constituent of petroleum ether; used in standard burners to furnish a standard of light.

Pentapetalous. Corolla of five petals.

Pentaphyllous. Calyx or corolla composed of five leaves (sepals or petals).

Pentasepalous. Calyx composed of five sepals, as in the Apple.

Pentastichous. Five-ranked, as the arrangement of the alternate leaves in the Apple, the scales of a Larch cone, and numerous other plants.

Pentastomida. See LINGUATULIDA.

Pentateuch. "Five books of Moses," first of O. T.

Pentathionic Acid. $H_2S_5O_6$. Made by the action of hydrogen sulphide upon a solution of sulphur dioxide in water.

Pentathlon. Five exercises of running, leaping, wrestling, throwing the discus, and throwing the spear, popular in ancient Greece.

Pentecost. In Israel, second of the three great feasts, celebrated fifty days after the Passover, commemorating the harvest.—In the Christian Church, day of the Descent of the Spirit.

Penthesilea. Queen of Amazons; ally of Priam; slain by Achilles.

Pentheus. King of Thebes; driven mad by Bacchus and torn in pieces by his mother and aunts in a Bacchic frenzy.

Pentland Firth. Between Scotland and the Orkneys, connecting North Sea and Atlantic.

Pentland Hills. S.w. of Edinburgh; 16 m. long. Greatest altitude 1,898 ft. Here a body of Covenanters was defeated Nov. 28, 1666.

Pentonville. District of London, containing a model prison, erected 1840–42.

Pentremites. See BLASTOIDEA.

Pentyl Alcohols. $C_5H_{11}OH$. Seven compounds of this formula are known. Only two are of importance, the AMYL ALCOHOLS (q.v.).

Penumbra. One of the results of the rectilinear propagation of radiation is the production of shadows cast by opaque objects. If, *e.g.*, a disk be held opposite a candle flame, and straight lines be drawn from the flame tangent to the edge of the disk, the conical space behind the disk which receives no

Umbra and Penumbra.

light is called the shadow. If the source of light be a point, the edges of a plane section of the shadow are sharp. If it have an appreciable surface, the edges of the shadow shade off gradually. This surrounding region, through which the dark portion or the umbra shades off gradually, is the penumbra.

Penumbra OF THE SHADOW OF THE EARTH OR MOON. That part of the shadow within which the sun's light is only partially cut off. In those portions of the earth, traversed by

In case of an eclipse of the sun, those parts of the earth between *a*, *b* and *c*, *d* respectively would be within the penumbra, and the eclipse is partial.

the moon's umbra or true shadow, the eclipse would be total; where the penumbra or partial shadow falls, the eclipse would be partial. The greatest breadth of the former is 180 m. and of the latter 4,900 m.

Peons. Mexican and S. American serfs, under Spanish laws for debt.

Peony. *Pæonia officinalis.* Large perennial herb of the natural family *Ranunculaceæ*, native of central Europe, widely cultivated for ornament. There are numerous other species, two indigenous in California.

People's Palace. Institution at Mile End Road, inaugurated by the Queen 1887 and intended for the recreation and amusement of the inhabitants of the East End of London. It comprises technical schools, art galleries, concert halls, gymnasium, etc.

Peoria. City of P. co., Ill., on the Illinois; founded 1779. It is entered by 11 railroads, is regularly laid out and has extensive manufactures. Pop., 1890, 41,024.

Pepe, GUGLIELMO, 1873–1855. Italian officer in Spain; leader of a revolt in Naples 1820; in exile 1821–48, when he held Venice for the patriots; historian of the events in which he bore part.

Peperino. Variety of tuff found near Rome.

Pepin, LAKE. Extension of the Mississippi River between Wis. and Minn., 1 m. below the junction of the St. Croix River. Length 24 m., width 2–4 m.

Pepin, or PIPPIN, "THE SHORT," 714–768. Son of Charles Martel and father of Charlemagne; became sole Duke of Franks 747; first king 752; at war with Bavarians, Saracens, Lombards, Saxons, and the Duke of Aquitania. He gave Ravenna, Pentapolis, and the duchy of Rome to the Holy See, and so laid foundation of temporal power.

Pepin of Heristal, d. 714. Founder of Carlovingian line of Frankish kings; Mayor of the Palace under several Merovingian kings; conquered Burgundy and Neustria 687; father of Charles Martel.

Pepo. Fleshy fruit, with a firm rind, composed of the thickened adnate calyx and ovary, as in the Pumpkin, Cucumber, and Melons.

Pepper. *Piper nigrum.* Herb of the natural family *Piperaceæ*, native of India, yielding from its berries the well known condiments black and white pepper. Red Pepper is derived from the fruit of a species of *Capsicum*, natural family *Solanaceæ*. Other plants produce a similar substance.

Black Pepper (*Piper nigrum*).

Pepper, WILLIAM, M.D., LL.D., b. 1843. Prof. Univ. Pa. since 1876, and its provost 1881–94.—His father, WILLIAM, M.D., 1810–1864, was prof. Univ. Pa. 1860–64.

Pepperbush. Shrubs of the genus *Clethra*, natural family *Clethraceæ*, natives of N. and S. America, bearing odorous white flowers. The two species of the U. S. are known as White Alder.

Peppercorn Rent. Acknowledgment of tenancy when lands are let virtually free of rent; one peppercorn a year to be paid on demand.

Pepperell, SIR WILLIAM, 1696–1759. Merchant at Kittery, Me.; Chief-justice of Mass. Common Pleas from 1730; leader of an expedition, the most famous of colonial times, which took Louisburg June 1745; Baronet 1746; acting Gov. of Mass. 1756–58; Lieut.-gen. 1759.

Peppergrass. Herbs of the genus *Lepidium*, natural family *Cruciferæ*, of wide geographical distribution; also called Pepperwort.

Pepperidge. *Nyssa sylvatica.* Large tree of the natural family *Cornaceæ*, native of swampy ground in the e. U.S., furnishing a valuable timber; called also Tupelo, and Black Gum or Sour Gum.

Peppermint. *Mentha piperita.* Odorous herb of the Mint family, native of Europe; cultivated and introduced into wet places in America, in Mich. and N. Y. See MINT.

Peppermint, OIL OF. Oil of *Mentha piperita.* The oil is used in confectionery and in medicine. Its essential constituent is MENTHOL (q.v.).

Pepper-Pot. Mixed dish of meat or fish with okra and red peppers, originating in W. Indies. In Pa. tripe with dough balls and red peppers are used.

Pepper-Root. Certain species of the genus *Cardamine*, herbs of the natural family *Cruciferæ*, natives of N. America; known as Toothwort.

Pepsin. Digestive ferment of the gastric juice. As found in the market it is usually prepared from the stomach of the hog, and is employed to aid weak digestion, acting on nitrogenous food only. It changes albuminoids into peptones. It is used in tablets.

Peptones. Bodies containing carbon, hydrogen, nitrogen, sulphur, and oxygen, produced by the action of pepsin upon albuminoids, and by the action of other similar ferments; easily soluble in water and not as readily coagulated as albumens.

Peptonized Food. Any article of food artificially digested by means of some preparation of the pancreas. Peptonized foods are used to afford nourishment when, from any cause, the power of digestion is impaired; *e.g.*, during the weakness consequent upon a low fever or where there is a chronic disease of the stomach. See PANCREATIN.

Pepys, SAMUEL, 1633–1703. Sec. to the Admiralty 1685–88; Pres. Royal Soc. 1684–86. His famous *Diary*, 1660–69, was first pub. 1825.

Pequigny. Town of France, on the Somme, near Amiens; notable for a treaty, signed Aug. 28, 1475, which arranged for a 7 years' truce between France and England. The English king engaged to quit France on receipt of 75,000 crowns, and to release Queen Margaret for a ransom of 50,000 more. A separate treaty provided for mutual aid in case of revolt in either kingdom.

Pequots, or PEQUODS. Tribe of Indians in Conn., which was hostile to the whites and caused several conflicts and massacres; nearly exterminated 1637 by a band led by John Mason, assisted by Uncas and the Mohegans. More than 600 Pequots were killed: others were sold as slaves to the W. Indies.

Pera. Suburb of Constantinople, occupied by foreigners and embassies; ravaged by fire 1870.

Peræa. Palestine e. of the Jordan, or part thereof, between Pella and Machærus.

Perak. Malay territory held by Britain from 1874. Area ab. 8,000 sq. m., pop. ab. 200,000.

Peralta, GASTON DE, MARQUIS DE FALCES, ab.1520–ab.1580. Viceroy of Mexico 1566–67; noted for justice and humanity; Constable of Navarre 1568.

Peralta, MANUEL MARIA DE, b. 1847. Costa Rican author and diplomatist, well known at Washington 1875–78 and later.

Peralta-Barnuevo, PEDRO, 1663–1743. Peruvian author.

Perameles (BANDICOOT). See ENTOMOPHAGA.

Peramelidæ. See ENTOMOPHAGA.

Per Capita. By heads; according to the number of individuals. See PER STIRPES.

Percentage. Process and result of reckoning by the hundred. The primary elements are the base and the rate per cent: their product is the percentage. The base being given in units, the rate is expressed decimally.

Perception. Psychologically, process of acquiring knowledge of the external world by means of the senses. The basis of perception is therefore sensation, but something more is needed. The object to be perceived must not only arouse a sensation, but must be discriminated, recognized, localized in space and time, and assimilated into the body of conscious ex-

perience. Perhaps the most important act in the complex process of perception is the movement of attention, which brings the sensation or the object producing it into the focus of consciousness, and allows the operation of the processes necessary to the development of perception.

Percesoces. Sub-order of Acanthopterous fishes, including the Mullets (*Mugilidæ*), Smelts (*Atherinidæ*), and Barracudas (*Sphyrænidæ*). These fishes stand between the Perches and the Pikes. They have the ventral fins abdominal in position, the spinous dorsal well separated from the soft dorsal, branchial arches well developed and scales cycloid. The largest species (*Mugil albula*) averages 2 lbs. in wt. They come in schools to spawn in June. They feed on the mud of the bottom, having a gizzard-like stomach and an extra long intestine; but the mud is partly culled before it is swallowed; the indigestible pieces are thrown out of the mouth. A special arrangement of the pharyngeal bones acts as a filter in the throat. The head is flat and scaly, the body is of pike-like proportions, but has two dorsal fins, and the ventrals are below the pectorals. The anterior dorsal is spiny.

Perceval, AMAND-PIERRE CAUSSIN DE, 1795–1871. French Arabic scholar.

Perceval, JOHN, 1680–1748. Irish baronet 1691, Baron 1715, Viscount 1722, Earl of Egmont 1733; grantee of a charter to colonize Georgia 1732.—His grandson, SPENCER, 1762–1812, became M.P. 1796, Atty.-gen. 1802, Chancellor of the Exchequer 1807, Prime Minister 1809, and was murdered.

Percheron. See HORSE.

Perches. *Percidæ*, including a large number of species of *Acanthopteri*. Some are called Pikes, or Pike-perches. Of these the wall-eyed pike, *Stizostedion vitreum*, is a prominent example. It may attain a weight of 10 to 30 lbs.; the body is more elongated and less compressed than in the yellow perch.

1. Sea Bass (*Labrax lupus*), 2. Striped Bass (*Serranus scriba*), 3. Wreck Bass (*Polyprion cernuum*).

The principal fishery for this species is Saginaw Bay, Lake Huron. The white perch (*Morone*) belongs to the *Labracidæ*. The sub-family *Etheostominæ* includes the Darters, which are considered minute perches. The SUNFISHES, q.v., (*Lepomis*) and Black Bass (*Micropterus*) of the *Centrarchidæ* have 3 or more anal spines and rudimentary pseudobranchs, while the Sea Bass (*Roccus* or *Labrax*) of the *Serranidæ* have large pseudobranchs. These families are by some authors included in the Perch family, here restricted to perches with 1 or 2 anal spines, and rudimentary pseudobranchs (except *Stizostedion*).

Perchers (BIRDS). See INSESSORES.

Perchlorates. Metallic derivatives of perchloric acid.

Perchloric Acid. $HClO_4$. Colorless, fuming liquid, very unstable and explosive. It produces bad wounds when brought in contact with the flesh. It is made by treating potassium perchlorate, $KClO_4$, with sulphuric acid.

Percival, JAMES GATES, 1795–1856. American poet, of considerable repute in the past; geologist of Wis. 1854. *Clio*, 1822–27.

Percurrent. Midvein of a leaf when it extends to but not beyond the apex.

Percussion. The sudden stopping of a body by impact, from which the term has been applied to shells to be exploded upon striking by means of a percussion fuse: the means employed to discharge the musket by a percussion cap, within which is placed a small charge of fulminate. Explosion in such cases is produced by the conversion of mechanical energy into heat.

Percussion. Process in physical diagnosis, which, by tapping various parts of the body, more particularly the chest and abdomen, gives an indication of the physical condition of the organs beneath by the resultant sound.

Percussion Cap. Small copper cylinder containing fulminating powder, a mixture of 7 parts mercury fulminate and 2 parts potassium chlorate, placed in the lock of a gun to explode the charge. See FULMINATES.

Percussion Table. Apparatus used in ore-dressing, in which the pulp flows in a thin sheet over the surface of an inclined table, and is kept in agitation by a succession of blows given either at the upper end or at the side of the table.

Percy, HENRY, d. 1408. Fourth Baron of Alnwick; first Earl of Northumberland 1377.—His son, HENRY ("HOTSPUR"), 1364–1403, victor of Chevy Chase, 1388, was killed at Shrewsbury, and celebrated by Shakespeare. Others of this line were prominent in war and intrigue.

Percy, JOHN, 1817–1889. Physician in the Queen's Hospital, Birmingham, 1842–51; Lecturer on Metallurgy to the Royal School of Mines 1851–79; pres. Iron and Steel Institute 1885–87. His works on Fuel, Iron and Steel, Silver and Gold, and the metallurgy of the other metals, pub. 1869–80, are standard works, and have been tr. into French, German, and Spanish.

Percy, THOMAS, D.D., 1728–1811. Bp. of Dromore 1782. His *Reliques of Ancient English Poetry*, 3 vols., 1765, is an important collection of ballads, freely revised and enlarged by his own hand.

Percy Anecdotes. Famous collection, published in London, in monthly parts, 1820–23, by Thomas Byerley, d. 1826, and Joseph C. Robertson, d. 1852, who wrote under the name of Shilto and Ruben Percy.

Perdiccas. Kings of Macedonia ab.700, 454–413, and 365–360 B.C.

Perdiccas, d. 321 B.C. General of Alexander, and temporary regent after his death, holding his signet-ring.

Pereda, JOSÉ MARIA DE, b. 1833. Spanish novelist and descriptive writer.

Péréfixe, HARDOUIN DE BEAUMONT DE, 1605–1671. Bp. of Rhodes 1649, Abp. of Paris 1662; persecutor of Port Royal.

Peregrine Falcon (FALCO PEREGRINUS). Hawk formerly used in falconry. It is a very swift flyer. It is known to have attained a speed of 150 m. an hour. The male, called Tercel, is smaller than the female.

Pereiopod. One of the walking legs of the lobster and of allied *Crustacea*.

Pereira, JONATHAN, M.D., F.R.S., 1804–1853. Practitioner and prof. in London. *Materia Medica*, 1839–40; *Diet*, 1843.

Pereira da Silva, JOAO MANOEL, b. 1817. Brazilian historian.

Pereira de Figueiredo, ANTONIO, 1725–1797. Portuguese priest of the Oratory. He tr. the Bible and wrote much against the Jesuits.

Hooded Peregrine on the block.

One end of the leash is attached to the jesses, the other to a ring driven into the side or top of the block; and thus the hawk is prevented from escaping.

Perekop, ISTHMUS OF. In Russia, connecting the Crimea with the mainland of European Russia. It is crossed by a ship canal.

Père-la-Chaise. Cemetery in e. Paris; named from the Jesuit confessor of Louis XIV., whose garden was converted into this burial place 1804.

Perennial. Vegetable structures which endure indefinitely, year after year.

Perennibranchiata (PROTEIDA, SOZOBRANCHIA). Tribe of *Ichthyoidea* (Urodele Amphibians), including forms having

external gills throughout life, but no maxillary bones. The teeth are in several rows, and borne by the vomer and palatine bones. Here are included: the Siren, or Mud-eel, of S. C., with eel-like body and no posterior limbs; the Proteus of s. Europe,

Mud-Puppy (*Necturus maculatus*).

living in subterranean waters, having three toes on the fore feet, two on the hind feet, and only two pairs of gill slits; and the Necturus or Menobranchus (known popularly as the Mud-puppy or Water-lizard), with four-toed feet and four pairs of gill slits, abundant in the Great Lake region and Upper Mississippi system.

Perennichordata. See COPELATÆ.

Perez, ANTONIO, 1539–1611. Sec., agent, and scapegoat of Philip II. of Spain. Tried for the murder of Escovedo, emissary of Don John of Austria, he confessed under torture, escaped to Aragon, was there repeatedly delivered by popular risings, and fled to France 1591. *Relaciones*, 1598.

Pérez, JOSÉ JOAQUIN, b. 1801. Pres. of Chili 1861–71.

Pérez, SANTIAGO, b. 1830. Colombian author and Senator, twice Minister to the U. S.

Pérez de Hita, GINÉS. Spanish author. His *Civil Wars of Granada*, 1595–1604, a mixture of history and romance, has been drawn on by other writers, from Calderon to Irving.

Pérez Galdós. See GALDÓS.

Perfect. Flowers which contain both stamens and pistils.

Perfection, IN ETHICS. Excellence of human nature considered as a rational end for moral action.

Perfectionism. Doctrine professed by many Methodists, some Roman Catholics, and others, that man may through grace attain a sinless state in this life. It is disowned by most Christians.

Perfectionists. Sect founded 1838 in Vt. by J. H. Noyes; transferred 1847 to Madison co., N.Y., and known as the Oneida Community.

Perfect Square. Quantity whose two equal factors can be exactly expressed.

Perfoliate. Sessile leaves having the stem on which they are borne passing through the lower portion of their blades.

Perforata. Section of *Foraminifera*, including the orders TEXTULARIDEA, CHILOSTOMELLIDEA, LAGENIDEA, GLOBIGERINIDEA, ROTALIDEA, NUMMULINIDEA (q.v.).

Perforata. Division of the Madrepore corals. See MADREPORARIA.

Perforated Cake Powder. Used in heavy guns; hexagonal powder prisms having seven perforations from upper to lower base; made by moistening and reworking ordinary grained powder of sp. gr. 1.5 and subjecting it to a pressure of ab. 65,000 lbs. per sq. in. in hexagonal molds. Each prism weighs ab. 555 grs. and has sp. gr. ab. 1.7. Combustion proceeds from interior perforations on increasing surface, and the amount of gas evolved is better proportioned to perform its work with less initial pressure on the bore than in the case of single grained powder.

Perforate Shell. Gastropod shell with a hollow columella.

Perfumery. Art of preparing essences and perfumes. A good perfume should leave no residue on evaporation. Some of the most exquisite perfumes are obtained from the most offensive substances: the oil of pineapple being produced from sugar and putrid cheese. Most of the perfumes come from the vegetable kingdom; musk, civet, castor, and ambergris being from the animal, but chemistry has shown how to obtain them from other sources. In 1889 there were grown in France for perfumery 1,860 tons of orange blossoms; and in Bulgaria 5,660 lbs. of attar of roses were made, requiring 3,200 lbs. of rose petals per pound.

Pergamus. City of Mysia, w. Asia Minor; capital of Attalus I., 241–197 B.C.; bequeathed to Rome 133 B.C.; long wealthy and populous; seat of a flourishing school of Greek

Restoration of the great Altar Building at Pergamus, by R. Bohn.

art in 2d century B.C. Its library of 200,000 vols. was given to Cleopatra by Antony, and added to that of Alexandria. Its ruins were excavated 1878–86, and many sculptures were taken to Berlin.

Pergolesi, GIOVANNI BATTISTA, 1710–1736. Italian composer of the Neapolitan school, best known by his opera *La Serva padrona*, 1733, and a *Stabat Mater* for two women's voices with accompaniment of strings.

Perham, SIDNEY, b. 1819. M.C. 1863–69; Gov. of Maine 1871–74.

Peri. In Oriental Mythology, a Being, harmless or beneficent, and immortal, but not to be admitted to Paradise; most familiar through Moore's poem.

Peri, JACOPO, ab.1600. Florentine musician, one of the creators of the lyric drama (see OPERA). He composed the opera *Euridice*, performed at the marriage of Henry IV. of France.

Periander, ab.665–585 B.C. Tyrant of Corinth.

Perianth. Floral envelopes of a flower, especially in cases where the calyx and corolla are indistinguishable, or where one of them is wanting; sometimes called Perigone.

Periastre. That point in the orbit of a binary star where the secondary star approaches nearest to the primary.

Periblem. Layer of cells at the growing points of plants, which develops the bark; immediately beneath the epidermis.

Peribranchial Space. Space surrounding the branchial sac in Tunicates, etc.

Pericambium. Layer of thin-walled cells, found in the roots of dicotyledonous and gymnospermous plants, immediately within the endodermis; periphlæum.

Pericarditis. Inflammation of the pericardium. Frequently a sequel to inflammatory rheumatism. It is often accompanied by a dropsy of the part, known as hydropericardium.

Pericardium. Serous sac enveloping the heart, enabling its movements to be carried on without undue friction. See SEROUS MEMBRANE.

Pericarp. Seed-vessel of flowering plants; ripened ovary-wall.

Perichætium. Cluster of modified leaves which surrounds the archegones in the flower of a moss.

Perichondrium. In Embryology, membranous investment of dermis which surrounds the cartilaginous cranium and becomes ossified about it to form the membrane bones.

Pericladium. Expanded and sheathing base of a petiole, especially in herbs of the Carrot family.

Pericles.

Pericles, ab.495–429 B.C. Greatest statesman of Athens. He entered public life 469, and by the ostracism of Thucydides 444 was left without a rival. He employed the ten years preceding the Peloponnesian war in adorning Athens with public buildings. His was the golden age of Greece.

Periclinium. Involucre of the compound flower or Anthodium of the *Compositæ;* also known as Periphoranthium.

Periderm. Hard cuticular layer developed in the cœnosarc of certain Hydroids.—In Botany, the tissue formed externally from the phellogen of stems. Its diminutive is peridiolum.

Peridium. Investing membrane of the puff-balls, truffles, and other fungi, consisting of several layers of densely matted hyphæ; also corky layer of the bark in exogenous stems.

Peridot. See CHRYSOLITE.

Peridotite. Group of basic igneous rocks containing olivine, but no feldspar.

Perienteron. Blastocœl cavity after the digestive cavity is established in embryos.

Perier, CASIMIR, 1777–1832. French Deputy 1817; Finance Minister 1828–29; Premier 1831. His policy was that of the *Juste Milieu.*

Périers, JEAN BONAVENTURE DES. See DES PÉRIERS, BONAVENTURE.

Perigastric Cavity. Perivisceral cavity; body cavity outside of the alimentary canal.

Perigee. Point of the moon's orbit nearest the earth.

Perigenesis. Theory of heredity, according to which protoplasm is made up of small bodies called plastidules, each of which is an organized system of molecules, each molecule having a peculiar form of vibration; the character of the whole is determined by the forms of these vibrations. The vibrations are complex and run through cycles so as to return periodically to the same phase as a result. The plastidule also undergoes a cyclic change of its powers. Changes in the environment modify the vibration systems, and also determine the resultant effective work of the molecule in adding other molecules, or of the plastidule in splitting into new plastidules, for growth is the one and cell-division results from the other. A modification of the system of vibrations constitutes variation, and must always be impressed from without. Thus Hæckel accounts for the cyclic development of ontogeny and the branched development of phylogeny. As to the branched development of the differentiation of tissues, he supposes a similar modification of the vibration along different lines, as each cell divides, due to environment. Development is a purely mechanical process, capable of being represented mathematically and graphically. See WEISMANN'S THEORY OF HEREDITY.

Perigone. See PERIANTH.

Perigonium. Walls of a sporosac or reproductive bud in Medusoids. When mature there are three layers, a middle, mesotheca, an outer, ectotheca, and an inner, endotheca.

Perigueux. City of France, 42 m. s.e. of Angouleme, the ancient Vesunna of Cæsar's time. Here are the remains of a Roman amphitheater. It has an archæological museum rich in inscribed stones. Pop., 1891, 28,000.

Perigynium (PERIGYNE). In Botany, sac which incloses the pistil and achenium in the genus *Carex;* also perichætium of *Bryophytes.*

Perigynous. Stamens inserted around the pistil of a flower, either on the calyx or corolla; also, disk of a flower when adnate to the base of the calyx.

Perihelion. Point in a planet's or comet's orbit nearest the sun.

Perimeter. Bounding line of a plane figure.

Perimeter. Instrument used for determining the area of the field of distinct vision of the eye.

Perineum. In Regional Anatomy, the lowest part of the trunk found between the joining of the thighs to the trunk.

Perinium. Third layer of cells existing on the spores of certain *Jungermanniaceæ*, often beautifully sculptured.

Period. In simple harmonic motion, interval of time between two successive passages of the vibrating body through a given point of its path in the same direction.

Period. In Mathematics, two or more consecutive digits of a number, considered together.

Periodates. Salts derived from periodic acid, HIO_4, or from derivatives of normal periodic acid, $I(OH)_7$.

Periodic Acid. HIO_4. Simplest form, made by treating perchloric acid with iodine; white crystals, containing $2H_2O$.

Periodicals. Magazines and reviews, usually pub. monthly or quarterly; numerous of late in all civilized lands, and occupying a middle place between newspapers and ordinary books. The Royal Society's *Transactions* began 1665, the *Journal des Savants* also 1665, and the *Gentleman's Mag.* 1731.

Periodic Function. One in which the same value recurs at regular intervals in the change of the variable.

Periodic Law. In Chemistry, the properties of the elements are periodic functions of their atomic weights.

Periodic Table. Arrangement of the chemical elements in groups and series, in the order of their atomic weights, showing the relation of the properties of the elements and their atomic weights. Such tables have been arranged by Mendeléff and by Lothar Meyer.

Period of Sun Spots. Discovered by Schwabe of Dessau. It is not absolutely constant, but is approximately $11\frac{1}{10}$ years in length. The last maximum epoch was 1895.

Periœci. People of the native race in Lacedæmon, whose ancestors occupied before the Dorian conquest; regarded by the Spartans as inferiors, but not generally oppressed.

Periostitis. Inflammation of the periostium. It is most frequently experienced in the membrane investing the roots of the teeth; dental periostitis.

Periostium. Sheath of fibrous tissue enveloping bones, except over the articular surfaces. Externally it affords a surface to which the muscles can be attached; internally it serves to give nourishment to the bone and to regenerate the bony tissue, should it be destroyed.

Periostracum. Epidermal layer on outside of shells of mollusks.

Peripatetics. Disciples of Aristotle. See LYCEUM.

Peripatus. See ONYCHOPHORA.

Periphloëm. See PERICAMBIUM.

Periphoranthium. See PERICLINIUM.

Periphyllidæ. Family of *Peromedusæ*, including Jellyfish of complex structure, with twelve tentacles, of which four

Periphyllidæ (*Periphylia mirabilis*).

are interradial and sensory, and with sixteen marginal lappets, containing thirty-two pockets.

Periphyses. Sterile filaments of the nature of paraphyses, arising from the hymenium of certain *Fungi* at places where there are no asci.

Periplasm. Layer of hyaline protoplasm surrounding the oösphere in the oögones of *Oömycetes*, a sub-class of *Fungi.*

Periplast. See BLASTEMA.

Periplus. Voyage or circumnavigation. That of Hanno was along the w. coast of Africa to a point beyond the Senegal.

Periproct. Space surrounding the anus, especially in Echinoderms.

Peripteral. In Grecian Architecture, this denotes a temple entirely surrounded with columns.

Peripylæa. Order of siliceous *Radiolaria*, with a spherical structure to the central capsule which is uniformly perforated. The nucleus is single in the *Monocyttaria*, and double in the *Polycyttaria*. The sub-order *Sphærida* includes *Haliomma*, with the spherical skeleton partly in the central capsule. The sub-order *Discida* has the skeleton somewhat flattened; *Thalassacolla* has no connected skeleton. The *Polycyttaria* consist of colonies of Radiolarians fused by their extra capsular protoplasm, e.g. *Collosphæra*.

Perisarc. Chitinous envelope secreted about certain Hydroids.

Perischoëchinidæ. See TESSELLATA.

Periscopic. Eye-glasses when in the form of converging or diverging menisci. These were proposed first by Wollaston to replace the ordinary double convex and double concave lenses, because by this means a much wider range of vision is obtained: hence the name periscopic glasses.

Perisome. Integument of echinoderms.

Perisperm. See ALBUMEN.

Perisporangium. Indusium of ferns.

Perispore. In Algology, cell in which tetraspores are formed.

Perissad. In Chemistry, element whose valency is expressed by an uneven number.

Perissodactyla (ODD-TOED UNGULATES). Hoofed Mammals, having the middle toe or digit most developed and serving as the main support of the body. In all, the toes of the hind feet are odd in number, one or three digits being present (in *Coryphodon* five). When horns are present, they are never supported by a bony core, and are in the median line of the skull even when there are more than one. The stomach is not divided into compartments. There are never less than 22 dorso-lumbar vertebræ. The dentition is usually complete. A space is present between the incisors and premolars; the canines, when present, are developed, especially in the upper jaw of the males, into tusks. The families included are *Coryphodontidæ*, *Rhinocerotidæ*. *Tapiridæ*, *Brontotheridæ*, *Palæotheridæ*, *Macraucheniidæ*, *Equidæ*.

Peristaltic Motion. Action of the muscular coat of the intestines by which the contained substance is moved on regularly.

Peristerite. Variety of albite feldspar, showing a peculiar iridescence, similar to the colors on the neck of a pigeon; sometimes used as a gem-stone.

Peristeromorphæ. See COLUMBINÆ.

Peristoma. 1. Lip of the aperture (mouth) of snail-like shells. 2. Region around the mouth of animals, having a circumoral ring of cilia or of tentacles. It includes the space thus inclosed.

Peristome. Row or rows of hair-like processes, called teeth, surrounding the mouth of the sporange or capsule of certain mosses. These teeth are in number always some multiple of 4.

Peristyle. Inclosure of columns surrounding either a building or a vacant space. It is most commonly employed to denote a circle of columns, but is equally applicable to a rectangular arrangement.

Perithecium. Conceptacle which contains the asci in *Ascomycetes*, an order of *Fungi*.

Peritoneum. Serous sac covering the contents of the abdomen and lining the abdominal walls. Because of the diverse contents of the abdomen, it is the most complexly formed of all the serous sacs. Its use is to permit the proper movement of the various organs in the abdomen. See SEROUS MEMBRANE.

Peritonitis. Inflammation of the peritoneum; of many forms and from many causes. Acute peritonitis begins suddenly with agonizing pain. The sufferer lies on his back with shoulders raised and thighs flexed to relax the abdominal walls. The pulse is small and wiry, the abdomen tense and tympanitic. Physicians are divided as to the treatment: some insist upon free catharsis, others upon the free use of opium, and still others say an incision through the abdominal walls and local treatment is necessary. The probability is that all are correct, and skill is required to determine the proper treatment in the individual case.

Peritreme. Peristome of a Gastropod shell.

Peritricha. *Infusoria* with a circle of cilia around a disk, in the edge of which is a mouth leading into a pharynx. The opposite pole of the body is adapted for fixation. *Vorticella* is a typical example.

Perivisceral Cavity. Part of the body cavity that surrounds or contains the viscera.

Periwinkle. *Vinca minor.* Low, blue-flowered, trailing shrub of the natural family *Apocynaceæ*, blooming in early spring; native of Europe; much cultivated as an ornamental plant.

Periwinkle (LITTORINA). Medium-sized globular snail of sea-shores; it feeds on *Algæ*.

Periwinkle, PENNYWINKLE, WINKLE, WRINKLE (SYCOTYPUS). Large sea snail, with hairy epidermis; it sometimes destroys oysters.

Perizonium. Wall of the auxospore in Diatoms.

Periwinkle (*Vinca minor*).

Perizonius, or **Voorbroek,** JACOB, 1651–1715. Prof. Franeker 1681, Leyden 1693; writer on the classics. *Origines Babyloniæ*, 1711.

Perjury. Willful false swearing to evidence material to the issue in a legal action. The definition and punishment vary with the statutes of different jurisdictions.

Perkins, BISHOP W., 1841–1894. Judge 11th Dist. Kan. 1873–83; M.C. 1885–91; U. S. Senator 1892–93.

Perkins, CHARLES ALLEN, 1832–1892. U. S. Minister to Portugal 1869–70; married to a Spanish princess 1870; proscribed in Spain 1874.

Perkins, CHARLES CALLAHAN, 1823–1886. American writer on art. *Italian Sculptors*, 1868–83.

Perkins, ELI (MELVILLE D. LANDON), b. 1840. American humorist. *Eli Perkins* (*at large*), 1875.

Perkins, ELISHA, 1741–1799. Inventor 1796 of an alleged method of curing rheumatism by "metallic tractors," which was used in London, and caused much controversy; inventor also of an antiseptic drug for other diseases, which failed to save himself when tried for yellow fever.

Perkins, GEORGE HAMILTON, U.S.N., b. 1836. Lieut. 1861; distinguished at New Orleans and Mobile; Captain 1882.

Perkins, GEORGE ROBERTS, 1812–1876. American mathematician, author of widely-used text-books.

Perkins, JACOB, 1766–1849. American inventor of improvements in banknote engraving, and later of the bathometer, the pleometer, and the steam-gun. He was in England from 1818.

Perkins, JUSTIN, 1805–1869. American missionary in Persia from 1834; translator of the Bible into Syriac.

Perlitic Structure. Structure seen in some vitreous rocks. See PEARLSTONE.

Perm. City of e. Russia, on the Kama, at the mouth of the Joga Shika. It has extensive smelting works. Pop., 1890, 39,281.

Permanent Fortification. Defensive works erected during peace for the protection of vital strategical points, such as an important harbor, the capital of the State, or other point essential to the security of the State. They require the application of the highest development of the art of fortification, and are intrusted to the care of trained military engineers. In the U.S. the principal harbors on the Atlantic and Pacific coasts are permanently fortified, while in European States the frontiers and capitals are also necessarily cared for. The recent developments in artillery have greatly modified the character of these works and made obsolete the masonry structures which in 1860 were considered abundantly strong. In that day the 64 lb. solid shot could make but little impression upon the 8 ft. of granite wall, but the ton and a half shot of the 17-in. modern rifle demands great thickness of steel armor, or of earthen and concrete batteries to offer a reasonably secure protection to the modern armaments of defense.

Permanent Rank. The rank held by an officer in the permanent military establishment, as distinguished from that which the same person may hold temporarily in the volunteer army, or by assignment temporarily in the regular army, such as aides-de-camp, acting judge-advocates of departments, etc.

Permanent State. See CONDUCTION.

Permanent Way. Roadbed of a railroad, with its culverts, bridges, and track. The cost of construction for steam railroads has averaged ab. $30,000 per mile of single track. For electric railways the cost is about one-half as great, on account of the smaller amount of excavation and embankment.

Permanent White. See BARIUM SULPHATE.

Permanganates. Derivatives of permanganic acid.

Permanganic Acid. $HMnO_4$. Compound resembling perchloric acid; obtained in water solution by the decomposition of its salts when acted upon by sulphuric acid; good oxidizing agent; principal salt is POTASSIUM PERMANGANATE (q.v.).

Permian. Highest of the Palæozoic rocks; by some included in the Carboniferous. See COLUMN.

Permutation. Arrangement of elements in different orders. The number of possible permutations of n elements equals the product of the natural numbers from 1 to n (called factorial n), and is represented by placing n in a right angle $\lfloor n$, or by placing the exclamation mark after it, n!

Pernambuco. City and seaport of n.e. Brazil. It consists of three sections: Recife, founded by Spaniards ab.1580, and

Street View in Pernambuco.

San Antonio and Boa Vista, settled by the Dutch 1639 and taken by Portuguese 1654. It has an extensive commerce in sugar, cotton, and hides. Pop. ab. 140,000.

Peromedusæ. Order of *Scyphomedusæ*, having four interradial sensory tentacles, four pairs of band-like reproductive glands fixed to the wall of the sub-umbrella and projecting into a wide ring-canal, and the wide perradial stomach pouches. See PERIPHYLLIDÆ.

Peromela. See GYMNOPHIONA.

Peronosporaceæ. Order of minute *Fungi* (mildews), of the sub-class *Phycomycetes*, existing parasitically on living green plants. The well-known and destructive potato-rot is of this order.

Peropoda. The Old World *Pythonidæ* and New World *Boidæ* (Boas and Anacondas) are included. The Pythons have a long oval head, two rows of subcaudal plates and pitted labial plates. They live near water, hanging from limbs by the prehensile tail, and feed on small mammals; none larger than a goat can be swallowed by the largest Python. The bones are first crushed; the deglutition lasts a long while. Large animals are sometimes killed in the coils of these monsters, whose length ranges from 10 to 25 ft., although fabulous stories are told of Pythons more than 40 ft. long. The female Python incubates its eggs for three months, the temperature within the coils rising to 96° F. The *Boidæ* have broader frontal bones, subcaudal plates entire, the labial plates usually not pitted; otherwise they resemble Pythons, like them having rudiments of hind feet near the cloaca. The Boa-constrictor

Python (*Python natalensis*).

of Brazil has one row of large oval pale spots on the back, while the Anaconda has a double series of dark spots on the back. See AGLYPHODONTA.

Perowne, JOHN JAMES STEWART, D.D., b. 1823 in India. Prof. Cambridge 1875, Dean of Peterborough 1878, Bp. of Worcester 1891; O. T. reviser. *Psalms*, 1864–68.

Peroxide of Hydrogen. See HYDROGEN DIOXIDE.

Perpendicular Fortification. Devised by Montalembert ab.1776; succession of salient and reëntrants, the sides of the latter being perpendicular to each other. Covering these were low counterguards and ravelins, and within were brick towers; seen in German defensive works, which now are of lessened importance.

Perpendicular Gothic. Term applied to the latest phase of mediæval architecture in England. It is derived from the fact that the windows at this period were subdivided by numerous upright mullions, and especially that the tracery of the window-heads, which in previous periods had been composed of flowing and curved lines, consisted also of their mullions and of the lancets they inclosed. A like series of panels was in many cases applied to the buttresses and other exterior features, and to some part of the walls next to the vaults, for ornament, while pointed doorways were inclosed in square frames, and the spandrils were richly decorated. This declining phase of the style prevailed from the middle of the 14th century to the end of Henry the Eighth's reign in 1547, the succeeding architecture, in which classic forms began to appear, being known as Elizabethan, Jacobean, etc. English collegiate Gothic is for the most part perpendicular. New College, Merton College, the Divinity School at Oxford, Henry the Seventh's chapel at Westminster, the College chapel at Cambridge, and interior of Winchester Cathedral are familiar examples of the style.

Perpendicularity. Two straight lines given by their equations are perpendicular when the product of their slopes equals minus one. $y = mx + b$ and $y = m^1x + b^1$ are perpendicular when $m.m^1 = -1$. Two planes given by their equation are mutually perpendicular when the sum of the products of their corresponding direction vectors equals zero. $Lx + My + Nz + P = 0$ and $L^1x + M^1y + N^1z + P^1 = 0$ are perpendicular if $LL^1 + MM^1 + NN^1 = 0$.

Perpendicular Lines. Lines are mutually perpendicular when their difference of direction is ninety degrees. A straight line is perpendicular to a plane when it is perpendicular to all lines of the plane through its foot.

Perpendicular Planes. Two planes are mutually perpendicular when their angle of intersection is a right dihedral.

Perpent Stone. Stone reaching through a wall so as to appear on both sides of it. The name Bond-stone is used in rough walling.

Perpetua, ST. Martyr at Carthage 203. See FELICITAS.

Perpetual Motion. Motion of any machine which, independent of wear, would not cease; self-sustained, continuous mechanical motive-power. A ball always rolling or a wheel always turning, each operating, *e.g.*, by gravity alone, would fulfill the necessary conditions. Inasmuch as friction between surfaces in contact can never be entirely avoided, it is clear from the principle of the conservation of energy that all attempts to solve this problem are sure to fail. In Bishop Wilkins's third apparatus, shown in the cut, the water-wheels turn the Archimedean screw, which elevates the water to the tank above.

Perpetuity. Settlement of an interest in property which shall go in the succession prescribed, without any power of alienation; generally prohibited beyond a life or lives in being at the time of its creation and 21 years afterward.

Perpignan. Old town of s. France, near the Mediterranean and the Pyrenees; held by Aragon 1172–1475, and by Spain 1493–1642. Pop., 1890, 27,613.

Perradial. See RADIAL SYMMETRY.

Perrault, CHARLES, 1628–1703. French author, famous by his fairy tales 1697. *Parallel of Ancients and Moderns*, 1688–96.

Perron. Flight of exterior steps leading to a platform, but employed only with reference to structures of considerable magnitude and pretension.

Perrone, GIOVANNI, 1794–1876. Jesuit theologian, prof. at Rome 1823–53. His *Prælectiones Theol.*, 9 vols., 1835, is widely used.

Perronet, EDWARD, 1721–1792. English hymnist; author of *All Hail the Power of Jesus' Name*, 1780.

Perrot, GEORGES, b. 1832. Explorer in Asia Minor 1861; prof. Paris 1863; historian (with C. Chipiez) of ancient art, 1881–89.

Perry. Drink resembling cider, but made from pears; much used in England; it contains from 5 to 9 per cent of alcohol.

Perry, ARTHUR LATHAM, D.D., LL.D., b. 1830. Prof. Williams Coll. since 1873. *Political Economy*, 1865–77.

Perry, NORA, 1841–1896. New England poet.

Perry, OLIVER HAZARD, U.S.N., 1785–1819. Lieut. 1807; commanding on Lake Erie 1813; famous for his defeat and capture of six British vessels near Put in Bay, Ohio, Sept. 10, and for his laconic dispatch, "We have met the enemy and they are ours."—His brother, MATTHEW CALBRAITH, U.S.N., 1794–1858. Commodore 1841, commanded an expedition to Japan 1853, and there negotiated or compelled a treaty March 1854. *Report*, 3 vols., 1856.

Perry, THOMAS SERGEANT, b. 1845. American author. *Francis Lieber*, 1882; *Opitz to Lessing*, 1885.

Perry, WILLIAM STEVENS, D.D., LL.D., D.C.L., b. 1832. Bp. of Iowa 1876. *Hist. American Episcopal Ch.*, 1885.

Perryville. Village of Boyle co., Ky.; scene of an indecisive battle Oct. 8, 1862, between Unionists under Buell and Confederates under Bragg. Each lost nearly 5,000.

Persecutions, TEN. Somewhat arbitrarily defined as under Nero 64, Domitian 95, Trajan 107, Hadrian 125, M. Aurelius 165, Sept. Severus 202, Maximin 235, Decius 249, Valerian 257, and Diocletian 303. The last was by far the most severe and continuous; yet in amount of blood shed and misery inflicted, all these pagan harryings of the Church were probably far inferior to the Christian persecutions which raged 1200–1600, especially the Albigensian crusade, the Spanish Inquisition, and the efforts of Charles V. and Philip II. to suppress heresy in the Netherlands.

Perseids. Meteoric showers having the radient in the constellation Perseus. They appear ab. Aug. 1.

Persephone. Greek name of PROSERPINE (q.v.).

Persepolis. Capital of ancient Persia, ab. 35 m. n.e. of the modern Shiraz. Enormous masses of ruins, especially of palaces, still mark the spot. Chief among these were the Great Hall of Xerxes, his palace, and that of Darius. Their reliefs and other sculptures show a generally Assyrian quality and influence, but the forms of many buildings are distinctly Egyptian. Greek influences are also apparent in the ornamental details. P. is not mentioned before the Macedonian conquest: its original name is unknown. The palace, if not the city, is said to have been burned by Alexander 331 B.C.

Great Staircase to Northern Platform, and Propylæa of Xerxes; Great Hall of Xerxes and Palace of Darius in the distance.

Perseus. Argive hero, son of Zeus and Danæ; slayer of Medusa; liberator of ANDROMEDA (q.v.); King of Thessaly; widely honored; depicted like Hermes.

Perseus, ab.212–ab.163 B.C. Son of Philip V. of Macedon; King 179; at war with Rome 172, and successful against Crassus; defeated by Æmilius at Pydua 168. His kingdom was annexed, and he died a captive.

Perseus. Constellation of the northern heavens. Mean right ascension, 3h. 20m.; mean declination, 45°.

Perseverance of Saints. Doctrine that the elect cannot fall from grace and must finally be saved. It is an essential point in the theology of Augustine and Calvin.

Persia. Country of w. Asia, consisting for the most part of a desert table land, 3,000 to 4,000 ft. high, crowned by mountain ranges. Area ab. 636,000 sq. m., pop. ab. 9,000,000, one-fourth wandering tribes. The products are wheat, barley, rice, opium, tobacco, hides, wool, silk and carpets. The government is a despotic monarchy. See PERSIAN EMPIRE.

Persian Architecture. Architecture of ancient Persia took on monumental proportions and pretensions after the conquests of Cyrus and Cambyses in the 6th century B.C. The elements of which it was composed were imported from

Gateway of the Great Mosque of Ispahan.

Egypt and Assyria, and the monuments follow in their general arrangement the plans of these, while the details in some cases are with difficulty distinguished from those of the Assyrians. The principal remains of Persian architecture are at Persepolis and Susa. The Palace of Xerxes at the former place is the most important. This was built early in the 5th century B.C., and its dimensions were 300 by 350 ft., making it larger than any Egyptian, Greek, or Roman temple, and than any European cathedral except St. Peter's in Rome. It was built of masonry, as were the other principal Persian buildings, of which a striking feature was the extensive and massive flights of stairs that served as approaches. The interior columns were lofty and slender, and the forms of their capitals indicated wooden originals. Their interest is upon the whole rather archæological than artistic. In addition to the palace there are extant ruins of small temples and rock-cut tombs.

Persian Art. Best illustrated, for antiquity, by the remains at PERSEPOLIS and SUSA (q.v.). The earliest known ruins will not antedate 500 B.C. At this time the Persian art may be considered as a continuation of the earlier Chaldean and Assyrian with some national modifications. Egyptian influences are also very apparent, and are due to the political connection of Egypt with Persia. A later period of Persian art is known as Sassanian, from the dynasty founded 218. This art is a bastard classic, and represents influences which had been ascendant ever since the time of Alexander's conquest of the Persian empire. After the Mohammedan conquest, 7th century, such traits of the Arab style and art as had been elsewhere developed came into play here also; but the Sassanian or bastard Greek quality still survives in modern Persian designs, especially in repoussé metals. This quality does not, however, appear in the textiles, which are a most important and splendidly developed industrial art, handed down to modern times in direct continuation from a very early antiquity, when Babylonia was a famous neighboring center for textiles. The Arabian influence was most apparent in ceramics and in tiles. Here again the older Persian traditions in the art of glazing had great importance. The finest surviving instance of ancient tile decoration is that in the Louvre, from Susa.

Persian Berries. Dried unripe fruit of different varieties of *Rehamnus*, used as a dye in calico printing. They are also called French berries, Arigum, and Yellow berries. They dye yellow and green.

Persian Empire. This dates from Cyrus' revolt against and conquest of the Medes 558 B.C. Babylonia and Assyria were soon added. Asia Minor was conquered ab.547. Cambyses, 529–522, subjugated Egypt and n. Africa. For 200 years Persia was the chief power of the world. The expeditions against Greece under Darius 490, and Xerxes 480, resulted disastrously. Cyrus the younger died in an attempt to dethrone his brother Artaxerxes 401. The empire ended with Alexander's victory at Gaugamela 331. Persia was subjugated by Parthians 248 B.C. The Sassanian empire began 212; under Sapor II., 310–379, and Chosroes II., 590–628, it became a formidable power and threatened Constantinople. It was conquered by Saracens 641; by Seljuks in 12th century, by Mongols in 13th, by Tamerlane in 14th.

Persian Gulf. Land-locked sea between Persia and Arabia, connected with the Indian Ocean by the Strait and Sea of Ormuz. Length 650 m., width ab. 250.

Persian Inscriptions. See CUNEIFORM WRITING.

Persian Language. One of the oldest Aryan families of speech, with inscriptions dating back to 500 B.C., and a literature headed by the Avesta, the sacred books of the religion of Zarathustra. The Parsees of India spoke another dialect of the same. Modern Persian has many words borrowed from the Arabic. See IRANIAN LANGUAGE.

Persian Literature. It began ab. 5th century. Under the Mohammedan caliphs and princes it flourished at Khorasan and elsewhere. Abbas at Merv is said to have written the first poem 809. Arabic literature hindered the growth of the Persian, but a succession of writers handed down the literary spirit. Firdausi in 1011 completed the *Shâh Nameh*, which Sir William Jones compared to Homer. Around this "Book of the Kings" cluster a series of epics. Romantic fiction also was developed, Nizami of Ganjah (1141–1203) being its most brilliant exponent. Of the poets, Omar Kharyam was noted. Innumerable writers have composed works in various departments, and Persian has found many champions and devotees in India, at the courts of the Mogul sovereigns. The principal authors have been mentioned individually elsewhere.

Persian Powder. See PYRETHRUM.

Persians. The Tajiks are the descendants of the true ancient Persians who were Caucasians: they number ab. 1,000,000. They are mostly Mohammedan. The Turcomans, Kurds, and Arabs are nomadic, and number 2,000,000. There are 25,000 Nestorian Christians. A sharp distinction is recognized of classes: Priests, officials, soldiers, merchants, artisans, etc. Several Mohammedan sects have developed, among whom the Babist is highest. The descendant of pure Persian blood is generally honest and superior to others. Four wives are allowed the Mohammedans. In character the people are sensual, love money, dress, and ceremony. See PARSEES.

Persian Wheel. Horizontal wheel for raising water, having buckets attached to its arms, which fill themselves at

Persian Wheel.

one part of the revolution and when higher up are emptied. It is used for irrigation in Oriental countries, being turned by bullocks.

Persico, IGNAZIO, 1823–1895. Italian Capuchin 1846; missionary in Asia 1852, and in S. C. 1867; Bp. of Savannah 1870–73; Prefect of the Congregation of Indulgences; Cardinal 1893.

Persigny, JEAN GILBERT VICTOR FIALIN, 1808–1872. Bonapartist, accomplice of Louis Napoleon in the attempts at Strasburg and Boulogne; imprisoned 1840–48 for the latter; Deputy 1849; Minister of the Interior 1852–54 and 1860–63; Ambassador to London 1855–60; Duke 1863. *Mémoires*, 1896.

Persimmon. Trees of the genus *Diospyros*, of the ebony family (*Ebenaceæ*), bearing pulpy edible fruits, natives of America and Asia. The e. N. American species is *D. virginiana*, known as Date Plum.

Persistent. Leaves which remain on a plant during two seasons, or until the appearance of new ones, as in Evergreens; also portions of the perianth of flowers which remain after anthesis.

Persius, or AULUS PERSIUS FLACCUS, 34–62. Third in the series of Latin satirists, though more nearly allied to his successor, Juvenal, than to Horace. But 650 lines, in six satires, remain, which show his high views and earnest purposes. He affected obscurity of style, but lashed the vices of the times severely.

Person. 1. Totality of the human organism and the states connected with it, coextensive with body and mind. 2. Subject or ego, conceived as possibly other than the body. In common parlance, synonym for individual.

Personal Capital. PERSONAL WEALTH (q.v.) as capable of reproductive use.

Personal Equation. That constant which, in any series of time observations made by one person, must be added to each term of the series in order that their mean shall agree with the mean of a similar series of observations made by another. Used first and principally in astronomy, where, *e.g.*, if two observers are watching the same series of events, as the passing of a series of stars over the same line marked in the telescope, it is almost invariably found that one observer has a tendency to note the times of passage later than the other, and that with approximate constancy, so that to combine the observations of the two it is necessary to determine the mean of the differences in the one observer and add this mean to the observations of the second, in order to make those of the first what they would have been if observed by the second, or approximately so. The term has now come to be used to designate any constant tendency to error which is peculiar to the observer or worker, and for which allowance can be made. Most noticeable in transit observations, and, although gener-

ally small, may in extreme cases be as large as half a second. In case of the noted astronomers, Bessel and Struve, the relative personal equation, *i.e.*, the difference between the times of transit of the same star observed by each, was a whole second. See PSYCHOMETRY.

Personal Equation Machine. Various forms of apparatus have been devised for determining the personal equation. They generally consist of an artificial star passing across a field like that of the transit instrument, recording its time of transit automatically by electric appliances. The difference between this time and that noted by the observer is his personal equation. Any constant error in the automatic record may be eliminated by causing the star to move back and forth across the field.

Personality. Distinguishing individuality of a person. Its most distinctive element is the conscious realization of identity. All one's mental life goes to make up his personality, the traces of past experiences associated and remembered, his interests, etc. So long as this consciousness of personal identity remains undisturbed, the personality is normal; but it has been shown by many cases of mental disorder that this consciousness may be pathologically deranged, and we have as a result the so-called alterations of personality, or dual or multiple personality. These conditions are best seen in certain hypnotized hysterics, in whom it is found that certain symptoms and sets of ideas exist for but one consciousness, if we may use that term, while the subject may pass into another condition or state, where he has quite another world of ideas and experiences, those of this second state being non-existent for the first; and similarly if there be a third personality, it will include the experiences of the first and second, plus a series of its own, and the first and second states will know nothing of the third. In non-hypnotic cases the second personality may appear, last for a time, and then give way to the original or normal condition, though this may be of inferior physical and intellectual type to the abnormal state. The physical basis of these disturbances of personality is not understood. Alternating action of the two hemispheres of the brain has been suggested, but will not satisfy the facts of triple and quadruple personalities, and no other satisfactory theory is at hand.

Personal Property. That which is not of a freehold nature nor descendible to heirs at law.

Personal Risks, IN ECONOMICS. Business risks which a man working with borrowed capital has to bear, and pay for in the form of a higher rate of interest, in addition to the ordinary trade risks borne also by the man working with his own capital.

Personal Wealth. All those energies, faculties, and habits which directly contribute to making a person industrially efficient, together with his business connections and associations of every kind.

Personate. Corollas of certain plants of the natural family *Scrophulariaceæ* and some others, which are nearly closed by the palate of the lower lip.

Person, RIGHTS OF THE. Rights of safety, security and free agency, requisite for the peace of society and the free action of individuals; in all civilized countries guaranteed by the laws.

Persoon, CHRISTIAN HENDRIK, 1755–1837. Dutch botanist. *Synopsis methodica fungorum*, 1801; *Synopsis plantarum*, 1805; *Traité sur les champignons comestibles*, 1818; *Mycologia Europæa*, 1822–28.

Perspiration. The secretion of the perspiratory glands, a clear, watery liquid having an acid reaction and a salty taste. It contains 0.5 to 1.25 per cent non-volatile constituents, consisting mostly of sodium chloride, with lactates, butyrates, and acetates of ammonium and sodium, and traces of calcium phosphate and ferric oxide. It removes waste material from the system, and, by the evaporation of the water, cools the body, maintaining the normal temperature. The amount of water exhaled from the skin of an adult in 24 hours is ab. 2 lbs., twice the amount passing off from the lungs; the maximum is 3.4 lbs., the minimum 0.7 lbs.

Perspiratory Glands. Apparatus to secrete the PERSPIRATION (q.v.). A minute tube coiled into a ball in the deep part of the skin and continued in the perspiratory duct to the surface of the skin.

Persulphocyanogen. $C_3N_3S_3H$. Yellow powder, formed by oxidizing potassium sulphocyanide with nitric acid or chlorine; insoluble in water. Used as a yellow pigment in calico printing.

Persulphuric Acid. Normal sulphuric acid, $S(OH)_6$ or $H_2SO_4+2H_2O$; formed by the action of water on sulphuric acid.

Perth. Town of Scotland, on the Tay, 22 m. w. of Dundee. Here James I. was murdered 1437: near it Montrose

The Church of St. John the Baptist, Perth.

won a victory 1644. P. is noted for its bleach-fields, 4 m. outside of the city. Pop., 1891, 30,525.

Perth. Capital of Western Australia; on the Swan, 12 m. from the w. coast; incorporated 1856. Pop., 1892, 10,040.

Perth Amboy. City of Middlesex co., N. J., on Raritan Bay; chartered 1784. It has terra-cotta works and other industries. Pop., 1890, 9,512.

Perthes, BOUCHER DE. See BOUCHER DE CRÉVECŒUR DE PERTHES, JACQUES.

Perthes, FRIEDRICH CHRISTOPH, 1772–1843. Publisher at Hamburg 1796, and Gotha from 1821.—His uncle, JOHANN GEORG JUSTUS, 1749–1816, founded another important publishing house at Gotha.

Perth, FIVE ARTICLES OF. In the Episcopal interest; urged by James VI. 1618; condemned by General Assembly 1638.

Perticari, GIULIO, COUNT, 1779–1822. Italian critic.

Pertinax, PUBLIUS HELVIUS, 126–193. Roman general of high character; Emperor Dec. 192; murdered by Prætorians after a reign of 87 days.

Perturbations OF PLANETS AND COMETS. Disturbances in their motions caused by the attraction of bodies other than the sun or central body, about which they revolve.

Pertz, GEORG HEINRICH, 1795–1876. Keeper of archives at Hanover from 1823; biographer of Stein, 1849–54. *Monumenta Germaniæ Historica.*

Peru. Country of w. S. America. The surface consists of a narrow desert strip along the Pacific, a high tableland, 7,000 to 12,000 ft. above sea, inclosed between two ranges of the Andes, and a low, densely forested country on the east, upon the headwaters of the Amazon. The second of these areas contains most of the settled portion. Its area is ab. 400,000 sq. m. Its mineral wealth is very great. The government is a republic. The capital is Lima. For centuries before the Spanish conquest P. was occupied by the Incas, who had reached a stage in many respects in advance of its Spanish conquerors. They had an elaborate religious ritual, a well-developed system of colonization and land tenure, postal facilities, a written history, and a drama. Their architecture was of an elaborate order: their skill in stone-cutting and joining is said to be unsurpassed. The Spanish conqueror, Pizarro, came 1527 in search of gold. After obtaining the title of Governor he returned 1529. Taking advantage of a civil conflict between two sons of the Inca, who had just died, he, by allying himself with one of them, established himself in the empire, marched to the capital and proclaimed the sovereignty of Spain. P. thus became one of the four principal Spanish dependencies in the New World. In the attempt of the S. American countries to throw off the Spanish yoke P. was the last to join. She declared her independence 1821. Bolivar was Dictator till 1827, when Bolivia was detached from P. P. has been involved in several civil wars, and twice, 1837 and 1879, in wars with Chili, the last of which proved disastrous to the political and commercial prosperity

of P. Her navy was destroyed, her capital pillaged, and her territory much curtailed. Its products are sugar, wool, cotton, cinchona bark, silver and copper. The guano deposits of its islands are exhausted. Pop. ab. 3,000,000.

Perugia. Ancient Etruscan city, on the Tiber, 127 m. n. of Rome; taken by Romans 310 B.C., and by Goths 549. Its university, founded 1307, has 21 instructors and ab. 180 students. The city has many fine buildings, pictures and antiquities; 11 m. w. is Lake Trasimeno (now P.) where Hannibal overthrew a Roman army 217 B.C. Pop., 1893, 54,500.

Perugino (PIETRO VANNUCCI), 1446–1524. Italian painter of the Umbrian school. Long reputed the teacher of Raphael. Although Giovanni Morelli has vindicated the claims of Timoteo della Vite to this distinction, the affinities between the early art of Raphael and that of P. are still obvious. His works

Decoration of the Cambio, Perugia, by Perugino.

are mainly altar-pieces; an important fresco is in the Sistine Chapel at Rome. His color is warm, his composition somewhat formal, as was common in his earlier time.

Perules. In Botany, bud-scales.

Peruvian Balsam. Fragrant oleo-resin obtained from *Myroxylum pereirœ* of San Salvador; used in medicine in respiratory affections and as a stimulating ointment. It is also used in the manufacture of perfumery and soaps.

Peruvian Bark. Bark of numerous species of the genus CINCHONA (q.v.), natural family *Rubiaceæ*, natives of the Andes; extensively cultivated, yielding quinine, cinchonine, and a variety of other alkaloids. *C. calisaya* and *C. succirubra* contains 2–5 per cent of quinine; *C. ledgeriana* has 11 per cent. It was made known in Europe, 1639, by the Countess of Cinchon, wife of a gov. of Peru; used in England 1658; called also Jesuits' Bark, as the Jesuits introduced it in Italy. See QUININE.

Peruvians. For ancient Peruvians, see INCAS. Their modern descendants are the QUICHUA (q. v.). The Aymara number ab. 750,000; two-thirds live in Bolivia. They inhabit the mountain fastnesses; it is supposed that their ancestors were civilized earlier than the Incas, the ruins in Lake Titicaca being their work. They are more closely related to the Quichua than to the other mountain tribes. Among the latter is a group of tribes known as the Jivaro, among whom the couvade is practiced, and cannibalism is reported to exist. The Campo is the largest tribe, but, like the others, are degenerated from ancient condition. They bury their dead under water. The Mojo were largely Christianized, but have relapsed since the Jesuits were driven out. The tribes on the east slope of the Andes belong to the TUPI-GUARANI (q.v.) group of Indians.

Peruzzi, BALDASSARE, 1481–1536. Italian architect and painter of the great period. He designed the Farnesian Villa and the Palace Massimi at Rome, and had charge of the work on St. Peter's 1520–27.

Peruzzi, UBALDINO, 1822–1891. Deputy and Syndic of Florence; Cabinet Minister 1861 and 1864.

Pervigilium Veneris. Anonymous Latin poem in honor of Venus.

Pes. Human foot, or hind foot of lower animals.

Pesado, JOSÉ JOAQUIN DE, 1801–1861. Mexican poet; Minister of State 1838 and 1846; prof. Univ. Mexico 1854.

Pescadores Islands. Group of 21 islands besides uninhabited rocks in Formosa Channel, of basaltic origin, 109 m. s.e. of Amoy; dangerous to navigators; ceded by China to Japan 1895.

Peschiera. Fortified town of Italy, at the foot of Lake Garda, 14 m. w. of Verona. Before 1860 it formed the n.w. angle of the QUADRILATERAL (q.v.). Pop. 2,000.

Pesellino, FRANCESCO, 1422–1457. Florentine painter.

Peshawar. City of the Punjab, British India, near the river Kabul and the Khyber Pass, among high mountains; important military station. Pop., 1891, 84,181.

Peshito. Syriac version of O. T. and most of N. T.; dating from ab. 200.

Pessard, HECTOR, 1836–1895. French journalist, vehement against Napoleon III.

Pessimism. Theory that the nature and tendencies of things are only evil; opposed to Optimism. Its most eminent expounders are Schopenhauer and Hartmann. In practical ethics, tendency to look on the dark side of life, exaggerating its evils and neglecting its goods.

Pessinus. City of w. Galatia, on the Sangarius; noted for a temple and statue of Cybele, whose worship for a time made the town rich and prominent.

Pessulus. Vertical partition between the two bronchial openings in the syrinx.

Pestalozzi, JOHANN HEINRICH, 1745–1827. Swiss teacher and theorizer, head of a school at Yverdun 1805–25; an impractical philanthropist, whose ideas have revolutionized modern educational methods. *Hours of a Hermit*, 1780; *Leonard and Gertrude*, 4 vols., 1781; *How Gertrude Teaches*, 1801.

Pesth. Capital of Hungary, situated on the left bank of the Danube, opposite Buda. The site is level, and the city is

Buda-Pesth, from the Gellerthegy.

regularly laid out, with many fine buildings. It has large manufactures and trade. Pop., with BUDA (q.v.), with which it was united 1873, 452,907 in 1889.

Petal. Division of the corolla of a flower.

Petalite. $LiAlSi_4O_{10}$. Lithium aluminium silicate; mineral in which lithium was first discovered.

Petalode. Organs resembling petals.

Petalody. Metamorphosis of other floral organs into petals.

Petaloid. Resembling petals: colored upper leaves or bracts of certain plants, and sepals or stamens of others, when these are so modified as to simulate petals in appearance, as in Poinsettia and the Dogwood.

Petaloid Ambulacra (CIRCUMSCRIPT ZONES). Ambulacral lunules, when present near one pole only, as in irregular sea-urchins. In a typical or regular sea-urchin the Ambulacra extend from pole to pole.

Petalosticha. See SPATANGOIDEA.

Petard. Case of gun-metal, often bell-shaped, containing 10 to 20 lbs. of gunpowder, used for destroying drawbridges, gates, etc., as by Henry IV. at siege of Cahors, 1580; now obsolete, its place being taken by powder-bags, dynamite cartridges, etc.

Petau, DENIS. See PETAVIUS.

Petavius, DIONYSIUS (DENIS PETAU), 1583–1652. Jesuit theologian, prof. Paris 1621–46; voluminous writer. *De Doctrina Temporum*, 1627; *Tabulæ Chronologicæ*, 1628; *De Theologicis Dogmatibus*, 5 vols., 1644–50. He edited Synesius and Epiphanius, and wrote against Grotius.

Petchora. River of n. Russia, heading in the Ural Mts., and flowing into the Arctic Ocean. Length 1120 m., drainage area 117,996 sq. m.

Pet Cocks. Small plug cocks, opening into the air from some vessel in which there is a different pressure from that outside; originally cocks put upon the connection to the air-chamber of the feed pump on a locomotive, so that the hot water might be expelled through them which leaked into it, and by its vaporization prevented the barrel from filling from the suction. These cocks are still used on locomotives which pump their feed. The use has been extended so that the term now covers any small cock which can be opened to blow out air or water to waste into the atmosphere.

Petechiæ. Small punctate extravasations of blood under the epidermis, resulting from various diseases; *e.g.*, scurvy.

Peter, ST. One of the Apostles; Galilean fisherman. At first usually the spokesman of the Twelve; less prominent after the rise of James among the Jewish and Paul among the Gentile Christians. Supposed to have been crucified at Rome ab. 67. His first Epistle, 21st N. T. book, was written, probably, after 60, from Babylon (possibly Rome), to the churches of Asia Minor. The second epistle is less certainly authentic. His Gospel and Revelation are apocryphal: fragments remain.

Peter I., "THE GREAT," 1672–1725. Emperor of Russia 1682; sole ruler from 1689. He studied navigation and shipbuilding, living in Holland and England 1697–98. His reign was marked by extensive reforms, some cruelties, the founding of St. Petersburg 1703, and wars with Sweden 1700–21, and Persia 1722, which added several provinces to his dominions. A war with Turkey, 1711, was disastrous. Of his grandsons, PETER II., 1715–1730, was Czar from 1727, and PETER III., 1728–1762, was murdered after reigning six months.

Peter the Great's House at Zaandam, Holland (on the left).

Peterborough, CHARLES MORDAUNT, EARL OF, ab. 1658–1735. Lord of the Treasury and Earl 1689–90; imprisoned January–April 1697; commander in Spain 1705–7, where he won great fame by a brilliant campaign, and by his capture and defense of Barcelona.

Peter de Vincis, d. 1250. Chancellor of Frederic II.; author of a code of laws proclaimed 1213.

Peterloo Massacre. In St. Peter's Field, Manchester, Aug. 16, 1819, a crowd of laborers assembled to petition Parliament for a redress of grievances. They were dispersed by cavalry; some were killed and many injured. This was the starting point of modern reform agitation.

Petermann, AUGUST, 1822–1878. German geographer; in Gt. Britain 1845–54; ed. *Mittheilungen* from 1854.

Peter Martyr, d. 1252. Italian Dominican, killed by a mob; patron and model of the Inquisition.

Peter Martyr. See VERMIGLI.

Peter Martyr Anglerius, 1459–1525. Spanish priest and writer. *De Orbe Novo*, 1516.

Peter Out. To grow gradually thinner and thinner, and finally to disappear altogether, especially in relation to mineral veins.

Peters, CHRISTIAN AUGUST FRIEDRICH, 1806–1880. Assistant at Hamburg Observatory 1834–39; connected with that at Pulkowa 1839–49; Prof. of Astronomy at Königsberg 1849; director of observatory at Altona 1854, and from 1872 at Kiel; ed. *Astronomische Nachrichten*.

Peters, CHRISTIAN HENRY FREDRICK, 1813–1890. Born in Sleswick; graduated at Berlin. Prof. Hamilton Coll. and Director of Litchfield Observatory, Clinton, N. Y., from 1858. Here he constructed a series of excellent maps of zodiacal stars, observed many thousands of sun spots, and discovered 52 asteroids, besides many comets and variable stars.

Peters, HUGH, 1599–1660. Minister at Salem, Mass., 1636–41; Chaplain in Parliament's army; executed as a regicide.

Peters, RICHARD, LL.D., 1744–1828. Sec. to Board of War 1776–81; Delegate to Congress from Pa. 1782–83; U. S. District Judge from 1792. *Admiralty Decisions*, 1807.—His son, RICHARD, 1780–1848, pub. *Condensed Reports of U. S.*, 1830–34; *U. S. Digest*, 1838–39, and other reports.

Peters, SAMUEL, 1735–1826. Romancing historian of Conn. and its "blue laws." *General History of Conn.*, 1781; *Hist. of Hugh Peters*, 1807. See BLUE LAWS.

Peter's, ST. At Rome; largest church in the world; 613 ft. long, 450 ft. wide in the transept, with a façade 368 ft. long and 145 ft. high. The dome is 195½ ft. in diameter, and rises 435 ft. from the pavement. It stands on the site of a basilica built by Constantine on the spot where, according to tradition, St. Peter suffered martyrdom. The replacing of the old basilica was begun 1450; the dome, designed by Michelangelo, was finished 1590; the completed church was consecrated 1626.

St. Peter's Church, with Colonnade built by Bernini 1667.

Petersburg. City of Dinwiddie co., Va., on the Appomattox River. It is an important railroad center, and has considerable manufactures of tobacco and cotton goods. It was invested by Union forces June 15, 1864, and evacuated by Confederates April 3, 1865, after many assaults. A mine was exploded July 30, 1864. Pop., 1890, 22,680.

Petersen, JOHANN WILHELM, 1649–1727. Supt. at Lübeck 1677 and Lüneberg 1688; deposed 1692 for indorsing the revelations of an alleged prophetess; voluminous theological writer.

Petersen, NIELS MATTHIAS, 1791–1862. Prof. Copenhagen 1845; philological and antiquarian writer. *Hist. Danish Literature*, 5 vols., 1853–64.

Peter's Pence. Contributions to the papal treasury, exacted in England ab.725–1534; of late, free-will offerings from various countries.

Peter the Hermit, ab.1050–1115. Preacher and leader of 1st crusade 1095.

Peter the Venerable, 1094–1156. Abbot of Cluny 1122. He wrote against Jews, Saracens, and heretics.

Peterwardein. Town of Hungary, on the Danube, 44 m. n.w. of Belgrade; scene of a defeat of 180,000 Turks, Aug. 10, 1716, by Prince Eugene.

Petigru, JAMES LEWIS, 1789–1863. Atty.-gen. of S. C. 1822–30; leader of Charleston bar; Unionist, opposing nullification 1830 and secession 1860; codifier of S. C. laws.

Petiolar. Resembling or pertaining to the petiole.

Petiole. Leaf-stalk.

Petiolule. Petiole of a leaflet in compound leaves.

Petion, ALEXANDRE, 1770–1818. Pres. Hayti from 1807; at war with Christophe; a wise and efficient ruler. His small coinage is abundant.

Petion de Villeneuve, JEROME, 1753–1793. French Deputy 1789; Mayor of Paris 1791; first pres. Convention; Girondist, proscribed for opposing Robespierre.

Petis de la Croix, FRANÇOIS, 1653–1713. French Arabic scholar and court interpreter, who translated many works from the Turkish, Persian, and other languages.

Petit de Julleville, LOUIS, b. 1841. Prof. Dijon and Paris; historian of the drama. *Les Mysterès*, 1880; *Théâtre en France*, 1889.

Petite Culture. Custom of cultivating small portions of land with a relatively large application of labor and capital, especially under a peasant proprietary.

Petition of Right. Concerning divers rights and liberties, being ch. I. of 3 Car. 1; statute of great constitutional importance in Britain. Also, common law proceeding for the recovery of one's private property from the Crown's possession.

Petitio Principii. Argument which proves a point by assuming it.

Petit Mal. Form of epileptic seizure not marked by the violent convulsion (Grand mal) so frequently associated with the disease; the form of the attack is protean.

Petit-Thouars. See DUPETIT THOUARS.

Peto, SIR SAMUEL MORTON, 1809–1889. English engineer; Baronet 1855; constructor of the Grand Trunk R.R. in Canada; M.P. 1847–54, 1859–68. His firm failed heavily 1868. *Taxation*, 1863.

Petöfi, SANDOR, 1823–1849. Hungarian poet, killed in the revolution. *Works*, 1874.

Petra. Ancient capital of Edom, afterward of the Nabatæans; in a mountain basin, the meeting-place of various caravan routes; in splendor long comparable to Palmyra or Baalbec. Its ruins are almost all built against rocky masses, or hewn into

El Khusna, or Treasury of Pharaoh.

them. Its rock tombs and cave-dwellings, with ornamental façades of late Greco-Roman style, are now beset by Bedouins, and accessible only under exceptional circumstances or with a strong military escort.

Petrarch, FRANCESCO, 1304–1374. Italian poet, celebrated for the exquisite music of his verse in *Sonnets* and *Canzoniere*. He marks the transition from mediæval allegorical poetry to the modern school, and has been called "the first true artist of Italian literature." He received the laurel crown in Rome 1341, became Archdeacon of Parma, and was canon of several cathedrals. He vainly sought to secure the removal of the Papal court from Avignon to Rome. His life was tinged by his passion for Laura, in whose praise he wrote 350 sonnets and canzoni.

Petrels (PROCELLARIIDÆ). Seventy species exist. They have tubular nostrils, long pointed wings, three webbed toes, turned forward, and a small hind toe. They fly close to the water, and rarely land. Wilson's Petrel, the most common, is black above, dusky below, the upper tail coverts white, and tail not forked. Length ab. 7 in. See STORMY PETREL.

Petri, LAURENTIUS, 1499–1573. First Lutheran Abp. of Upsala 1531.—His brother, OLAUS, 1497–1552, was an active reformer.

Petrie, GEORGE, LL.D., 1790–1866. Irish painter and antiquarian, pensioned 1849. *Round Towers*, 1830.

Petrie, WILLIAM M. FLINDERS, b. 1853. English Egyptologist and excavator. His *Inductive Metrology*, 1877, *Stonehenge*, 1880, and *Pyramids and Temples of Gizeh*, 1883, were pub. before his connection with the Egypt Exploration Fund Society. For this Society he pub. Memoirs on his work at Tanis, Nebesheh, Daphnæ, and Naukratis 1883–87. He has been subsequently engaged in independent researches. In 1886–87 appeared *Season in Egypt* and *Racial Types from the Egyptian Monuments;* later, *Historical Scarabs; Hawara and Arsinoe; Kahun, Gurob, and Hawara; Illahun, Kahun, and Gurob; Tell el Hesy* (Syria); *Medum; Tell el Amarna; Koptos.* Each of these represents a season's work. *Hist. Egypt*, 1896. At Koptos P. discovered the first remains of prehistoric Egypt. His great reputation dates from the excavations at Naukratis, which first revealed the whole influence of Egypt on Greek art. In 1892 he became Prof. of Egyptology at University College, London.

Petrifaction. Fossil that retains the perfect form and structure of the organism, but with the original substance replaced by other mineral matter; also, process by which such a change is produced.

Petrified Wood. Wood whose organic matter has been replaced by mineral substances, usually opal or quartz, but whose vegetable structure and origin is more or less distinctly recognizable.

Petrography. Science that describes the rock masses of which the crust of the earth consists, with the view of eliciting the course and the causes of their development. It has respect more to their occurrence in large masses and to their mutual geological relations than to details of texture and mineral composition.

Petrolatum. See VASELINE.

Petroleum. Oil was obtained from the distillation of coal and shale in Great Britain as early as 1694, and Selligue in France made 15,000 bbls. of shale oil in 1838–43. In Glasgow from 1850 boghead coal was used. In U. S., Gesner distilled bituminous coal from Prince Edward's I. 1846, and subsequently bituminous coal from Ky. and asphaltum from W. Va. and Nova Scotia were used. In 1860 the product in U. S. reached 200,000 bbls., chiefly from the boghead coal of Scotland. The oil was called kerosene, and was used for illumination. The development of the petroleum wells of Pa. put an end to this industry in 1860.

Petroleum has been obtained in the East from the time of the building of Babylon, and has been found in various parts of the world. The great development began in 1858, when oil was obtained by an artesian well, 71 ft. deep, on Oil Creek, Venango co., Pa. It is now derived chiefly from U. S., in Pa., W. Va., N.Y., Ohio, Ind. and Cal.; in Canada, in Baku, Russia, on the Caspian Sea, and in Austria. The oil is found at various depths, from 400 to 4,500 ft., by drilling wells through the overlying strata, and when reached frequently rushes up with great force, soon diminishing, and finally the flow becomes small. The pebble sand of the Allegany district yields 1,000 bbls. per acre for each foot of depth. The cost of an equipped well is from $5,000 to $15,000. The yield is maintained by constant drilling and the discovery of new productive fields, which will doubtless continue for some years. Ultimately the supply must fail, and the world must fall back on the distillation of Black Shale.

Wells Drilling and Pumping.

The oil is transported from the wells to the refineries in wrought-iron pipes, 6 in. diameter, with pumping stations ab. 40 m. apart, and storage tanks holding 35,000 bbls. each at convenient distances. These lines extend to Chicago and Baltimore and intermediate markets.

Petroleum is the product of slow and ill-understood changes in the organic matter impregnating the beds of black shale and limestone of various geological ages, from the Paleozoic to the Tertiary, the older rocks being the chief repositories in the U. S., and the younger in the Baku fields. It is an oily liquid, yellow, greenish, brown and black in color, sp. gr. from 50° B.

in Pa. to 23° B. in Java. It is a mixture of hydrocarbons, paraffins of the formula C_nH_{2n+2} and olefines C_nH_{2n}, the former predominating in the American product and the latter in that from Russia. In U. S. the crude oil is distilled by direct heat, in cylindrical stills, holding 600 barrels, the distillate being condensed in tubes, placed in tanks of water, yielding naphtha and illuminating oils; there remains in the stills coke and tar, the former being used as fuel and the latter being distilled in smaller stills, with introduction of steam, for production of paraffin oil. The coke remaining in the still is used for electric light carbons. The crude paraffin oil is treated successively with sulphuric acid, water and caustic soda, which removes tarry matter, then cooled by a refrigerating apparatus, and the paraffin, which is thus crystallized, is filtered out and refined. The oil is used for lubrication and the paraffin for candles. The illuminating oils are refined by sulphuric acid and caustic soda. The naphthas are distilled with steam yielding gasoline and naphthas of different gravities. The sulphurous Ohio oil is distilled over copper oxide and other metallic oxides which removes the sulphur. The yield varies, Appalachian oils giving naphtha 10–11 per cent, illuminating oil 75–78, paraffin oil 2–6, residuum 3–4, and water and loss 5–8. Russian oil yields about 35 per cent illuminating oil.

The following products have been obtained from petroleum, with bpt. and sp. gr. and use, as given: Cymogen, 32° F., 110° B., ice-machines; Rhigolene, 67° F., 100° B., local refrigerant; Petroleum-ether, 104° F.–158° F., 80° B.–85° B., solvent for caoutchouc and fatty oils, and for carbureting air in gas-machines; Gasoline, 158° F.–194° F., 75° B.–85° B., extracting seed-oils, gas-machines, lamps, and stoves; Naphtha, 176° F.–248° F., 62° B.–76° B., solvent for resins in varnish making, in making oilcloth, and in stoves; Ligroin, 176° F.–248° F., 62° B.–67° B., solvent in pharmacy, and in sponge-lamps; Benzene, 248° F.–302° F., 57° B.–62° B., turpentine substitute in oil-paints; Water-white burning oil, fire test 150° F., 48° B.; Export burning oil, fire test 100° F.–110° F., 45° B.; Paraffin oil, fire test 405° F., 23° B., lubricating machinery; Paraffin, mpt. 110° F.–140° F., candles, insulating, chewing-gum; vaseline, roofing pitch, axle grease, coke, electric carbons.

Production of petroleum in 1894, in metric tons, was: U. S. 6,158,119. Russia 4,873,000, Austria 131,930, Canada 116,000, Germany 17,232, Italy 2,853.

Product U. S., 1895, bbls. 42 gals., was: Pa. 18,231,442, N. Y. and W. Va. 12,176,933, O. 16,109,101, Ind. 2,306,530, Col. 845,000, Cal. 975,000, Ky. 1,000, Wy. 2,019, total 50,652,025.

The aggregate yield of petroleum in the U. S. 1859–95 was more than 700,000,000 barrels of 42 gallons each; the yield of Russia in the same period is estimated at ab. one-eighth of that amount.

Petroleuses. Female incendiaries of the Parisian Commune 1871. Many were shot for burning public buildings.

Petrology. Division of Geology which treats of the mechanical constitution and composition of rock-masses.

Petromyzon. See LAMPREYS.

Petronel. Clumsy pistol of ancient times.

Petronius Arbiter, 1st cent. Courtier of Nero, supposed author of *Cœna Trimalchionis*, portion of a satire depicting the fashionable life of the times. It is partly in prose and partly in verse.

Pettee, WILLIAM HENRY, b. 1838. Mining engineer and mineralogist. Assistant on California geological survey 1870–71; prof. Univ. of Mich. 1875. He has contributed many scientific papers to the various societies of which he is a member. *Contributions to Barometric Hypsometry*, 1874.

Pettenkofen, AUGUST VON, 1821–1889. Austrian painter, chiefly of military scenes.

Pettenkofer, MAX, b. 1818. Prof. of Chemistry at Munich 1847; author of many discoveries and additions to scientific and sanitary knowledge, especially as to cholera and hygiene.

Pettie, JOHN, b. 1839. Scottish painter, R. A. 1873.

Pettis, GEORGE WILLIAM, ab. 1822–1892. American authority on whist.

Petty, SIR WILLIAM, F.R.S., 1623–1687. Prof. of Anatomy at Oxford 1651; knighted after 1660; noted chiefly as an economist. *Political Anatomy of Ireland*, 1691; *Taxes and Contributions*, 1667; *Political Arithmetic*, 1676.

Peutingerian Table. Roman road-chart, now in Imperial library at Vienna; named from Konrad Peutinger (1465–1547) of Augsburg, in whose library it was found; probably a 13th century copy of a 3d century document. It gives distances, but is a diagram rather than a map.

Pew. Inclosed seat in a church. In England the property in a pew is a mere easement; but in the U. S. a pew may be

Pews, Fressingfield Church, Suffolk, Eng.

owned by an individual and descend to his heirs as real estate. In some States property in pews is declared to be personalty.

Pewter. Alloy of lead and tin, in varying proportions. Copper, antimony, bismuth, and other metals are sometimes added. Three of tin to two of lead is the hardest and toughest alloy.

Peyer's Glands. One of the varieties of glands of the small intestines, found always in patches (agminated glands). These glands are the local seat of the disease in typhoid fever, when they are inflamed and ulcerated, and sometimes the intestine is perforated by the ulceration, a very serious complication to the disease.

Peyron, VITTORIO AMADEO, 1785–1870. Prof. Turin; author of a Coptic lexicon and grammar. He pub. sundry Greek texts, and tr. Thucydides.

Peyronnet, CHARLES IGNACE, COMTE DE, 1778–1854. French Minister of Justice 1821–28, and of the Interior 1830; violent reactionist and tool of tyranny, ennobled 1822; imprisoned 1830–36.

Peyton, BALIE, 1803–1878. M.C. from Tenn. 1833–37; U. S. Minister to Chili 1849–53; Unionist.—His cousin, EPHRAIM GEOFFREY, 1802–1876, was Chief-justice of Miss. 1870–75.

Pezet, JUAN ANTONIO, b. 1806. Pres. of Peru 1863–65.

Pezizoid. Structures resembling *Fungi* of the genus *Peziza*.

Pezuela, JACOPO DE LA, 1811–1882. Historian of Cuba 1863–68.

Pezuela, JOAQUIN DE LA, 1761–1830. Viceroy of Peru 1817–21.—His son, JUAN MANUEL, b. 1810, Gov. of Cuba 1853–54, tr. Dante, Tasso, Ariosto, and Camoens.

Pfaffian. In Higher Algebra, function derived from zero-axial skew-determinants, and closely akin to determinants in its properties. Its form is triangular: its symbols are $^1/$ ¦ and ff.

Pfaff, JOHANN FRIEDRICH, 1765–1825. Prof. Helmstadt and Halle. *Disquisitiones Analyticæ*, 1797; *Differential Equations*, 1814.

Pfaffers. Village in Switzerland, $1\frac{1}{2}$ m. s. of Ragatz. It is noted for the hot springs discovered ab. 1050, and for its Benedictine convent, founded 713.

Pfalz. See PALATINATE.

Pfeiffer, IDA (REYER), 1797–1858. Austrian traveler from 1842. The books describing her journeys were widely read.

Pfenning. German copper coin (originally silver), worth $\frac{1}{4}$ Kreuzer or $\frac{1}{100}$ Mark.

Pfleiderer, OTTO, D.D., b. 1839. Prof. Jena 1870, Berlin 1875. *Paulinism*, 1873, tr. 1877; *Philosophy of Religion*, 1878, tr. 1886–88; *Theology since Kant*, 1890.—His brother, EDMUND, b. 1842, prof. Kiel 1873 and Tübingen 1878, has pub. much in philosophy.

Pflüger, EDUARD FRIEDRICH WILHELM, b. 1829. Prof. Bonn 1859; writer on physiology.

Phæacians. People described in the Odyssey as living on an island in the farthest west.

Phædra. Wife of Theseus, to whose son Hippolytus she bore the part of Potiphar's wife to Joseph; heroine of several tragedies.

Phædrus, 1st cent. Latin writer of fables, partly from Æsop; 93 survive, in five books.

Phænogamia. Division of the vegetable kingdom, including all the flowering plants, those which produce seed containing an embryo. See SPERMATOPHYTA and ANTHOPHYTA.

Phænogamous. Relating to phænogamia.

Phænological. Periodic phenomena of plants and animals.

Phænology. Study of the connection between climate or weather and the growth of plants; term first used by Von Oettingen.

Phæodaria. Order of siliceous *Radiolaria*, with the membrane of the central capsule double, and having a chief polar aperture and accessory perforated areas. There is much pigment around the central capsule, and only one nucleus. The skeleton consists of hollow tubes or needles. These are outside the central capsule in the *Phæocystida*. A fenestrated shell with one or more large openings is present in the *Phæogromida*. There is a basket work of hollow spicules in the *Phæosphærida*, and valves like those of a mussel, but fenestrated and covered with spines in the *Phæoconchida*.

Phæophyceæ. Sub-class of *Algæ*, including all the dark-green, olive-green or brown species; also called *Melanospermæ*, *Melanosporeæ*, *Melanophyceæ*, and *Phæospermeæ*.

Phæophyll. Pigment contained in red and brown *Algæ*.

Phæosporeæ. See PHÆOPHYCEÆ.

Phaëthon. Son of Apollo, who got leave to drive the chariot of the sun, but was unable to check the horses, which came near setting the earth on fire.

Phagocytes (MESAMŒBOIDS). Sort of white blood corpuscle which feeds on bacteria that develop in the blood or the tissues of an animal.

Phalangers. Australian marsupials ranging from fox to squirrel, or even mouse, in appearance and size, but having long prehensile tails. Some are insectivorous, some herbivorous. Six incisors are present in the upper jaw, and two below. Cook's Phalanger has both index finger and thumb opposable to the other fingers. Some of the genera have a parachute similar in structure and use to that of flying squirrels.

Phalanger (*Phalanger maculatus*).

Phalangida (DADDY-LONG-LEGS). Arachnids with four pairs of long slender legs and a segmented abdomen, joined by its whole breadth to the cephalothorax. They breathe by tracheæ and have no spinning glands.

Phalanstery. Unit of social organization according to the socialistic plans of Fourier. It should be a district of country with a collection of buildings for habitations and amusement, and for all kinds of agricultural and manufacturing uses, occupied in joint possession by some 300 or 400 families. It would be self-governing, and would hold relations of alliance and exchanges with other similar groups.

Phalanx. Greek body of infantry armed with long spears and shields. The Macedonian was at first 8, afterward 12 to 16 ranks deep. The Romans used this formation before Camillus (d. 365 B.C.), and returned to it in fighting with barbarians in 2d century A.D.

Phalanx. In Botany, group of stamens, more or less united at their bases.

Phalaris. Tyrant of Agrigentum, Sicily, ab.570–564 B.C.; said to have caused the objects of his hatred to be burned alive in a brazen bull, the inventor of which was the first to suffer. The *Epistles*, pub. 1498, are not his.

Phalloideæ. Family of *Fungi*, of the order *Gasteromycetes*, comprising the so-called stink-horns and their allies. They have an extremely offensive odor.

Phallus. Sign of generation, whose worship or observance had place in the systems of the Greeks and other ancient (as of some modern) races. In Italy it survives as a charm against the evil eye.

Phanarists. See FANARISTS.

Phanerocarpæ. See SCYPHOMEDUSÆ.

Phanero-codonic Gonophore. One which possesses a fully developed umbrella, as in all gonophores that are to be set free.

Phanerogamia. Flowering plants. See ANTHOPHYTA and SPERMATOPHYTA.

Phaneroglossa (FROGS and TOADS). Sub-order of *Anura*, comprising two groups: *Proteroglossa*, with the tongue free in front, as in *Rhinophrynus*, a Mexican Toad; and *Opisthoglossa*, with the tongue fixed in front and free behind, as in ordinary Frogs and Toads. This group is sub-divided into the *Oxydactylia* and *Discodactylia*. See also ARCIFERA and FIRMISTERNIA.

Phanocles. Greek elegiac poet of uncertain date, known by fragments.

Phantom Horseman. Legends of the Phantom Horseman, which is universally regarded as a presage of death or misfortune to the person who sees it, are extremely common in various parts of England and throughout Europe. In many of the tales the horse is described as headless. The origin of the story in Europe has been attributed to the horse or horses of Odin.

Phantom Ship. Omen of ill-fortune to sailors, known in the Baltic as Carmilhan.

Pharaoh. Official title of kings of Egypt in O. T. times.

Pharaoh-Hophra. King of Egypt ab.580 B.C.; at first a conqueror, then a fugitive before Amasis; denounced by Isaiah and Ezekiel.

Pharaoh's Chickens. Egyptian vulture, common in the Mediterranean region; also called White Crow. It was sacred as a scavenger and is figured on monuments.

Pharaoh's Rat. See ICHNEUMON.

Pharetrones. See CALCISPONGIÆ.

Pharisees. Leading party of later Judaism. It originated under the Maccabees, had immense influence over the people, and was distinguished by great rigor in the observance of the Law, which by the time of Christ had pressed almost all spontaneity and sincerity out of religion. Christ approved their doctrine and reprobated their spirit. The Talmud also is severe upon them.

Pharmacology. Science of the nature and properties of substances used as medicines. See PHARMACY.

Pharmacopeia. Official list of crude drugs and the preparations made from them, used as a standard by the pharmacists of the country issuing it. It secures uniform composition of certain preparations, which is invaluable either in dispensing medicines or in consulting literature concerning medicine. In the U. S. the Pharmacopeia is revised every ten years by a convention of pharmacists.

Pharmacy. Art including everything necessary to select and prepare for administration all medicinal articles. Establishment where medicines are prepared or sold. Ancient physicians prepared their own medicines, and a drug shop has been found in Pompeii. In the Middle Ages pharmacy became more of an art. Now schools of pharmacy exist in many countries. See PHARMACOLOGY.

Pharances, d. 47 B.C. Son of Mithradates, made King of the Bosphorus by Pompey 63 B.C.; defeated by Cæsar near Zela 47 B.C., after which Cæsar sent the famous dispatch, *Veni, vidi, vici.*

Pharos. Small island opposite Alexandria. Ptolemy II. erected here 270 B.C. a tower of white marble at a cost of 800 silver talents ($800,000) to serve as a lighthouse. This was esteemed one of the wonders of the world.

Pharsalia. District of Thessaly in which Cæsar defeated Pompey 48 B.C.

Pharyngeal Sac. Branchial sac of Tunicates.

Pharyngobranchii. See LEPTOCARDII.

Pharyngognathi. This sub-group has the lower pharyngeal bones behind the gill arches consolidated into plates. *Tilapia simonis* of the Jordan system in Palestine has been supposed to be the species of fish out of whose mouth St. Peter obtained tribute money. It is remarkable in that the male, after fertilizing the eggs of the female, gathers them up in his

Pharyngognathi (*Labrus mixtus*).

mouth, and holds them there during development; even after the young attain a considerable size, they remain in this protected locality, distending the cheeks of the father in a most remarkable way. *T. tiberialis*, of the Sea of Galilee, goes in great schools, affording remarkable draughts of fishes when caught in a seine. To this group also belong the LABRIDÆ or WRASSES (q.v.). See also ACANTHOPTERI.

Pharyngopneusta. Group formed by Huxley to include the Tunicates and Balanoglossus.

Pharynx. Organ connecting the nose and mouth with the gullet and windpipe.

Phascaceæ. Order of minute mosses, growing on damp earth, characterized by a persistent protonema.

Phascolarctus. See CARPOPHAGA.

Phascolomys. See RHIZOPHAGA.

Phase. See SIMPLE HARMONIC MOTION.

Phases of the Moon. Appearances commonly distinguished as crescent, gibbous and full moon, caused by the amount of the illuminated disk turned toward the earth. Venus and Mercury present similar phases when viewed through a telescope, and to some extent Mars.

Phasianidæ (FOWLS). Family of *Gallinacei*, whose heads are partly bare of feathers and often adorned, especially in the male, with tufts of feathers, or colored fleshy lobes (combs and wattles). The beak is strong, with down-turned point. The male is markedly distinct from the female, being more powerful and more highly ornamented. Here belong Guinea-fowls, Domestic Fowls, Pheasants, Turkeys, Pea-fowls, and many other species of gorgeous ground birds of Asia, Malaysia, etc.; in all nearly a hundred species are known, originally natives of s e. Asia.

Phasmidæ. Gressorial *Orthoptera*, with long slender bodies and long legs. The wingless forms are the Walking-sticks, so called from their resemblance to dried twigs; the winged forms resemble dried leaves. They live in warm climates.

Pheasants. Sub-family of *Phasianidæ*. Gallinaceous birds of ab. 40 species, inhabiting s.e. Asia. They are brilliantly colored and have long tails and crests. The males generally are pugnacious; the male of the Blood Pheasant,

English Pheasants.

dwelling on the heights of the Himalayas, has 4 or 5 spurs on each foot. Some drum like Partridges. Both sexes of the Golden Pheasant crow. Some species of this genus attain a wt. of 3 lbs. *Phasianus colchicus*, the English Pheasant, is introduced and domesticated in Europe.

Phelloderm. Chlorophyll-bearing cells produced on the inner side of the cork meristem of certain trees.

Phellogen. Growing layer of cork cells in bark of exogenous plants.

Phelps, ALMIRA (HART) LINCOLN. 1793–1884. Sister of EMMA WILLARD (q.v.), teacher at Troy, N. Y., and at Baltimore, 1841–55; author of text books, chiefly scientific.—Her son, CHARLES EDWARD, b. 1833, was Brig.-gen. U.S. Vols. 1864, M. C. 1865–69, and judge Baltimore Superior Court, 1882.

Phelps, AUSTIN, D.D., 1820–1890. Prof. Andover 1848–79. *Still Hour*, 1859; *Theory of Preaching*, 1881.—His wife, ELIZABETH STUART, 1815–1852, wrote *Sunny Side*, 1851, and other pious or juvenile tales.—Their daughter, ELIZABETH STUART, b. 1844, has pub. *The Gates Ajar*, 1868; *Hedged in*, 1870; *Avis*, 1877; *Dr. Zay*, 1884; *A Singular Life*, 1895; *Chapters from a Life*, 1896, and other books of marked power and high moral purpose. She became Mrs. Herbert D. Ward, 1888.

Phelps, EDWARD JOHN, LL.D., b. 1822. Law prof. at Yale 1881; U. S. Minister to England 1885–89.—His father, SAMUEL SHETHAR, 1793–1855, was U.S. Senator from Vt. 1838–51 and 1853–55.

Phelps, SAMUEL, 1804–1878. English actor and manager.

Phelps, WILLIAM WALTER, LL.D., 1839–1894. M. C. from N. J. 1873–75 and 1883–89; U. S. Minister to Austria 1881–82, and to Germany 1889–93.

Phenacetin. $C_2H_5.O.C_6H_4.NH.C_2H_3O$. Acetparamidophenetol; white crystalline solid, melting at 132.5° C.; prepared by the action of acetyl chloride upon paramidophenetol; powerful febrifuge.

Phenacite. Be_2SiO_4. Beryllium silicate; mineral resembling quartz in some respects. It has been found in Siberia, Col., and N. H., associated with several varieties of gem-minerals, and is itself sometimes used as a gem.

Phenacodus. Extinct mammal from the Wahsatch Eocene of Wyoming, resembling the tapir in its nasal bones, and having a very long tail, hind feet semiplantigrade, and pig-like molar teeth; supposed by Cope to be the ancestor of all hoofed mammalia, monkeys, and man.

Phenakistoscope. Toy devised by Plateau, similar to the STROBOSCOPIC DISK (q.v.)

Phenanthraquinone. $C_{14}H_8O_2$. Orange needles, melting at 198° C.; prepared by the action of chromic acid upon phenanthrene.

Phenanthrene. $C_{14}H_{10}$. Solid hydrocarbon, crystallizing in plates and melting at 100° C.; found in coal tar. It is present in anthracene oils, and may be separated by the oxidation of the anthracene, leaving the phenanthrene. It is used in making printers' blacks.

Phenetol. $C_6H_5OC_2H_5$. Phenylethyl ether; bpt. 172° C.; liquid of very agreeable odor, prepared from diazobenzene nitrate and ethyl alcohol.

Phenetol Red. Sodium salt of the product of the action of diazophenetol upon a naphtholdisulphonic acid.

Phenol. C_6H_5OH. Carbolic acid; colorless crystalline mass of strong odor, melting at 41° C. It is prepared from coal tar. The oils, distilling from 150°–225° C., are treated with caustic soda solution, the clear solution then acidified by sulphuric acid, in which the phenol is insoluble, and which causes its separation as an oil. It is then rectified. It is slightly soluble in water. It is used largely as an antiseptic and for the preparation of other products, as salicylic acid and picric acid. It is poisonous and should be used with care about extensive wounds. It is very easily acted upon by chemical agents. It forms unstable salts, as the sodium salt C_6H_5ONa (called a phenylate or phenate), which is decomposed by water. The name phenol is applied to the class of compounds obtained by replacing the benzene hydrogen of aromatic hydrocarbons with hydroxyl.

Phenol Alcohols. Substances which are at once alcohols and phenols, as $HO.C_6H_4.CH_2OH$, hydroxybenzyl alcohol. See ALCOHOLS and PHENOLS.

Phenol Brown. See PHENYL BROWN.

Phenol Colors. Artificial coal-tar colors, prepared from phenols, or having the constitution of a phenol; *e.g.* eosin.

Phenolphthalein. $C_{20}H_{14}O_4$. Phthalein of phenol, produced by heating phenol with phthalic anhydride and sulphuric acid; yellow mass, insoluble in water. Used as an indicator, it gives a deep red with alkalies, and is colorless with acids, in dilute solution. It is the first member of the class of phthaleins.

Phenols. Compounds in which hydroxyl (OH) is attached to a carbon atom which is a member of a closed ring. So phenol is BENZENE (q.v.), in which hydrogen has been replaced by hydroxyl. The compounds present certain similarities to the alcohols, but have a more acid character. See PHENOL. By oxidation they are usually broken up and do not furnish acids or ketones. Examples: Phenol, cresol, naphthol.

Phenol Sulphonic Acid. $HO.C_6H_4.HSO_3$. Known in three forms: ortho, meta, and para. They are all white crystalline bodies. The ortho and para phenol sulphonic acids are formed by the action of sulphuric acid upon phenol. The ortho acid is used as an antiseptic.

Phenomenology. Science of phenomena or of the laws of events, including their classification and the order of their dependence and conditions; contrasted with Ontology.

Phenomenon. 1. Any event which occurs in time and conditioned by some cause, whether the event be related to consciousness or not. 2. Appearance essentially related to mind and expressed in terms of consciousness, or a relation to knowledge.—In science, any event, whatever its character or circumstances.

Phenyl. C_6H_5. Group or radical derived from benzene by the removal of one atom of hydrogen from it. $C_6H_6—H = C_6H_5—$. Constituent of numerous aromatic compounds. It does not exist in the free condition.

Phenyl Acetate. $CH_3.COO.C_6H_5$. Bpt. 193° C. Liquid of agreeable odor, prepared by the action of acetamide upon phenol.

Phenyl Alcohol. See PHENOL.

Phenyl Amine. See ANILINE.

Phenylamine Blue. See DIPHENYLAMINE BLUE.

Phenyl Brown. Yellow powder, somewhat explosive; produced by the action of nitric acid upon crude phenol.

Phenyl Cyanide. See BENZONITRILE.

Phenylene. C_6H_4:. Group or radical derived from benzene by the removal of two atoms of hydrogen. $C_6H_6—2H = C_6H_4$:. Three forms of the group, ortho-, meta-, and paraphenylene, are recognized. Derivatives are called phenylene compounds.

Phenylene Blue. Blue dyestuff prepared by the action of aniline and oxygen upon paraphenylenediamine.

Phenylene Brown. See BISMARCK BROWN.

Phenylenediamine. C_6H_4: $(NH_2)_2$. Diamidobenzene; known in three forms, corresponding to the three phenylene groups; easily oxidizable white solids, prepared by the action of hydrogen upon the corresponding nitranilines and dinitro compounds; bases, forming permanent salts with hydrochloric acid. The meta compound is used as a test for nitrous acid, the minutest amount of the acid giving a yellow coloration with the compound.

Phenyl Ether. $(C_6H_5)_2$:O. Long needles, prepared from phenol by treating it with zinc or aluminium chloride.

Phenylhydrazine. $C_6H_5.NH.NH_2$. Colorless crystals, easily uniting with hydrochloric acid to form a chloride. This salt is best prepared by the action of hydrogen on diazobenzene chloride. It is a common reagent for the detection of aldehydes, ketones and glucoses, with which characteristic compounds are formed.

Phenyl Salicylate. See SALOL.

Phenyl Sulphone. $(C_6H_5)_2$:SO_2. White crystalline body, prepared by the action of sulphuric anhydride upon benzene. See SULPHENES.

Phenyl Sulphurous Acid. See BENZENE SULPHONIC ACID.

Phenyl Violet. $C_{28}H_{25}N_3O_4$. Acetate of orthotolylpara rosaniline; made from the residues of the fuchsine manufactured by the arsenic acid method; green powder, dyeing wool red-violet.

Pheræ. City of Thessaly, near Mt. Pelion; capital of Jason and Alexander, 378–357 B.C.

Pherecrates, 5th cent. B.C. Athenian dramatist. Fragments survive.

Pherecydes. 1. Greek philosopher of Syros, 6th cent. B.C. 2. Athenian writer on mythology and history, 5th cent. B.C. Both are known by fragments.

Phi Beta Kappa. College fraternity founded 1776 at William and Mary Coll., Va.

Phidias, ab. 500–ab. 432 B.C. Greatest sculptor of ancient Greece. Art director of Athens during the ascendency of Pericles. The Parthenon and Propylæa were thus among his works. He is best known through the sculptured decorations of the Parthenon, now mainly in London. Although it is not certain that he personally worked on any of these figures, it is possible, and they represent his original models. As a sculptor he was most actively employed on the colossal gold and ivory temple statues, like the Zeus at Olympia and Athena in the Parthenon. Among other colossal bronze figures he executed the Athena Promachus for the Acropolis. The later Greek types of Athena and Zeus were his creation. The bust known as the Otricoli Jupiter in the Vatican is the best Roman copy of the later type. The characteristics of this sculptor were simplicity, sublimity and grandeur.

Phigalia. Ancient town of s. w. Arcadia, noted for a temple of Apollo, described 1765. Its fine frieze, showing fights between Centaurs and Lapithæ, and Greeks and Amazons, was taken to the British Museum 1812.

Philadelphia. Largest city of Pa., on the Delaware, at the mouth of the Schuylkill. It has extensive railroad com-

Independence Hall.

munications and a large commerce. Most of it, except the newly annexed suburbs, is regularly laid out. It covers 129

sq. m., the city and county being coextensive. It has ab. 1,300 m. of streets, of which ab. 350 are paved. Water is supplied by pumping, mainly from the Schuylkill, with a small proportion from the Delaware. The principal park is Fairmount, on both banks of the Schuylkill, in the outskirts of the settled area. It comprises 2,740 acres, or ab. 4 sq. m. There are numerous other parks and open squares. The city is thoroughly sewered, drainage being had into the Delaware and Schuylkill rivers. It has extensive manufactures, consisting largely of iron and steel, cotton and woolen goods, carpets, drugs, chemicals, sugar, and molasses. It is the site of Univ. Pa., Jefferson Medical Coll., Girard Coll., and other educational institutions. Swedish colonists located here 1636. The city was founded by Penn 1682, and from the commencement had a steady growth. It was the place of meeting of the Continental Congress from 1774 till 1783, excepting the year of its occupation by the English troops, in Carpenters' Hall 1774, subsequently in the State House, Independence Hall. Here the Declaration of Independence was adopted and the U. S. Constitution was framed. It was the capital of Pa. till 1799, and of the U. S. 1790–1800. Pop., 1890, 1,046,964.

Philadelphians. Mystical sect, founded 1652 in London by Dr. John Pordage (1608–1698), and other disciples of Jakob Boehme (1652–1710), theosophist and mystic. Mrs. Leade was its prophetess. It died ab. 1710.

Philæ. Island in the Nile, near Assouan, and just above the First Cataract; site of some picturesque ruins of the Ptolemaic period. It was celebrated in Egyptian Mythology as the burial-place of Isis and Osiris, and thus became a resort for pious pilgrims.

Island of Philæ, seen from the southwest corner.

Philaret, 1782–1867. Abp. of Tver 1819; Metropolitan of Moscow 1821; eminent for piety, learning, eloquence, administrative ability, and knowledge of Western thought.

Philaster. Bp. of Brescia in 4th century; writer on heresies.

Philately. Study and gathering of postage-stamps; begun ab. 1850, and since carried to great lengths by many persons in all civilized lands. It is now far more popular (at least in the U. S.), though far less instructive, than numismatics; for stamps suggest only geography, while coins cover almost the whole ground of known history. Numerous journals are devoted to philately, as well as organized societies of stamp collectors. The sale of stamps is a well recognized industry. The word was coined by a French collector (Herpin) 1865.

Philbrick, JOHN DUDLEY, LL.D., D.C.L., 1818–1886. Supt. of Boston schools 1857–74 and 1876–78. *City School Systems,* 1885.

Philelpho, or **Filelfo,** FRANCESCO, 1398–1481. Italian teacher; Sec. to Venetian Embassy at Constantinople 1426–27. After acquiring a knowledge of the Greek language and literature, then almost wholly unknown in the West, he returned to Italy and played an important part in the Revival of Learning then in progress, lecturing at Bologna, Florence, Milan, and Rome.

Philemon, ab. 365–262 B.C. Attic writer of the New Comedy, imitated by Plautus. Fragments survive.

Philemon AND **Baucis.** Phrygian entertainers of Zeus and Hermes; celebrated in Ovid's *Metamorphoses.*

Philemon, EPISTLE TO. Eighteenth N. T. book, written by St. Paul to a Colossian, interceding for a fugitive slave, Onesimus.

Philharmonic Society. 1. Of New York; organization of professional musicians whose purpose it is to give concerts of high-class music on the communal plan; organized April 5, 1842; incorporated Feb. 17, 1853. It has given annual concerts since 1842. Carl Bergmann was conductor 1865–76. His successors have been Dr. L. Damrosch, T. Thomas, A. Neuendorff and Anton Seidl. 2. Of London; founded 1813 for the encouragement of orchestral and instrumental music. Some of the greatest masterpieces were written for it, among them the Choral Symphony of Beethoven. 3. Of Vienna; an orchestral body with organization and purpose similar to those of the New York Society; organized 1842 by Otto Nicolai.

Philetas, OF COS, 3d cent. B.C. Poet and critic at Alexandria; tutor of Ptolemy Philadelphus.

Philidor, FRANÇOIS ANDRÉ (DANIGAN), 1726–1795. French chess player, composer of 22 operas, besides intermezzi and church music. *Jeu des Echecs,* 1777.

Philip. One of the Apostles; in later life active, it is said, in Asia Minor.

Philip. Evangelist: one of the 7 deacons. Acts vi., viii.

Philip II., OF MACEDON, 382–336 B.C. King 359; conqueror of Thessaly, and at Chæronea 338 of all Greece; father of Alexander, who carried out his plan of invading Persia.

Philip V., 237–179 B.C. King of Macedon 220; at war with Rome 210–205 and 200–197; defeated at Cynoscephalæ 197.

Philip I., OF FRANCE, 1052–1108. King 1060; twice excommunicated.

Philip II. (AUGUSTUS), 1165–1223. Son of Louis VII.; King 1180. He took part in the 3d crusade 1190, warred with England and other neighbors, greatly enlarged his domains, quarreled with the Pope, gained a memorable victory at Bouvines 1214, and did much for Paris and its university.

Philip III., 1245–1285. Son of Louis IX.; King 1270; a wise and pacific ruler.—His son, PHILIP IV. ("LE BEL"), 1268–1314, King 1285, taxed the clergy, defied the Pope, and later won infamy by persecuting and destroying the Templars 1310–14.—His 2d son, PHILIP V., reigned 1316–22.

Philip VI., 1293–1350. King 1328; founder of the House of Valois; at war with England from 1337; worthless as man and ruler. He was defeated at Cressy and lost Calais 1346–47.

Philip II., OF SPAIN, 1527–1598. Son of Charles V.; King 1555; most powerful monarch in Europe, holding Spain, vast dominions in America, Africa, and E. Indies, the two Sicilies, Milan, Burgundy, the Low Countries, and, from 1581, Portugal. He exhausted his dominions in attempts to subjugate the Netherlands, and in wars with England and France. The elaborate preparations of the Armada 1588 ended in humiliating failure. His long reign was an industrious and dogged effort to maintain the sternest absolutism and the most rigid Catholic orthodoxy, and to enforce them by any means: sincerity and justice had no more value with him than human life. In modern eyes he is the most offensive, as he was the most destructive, of monarchs.—His son, PHILIP III., reigned 1598–1621, and expelled the Moors: his son, PHILIP IV., 1621–1665, lost Portugal.

Philip II., King of Spain.

Philip V., 1683–1746. Grandson of Louis XIV.; King 1700; first of the Spanish Bourbons; feeble and incapable. The War of Succession, 1700–13, stripped Spain of the Netherlands, Italy, and Gibraltar.

Philip. German emperor 1198–1208; son of Frederic I.

Philip, or METACOMET, d. 1676. Indian chief who carried on a devastating war against the Mass. colonists 1675.

Philip THE BOLD, 1342–1404. Son of John of France; Duke of Burgundy 1363.—His grandson, PHILIP THE GOOD, 1396–1467, was in alliance with England 1419–35, and inherited most of the Netherlands ab.1430, making his realm the strongest in Europe.

Philiphaugh. In s. Scotland, near Selkirk; scene of defeat of Montrose Sept. 13, 1645.

Philippi. City of Macedonia, famous for the victory won by Octavianus and Antony over Brutus and Cassius 42 B.C.; seat of a church addressed by St. Paul ab.62 from his Roman prison, in an epistle which is the 11th N. T. book.

Philippics. Three great orations of Demosthenes against Philip of Macedon. The Olynthiac orations are sometimes so styled, as also Cicero's orations against Antony.

Philippine Islands. Large group in w. Pacific, n.e. of Borneo, the principal being Luzon and Mindanao; discovered 1521. They belong to Spain and are very fertile. Area ab. 115,000 sq. m. The natives rose in rebellion 1896. Pop. ab. 7,500,000.

Philippine Islanders. The original inhabitants, NEGRITOS (q.v.) or Ætas, now number ab. 25,000 in population. The chief inhabitants are Malays, of whom the TAGALS (q.v.) and Visayas are the most important tribes and number ab. 3,300,000.

Philippopolis. Ancient city of E. Rumelia, on the Maritza; taken by Turks 1363, and by Russians 1878. Pop. ab. 33,500.

Philippoteaux, HENRI EMMANUEL FÉLIX, 1815–1884. French painter of battle-scenes and panoramas.—His son, PAUL, b. 1846, exhibited *The Battle of Gettysburg*, a cyclorama, in the U. S. 1883.

Philippus, MARCUS JULIUS, 204–249. Arabian; Emperor 244, by murder of Gordian; defeated and slain by Decius, after celebrating the millennium of Rome 248.

Philips, AMBROSE, 1671–1749. English poet and dramatist; ed. *Freethinker* 1718.

Philips, EDWARD, 1630–ab.1695. English author, nephew of Milton.—His brother, JOHN, 1631–ab.1707, pub. satires and translations.

Philips, JOHN, 1676–1708. English poet. *Splendid Shilling*, 1701; *Cider*, 1708; *Blenheim*, 1705.

Philips, KATHERINE ("ORINDA"), 1631–1664. English poet.

Philistines. Warlike tribe, occupying the s. coast of Palestine; gradually subdued by the Israelites, and broken up by Assyrians and Egyptians: commonly regarded as of Aryan descent. The name was applied by M. Arnold to dull or prejudiced Conservatives, opponents of light and progress.

Philistus, ab.435–ab.361 B.C. Greek historian of Sicily.

Phillimon, JOHN GEORGE, LL.D., 1809–1865. London lawyer, M.P. 1852. *Private Law among the Romans*, 1863.—His brother, SIR ROBERT JOSEPH, D.C.L., 1810–1885, was Judge of the Arches Court 1867–75, and of Admiralty 1867–83. *International Law*, 4 vols., 1854–61.

Phillip, JOHN, 1817–1867. Scottish painter, chiefly of Spanish scenes; R.A. 1859.

Phillipps, ADELAIDE, 1833–1882. American singer.

Phillips, GEORG, 1804–1872. German writer on history and canon law. *Das Kirchenrecht*, 7 vols., 1845–72.

Phillips, JOHN, 1719–1795. Founder of Phillips Exeter Academy, N. H., 1781.

Phillips, JOHN, 1800–1874. Prof. of Geology in London, Dublin, and Oxford. *Geology*, 1837–38; *Palæozoic Fossils*, 1841.

Phillips, JOHN ARTHUR, 1822–1887. English geologist and metallurgist. *Mining and Metallurgy of Gold and Silver*, 1867; *Ore Deposits*, 1884.

Phillips, PHILIP, b. 1834. American singing evangelist.

Phillips, WENDELL, 1811–1884. American reformer, unsurpassed in oratory and in energy, especially against slavery; labor and prohibition candidate for Gov. of Mass. 1870. His lecture on *The Lost Arts* is a classic. *Speeches*, 1863–84.

Phillips, WILLIAM, 1731–1781. M.P. 1774; Major-gen. 1776; distinguished in the American war.

Phillips, WILLIAM, 1775–1828. English geologist and mineralogist. *Outlines of Mineralogy and Geology*, 1815; *Introduction to Mineralogy*, 1816.

Philochorus, 3d cent. B. C. Historian of Attica. Fragments of his work remain.

Philoctetes. Inheritor of Hercules' arrows; these presents were a reward for his having erected and set fire to the

Philoctetes and Ulysses.

pile on Mt. Oeta, where Hercules burned himself. Partaker in the siege of Troy; slayer of Paris; subject of a drama by Sophocles.

Philodemus, 1st cent. B.C. Greek epicurean. Fragments of his writings exist.

Philo-Judæns, d. after 40. Jewish philosopher, Alexandrian Neo-Platonist, who developed the Zogos doctrine which introduced Greek philosophy into Palestine; chief representative of the effort to fuse Jewish faith with Hellenic culture. He probably had no little influence on early Christian doctrine.

Philolaus, b. ab. 480 B.C. Pythagorean philosopher, first to propound the earth's motion.

Philology. This has the twofold task of classifying the languages of the world, co-ordinating and studying them, and of stating and solving all problems of speech in itself. It touches history and philosophy on one side, and physiology on the other. It is not quite the same thing as the science of language. The latter defines itself; the former, with language as its basis, takes up questions of law, culture, art and religion, whatever is expressed by the word humanities. Its narrowest field is the study of words, and this study goes hand in hand with phonetics. A word is a sound or combination of sounds, and this, not the letters, which merely serve as symbol, is the starting point of the philologist. Words, singly and in combination, make language; the dividing line between the signs, calls, and other means of communication used by brutes, and human speech, is admitted to be the conventional, communal and progressive character of the latter. The former are emotional signs, stable, and directly joined with physical causes. Human beings use speech as an art, and constantly improve it. Human speech, moreover, is articulate, and therefore subject to analysis into the sounds which compose it; whence our alphabet, an inadequate symbolic register of the chief sounds in a given language. Language being progressive, the earliest forms of speech must have been as rude and general as possible, expressing the most obvious physical facts in the most obvious way. The earliest form of the word is the root, which holds the crude or general meaning which is afterward modified by many changes of form to signify, (1) particular changes of the general meaning, and (2) changes of application, as in the inflections. See COMPARATIVE PHILOLOGY.

Philomēla. Sister of Procne, wife of Tereus, King of Thrace. Dishonored by him, she was metamorphosed into a nightingale.

Philopena. German game; an almond with two kernels is divided between two persons, and the one who first receives anything from the other must give a present.

Philopœmen, ab. 252–183 B.C. "Last of the Greeks"; of Megalopolis in Arcadia; 8 times general of the Achæan league. After gaining great honor and rendering noble services, he was taken prisoner by Messenians and poisoned.

Philosopher's Stone. See ALCHEMY.

Philosopher's Wool. See ZINC OXIDE.

Philosophy. Reflection upon the totality of things with a view to ascertaining their unity, relation and ultimate explanation. It comprehends both antology and phenomenology, though sometimes identified with the former, and sometimes with certain functions of the latter. It differs from any special science in the comprehensiveness of its subject matter, in that it embraces that of all the sciences, and from all the sciences in the extent to which it employs reflection, deductive method, and analysis, and excludes experiment. Philosophy is thus an instrument or method for determining the organic unity and meaning of all knowledge, with special reference to the ultimate nature of being and the laws of phenomena.

Philosophy, NATURAL. See PHYSICS.

Philostratus, ab.180–ab.250. Greek sophist at Rome, whose *Lives of the Sophists* and of Apollonius of Tyana are extant, with poems and epistles. Two namesakes of his, somewhat later, and one in 1st cent., left writings.

Philoxenus, 435–380 B.C. Greek dithyrambic poet of Syracuse, Italy, Corinth and Asia. Fragments remain.

Philters. Concoctions of herbs and other materials, often used in ancient and mediæval times, and still by the superstitious, to induce love in him who drank them. One of them is said to have maddened the poet Lucretius. They are still common in the East.

Philydraceæ. Natural family of flowering plants, of the class *Angiospermæ* and sub-class *Monocotyledons*, comprising 3 genera and ab. 3 species, natives of Australia, Malaysia, e. Asia, and the Pacific Islands.

Phinehas. 1. Son of Eleazar and grandson of Aaron, high priest of Israel. 2. Son of Eli, slain with his brother Hophni, in battle with the Philistines, when the ARK OF THE COVENANT (q.v.) was captured.

Phips, or **Phipps,** SIR WILLIAM. 1651–1695. Boston merchant, knighted 1687 for recovering Spanish treasure lost near the Bahamas; sheriff of New England 1688; Gov. of Mass. 1692–94. He took Port Royal, N. S., 1690, attacked Quebec 1691, and stopped the witchcraft trials 1692.

Phlebenterata. See EOLIDÆ.

Phlebitis. Inflammation of the veins; apt to produce blood-poisoning or to form a clot (see THROMBOSIS), which, if separated from the walls of the vein and carried along in the circulation, may plug up a blood-vessel, forming an embolism.

Phlebotomy. Extraction of blood from a vein as a remedial measure. The vein known as the median cephalic on the front of the arm at the elbow is usually selected for the operation.

Phlegethon. In Greek Mythology, river of flames in the lower world.

Phlegmasia Dolens, or PHLEGMASIA ALBA DOLENS. Painful swelling of the leg, usually of septic origin, consequent upon child-birth; popularly known as Milk-leg.

Phlegmon. Inflammation attended with the formation of pus which is not confined to the part inflamed, but spreads within the tissues.

Phlegon, 2d cent. Greek writer, of whose work on *Marvels*, his *Olympiads*, and his treatise on *Long-lived Persons*, portions are extant.

Phloem. Part of a fibro-vascular bundle composed of cribrose-cells.

Phloem-Sheath. See PERICAMBIUM.

Phlogiston. See CHEMISTRY.

Phlogopite. Variety of mica in which is relatively a larger amount of magnesium and a smaller amount of iron than in the biotite variety. Its color is usually some shade of yellow, brown, or copper red.

Phloroglucin. $C_6H_3 : (OH)_3$. Trihydroxybenzene; white solid, melting at 218° C.; formed by the fusion of certain resins, and also resorcin, with potash or soda; isomer of pyrogallic acid.

Phlox. Genus of showy-flowered plants of the natural family *Polemoniaceæ*, natives of N. America; much planted for ornament.

Phlox paniculata (var.).

Phloxine. $C_{20}H_4Cl_2Br_4O_5K_2$. Potassium salt of dichlortetrabromfluorescein; made by the action of bromine on dichlorfluorescein; yellow powder, soluble in water, and dyeing wool red; also, the corresponding tetrachlor compound.

Phocæa. Ionian city of w. Asia Minor, whose people were active and hardy mariners. Attacked by Persians ab. 500 B.C., they migrated westward; some of them founded Marseilles.

Phocas I., d. 610. Byzantine emperor 602; deposed as a tyrant, and executed.—II. Emperor 963; conqueror in several wars; murdered by Zimisces, his successor.

Phocidæ. Family of *Pinnipedia*, comprising the true Seals, numerous in species, abounding in all seas, but especially in the colder regions. They are unable to use their hind feet when on land, as these are directed backward and included with the tail in a sort of rudder or propeller. They have incisors in both jaws and moderate-sized canines.

Phocion, 402–317 B.C. Athenian statesman and general, who, after fighting the Macedonians with success, foresaw Philip's triumph and advocated submission, opposing Demosthenes. A pure patriot of high character, he was condemned to the hemlock; but his memory was honored after death.

Phocis. District of Greece w. of Bœotia, containing Mt. Parnassus and the Temple of Delphi. The Sacred War, 355–346 B.C., ended in the defeat and punishment of the Phocians by Philip.

Phocylides, 6th cent. B.C. Greek elegiac poet.

Phœbus. See APOLLO.

Phœnician. See SEMITIC.

Phœnicians. Semitic race occupying a strip of coast land in Syria. Tyre, Sidon, Berytus, and Tripolis were some of their

Phœnician Ruins in Malta.

cities; among their colonies, Carthage, Hippo, Utica, Gades. They were the most eminent navigators and traders of antiquity, visiting the w. coast of Africa and even the British isles. The invention of letters, arithmetic, astronomy, navigation, manufacture of glass, and coinage have been ascribed to them. Phœnicia was conquered by Cyrus 537 B.C., by Alexander 332, by the Romans 47 B.C.

Phœnicopteridæ (FLAMINGOES). Family of African and S. American Lamellirostral birds, resembling the *Anseridæ* in the structure of the feet and bill, and the Herons in the length of the legs. The bill is suddenly curved downward at the middle.

Phœnix. Mythical bird of ancient Egypt, supposed to rise from flames.

Phœnix Column. Hollow wrought-iron column, formed by riveting together several segmental shapes with flanges; so called because made by the Phœnix Bridge Company.

Pholadidæ (BORING MUSSELS). Family of Lamellibranchs, including forms having the valves of the shell gaping and with accessory pieces on the hinge (or on the siphons, in *Teredo*). The mantle has only a small opening for the foot, but there are very long siphons. They bury deeply in sand, wood, or stone, and protrude the siphons. The Ship-worm, *Teredo*, does much damage by its perforations of the hulls of ships and the piles of docks and wharfs.

Phonautograph. Instrument contrived by Léon Scott 1858. It consists of a hollow paraboloid, closed at its narrow end by an elastic membrane having a stylus attached at its middle point. The stylus is just in contact with the surface of a smoked revolving cylinder, in such a position that a uniform

Scott's Phonautograph.

line is traced upon the cylinder if the membrane be at rest. If, however, it be thrown into vibration by waves of sound entering the paraboloid, the stylus describes an undulating line which varies in its form according to the frequency, amplitude, and complexity of the sound wave.

Phonetics. Science which investigates the sounds of the human voice, and is thus allied with both physiology and physics. It is among the latest developments in philology, and is not yet fixed in its principles and methods; notably, it has not yet produced a system of symbols which all scholars are willing to accept, though various schemes, such as the "visible speech," have been suggested. The importance of phonetics lies in the help it affords to the study of sound-changes, and hence of all development and differentiation of speech. The simplest elements of speech, usually known by the name of their symbols, as the alphabet, or letters, are divided into vowels and consonants; in reality, not only is the hard and fast dividing-line impossible (sounds such as *r* or *n* may be vowel or consonant), but there is no limit to the variety of these sounds, according to the position of the vocal organs. A consonant may be defined as the closer "less continuable" sound, which, combined with a vowel, the open "continuable" sound, makes up the syllable. The symbols *b, d, g; p, t, k*, are the "explosives" or mutes; the "forcatives," rubbing or lingering consonants, are *th* (*thy*), *th'* (*thigh*), *f, v, s, z;* the nasals *m, n;* and the liquids *r, l*. These, again, are divided into lip-sounds, *b, p, v, f, m;* tongue (or teeth) sounds, *d, t, th, th';* and palatals, or gutturals, *g, k*. Still another division is made; consonants formed with a distinct effort of the larynx are called sonant, *b, d, g, v, z*, as compared with the "surds," *p, t, k, f, s*. The English-speaking student must pronounce the vowels after the Italian fashion. With this caution a simple table, arranged according to the various positions of the vocal organs, may indicate the vowels:

$$i,\ i^{e},\ e^{l},\ e,\ e^{a},\ a^{e},\ a,\ a^{o},\ o^{a},\ o,\ o^{u},\ u^{o},\ u.$$

Here a^{e} is our sound of *a* in *hat*, while a is the sound in *father*. Diphthongs are combinations of vowels like *i* in *write*, which is really made up of two sounds, though often miscalled a vowel.

Phonograph. Invention of Edison, somewhat analogous to the phonautograph of Scott. It consists of a horizontal cylinder carrying a screw thread, which rotates with a uniform lateral motion. The cylinder is covered with tin foil: upon this a stylus fixed to the under side of a vibrating plate is made to press lightly. When the cylinder is turned and at the same time the membrane is thrown into vibration by the voice or other source of sound, the style produces depressions in the groove upon the foil of varying depth, the variations depending upon the amplitude and character of the sound-waves. If this groove be again followed by the stylus, the original mo-

Edison's Phonograph.

tions will be reproduced and transferred to the diaphragm, which in turn will send out corresponding sound-waves into the air. The recently improved instrument of Edison uses peculiarly prepared cylinders of wax in place of tin foil.

Phonography. See SHORTHAND.

Phonolite. See CLINKSTONE.

Phonomotor. Apparatus devised by Edison for changing the energy of sound into that of a rotating mass. A stretched elastic membrane has attached at its center a pawl, the end of which rests on the serrated rim of a ratchet wheel, the teeth so sloped that the pawl will slide over them easily in one direction, but will catch if moving in the opposite direction. In this way a continuous vibration of the membrane, caused by the impact of sound waves, is able to produce rotation of the wheel, the rim of the ratchet passing under the pawl away from the membrane.

Phonoplex. System of telegraphy devised by Edison, by which the capacity of an ordinary telegraph line can be increased. The principle upon which the system is operated is induction. The receiving instruments or phones respond only to induced currents of high tension, thrown upon the line by suitable transmitting devices. These currents interfere in no way with the Morse instruments on the same circuit, being made to pass round them through condensers. This system can be operated upon circuits not exceeding ab. 100 miles.

Phoranthium. See CLINANTHIUM.

Phormion, 5th cent. B.C. Athenian general, prominent at Potidea, Naupactus, and in other battles.

Phormis, 5th cent. B.C. One of the originators of Doric comedy.

Phoronomy. See ZOÖLOGY.

Phosgene. $COCl_2$. Carbonyl chloride; yellowish gas, formed by the union of carbon monoxide with chlorine in the sunlight; used in the preparation of certain organic compounds; often sold in solution in benzene. Treated with ammonia it yields urea.

Phosphate Rock. Rock containing calcium phosphate in such quantity and in such chemical combination as to be available for use in the manufacture of fertilizers. In different localities the deposits differ widely in physical and in chemical properties, and only a small part of the rock mined is of use to the agriculturist, with previous chemical treatment. Some phosphates are clearly of mineral origin, as rock containing apatite; but the larger deposits, those from which the commercial demand is met, owe their existence, directly or indirectly, to accumulations of animal remains. In recent years a great part of the world's supply has been drawn from S. C. and Fla. In 1895, 831,498 tons, value $2,577,643, were produced in U. S.

Phosphates. Derivatives of phosphoric acid.

Phosphatic Diathesis. Habit of a body which favors the deposition of the phosphates from the urine.

Phosphides. Compounds formed by the union of phosphorus and some other element: *e.g.*, zinc phosphide, Zn_3P_2.

Phosphine. $C_{19}H_{16}N_4O_3$. Diamidophenylacridinehydrochloride; by-product in fuchsine making; orange powder, soluble in water. It dyes cotton yellow upon a tannin mordant, and is not to be confounded with the gaseous phosphine, PH_3. See PHOSPHURETED HYDROGEN.

Phosphines. Compounds formed by replacing the hydrogen of phosphoreted hydrogen (PH_3) by organic groups or radicals. Examples: $PH_2.CH_3$., methyl phosphine. $PH:(C_2H_5)_2$, diethyl phosphine.

Phosphites. Derivatives of phosphorus acid.

Phosphomolybdates. Metallic derivatives of phosphomolybdic acid.

Phosphomolybdic Acid. Various in composition; the ordinary form has the formula $H_3PO_4.11MoO_3+12H_2O$. Ammonium phosphomolybdate is its most important derivative.

Phosphonium Bromide. PH_4Br. Colorless, transparent cubes, very hygroscopic; unstable; made by treating phosphine with gaseous hydrobromic acid.

Phosphonium Chloride. PH_4Cl. Small lustrous needles, obtained by subjecting equal volumes of phosphine and hydrochloric acid gas to 2.7 atmospheres pressure at 2.2° C.; more unstable than the corresponding bromide or iodide.

Phosphonium Iodide. PH_4I. Transparent cubes, formed by the action of phosphine on hydriodic acid.

Phosphor Bronze. Alloy more resistant to abrasion than the ordinary bronzes for bearings and journal brasses, and more infusible after being cast for tuyeres and other such uses, made by fluxing bronze with phosphorus, and containing less than one per cent of this. Invented by a Belgian engineer 1870. See COPPER, METALLURGY OF.

Phosphorescence. Power in certain substances of appearing self-luminous when viewed in the dark, after being exposed for a time to the action of any luminous radiation. The phenomenon is supposed to be due chiefly to the action of rays of rather high refrangibility. The sulphides of calcium and of barium are notably phosphorescent. In many cases the phosphorescence is of short duration; for the examination of

Becquerel's Phosphoroscope

such Becquerel's phosphoroscope may be employed. This consists of a device by which in rapid succession a phosphorescent body is exposed to bright light and brought against a dark background before the eye of an observer situated in darkness. Most substances are found to be phosphorescent when examined in this way. The rays of light which generate phosphorescence are called phosphorogenic rays.

Phosphorescent Clouds. Very delicate, silver-white clouds, seen in Europe in June and July, even at midnight, during the short nights. Simultaneous photographs show that these are from 10 to 15 m. high and probably shine by reflecting distant twilights.

Phosphorescent Organs. Present on the ventral side of the abdominal segments, and sometimes in other parts of the body of insects; also on the sides of deep-sea fishes. The cells of these organs produce light under nervous stimulation of a trophic character. Examples are glow-worm, fire-fly and certain marine animals.

Phosphoreted Hydrogen, or PHOSPHINE. PH_3. Sp. gr. 1.2. It was discovered by Gengembre 1789. Ignes fatui is thought to be due to it. Poisonous, colorless, slightly soluble gas, of an unpleasant, garlic-like odor, usually spontaneously inflammable; made by heating phosphorus in a solution of caustic potash. It does not take fire in the air when pure. Liquid phosphine has the formula P_2H_4, and solid phosphine P_4H_2.

Phosphoric Acid, or ORTHOPHOSPHORIC ACID. H_3PO_4. The anhydrous acid consists of hard, colorless prisms, which rapidly absorb moisture from the air, forming a thick liquid. It is made by dissolving phosphorus pentoxide in hot water, or by treating phosphorus with nitric acid; it is tribasic, yielding primary, secondary, and tertiary salts by replacement of one, two, and three hydrogen atoms respectively. Glacial phosphoric acid is the more common commercial form: it is METAPHOSPHORIC ACID (q.v.). When heated to 200°–300° C., it is converted into pyrophosphoric acid; heated to 400° C., it yields metaphosphoric acid.

Phosphorite. Fibrous, massive, or concretionary forms of APATITE (q.v.).

Phosphorogenic Rays. See PHOSPHORESCENCE.

Phosphoroscope. See PHOSPHORESCENCE.

Phosphorous Acid. H_3PO_3. Transparent crystals, made by treating phosphorus trichloride with water; converted into phosphoric acid by heat; dibasic acid.

Phosphor Tin. Brittle, white substance, composed of tin and phosphorus in varying proportions; sp. gr. 6.56; soluble in hydrochloric acid; made by throwing phosphorus upon melted tin, or by melting equal parts of tin and phosphorus pentoxide together; used in making phosphor bronze.

Phosphorus. P. At. wt. 31, sp. gr. 1.83, sp. ht. .202, mpt. (under water) 44° C., bpt. 290° C., valence III., V. Discovered by Brand 1669; waxy, transparent, yellow substance. It does not occur in nature, on account of its great affinity for oxygen; on exposure to the air at ordinary temperatures it takes fire. It is made by calcining bones, then treating with sulphuric acid, when this reaction takes place: $Ca_3(PO_4)_2 + 2H_2SO_4 = CaH_4(PO_4)_2 + 2CaSO_4$. This primary phosphate is heated and converted into the metaphosphate. $CaH_4(PO_4)_2 = Ca(PO_3)_2$

Distillation of Phosphorus.

$+ 2H_2O$. It is then distilled with carbon and silica, and condensed under water. $2Ca(PO_3)_2 + 10C + 2SiO_2 = 4P + 10CO + 2CaSiO_3$. When taken into the stomach, it is poisonous, as are its vapors. It must be handled with the greatest care, since it takes fire readily and causes serious wounds. It occurs in several allotropic forms. See PHOSPHORUS, AMORPHOUS, and PHOSPHORUS, CRYSTALLIZED. It is insoluble in water, but soluble in carbon disulphide. It is used in making matches and as a poison for vermin.

Phosphorus, AMORPHOUS. Made by heating ordinary phosphorus to 300° in a sealed tube; dark red powder, insoluble in carbon disulphide. It does not emit light, and is not poisonous. Heated to 261° C. it is converted into the ordinary variety. It is used for making safety matches, being applied to the box.

Phosphorus, CRYSTALLIZED. Metallic phosphorus. If ordinary phosphorus is heated with lead for ten hours in a sealed tube from which the air has been exhausted, on cooling, black crystals are found. They undergo no change in the air.

Phosphorus Hydrides. See PHOSPHORETED HYDROGEN.

Phosphorus Oxychloride. $POCl_3$. Clear, fuming liquid, made by treating phosphorus pentachloride with hydroxyl compounds. Treated with water it yields phosphoric and hydrochloric acids.

Phosphorus Pentabromide. PBr_5. Yellow, crystal-

line solid, made by adding bromine slowly to phosphorus tribromide.

Phosphorus Pentachloride. PCl_5. Solid, crystalline, yellowish, fuming compound, made by treating phosphorus trichloride with chlorine. It sublimes without fusion. It is used as a reagent for testing for the presence of hydroxyl and for introducing chlorine into hydroxyl compounds.

Phosphorus Pentafluoride. PFl_5. Colorless, strongly fuming gas, with a marked odor; made from arsenic trifluoride and phosphorus pentachloride.

Phosphorus Pentaselenide. PSe_5. Dark-red, glassy substance, crystallizing from carbon tetrachloride in black needles, decomposing in moist air; made by heating phosphorus and selenium in a carbon dioxide atmosphere.

Phosphorus Pentasulphide. P_2S_5. Grayish-yellow crystalline mass, or thin, almost colorless crystals; mpt. 274°–276° C., bpt. 530° C.; soluble in caustic alkalies and ammonium hydroxide; made by heating phosphorus (2 at.) and sulphur (5 at.) together in an atmosphere of carbon dioxide.

Phosphorus Pentoxide. P_2O_5. Phosphoric anhydride; white powder, becoming glassy on fusion; odorless, with a strong acid taste, sublimable; extremely hygroscopic, therefore used extensively as a dehydrating agent; formed by burning phosphorus in a free supply of air or in oxygen; very soluble in water, forming PHOSPHORIC ACID (q.v.).

Phosphorus Sulphobromide. See PHOSPHORUS SULPHOCHLORIDE.

Phosphorus Sulphochloride. $PSCl_3$. Colorless, strongly refractive, mobile, fuming liquid of unpleasant odor. It dissolves sulphur and phosphorus. It is made by heating phosphorus with sulphur monochloride, S_2Cl_2. The corresponding bromine and fluorine products are very similar in properties and are made in the same general way.

Phosphorus Sulphofluoride. See PHOSPHORUS SULPHOCHLORIDE.

Phosphorus Tribromide. PBr_3. Colorless liquid; bpt. 175° C., sp. gr. 2.7; made by treating phosphorus with bromine; used in the synthesis of organic compounds.

Phosphorus Trichloride. PCl_3. Fuming, colorless liquid, of a sharp, penetrating odor; sp. gr. 1.61; made by passing chlorine over gently heated phosphorus; decomposed by water, forming hydrochloric and phosphorus acids; used as a reagent for testing for hydroxyl.

Phosphorus Trifluoride. PF_3. Colorless, non-fuming gas, decomposes with water into phosphorous and hydrofluoric acids; made by heating copper phosphide, Cu_3P_2, with lead fluoride.

Phosphorus Triiodide. PI_3. Red crystals; mpt. 55° C.; made by treating phosphorus with iodine; used in the synthesis of organic compounds.

Phosphorus Trioxide. P_2O_3 or P_4O_6. Phosphorus anhydride; white, voluminous, easily volatile substance of a garlic-like odor and acid taste, obtained in large crystals by sublimation in a vacuum; mpt. 22.5° C. The action of light causes it to change rapidly to yellow and finally red. It is formed by the incomplete combustion of phosphorus in air.

Phosphorus Triselenide. PSe_2. Similar to the trisulphide; robin-red solid, taking fire in the air, soluble in caustic potash; made by fusing phosphorus with sulphur.

Phosphorus Trisulphide. P_2S_3. Grayish-yellow, crystalline substance; mpt. 167° C.; soluble in caustic alkalies and ammonium hydroxide; made by heating phosphorus and sulphur together in an atmosphere of carbon dioxide.

Photantitypimeter. Form of actinometer introduced by Marchand 1860, in which the solar radiation falls upon a quantity of chemicals and causes a slow disengagement of carbonic acid gas, whose volume is an index of the power of the solar rays.

Photius, d. ab.891. Patriarch of Constantinople 861; great scholar, whose extensive works upon ancient literature, lexicography, and ecclesiastical history are of value, as rescuing from oblivion names and facts which would otherwise have perished in the destruction of the libraries of Constantinople and the East. He was involved in violent quarrels with Rome, and was deposed 867 and 886.

Photochromoscope. Instrument invented by F. E. Ives for viewing specially prepared photographs, known as chromograms, in such a way as to reproduce perfectly all the colors of the original object. The Ives method consists, first, of a reproduction, in a special camera, of a photograph consisting of three distinct images, which, by the differences in their light and shade, constitute a color record, each image, in fact, representing one of the three fundamental color sensations, red, green, or blue-violet; and second, of viewing this triple photograph in the photochromoscope, which is practically a reversal of the camera, and blends the three images into one so perfectly that one seems to be viewing the object itself.

Photo-Engraving. From a silver collodion negative a gelatin positive is made, from which a bitumen mold on glass is prepared. From the latter a plaster-of-Paris mold is made, in which type-metal is cast. From this impressions in ink on paper are made. This is the Moss method. Another process, more commonly used, is to expose to the light a gelatin plate, sensitized with potassium bichromate, beneath a collodion negative. The unaffected gelatin is dissolved by water and the film transferred to a polished zinc or copper plate, which is then treated with an etching liquid, the former with nitric acid, the latter with perchloride of iron. The film is also produced directly upon the metal plate. It is also produced by exposing to the light, under a silver negative, a plate coated with bitumen, the unaffected bitumen being dissolved by turpentine. In these processes, the silver negative is made from a line drawing. When a picture with gradation of color is to be reproduced, a transparent screen, with network of black lines upon it, is interposed between the negative and the sensitized plate, upon which fine dots are thus produced. This is the half-tone process. See PHOTOGRAVURE.

Photographic Object-Glass. Object-glass so formed as to bring the actinic rays of the spectrum to a common focus, instead of the visual rays.

Photographic Survey OF THE HEAVENS. April 16, 1887, by invitation of Admiral Mouchez, an international congress assembled at Paris for the purpose of considering plans for a photographic survey of the entire heavens on a uniform system. The scheme then inaugurated involved apportioning the work among different observatories, the construction of special instruments, and the settlement of innumerable questions of detail, to insure uniformity. All this required time; the work is now fairly under way, but many years will be required for its completion. Two distinct series of plates are to

Equatorial Photographic Telescope at Melbourne Observatory.

be taken: 1, a series with sufficiently long exposure to show all stars to the 11th magnitude inclusive, for the formation of a catalogue; 2, a series with long exposure, 40 minutes, for purposes of a chart. The work has been distributed among 18 observatories, but does not include a single observatory of the U. S. On the other hand, an independent photographic survey is being conducted at the Harvard College Observatory with a splendid instrument of 24 in. aperture, the intention being to obtain with this single instrument a chart of the entire heavens.

Photography. Art of producing pictures by light on sensitized surfaces. In 1802 Wedgwood, in England, on paper moistened with a solution of silver nitrate, reproduced a design on translucent paper laid upon it and exposed to light. Davy found that silver chloride was more sensitive. In 1814 Niepce discovered that an asphaltum film on metal or glass, exposed to light under a drawing, was rendered insoluble in oil of lavender and petroleum. He thus produced pictures in

a camera obscura which he named Heliographs. He became associated with Daguerre 1829. The latter, in 1839, invented the DAGUERREOTYPE (q.v.). The Callotype was patented by W. H. Fox Talbot 1841. Paper sensitized with silver iodide, after exposure in a camera, was developed by silver nitrate and gallic acid, the unaffected silver salt being removed by sodium thiosulphate, a suggestion of Sir John Herschel. The paper was then waxed to render it translucent, and constituted a negative, which was exposed to light upon similarly prepared paper to produce a positive. Sir John Herschel suggested the use of glass plates. Niepce Saint-Victor introduced the use of egg albumen containing the silver salts for coating glass negatives and paper positives.

The collodion process was invented by Scott Archer of England 1851. Pyroxyline is dissolved in alcohol and ether, containing cadmium and potassium iodides, and with this a glass plate is coated. This is dipped in a water solution of silver nitrate, which produces silver iodide in the film. After exposure in the camera, the picture is developed by a solution of ferrous sulphate or pyrogallic acid which causes a deposition of metallic silver where the light has acted, thus producing a negative. The unaffected silver salts are removed by a water solution of sodium thiosulphate. The paper for the positives contains salt and is sensitized with nitrate of silver, producing silver chloride. This is exposed to the light under the negative, which reduces the silver salts to metallic silver, producing a positive. This is toned or colored in a water solution of gold chloride, the unaltered silver salts dissolved by sodium thiosulphite and thoroughly washed.

The gelatin dry plates are made of an emulsion of gelatin in water, with silver chloride, bromide, or iodide, dried upon glass plates. The emulsion was used successfully 1871 and the dry plates ab.1878. They are used and treated similarly to the collodion plates. Orthochromatic and isochromatic gelatin dry plates contain small quantities of eosin or other coal-tar dyes and reproduce the true shade relations of colors; they were first made by Vogel 1873.

Color photography, reproducing colors, has not yet been effected; Gabriel Lippman of Paris claimed to have accomplished this in 1891, but no valuable results have been obtained.

Color printing has been accomplished by plates made by interposition of a red, green, or blue-violet screen in the camera, which permits the passage of the respective rays. By superprinting with the respective pigments the original colors can be obtained. See FERROTYPE, BLUE-PRINTING and PLATINOTYPE.

AMBROTYPE.—This is silver negative on glass with a black background of paper or cloth.

ARTOTYPE.—A glass plate is coated with albumen and potassium bichromate, dried at 110° F., and the albumen rendered insoluble by exposure to light. It is then coated with gelatin and potassium bichromate, dried at 110° F., and coated with gelatin, isinglass and ammonium bichromate, with a small addition of chrome alum and potassium bicarbonate, and dried as before. The plate is then exposed under the negative, by which the transmitted light renders the gelatin insoluble. It is now immersed in water to remove the unaltered bichromates. Paper prints are made from this in the lithographic press, the ink adhering only to the altered gelatin. Two thousand impressions have been taken from a plate. This process was perfected by Joseph Albert of Munich, and is sometimes called the Heliotype, Photogelatin, and ALBERTYPE (q.v.).

Photogravure. In making a plate for this process, a silver collodion positive on glass is made from a silver collodion negative on glass. A gelatin film, containing lampblack and sensitized with potassium bichromate, on tissue paper, is exposed to the light under the positive. The resulting negative is laid, face downward, on a copper plate, coated with rosin, and the paper stripped off, leaving the gelatin film attached to the copper plate. This is treated with hot water, which dissolves the gelatin which has not been affected by the light, leaving a gelatin negative on the plate. This is then treated with perchloride of iron, which etches the copper, more or less, according to the thickness of the gelatin, thus reproducing a positive on the copper. This is frequently finished by handwork and then steel faced by an iron solution to increase its durability. Prints are made on paper from this in a copperplate press.

Photolithography. A film of bichromatized gelatin on paper is exposed to light under a negative and the unaltered bichromate washed out with water. The film is then inked with greasy printers' ink, which adheres only to the gelatin rendered insoluble by light. This is laid face downward on the lithographic stone, upon which it is pressed, thus transferring the ink to the stone. The paper is removed by rubbing with water. A water solution of gum arabic fills the pores of the uninked stone. The picture in ink is thus left upon the stone to which printers' ink adheres and may be transferred to paper in the press.

Photo-Mechanical Printing (WOODBURYTYPE). A layer of gelatin sensitized with potassium bichromate is exposed under a negative and the unaltered gelatin dissolved in warm water, leaving a gelatin relief. This is impressed in a sheet of lead, thus forming a mold. This is filled with colored gelatin, covered with paper and a glass plate and pressed. The gelatin cast adheres to the paper and is hardened by alum solution. The Stannotype, also invented by Woodbury, is made in a similar manner, a carbon gelatin mold being lined with tinfoil. In the Phototype, Heliotype and Collotype processes the gelatin relief is printed from with printers' ink. See AUTOTYPE.

Photometer. Instrument for comparing the illuminating powers of two sources of light. The two lights are placed at such distances from the illuminated surface as to produce the same effect, as judged by the eye. In Rumford's photometer a vertical rod casts two shadows on a screen; the distances are so adjusted that the illumination of these shadows shall be

Rumford's Photometer.

equal; the illuminating powers of the sources are then proportional to the squares of their distances from the screen. In Bunsen's the sources of light are placed at such distances on opposite sides of a translucent disk, having on it a paraffined spot, that the illumination, as viewed from each side successively, appears to be the same. The same law of distance applies in this case also.

Photometer, MERIDIAN. Designed by Pickering. The instrument is mounted in the meridian with appliances so arranged that the light of each star as it culminates may be compared with that of Polaris.

Photometer, POLARIZING. The light is passed through a Nicol's prism with apparatus so arranged that by turning the prism the light may be reduced to the same brightness shown by a standard star in the same field. The latter may be a real star or an artificial one.

Photometer, WEDGE. The important feature is a wedge of colored or neutral-tinted glass: the star's light is measured by the thickness of the wedge necessary to extinguish it.

Photometry. Science of measuring and comparing the relative amount of light emitted by different sources. The methods generally consist in measuring the distances at which two sources produce equal intensities of illumination. Hence by the application of the law of inverse squares the ratio of the quantities of light emitted can be determined. The unit in photometric measurement is the quantity of light emitted by a standard candle. This is a spermaceti candle, six to the pound, each burning 120 grains per hour. The Paris Electrical Standards committee in 1884 recommended as the unit the light emitted by one square centimeter of melted platinum at its temperature of solidification.

Photometry, STELLAR. Measurements of the amounts of light, or relative brightness, of stars.

Photonephograph. Apparatus (consisting essentially of twin cameras adjustable at any angle of elevation and azimuth) for taking simultaneous photographs of a cloud as seen from two points on the earth; so named by Abney 1883.

Photophone. Crystalline selenium when acted upon by light increases in electric conductivity, sometimes even tenfold. Light of varying intensity produces corresponding changes of conductivity. The photophone is constructed on this principle.

Photosphere OF THE SUN. Luminous mass which forms the visible disk. It consists of a mass of luminous clouds floating in the sun's atmosphere.

Phototachy, METRICAL. Method of determining the sun's distance by direct measurement of the velocity of light, and of the time which it requires to pass from the sun to the earth.

Phototaxis. Habit of certain organisms of placing themselves in definite positions with reference to the incident rays of light, as in the zoöspores of some *Algæ*.

Phototonic. Action of light upon certain plants, increasing or inducing irritability.

Photozincograph. See PHOTO-ENGRAVING.

Phragma. Membrane stretched across the hollow stems of the *Equisetaceæ* at each node; also dissepiments of certain fruits.

Phragmacone. Chambered portion of the internal shell of a BELEMNITE (q.v.).

Phranza, GEORGE, 1401–1478. Byzantine historian. His *Chronicon*, written after the fall of Constantinople and pub. 1796, extends 1259–1477.

Phrenology. So-called system of psychology, founded by GALL (q.v.) and developed by his followers. At one time it had considerable popularity, but has now fallen into disrepute. It was based upon four principles: 1. The brain is the organ of mind. 2. The mental powers can be analyzed into a definite number of independent faculties. 3. These faculties are innate, and each has its seat in a definite region of the brain. 4. The size of each of these regions is proportionate to the power of manifesting the faculty associated with it. Gall divided mind into 26 faculties, and mapped out a corresponding number of areas on the skull: this number was varied by succeeding

AFFECTIVE.

I. PROPENSITIES.—1. Amativeness; 2. Philoprogenitiveness; 3. Inhabitiveness or Concentrativeness; 4. Adhesiveness; 5 Combativeness; 6. Destructiveness and Alimentiveness; 7. Secretiveness; 8. Acquisitiveness; 9. Constructiveness. II. SENTIMENTS.—10. Self-esteem; 11. Love of Approbation; 12. Cautiousness; 13. Benevolence; 14. Veneration; 15 Firmness; 16. Conscientiousness; 17. Hope; 18. Wonder; 19. Ideality; 20. Wit; 21. Imitation.

INTELLECTUAL.

I. PERCEPTIVE.—22. Individuality; 23. Form; 24. Size; 25. Weight; 26. Coloring; 27. Locality; 28. Number; 29. Order; 30. Eventuality; 31. Time; 32. Tune; 33. Language. II. REFLECTIVE.—34. Comparison; 35. Causality.

phrenologists, the maximum number of faculties and areas, 43, being reached by Fowler of New York. The objections to this system are many and unanswerable. Psychologically, the division of mind into a number of independent faculties is admittedly impossible, while the mapping out of sharply defined areas of the brain which can be determined by external examination of the skull has been shown by the modern researches in brain physiology to be in direct opposition to the facts. At the same time there is localization of brain function, and Gall's system of phrenology must be given the credit of being the first systematic attempt on empirical lines to determine its details.

Phryganidæ. See TRICHOPTERA.

Phrygia. Region of central Asia Minor, whose limits varied at different times. The original inhabitants were probably Thracian. The earliest Greek music came in part hence.

Phrygian Language. Only known by glosses and inscriptions, and was probably an Indo-European tongue, closely related to the Armenian.

Phryne, 4th cent. B.C. Bœotian courtesan, famous for her beauty; said to have been painted by Apelles, and copied in Praxiteles' Cnidian Venus.

Phrynichus, 5th cent. B.C. Attic tragic poet.

Phrynichus, ARABIUS, 2d cent. Greek rhetorician and grammarian.

Phrynidea. See PEDIPALPI.

Phthaleins. Compounds formed by heating phenols with phthalic anhydride. See FLUORESCEIN. The simplest member of the class is phenol phthalein.

Phthalic Acids. $C_6H_4:(COOH)_2$. Dicarboxyl derivatives of benzene; known in three forms: the ortho-, called phthalic acid, the meta-, called isophthalic acid, and the para-, called terephthalic acid. The ortho acid is prepared by the action of oxidizing agents on tetrachlornaphthalene. It crystallizes in short prisms or plates; mpt. 184° C.; soluble in alcohol and water. On heating it is converted into the anhydride. It is used in the manufacture of phthalic anhydride.

Phthalic Anhydride. $C_6H_4(CO)_2O$. White solid, crystallizing in magnificent prisms, melting at 128° C.; prepared by heating orthophthalic acid, and used in preparing the phthaleins. See FLUORESCEIN and EOSIN.

Phthiotis. S.e. Thessaly; birthplace of Achilles.

Phthisis. Any wasting disease, but now usually applied to a disease destroying the tissue of the lung and, for the most part, synonymous with pulmonary consumption. The disease is caused by the ravages of a microphyte, the bacillus of tuberculosis (Koch's bacillus). The disease when well established usually results fatally, and more deaths are attributed to this than to any other single cause. Since its cure is so difficult, especial pains should be taken to prevent its spread. The prevention of the diffusion of the bacilli by disinfecting the expectoration of a consumptive and all with which it comes in contact should be carefully attended to. Then there should be personal care of one's health, so as to resist the onslaught of any of the bacilli that may find lodgment in the lungs. See BACILLUS TUBERCULOSIS, KOCH'S LYMPH, and CONSUMPTION.

Phycochromaceæ. See CYANOPHYCEÆ.

Phycocyanin. Characteristic bluish-green pigment contained in the cells of the *Cyanophyceæ*. It is soluble in hot water.

Phycoerythrine. Red soluble coloring matter contained in the *Florideæ* (*Rhodyphyceæ*) or red *Algæ*.

Phycology. Study of seaweeds; Algology.

Phycomycetes. Sub-class of *Fungi*, mostly unicellular or cœnocytic organisms with both sexual and asexual modes of propagation, including many of the moulds.

Phycophæin. Reddish-brown substance obtained from certain of the olive-brown seaweeds.

Phycoxanthin. Yellow substance obtained in alcoholic solution from the olive-green seaweeds and diatoms.

Phylactery. Small square box, inclosing certain texts, worn by the Jews during the hours of morning prayer, on a literal interpretation of Exod. xiii. 9, 16.

Phylactolæmata (LOPHOPODA). Ectoproctous *Bryozoa* with epistome and a horseshoe-shaped lophophore. They are all (except *Rhabdopleura*) fresh-water forms, colonial, and without polymorphism. *Cristatella* lives as free-moving colonies; *Plumatella* as fixed colonies.

Phylæ. Attic tribes; at first 4, then 10, finally 12.

Phylarchus, 3d cent. B.C. Historian of Greece 280–220 B.C. Fragments of his work survive.

Phyllidiobranchia. In this group of Opisthobranchs the ctenidia are aborted, and special gills are symmetrically developed from the mantle. See TECTIBRANCHIATA.

Phyllirhoë. Nudibranch belonging to the sub-group GYMNOBRANCHIA (q.v.).

Phyllite. Old name given to clay slate or argillaceous schist.

Phyllocladia. Branches which imitate leaves, and in many cases perform the functions of leaves, as with Cacti.

Phyllocyanin. Greenish-blue substance, obtained from the alcoholic solution of chlorophyll by the action of ether and hydrochloric acid.

Phyllocysts. Cavities in *Hydrophyllia*.

Phyllodium. Leaf-like organ developed from the sides of a petiole, as in many Acacias.

Phyllody. Transformation of floral organs to leaves.

Phyllome. Modified leaves, especially those which perform other than their normal functions.

Phyllophore. Leaf-bearing organs.

Phyllopoda (BRANCHIOPODA). Crustaceans with elongated, segmented body, with numerous, lobed, biramous, leaf-like feet, usually absent on the posterior segments of the abdomen, except the terminal one, where a caudal fork is often present. The posterior pair of antennæ act often as locomotor organs. Some forms have a flat carapace, others have a laterally compressed bivalved shell. Some species produce parthenogenetic summer generations. There are two sub-orders, *Branchiopoda* and *Cladocera*.

a, Sea hare (*Branchipus grubei*), male; *b*, female; *c*, Brine shrimp (*Artemia salina*), male.

Phyllopodium. Petiole of a simple leaf, or petiole and rachis of a compound leaf.

Phyllorhina. Tribe of *Microcheiroptera*, characterized by having cutaneous appendages spread on the nose, consisting of a horseshoe-shaped anterior leaf, a medium saddle, and a posterior, vertical, lancet-shaped leaf. The RHINOLOPHIDÆ, MEGADERMIDÆ, and PHYLLOSTOMIDÆ (q.v.) are the families included.

Phyllosiphoneæ. Family of minute green *Algæ* of the order *Siphonaceæ*, occurring within the tissues of other plants.

Phyllostomidæ. See BATS.

Phyllotaxy. Study of arrangement of leaves on a stem.

Phylloxanthin. See XANTHOPHYLL.

Phylloxera. Genus of plant lice of ab. 20 species (nearly all of e. N. America), which form galls on various plants, principally on the leaves. *P. vastatrix* of the grape mainly attacks the roots. It was first found in N. America 1854, and was first described by two American entomologists, Asa Fitch and C. V. Riley 1871. It had previously been introduced into France 1863, where the mild winters favored its development; as a result the vines succumbed, being less resistent than those of America, which have become habituated to this parasite. By 1874 the French Government, thoroughly alarmed, offered 300,000 francs for a remedy. The measures that have proven most practical have been the enforcement of quarantine regulations against infected districts, and the introduction of hardy American stock. In 1890, more than 700,000 acres had been replanted with American vines. This pest has also been introduced into California. The biology of Phylloxera is most interesting: these lice are so small as to be barely visible, and produce generation after generation of wingless (larval) parthenogenetic females in the root galls. About midsummer the generations become winged and appear above ground, laying eggs of two sizes on the leaves. The large eggs hatch into true females, the small ones into males; both sexes are mouthless, and have only the function of laying fertilized eggs, one from each female. Those laid late in fall rest until spring, but the earlier ones hatch in a short time into prolific, agamic females, that start the cycle over again. If the winters are cold, the larvæ hibernate. On some vines the agamic generations are produced in leaf-galls instead of root-galls. Carbon bisulphide, potassium sulphocarbonate and emulsions of petroleum are applied to the vines.

Life-history of Phylloxera.

A winged female; a wingless female from the root; under surface of a vine-leaf, showing the wart-like galls; an enlarged section of one of the galls, showing the eggs within it; upper surface of a vine-leaf, showing the openings of the galls; some of the roots of the vine, showing the nodosities caused by the parasites.

Phylogenetic Variation. Congenitally acquired improvements of the characteristics inherited by an organism from its ancestors, provided such improvements are transmitted to posterity.

Phylogeny (PHYLOGENESIS). Race development; or, most broadly, the development of the different species, genera, families, orders, classes, etc., of organisms, according to the evolutionary view, from the simple and original parent species. The species of a genus are more nearly related and have more recent ancestors than species of different genera, and these in turn than species of different families, and so on. Compare ONTOGENY.

Phylum. Branch or large division in a system of classification of organisms.

Phyogemaria. Small gonoblastidia of the siphonophore *Velella*.

Physalidæ. Sub-order of the Siphonophores, characterized by possessing a very large pneumatocyst (as in the Portuguese man-of-war), with no nectocalyces or hydrophyllia, but with clusters of large and small nutritive polyps, and with gonophores on the ventral side of the sac; also with very long and strong tentacles. The female buds become free medusæ.

Portuguese Man-of-war (*Physalia pelagica*).

Physeteridæ. See CATODONTIDÆ.

Physic, INDIAN. Perennial white-flowered herbs of the genus *Porteranthus*, natural family *Rosaceæ*, natives of the e. U. S.

Physical Diagnosis. Method of investigating the nature of a disease by the aid of the senses of the examiners as distinguished from the symptoms detailed by the patient.

Physical Education. This is the system of gymnastics, for the training of muscles of the human body and its consequent healthy development. Throughout all time the strengthening of the body, as a means of defense and attack, was necessary for self-preservation. The early Greeks were skillful with weapons of war and later extended their training, which resulted in the noted GREEK GAMES (q.v.). These were replaced by exhibitions of skill by their slaves. The Romans closely followed the Greeks in their athletics. In the Middle Ages exercise was practiced for its usefulness in war. In the 17th and 18th centuries some efforts were made to encourage gymnastics. Early in the present century JAHN (q.v.) organized gymnastic societies in Germany and invented much of our modern apparatus, and is considered the founder of the modern system, which has extended to U. S. and other countries. The Swiss system of Clias was introduced in France, Italy and England. Ling invented the Swedish system, which begins with simple movements, gradually extending these to more complex exercises. England developed the sports and games. In U.S. gymnasiums were established by schools and colleges on the German plan. The Harvard system was originated by Dr. Sargent in 1869 and consisted of the use of developing apparatus, regulated for the individual, the movements being the Swedish. ANTHROPOMETRY (q.v.) is used to guide the exercise. More than 1,000 such gymnasiums have been built in U.S.

Physical Geography. See GEOGRAPHY, PHYSICAL.

Physicians, ROYAL COLLEGE OF. Founded in London 1518; that of Edinburgh 1617, chartered 1681. Salerno was already termed the Hippocratic City in 9th century. The Arabian medical authors began to be known in Europe through translations ab. 1050.

Physick, PHILIP SING, M.D., 1768–1837. Prof. Univ. Pa. 1805–31; "father of American surgery."

Physic Nut. Fruit of *Curcas purgans*, found in the E. Indies. It is a small bush with a milky juice; the seeds yield an acrid oil, called Jatropha-oil, used as a purgative, and in lamps.

Physics. That department of science which treats of matter in its relations to energy. It investigates the phenomena and properties of matter and energy, states the results in terms of some definite measurement, and explains them according to certain principles or laws, regarded as the laws of nature. It was formerly called Natural Philosophy. It includes Mechanics, Gravitation, Cohesion, Elasticity, Acoustics, Optics, Heat, Electricity and Magnetism; the properties of masses and molecules.

Physiocrates. School of economists in France in 18th century. They considered agriculture as the only truly productive industry, and advocated a single tax laid upon land.

Physiognomy. Determining of qualities of mind by external marks, which in primitive conditions we find attempted as a magical and divinatory, rather than a rational process. Thus in China the physiognomist practices his art in connection with palmistry and other methods of fortune-telling, and the various parts of the countenance are supposed to furnish an index for different years in a man's existence. A knowledge of the origin of the features is the necessary basis for a true physiognomy, which is gradually being developed by the aid of modern evolutionary science.

Physiography. Description of Nature. See MOUNTAIN STRUCTURE and OROGRAPHY.

Physiological Chemistry. Chemical principles as concerned in the life and structure of animals and plants.

Physiologus. Greek writing of great popularity in the Middle Ages and probably written at Alexandria in the second century. It described all the animals of creation, real or fabled, and was illustrated by drawings. It was valuable for the moral allegories it contained, and was translated into many languages.

Physiology. Science that investigates the functions of a living organism in a normal condition; if the function is perverted from the normal its investigation belongs to PATHOLOGY (q.v.). After the speculative period of the ancient Greeks, Hippocrates, the father of medicine, 450 B.C. was the first to attribute disease to natural causes and not to special visitations of the gods. Aristotle, the father of natural history, 350 B.C. dissected dead animals. Galen, A.D. 150 experimented with living animals, and investigated the blood and the nervous system. Harvey discovered the circulation of the blood 1616. Haller, the father of the science of physiology, made extensive contributions in the 18th century, and Muller in the first half of the present century broadened out the science. The invention of the microscope was a most important adjunct to progress.

Physiology, VEGETABLE. This discusses the functions of the organs of plants.

Physoclisti. Group of Teleostean fishes, having no ductus pneumaticus, and with the pelvic fins usually far forward under the breast. Here are included the *Lophobranchii*, *Plectognathi*, *Anacanthini*, and *Acanthopteri*. The two last groups, except *Pleuronectidæ* and *Pediculati*, but including also many Physostomes, are known as the *Teleocephali*. See TELEOSTEI.

Physograda. See SIPHONOPHORA.

Physophoridæ. Sub-order of the Siphonophores, characterized by a short stem (or long in *Agalmidæ*), having a terminal pneumatophore, beneath which usually are two or more rows of nectocalyces; then follow the polyps (nutritive and generative), and usually also dactylozooids and hydrophylia alternate regularly with them. Each polyp bears a long branched tentacle.

Physopoda, or THYSANOPTERA. Tribe of *Pseudo-neuroptera*, characterized by having a small, narrow, flat body, wings covered with hairs, and the mouth parts adapted for sucking. Thrips, frequenting the flowers of the chicory, is an example.

Physostomi (PHYSOSTOMATA, MALACOPTERI, CYCLOIDEI). Sub-order of Teleostean fishes, having soft fins, comb-like gills, and separated jaw-bones. The pelvic fins are abdominal in position when present. The swim-bladder always has a ductus pneumaticus. There are two sub-groups, the APODES and ABDOMINALES (q.v).

Phyto Chemistry. Chemistry of plants. It deals with the active principles of plants, the formation and transformation of their constituent parts.

Phytogeny. Study of the development of plants or their organs from pre-existent forms.

Phytography. Rules governing the description of plants.

Phytolaccaceæ. Natural family of flowering plants, of the class *Angiospermæ* and sub-class *Dicotyledons*, comprising 20 genera and ab. 60 species, widely distributed in the tropical and temperate regions of both hemispheres; called the Pokeweed family.

Phytolite. Fossil plant.

Phytology. See BOTANY.

Phytomastigoda. See ISOMASTIGODA.

Phytomer. Unit of structure; in more highly organized plants an internode, terminated by a node which bears one or more leaves; also termed Phyton.

Phytonomy. Plant physiology.

Phytopathology. Study of plant diseases.

Phytophaga. Tribe of *Terebrantia*, in which the larvæ feed on plants and resemble caterpillars, but with a greater number of abdominal feet. The adult has a sessile abdomen, which carries a short terebra in the Saw-flies, or Leaf-wasps, that deposit their eggs in the epidermis of leaves, and a long terebra in the Wood-wasps, that deposit in holes bored in wood by means of the ovipositor.

Phytophaga. See EDENTATA.

Phytophthires. Sub-order of *Rhynchota*, having two pairs of membranous wings (the female is usually apterous). The surface of the skin is often covered by a waxy deposit. The Bark-lice (*Coccidæ*), Plant-lice (*Aphidæ*), and Leaf-fleas (*Psyllidæ*) are included.

Phytotomy. Plant anatomy.

Piacenza. Old city of n. Italy, on the Po, 43 m. s.e. of Milan; founded 219 as Placentia; taken by Totila 546; sacked by Sforza 1447; joined to Parma 1545. It has some old and notable churches and palaces, and a town library of 120,000 vols. Pop. ab. 37,000.

Piacenza, DUKE OF. See LEBRUN, C. F.

Pia Mater. Innermost of the three coverings of the brain and spinal cord. It is a vascular net work lightly held together covering the entire surface. It sends arterial branches into the gray matter of the brain.

Pianoforte. An instrument of music consisting of a system of metal strings stretched over a resonance box, which are sounded by being struck with hammers covered with felt and manipulated by a keyboard. As an apparatus embodying all these principles, its history is compassed by less than two centuries; but the origin of each separate principle is lost in the darkness of antiquity. Immediate precursors of the pianoforte were the instruments used in the middle ages and till 1800, variously called clavecin, clavichord, clavicembalo, clavicymbalum, cembalo, gravicembalo, clavicytherium, virginal, spinet and harpsichord. There were differences of shape, size and efficiency in these instruments, but the principles of tone production were but two: The strings were sounded either by being snapped by bits of elastic material (quills, sole leather, etc.) placed in uprights called jacks and pushed past the strings by pressure on the keys; or by blows against the strings delivered by bits of brass, called tangents, with which the inner end of the keys were armed. The latter principle lies near to that of the pianoforte hammers, but the instruments in which it was employed (clavichord, clavecin) were feeble in tone and not adapted to the concert-room. There being no control of the dynamic intensity of the tones in the other instruments of which the highest type was found in the harpsichord, except by mechanical contrivances, musicians and instrument makers sought a remedy by changing the mode of tone production and hammers controlled by keys were the result. The priority of invention belongs to an Italian, CRISTOFALI or CRISTOFORI (q.v.), who produced an attachment to the harpsichord 1711 by which he could have tones *piano e forte*, at will. A Frenchman, Marius, and a German, Schrotter, seem to have arrived at similar results 1716–17.

Piarists. R. C. teaching order, founded 1599 by Joseph of Calasanza (1556–1648); confirmed 1617; most prominent in Austria and Poland.

Piassava. Coarse fibrous substance obtained from the Brazilian palm-trees *Leopoldinia piassaba* and *Attalea funifera*. It is used in making brushes for street sweeping.

Piast. Polish dynasty ab.850–1370.

Piastre. 1. Spanish "piece of eight" (reals), or silver dollar; worth ab. a U. S. silver dollar. 2. Italian scudo, worth

Spanish Piastre.

ab. 5 francs. 3. Small Turkish coin, worth ab. 4 cents; 1, 2, 5, 10, 20 piastres are also made.

Piatt, DONN, 1819–1891. American journalist. *Men who saved the Union*, 1887.

Piatt, JOHN JAMES, b. 1835. Poet and journalist; U. S. Consul at Cork 1882–94.—His wife, SARAH MORGAN (BRYAN), b. 1836, is also a poet.

Piazzi, GIUSEPPE, 1746–1826. Prof. of higher mathematics at Palermo 1780, where he founded an observatory and formed a valuable catalogue of 7,646 stars. On Jan. 1, 1801, he discovered the first of the Asteroids, Ceres.

Pi-beseth, or BUBASTIS. Ruined city on the Nile, notable for its remains of the 4th and later Egyptian dynasties.

Pibroch. Bagpipe music of the Scotch, chiefly of martial character: mainly recent, and all since 1594.

Picard, ALFRED, b. 1844. French engineer.

Picard, JEAN, 1620–1682. Founder of the Paris Observatory. He executed the first accurate measurement of an arc of a meridian, between Amiens and Malvoisin.

Picard, LOUIS BENOIT, 1769–1828. French actor and manager, author of many comedies. *Théâtre*, 9 vols., 1821–32.

Picardy. Former French province, between the English Channel and Champagne.

Picariæ. See SCANSORES.

Picayune. Spanish half-real or sixteenth of a dollar, long circulating in U. S.; so-called by the Caribs and in La.

Piccini, NICOLA, 1728–1800. Italian opera composer of many operas, whose rivalry with Gluck caused a musical war in Paris 1778.

Piccolo. Small FLUTE (q.v.), sounding an octave higher than the common flute.

Piccolomini, MARIA, b. 1834. Italian operatic singer, celebrated more for her charms of person than for voice or skill. She visited America 1858. In 1860 she married the Marquis Gaetain and retired.

Piccolomini, OTTAVIO, 1599–1656. General in the 30 Years' War, and for some years in Spanish service in the Netherlands; field marshal of the Empire 1648.

Pichardo y Tapia, ESTEBAN, 1799–1879. Cuban geographer and poet.

Pichegru, CHARLES, 1761–1804. French general, conqueror of Holland 1795; pres. Council of 500, 1797; deported for conspiracy. He escaped to England 1798, continued his intrigues, plotted with Cadoudal to murder Bonaparte, was arrested in Paris Feb. 28, 1804, and found dead in prison April 6.

Pichincha. Volcanic peak of the Andes, in Equador, altitude 15,918 ft. Beneath it Sucre defeated a Spanish force 1822.

Pichler, CAROLINE (GREINER), 1769–1843. Austrian novelist and playwright. *Agathokles* 1808; *Denkwürdigkeiten*, 4 vols., 1844.

Pichler, JOHANN, 1734–1791. German engraver, mostly of intaglios; in Rome from 1763.

Pichon, JEROME FRÉDÉRIC, BARON, 1812–1896. French author; pres. Societé des Bibliophiles from 1844.

Picidæ (PICOIDEÆ, PICI. CELEOMORPHÆ, SAUROGNATHÆ, WOOD-PECKERS). Group of Scansores, having strong, chisel-shaped, pointed beaks, without cere. The toes are strongly clawed; the tail is stiff, to assist in climbing. The tongue is long and horny, with hooks at its tip, and can be protruded a considerable distance, owing to the peculiar mechanism of the hyoid bone, whose horns arch up over the skull to the base of the beak. They feed on insects. Here also belong the Toucans and Wry-Necks.

Pick, ARNOLD, b. 1851. Prof. Prague 1886; writer on Neurology and Psychiatry.

Pickens, ANDREW, 1739–1817. Revolutionary officer, distinguished at Cowpens 1781; M.C. from S. C. 1793–95.—His grandson, FRANCIS WILKINSON, 1805–1869, was M.C. 1834–43, U. S. Minister to Russia 1858–60, and Gov. of S. C. 1861–62.—His cousin, ISRAEL, 1780–1827, was M.C. from N. C. 1811–17, Gov. of Ala. 1821–25, and U. S. Senator 1826.

Pickerel. See HAPLOMI.

Pickerel-Weed. Showy-flowered marsh plants of the genus *Pontederia*, natives of America.

Pickering, EDWARD CHARLES, b. 1846. Great-grandson of Timothy; prof. Mass. Inst. of Technology 1868–76; director of the Observatory at Harvard since 1876. Under his management it has reached a high state of efficiency. Besides much other valuable work, he has been conducting an extensive series of photometric and photographic investigations.

Pickering, TIMOTHY, 1745–1829. Colonel in Revolutionary War; Adjutant-gen. 1777; Quartermaster-gen. 1780–85; U. S. Postmaster-gen. 1791–95; Sec. of War Jan. 1795, and main founder of the Military Academy; Sec. of State 1795–1800; U. S. Senator from Mass. 1803–11, and conspicuous as a Federalist; M.C. 1813–17; active through life in public affairs.—His son, JOHN, LL.D., 1777–1846, City Solicitor of Boston from 1829, was noted as a philologist. *Greek Lexicon*, 1826; *Indian Languages*, 1836.—His nephew, CHARLES, M.D., 1805–1878, was naturalist to the Wilkes Exploring Expedition 1838–42. *Races of Man*, 1848; *Animals and Man*, 1854; *Distribution of Plants*, 1861.

Picketing. Custom of employés, during a strike, of posting certain of their number at the approach to their places of usual employment, to explain to other workmen the circumstances of the case, and try to dissuade them from going to work there.

Pickett, ALBERT JAMES, 1810–1858. Historian of Alabama 1851.

Pickett, GEORGE EDWARD, 1825–1875. Major-gen. C.S.A. 1862; famous for his charge at Gettysburg July 3, 1863.

Picking the Plums. Game in which a number of marbles are placed in a line nearly touching each other, and the players shoot at these, each taking those knocked off the line.

Pickles. Vegetable or animal food preserved with vinegar, sometimes with salt or spices.

Pickling. See PRESERVATION OF FOOD.

Picknell, WILLIAM LAMB, b. 1854. American landscape painter.

Pico. One of the Azores Is., belonging to the central group. It is covered with lava; has a volcanic peak 7,613 ft.

Pico Wine-Boat.

high. The island is well timbered, very fertile, and produces wine in large quantities. Chief towns are Magdalena and Lagos. Area 254 sq. m. Pop. 29,000.

Pico della Mirandola, GIOVANNI, COUNT, 1463–1494. Italian scholar and philosopher, once esteemed a marvel of genius and learning. His proposed discussion of 900 theses at Rome, 1486, was forbidden by the Pope. His Latin writings were collected 1496, and often reprinted.

Picoline. $C_5H_4N.CH_3$. Methylpyridine: known in three forms, all of which are liquids of strong odor contained in bone-oil. They are strong bases.

Picot, FRANÇOIS ÉDOUARD, 1786–1868. French painter.

Picquet, FRANÇOIS, 1708–1781. French missionary in Canada 1735–59; active against the English, who outlawed him; writer on Canadian history.

Picrates. Salts of picric acid. Potassium picrate is a violent explosive; when mixed with niter and charcoal and grained it forms Designolle's powder, which has been used for torpedoes and for both cannon and small arms. Ammonium picrate is less sensitive and burns without explosion in air; mixed with nearly equal parts of niter it forms Brugere's powder, which has about twice the strength of ordinary gun-

powder, but is too violent for small arms. Picrates form the bases for certain of the SMOKELESS POWDERS (q.v.).

Picric Acid. C_6H_2: $(NO_2)_3$.OH. Trinitrophenol. Mpt. 122.5°C. Lemon-yellow crystals, soluble in water; prepared by the action of nitric acid upon phenol and many organic compounds, silk, leather, wool, resins, etc.; used as a yellow dyestuff on wool and silk. It forms salts, as $C_6H_2(NO_2)_3OK$, potassium picrate. These salts are very dangerous and powerful explosives, and are prepared by neutralizing the acid with an alkali. The acid forms well crystallized addition products with many hydrocarbons.

Picrotoxin. $C_{30}H_{34}O_{13}$. Very poisonous and very bitter, colorless needles, obtained from *Cocculus indicus*, the berry-like fruit of *Anamirta paniculata*, a shrub of the E. Indies. It acts much like strychnine.

Pictet, FRANÇOIS JULES, 1809–1872. Prof. Geneva; Swiss zoölogist who devoted nearly thirty years to the fossils of the Jurassic and Cretaceous deposits of Switzerland. *Traité de Paléontologie*, 4 vols., 1844–46.—Of his relatives, ADOLPHE, 1799–1875, prof. Geneva 1836, wrote on the Aryans and Celts; MARCUS AUGUSTE, 1752–1825, and RAOUL b. 1842, prof. Geneva, were noted physicists and chemists; the latter, 1877, announced the liquefaction of hydrogen, nitrogen and oxygen, pub. memoir 1878.

Picton, SIR THOMAS, 1758–1815. English general, distinguished in Spain 1810–11; killed in leading a charge at Waterloo.

Picts. Early Celtic inhabitants of s. and e. Scotland; united with the Scots under MacAlpin 844.

Picture Gallery. Room for the exhibition of pictures. The various galleries are described under their respective names.

Picture Writing. See HIEROGLYPHICS.

Pidgin-English. Dialect manufactured to assist the intercommunication of Europeans and Chinese; mostly English, corrupted to meet Chinese capacities, as by adding *ee* to words, substituting *belong* for *be*, *my* for *I*, and the like. Also written Pigeon-English.

Piece, FIELD. In U.S. Service there are two guns, the 3.2 in. and the 3.6 in. calibers, the former for the light and horse batteries and the latter for the heavy field battery; both are breech-loading steel rifled guns. The 3.2 in. fires a 13.5 lb. projectile, is 7.31 ft. long, weighs 794 lbs., has muzzle velocity 1,685 f. s., and maximum range for shrapnel 6,613 yds. The 3 6 in. fires a 20 lb. projectile, is 7.79 ft. long, weighs 1,181 lbs., has muzzle velocity 1,550 f. s., and maximum range 7,420 yds. See FIELD ARTILLERY, FIELD BATTERY and FIELD CARRIAGE.

Piece-work Wages. Wages paid according to the amount of work performed, instead of according to the length of time the employé is on duty.

Piedmont. Region of n.w. Italy; held by House of Savoy from ab.1190. Area 11,340 sq. m.

Piedmont (MT. CRAWFORD). Near Staunton, Va.; scene of a Union victory June 5, 1864.

Pied Piper. Mediæval European myth, made familiar by Browning's poem. Hameln in Saxony was infested with rats, which were charmed away 1284 by a man attired in a party-colored suit. The townsmen agreed to give him a sum of money to rid the place of the vermin, whereupon he piped, and the rats all followed him to the Weser and there perished. When the authorities refused to pay, the piper, again piping, drew all the town children with him to the mountain, which opened and they disappeared therein.

Pie-Powder Court. Formerly held at fairs in England.

Pier. Masonry column supporting a bridge; when built near shore and supporting only one end of a span, it is called an ABUTMENT (q.v.). The deepest piers in the U. S. are those of the bridge over the Hudson at Poughkeepsie; they were sunk by dredging through cribs to a depth of 130 ft. below the water surface. The deepest pier foundation is that of the Hawksbury bridge in Australia, 170 ft. below water level.—Piece of wall between two openings, or an isolated mass of masonry.

Pierce, BENJAMIN, 1809–1880. Prof. Harvard from 1833; superintendent U. S. Coast Survey 1867–74; author of text-books on Algebra, Geometry, and Trigonometry. *Analytical Mechanics*, 1857; *Linear Associative Algebra*, 1870.

Pierce, FRANKLIN, 1804–1869. Fourteenth president of the U. S.; M.C. from N. H. 1833–37; U. S. Senator 1837–42; Pres. 1853–57. His administration was pledged to the enforcement of the Fugitive slave law. The repeal of the Missouri Compromise and the Kansas-Nebraska troubles hastened the formation of the Republican party and the beginning of the Civil

Franklin Pierce.

War. The treaty with Japan, the OSTEND MANIFESTO (q.v.), and the settlement of Mexican boundary dispute occurred in his term.

Pierian. Belonging to the Muses, whose birthland was Pieria in Macedonia, at foot of Mt. Olympus.

Pierola, NICOLAS DE, 1798–1857. Peruvian scientist; director National Museum at Lima from 1845; Sec. Treasury 1852–54.—His son, NICOLAS, b. 1839, was dictator, or Supreme Chief, of Peru 1879–81, during the war with Chili; exiled 1885; Pres. 1895.

Pierpont, JOHN, 1785–1866. American poet and reformer.

Pierre Perdue. Riprap, or random stone, thrown around the base of a pier to protect it from the current; also used in breakwaters.

Pierrepont, EDWARDS, LL.D., D.C.L., 1817–1892. Judge New York City Superior Court 1857–60; U. S. Attorney-gen. 1875–76; Minister to London 1876–78.

Piers Plowman. See LANGLAND, WILLIAM.

Pietà. Representations in Italian sculpture or painting of the Madonna holding the dead Saviour in her arms. The finest

Pietà, bas-relief at Nuremburg, by Adam Krafft.

statuary representation of this subject is that by Michelangelo in St. Peter's. One of the finest paintings of this subject is that by Giovanni Belleni at Milan.

Pietermaritzburg. Capital of Natal, S. Africa. Pop., 1891, 17,500.

Pietism. Movement begun at Frankfort 1670 by P. J. Spener, and carried on at Leipzig, and later at Halle, by A. H. Francke and other earnest men, who laid more stress on religion of the heart and life than on ecclesiastical or doctrinal distinctions; they were Lutherans, and founded no sect. Their influence, great for a time, was opposed by the rationalism of the 18th century.

Pietra Dura. Florentine mosaic work in which jasper, agate, and other hard stones are inlaid in a slab of marble.

Piezometer. Apparatus devised by Oersted, and used for measuring the compressibility of liquids. It consists of a strong glass cylindrical vessel, fitted at its top with a metallic cylinder of smaller diameter, in which is a tightly fitting piston movable from without by a screw. The vessel containing the liquid to be compressed is a cylindrical bulb terminating in a capillary tube dipping under the surface of the mercury. This is placed within the instrument and the latter filled up to the movable piston with water. If the screw be turned down, the pressure applied will be transmitted by means of the mercury to the liquid contained in the inner vessel. The capillary tube is graduated so that, by noting the movement of the mercury surface as it rises in it, the compression of the liquid under examination can be calculated. There is also contained a closed air manometer, which indicates the pressure applied. See GAUGE, STEAM.

Piezometric Level. Difference of level of two atmospheric layers as expressed not by elevation (orometric), or by temperature (thermometric), or by density (pyknometric), but by barometric pressure (piezometric); so called by Lasne 1888.

Pig. See SUIDÆ and SWINE.

Pigafetta, FRANCESCO ANTONIO, 1491–1535. Italian who sailed with Magellan 1518–22, and kept a journal of the memorable voyage. *Viaggio intorno al Globo Terracqueo*, 1800.

Pigeon-Berry. See POKEWEED.

Pigeons. 300 species included in 4 families of the order COLUMBÆ (q.v.). Their distribution is world-wide, but they are absent from localities inhabited by monkeys. In Oceanica and s.e. Asia is the genus *Ptilopus*, containing 80 species that vie with Paradise birds in coloration. In N. America is *Ectopistes*, the wild or Passenger Pigeon, once present in incalculable numbers; it could fly 100 m. per hour. In Jamaica is a species resembling quails, and in Australia is a species that attains a lb. wt. (see DODO). *Columba livia*, the Rock Dove of the

Rock Dove (*Columba livia*).

Mediterranean region, is the ancestor of our domestic breeds, such as Fantails, Tumblers, Pouters. Doves differ from Pigeons in having smaller heads, more graduated tails and subdued colors. Pigeons have the nostrils situated in a cere; their wings are long and pointed, and tail long and rounded, containing 12 to 20 rectrices. They can drink without raising the head. They are monogamous; both sexes care for the young, which never exceed two, and are born naked and blind. These receive food moistened by a special milky secretion in the crop. See CARRIER PIGEONS.

Pigeons, HOMING. Highest speed record of U. S. in homing pigeons 200 m., speed 1,875 yds. per minute, in 1893; the longest distance is 1,183 m. in 13½ days, in 1892; the best record is 614 m., speed 1,349 yds. per minute, in 1896.

Pigeon-Shooting. In U. S. shooting with shot-guns at birds from traps is at a distance of 30 yds. One hundred consecutive birds have been shot by Bogardus 1869 and by Bandle 1888. One hundred and eighty-eight out of 200 were shot by Murphy 1896, five traps being used. Five hundred glass balls out of 514 were broken 1881 by Haskel in 24 min. 2 sec. One hundred out of 105 clay pigeons were broken by Heikes 1896 in 3 min. 7 sec.

Pigeon Weed. *Lithospermum arvense.* A troublesome biennial weed, especially in wheat. In land once infested, the only remedies are hand-pulling and a thorough bare summer fallow.

Piglhein, BRUNO, 1848–1894. German artist. Prof. Munich; chiefly noted for religious subjects.

Pigment. Powdered substance, either animal or vegetable, used as a color. The oldest are those of the paintings of the Egyptians, who confined themselves to red, yellow, green, blue, black, and white. The Greeks owed their knowledge of painting, practiced by them ab.450 B.C., to the Egyptians. See PAINTS.

Pigmy. See PYGMY.

Pignotti, LORENZO, 1739–1812. Italian poet and historian.

Pignut. *Hicoria glabra.* Large forest tree of the Walnut family, native of the e. U. S., known as Broom Hickory.

Pigres, 5th cent. B.C. Greek satiric poet, supposed author of *Margites* and *Battle of Frogs and Mice.*

Pigs in Clover. Mechanical puzzle, consisting of a small circular box containing several ring-shaped communicating partitions, one within the other, in which are small free-rolling balls. The object of the puzzle is to bring the balls together in a middle place called the Pen. It was invented 1889 by M. Lyman of Waverly, N. Y. It at once became a popular craze; hundreds of modifications of it appeared, and it was carried to all parts of the world. It is one of the few modern inventions of its kind, if not the only one.

Pigweed. The various species (*Amarantus* and *Chenopodium*, called Goosefoot) are ordinarily more unsightly than otherwise troublesome, and may be kept in check by cutting.

Pigweed (*Chenopodium ambrosioides* and *C. botrys*).

Sometimes they are troublesome in cultivated crops in very rich land, and then are kept in check only by early and frequent stirring of the soil with hoe and cultivator.

Pike. See PERCH and HAPLOMI.

Pike. Spear of varying length, in general use from ancient times till ab.1530; since ab.1700 employed only for irregular warfare. The bayonet now replaces it. See BAYONET.

Pike, ALBERT, 1809–1891. American poet; Brig.-gen. C.S.A. 1862. *Hymns to the Gods*, 1839–54.

Pike, WARBURTON, b. 1859. Canadian explorer. *Barren Ground*, 1892; *Subarctic Forest*, 1896.

Pike, ZEBULON MONTGOMERY, U.S.A., 1779–1813. Explorer of the upper Mississippi 1806–7; discoverer of Pike's Peak, Col., 1806; killed in attacking York (Toronto), Canada.

Pike's Peak. Summit of the Colorado range, Col. Altitude 14,147 ft. Here the U. S. Signal Service maintained a meteorological station 1842–88.

Pilacreæ. Family of *Fungi* of the sub-class *Basidiomycetes*, occurring on the Hornbeam and Beech.

Pilaster. Flat and shallow pillar placed against a wall, and corresponding in treatment to the circular and free-standing columns used in the same edifice.

Pilate, PONTIUS. Roman procurator of Judæa 26–36. He permitted the execution of Jesus, was accused of extortion and cruelty by Samaritans, and is said to have been banished to Gaul.

Pilatus, MOUNT. In Switzerland, w. of Lake Lucerne. Altitude of its highest peak 7,000 ft. A railway, built 1889, reaches the summit. An old tradition places Pilate's body in a pond near the top.

Pilau. Oriental dish of rice and onions, sometimes with meat or fowls.

Pilcomayo. Branch of the Paraguay. It flows s.e. across Bolivia from the Andes, and forms part of the n.e. boundary of Argentina. Its upper course is unexplored. Length 1,000 m. or more.

Pile. Column of timber or iron sunk in the earth. Wooden piles are generally round, 9 to 18 in. in diameter at top and ab. 6 in. at base; the base is often provided with an iron shoe. Creosoting is used as a protection against sea-worms. Piles should be driven in soft soil until they sink less than 1 in. under a blow of a ram equal in weight to that of the pile. Sheet piles are those driven in close contact to form a wall or inclosure; they are fastened together by iron clamps. See DISK PILE, SCREW PILE.

Pileate. Organs having or resembling a pileus.

Pileated Woodpecker. See WOODPECKER.

Pile Bridges. Formed of trestle bents with spans rarely greater than 30 ft. Cæsar's bridge over the Rhine was a trestle structure.

Pile Driver. Apparatus for driving piles, consisting of a ram with the arrangements for raising it and guiding it. The common driver has a ram weighing 1,500 lbs., which falls from

Pile Driving—Process of sinking the piles by water jets.

10 to 20 ft. and makes 5 blows per minute. The steam driver has a ram weighing from 2,000 to 4,000 lbs., which falls only 3 ft. but makes 50 blows per minute. Gunpowder and dynamite have been used to drive piles. See NASMYTH PILE DRIVER.

Pileolus. Diminutive of pileus.

Pileorhiza. In Botany, root-cap.

Piles. See HÆMORRHOIDS.

Pileus. Cap or spreading portion of mushrooms, toadstools, and other hymenomycetous *Fungi.*

Pilewort. *Ficaria ficaria.* Low, yellow-flowered herb of the Buttercup family, native of Europe, sparingly introduced into the U. S.

Pilgrim. See PALMER.

Pilgrimage of Grace. Uprising of the rural population in Lincolnshire and Yorkshire, Eng., in 1536 in opposition to the suppression of minor monasteries; there were about 60,000 rebels, who were quickly dispersed, about 20 being executed in 1537.

Pilgrimages. Journeys to sacred places; often undertaken from ab. 325; imposed as a religious discipline in the Middle Ages, and regarded as good works; common among Mohammedans and Hindus.

Pilgrim Fathers. English separatists, who in 1620 founded Plymouth Colony; to be distinguished from the non-separatist PURITANS (q.v.) who in 1628 founded and in 1630 settled Massachusetts Bay.

Pilidium. Larva of certain nemertine worms. It is helmet-shaped. As with the Echinoderm larvæ, the adult is produced through histolytic metamorphosis.

Piliferous Layer. Epidermal portions of young rootlets, bearing an abundance of root-hairs.

Pillar. Vertical shaft or column bearing a load. Its strength varies inversely with the square of its length, when the size is small compared to length.

Pillar. Block of coal, ore, or rock, left standing to support the roof of a mine. Pillars vary in size from a few feet to several yards in width, according to the nature of the ground to be supported.

Pillar and Stall. Method of coal-mining, in which the working places and excavated portions are long and narrow, usually parallel to each other, and separated by pillars of standing coal.

Pillar-Saints. See STYLITES.

Pillars of Hercules. Heights on either side the Straits of Gibraltar; supposed to have been reared by Hercules as memorials of his making an outlet for the Mediterranean.

Pilling, JAMES CONSTANTINE, b. 1846. Connected with U. S. surveys 1872–79, and since with Smithsonian Bureau of Ethnology; author of bibliographies of sundry Indian languages.

Pillory. Instrument used from remote to recent times, whereby a prisoner's neck and wrists were fastened in holes in

Pillory.

a board, causing his head and hands to protrude shamefully; abolished in England 1837; used in some Southern States later.

Pillow, FORT. In Tenn.; captured by Union forces June 4, 1862; by Confederates April 13, 1864, when nearly the whole (colored) garrison was killed.

Pillow, GIDEON JOHNSON, 1806–1878. Brig.-gen. Tenn. Vols. 1846; Major-gen. U.S.A. 1847–48, serving throughout the war with Mexico; Brig.-gen. C.S.A. 1861; second in command at Fort Donelson Feb. 1862, whence he escaped.

Pills. Medical preparation formed by mixing the ingredients usually with an excipient to make them cohesive, and then fashioning into spheroidal bodies of the prescribed size. They are frequently covered with a coating, as sugar or gelatin, to prevent tasting the medicine.

Pilon, GERMAIN, d. 1590. French sculptor, ranking next to Goujon. His groups of the *Three Graces* and *Four Cardinal Virtues* in the Louvre are important works, designed as tomb monuments and as supports for cinerary urns.

Pilose. In Botany, organs provided with soft, long, scattered hairs.

Pilot. Person legally authorized to conduct a ship through a specified locality. His appointment, fees, rights, and powers are generally regulated by statutes. In U.S. pilots are licensed under U. S. laws, by a commission or by a State Governor; in Great Britain the Pilotage Authorities have charge of this subject.

Pilot Fish (NAUCRATES DUCTOR). Acanthopterygian fish of the family *Carangidæ.* It lives in the high seas, attains a

length of ab. a foot, and is marked by several broad black bars. It has four short spines in front of the dorsal fin. It is sup-

Pilot Fish (*Naucrates ductor*).

posed to guide sharks to their food, because found associated with them, but this remains unexplained.

Pilot Knob. In Mo. Here a Union force of 1,200 repulsed two assaults of Gen. Price with 10,000 men, Sept. 26, 1864, inflicting a loss of 1,000, but retreated by night.

Piloty, KARL VON, 1826–1886. German painter, prof. Munich Academy 1856, director 1874. He exercised an important influence as a teacher, on American artists among others. He represents some advance in color beyond most of his German contemporaries, although far below Makart.

Pilpay, or BIDPAI. Reputed author of a noted collection of Indian fables, tr. from the Sanskrit into Pehlevi, or early Persian, in the 6th century, and subsequently into Arabic, Greek, Latin and most European languages. *Kalilahand Dimna*, the Arabic version, 750, is the earliest extant. The PANCHATANTRA, the MAHA-BHARATA, and the HITOPADESA (q.v.), each contain portions of this work.

Pils, ISIDORE ALEXANDRE AUGUSTE, 1815–1875. French painter, especially of battle-scenes.

Pilsen. City of w. Bohemia, on the Beraun. It has manufactures of woolens, cottons, etc. Taken by Ziska 1421; occupied by Wallenstein 1633–34; now noted for its beer, annual product 300,000 bbls. Pop. 1891, 50,693.

Pim, BEDFORD CLAPPATON TREVELYAN, R. N., 1826–1886. Arctic explorer, M.P. 1874–80. *Gate of the Pacific*, 1863.

Pimaric Acid. $C_{20}H_{30}O_2$. Mpt. 148° C. Main constituent of galipot resin. See ABIETIC ACID, which it closely resembles.

Pimentel, MANOEL, 1650–1719. Portuguese geographer, dealing with S. America.

Pimento (ALLSPICE). West Indian spice, from the fruit of *Eugenia pimenta*, a tree found mostly in Jamaica.

Pimpernel. *Anagallis arvensis.* Low, weedy herb of the Primrose family, with variously colored flowers, usually scarlet, which close in cloudy weather, whence it is known as Poor Man's Weather-glass. It is native of Europe and introduced into N. America.

Pimpernel (*Anagallis arvensis*).

Pimpernel, FALSE. *Lysanthes gratioloides.* Small marsh plant of the natural family *Scrophulariaceæ*, native of N. America.

Pimpernel, WATER. See BROOKWEED.

Pimples. Name commonly given to small swellings of the skin. These may contain a small quantity of pus (pustules) or be solid throughout (papules).

Pina Cloth. See PINEAPPLE.

Pinacothek. Picture gallery of Munich, completed 1836 by Klenze. The paintings are of rare value and include the famous Boisserée collection of old German masters.

Pinchbeck. Alloy consisting of two parts of copper and one of brass.

Pinckney, CHARLES, LL.D., 1758–1824. Member of the U.S. Constitutional Convention of 1787; Gov. of S. C. 1789–93, 1796–98 and 1806–8; U. S. Senator 1798–1801; Minister to Spain 1802–5; M.C. 1819–21; anti-federalist.—His son, HENRY LAURENS, 1794–1863, M.C. 1833–37, founded the Charleston *Mercury* 1819, and edited it till 1834.—Their cousin, CHARLES COTESWORTH, 1746–1825, was a colonel in the Revolutionary War, member U.S. Constitutional Convention 1787, major-gen. U.S.A. 1797, and a leading Federalist.—His brother, THOMAS, 1750–1828, was Gov. of S. C. 1787–89; Minister to England 1792–94, and to Spain 1794–96, where he secured the free navigation of the Mississippi; M. C. 1799–1801; major-gen. U.S.A. 1812, acting against the Creeks.

Pindar, ab. 522–ab. 442 B.C. Most famous Greek lyric poet, who spent the greater part of his life at Thebes, but was for a time at the court of King Hiero of Syracuse. He composed odes for many princes and others. We possess his *Epinicia* or triumphal odes, in four books, in honor of victors in the Olympian, Pythian, Nemean and Isthmian games. He was a versatile writer of deep religious and patriotic feeling, joined to poetic talent of the highest order.

Pindar.

Pindar, PETER. See WOLCOT, JOHN.

Pindarees. Roving guerrillas and robbers in India, overthrown 1817 by Warren Hastings.

Pindemonte, IPPOLITO, 1753–1828. Italian poet and essayist. *Poesie Campestri*, 1785; *Sermoni*, 1805; tr. *Odyssey*, 1809–22; *Epistole*, 1819; *Elogi*, 1825.

Pindus. Mountain range between Thessaly and Epirus.

Pine. Trees of the family *Coniferæ*, genus *Pinus*, yielding important timber. There are numerous species, widely distributed throughout the n. temperate zone. Scotch Pine, *P. sylvestris*, called Scotch Fir, is the only species indigenous to Great Britain. Black Pine, *P. nigricans*, is a native of Austria. Taurian Pine, *P. maratima*, Aleppo Pine, *P. halepensis*, and Corsican Pine, *P. laricis*, are found in s. Europe. Other European species are Cluster Pine, *P. pinaster*, Pyrenean Pine, *P. pyrenaica*, and Stone Pine, *P. bruttia*. In N. America are Red Canadian Pine, *P. resinosa*, Scrub Pine, *P. banksiana*, Yellow Pine, *P. rariabilis*, Jersey Pine, *P. niops*, Pitch Pine, *P. rigida*, Southern Pine, *P. palustris*, White Pine, *P. strobus*, and *P. lambertiana*. Most of these trees furnish valuable timber, though the term Pine-timber is applied to wood of species of other genera. Many of these trees yield turpentine as sap, from which rosin and oil of turpentine is obtained.

Pine, ROBERT EDGE, 1730–1788. English portrait painter, in Phila. from 1783.

Pine, STRENGTH OF. The tensile strength is about 10,000, and the compressive strength from 5,000 to 8,000 lbs. per sq. in. of cross-section.

Pineal Eye. Rudimentary eye, present in the top of the cranium of certain Reptiles, and represented rudimentarily in Mammals by the pineal gland.

Pineapple. *Ananassa sativa.* Herb of the natural family *Bromeliaceæ*, native of S. America; widely cultivated in tropical countries and in hothouses in Europe for its delicious

Pineapple (*Ananassa sativa*).

fruit. It weighs from 2½ lbs. to 12 lbs. Pina muslin is made from the fibers of the leaves of this and allied species. Pineapple rum is flavored with pineapple.

Pineapple Essence. See BUTYRIC ETHER.

Pine-Drops. *Pterospora andromedea.* Large herb of

the natural family *Monotropaceæ*, parasitic on the roots of trees, native of the n. U. S. and Canada.

Pinel, JACQUES, 1640–1693. French buccaneer in W. Indies, made a marquis by Louis XIV. after abducting and marrying an heiress of rank; founder of a wealthy family.

Pinel, PHILIPPE, 1745–1826. French alienist, reformer of the treatment of the insane, and first to study properly and understand their condition.

Pinelo, ANTONIO DE LEON, ab.1590–ab.1675. Officer of the COUNCIL OF THE INDIES (q.v.). He wrote much on the Spanish colonies, and codified their laws.

Pinene. $C_{10}H_{16}$. Two varieties, dextro and lævo. Bpt. 158°–161° C. Principal constituent of American and German oil of turpentine, oil of juniper, etc. See TURPENTINE, OIL OF.

Pinene Hydrochloride. $C_{10}H_{17}Cl$. Terpene hydrochloride; solid white crystalline, insoluble substance, resembling camphor in odor and appearance. Treated with an alkali it yields camphene. It is known as "artificial camphor," and is made by passing hydrochloric acid gas into oil of turpentine.

Pinero, ARTHUR WING, b. 1855. English playwright. *The Squire*, 1881; *Mrs. Ebbsmith*, 1895.

Pinerolo. Town of n.w. Italy, 23 m. s.w. of Turin, with a citadel long alternately held by Savoy and France. Pop. ab. 12,000.

Pine-Sap. *Hypopitys hypopitys.* Saprophytic plant of the natural family *Monotropaceæ*, native of the n. hemisphere; also called False Beech-drops.

Pine-Sap (*Hypopitys hypopitys*).

Pine-Sap, SWEET. *Schweinitzia odorata.* Parasitic herb of the natural family *Monotropaceæ*, growing on the roots of herbs in the s.e. U. S.

Pines, ISLE OF, or HUNCA. In the southern Pacific, belonging to France, 30 m. s.e. of New Caledonia; discovered by Cook 1774, and since 1872 a penal colony. Turtles are abundant. Area 72 sq. m. Pop., exclusive of convicts, ab. 800.

Pines, ISLE OF. Cuban dependency, 37 m. s. of Cuba. It has quarries of marble, and is a favorite resort for invalids having lung diseases. Area 1,214 sq. m., pop. ab. 2,500.

Pine Tree Money. The first mint established in Boston issued in 1652 coins of the value of 3, 6, and 12 pence, with a pine tree on the obverse.

Pine-Weed. See ORANGE-GRASS.

Pine Wool. Fiber obtained from the leaf-needles of the Scotch fir and woven into blankets for hospital use. It is usually mixed with cotton or wool, and supposed to have medicinal properties.

Pingré, ALEXANDRE GUI, 1711–1796. French astronomer. *Cométographie*, 1783.

Ping-Yang. In e. China; scene of a Japanese victory Oct. 28, 1894.

Pinheiro, SYLVESTRE FERREIRA, 1769–1847. Portuguese publicist and Minister of State.

Pini, GAETANA, 1846–1886. Italian physician and philanthropist.

Pinillos, CLAUDIO, COUNT OF VILLANUEVA, 1782–1853. Supt. 1825–50 of Cuban finances, which he greatly improved.

Pink. Showy-flowered herbs of the genera *Dianthus* and *Silene*, natural family *Caryophyllaceæ*, natives of the n. hemisphere; much cultivated in gardens.

Pink, FIRE. *Silene virginica.* Crimson pink of s.e. U. S.

Pink, MOSS. *Phlox subulata.* Low, tufted, purple-flowered plant of the natural family *Polemoniaceæ*, native of the s.e. U. S.; known as Ground Pink.

Pinkerton, ALLAN G., 1819–1884. Founder of a detective agency in Chicago 1850; head of U. S. Secret Service 1861–65. *Molly Maguires*, 1877; *Thirty Years*, 1884.

Pinkerton, JOHN, 1758–1826. Scottish writer, chiefly of history. *Voyages and Travels*, 17 vols., 1808–14; *Correspondence*, 1830.

Pinkeye. Contagious inflammation in the eyes of horses in which the white of the eye appears as deeply congested. The disease may occur in man, and the word is popularly used to indicate any disease of the eye where the conjunctiva is reddened. Washing the eye with antiseptic lotions, as of boric acid or of borax, is curative in mild cases.

Pinkie Clough. Battle near Edinburgh, Sept. 10, 1547; the English under Somerset totally defeated the Scots under Arran, who lost 10,000 men besides 1,500 prisoners; English loss ab. 200.

Pinkney, WILLIAM, 1764–1822. U. S. Commissioner to England 1796–1804 and 1806; Attorney-gen. of Md. 1805; Minister to England 1807–11, and to Russia 1816–18; U. S. Attorney-gen. 1811–14; M.C. 1815–16; U. S. Senator 1820.—His son, EDWARD COATE, 1802–1828, wrote some memorable verses; his nephew and biographer, WILLIAM, D.D., LL.D., 1810–1883, became assistant Bp. of Md. 1870 and Bp. 1879.

Pink-Root. *Spigelia marylandica.* Showy-flowered officinal herb of the natural family *Loganiaceæ*, native of the s. e. U. S.

Pink Salt. Ammonium chlorstannate. $SnCl_4.2NH_4Cl$. Mordant for cotton prints.

Pin-Money. Sum allowed by the husband to the wife for her dress, decoration and ornament. Pins were acceptable New Year's gifts to ladies, in place of the wooden skewers which they used until ab. 1500. They sometimes received a composition in money whence the term.

Pinna. Leaflet of a compound leaf, especially in ferns.

Pinnacle. In Gothic Architecture, a tapering mass of stone crowning a buttress, and having for its mechanical function to add to its height, but often elaborately enriched by carving.

Pinnacocytes. Pavement-like epithelial cells, such as constitute the ectoderm in Sponges and also line the paragastric cavity and canals in all but the lowest sponges.

Pinnate. Arrangement of the veins of a simple leaf, or the leaflets of a compound leaf, laterally along a central midvein or axis, like the disposition of the barbs on the shaft of a feather.

Pinnatifid. Leaves which are divided nearly to the midrib into lateral segments.

Pinney, NORMAN, 1800–1862. American author of French text-books.

Pinnigrada. See PINNIPEDIA.

Pinnipedia (PINNIGRADA). Sub-order of *Carnivora*, comprising the Seals and Walruses. The limbs are short, the hinder ones directed backward, and the toes united by skin to form swimming paddles. The tail is short and conical. The skin rests upon a layer of fat (blubber), and bears a short dense fur, usually interspersed with bristles. The ears are small or absent. The lungs are large, the intestine very long compared with that of other *Carnivora*. The food is fish, shellfish, and other marine animals. There are three families: PHOCIDÆ, OTARIADÆ, and TRICHECHIDÆ (q.v.).

Pinnock, WILLIAM, 1781–1843. English author of historical and other text-books, some of them widely used.

Pinnulæ. Simple jointed side twigs on the branched arms of Crinoids (Stone Lilies).

Pinnule. Division of a pinna or leaflet in a decompound leaf, especially in ferns.

Pinnulus. Pentactine sponge spicule, having spines on one ray; present in the genus *Asconema*.

Pinocle. German Bezique, played with two packs of cards, Ace to Nine, the game being 1,000 points, and it may be played by from two to four persons. In two-handed game 24 cards are dealt, the next card being trump, and the balance are drawn with the play. The cards are then played, but one is not required to follow suit. Combinations are declared as in Bezique. After the pack is exhausted, the cards not played are taken in hand and played, following suit and taking the trick if possible, and trumping when the player has not the suit. In three-handed game the whole pack is dealt and the cards are played as in two-handed game after the pack is exhausted. The four-handed game is played as in the three-handed game, but may be played as partners. Pinocle is combination of queen of spades and knave of diamonds.

Pins. The earliest pins were probably fish bones or thorns. Pins with gold heads have been found in Egypt and bronze pins at Pompeii. Brass pins were brought from France 1540, and first made in England 1543. Solid headed pins were first made by machinery in England 1824 under patents of L. W. Wright, an American. Pins are now made entirely by machinery, even to sticking them in papers, which was patented by T. Fowler in 1860. Ordinary pins are brass, coated with tin in

a water solution of argol. Black pins are iron, coated with varnish or blued in a muffle.

Pinsuti, CIRO, 1829–1888. Italian composer, mostly of songs.

Pint. Eighth of a gallon; U. S. 28⅞ cu. in., imperial 34.66 cu. in.

Pinto, FERNAM MENDEZ, ab. 1510–ab. 1583. Portuguese trader, in Asia 1537–58. *Travels*, 1614, tr. 1663.

Pinto, FRANCISCO ANTONIO, ab.1785–1858. Pres. of Chili 1827–29.—His son, ANIBAL, 1824–1884, was Pres. 1876–81.

Pinturicchio (DI BETTI), BERNARDINO, 1454–1513. Italian painter, represented by important frescoes in the Siena Cathe-

The Annunciation, at Spello, Italy, by Pinturicchio.

dral. His affinities with Perugino are marked, but his originality was greater. He had influence on Raphael, who worked under him in youth.

Pinweed. Low woody plants of the genus *Lechea*, natural family *Cistaceæ*, natives of e. N. America.

Pin Worms. Animal parasites (*Ascaris vermicularis*) whose habitat is in the large intestine. They are from 4 to 12 in. long, resembling a short piece of cotton thread, whence another name, Thread worms. The chief symptom of their presence is an intense itching at the anus. The most successful treatment applies the vermifuges locally by enema or suppository. From their habitat, they are sometimes called Seat worms. See ASCARIDÆ.

Pinxter-Flower. *Azalea nudiflora.* Showy-flowered shrub of the Heath family, native of e. N. America; known also as Wild Azalea.

Pinzon, MARTIN ALONSO, 1441–1493. Associate and rival of Columbus; captain of the *Pinta* 1492.—His brother, VICENTE YAÑEZ, ab.1460–ab.1524, had command of the *Nina* 1492, and discovered Brazil 1500; another, FRANCISCO MARTIN, ab.1462–1500, was pilot of the *Pinta*.—Their nephew, ARIAS MARTIN, 1465–1510, was pilot of the *Nina*, sailed with Columbus twice later, and with Vicente 1499, 1507, and 1509.

Piombino. Italian principality, including part of Elba; connected with Lucca 1806–14; assigned to Tuscany 1815. Area 139 sq. m.

Piombo, SEBASTIAN DEL, 1485–1547. Italian painter, great colorist, and associate of Michelangelo, who made the design for his *Resurrection of Lazarus* in the National Gallery. His works are rare, and of the first rank. Several of them have been ascribed to Raphael; *e.g.*, the *Fornarina* of the Uffizi in Florence.

Pioneers. Military road and bridge builders, who remove obstruction from the path of an army.—In civil life, first settlers of a new country, who clear and plant the land.—Figuratively, advance guards of civilization, in science, art, or any department of thought or activity.

Piorry, PIERRE ADOLPHE, 1794–1879. Prof. Paris 1840–66; inventor of the pleximeter; writer on pathology.

Piozzi, HESTER LYNCH (SALUSBURY), 1741–1821. Friend (as Mrs. Thrale, 1763–81) of Dr. Johnson; wife of G. Piozzi, 1784–1809. *Anecdotes of Dr. S. Johnson*, 1786; *Letters*, 1788; *Autobiography*, 1861.

Pip. Name formerly given to different diseases of fowls. See ROUP.

Pipe. Wrought-iron tube for conveying gas, steam or water in factories or other buildings; distinguished from "tube" technically by being sold always by the inside diameter, and less carefully made as to quality of raw material than tube, which is known by its outside diameter. The usual diameters are ⅛″, ¼″ ⅜″, ½″, ¾″, 1″, 1¼″, 1½″, 2″, 2½″, 3″, and by single inches to 14″ as an ordinary limit; usual lengths are 12 or 16 ft. Sizes under 1¼″ are butt-welded; above that limit they are lap-welded. They are tested to 200 lbs. per sq. in. in butt-welded pipe; to 2,000 for lap-welded. The usual process of manufacture is to roll plate to the required thickness and width if possible; heat and bend over by drawing through a curved orifice; reheat and weld over a ball under rollers; straighten by rolling between hyperboloidal rolls; cut off and test. See TUBE.

Pipe, or PIPE-VEIN. Form of ore deposit, of limited extent, showing a relatively marked elongation in one direction; not often met with except in a limestone country.

Pipe, or BUTT. English measure for wines, used also in other European countries; varying from 104 to 137 imperial gallons.

Pipe, INDIAN. *Monotropa uniflora.* Low white or pink herb of the natural family *Monotropaceæ*, native of N. America, growing as a saprophyte on decaying wood in forests; known also as Corpse Plant.

Pipes, TOBACCO. The custom of smoking tobacco originated in America, and has been diffused throughout the world since the time of the discovery. It was practically universal among the American tribes, and appears to have been practiced from remote antiquity. The earliest form of the pipe was doubtless a simple tube, such as was used in Mexico, and occurs in the mounds of Ohio. Its origin has been traced to the blowing tube, used by the shaman or medicine man to direct his breath, a potent agency in magical rites. Burning material is thought to have been placed in the tube, that the smoke might render the breath visible. Tobacco is only

Pipes of all Peoples.

one of several plants smoked by the Indians, and its first use may have been the result of a happy accident. The name is derived from an Arawak word of the Bahama dialect, tabake, referring to the pipe in which the tobacco was smoked. A great variety of forms exist among the American pipes. The first were doubtless made of reed and have disappeared. Stone and pottery were generally employed, especially the well-known Catlinite or pipe stone, which was quarried by the Indians at the Coteau des Praries in southwestern Minnesota. In general, the pipe was a ceremonial object in America, used in tribal rites. It was first brought to Europe by Ralph Lane, first Governor of Virginia, 1586, who gave it to Sir Walter Raleigh.

Pipe-Clay. Light-colored plastic clay, suitable for use in making earthen pipes. In California it is customary to call a clay of any color a pipe-clay, if found associated with a body of auriferous gravel.

Pipe-fish. See LOPHOBRANCHII.

Pipe Lines. 1. Long lines of water mains for the supply of a city. One at Rochester, N. Y., is nearly 30 m. in length. 2. Conduits for the transportation of oil, natural gas, etc. Companies chartered for the operation of such lines generally have the power of eminent domain conferred upon them, as their business is deemed impressed with "a public use." See PETROLEUM.

Pipe-Ore. Masses of bog iron ore, having a cylindrical or doubly conical structure, such as might be caused by the meeting of stalactites and stalagmites.

Piperaceæ. Natural family of flowering plants, of the class *Angiospermæ* and sub-class *Dicotyledons*, comprising 11 genera and ab. 1,025 species, widely distributed in tropical regions; called the Pepper family.

Piperic Acid. $C_{12}H_{10}O_4$. Mpt. 217°C. Long needles, insoluble in water; obtained by boiling piperine with caustic potash.

Piperidine. $C_5H_{11}N$. Liquid of strongly basic properties and the odor of pepper; bpt. 106°C.; derivative of pyridine. It occurs in pepper in combination with piperic acid in the alkaloid piperine, and is made by treating pyridine with nascent hydrogen.

Piperine. $C_{17}H_{19}NO_3$. Mpt. 128° C. Alkaloid occurring in different varieties of pepper. It crystallizes in prisms, and is decomposed by boiling alcohol into piperic acid and piperidine.

Pipestone. See CATLINITE.

Pipette. Glass tube open at both ends, terminating below in a narrow tapering point. There is usually blown in the tube a spherical or cylindrical bulb. A liquid may be introduced into it by direct immersion or by aspiration, and if the top be closed with the finger, the pipette may be transported from one place to another. By admitting the air, the liquid will run out, the rate of efflux being easily regulated by the finger.

Pipewort. Aquatic herbs of the genus *Eriocaulon*, natives of N. and S. America.

Pippi. GIULIO ROMANO (q.v.), who was called G. Pippi.

Pippin. See PEPIN.

Pipsissewa. *Chimaphila umbellata.* Low, evergreen, white-flowered plant of the natural family *Ericaceæ*, native of N. America; called also Prince's Pine.

Piquet. French game of cards, mentioned by Rabelais 1530, Twos to Sixes being discarded, played by two persons; eight cards are left in stock, for which the players may exchange, the non-dealer taking five and the dealer three. The counts for cards in hand are: Point, the longest suit; sequence of three or more cards in order of value, three cards counting 3, four 4, five 15, six 16, seven 17, eight 18; trio or quatorze of same denomination above nines, the former counts 3, the latter 14. The player having the best combination scores. Counts in play are 1 for each lead, 1 for each trick taken by non-leader, 2 for last trick, 10 for majority of tricks, 40 for all the tricks. If a player has no face card, he counts 10 for Carte-blanche; if he counts 30 before his opponent scores anything, he adds 30 for Pique; if he counts 30 in hand before his opponent scores anything, he adds 60 for Repique. Six deals make a game. The lowest score subtracted from the highest and 100 added to the remainder scores for the winner; if the loser has less than 100, the two scores and 100 are added together for the winner. This is the rubicon game of 1880.

Piracy. Robbery on the high seas; a crime by international law, which has been extended and regulated by modern statutes.

Piræus. Harbor of ancient and modern Athens; designed by Themistocles; anciently connected with Athens by 3 walls, now by a railway 5½ m. long. It sank into obscurity after 86

The Piræus and Port of Athens, from the Seat of Xerxes.

B.C., when Sulla destroyed its fortifications. It is called the Manchester of Greece, from its growth as a commercial center. Pop. ab. 36,000.

Piranesi, GIAMBATTISTA, 1711–1778. Italian architect and engraver; author of many fine plates of *Roman Antiquities*, and ab. 130 of modern buildings, pub. in 16 folio vols., 1743 and later.—His son, FRANCESCO 1748–1810, carried on the work.

Pirithous. Son of Zeus and Dia. His marriage to Hippodameia occasioned the battle of the Centaurs and Lapithæ. He went to Hades with Theseus to seize Proserpine, and was there detained in chains.

Piron, ALEXIS, 1689–1773. French poet and dramatist, noted for his epigrams. *La Métromanie*, 1738.

Pirouette. Rapid turn upon one foot, often repeated in dancing.

Pirry, or PIRRIE. Sudden gale, squall or pirouette of wind, larger than the little cat's-paw, and strong enough to damage small craft.

Pisa. Ancient Etruscan city of Italy, on the Arno; once a seaport, is now 5 miles from the sea; powerful in 11th cent., and active against the Saracens; crushed by Genoa 1284; ruled by Florence from 1406. The University, founded 1338, has ab. 750 students and 65 instructors, with a library of 120.000 vols. The Leaning Tower, built 1174, is of circular form, 180 ft. high, in eight stories; it is 58 ft. in diameter and inclines ab. 14 ft. from the perpendicular. The Baptistery dates from 1174; it is 180 ft. high, 160 ft. in diameter, and is crowned by a dome. Pop. of commune, 1893, 61,500. See LEANING TOWERS and BAPTISTERY.

Pisa, COUNCIL OF. Held 1409; called by 14 cardinals. It deposed and anathematized the rival Popes of Rome and Avignon, and elected a third, Alexander V. Its œcumenicity is not admitted.

Pisan, CHRISTINE DE, 1364–ab.1431. French poet and historical writer.

Pisander, 7th cent. B.C. or later. Greek epic poet. *Heracleia.*

Pisander. Leader of the oligarchical party at Athens; chief agent in establishing the Council of 400, 412 B.C.

Pisano (DE PONTEDERRA), ANDREA, 1270–1349. Italian sculptor, greatest pupil of Niccola P. His best work, and the most important of that age, is the earliest pair of bronze doors of the Florence Baptistery, with reliefs from the life of John the Baptist.

Pisano, GIUNTA, 1190–1236. Italian painter, pioneer of art free from Byzantine shackles.

Pisano, NICCOLA, ab.1206–1278. Earliest Italian sculptor to work in a professional spirit and to revive the science of the ancients in design. His great works are the pulpits in Pisa and Siena; the former (ab.1260) is more celebrated, as first in time and somewhat superior in the style of its relief composi-

The Pulpit in the Baptistery at Pisa, by Niccola Pisano.

tions. It has epoch-making importance for the later history of Italian art.—His son, GIOVANNI, 1250–1330, was more influenced by the northern Gothic, and less by the antique. He headed a school of artists whose relief works on the Cathedral facade at Orvieto are especially celebrated.

Pisano, or **Pisanello,** VITTORE, 1380–1456. Italian fresco-painter and medalist.

Piscary. The right or privilege of fishing. Common of piscary is the right of fishing in waters belonging to another person.

Piscataqua River. In New Hampshire, and is partly the boundary between Maine and New Hampshire. It is formed by the junction of the Salmon Falls and Cocheco Rivers.

Pisces. See ZODIAC.

Pisces (FISHES). Cold blooded, usually scaly, aquatic *Vertebrata*, with median fins and paired pectoral and pelvic fins. They breathe by means of gills borne on four to seven pairs of branchial arches, and they have a heart consisting of an auricle and a ventricle. Most are diœcious and oviparous; the female reproductive elements leave the body either by true oviducts (Mullerian duct) or by abdominal pores, or by a special ovarian duct, usually before fertilization takes place. The classes included are *Leptocardii*, *Cyclostomi*, *Selachii*, *Ganoidei*, *Teleostei*, and *Dipnoi*. There are ab. 8,000 species of fishes.

Pisciculture (FISH CULTURE). Broadly, as Aquæculture, this includes the protection, cultivation and propagation of aquatic animals (sponges, corals, leeches, oysters, lobsters, fishes proper, frogs, terrapin, whales, seals, etc.); ordinarily it is used in the narrower sense of the artificial hatching of the eggs of true fishes. By this means fishing grounds, that have become depleted through overfishing, have become so extraordinarily productive that laws restricting the freedom of the public in fishing have become unnecessary. Artificial fecundation and hatching of fish eggs (salmon and trout) was introduced 1748 by Jacobi of Westphalia, inaugurated in Italy 1791, France 1820, Britain 1837, Switzerland 1842, U. S. 1853. The first governmental hatchery was established in France 1850. Pioneers of fish culture in U. S. were Dr. Garlich and Seth Green. As the result of their work, Mass. established its fish commission permanently in 1865, and during the next 16 years 38 other States followed her example, led by New England, N.Y., and Pa. The U.S. Fish Commission was established in 1871 with Spencer F. Baird as chief, succeeded at his death 1885 by Marshall McDonald, who was succeeded in 1895 by G. Brown Goode. The first public hatchery was established in Mass. 1867, and by 1891 there were 46 State and 20 national hatcheries, for whose work that year $176,000 and $150,000 had been respectively appropriated. These stations distributed nearly a billion fish, stocking rivers, ponds, lakes and oceans. The same year Newfoundland distributed over half a billion fish, Norway a quarter billion, and the other states of Europe, mainly from hundreds of small private stations, about sixty millions. In 1895 the U. S. national hatcheries distributed 619,915,852 eggs and fry, of 30 species of fishes, including over 70 million lobster fry hatched at the Woods-Hole station, over 76 million shad, 125 million whitefish, 252 million pike-perch, and 60 million cod. The railways furnished 81,578 m. of transportation free. Probably the State hatcheries distributed approximately as many as the National Government. Of the notable triumphs of pisciculture may be mentioned the repletion of the Eastern shad fisheries and Western salmon fisheries, and the successful introduction of shad on the Pacific coast. Aquæculture is thus an important branch of, if not correlative with, Agriculture. As to technique of fish culture, the roe is secured from "ripe" females and milt from "ripe" male fish at the time of spawning and the two fluids are mixed, thus impregnating the eggs, which are then washed clean. If the eggs are heavy like trout eggs they are placed on gravel in long troughs over which a stream of water flows. Adhesive eggs, like those of perch, are fastened on single layer glass plates. Semibuoyant eggs, like those of whitefish, are kept in suspension by introducing water into jars from below. Shad eggs are hatched in special boxes with gauze bottoms, and kept moving up and down in the water. The period of incubation varies from months to hours according to species and temperature.

Piscina. In Gothic Architecture, properly a channel to carry away the water used for ablutions in the mass, but applied to the niche built to receive the channel and often very richly adorned with arched headings filled with tracery.

Piscivorous Dentition. Having teeth like those of fishes, small, numerous, and uniform.

Pise, CHARLES CONSTANTINE, D.D., 1802–1866. American priest and poet; knight of the Roman Empire; friend of Henry Clay, and chaplain U. S. Senate. *Father Rowland*, 1829; *Hist. Ch.*, 5 vols., 1830; *Alethia*, 1843.

Pisemskii, ALEXSEI, 1820–1881. Russian novelist and dramatist. *A Thousand Souls*, 1858.

Pisgah. Mountain e. of the Dead Sea, from whose peak Moses overlooked the Land of Promise.

Pisidia. Former region of s. Asia Minor, between Phrygia and Pamphylia. Its ancient inhabitants were mainly independent and lawless.

Pisistratus, d. 527 B.C. Became tyrant of Athens 560 B.C.; twice expelled; in power from 543 B.C. He enforced the laws of Solon, and ruled without oppression, and was succeeded by his sons.

Piso, LUCIUS CALPURNIUS, 2d cent. B.C. Latin annalist; once consul; victorious in Sicily; celebrated on coins of his family. Others of this house were eminent in war and statesmanship.

Pisolite. Variety of calcite, occurring in concretionary forms, the individual grains being about the size of a pea.

Pison, WILLEM, 1596–1681. Dutch naturalist, in Brazil 1637–45; discoverer of ipecacuanha, which he brought into use.

Pistachio-Nut, or GREEN ALMOND. Fruit of *Pistacia vera*, common in s. Europe. It is somewhat like the almond, but green. Lamb fattened upon the nuts is a delicacy.

Pistil. Female organ of reproduction in flowers, occupying the center of the blossom, and consisting of ovary, style, and stigma.

Pistillate. Flowers in which the pistils are present without stamens, or the stamens present and imperfect.

Pistillody. Transformation of other floral organs into pistils.

Pistoia. Town of Italy, 21 m. n.w. of Florence, which ruled it from 1306; scene of Catiline's defeat 62 B.C. Pop. ab. 21,000.

Pistol. Short single-hand firearm for use at close quarters, invented ab.1500 in Italy: replaced in military service by the REVOLVER (q.v.).

Pistole. Former Spanish gold coin of varying value, usually $10 or more.

Piston. Circular disk which reciprocates in a cylinder, whose bore it fits closely, and which separates the fluid of greater pressure on one side from that of less pressure on the other as it drives or is driven by that of greater pressure. The idea of utilizing a piston in a cylinder to be actuated by steam is due to DENIS PAPIN (q.v.), although the idea of the pump-piston seems to run much further back, to the earlier writers on hydraulics and pneumatics. The piston disk is usually much thinner than its diameter; it is either solid, or hollow, when it is called a box piston. It is in one piece, or in two. When in two pieces, the larger part to which the rod is secured, and which carries the radiating ribs which give it stiffness, is known as the spider, and the ring or disk which bolts over the cavities and mechanism of the spider is called the follower. In large vertical pistons, following an English precedent, it is called a junk-ring or bull-ring. To pack the contact of the piston disk with the bore of the cylinder, solid pistons or box pistons in one piece have grooves turned in their cylindrical surface, into which are fitted light rings which are pressed out against the bore. These rings may be of cast iron,

Piston.

steel, or brass, or brass with Babbitt-metal buttons or pockets. They may be forced out by their own elasticity, being turned as for a cylinder larger than the one in which they are to work; a cut then being made in the circumference, makes it possible to spring them into place in the smaller bore, so that they press outward when at work. Or there may be a spring ring put behind the packing ring to force the latter out, or steam may be let in behind the ring into the groove and press the segments of the ring radially outward. In follower pistons the springs are often arranged to be adjustable radially by nuts on studs when the follower is off, or wedges are used for adjustment. For air pistons metal rings are used where the air is to be much heated by the compression; but leather answers for low pressures. For water, either brass rings, or cup-leathers, or some of the manufactured canvas and rubber packings are approved. Grooved pistons without packing rings are practicable with liquids, and with gases also, if the piston be

made so long that the stroke is completed before the pressure has had time to leak and fill the grooves near the end where the lesser pressure is.

Pit. English coal mine.

Pita-Hemp. Name of the AGAVE (q.v.) fiber. It is used in making ropes and artificial hair-cloth.

Pit and Gallows. In Scotland, a phrase in old grants of criminal jurisdiction, as signifying authority to drown or hang offenders; women in consideration of their sex were drowned in a pit.

Pitaval, FRANÇOIS GAYOT DE, 1673–1743. French compiler of the noted *Causes Célèbres*, 20 vols., 1734–43, and of other works.

Pitcairn, JOHN, ab.1740–1775. British major, engaged at Lexington and Concord; killed at Bunker Hill.

Pitcairn, ROBERT, 1793–1855. Ed. *Criminal Trials in Scotland*, 4 vols., 1830–33.

Pitcairne, ARCHIBALD, 1652–1713. Physician in Edinburgh; medical writer, satirist of the Kirk, and Latin poet.

Pitcairn Island. In the Pacific; lat. 25° 3′ S., long. 130° 7′ W.: discovered 1767; colonized 1790 by nine mutineers from the

Pitcairn Island.

Bounty with some Polynesian men and women. The colony was discovered 1808. Many were removed to Norfolk Island 1856, when they numbered 198. See BOUNTY, MUTINY OF THE.

Pitch. Black residue obtained by boiling down the tar from the charring of wood. It is used in calking vessels.—Also the residuum from the distillation of coal tar, used in mixtures for pavements.

Pitch. In Acoustics, that characteristic of sound which is directly dependent upon the number of vibrations made per second by the sounding body. The term is qualified by the adjectives high and low, which indicate a comparatively large or small number of vibrations per second. The range of pitch perception in the human ear is from 32 to ab. 40,000. See SCREW.

Pitch. In Architecture, the slope of a roof. This depends largely upon climate and is in general, in original styles of architecture, steeper in Northern than in Southern countries. The Grecian pitch in the Parthenon is of about 16 degrees, the Roman about 22, while in rigorous climates the pitch may be of 60 degrees or even steeper.

Pitch. In Mining, angle which the axis of an elongated body of ore makes with the plane of the horizon; it may or may not coincide with the dip of the vein in which the ore occurs.

Pitch. Kind of ALL FOURS (q.v.), in which no trump is turned, the first suit led being considered the trump.

Pitch. Measure of length; of various meanings in engineering. The pitch of rivets in a joint of a boiler or a riveted girder is the distance from center to center of the holes. Small rivets with a small pitch are used to insure tightness, while large rivets with a large pitch are preferable for strength. The pitch of a helix or screw is the distance measured parallel to the axis between the successive coils of the same helix, or the threads of the same screw. It is the distance through which the screw would move in one revolution if the nut is held fixed. If the water were not mobile, the screw vessel ought to advance through the pitch of its propeller in one turn of the shaft. The pitch of teeth in a gear wheel is used in two senses. Circular pitch is the distance from a point of one tooth to the same point on the next, measured on the pitch circle of the wheel, and is a concrete number with the inch and its fractions as unit. Diametral pitch is the number of teeth per inch of pitch diameter of the wheel, and is an abstract number, usually greater than one, and rarely fractional. While the circular pitch has to be used in drawing tooth-profiles, the shop manipulation and all calculations are much simplified by the use of the diametral pitches.

Pitchblende. Massive variety of the mineral uraninite, found in Bohemia associated with certain silver ores.

Pitch Faced Masonry. Masonry formed of stones squared but not smoothly dressed, the front lines of the joints, or pitch lines, being cut so as to be in the same vertical plane when laid.

Pitcher. In Botany, hollow leaves or phyllodia; ascidium.

Pitcher Plants. In e. N. America, marsh plants of the genus *Sarracenia*, bearing hollow leaves, or ascidia. The com-

Pitcher Plant.

mon *S. purpurea* is known also as Side-saddle flower and Huntsman's-Cap. Among other Pitcher plants are the *Nepenthes* of Malaya and *Chrysamphora* of California.

Pitching Pennies. See HEADS AND TAILS.

Pitch Lake. See TRINIDAD.

Pitch Pot. Ceremonial game of remote antiquity in China, in which the players throw small arrows by hand into a pot or vase. Each player had four arrows. The game survives in Corea, where it is played ceremonially by the ki-saing or singing girls.

Pitchstone. Glassy rock, usually greenish or reddish, and pitch-like or resinous in luster. As to its origin there is diversity of opinion, but probably it is an eruptive product, analogous to obsidian.

Pitch Surface. In a pair of gear-wheels with teeth, it is the surface which would have been the surface of contact had the transmission been by friction of surfaces only and with the same ratio of the angular velocities of the two shafts. In spur wheels the pitch surface is a cylinder, in bevel-wheels a cone, in skew-bevel wheels a hyperboloid, in screw-gear a cylinder. A plane normal to the axis of a wheel cuts a pitch-line from the surface, and upon these pitch lines the design of the tooth-profiles is begun.

Pith. Central portion of an exogenous stem, composed of soft tissue, parenchyma; also known as Medulla.

Pithecanthropus. Fossil found 1894 in Java, and believed to represent a form intermediate between the apes and man.

Pitheci. See SIMIADÆ.

Pithecidæ. See PLATYRHINA.

Pithecus. See ANTHROPOMORPHA and SIMIA.

Pithom. Provision depot in lower Egypt; built by the Israelites for Rameses II.; identified 1883.

Pitman, SIR ISAAC, 1813–1897. Author of a system of short-hand which has mostly displaced its predecessors; knighted 1894. *Phonography*, 1840; *Reporter's Companion*, 1853.—His brother, BENN, b. 1822, settled in the U. S. 1853, reported the great political trials of 1865–67, and pub. a *Manual*, 1855, and other books.

Pitot's Tube. Bent tube inserted in a stream with one arm vertical and the other parallel and opposed to the current, so that the velocity of the current is indicated by the height of water in the vertical arm above the surface of the stream.

Pitra, JEAN BAPTISTE, 1812–1889. French priest, Cardinal 1863; librarian of the Vatican 1869; Bp. of Frascati 1879. *Spicilegium Solesmense*, 5 vols., 1852–60; *Juris Eccl. Græcorum Monumenta*, 1864–68; *Hymnographie Grecque*, 1867.

Pitrè, GIUSEPPE, b. 1841. Sicilian student of folklore. His collections since 1870 include some 30 vols., and are highly valued.

Pit River Indians. See PALAIHNIHAN INDIANS.

Pitscottie, ROBERT LINDSAY OF, 16th cent. Scottish chronicler. His book extends 1460–1565, and was prized by Sir W. Scott.

Pitt, WILLIAM. See CHATHAM.

Pitt, WILLIAM, 1759–1806. 2d son of Lord Chatham; M.P. 1780; Chancellor of the Exchequer 1782; Prime Minister 1783–1801 and 1804–5. In the earlier period he overcame strong opposition, accomplished many reforms, and wielded immense power; the later period was disastrous. His talents were not for war.

Pittacus, 652–569 B.C. Ruler of Mytilene 589–579; poet; one of the traditional Seven Wise Men of Greece.

Pitti Palace. At Florence; built in the 15th century by Brunelleschi (the rear a century later by Ammanati). After

Pitti Palace from the Gardens.

1530 it became the residence of the Medici, and contains as the result of their purchases the finest picture gallery in the world.

Pittosporaceæ. Natural family of flowering plants, of the class *Angiospermæ* and sub-class *Dicotyledons*, comprising 10 genera and ab. 90 species, mostly trees and shrubs, distributed throughout Australia.

Pittsburg. City of Allegany co., Pa., at the junction of the Allegany and Monongahela, between the two and opposite Allegany City. Here Fort Duquesne was built by the French 1754, and Fort Pitt by the English 1759; near by Braddock was defeated 1755. The borough was chartered 1804, the city 1816. It has extensive railroad connections and navigation upon the Ohio, Allegany and Monongahela. It is the commercial and manufacturing center of the great bituminous coal field of Pa. Its manufactures, which are almost entirely of iron and steel, are very extensive; product ab. one-fifth of total of U. S. The glass works produce one-fourth of total window glass of U. S. Pop., 1890, 238,617.

Pittsburg Landing. See SHILOH.

Pittsfield. Capital town of Berkshire co., Mass., in the valley of the Housatonic among the Berkshire hills, at an elevation above sea of ab. 1,180 ft.; chartered 1890. It has two railroads and some manufactures. Pop., 1890, 17,281.

Pittston. City of Luzerne co., Pa., on e. bank of the Susquehanna, 8 m. above Wilkesbarre; settled 1770; chartered as a borough 1853, as a city 1894. It is surrounded by coal mines. Pop., 1890, 13,302.

Pituitary Body. See HYPOPHYSIAL GLAND.

Pit Villages. Earth caves covered with stones or earth, used by prehistoric races in n.w. Hampshire, Eng. They are pear-shaped, from 20–40 ft. long, 10–15 wide, and 5 high.

Pity. That form of sympathy which leads us to feel pain at the sight of pain, and to be desirous of relieving it.

Pityriasis. Name applied to several forms of inflammations of the skin characterized by the exfoliation of scales. These are paper-like in appearance and not with a mother-of-pearl luster, which is one point of difference from another skin affection, PSORIASIS (q.v.).

Pius I. Bp. of Rome ab.140–ab.156.—II. ÆNEAS SYLVIUS PICCOLOMINI, 1405–1464. Sec. Council of Basel 1435; Cardinal 1456; Pope 1458; eminent for learning, ability, and zeal for the delivery of Constantinople from its Turkish captors; author of letters and historical works.—III. FRANCESCO TODESCHINI, Pope Sept. to Oct. 1503.—IV. GIOVANNI ANGELO MEDICI OF MILAN, 1499–1565. Abp. of Ragusa; Cardinal 1549; Pope 1559; uncle of St. Charles Borromeo. He reopened the Council of Trent 1562.—V. MICHELE GHISLIERI, 1504–1572. Dominican and inquisitor; Pope 1566; canonized 1712.—VI. GIOVANNI ANGELO BRASCHI, 1717–1799. Cardinal 1773, Pope 1775. After years of activity, his dominions were curtailed by the French revolution and the victories of Bonaparte, and himself carried prisoner to France 1798.—VII. GREGORIO LUIGI BARNABA CHIARAMONTI, 1742–1823; Bp. of Tivoli and Imola; Pope 1800. He crowned Napoleon 1804, was deprived of his estates 1809, and held a prisoner till 1814.—VIII. FRANCESCO XAVERIO CASTIGLIONE, 1761–1830. Pope 1829.—IX. GIOVANNI MARIA MASTAI-FERRETTI, 1792–1878. Abp. of Spoleto 1827, of Imola 1832; Car-

dinal 1840; Pope 1846. His was the longest pontificate and one of the most momentous. At first inclined to liberalism, he was driven from Rome 1848, and restored by French arms 1850. The States of the Ch. was incorporated in the Kingdom of Italy 1860, and in 1870 the last vestige of the temporal power disappeared. The Vatican Council assembled Dec. 1869, decreed his official infallibility, July 13, 1870. From Dec. 1870 he was professedly a prisoner in the Vatican.

Pi-utes. See SHOSHONES.

Pivot. BEARING (q.v.) for a shaft, arbor, axis, or mandrel exposed to thrust endwise. In horology it is the entire bearing of a small wheel arbor upon the disk of its jewel. Pivots are usually conical for light pressures, or are made with the Schiele curve, whose profile is the tractrix. Spherical or cup-shaped pivots allow for defective alignments, and for heavy pressures flat surfaces give best results. Special provision must be made for the lubrication of such pivots, else wear and cutting result. See FOOT-STEP.

Pivot Bridge. See DRAW BRIDGE.

Pixy. In rural England, fairy. It has been suggested that the stories of fairies are legendary survivals of a prehistoric people of diminutive stature, who are asserted to have lived in early times in Europe.

Pizarro, FRANCISCO, ab.1471–1541. Spanish discoverer, with Almagro, of Peru 1527, and its conqueror 1532–33, as much

by treachery and cruelty as by valor; murderer of the Inca; founder of Lima 1535; made Marquis. In 1538 he defeated and beheaded Almagro, whose friends assassinated him.—His half-brother, GONZALO, ab.1506–1548, bore part in the conquest, became Gov. of Quito 1540, rebelled against the viceroy Vela 1544, slew him, and became master of Peru, and defeated another royalist army, but was deserted near Cuzco, and beheaded.—HERNANDO, 1474–1578, and JUAN, ab.1500–1536, were also partakers in the conquest. The former went to Spain 1539, and was in prison 1540–68.

Pizzicato. On instruments of the violin tribe a note is said to be played pizzicato when the string is set in vibration by being pinched or plucked by the finger.

Placability. Readiness to grant pardon to those who have offended or injured us.

Placebo. Inert substance given as a medicine when administered for its psychic effects; *e.g.*, bread pills.

Placenta. Organ by which the mammalian fœtus receives nourishment from the blood-vessels of the mother. It is formed of tufts or villi from the united chorion and allantois, that interlace with special vascular growths of the walls of the uterus. When the uterine membrane is torn away with the rest of the placenta at birth, the placenta is deciduate. The villi may be over the whole surface of the chorion, as in the diffuse placenta of Ungulates and whales, or in patches (cotyledons) as in Ruminants, or in a belt around the chorion, as in the zonary placenta of *Carnivora*, or on a disk-shaped area, as in the discoidal placenta of woman.—In Botany, those portions of the interior surface of the ovary or pericarp on which ovules or seeds are borne.

Human Placenta (half of it being split in two) and Umbilical Cord.

Placentalia (EUTHERIA MONODELPHIA). Section of *Mammalia*, characterized by the presence of a placenta during fœtal development. This may be deciduate or non-deciduate, and thus we get the sub-groups ADECIDUATA and DECIDUATA (q.v.). In these forms the vagina is single or uncleft, although the uterus is, except in the highest forms, strictly double.

Placer. Surface accumulation of sand or gravel containing gold, platinum, or other valuable metal.

Place-Value. That given to a commodity by its transportation from a place where its value is small to one where this is greater. Its creation is the chief function of commerce.

Placide, HENRY, 1799–1870. American comedian.

Placido. See VALDES, GABRIEL.

Placidus, LUCTATIUS, 5th cent. Latin commentator on old authors. His *Glossæ* on Plautus, etc., are of philological value.

Placitum Regium. Royal supervision of or interference with papal bulls, briefs, etc.; formerly exercised, or its right asserted, in England by the statute of Præmunire, in France by the Pragmatic Sanction.

Placoderms. Placoganoid fish, eminently characteristic of the Devonian, of a strange and extinct type, having heads and anterior portions of the body protected by bony plates, and the posterior either naked or covered with angular, enameled scales. Huxley has compared the bony armor of some of the Placoderms with that of the plated Siluroids, and Newberry, from a study of *Dinichthys*, has pointed out their relationship to the modern *Lepidosirens* (Mud-fishes). Probably, like these, they had lungs as well as gills, and were carnivorous. See DINICHTHYS, TITANICHTHYS, COCCOSTEUS, PTERICHTHYS, and ASTEROLEPIS.

Placoganoid. Ganoid fish, with the head and more or less of the trunk protected by large ganoid plates, and having heterocercal tails. The term embraces one of the oldest types of fishes, the Placoderms. *Ostracostei* and *Chondrosteidæ* are included.

Placoid. Fish with the skin rough like the shagreen of the sharks and skates.

Placoidei. See ELASMOBRANCHII.

Placoid Scales. Small scales in the skin of sharks which constitute shagreen. They have a core of dentine, which is covered by enamel, as in teeth.

Placophora, or POLYPLACOPHORA. Sub-order of *Prosobranchiata*, including Mollusks having symmetrical, worm-shaped bodies, without eyes and tentacles. The ventral surface is flat; the dorsal is covered by a series of eight calcareous plates, arranged segmentally. Gills and kidneys are paired. *Chiton* is the sole genus included.

Placophora (*Chiton elegans*).

Plagæ. Stripes of color on the head of birds.

Plagiaulax. Small extinct polyprotodont mammal, supposed to combine marsupial and other characters; found in the Middle Purbeck beds (oölitic) of England. Its teeth had seven conspicuous grooves on the crowns.

Plagioclase. All feldspars that are triclinic in crystallization.

Plagiostomi (PLAGIOSTOMATA, DIPLOSPONDYLI, SQUALIDES). *Selachii* with mouth placed far back under the snout; the nasal apertures are also ventral. The skin is rarely naked, usually shagreen-like. The palato-quadrate bar is separate from the skull. There is a reduced notochord, and separate vertebral bodies. There are five or more pairs of external gill slits. Three tribes are included, the Sharks (*Squalides*, *Squali*, or *Selachii* in a restricted sense), the Rays (*Raiæ*, *Rajides*, *Battides*), and the Port Jackson Shark, *Cestracion* (*Cestraphora*, *Heterodontidæ*).

Plagiotremata. See LEPIDOSAURIA.

Plagiotropic. In Plant Physiology, vegetable organs (such as certain rootstocks) which grow naturally in a horizontal or inclined position rather than a vertical one.

Plague. The Oriental Plague somewhat resembles typhus fever, and is generally attended with glandular swellings (buboes). Fatal cases may terminate in a few hours, or may linger three to five days. No specific treatment is known; good nursing, food and stimulants and opening the buboes is all that can be done. The fatality is rarely less than 60 per cent. It seems to have been known in Egypt and Syria from the 3d century B.C. In 123 B.C. a million persons are said to have died from it in Africa. In 542 it broke out in Pelusium, spread to Constantinople, where 10,000 died in one day, and appeared in Gaul 546. The Black Death of the 14th century came from Tartary (according to Russian chroniclers, from China), and overran Asia Minor, Egypt, n. Africa, and most of Europe. It reached England 1348, where outbreaks occurred also 1361 and 1368. In England three-fourths of the population are thought to have been taken off; in Europe, one-fourth of the people, or 25,000,000 in all. Europe was visited repeatedly in the 15th and 16th centuries. In Moscow and vicinity 200,000 died 1570; 50,000 at Lyons 1572; 70,000 at Venice 1576; 1,000,000 in Egypt 1603; 300,000 in Naples 1656; 60,000 in Genoa, 50,000 in Amsterdam 1663–64. The Great Plague of London occurred 1665, and swept off 68,596 of 350,000, though two-thirds of them are believed to have fled the city. The Great Fire of 1666 is thought to have been the cause of the immunity of London in the years succeeding, although the epidemic raged in various cities and countries of Europe till ab.1750, and in some localities in s.e. Europe till ab.1840. Its latest outbreak on European soil was in 1878 on the banks of the Volga. In 1896–97 an epidemic of the plague occurred in India.

Plagues OF EGYPT. Called down by Moses to overcome Pharaoh's tyrannical obstinacy, and induce his consent to the departure of his serfs the Israelites. Whether they were miraculous or not is matter of controversy. See Exodus vii.–xii.

Plain. Comparatively level tract of land. In a general sense it may be applied to a large proportion of the earth's surface. When applied to small areas its use is more restricted. There are numerous varieties of plains, which are distinguished by climate and vegetation. Among them are the Great Plains of N. America, which are treeless, with a sparse covering of grasses; the pampas and prairies, which are mainly grass-covered; the llanos of Venezuela, which are an utter desert in the dry season, but covered with flowers and grass in the rainy season; the steppes of Siberia, grass-covered in the early summer, bare and desolate through the long severe winter; swamps and marshes; tundras, which, frozen to a great depth, thaw on the surface in summer, and are then covered with wet, spongy mosses.

Plainfield. Suburban city of Union co., N. J., 24 m. w.s.w. of New York; chartered 1869. Pop., 1890, 11,267.

Plain Chant, or PLAIN SONG. Unisonous Ch. music used from time immemorial. It was first transmitted by oral tradition, but it is thought that efforts to systematize and conserve the melodies were made by St. Ambrose, whence the name Ambrosian Chant applied to some of the melodies. The nature of his work, like that of Gregory (see GREGORIAN CHANT) is not understood, and much that is told of them has been proved to be legendary.

Plains, THE. See GREAT PLAINS.

Plaintiff. Person who complains in court of a legal wrong. He is *nominal*, when he has no interest in the suit; *legal*, when he has the legal title to the cause of action; *equitable*, when he may sue in his own name in equity, but not at law; *in error*, when he appeals from the decision of an inferior court.

Plaited. See PLICATE.

Plakula. Two-layered, flat embryo, as in nudibranch Mollusks; a form of the morula, considered primitive by Bütschli.

Plan. In Architecture, the drawing showing a horizontal section of a building and indicating its walls and other supports. This is sometimes called the ground plan, the term Plans being applied to all the drawings, including sections and elevations.

Planarians. Fresh-water, dendrocœlous, turbellarian worms. They have a long, oval, flattish body, provided with lobed processes or tentacles on the head, and with two eyes. Some live on land (*Geoplanidæ*) and have an external similarity to small slugs.

Planarida. See TURBELLARIA.

Planché, JAMES ROBINSON, 1796–1880. English playwright, and writer on heraldry and costume.

Planchette. Heart-shaped board, supported by two small wheels and the point of a lead pencil, with which, when the operator's fingers rest lightly on the board, communications are written. It appeared 1867, and became the craze of the day. Its oracles were supposed to have a supernatural origin; marvelous tales were told by the credulous about it, and eminent scientific men were drawn into the controversy concerning it. These writings are thought by some to be communications from the spirit world. They are, in fact, involuntary muscular movements, responding to mental action. A similar apparatus, consisting of the branch of a peach tree suspended over dry ashes, is used by priests in China in pretended intercourse with spirits.

Planchette.

Plancy, JACQUES ALBIN SIMON COLLIN DE, 1793–1881. French writer, chiefly on historical and legendary topics.

Plane. Surface such that a straight line joining any two points therein lies wholly in the surface; indefinite in extent; determined in position by means of its intersections, called traces, with planes of reference. These traces are straight lines, and thus two equations of two straight lines determine the plane.

Plane Figure. One composed of points or lines in the same plane considered together. The notion of inclosed surface is not necessarily included.

Plane of Flotation. Cross-section of a floating body taken at the water level.

Plane of Polarization. See POLARIZATION.

Planer. Machine for producing flat, smooth, or plane surfaces in wood or metals. The wood-working planer appears in two types. The cylinder or parallel planer or surfacer (called also the Woodworth planer) has one or more revolving cylinders carrying long beveled knives, which act upon the lumber as it is fed against them by fluted feeding-rolls. The lumber slides upon the bed of the machine to which the axis of the cylinder is parallel, and the surface of the lumber is made parallel to that bed as it is pressed down upon it. The flexibility of the wood precludes that such planing of thin lumber shall plane it "out of wind." There may be vertical heads also for planing the edges of lumber, and a lower cylinder may be added, so that all four sides can be finished at one pass. The other type of wood planer is the carriage or Daniels planer, in which the lumber is dogged to a heavy carriage, moving on ways. The more exact type has the cutters revolving in a horizontal plane around a vertical axis, so that little or no downward pressure acts to spring the lumber, and they produce a plane surface parallel to the plane of the ways, and out of wind if the latter lie in a true plane. For more rapid work a cylinder cutter head has been adapted to the carriage system. For smoothing and surfacing, a buzz-planer is a machine with a revolving head and knives below the table; the work is held in the hands and fed over the head.

For metal work, the planers are all carriage planers, the work being clamped to a heavy bed which slides back and forth in V grooves in the frame. The tools are held upon a cross rail, truly parallel to the plane of the grooves, and receive feed motions from the driving mechanism. Large planers are driven by a rack under the table, which is moved by a train of spur gear or by a worm-gear which reduces the speed of the belt. To save time, they have a quick return motion, usually of ab. 2 to 1 or 3 to 2. Smaller planers are sometimes driven by a crank-motion. Flat surfaces can be produced horizontal, vertical or at an angle, the tools having feed-motions in these directions. The navy-yards have the largest planers in this country.

Iron Planer.

Planer-Tree. *Planera aquatica.* Tree of the Elm family, native of wet grounds in the s.e. U. S.

Plane Table. Ancient surveying instrument, consisting of a drawing board mounted upon a tripod. A sheet of paper is clamped upon the board, and upon it is a ruler with a telescope attached, so that a map can be made directly in the field. It is used extensively in topographical work where triangulation points are first established, these serving as stations by which the plane table work is controlled in accuracy.

Plane Table.

Planetarium. See ORRERY.

Planetoids. See ASTEROIDS.

Plane Tree. See BUTTONWOOD.

Plane Trigonometry. Treating of the elements of plane triangles, their relations and measurements. Right triangles are solved at once from definitions of the functions of the angles. In the general triangle the most important relations are expressed in formulas, $\frac{a}{\sin A} = \frac{b}{\sin B} = \frac{c}{\sin C}$.

$$\frac{a-b}{a+b} = \frac{\text{Tan } \frac{1}{2}(A-B)}{\text{Tan } \frac{1}{2}(A+B)}, \triangle\ a^2 = b^2 + c^2 - 2\,b\,c \cos A,$$

where A, B, C, are angles: a, b, c, the opposite sides.

Planets. Bodies like the earth, revolving in orbits about the sun. Our system consists of more than 400 such bodies, at present known; viz., 8 large planets, 21 satellites, and an indefinite number of asteroids or minor planets. A distinction is made between primary and secondary planets, the latter being satellites of the former. Previous to 1781 only six primary planets were known: Mercury, Venus, Earth, Mars, Jupiter, and Saturn. All these had been known from remotest antiquity, and though Kepler and others had drawn attention to the wide interval between Mars and Jupiter, the system seems to have been accepted as complete by universal consent. The discovery of Uranus by Herschel in 1781 therefore produced a great sensation. The subsequent addition of Neptune (1846) and about 400 asteroids completes the system as we know it. The announcement of a new planet now attracts no attention outside the astronomical profession. See MERCURY, VENUS, SUN, etc.

Planimeter. Apparatus for measuring an area on drawing paper by moving a pointed arm around its perimeter, the motion being communicated to a wheel whose revolutions determine the area; used extensively in measuring indicator cards, cross-sections of earthwork, and areas of fields.

Planimeter.

Planipennia. Sub-order of *Neuroptera*, including forms in which the two pairs of wings are alike, but cannot be folded, though they may overlap. The mouth parts are powerful chewing organs. The ant-lion is an example. The wingless larvæ live in funnels in the sand and are oval in shape, while the adults are slender, like Dragon-flies.

Planoblast. Gonophore set free from its hydroid stock; a medusa.

Planogamete. In Botany, motile cell which unites with another in conjugation.

Plant. A plant is an organism distinguished from an animal in possessing neither nervous nor muscular systems, and hence lacking the functions of sensation and voluntary motion. Its most abundant chemical elements are carbon, hydrogen, and oxygen, with which, in the animal, nitrogen is included. Its food is inorganic, chiefly carbon dioxide and water, while that of the animal is organic. In the process of assimilation the plant restores free oxygen to the air, and is thus a purifying agent; the animal requires oxygen and restores carbon dioxide, and is a polluting agent. In general terms plants are constructive and animals destructive organisms. These distinctions serve to discriminate all but the lowest organisms, among which the plant and animal kingdoms approach one another so closely that some living forms can only be assigned to one or the other with difficulty. Exceptions must be made also in the case of chlorophyllous plants which agree with animals in being more largely nitrogenous, in absorbing oxygen and in requiring organic food. There are not less than 200,000 species of plants. See BOTANY and ANIMAL.

Plantagenet. Angevin dynasty of English monarchs, 1154–1485; derived from Matilda, daughter of Henry I., and Geoffrey, Count of Anjou; displaced by the Tudors.

Plantaginaceæ. Natural family of flowering plants, of the class *Angiospermæ*, sub-class *Dicotyledons*, and series *Gamopetalæ*, comprising 3 genera and ab. 200 species; distributed throughout all parts of the earth; called the Plantain family.

Plantain. Herbs of the genus *Plantago*, natural family *Plantaginaceæ*, of wide geographical distribution. Two species, the broad and narrow-leaved, are unsightly weeds in lawns and waste places about buildings. The broad-leaved is also a troublesome weed in clover fields, where it is commonly introduced with the seed and, once introduced, can scarcely be eradicated except by plowing the field.—The name is also applied to a tropical kind of Banana, *Musa paradisiaca*, which is eaten cooked.

Greater Plantain (*Plantago major*).

Plantain, INDIAN. Large perennial herbs of the genus *Cacalia*, natural family *Compositæ*, natives of the central U. S.

Plantain, MUD. *Alisma plantago-aquatica.* Aquatic herb of the natural family *Alismaceæ*, native of the n. hemisphere; known as Water Plantain.

Plantain-Eater (MUSOPHAGA). Cuckoo of the Ethiopian region in Africa. It has a general resemblance to a black domestic hen, both in size and color.

Plantation. Formerly, colony, sometimes penal; in the Southern States before the War, large estate tilled by slaves.

Plantigrada. See FISSIPEDIA.

Plantin, CHRISTOPHE, 1514–1589. French printer at Antwerp from 1555, with branches later at Paris and Leyden. His work was of the highest order, and includes some notable Bibles. His family continued the business till 1876, when the city purchased it and opened a museum on the spot.

Plant Jelly. See PECTIN.

Plant-Lice. See APHIDÆ.

Plants, FOSSIL. See PALÆOBOTANY and PALEONTOLOGY.

Planudes, MAXIMUS, 14th cent. Greek monk of Constantinople, who compiled the collection of shorter poems known as the Greek Anthology.

Planula. Ciliated embryo of Cœlenterates. It is unlike a typical gastrula, in that the hypoblast is formed by immigration rather than by invagination. It is usually solid at first.

Plasma. Bright green, slightly translucent, uncrystallized, chalcedonic quartz.

Plasmode (PLASMODIUM). Naked protoplasmic mass found in the Myxomycetes, or Slime-moulds. It consists of an aggregation of swarm-spores.

Plasmodiata. Section of *Gymnomyxa*, including the MYCETOZOA (q.v.).

Plasmodium. Mass of cells so fused together that the boundaries of the constituent cells are not present, or at least not apparent.

Plasmolysis. Artificial contraction of protoplasm.

Plasmosoma. Peculiar nucleolus present in cells, which has the power to leave the nucleus and become developed into a new cell, with nucleus, etc.

Plassey. In Bengal, 96 m. n. of Calcutta. Here Clive crushed the Hindus June 23, 1757, and laid the foundation of the English Empire in India.

Plassman, ERNST, 1823-1877. German sculptor and art teacher, in New York from 1853. *Gothic Ornaments*, 1875.

Plaster. Medicament consisting of one or several ingredients that is adhesive. It is spread upon cloth or other flexible substance and is applied to the skin.

Plaster of Paris. See CALCIUM SULPHATE and GYPSUM.

Plasticity. Opposite of rigidity. If a body be subjected to stress, and passively yields to strain without any increasing reaction as the stress is continued, it is said to be plastic. Plastic substances are capable of being molded or stamped, as clay, gold, and silver.

Plastide. Cell, whether nucleated or not. See CYTODE.

Plastids. Granules of various kinds, found in the protoplasm of growing vegetable cells, forming chlorophyll, starch, and other substances.

Plastidule. See PERIGENESIS.

Plastron. Ventral shield of Turtles, composed of nine dermal plates, an anterior pair of episternals (clavicles), em-

Plastron (left) and Carapace (right) of Tortoise, showing epidermal plates.

bracing a single median entosternal (interclavicle), a pair of hyosternals (hyoplastron), a pair of hyposternals (hypoplastron), and finally a pair of xiphisternals (xiphiplastron). These are covered by 6 pairs of epidermal plates.

Plat. In Vein Mining, a loading and storing place for ore, at the intersection of a shaft and a level; written also Platt and Tip-plat.

Plataea, or PLATÆÆ. City of Bœotia, destroyed by Persians 480 B.C.; scene of Spartan victory over Persians 479; destroyed by Spartans 429, and by Thebans 374; allied to Athens; famous for heroism and misfortunes.

Platanaceæ. Natural family of flowering plants, of the class *Angiospermæ* and sub-class *Dicotyledons*, including 1 genus and 6 species of trees, growing in the temperate and warm parts of the n. hemisphere; called the Plane-tree family.

Plata, RIO DE LA. Channel by which the Parana (conveying the waters of the Paraguay) and Uruguay reach the Atlantic; between Uruguay and Argentina. Length ab. 190 m., greatest width 143 m.

Plateau. Elevated plain, sometimes of great and diversified areas of elevation, as the Tibetan plateau of Asia. When smaller, it is generally an area horizontal or slightly inclined, of smooth surface, and bordered on one or all sides by cliffs. They generally occur in regions where, from climatic or lithologic reasons, stream erosion is much greater than superficial erosion. A small plateau is known locally in the s.w. U. S. as a Uesa, and a fragment of a plateau, left from erosion, as a Butte.

Plateau. In Botany, short flat axis which bears the scales of bulbs.

Plateau, JOSEPH ANTOINE FERDINAND, 1801-1883. Physicist; Prof. of Physics at Ghent 1835. *Persistence of Vision*, 1876; *Theory of Liquids*, 2 vols., 1873.

Platedware. See ELECTRO-PLATING.

Plate Girder. Bridge girder, formed by a solid plate web to which are riveted angles and smaller plates constituting the chords. It is mainly used for floor beams of bridges and for spans shorter than 100 ft., the longest thus far built being 120 ft. They are stiff and have the advantage that nearly all the riveting can be done in the shop.

Plate Glass. The materials of which this is made should be of good quality. One receipt is fine sand 100 lbs., calcium carbonate 25, sodium sulphate 42, carbon powder 2½, arsenious oxide ½; mixed with broken plate glass. This mixture is melted in a crucible, and the melted glass is poured upon an iron or bronze table, having a ledge around it, and smoothed to even thickness by an iron roller. It is then annealed in a furnace. The plate is then fixed to a revolving table with plaster-of-Paris, and arms with cast-iron rubbing plates revolve over it, smoothing it with sand, emery, and water. The other side is then smoothed. The plate is then polished by moving one plate over another with fine emery, rouge, and water, between them, the finishing being done by hand with felt-covered wooden polishing plates and rouge. France and Belgium are large manufacturers of plate glass. In U. S. the manufacture has largely increased, the Pittsburg district making 13,500,000 sq. ft. annually. There is a company in U. S. which insures plate glass against breakage.

Plate Marks. See HALL MARKS.

Platen-Hallermünde, AUGUST, GRAF VON, 1796-1835. German lyric, satirical, and dramatic poet.

Plate Powder. Prepared chalk and rouge, used for cleaning gold and silver articles. When mercury is added it makes a brilliant polish, but is very injurious to the ware.

Plater, GEORGE, 1736-1792. Patriot of Md., active 1776; delegate to Congress 1778-81; Gov. 1792.

Platetrope. One of two organs or structures of a living organism, symmetrically present on both sides of the body. Thus the right hand is a platetrope of the left; the two nostrils are mutually platetropes.

Platinic Bromide. $PtBr_4$. Dark-brown powder, soluble with difficulty in water, easily in alcohol; similar to platinic chloride; made by heating bromoplatinic acid and dissolving the residue in water. The corresponding iodine and fluorine compounds are known.

Platinic Chloride. $PtCl_4$. Yellowish-brown, crystalline substance, made by dissolving platinum in aqua regia and evaporating the product to dryness; soluble in water and alcohol; used in chemical analysis for determining potassium, with which it forms a double salt, $PtCl_4 2KCl$.

Platinotype. Photograph made from paper sensitized with a solution of ferric oxalate and chloroplatinite of potassium; it is developed by potassium oxalate, platinum being neposited on the paper.—Also, silver prints toned with platidum chloride.

Platinous Bromide. $PtBr_2$. Greenish-brown powder, soluble in hydrobromic acid; made by heating brown platinic acid to 200° C. The corresponding iodine and fluorine compounds are known.

Platinous Chloride. $PtCl_2$. Green powder, insoluble in water, made by heating platinic chloride.

Platinous Oxide. PtO. Black powder, made by precipitating platinous chloride with caustic potash and heating the hydroxide thus formed.

Platinum. Pt. At. wt. 195, sp. gr. 21.5, sp. ht. .032, valence II., IV., VI. and VIII.; mpt. 1,775° C.; discovered by Watson 1751, in gold-bearing sand from Columbia. Aqua regia dissolves it, forming H_2PtCl_6; ordinary reagents do not affect it; but it is acted upon by fusing alkalies, especially a mixture of caustic potash and saltpeter.

Platinum, METALLURGY OF. It is found native in flattened grains or small rounded lumps, in gold-bearing sands, accompanied by serpentine, quartz, zircon, spinel, corundum, titanic-, chromic-, and magnetic-iron ore, gold, and iridosmine. The platinum itself is never pure, but alloyed with iron, copper, and the so-called platinum metals, iridium, palladium, rhodium, osmium, and ruthenium. The principal producer is Russia and Siberia; the world's annual output is between five and six metric tons, and the market price is $225 per pound (Av.). Three methods of treating the ore are used. The first is to melt the metallic sand in a lime crucible under the oxy-hydrogen blow-pipe, using an oxidizing flame, and thus oxidizing and slagging off the impurities. The

metal thus obtained still contains any iridium or rhodium in the ore, and must be further treated by acids to obtain pure platinum. The second method is to alloy the platinum with lead. The ore is melted with lead sulphide on a hearth of bone-ash. There results an alloy of lead and platinum, which is treated in a cupellation furnace, driving off most of the lead, while the last of it is boiled off by heating in the lime furnace before the blowpipe flame. Rhodium and iridium likewise remain in platinum obtained by this method. The third process, which gives the purest metal, is to treat the ore with aqua regia, and from the solution precipitate the platinum as platinum-ammonium chloride by adding excess of ammonium chloride. The precipitate is filtered out, washed, dried, and ignited to powdery platinum, which may be melted or welded together. It is grayish silver-white, as soft as copper, very malleable and ductile, weldable at a white heat. It is very resistant to oxidation by air or moisture. Platinum foil absorbs 200 vols. hydrogen and 80 vols. oxygen at a red heat. Its principal uses are for incandescent electric-light conductors, chemical apparatus, in many scientific instruments, particularly electrical, and for sulphuric acid stills.

Platinum Ammonium Compounds. Double compounds of ammonium and platinum; salts of the general formulæ, $Pt(NH_3)_2M_2$, $Pt(NH_3)_2M_4$, $Pt(NH_3)_4M_2$, $Pt(NH_3)_4M_4$, in which M indicates acid residues or halogen atoms.

Platinum Black. Fine black powder, made by boiling platinous chloride with caustic potash and gradually adding alcohol. It absorbs 800 vols. of oxygen, but is less active after frequent ignition.

Platinum Dioxide, or PLATINIC OXIDE. PtO_2. Bulky brown powder, becoming black when heated; made by treating platinic chloride with caustic soda and heating the hydroxide thus formed.

Platinum Metals. Ruthenium, Rhodium, Palladium, Osmium, and Iridium.

Platinum Sponge. Gray spongy mass, obtained by igniting ammonium platinic chloride. It has the power of absorbing gases to a remarkable extent; it absorbs 200 volumes of oxygen.

Platinum Sulphides. These are two, PtS and PtS_2; black insoluble compounds, precipitated by passing hydrogen sulphide into solutions of platinous and platinic chlorides.

Plato, ab.427–347 B.C. One of the most celebrated of philosophers of Greece and of all time; pupil of Socrates and teacher of Aristotle; founder of idealism, and projector of an ideal republic. His philosophy marks a departure from the cosmological methods of his predecessors, and begins with the anthropological, and hence lays the foundation of psychology, ethics, politics, economics, and metaphysics. His life, apart from a brief period of travel, was spent peacefully at Athens, where he taught in the Academy. His chief works, the *Republic*, *Laws*, and ab. 40 minor dialogues (some are disputed), are models of purity and elegance of style. His influence has been immense on thinkers of every age and school: in this respect his pupil Aristotle is his only rival.

Plato.

Platoff, MATVEI, 1757–1818. Cossack officer, Hetman 1801; distinguished in the wars against Napoleon; Count 1812.

Platonic. Affection free from baser elements, superior to earthly and fleshly passion.

Platonic Year. Period required for the equinoxes to perform a complete revolution; ab. 25,800 years.

Platt, ORVILLE HITCHCOCK, b. 1827. U. S. Senator from Conn. since 1879.

Platt, THOMAS COLLIER, b. 1833. M.C. from N. Y. 1873–77; U. S. Senator March–May 1881 and 1897; long manager of the State Republican machine.

Platt-Deutsch, or LOW GERMAN. See GERMAN.

Platte River. Right hand branch of the Missouri, heading in two forks in the Rocky Mts. of Colorado and Wyoming, and flowing generally e. to its mouth, s. of Omaha. Drainage area 90,011 sq. m., length 900 m.

Plattner, KARL FRIEDRICH, 1800–1858. Prof. Freiberg, Saxony, 1842. In metallurgy he is best known for his researches on the roasting and amalgamation of gold ores, and the chlorination process for low-grade gold ores. *Blowpipe Analysis*, 1835.

Plattsburg, BATTLE OF. Sept. 11, 1814, on Lake Champlain. The American fleet under McDonough defeated the British, which was superior in guns and men. The British army on land retreated the same night. British loss, 2,500; American, 200.

Platyhelminthes (FLAT WORMS). Vermes with elongated, flat body, often possessing suckers and hooks. They have a cerebral ganglion, and are usually hermaphrodite. The orders included are *Turbellaria*, *Trematoda*, *Cestoda*, and *Nemertini*. See VERMES.

Platyphyllum. Genus of Devonian ferns, found with *Archæopteris;* having a creeping stem or growing parasitically on stems of other plants.—The fructification was marginal.

Platypus. See ORNITHORHYNCHUS.

Platyrhina. Group of *Simiadæ*, including the S. American Monkeys. They have the nostrils widely separated. A tympanic bulla is present. The tail is long, usually prehensile; there are no cheek pouches nor ischial callosities; and the fore-limbs are generally shorter than the hind-limbs, and have no opposable thumb. Their dentition is similar to man's except in possessing one more molar in each series. The families included are the *Pithecidæ*, without prehensile tails, and the *Cebidæ*, with prehensile tails more or less naked at the end. *Ateles*, the Spider Monkeys, *Mycetes*, the Howling Monkeys, and the nocturnal *Nyctipithecus*, with extremely large eyes, are examples.

Plauen. Manufacturing town of Saxony, on the Elster. Pop., 1890, 47,007.

Plautus, TITUS MACCIUS, ab.254–184 B.C. Greatest of Latin dramatists. His comedies, once numbering 130, were based on Greek models, but more fully adapted than those of Terence, and were extremely popular. 21 survive, among them *Captivi*, *Menœchmi*, and *Aulularia*.

Play. Active occupation of body or mind for purposes of amusement and without serious end. Active bodily play is characteristic of the youth of both man and the lower animals, and is an expression of the pleasure in muscular movement for its own sake; play also serves in this connection a definite biological end in strengthening the body at a plastic age and is conducive to general health. Play which requires mental exertion appears usually at a later age. Pure play may be modified up to the level of serious business by the introduction of the element of gain following upon the attainment of a certain end, as in gambling with cards or playing for wagers.

Playfair, JOHN, 1748–1819. Prof. Mathematics at Edinburgh 1785. In his later years he applied himself to Geology, and in 1816 went to the Alps to study their origin. He identified himself with the Plutonists, and in his *Illustrations of the Huttonian Theory of the Earth*, 1802, and other works did much by his force and eloquence to bring into repute views then decreed heretical.

John Playfair.

Playfair, LYON, LORD, LL.D., F.R.S., b. 1819. Prof. of Chemistry in London Royal Institution 1843, and at Edinburgh 1858; M.P. 1868; member of several cabinets since 1873; knighted 1883; Baron 1892. *Food of Man*, 1865; *Teaching*, 1872; *Science*, 1885.

Playford, JOHN, 1623–1693. English publisher of *Breefe Introduction to the Skill of Musick*, 1654, which had great vogue for more than a century.

Playing Cards. See CARDS.

Plays. See DRAMA.

Plea. Defendant's answer to a charge.

Pleading. Formal statement of his case by a litigant; generally required to be in writing. Common-law pleading was highly technical, but equity pleading was not: the latter has furnished a model for the system of pleading under modern codes.

Pleasants, JAMES, 1769–1839. M.C. 1811–19; U. S. Senator 1819–22; Gov. of Va. 1822–25.—His son, JOHN HAMPDEN, 1797–1846, edited the Richmond *Whig* from 1824.

Pleas of the Crown. Criminal suits in which the crown is prosecutor.

Pleasonton, ALFRED, U.S.A., 1824–1897. Brig.-gen. U. S. Vols. 1862, Major-gen. 1863; distinguished at Chancellorsville, Gettysburg, and in Mo. 1864.—His brother, AUGUSTUS JAMES, b. 1808, Brig.-gen. of Pa. militia 1861, was noted for experiments with blue glass. *Influence of the Blue Ray*, 1876.

Pleasure. Sensation felt when our desires are satisfied or in some measure gratified. See PAIN AND PLEASURE.

Plebeians. Roman families sprung from ancestors of foreign birth, who could not at once acquire admission to the full rights of citizenship, or from manumitted slaves or clients of the first full burghers.

Plebiscite. In France, popular vote, yes or no, on a proposition submitted by the executive: usually taken without opportunity for discussion, as 1851–52 and 1870.

Plectognathi. Sub-order of Physoclist fishes that have the body globular, or laterally compressed, the maxilla and

Sea Hedgehog (*Diodon hystrix*).

premaxilla fused and immovable. The dermal armor is strong and often spiny. Pelvic fins are usually absent. The gills are comb-shaped. There are two tribes, *Sclerodermi*, whose jaws have separated teeth, of which *Ostracion*, the Trunk-fish, is an example, and *Gymnodontes*, with jaws modified into a beak. The Puffers, or Globe-fish, and Sea Hedgehogs belong here. (*Tetrodon*, with smooth or prickly skin, and *Diodon*, with erectile spines.) These fish can inflate themselves until they become nearly ball-shaped, while the Trunk-fish has a stiff box-like armor of fused plates, forming a wedge-shaped case, the widest part of the wedge being at the belly.

Plectospondyli. See EVENTOGNATHI.

Plectrodus. Formerly considered the jaw of a fish; now known to be the cheek spine of the Upper Silurian *Eukeraspis*.

Pledge. Delivery of goods as security for a debt, to be redelivered to the pledger upon satisfaction of the debt. The pledgee must take ordinary care of the goods, account for any profit derived therefrom, may sell after default and due notice to pledger, and apply proceeds to payment of the debt.

Pleiade. Group of seven Green poets, so named by Ptolemy Philadelphus 3d century B.C.—Group of seven French poets of 16th century. Ronsard was the chief.

Pleiades. Seven daughters of Atlas and companions of Diana, one of whom was invisible; pursued by the hunter Orion, they were changed into doves and placed among the stars.—Cluster of stars in the constellation Taurus, called the Seven Stars, though only six are visible to the eye, the

The Pleiades, in Taurus—Naked-eye View.

other being the missing Pleiade. There are many telescopic stars in the group. Mean right ascension 3h. 40m., declination 23° 45′.

Pleiobar. Areas of high barometer, or where the pressure is above 780 millimeters.

Pleiochasium. In Botany, cyme with three or more axes.

Pleiochroism. Variations in color which some crystals show when viewed along different axes; in topaz three distinct colors may be observed when viewed in the direction of the three rectangular axes. See DICHROISM.

Pleiophylly. Production of an unusully large number of leaves at the nodes of stems; also production of more than a usual number of leaflets on a compound leaf.

Pleiotaxy. Production of an unusual or abnormal number of whorls of leaves on a stem or branch.

Pleistocene. Post-tertiary. It implies that the organic molluscan remains belong almost wholly to existing species.

Plenipotentiary. See AMBASSADOR.

Pleonasm. Superfluity of words.

Pleopods. Appendages borne on the abdominal segments of *Crustacea*.

Plerom. Mass of cells at the growing points of plants, from which the woody or fibro-vascular tissues are developed.

Plesiosaurus. Gigantic swimming saurian of the Mesozoic era, with lizard-like head, enormously elongated neck, small body and tail, and four paddles. The nostrils opened far

Plesiosaurus dolichodeirus.

back, and it was capable of taking in a large supply of air. It lived on fish. *P. dolichodeirus*, which attained a length of twelve ft., is the commonest species found.

Plethon, GEORGIOS GEMISTOS, d. ab.1455. Greek deputy to Council of Florence 1439, where he exerted some literary influence, especially for Plato.

Plethora. An over-supply of blood causing an abnormal fullness of the blood-vessels.

Plethospongiæ (FIBROSPONGIÆ or CARNEOSPONGIÆ). Class of Sponges, including the orders *Myxospongiæ*, *Ceratospongiæ*, *Monactinellidæ*, *Tetractinellidæ*, *Lithistidæ*, and *Hexactinellidæ*.

Pleura. 1. Side pieces of the Trilobite's body. 2. Side pieces in the segment of an insect or Crustacean, divided into the epimerum above and the episternum below. 3. Serous sac enveloping the lungs and lining the thorax, enabling the unimpeded movement of the lungs. See SEROUS MEMBRANE.

Pleuracanthus. Fossil Sharks, having fin rays with spines denticulated along both margins; in size and distribution resembling *Ctenacanthus;* probably allied to the modern rays.

Pleurembolic. Proboscis in which during introversion the sides at the base sink in, or fold in first, leaving the apex, on which the mouth is placed, to disappear last. Such a proboscis is always acrecbolic when everted. Examples are probosces of rhabdocœlous Planarians, and the ordinary Whelks, Conchs, and Sea-snails.

Pleurisy. Inflammation of the serous tissue covering the lungs. There is a sharp pain in the side greatly increased in taking a long breath. This is usually preceded by a chill and is always accompanied by fever, wherein it differs from intercostal neuralgia. An active cathartic at the beginning of the attack is usually permissible, and a warm poultice to the affected side gives comfort, but the details of treatment vary with each case.

Pleurisy-Root. See BUTTERFLY-WEED.

Pleurocarpi. Division of Mosses having the sporanges borne laterally on the stem or branches.

Pleurocarpous. Plants which bear their fruit laterally; more usually, in Bryology, mosses whose sporanges are so borne.

Pleurococcaceæ. Order of *Chlorophyceæ* or green *Algæ*, consisting of minute isolated cells, or these aggregated into irregular colonies, propagating only by division.

Pleurodont Dentition. In Reptiles, where the teeth are borne on the inner side of the dental ridge, and not in sockets.

Pleuronectidæ. See ANACANTHINI and HETEROSOMATA.

Pleuro-Pneumonia. Combined attack of PLEURISY and PNEUMONIA (q.v.). In most cases of pneumonia, the pleura adjacent to the diseased lung is inflamed, but the word is not used unless the symptoms of pleurisy are very marked in connection with an attack of pneumonia.

Pleurotribe. In Plant Physiology, zygomorphic flowers in which in cross-fertilization the pollen is deposited on the side of the visiting insect.

Plevna. Town of Bulgaria, 24 m. s.s.w. of Nikopolis, defended by Osman Pasha against Russian besiegers Aug.–Dec.

The Giant Battery before Plevna.

1877. After twice repulsing the Russian attacks in July 1877 he intrenched himself and held out until Dec. 10. Pop. ab. 15,000.

Pleyel, IGNAZ JOSEPH, 1757–1831. Musical composer of Austrian birth, author of 29 symphonies and many chamber compositions; in later life publisher and pianoforte maker in Paris. *Pleyel's Hymn* is an arrangement of one of his instrumental melodies, 1791, set to Addison's hymn, *The Spacious Firmament on High.*

Plicate, or PLAITED. Folding of leaves in the bud in the manner of a closed fan, the folds being along the main veins, as in the Maple and other palmately veined leaves; also a manner of æstivation, where the corolla tube is folded in plaits, as in Morning-glories.

Plimsoll, SAMUEL, b. 1824. M.P. 1868–80; author of the Merchant Shipping Act of 1876, revised 1890; active and persistent reformer in this field, who exposed many abuses, and did much to protect and benefit sailors. *Our Seamen*, 1873; *Cattle-Ships*, 1890.

Plinth. Lowest projecting member of a wall, pedestal, or column.

Pliny (GAIUS PLINIUS SECUNDUS), CAIUS, 23–79. Roman naturalist, procurator in Spain ab.68–71; killed while studying an eruption of Vesuvius. *Historia naturalis*, tr. 1601.—His nephew, GAIUS PLINIUS CÆCILIUS SECUNDUS, b. 62, was Consul 100, and Proprætor in Bithynia 103–105. His letter thence to Trajan throws much light on the proceedings against the Christians. His *Epistolæ* were tr. 1746.

Pliocene. Upper Tertiary beds; so called by Lyell.

Pliohippus. See EQUIDÆ.

Plotinus, 205–270. Greek philosopher, founder of Neo-Platonism, which placed the Absolute above all cognizability, and made absorption in the contemplation of it the means of moral purification.

Plots. Conspiracies, usually to overturn a government, often with murder of those in authority. They have been hatched in every monarchial country, and with most excuse under despotisms; but republics have not been exempt. One of the best-remembered, that exposed or invented by Titus Oates 1678, was probably no plot at all.

Plougs, CARL PARMO, 1813–1894. Danish poet; ed. *Fatherland*, 1841–87; legislator 1848–90.

Plovers. Wading shore birds of sub-family *Charadriinæ*, sometimes also known as Sandpipers. Their bills are long for probing in the mud. The wings are long and pointed. The most peculiar species lives in New Zealand: its bill is sharply bent either to the right or left, near the end, enabling it to secure food from beneath stones.

Plow. Fundamental tillage implement. The original plow was a forked stick, and merely served to scratch the surface of the ground. The modern plow has been evolved from this, so that plowing carries with it the idea of both lifting and turning over the soil. That plow is the most efficient which, other things being equal, causes the most complete pulverization of the particles of the soil by their action on each other during this lifting and turning process. See AGRICULTURE.

Plowden, EDMUND, 1519–1584. English law writer. His *Commentaries*, pub. in French 1684 and in English 1792, extend 1550–80, and are highly valued.

Plow Monday. English holiday; Monday after Twelfth Day, Jan. 6, when agricultural laborers were accustomed to

Procession of the Plow on Plow Monday.

draw a plow about, and solicit money, with masks and the sword dance.

Plücker, JULIUS, 1801–1868. Mathematician and physicist. Prof. Bonn 1826–34, and from 1836; best known from his equations on the singularities of curves.

Plücker's Tubes. See GEISLER'S TUBES.

Plug and Feather. Combination of irons and wedges, by means of which, without the aid of powder, large blocks of stone in a quarry are split off along lines determined by a series of small drill holes.

Plukenet, LEONARD, 1642–1706. Physician and botanist in London. *Opera omnia botanica*, 1720.

Plum. Small trees of the genus *Prunus*, natural family *Drupaceæ*, comprising numerous species, natives of the n. temperate zone, many of them cultivated for their fruit.

Plumatella. See PHYLACTOLÆMATA.

Plumbaginaceæ. Natural family of flowering plants, of the class *Angiospermæ*, sub-class *Dicotyledons*, and series *Gamopetalæ*, comprising ab. 8 genera and 250 species, mostly herbs widely distributed; called the Leadwort family.

Plumbago. See GRAPHITE.

Plumbates. Salts derived from plumbic acid, H_2PbO_3.

Plumbic Compounds. Compounds of lead.

Plumbing. Pipes and connections which bring water to a house and carry it away. Lead was used by the Romans, whence the word. Iron is now more frequently used both for water and drain pipes, screw joints being provided for the former, and lead joints for the latter. All drain pipes should have both traps and vent tubes. Plumbing work should be accessible, and not be surrounded by woodwork or be concealed in closets. The house drain or soil pipe is usually four inches in diameter. See HOUSE DRAINAGE.

Plumbism. See LEAD-POISONING.

Plumbites. Compounds made by treating lead hydroxide with bases, general formula, $Pb(OM)_2$, in which M stands for a univalent metal.

Plumb Line. Device for determining the direction of the vertical at any point of the earth's surface. It consists of a small mass, usually of metal, suspended at the end of a string and allowed to come to rest under the action of its weight only. The direction of the string is then vertical. Local causes, *e.g.*, a mountain on one side, may slightly deflect the plumb line from the true vertical.

Plum Curculio. Snout-beetle, $\frac{1}{8}$ in. long. It winters under rubbish, eats buds, leaves, and fruit. Ab. 100 eggs are laid, each in a hole in the fruit made with the snout, a few being laid each day. When the grub is full grown, the fruit falls, and in a month the transformation into a beetle has occurred. They can be caught on sheets by jarring the tree early in the morning, or at evening. A one per cent solution of Paris green can be used as a spray.

Plum Curculio.

Plumier, CHARLES, 1646–1704. French Franciscan. *Plantes de l'Amerique*, 1693; *Nova plantarum Americanarum genera*, 1703; *Filicetum Americanum*, 1703; *Plantarum Americanum fasciculus*, 1755–60.

Plum Knot. *Plowrightia morbosa.* Parasitic fungus found upon twigs of plums and cherries.

Plumose. In Botany and Zoölogy, feather-like structures.

Plum Pockets. Parasitic disease of plums in which they are swollen and hollow, produced by *Exoascus pruni*, a fungus which punctures the tissue and finally produces spore sacs.

Plumptre, EDWARD HAYES, D.D., 1821–1891. Dean of Wells 1881; O.T. reviser; poet: tr. Sophocles, 1865, Æschylus, 1868, and Dante, 1887. *Life of Bp. Ken*, 1888.

Plum Pudding. Old English dish, consisting of raisins, currants, beef suet, bread-crumbs, flour, sugar, eggs, milk, and brandy. It is boiled or baked and served with sweet sauce.

Plumularidæ. Family of campanularian *Hydromedusæ*, having the hydrothecæ in a single row on the branches. Those of the nutritive polyps have small accessory calyces filled with nettle-cells (nematocalyces).

Plumule. Initial terminal bud of a vegetable embryo or germinating seed.

Plunger. (See PISTON.) Cylinder of relatively large diameter, which slides through a stuffing-box into a larger cylinder whose bore it does not touch, and which acts to force liquid out of the latter by displacement. It will be seen to be single-acting in this form, and to be a better forcing arrangement than adapted for a lifting or sucking pump. The plunger is cheaper to turn than a cylinder is to bore with its fitting

Outside Packed Plunger Pump.

piston, and for gritty liquids the wear is less rapid. To make a plunger system double-acting, it must either be doubled in two chambers, entering and withdrawing alternately, or one plunger fitting a diaphragm between the chambers must be operated by a rod through the wall of one, the length of the plunger being enough greater than the stroke to secure its fit in the diaphragm.

Plunket, WILLIAM CONYNGHAM, LORD, 1765–1854. Irish lawyer, M.P. 1807–22; Baron and Chief-justice 1827; Lord Chancellor of Ireland 1830–41.

Pluralism. Holding two or more posts, especially in the Ch., together; forbidden by sundry councils from 451; long practiced in Ch. of England, but made impossible by recent statutes.

Plus. Sign of addition (+). It denotes positive as opposed to negative. It is a sign both of operation and of character. As quantities are usually assumed to be positive unless otherwise stated, the plus sign is generally omitted before monomials and the first term of any expression.

Plush. Variety of cloth woven like velvet but having a longer pile.

Plutarch, ab.46–ab.120. Greek author, known by his *Lives* of 46 of the great men of antiquity, which are familiar in every civilized land, and his estimable *Morals*, tr. ab.1680. He represents the best elements in the thought and life of his time.

Pluteus. Bilateral larva of the Sea Urchins and Ophiurans. It has three or four pairs of long, slender, diverging arms, stiffened by calcareous rods. The adult develops inside this larva by a process analogous to the metamorphosis of insects.

Pluto. HADES (q.v.); god of the under world, and supposed giver of wealth.

Plutology. Science of wealth; name proposed by Prof. Hearn for the science of political economy.

Plutonic Rocks. Granite, porphyry, and other igneous rocks; supposed to have consolidated from a melted state at a great depth from the surface.

Plutonism. Hypothesis of the formation of the earth's crust which, attributing many of the rocks to igneous action, divided the opinion of geologists ab.1800. Advocated by Hutton and Playfair, and zealously and courageously defended by their followers against the attacks of the Neptunists, it has gradually grown in favor and become an established principle in Geology.

Plutus. God of wealth, struck blind by Jupiter, that he might distribute his gifts without regard to merit.

Pluviometer. See RAIN GAUGE.

Plymouth. Capital of P. co., Mass.; famous as the land-

ing-place of the Pilgrim Fathers Dec. 21, 1620. The rock on which they landed is covered with a granite canopy; a monument to their memory was dedicated 1889. Pop., 1890, 7,314.

Plymouth. Seaport and borough of Devonshire, at the head of P. Sound; prominent in the naval history of England. It is a very important naval station, has manufactures, and a

Citadel Gate.

large commerce. The citadel, at the eastern extremity of the Hoe, is a fine example of the fortifications built during the latter half of the 17th century. Pop., 1891, 87,307.

Plymouth Brethren. Denomination organized in Dublin 1827; premillennian and anti-ecclesiastical. Their leader was J. N. Darby, 1800–1882.

Plymouth Sound. Inlet of the English Channel on s.w. coast of England, ab. 3 m. long and 4 m. wide.

Plympton, GEORGE WASHINGTON, b. 1827. Prof. Brooklyn Polytechnic Institute 1863; Cooper Union 1869; ed. *Van Nostrand's Magazine*, 1870–86. *The Blowpipe*, 1870; *The Aneroid*, 1880.

Pneumatic Caisson. See CAISSON.

Pneumatic Dispatch. Method of transmitting papers or merchandise through tubes by compressed air, first suggested by Denis Papin 1687. In 1853 a London telegraph station and the Stock Exchange were connected by a tube 1½ in. diameter, 660 ft. long, round boxes being carried by a partial vacuum. In 1858 compressed air was used in one direction and a partial vacuum in the other. The London Post-office uses a lead pipe 2½ in. diameter, inclosed in an iron pipe, with an air pressure of 10 lbs. and a vacuum of 6½ lbs., attaining a speed of 1,000 yds. a minute and 3,000 yds. in 5½ minutes. A parcel dispatch from a railroad station to the post-office in London was established 1863, a tube 2 ft. 8 in. square, 1,800 ft. long, with wheeled carriages moving at the rate of 17 m. per hour being used. In 1872 two tubes 4 ft. by 4 ft. 6 in., 14,214 ft. long, were laid there for the same purpose to the General Post-office. In Philadelphia, 1893, the Post-office Department laid an iron pipe 6 in. diameter, ab. 3,000 ft. long; both pressure and vacuum are used. The pipes connecting the New York and Brooklyn post-offices will be 8 in. diameter, and those connecting with the sub-offices will be 8 in. and 10 in. The Western Union Telegraph Co. have had their offices connected by pneumatic dispatch tubes for many years, and in many mercantile establishments the cashier's office is connected with the salesrooms in the same manner.

Pneumatic Duct. See DUCTUS PNEUMATICUS.

Pneumatic Dynamite Gun. Long barreled cast-iron gun, whose projectiles are loaded with dynamite or explosive gelatin and are fired by pneumatic pressures, not exceeding 1,500 lbs. per sq. in. The necessary accessories are boilers and compressors for compressing the air, reservoirs for storing it, and electric motors for elevating and traversing the gun. D. M. Mefford of Ohio first applied this principle to a 2-in., 28-ft. gun 1883, and Capt. E. L. Zalinski, U.S.A., demonstrated in 1884 with an 8-in. gun the feasibility of throwing dynamite loaded shells with safety and accuracy to a distance of over two miles. U. S. Government recently established two batteries of these guns; one of one 8-in. and two 15-in. guns at Sandy Hook, N. Y. Harbor, and one of three 15-in. at Fort Winfield Scott, San Francisco Harbor. The 15-in. guns at Sandy Hook command the main channel for a course of 9,000 yds. and the Swash Channel for 4,200 yds., and would have a vessel, going at 20 miles an hour, under fire for 16 and 7½ min. respectively. Each gun could deliver 10 projectiles in the first case and 5 in the second. The 15-in. guns, firing charges of from 200 to 500 lbs. of explosive gelatin with great range and accuracy, ought really to be considered torpedo throwers, and as such have a distinct value in coast defense works much beyond others of this class.

Pneumatic Pile. Hollow cylinder which is sunk by the help of compressed air, and afterward is filled with concrete and serves as a support for a superstructure. Depths of 60 ft. may be reached by this method in soft soil.

Pneumatic Power. Compressed air in pipes for a pneumatic clock system was introduced into Paris 1870, and subsequently extended to supply motors, a pressure of 90 lbs. per sq. in. being maintained in 30 m. of pipe. In 1889 a similar system was established in Birmingham, Eng. Compressed air for propelling tram-cars has been used in France since 1879. There is a line from Vincennes 12 m. long, the air, under pressure of 600 lbs. per sq. in., being carried in steel tanks beneath the car. In New York city compressed air of 2,500 lbs. pressure is similarly employed on street cars.

Pneumatic Railway. One on which the cars are propelled by compressed air. In 1870 a line one block in length was built by Alfred Beach under Broadway, New York, the diameter of the tunnel being 8 ft. In 1865 a railroad 600 yds. long was laid in a brick tunnel 10 ft. by 9 ft. at Sydenham, Eng., and the car was propelled this distance in 50 seconds with an air pressure of 2½ oz. per sq. in.; compressed and rarefied air were used alternately.

Pneumatics. That subdivision of MECHANICS (q.v.) which treats of the action of forces upon air and other gases, discussing their weight, friction, efflux, etc.

Pneumatic Syringe. See FIRE SYRINGE.

Pneumatic Trough. Water tank, devised by Priestley, over which gases are collected in bell-jars.

Pneumatocyst. Air-chamber in a pneumatophore.

Pneumatodes. Upright processes growing from the roots of palms and some other trees and shrubs; supposed to be organs of aëration.

Pneumatophore. Modified polyp of a Siphonophore colony which buoys up or floats the hydrosoma.

Pneumochlamyda (OPERCULATA). Section of *Reptantia*, including the *Aciculidæ* and *Cyclostomidæ*, sometimes classed with the Pulmonates.

Pneumodermon. See GYMNOSOMATA.

Pneumo-Gastric Nerve. Tenth cranial nerve of the anatomist, emerging from the base of the brain. It supplies the organs of the voice and of the respiration with both motor and sensory nervous energy; and the heart and stomach with motor nerves alone. Its relation to respiratory, circulatory, and digestive functions makes it one of the most important nerves of the body.

Pneumonia. Inflammation of the lungs. Physicians distinguish a number of forms, one of which, the croupous or lobar, is understood when the name is used alone. The disease is now believed to be caused by one of several micro-organisms, the pneumococcus of Frænkel being the most common. Some abnormal condition of the lung is necessary as another factor, hence the disease occurs more frequently in cold weather. There is a chill, followed by a high fever, rapid respiration and pain on the affected side. Like all diseases of similar causation it is self-limited, but is frequently fatal. Domestic remedies are not to be relied upon, but anything that will assist to relieve the congested lungs, as hot foot-baths or warm poultices to the chest will be helpful till the doctor comes.

Pneumonophora. See DIPNEUMONA and APODA.

Pnyx. Place of meeting for the popular assembly in Athens. Its exact location is not known.

Po. River of n. Italy, heading in the Alps and flowing e. into the head of the Adriatic Sea. Length 360 m., drainage area 28,730 sq. m. The volume of its water is great but variable, necessitating levees along much of its course.

Poaching. Unlawful destruction of game or fish; also,

trespassing on another person's land or water in pursuit of game or fish.

Pocahontas, ab.1595–1617. Daughter of the Indian Chief Powhatan; protector of Capt. John Smith when about to be

Pocahontas.

executed; married to John Rolfe 1614; she left one son; ancestress of several Va. families.

Pocket. In Mining, small local accumulation of rich ore.

Pocock, EDWARD, D.D., 1604–1691. English Orientalist; chaplain at Aleppo 1630–36, where he mastered Arabic; prof. of Arabic at Oxford 1636, and of Hebrew 1648. He rendered distinguished service in Biblical studies. *Works*, 1740.

Pococke, RICHARD, LL.D., 1704–1765. Traveler in Asia and Egypt; Archdeacon of Dublin 1745; Bp. of Ossory 1756, and of Meath 1765. *Description of the East*, 1743–45.

Pocomoke River. River rising in the Cypress Swamp of Delaware, flowing s.w. into Chesapeake Bay; 70 m. long; navigable for sloops 35 m.

Pocono. Thick Pa. sandstone, lying below the Pottsville. See CARBONIFEROUS.

Pod. Seed-vessel which opens to emit the seeds; said to be dehiscent.

Podactinaria. See LUCERNARIÆ.

Podaxonia. Phylum of *Metazoa*, including the classes *Sipunculoidea*, *Brachiopoda*, and *Polyzoa*.

Podesta. Mediæval magistrate in n. Italian towns, often practically a dictator.

Podesti, FRANCESCO, 1801–1895. Italian historical painter and sculptor. *Siege of Ancona by Barbarossa; Francesca di Rimini; Judgment of Solomon.*

Podetium. Stalk supporting the apothecium in lichens; also that of the sporanges in some hepaticæ.

Podiebrad, GEORGE, 1420–1471. Hussite leader; Regent of Bohemia 1453, King 1458; wise ruler who aimed to reconcile factions; excommunicated 1466; attacked by M. Corvinus of Hungary, whom he overcame.

Podocarpous. Fruit supported on a stalk above the calyx.

Podogynium. See GYNOPHORE.

Podolia. Region of w. Russia, on the Austrian border. Area 16,224 sq. m.

Podophthalma. See RHIPIDOGLOSSA.

Podophthalmata (PODOPHTHALMIA). Stalk-eyed *Crustacea;* division of *Malacostraca*, including the *Thoracostraca;* in a restricted sense only the Stomatopods and Decapods.

Podophthalmite. Outer (distal) joint of the ophthalmite.

Podosomata. Group of Arachnids, including the Pycnogonids.

Podosperm. See FUNICULES.

Podostemaceæ. Natural family of flowering plants, of the class *Angiospermæ* and sub-class *Dicotyledons*, comprising 23 genera and ab. 116 species, growing usually on sunken rocks in swiftly flowing streams in tropical and temperate regions; called the River-weed family.

Poduridæ. See THYSANURA.

Poe, EDGAR ALLAN, 1809–1849. Poet, romancer, and critic, esteemed in France and Germany, if not also in England, the chief figure in American literature. His genius was striking, erratic, and lurid; his misfortunes were chiefly due to the fatal deficiencies of his character. With rare gifts of fascination, he had no love for truth, small sense of responsibility, smaller power of self-direction; hence his life was spent in shifts, in hack-work, in vain projects, and often in bitter misery. His early volumes of verse appeared 1827–29–31; *Narrative of Arthur Gordon Pym*, 1838; *Tales of the Grotesque and Arabesque*, 1840; *Tales*, 1845; *The Raven*, etc., 1845; *Eureka*, 1848. His critical work was that of a pioneer, and is now unimportant; but his best poems, *The Raven* and *The Bells*, will live. His

Edgar Allan Poe.

wonderful tales, ranging from pure genius almost to pure insanity, occupy a unique position. His works were collected in 4 vols. 1850, and more completely in 10 vols. 1895. The only reliable life of him is by G. E. Woodbury, 1885.

Poe, ORLANDO METCALFE, U.S.A., 1832–1895. Brig.-gen. U. S. Vols. 1862; chief engineer under Gen. Sherman. He did much work on rivers, harbors, and lighthouses.

Poëbrotherium. Generalized type of American Miocene animals, from which, through the Pliocene *Procamelus*, Cope traces the descent of the modern Camel.

Pœcilopoda (XIPHOSURA). Group of *Gigantostraca*, including *Limulus* (King-Crabs). They have a broad horse-shoe-shaped cephalothorax, an abdomen with five pairs of leaf-like appendages, and a long movable caudal spine (telson). The six pairs of thoracic appendages are chelate and surround the mouth, which is centrally located, on the ventral side.

Pœphaga, or MACROPODA. Tribe of diprotodont Marsupials, including the *Halmaturidæ* or KANGAROOS (q.v.). *Macropus* is the Great Kangaroo.

Poeppig, EDUARD, 1797–1868. Prof. Leipzig from 1833; writer on the Fauna and Flora of S. America 1835–45, and on the U. S. 1837.

Poerio, ALESSANDRO, 1802–1848. Italian patriot and lyric poet, killed in battle with the Austrians. Some of his songs were notable contributions to the cause.—His brother, CARLO, 1803–1867, endured repeated imprisonment at Naples, was deported 1858, and was a member of the parliaments of 1848 and 1860.

Poet Laureate. See LAUREATE, POET.

Poetry. Literature of imaginative character, usually in metrical shape. It has existed from the earliest ages, commonly in some form of rhythm, and was often handed down orally. It constitutes an important part of every modern literature, generally (except in the case of blank verse) in rhyme and under recognized metrical laws. Its main divisions are dramatic, epic, and lyric. If we look beyond externals, the essence of poetry is often found in prose compositions, while much verse is no more than "prose tagged with rhyme."

Poey, FELIPE, 1799–1894. Prof. Havana from 1842, the work of his chairs including zoölogy, botany, mineralogy, geology, and philosophy. *Natural History of Cuba*, 1851–60. His *Synopsis Piscicum Cubensium*, 1868–75, was purchased by the Spanish Government, and won praise in Europe.—His son, ANDRÉS, b. 1826, is noted chiefly as a meteorologist.

Poggendorf, JOHANN CHRISTIAN, 1796–1877. Prof. of Physics at Berlin from 1834; ed. *Annalen der Physik und Chimie* from 1824; inventor of a multiplying galvanometer; writer on electricity and on the history and biography of science.

Poggio Bracciolini, GIAN FRANCESCO, 1380–1459. Italian historian, essayist, and satirist; secretary to Papal Court 1403–53; collector of classical MSS. *Liber Facetiarum.*

Pogodin, MIKHAIL PETROVICH, 1800–1875. Russian historian, translator, and journalist; prof. Moscow 1830–44.

Pogonias. See ACANTHOPTERI and DRUMFISH.

Poh. In Africa, Arab game of MANCALA (q.v.). The word is mimetic, imitating the sound of a piece thrown upon the resonant board.

Pohl, JOHANN EMMANUEL, 1784–1834. Austrian botanist, in Brazil 1817–21; writer on its plants 1827–32.

Poikilothermic. Cold-blooded, *i.e.*, having blood that varies in temperature with that of the external medium.

Poindexter, GEORGE, 1779–1853. M.C. from Miss. 1807–13; U. S. District Judge 1813–21; reviser of Miss. laws; U. S. Senator 1830–35; violent anti-federalist.

Poinsett, JOEL ROBERTS, LL.D., 1779–1851. M.C. from S. C. 1821–25; U. S. Minister to Mexico 1825–29; Sec. of War 1837–41.

Point. Position considered without magnitude. Points moving under different laws may become coincident, yet each may have under its law a different tendency.

Point Alphabet. This consists of raised dots, variously grouped to represent letters and words, for the blind. New York alphabet and the Braille are used in U. S., the latter in Europe.

Pointed Arch. One whose intrados is formed by two arcs of circles intersecting at the crown; Gothic arch.

Pointed Architecture. See GOTHIC.

Pointed Boxes. Rittinger hopper; piece of apparatus used in ore-dressing.

Pointer. Kind of dog closely related to the hound; introduced into England from Spain 1750 and crossed with the foxhound to produce the English variety. The pointer is very affectionate and intelligent. The habit of pointing the posi-

Pointer Standing at Game.

tion of the game when scented was first taught, but is now hereditary, as young pointers exhibit it. When scenting game the pointer stops so suddenly that the forefoot remains suspended in the air, when already lifted.

Points (NAUTICAL). Plaited ropes attached to the sails for the purpose of reefing.

Points of the Compass. See COMPASS.

Poiret, JEAN LOUIS MARIE, 1755–1834. French botanist. *Lecons de Flore*, 1819–20; *Histoire des plants de l'Europe*, 1825–29.

Poiret, PIERRE, 1646–1719. French mystic, resident in Germany; editor of Mme. Guyon and Mlle. Bourignon. *Divine Economy*, 1687, tr. 1713.

Poiseuille, JEAN LOUIS MARIE, 1799–1869. French physician and medical writer.

Poiseuille's Law. Law of liquid flow through very small tubes, investigated by Poiseuille. It is given briefly by the equation, $V = \frac{Kr^4H}{l}$, in which V is the volume of liquid flowing in one second through a tube of radius r and length l under a head H, and K is a coefficient depending on the liquid used and on the temperature.

Poison. Substance that uniformly works hurt to an organism, even in a state of health, but not by mechanical action. Poisons are found in the Animal (venom of snakes), Vegetable (strychnine), and Mineral (arsenic) kingdoms. In many instances, when administered in small doses, substances classed as poisonous exert a beneficial action on certain diseased conditions.—Poisons may be classified as follows: Irritant poisons irritate and inflame the tissues, inducing vomiting, purging, and pains in the stomach and intestines: *e.g.*, arsenious acid. Corrosives have a burning taste, attack and perforate the tissues, and also have same effects as the irritants; *e.g.*, hydrochloric acid and caustic potash. Neurotics affect the nerves, brain, spinal marrow, and heart; there are four classes. Cerebral poisons affect the brain, producing insensibility and coma; *e.g.*, morphine. Spinal poisons affect the spinal marrow, producing great sensibility and convulsions, no stupor, but conscious till death; *e.g.*, strychnine. Cerebro-spinal affect the brain and spinal marrow and indirectly the heart, producing the combined symptoms of the two preceding classes; *e.g.*, aconitina. Cerebro-cardiac act upon the brain and heart, sometimes on the spinal marrow, reducing pulsations of the heart, paralyzing it, and also may affect the brain and spinal marrow; *e.g.*, nicotine.

Poison Ivy. See IVY, POISON.

Poison of Serpents. See SERPENTS, POISON OF.

Poisonous Snakes. See PROTEROGLYPHA, SOLENOGLYPHA, and BITES.

Poisons, ANTIDOTES FOR. Vomiting should be promoted by mustard and water or zinc sulphate and water. For acids powdered magnesia, chalk or carbonate of soda in tepid water should be given, followed by milk. For alkalies dilute vinegar or lemon juice is efficient. The antidote for corrosive sublimate is white of egg; for arsenious oxide, magnesia and iron peroxide in water; for tartar emetic, tannic acid from gall nut or bark; for acetate of lead, magnesium sulphate; for opium, cold applications to the chest, electric stimulation, decoction of coffee, atropine subcutaneously, and exercise.

Poisson, SIMÉON DENIS, 1781–1840. Mathematician and physicist; lecturer at the Paris Polytechnic 1802. *Mechanics*, 1811–32; *Theory of Probabilities*, 1838.

Poisson's Equation. $V^2V = D_x^2V + D_y^2V + D_z^2V = -4\pi\varsigma$. It asserts that the potential function V, due to any distribution of matter, must be such that at all points within the mass the value of V satisfies the above equation, ς being the density at the point considered.

Poisson's Ratio. Ratio of proportional contraction to extension when a prism or wire is stretched longitudinally. It has been contended on the continent of Europe that this ratio should be $\frac{1}{4}$ for all isotropic solids. Stokes has however shown that for India rubber this ought to be nearer $\frac{1}{2}$ than $\frac{1}{4}$, and Thomson and Tait have shown that for cork it is much less than $\frac{1}{4}$; so that isotropic bodies present no agreement in their value for Poisson's ratio.

Poissy, COLLOQUY OF. Sept. 1561, between French prelates and 12 Huguenots led by Beza. It was followed by other conferences, and in Jan. 1562 by an edict of partial toleration.

Poitiers. Ancient town of w. France, 61 m. s. of Tours. Near it Alaric was killed 507. Charles Martel overthrew the

Cathedral of Notre Dame, Poitiers.

Saracens 732, and Edward the Black Prince with ab. 12,000 men defeated King John with 60,000, Sept. 19, 1356. Pop., 1891, 37,497.

Poitiers, DIANE DE, 1499–1566. Mistress of Henry II. of France 1547–59; Duchess of Valentinois 1548; all-powerful for a time.

Poitou. Former province of w. France, held by England 1152–1204, and several times later.

Poke, INDIAN. See HELLEBORE, FALSE.

Poker. Derived from the old card game of Primero or Prime, which was a favorite game in England ab.1500. In the 17th century a game called Post and Pair, derived from Primero, was played in w. England; from this came the game of Brag, of which the American game is simply a variation. It evidently arose in the custom of betting on the hands dealt in a round game, which itself was finally abandoned. The same process is now going on in Japan, where gamblers frequently do not play out the complicated native game of cards called 88, but win or lose according to their bets on the hands dealt. Straight Poker or Bluff originated in s.w. U. S. early in this century and was played with 20 cards, later with a full pack, the game depending on the five cards dealt. Draw Poker came later, the players having the privilege of drawing other cards in place of those dealt. Rank of the hands from the lowest upward: Pair; Two Pairs; Triplet; Straight, sequence of five not of same suit, not always played; Flush, five cards of same suit; Full, triplet and pair; Four of a kind; Straight Flush, sequence of five of same suit.

Poker Drawings. Designs burned upon wood with hot pokers. John Cranch, 1751–1823, was noted in this line. Two poker drawings by Salvator Rosa are said to be at Knowsley Hall, Eng.

Pokeweed. *Phytolacca decandra.* Coarse American weed of the natural family *Phytolaccaceæ*, the berries yielding a crimson fluid; known as Scoke, Garget, and Pigeon-berry.

Pola. Ancient town of Istria, on the Adriatic, 54 m. s. of Trieste; held by Venice 1148–1797; repeatedly destroyed; chief naval station of Austria since 1848. It has a fine harbor, which has been used in all ages. Pop., 1890, 39,273.

Polabians. Ancient Slavic race occupying the Lower Elbe. In a wider sense, used to designate all Slavonic peoples w. and n.w. of the Oder and Erzgebirge.

Poland. Formerly one of the largest and most powerful kingdoms in Europe, defender of Christendom against the Turks; named from the Polani, a Slavic tribe. Its history begins with Ziemovicz, second monarch of Piast dynasty, ab.850. Misceslas I., 962–992, accepted Christianity. Boleslas I., 992–1025, enlarged the territory, and introduced beneficent institutions. An invasion of Mongols took place 1241. The first Diet assembled 1331. The Piast dynasty expired with Casimir III., 1333–1370. Lewis of Hungary succeeded; the Jagellon dynasty was founded by his son-in-law, who united Lithuania to P. 1386. Before 1500 P. extended from the Baltic to the Black Sea, including much of Prussia and Russia. The highest prosperity

Poles of Volhynia.

was attained under Sigismund I. and II., 1506–72, the last of the Jagellons. Two elements of weakness were now added to the Constitution, the *liberum veto*, by which one member of the Diet could stop legislation, and the law making the monarchy elective. Stephen Batory, 1575–86, warred successfully with Russia. Under the weak Swedish rulers, 1586–1672, Polish armies were still victorious for a time, but later P. was overrun by enemies, and its territory was greatly reduced. War with Turkey followed, and, after a disgraceful peace, was renewed under Sobieski, who routed the Turks at Choczim 1673. The luxurious court of Augustus II. of Saxony, 1697–1733, had a corrupting influence; his war with Charles XII. led to dependence on Russia. Under Augustus III. it was attempted, too late, to make the monarchy hereditary. In 1763 Russia and Prussia presented S. Poniatowski to the Poles as their king. The insult was resented, but Russia fomented discord, forcing her protection on the Conservative party. The Confederation of Bar declared war against Russia 1768. In 1772 Russia and Austria divided among them 82,000 sq. m. of Polish territory. The second partition followed a vain attempt at resistance, under J. A. Poniatowski and Kosciusko 1793; the third, 1795, after a general rising of the Poles, ending in the capture of Warsaw, and the overthrow of the monarchy. Napoleon established the Duchy of Warsaw 1807, which was overthrown 1813. Repeated rebellions, especially in the portion subject to Russia, have only brought further calamity upon the Poles. A rearrangement of the division of P. was made by the Congress of Vienna 1815. See WLADISLAS.

Poland, LUKE POTTER, 1815–1887. Judge of Vt. Supreme Court 1848–60; Chief-justice 1860–65; U. S. Senator 1865–67; M.C. 1867–75 and 1883–85.

Poland China. See SWINE.

Polar Bands. Forms of cirrus clouds that are arranged in apparently converging but really parallel lines, stretching across the sky.

Polar Bodies. See POLAR GLOBULES.

Polar Cells. See POLAR GLOBULES.

Polar Clock. The plane of polarization of sky light is always 90° from the sun, and Wheatstone designed a clock dependent upon this which gives apparent solar time within a few minutes.

Polar Current. Currents of air that flow from the polar side toward the equatorial side of any locality, as the n.e. winds of Europe.

Polar Distance OF A STAR. In the n. hemisphere, distance from the North Pole of the heavens, measured on a great circle of the celestial sphere.

Polar Exploration. See ARCTIC OCEAN, ANTARCTIC OCEAN, NORDENSKIOLD and PEARY.

Polar Globules. When an egg is ready to receive the spermatozoön or ready to develop into a new organism, the nucleus (germinal vesicle) divides, and one-half passes out at the animal pole, with a little of the yolk; this is the first polar globule. In parthenogenetic eggs, the nucleus, left in the egg, multiplies to form the cells of the embryo. In other eggs, which need to be fertilized by a spermatozoön, the polar globule first extruded may divide again, but the nucleus left in the egg always does so, and one-half is passed out as the second polar globule. What is left in the yolk is the female-pronucleus, which unites with the spermatozoön or male-pronucleus to form the segmentation nucleus of the egg, which, by multiplication, produces the cells of the embryo. Weissmann believes that several sorts of protoplasm are present while the egg is acquiring yolk, and what is no longer needed is passed out in the first globule, while the second is the equivalent of the spermatozoön. See SEX and PERIGENESIS.

Polarimeter. See POLARISCOPE.

Polaris. Star α-Ursæ Minoris; second magnitude star, distant from the n. celestial pole 1° 17′.

Polariscope. Optical instrument for producing and analyzing polarized light. It consists essentially of a polarizer

Polariscope.

and an analyzer. In Malus' polariscope both are bundles of thin glass plates, one placed above the other, and both rotating about the same horizontal axis. The upper set of plates is

the analyzer: it may be turned around a vertical axis as well, the angle being read off on a horizontal circle. If the instrument be used for quantitative work, it may be called a polarimeter. See SACCHARIMETER.

Polarity. Phenomenon exhibited by some plants of placing their leaves in a n. and s. direction.

Polarization, OPTICAL. If the ether vibrations when transmitting a beam of radiant energy be brought into a single plane, the beam is said to be plane polarized. If a wave be propagated by the successive motions of a row of ether particles while each particle moves in a circle, the beam is said to be circularly polarized; again, if the path of each particle be an ellipse, we have elliptical polarization. Polarization may be DEXTROGYRATE or LÆVOGYRATE (q.v.). Light may be polarized; first, by reflecting it from glass or other reflecting surface, the polarization being greatest at a particular angle of incidence called the polarizing angle, which for glass is ab. 53°. The plane of reflection in which polarization takes place is called the plane of polarization. Second, by transmission through a pile of glass plates, the angle of incidence being the

Uniaxal Crystal; Black Cross.

Uniaxal Crystal; White Cross.

Biaxal Crystal; Black Cross.

Biaxal Crystal; Black Cross changed to hyperbolas by rotating the crystal.

Effect produced by passing polarized light through crystals.

polarizing angle. Third, by double refraction, the two rays being polarized in planes at right angles to each other. In the case of tourmaline one of the rays, the ordinary, is absorbed by the crystal so that the extraordinary ray alone emerges. Certain transparent media have the power of rotating the plane of polarization of a beam of light through a definite angle when the beam is passed through them. This phenomenon is called rotatory polarization. The amount of rotation varies with the wave length, and is also proportional to the thickness of the medium traversed. If this thickness be one millimeter, then the angle of rotation for any particular color is called the specific rotatory power of the medium. It may be DEXTROROTATORY or LÆVOROTATORY (q.v.).

ELECTRICAL.—If two conducting plates be immersed in an electrolyte, and a current of electricity be passed through for a short time, the plates suffer a change in condition, in virtue of which, if they now be joined by a wire, a current opposite in direction to the original current will flow through the wire. The electrodes in such a case are said to be polarized. This effect is due to the deposition upon the plates or in contact with them of substances of opposite polarity set free by the current.

MAGNETIC.—A magnetized piece of iron or steel is said to be polarized, the centers of force being called the poles.

Polarizer. Any optical device for producing the polarization of light. It is one of the essential parts of a polariscope. The instruments usually used as polarizers are a plane black glass mirror, a bundle of thin glass plates, or doubly refracting crystal. See NICOL'S PRISM and TOURMALINE.

Polarizing Angle. See POLARIZATION.

Polar Lights. See AURORA BOREALIS.

Polder. Land below the sea-level, which by drainage and dikes has been reclaimed and put to use; important in the Netherlands, where much of the country is of this nature.

Pole. Point near the end of a magnet at which the magnetic force is greatest. See MAGNETISM.

Pole, REGINALD, 1500–1558. Cardinal 1536; papal legate to England 1554; Abp. of Canterbury 1556. He had declined the see of York 1531, and been attainted 1536 for a book against his cousin, Henry VIII.

Pole, SPHERICAL. The pole of any circle or circular arc on the surface of a sphere or spheroid is the extremity of a diameter of the sphere perpendicular to the plane of the circle.

Pole, WILLIAM, Mus.Doc., F.R.S., F.R.S.E., b. 1814. English engineer, musician and authority on whist. *Treatise on Iron*, 1872; *Life of Sir William Fairbairn, Bart.*, 1877; *Life of Sir William Siemens*, 1888; *Philosophy of Music*, 1879; *Philosophy of Whist*, 1883.

Pole-Cat. See FERRET.

Polemics. Religious controversy; department of theology long and earnestly cultivated by differing Christian churches, sects, and schools of thought.

Polemon, 2d cent. B.C. Greek maker of itineraries, probably useful to Pausanius.

Polemoniaceæ. Natural family of flowering plants, of the class *Angiospermæ*, sub-class *Dicotyledons*, and series *Gamopetalæ*, comprising 10 genera and ab. 200 species of herbs, mostly natives of America; called the Polemonium family.

Polenta. Paste, usually of corn meal, eaten in Italy with salt, cheese, and sometimes meat.

Pole of Reference. In Polar Coördinates, fixed point on the initial line about which the radius vector revolves. It is thus the vertex of the vectorial angle.

Pole Piece. Piece of soft iron attached to the pole of a magnet, of such size and shape as to concentrate or arrange the lines of magnetic force to the best advantage. The pole pieces of a dynamo usually take the shape of the armature which is to rotate between them. Iron is used because of its high magnetic susceptibility.

Poles AND **Polars.** Points and lines in the plane of a conic, having certain reciprocal relations. The polar of any point in reference to a given conic is a straight line, the locus of the intersections of pairs of tangents to the conic at points where transversals from the given point cut the conic. The given point is the pole. If the pole be without the conic, the polar is the chord of contact of tangents from the pole to the curve. If the pole be on the conic, the polar is the tangent to the curve at the pole. If two points be so located that the second is on the polar of the first, the first will be on the polar of the second. Every point in the plane of a conic has its polar in reference to that conic; and every straight line its pole. The conic to which any system of poles and polars refers is the auxiliary conic.

Poles, CELESTIAL. Points about which the celestial sphere appears to revolve.

Poles OF THE ECLIPTIC. Points where the line drawn perpendicular to the ecliptic pierces the celestial sphere. Position of North Pole, right ascension 18 h., declination 66° 33′.

Pole-Star. See POLARIS.

Polevoi, NIKOLAI ALEXOCIEVICH, 1796–1846. Russian critic, dramatist, and historian, b. in Siberia; ed. *Moscow Telegraph* 1825–35.—His son, PETER, is also an author.

Polian Vesicles. Little sacs connected with the circumœsophageal water ring of Starfishes and Sea Urchins.

Police. The means used for the preservation of domestic order, and civil regulation of inhabitants to enforce peace and quiet, and promote the public health and security. The policemen are employed by towns and cities, under the direction of a police committee or board. Constables are sometimes appointed by the county courts, and in Pa. Coal and Iron Police are appointed by the Governor upon request for service in the corresponding districts. In most European countries the police are a military organization; in Great Britain the Irish Constabulary only are military in character. London has about 16,000 men in the police force; St. Petersburg 10,000, Paris 8,000, and New York 4,000.

Police, MILITARY. Enlisted men of a company are divided into squads, under the charge of a non-commissioned officer, who is held accountable for the cleanliness or police of quarters, barracks, bedding, bunks, arms, and accouterments. Provost guard is also a military police which, under the orders of a provost-marshal, perform police duty within the limits where military authority prevails.

Police Power. Inherent and plenary power in the State, which enables it to prohibit all things hurtful to the comfort and welfare of society.

Policy. Kind of lottery, introduced from Italy into the U. S., and extensively played by the lower classes in all the large cities. Numbered lots are used from 1 to 78. The drawings take place twice daily, 12 numbers being drawn in the morning and 13 in the afternoon. The players bet on from one to four numbers, and win if they come out. The game is conducted secretly, in defiance to the law, by well-organized companies. It closely resembles a popular Chinese lottery, from which it was probably derived.

Polignac, MELCHIOR DE, 1661-1742. French diplomatist; Academician 1704; Cardinal 1712; Envoy to Rome 1725-32. *Anti-Lucretius*, 1745.

Polignac, JULES, DUC DE, d. 1817. French courtier, whose corruption and evil influence contributed largely to the Revolution.—His wife, IOLANTHE DE POLASTRON, 1749-1793, was an

Jules Polignac.

intimate of the Queen.—Their son, AUGUSTE JULES, 1780-1847, was made a Roman Prince 1820; French Premier 1829; imprisoned 1830-36.—His nephew, CAMILLE ARMAND, COMTE DE, b. 1832, was general C.S.A. 1862-65.

Polish. See SLAVONIC.

Polish Music. The folk-songs and dances of Poland have chiefly been introduced into polite music through the influence of Chopin. The dance most often associated with the country and its people is the Polonaise, but it is doubtful if this has a right to be Polish or even Slavonic, except by courtesy. It is a stately court dance, a procession in triple time, generally supposed to have appeared in Poland in the 16th century; critical research has demonstrated that the dance which served Chopin as a model came from Germany ab. 1700. The true popular dances of the Poles are the Mazurka, the Oberek, which strongly resembles it, and the Krakowiak, so called after the district of Cracow, where it is indigenous. In all these dances a peculiarly energetic and propulsive effect comes from the shifting of the dynamic stress, by syncopation or forced change of accent from the first beat to the second in a measure. Melodic peculiarities of Polish music are the occasional omission of the seventh of the scale and the use of augmented seconds, *i.e.*, intervals composed of three half-steps.

Politian. See POLIZIANO.

Political Arithmetic. Political economy; now sometimes science of statistics.

Political Economy. See ECONOMICS.

Political Offenses. Offenses committed in carrying on civil war or open insurrection are political offenses and are not included in treaties of extradition. Between a state and its subjects political offenses were formerly treated with great severity. At the present time the tendency is to treat them according to ordinary criminal law.

Political Parties. See the various parties under their separate heads.

Political Science. That branch of sociology which considers the form of government; especially in regard to its underlying principles, the relations of individuals to it and to one another, as far as affected by action of government, and similar subjects.

Politics. Science or study of good government or the right conduct of society as a whole; distinguished from ethics, the investigation of what is right for individuals.

Polity, ECCLESIASTICAL. Scheme of Ch. government. Three forms divide Protestant Christendom, each claiming N. T. warrant: 1. Episcopal, in which bishops are the chief of three orders; 2. Presbyterian, which regards the clerical office as single and of divine appointment; 3. Congregational, wherein clergy are set apart from laity merely for convenience, and the congregation is the center and head.

Poliziano, or **Politian,** ANGELO (orig. AMBROGINI), 1454-1494. Poet, dramatist, and translator; prof. Florence 1480. *L'Orfeo*, 1471. His high repute has stood the test of time.

Polk, JAMES KNOX, 1795-1849. Eleventh Pres. U. S.; M.C. from Tenn. 1825-39; Speaker 1835-39; was elected Pres. 1844 over Henry Clay by a majority of 65 electoral votes. The Mexican

James K. Polk.

War, resulting in the annexation of California and New Mexico, was waged during his administration. The organization of the Dept. of the Interior and a system of collecting revenues without the aid of the banks were important measures.

Polk, LEONIDAS, D.D., 1806-1864. Bp. of Ark. and Indian Territory, with jurisdiction over the s.w., 1838; Bp. of La. 1841; Major-gen. C.S.A. 1861; Lieut.-gen. 1862. He held commands in Ky., Tenn., and Miss., and was killed in Ga.—His father, WILLIAM, 1758-1834, and grandfather, THOMAS, ab.1732-1793, were revolutionary officers.

Polk, TRUSTEN, 1811-1876. Gov. of Mo. 1856; U. S. Senator 1857-62.

Polka. Bohemian dance, dating from 1830; known in England from 1843.

Polko, MME. ELISE (VOGEL), b. 1823. German novelist and biographer. *Mendelssohn*, tr. 1869.

Pollajuolo, ANTONIO, 1429-1498. Florentine goldsmith and medalist, best known as a sculptor; as a painter formal, painstaking, and rather dry, but still important. He has a fresco of St. Cristopher in the Metropolitan Museum of New York.—His brother, PIETRO, 1443-1496, was associated in his work.

Pollard, EDWARD ALBERT, 1828-1872. Ed. Richmond *Examiner* 1861-67. *Southern Hist. War*, 4 vols., 1862-66; *Lost Cause*, 1866.

Pollard, JOSEPHINE, ab.1842-1892. American writer of juvenile and religious books.

Pollarding. Method of cutting off the tops of trees so that they may throw out branches.

Pollen. Granular contents, microspores, of the anthers of flowers, generally appearing as a yellowish dust. The grains are unicellular, and usually consist of a double cell-wall, inclosing the protoplasmic contents.

Pollen-Sacs. Cavities of the anther, containing the pollen.

Pollen-Tubes. Tubular prolongations which protrude from pollen-grains when moistened, or on alighting on the stigma; consisting of an extension of the intine through a hole in the extine, and by means of which the ovules are fertilized.

Pollination. Natural or artificial deposition of pollen upon the stigma.

Pollinia. Pollen masses of orchids and milkweeds, formed by several grains being united together by a glutinous substance; also called Pollidia.

Pollinodium. Male organ of reproduction of certain of the lower *Thallophytes*.

Pollinoids. Male fertilizing sperm of certain *Algæ* and *Fungi*. They are excessively minute masses of protoplasm, having no cilia and but little power of spontaneous motion; in form they are globular or oblong.

Pollio, CAIUS ASINIUS, 76 B.C.-4 A.D. Latin writer, more eminent as an orator and patron of letters; Consul 40 B.C.; founder of the first public library at Rome; friend of Virgil. His poems, tragedies, and history of the Civil War are lost.

Pollock, SIR GEORGE, 1786–1872. English officer in India 1803–46; Major-gen. 1838; distinguished in Afghanistan 1842; Field-marshal 1870; Baronet 1872.—His brother, SIR FREDERICK, 1783–1870, was M.P. 1831; knighted 1834; Attorney-gen. 1834–35 and 1841–44; Chief Baron of the Exchequer 1844–66; Baronet 1866.—His 4th son, SIR CHARLES EDWARD, b. 1823, was knighted and made Baron of the Exchequer 1873. *Law of Shipping* (with F. P. Maude).—His nephew, SIR FREDERICK, b. 1845, became prof. of Jurisprudence at Oxford 1883. *Principles of Contract*, 1875; *Spinoza*, 1880; *Law of Torts*, 1887.—His brother, WALTER HERRIES, b. 1850, ed. *Saturday Review* 1884, has pub. poems and lectures.

Pollock, JAMES, LL.D., 1810–1890. M.C. 1844–49; Gov. of Pa. 1854–57; director U. S. Mint 1861–66 and 1869–80.

Pollock, OLIVER, 1737–1823. U. S. commercial agent at New Orleans 1777–83; financial backer of Gen. G. R. Clarke's memorable expedition of 1778. He rendered great public services, which, as with Robert Morris, brought him to poverty and imprisonment.

Pollok, ROBERT, 1798–1827. Scottish poet. *Tales of the Covenanters*, 1823. His *Course of Time*, 1827, had a great vogue.

Poll Tax. Direct tax laid upon individuals; in modern times usually equal on each person.

Pollux. See DIOSCURI.

Pollux, JULIUS, 2d cent. Greek grammarian, teacher at Athens; author of the *Onomasticon*, a species of dictionary in ten books.

Pollux, JULIUS, 10th cent. Byzantine historian.

Polo. Variety of Hockey or Shinney, but the players are on horse-back. It has long been a popular sport among the English cavalry officers and wealthy men of hunting and sporting proclivities, and has been introduced into America. It is

Polo.

too expensive to become common, as the game is hard upon ponies, and requires good ones. It is played upon any level field where the surface is good, and consists of driving a ball by means of a mallet through goals erected at either end of the field.

Polo, GASPAR GIL, ab.1540–ab.1590. Spanish author. His continuation of Montemayor's romance, *Diana Enamorado*, tr. 1598, was very popular.

Polo, MARCO, b. 1254–ab.1325. Venetian, noted for his travels in central Asia and China, 1271–92. His book was written in French, from his dictation, by Rustichello of Pisa, 1298–99, while a prisoner at Genoa, and was revised and tr. by other hands.

Polo de Medina, SALVADOR JACINTO, ab.1607–ab.1660. Spanish poet. *Gobierno Moral*, 1657.

Polonaise. Polish dance of slow movement in $\frac{3}{4}$ time.

Poltava. See PULTOWA.

Polyadelphia. Linnæan class of plants, distinguished by having the stamens united in more than two sets, as in St. John's-wort and Linden.

Polyadelphous. Flowers whose stamens are united in several sets.

Polyænus. 2d cent. Greek writer on stratagems in war. Most of his book is extant.

Polyandria. Linnæan class of plants, having many stamens, all inserted on the torus of the flower, as in the Pond-lily (*Castalia*), Pea, and the Poppy.

Polyandrous. Flower with many hypogynous stamens.

Polyanthous. Bearing numerous flowers.

Polyaxonia. Organisms exhibiting symmetric forms having a definite number of similar axes, as seen in many *Radiolaria*, some spores, etc.

Polybius, ab.204–ab.122 B.C. Greek patriot who opposed the Romans, by whom he was taken to Italy among the 1,000 Achæan hostages. At Rome he became intimate with the Æmilii; he accompanied Scipio to Africa and witnessed the destruction of Carthage. After the rebellion of Achæa, he acted as a mediator for his countrymen. He wrote a Greek History of Rome in 40 books, of which we possess five. He was conscientious, impartial, and used authorities carefully. His style is rather monotonous.

Polycarp, ab.69–155. Pupil of St. John; Bp. of Smyrna. An epistle of the Ch. there records his martyrdom; his letter to the Philippians was probably written ab.115.

Polycarpellary. Ovary consisting of many carpels.

Polychæta (BRANCHIATA). Marine chætopod annelids, with numerous setæ imbedded in parapodia. They usually have distinct head, tentacles, cirri and branchiæ; they are mostly diœcious, and develop with metamorphosis. There are two sub-orders, *Errantia* and *Sedentaria*.

Polychromy. Art of coloring statuary and buildings, practiced by nations of antiquity to a great extent, and still used by Oriental nations. The Japanese and Chinese are skilled in this art.

Polyclady. Production of an abnormally large number of branches.

Polycleitus, 5th cent. B.C. Greek sculptor of Sicyon, contemporary of Phidias and next to him in rank. No original works are extant, but copies of his spear-bearing youth (*Doryphoros*) and Athlete binding on the fillet of victory (*Diadumenos*) are known by later copies. His greatest work was the gold and ivory colossal Hera made for the temple at Argos. The Ludovisi Juno head is thought to be a copy. One of the types of the Amazon in later Græco-Roman art is probably derived from him. He was also an architect of great distinction, and designed the theater of Epidaurus.

Polycotyledonous. Plants bearing several cotyledons, as in many of the Pine family.

Polycrates. Tyrant of Samos ab.536–522 B.C. He had a large fleet and gained sway over the neighboring islands. After vainly casting his ring into the sea to propitiate the envious gods, he was finally allured to the mainland by the Satrap of Sardis and crucified.

Polycystidia. See GREGARINIDÆ.

Polycystina. Division of *Radiolaria*, consisting of a sarcode body inclosed by a siliceous, foraminated shell of great beauty and variety of shape. See POLYCYSTINIDÆ.

Polycystinidæ. Family of Monozoic *Radiolaria*. The shell is basket-shaped, silicious, and open at the broad pole. They form a very large part of the oceanic deposits.

Polycyttaria. See RADIOLARIA and PERIPYLÆA.

Polydactyla. Sub-ungulata. See UNGULATA.

Polydipsia. Constant desire for drinking with a sense of dryness in the throat and mouth, and increased flow of urine. It is symptomatic of fever.

Polyembryony. Development of more than one embryo in a seed or sperm-cell, a not uncommon phenomenon.

Polygalaceæ. Natural family of flowering plants, of the class *Angiospermæ*, and sub-class *Dicotyledons*, comprising ab. 17 genera and 470 species of herbs and shrubs, widely distributed throughout the temperate and warm regions of the globe; called the Milkwort family.

Polygamous. Plants bearing both diclinous and hermaphrodite flowers.

Polygamy. Practice of one man having several wives at once; common among Israelites in O. T. times, sanctioned by the Koran, and prevalent among many savage and barbarous races.

Polygastrica. *Infusoria*, so named from the presence of vacuoles, containing food, in their endoplasm.

Polygenist. One who believes that man has had several independent origins, and is thus not a single species; *e.g.*, Agassiz, Pouchet, Poole.

Polyglot. Bible (rarely any other book) in several languages. The first was pub. in 6 vols. in Spain 1520; the next at Antwerp, 8 vols., 1569–72.

Polygnotus, 5th cent. B.C. Greek painter of high rank, who raised art to standards previously unknown. He came from Pharos, was active chiefly at Athens, and left some works at Delphi and Platæa.

Polygon, PLANE. Plane figure bounded by straight lines; regular, if the sides and angles are equal; convex, if no interior angle exceeds 180°.

Polygon, SPHERICAL. Portion of spherical surface bounded by three or more arcs of great circles. In ordinary usage each arc is less than a semicircle.

Polygonaceæ. Natural family of flowering plants, of the class *Angiospermæ*, and sub-class *Dicotyledons*, comprising ab. 30 genera and 750 species, distributed throughout all parts of the earth; called the Buckwheat family.

Polygonometry. Extension of principles in trigonometry to the discussions of polygons other than triangles.

Polygordius. See ARCHIANNELIDS.

Polygynea. Orders of plants having numerous pistils.

Polygynœcial. Structure containing the pistils of several flowers.

Polygynous. Flowers with several pistils.

Polyhalite. Hydrous calcium-magnesium-potassium-sulphate, found in several of the salt-mines of Germany and Austria.

Polyhedral Angle. Opening between three or more intersecting planes meeting at a common point. Its measure is the portion of the surface of a sphere included between its facial planes.

Polyhedron. Solid bounded by four or more plane faces, regular when its faces are equal polygons. There are five regular polyhedrons: tetrahedron, octahedron, and icosahedron, having faces equilateral triangles; hexahedron, having faces squares, and dodecahedron, having faces pentagons.

Polyhistor, CORNELIUS ALEXANDER, 2d cent. B.C. Greek of Miletus, writer upon geographical and historical subjects.

Polyhymnia. Muse of lyric poetry.

Polymeniscous Eye. Compound or faceted eye. Always retinulate, it may be monostichous (lateral eyes of *Limulus*), or diplostichous, as in insects.

Polymerism. Compounds which have the same percentage composition, but different molecular weights, are said to be polymeric; *e.g.*, C_2H_2, C_4H_4, C_6H_6.

Polymerous. Flowers with numerous members in each series of parts.

Polymolybdic Acids. See MOLYBDIC ACIDS.

Polymorphism. Occurrence of several forms of animals in a species, as in Ants, where there are males, queens, workers, soldiers, etc. This phenomenon is best illustrated in certain colonial forms, as in the Siphonophores among the Hydroids, in which the colony of connected zoöids consists of individuals that have so far become different as to appear as mere organs of the colony-individual.

Polynesia. One of the major divisions of the Pacific, embracing those groups of islands which are peopled by races of Polynesian descent. These groups of islands have an area of nearly 115,000 sq. m., with ab. 250,000 Polynesian inhabitants.

Polynesian Languages. Those of the Pacific islands, associated with Malay under the name Oceanic, and of a very primitive structure.

Polynesians. Malay races of the Pacific islands. See SAMOANS, TAHITIANS, SANDWICH ISLANDERS, and MAORIS. The NEGRITOS (q.v.) originally occupied part of Polynesia, and the lighter-skinned, handsomer, and superior Malays invaded and subjugated the aborigines. The invaders have a cranial capacity equal to that of the European skull, and are brachycephalic. They are now nearly all Christianized, but are in process of extinction. Their characteristics are, large noses, black hair, coffee-colored skin, dignified bearing, and characters sensitive, melancholic, generous, though thievish, lazy, taciturn, and deceitful. Their weapons are clubs and spears, not bows and arrows. Beautiful tattooing by puncturing is practiced. Originally they were polygamous; some were cannibals. They had the germs of parliamentary proceedings and a great mythology. They are fond of dancing. See MELANESIANS and MICRONESIANS.

Polynices. Son of Œdipus and Jocasta; killed with his supporters in an attempt to regain the throne of Phebes, whence his brother Eteocles had expelled him. The two fell in fratricidal strife.

Polyp. Single individual, whether free, fixed, or a portion (zoöid) of a colony (cormus) of (1) the *Actinozoa* (corals), of (2) any of the Cœlenterates, or even of (3) the *Polyzoa*. See POLYPITE and POLYPS.

Polypary. Chitinous covering secreted by many *Hydrozoa*.

Polypetalous. Corolla consisting of a considerable number of petals; also known as Choripetalous, Dialypetalous, and Eleutheropetalous.

Polyphemus. One of the Cyclopes, son of Poseidon. He lived in a cave by Mt. Ætna, and devoured some of the companions of Ulysses, who saved himself by putting out the monster's one eye.

Polyphonic. In Music, style in which each voice in the composition pursues a melody of its own, all being bound together by the laws of counterpoint.

Polyphylitic Origin. Independent evolution of groups of animals from different or distinct ancestors that may have resembled one another, but were not necessarily closely related. On this theory, the different sub-kingdoms could have been independently evolved from different Protozoan ancestors. See MONOPHYLITIC ORIGIN.

Polyphyllous. Calyx or corolla composed of a considerable number of sepals or petals.

Polyphylly. Phenomenon of increase in the number of petals or sepals in flowers.

Polypidom. Dermal system of a colony of *Hydrozoa* or *Polyzoa*.

Polypite, or POLYPID. Separate zoöid of a Hydrozoön.

Polyplacophora. See PLACOPHORA.

Polypodiaceæ. Order of Ferns, including the largest number of genera and species.

Polypody. *Polypodium vulgare.* Fern of wide geographical distribution growing especially in rocky places.

Polypo-Medusæ. See HYDROZOA.

Polyporeæ. Family of *Fungi* of the order *Hymenomycetes*, including the woody species, which grow abundantly on the bark of trees and on dead wood. The mycelium of these plants causes the dry-rot of timber.

Polyprotodontia (RAPACIA). Division of Marsupials, having more than two incisors in the lower jaw, well developed canines, and cuspidate or sectorial molars. It includes one tribe, the *Rapacia* (Carnivorous Marsupials), of which there are two subtribes, ENTOMOPHAGA and SARCOPHAGA (q.v.).

Polypodium:
1, Polypodium dryopteris; 2, P. vulgare.

Polyps. Sack-shaped zoöphytic animals with several or

numerous finger-like processes, termed tentacles, surrounding the mouth. The term is usually restricted to members of that division of the *Cœlenterates* which includes the coral-formers, viz., the *Anthozoa*, erroneously called coral-insects, but is sometimes also applied to the Hydroids.

Polypterus. See CROSSOPTERYGII.

Polypus. Tumor-like body attached to the mucous membrane of any organ; *e.g.*, nose or ear. It is usually only the excessive growth of normal tissue, consequently not strictly a tumor.

Polysepalous. Calyx consisting of a considerable number of sepals; also known as Chorisepalous.

Polysiphonous. Thallus of certain red *Algæ*, in allusion to its structure consisting of a number of elongated tubular cells called siphons.

Polyspermous. Fruits containing several or many seeds.

Polyspermy. Entrance into an egg of more than one spermatozoön.

Polysporea. See COCCIDEA.

Polystemonous. Flowers with more stamens than petals.

Polystomæ. See RHIZOSTOMÆ.

Polystomata. See SPONGES.

Polystomea. Trematodes with two small suckers on the head, and one or more posterior suckers, with chitinous hooks; eyes, and sometimes bristles, are present. They are mostly ectoparasitic. The body is sometimes externally segmented. Here belongs *Diplozoön*, which consists of two hermaphrodite

a, Diplozoon (*Diplozoon paradoxum*); b, Egg (case); c, Larva; d, Diporpa.

individuals fused in an X fashion to secure mutual cross-fertilization. The single animals before fusion are known as *Diporpæ*. Here also is the viviparous *Gyrodactylus*, in which a process of pædogenesis takes place. They are small, but with large caudal disks, on which are a number of suckers.

Polytechnic Schools. See TECHNICAL SCHOOLS.

Polythalmia. See RETICULARIA.

Polythalmic. Collective fruits.

Polytheism. Popular form of Paganism, founded on Pantheism, and dividing the universe into many personified Powers, each capable of receiving a distinct worship.

Polythionic Acids. Series of acids, consisting of hydrogen, oxygen, and sulphur, in which the proportion of sulphur increases; *e.g.*, $H_2S_2O_6$, dithionic acid; $H_2S_3O_6$, trithionic acid; $H_2S_4O_6$, tetrathionic acid; $H_2S_5O_6$, pentathionic acid.

Polytrichaceæ. Order of *Musci*, containing the Haircap Moss and its allies.

Polytriglyph. In Doric Architecture, an arrangement by which more than two triglyphs are introduced between two columns.

Polytrochal. Having several circles of cilia in the larva, as in certain Annelids.

Polyuria. Excessive secretion of urine. It may be temporary as in the crisis of certain fevers, or permanent when it is a symptom of some chronic disease, as diabetes.

Polyzoa. See BRYOZOA.

Polyzoarium. Polypidon of a polyzoön.

Polyzygosis. In Biology, conjugation of several gametes.

Pomaceous. In Botany, structures resembling an apple.

Pomade. Pharmaceutical preparation of lard or stearine, scented with some essential oil, used in dressing the hair or applied to the face.

Pombal, SEBASTIAN JOSEPH DE CARVALHO E MELLO, MARQUIS OF, 1699–1782. Portuguese Ambassador to England 1739, and to Austria 1745; Foreign Minister 1750–56; Premier 1756–77; Marquis 1770; eminently able and useful. He rebuilt Lisbon after the earthquake of 1755, expelled the Jesuits 1759, abolished slavery, and carried important reforms.

Pome. Fleshy fruit consisting of several carpels inclosed in the thickened calyx or receptacle, as the Apple, Pear, and Quince.

Pomegranate. *Punica granatum.* Tree of the natural family *Lythraceæ*, native of w. and s. Asia, cultivated in

Pomegranate.

tropical countries for its pulpy, edible fruit. In some parts of Europe it is used as a hedge plant.

Pomerania. German province on the Baltic; long held by the Wends; governed by its own dukes from 1062; converted by Bp. Otto ab.1125; divided between Prussia and Sweden 1637. Sweden gave up most of her portion in 1728. The whole, since 1815, belongs to Prussia.

Pomeranian Dog. Name given to the SPITZ DOG (q.v.).

Pomeroy, JOHN NORTON, LL.D., 1828–1885. Prof. Univ. New York 1864–69, and Univ. Cal. from 1878. *Introduction to Municipal Law*, 1865; *Equity Jurisprudence*, 1881–83.

Pomeroy, MARCUS MILLS ("BRICK"), 1833–1896. Journalist in Wis., Chicago, and New York. *Sense*, 1868; *Brick Dust*, 1872.

Pomeroy, SAMUEL CLARKE, b. 1816. U. S. Senator from Kan. 1861–73.

Pomeroy, SETH, 1706–1777. Officer in the French wars, 1745 and 1755; Brig.-gen. 1775; Commander of some Mass. militia 1776.

Pomme Blanche. *Psoralea esculenta.* Herb of the natural family *Leguminosæ*, with a large farinaceous root, native of the prairie region of the n. central U. S.; called also Pomme de Prairie.

Pomology. Study of fruits.

Pomona. Roman goddess presiding over fruit trees. Ovid and Propertius have tales of her lovers.

Pompadour, JEANNE ANTOINETTE POISSON, MARCHIONESS DE, 1721–1764. Mistress of Louis XIV. from 1745. She exercised a detrimental influence upon public affairs.

Pompeii. Ancient Greek colony, and subsequently Roman town, on the Bay of Naples, destroyed and buried by a volcanic eruption of ashes and mud from Mt. Vesuvius 79. Excavations were undertaken 1748, and are still in progress, but the best and most important results were generally the early ones. All objects found here are kept in the Naples Museum, which therefore has the most remarkable collection of domestic utensils and furniture in existence. The frescoed decorations of the Pompeiian walls are also our best surviving reference for Greek painting, as here known by the copies or inventions of the house-decorators. Many of these frescoes are still in position, but the best are in the Naples Museum. The public buildings which survive are not especially large,

but are in generally excellent preservation, especially the baths. No houses in P. were more than two stories high

Forum of Pompeii.

where they faced the street level, and only a few have preserved any remains of the upper story.

Pompey (CNEIUS POMPEIUS), 106–48 B.C. Roman general under Sulla 84; allowed a triumph and the surname Magnus 81 for victories over the Marian party in Africa; Proconsul in Spain 76–71; Consul 70. In 67 he cleared the Mediterranean of pirates; in 66 he succeeded Lucullus in command of the war with Mithradates, which he easily finished. In 60 he triumphed again, and formed a triumvirate with Cæsar and Crassus. The death of his wife, Julia, Cæsar's daughter, 54, severed the last link binding him to Cæsar. He was sole consul 52, and became head of the aristocratic party. Civil war followed: he was defeated at Pharsalia, and assassinated in Egypt. See CÆSAR.

Pompey's Pillar. Near Alexandria; of red granite, 73 ft. in height, and ab. 30 ft. in circumference, standing on a pedestal 25 ft. high; raised ab. 296 in honor of Diocletian.

Pomponatius, or **Pomponarri,** PIETRO, 1462–1524. Prof. at Padua and Bologna; expositor of Aristotle. He maintained as matter of faith what he denied as a philosopher. His book on the *Immortality of the Soul*, 1516, was publicly burned.

Pomponius, LUCIUS, 1st cent. B.C. Latin author of *Fabulæ Atellanæ*. Fragments remain.

Ponce. Seaport town on s. coast of Porto Rico, W. I. Pop. ab. 30,000.

Ponceau. Variety of azo coloring matters, which are naphthalene derivatives, and which dye red shades upon wool.

Ponce de Leon, JUAN, ab.1460–1521. Companion of Columbus 1493; Gov. of Porto Rico 1510; discoverer of Florida 1512, while in search of the "fountain of perpetual youth." On a second expedition thither he was mortally wounded by Indians.

Ponce de Leon, LUIS, 1527–1591. Spanish Augustinian, prof. Salamanca from 1561; imprisoned for five years by the Inquisition; lyric poet, translator, and commentator.

Poncelet, JEAN VICTOR, 1788–1867. French mathematician and officer of engineers. His chief work is a treatise on the projective properties of figures, 1822.

Poncelet Wheel. Early form of reaction water wheel, in which the water was let on below the horizontal diameter of a wheel on horizontal axis, as in the case of an undershot wheel. But the buckets were curved, and the water entered with a velocity which was imparted to the periphery of the wheel as the water was arrested by the vertical curve of the buckets. The water dropped without tangential velocity from the buckets as they emptied, on the ascent. The efficiency of such wheels varies from 48 to 60 per cent.

Ponchielli, AMILCARE, 1834–1886. Italian composer of operas.

Poncho. Piece of woolen or rubber cloth to shed rain, having a slit in the middle, through which the wearer passes his head, so that the poncho rests upon the shoulders and hangs down in front and behind; frequently used by mounted troops; worn by gauchos of S. America.

Pond, ENOCH, D.D., 1791–1882. Prof. Bangor Theol. Sem. 1832, pres. 1856; voluminous theological and polemic writer.

Pond, JOHN, F.R.S., 1767–1836. English astronomer royal 1811; translator of Laplace's *System of the World*, 1809.

Ponderation. Gravitation or weight of the air; so called by Hooke 1715.

Pondicherry. Capital of French settlements in India; on the Bay of Bengal, 83 m. s. of Madras; founded 1674; held

Portico of a Pagoda at Pondicherry.

by the Dutch 1693–97, by the English 1761–63, 1778–83, and 1793–1816. Pop., 1889, 41,253.

Pond Lily. See WATER LILY.

Pondweed. Purple-flowered aquatic herbs of the genus *Pontederia*, natural family *Pontederiaceæ*, of wide geographical distribution in America.

Pondweed, HORNED. *Zannichellia palustris.* Aquatic plant of the natural family *Naiadaceæ*, native of the n. hemisphere.

Poniatowski, JOSEPH, 1816–1873. Operatic composer, of a famous Polish family. *Don Desiderio*, 1868.

Poniatowski, STANISLAS, PRINCE, 1677–1762. Polish statesman and general, prominent in support of Charles XII. of Sweden.—His son, STANISLAS AUGUSTUS, 1732–1798, was King of Poland 1764–95.—His nephew, JOSEPH ANTONY, PRINCE, 1762–1813, was a capable general in several wars with Russia, joined the French 1812, was distinguished at Borodino and Leipzig, became Marshal, and was drowned in the Elster.

Ponsard, FRANÇOIS, 1814–1867. French dramatist. *Ulysses*, 1852.

Ponson du Terrail, PIERRE ALEXIS, VICOMTE DE, 1829–1871. French novelist. *Coulisses*, 1853.

Pons Sublicius. Oldest Roman bridge over the Tiber, believed to have been built 621 B.C. on piles by Ancus Martius, celebrated for the combat of Horatius Cocles. The only bridge at Rome until 2d century B.C.

Pons Variolii. Bridge forming the bond of union between the various parts of the brain; the cerebrum and cerebellum above and the medulla oblongata below. It is located at the base of the brain just posteriorally to the mathematical center.

Pont, TIMOTHY, ab.1560–ab.1620. Scottish surveyor and cartographer.

Pontano, JEAN JOVIEN, 1426–1503. Italian poet and historian.

Pontchartrain. Lake of e. La., n. of New Orleans, between the Mississippi and the Gulf, ab. 40 m. by 25.

Pont du Gard. The aqueduct bridge across the Gard, France, 10 m. below Nimes, over which the water of the Aure was carried to that city. See AQUEDUCT.

Ponte Delgada. Largest town of the Azores Is., on the s. coast of San Miguel. Pop. ab.20,000.

Pontederiaceæ. Natural family of flowering plants, of the class *Angiospermæ* and sub-class *Monocotyledons*, comprising 4 genera and ab. 35 species of aquatic herbs, widely distributed in tropical and temperate regions; most numerous in America; called the Pickerel-weed family.

Pontiac, ab.1720–1769. Chief of three allied Indian tribes; author of a plot, extending through the entire west, whereby 8 British garrisons were massacred May 1763. He besieged Detroit May–Oct. 1763. The war ended 1766.

Pontianak. Capital of Dutch w. Borneo. Pop. ab. 14,000.

Pontianus. Bp. of Rome 230–235.

Pontifex Maximus. Chief of the Roman colleges of priests. Under him stood the Rex Sacrificulus, who represented the kingly office in those sacrifices which the kings had anciently performed, the Flamines and the ordinary Pontifices. He resided in the Regia on the Forum. The office was held by Julius Cæsar, and afterward by the emperors. The title is now borne by the Pope, as that of pontiff is by bishops.

Pontifical High Mass. Celebrated by a bishop or mitered abbot in full attire: said by the Pope, with peculiar rites, it is a Papal high mass.

Pontine Marshes. Low marshy plain on w. coast of Italy, s. of Rome; in Augustus' day partly drained by a navigable canal; now miasmatic and unhealthy. The Appian Way ran through them.

Pontois, JEAN FÉLIX HONORÉ, b. 1837. French judge, playwright, legal and political writer.

Pontoons. Boats, cylinders, or other contrivances to support temporary bridges for use of troops. Those of the

Bridge of Boats at Attock, Punjab, India.

U. S. Army are 31 ft. long, 2 ft. 8 in. deep, 5 ft. 8 in. wide at top and 4 ft. 5 in. wide at bottom, placed 20 ft. apart.

Pontoppidan, ERIK, 1698–1764. Bp. of Bergen 1745; prof. Univ. Copenhagen 1738; Chancellor 1755; historical and theological writer.

Pontormo, JACOPO DI (CARUCCI). 1494–1557. Italian painter.

Pontus. Kingdom of n. e. Asia Minor, on the Euxine, e. of the Halys: founded ab.380 B.C.; most powerful under Mithradates VI., 120–63 B.C., who waged three wars with Rome, 88–84, 83–82, and 74–63 B.C., the latter conducted by Lucullus till 66, then by Pompey. Pontus became a Roman province 62.

Pontzen, ERNEST, b. 1838. Hungarian civil engineer, in Austria till 1876, since then in France; engaged on many railways and other public works in various countries; professional writer.

Pony. See HORSE.

Poodle. Breed of intelligent dogs, having extremely long and curly hair, brown, black, or white, weight 5 to 40 lbs. They are generally clipped bare, with the exception of the shoulders and tufts on their legs. They originated ab.1600, and were introduced into England ab.1800.

Pool. See BILLIARDS.

Pool, MARIAN LOUISE, b. 1845. American novelist. *Dally*, 1893; *Mrs. Gerald*, 1896.

Poole, JOHN, 1792–1879. English playwright and satirist. *Paul Pry*, 1825; *Little Pedlington*, 1839.

Poole, MATTHEW, 1624–1679. London rector, ejected 1662; active in controversy. *Synopsis Criticorum Bibl.*, 5 vols., 1669–76. His *Annotations on the Bible*, extending to Isa. lviii., were completed by other hands, and pub. 1685.

Poole, REGINALD STUART, 1832–1895. Archæologist and numismatist; prof. Univ. Coll., London, 1889.

Poole, WILLIAM FREDERICK, LL.D., 1821–1894. Librarian in Boston 1852–69, and Chicago from 1874. His *Index to Periodical Literature*, begun 1848, was repeatedly enlarged.

Poona. Town of s. w. India, near the e. base of the Ghauts, 119 m. s.e. of Bombay; former capital of the Mahrattas; held by England since 1818. It is a military station, and has several colleges and schools. Pop., 1891, 160,460.

Poop. Highest and aftermost deck of a ship.

Poor, CHARLES HENRY, U.S.N., 1808–1882. Commodore 1863; Rear-admiral 1868.

Poor, DANIEL, D.D., 1789–1855. American missionary in Ceylon from 1816.

Poor, ENOCH, 1736–1780. N. H. patriot; Colonel 1775; Brig.-gen. 1777; distinguished at Saratoga and elsewhere.

Poore, BENJAMIN PERLEY, 1820–1887. American journalist and historical writer.

Poore, HENRY R., b. 1858. American painter.

Poor Laws. Constitutional and statutory provisions for the care and support of those who are unable to support themselves.

Poor Man's Weather-Glass. See PIMPERNEL.

Poor Men of Lyons. See WALDENSES.

Poorsen-Schwartz. See MAARTENS, M.

Pope. In the East, a parish priest; in the West, the Bishop of Rome, declared by the Vatican Council, 1870, to have universal jurisdiction. In the received list the popes number 254; in this work all are mentioned under their official names. See BENEDICT, CLEMENT, GREGORY, INNOCENT, JOHN, PIUS, etc.

Pope, ALBERT AUGUSTUS, b. 1843. American manufacturer, active in advocating the improvement of roads.

Pope, ALEXANDER, 1688–1744. English poet, head of the "classical school"; eminent for intellectual brilliancy and mastery of his favorite form of verse, the heroic stanza, but not for ideality or deep feeling. *Essay on Criticism*, 1711; *The*

Alexander Pope.

Messiah, 1712; *Rape of the Lock*, 1712–14; tr. *Iliad*, 1715–20; tr. *Odyssey*, 1725; *Dunciad*, 1728–43; *Essay on Man*, 1733–34; *Moral Essays*, 1735; *Imitations of Horace*, 1738. He was unsurpassed in wit, satire, mastery of the couplet, and the turning of maxims; no other English poet, after Shakespeare, has been so

extensively quoted. Lyrics he seldom attempted, but the much berated *Universal Prayer*, 1738, is one of his finest productions. His influence was supreme till near the end of the century, when Cowper and Burns led a reaction from artificiality to nature.

Pope, JOHN, U.S.A., 1822–1892. Brig.-gen. U. S. Vols. 1861, commanding in Mo.: Major-gen. 1862; captured 1862. He took Island No. 10 April 8, and commanded the armies of Va. and the Potomac June–Sept. He was made Major-gen. U.S.A. 1882, and retired 1886.

Pope Joan. Old English card game, in which the Nine of Diamonds was called the Pope and entitled to certain privileges. The modern English game of Newmarket or Stop is derived from this.

Popham, GEORGE, ab.1550–1608. Head of the first company of English settlers in New England, which left England 1607 and settled at the mouth of the Kennebec.—His relative, SIR JOHN, 1531–1607, Attorney-gen. 1585 and Lord Chief-justice of King's Bench from 1592, was one of the patentees. *Reports*, 1656.

Popinjay. Old mark for archers, in form of a bird.

Popish Plot. Invented and "exposed" 1678. See OATES, TITUS.

Popkin, JOHN SNELLING, D.D., 1771–1852. Prof. Harvard 1815–33. *Greek Grammar*, 1828.

Poplar. Trees of the genus *Populus*, natural family *Salicaceæ*, natives of the n. temperate zone; also *Liriodendron tulipifera*, the Tulip-tree of e. N. America. The Balsam Poplar, or Tacamahac of N. America, is *Populus balsamifera*.

Popocatapetl. Volcanic peak 43 m. s.e. of Mexico; ht. 17,784 ft.

Poppet Head, or HEAD GEAR. Structure, with its appurtenances, built over a shaft to carry the sheaves that guide the hoisting rope.

Poppet Valves. Form of valve much used for engines of large cylinder volume, and by paddle-wheel steamboat engines, to the exclusion of any other type. They open a large port area rapidly, and are very easily balanced. Two disks are secured to one vertical stem. The disks are the valves proper, and seat upon suitable seats. These seats are so arranged that the space between them communicates through a port to the cylinder, and in the space above and below the disks there is the same pressure, which may be boiler pressure for the steam side, and the pounds of vacuum for the exhaust side. Hence the valve lifts easily by exerting only so much effort as is necessary to overcome the pressure on the difference of area of the upper and lower disks. Usually the lower disk is a little smaller, so that it may drop through the seat of the upper disk. Such valves are usually operated by cam motions.

Poppy. *Papaver somniferum*. Pink-flowered herb of the natural family *Papaveraceæ*, native of the Old World, extensively cultivated for its seed-vessels, whose milky juice yields the narcotic substance opium. The red-flowered Corn Poppy of Europe is *P. rhœas*. See OPIUM.

Poppy, HORNED. *Glaucium luteum*. Weed of the Poppy family, native of Europe, introduced into the U. S.

Poppy, MEXICAN. *Argemone Mexicana*. Prickly showy-flowered herb of the Poppy family, native of Mexico and the s.w. U.S., occasional in cultivation as a garden flower.

Population, LAW OF. As most generally accepted, it is that population tends to increase more rapidly than the means of subsistence, and would soon lead to an ever increasing amount of misery, if certain positive or preventive checks did not keep the numbers down.

Population of the World. See WORLD, POPULATION OF.

Porcelain. Variety of POTTERY (q.v.) which originated in China during the Han dynasty, 206 B.C.–25, hard porcelain. The manufacture was introduced into Japan 1513. In 1710 Frederick Böttger (1682–1719), an alchemist of Saxony, discovered the method of manufacture, and a factory was established at Meissen near Dresden by Augustus II., the Dresden works. In 1720 the Vienna works were established, and in 1751 porcelain was made in Berlin. The works at Sevres, France, were founded 1745, but until 1770 soft porcelain only was made. Works were also established at St. Petersburg, Copenhagen, and elsewhere in Europe. Porcelain is hard, transparent, sonorous, and difficultly fusible. The body of the ware is composed of kaolin and feldspar. The ware is inclosed in earthenware pots, seggars, and baked at a high temperature in the kiln for 40 hours. It is then dipped in the glaze, ground feldspar and quartz, suspended in water, and baked again at 1,600° C. to fuse the glaze. Painting of porcelain is accomplished by mixtures of metallic oxides with borax and other fluxes, applied upon the glaze and fused in a muffle. Colors are also laid on before the glaze. Soft porcelain is a variety of glass, and that of Sevres was composed of white sand 60, niter 22, salt 7.2, alum 3.6, soda 3.6, gypsum 3.6. This was roasted and washed, and to this was added chalk 2 and pipe-clay 1. After grinding, soap and glue were added to give plasticity. The glaze was a silico-alkaline glaze with oxide of lead. This manufacture was suspended ab.1800, but has been slightly revived.

Porcelain, REAUMUR'S. See REAUMUR'S PORCELAIN.

Porcelain Clay. Finer and purer kind of kaolin, suitable for the manufacture of the higher grades of ware.

Porcellanite. Argillaceous rock baked and altered by contact with an igneous rock.

Porcellanous. Having the texture of porcelain, as certain foraminiferal shells.

Porch. Covered entrance-way into a church or other building; formerly confounded with portico, which stood by itself, as that used by the Greek Stoics. In English churches it was quite universal, and in France beautiful mediæval specimens remain.

Porch of Aldham, Essex, Eng. (1350).

Porcupine. Rodent, in whose fur some of the hairs are developed as spines, barbed at the point. In some species these may be over a foot long. They are easily detached, are situated mostly on the back, and can be hurled like arrows from the tail. The American porcupines are arboreal, and some have prehensile tails; *Erithizon*, the common porcupine, is 2½ ft. long. A number of species are found in Africa. 2,000,000 porcupine quills are imported into England every year from India, for penholders and ornamental purposes. See HYSTRICOMORPHA.

Pordage, JOHN, 1608–1698. Founder of the London Philadelphian Society. *Mystic Divinity*, 1683.

Pordenone, 16th cent. Two Venetian painters of subordinate rank. See LICINIO.

Pores (OF SPONGES). See INHALENT PORES.

Porgy, or SCUP (STENOTOMUS CHRYSOPS). Acanthopterygian fish which arrives in schools off the coast of New England in May, and earlier further s. The largest spawners arrive first. They weigh up to 4 lbs., and attain a foot and a half in length. They are easily caught and are usually so abundant that nearly 1,000 lbs. can be daily caught by a quick fisherman. The bait used is clams.

Porifera. See SPONGES.

Porism. Proposition seeking such conditions as shall make a certain problem indeterminate.

Pork. The flesh of the pig, sold fresh or salted. In the year ending March 1, 1896, 20,480,000 hogs were packed and sold in U. S. In the year ending June 30, 1895, there were exported from U. S., bacon 452,549,976 lbs., hams 105,494,123 lbs., pork 58,266,893 lbs., lard 616,310,992 lbs.; total value $89,696,768. In 1890 the number of hogs in U. S. was estimated to be 42,842,759.

Porosity. Quality of the matter of which any body is composed, when not strictly continuous, but possessing interstices or pores between the molecules. We may distinguish between two kinds of pores, sensible, such as exist in a sponge or a piece of bread and are visible to the eye, and physical, which exist in all forms of matter and are the intermolecular spaces, which cannot be perceived by the senses.

Porphyraceæ. Sub-order of red *Algæ*, containing the Purple Laver and a few other species.

Porphyrio, POMPONIUS, 4th cent. Latin commentator on Horace.

Porphyrogenitus. Constantine VII., 905–959; emperor of the East from 944.

Porphyry. Originally, rock in which feldspathic crystals were distributed in a purplish matrix; now any rock containing mineral distinctly differentiated by crystallization from the main mass.

Porphyry, 232–ab.304. Neo-platonic philosopher, disciple and biographer of Plotinus. His doctrine is of a practical and religious character; but he wrote against Christianity. Most of his works have perished.

Porpita. See DISCOIDEÆ.

Porpoises (SEA-HOGS). Small Cetaceans of genus *Phocæna*, allied to the Mammalian dolphins (sometimes called porpoises), from which they differ in having a more rounded head; no beak is present. The pectoral fins are below and be-

Porpoises (*Phocæna communis*).

hind the eyes. Teeth are ab. 25 on each side of each jaw. The Atlantic species go in larger schools and ascend rivers further than do the Pacific species. They feed on herrings, etc. Porpoise leather is usually made from the skin of the white whale (*Beluga*).

Porpora, NICCOLA, 1686–1766. Neapolitan composer and vocal teacher, celebrated by George Sand in *Consuelo*.

Porridge. Nutritious food made by boiling barley, beans, or oatmeal in milk or water. That of oatmeal was the chief food of the Scotch peasantry.

Porro, EDUARDO, b. 1842. Prof. of Obstetrics at Milan; professional writer.

Porsena, LARS. King of Clusium in Etruria, who with a vast army undertook to replace Tarquin the Proud on the throne of Rome. The legend has it that Cocles prevented his crossing the bridge over the Tiber. In fact, Rome was conquered and compelled to pay tribute.

Porson, RICHARD, 1759–1808. Fellow of Trinity Coll., Cambridge, 1782; pre-eminent (after Bentley) as a Greek scholar and textual critic. He edited Æschylus and part of Euripides, and left some essays.

Port. Larboard side of a ship: left side, looking forward.

Porta, BACCIO, or BARTOLOMMEO, DELLA. See BARTOLOMMEO.

Porta, CARLO, 1776–1821. Milanese poet.

Porta, GIACOMO DELLA, d. 1604. Italian architect.

Porta, GIAMBATTISTA DELLA, 1543–1615. Neapolitan pioneer of the sciences; inventor of the camera obscura. *Natural Magic*, 1569.

Portage. Subdivision of the DEVONIAN (q.v.) in N. Y., consisting of dark shales, and intermediate between the Genessee below it and the Chemung above. This shale cannot be clearly distinguished in its western extensions.

Portal. Entrance, particularly applied to the deep and richly carved doorways of Gothic cathedrals.

Portales, DIEGO JOSÉ VICTOR, 1793–1837. Vice-pres. of Chili 1832; Minister of War 1835; shot by mutineers.

Portalis, JEAN ÉTIENNE MARIE, 1745–1807. French Minister of Worship 1804; chief author of the *Code Napoléon*.

Port Arthur. Harbor and town of Manchuria, China; taken by the Japanese Nov. 22, 1894. Pop. ab. 6,000.

Port au Prince. Capital, principal city, and a seaport of Hayti, at the head of the Bay of Gonaives; settled 1749. Nearly all the houses are of wood, building with stone being

Port au Prince.

abandoned on account of earthquakes. Steamers load and discharge by lighters. Pop. ab. 40,000.

Portcullis. Barrier of stout wooden beams, shod with iron, which can be lowered rapidly in case of surprise; they were suspended near or over the gates at the posterns of old masonry forts and castles.

Porte. Government of the Turkish empire; "gate" of the Sultan's palace, at which justice is supposed to be dispensed.

Porte Cochère. Carriage entrance to courtyard of a house.

Port Elizabeth. On Algoa Bay, in e. Cape Colony, 350 m. s. of Kimberley; settled 1820. Pop., 1891, 23,266.

Porteous, JOHN, d. 1736. Commander of Edinburgh City Guard, sentenced July 20 to death for firing on a crowd April 14, respited Aug. 26, lynched Sept. 7, as told in Scott's *Heart of Midlothian*.

Porter. See BEER.

Porter, ALBERT G., b. 1824. M.C. 1859–63; Gov. of Ind. 1881–84. *Decisions Ind. Supreme Court*, 5 vols., 1853–56.

Porter, ALEXANDER, 1786–1844. Judge La. Supreme Court 1821–33; U. S. Senator 1834–37 and 1843.

Porter, ANDREW, 1743–1813. Revolutionary officer; Brig.-gen. Pa. militia 1801.—Of his sons, DAVID RITTENHOUSE, 1788–1867, was Gov. of Pa. 1838–45; GEORGE BRYAN, 1791–1834, was Gov. of Mich. from 1832.—His son, ANDREW, U.S.A., 1820–1872, was Brig.-gen. U. S. Vols. 1861–64.—His cousin, HORACE, U.S. A., b. 1837, was on the staffs of Gens. McClellan, Rosecrans, and Grant 1862–65, and was sec. to Pres. Grant 1869–73. *West Point Life*, 1866.

Porter, CHARLES T., b. 1826. American mechanician; inventor of two governors, 1859–61; designer and manufacturer of the PORTER-ALLEN ENGINE (q.v.).

Porter, DAVID, U.S.N., 1780–1843. Commander of the *Essex*, 1812, which took sundry British vessels, and was taken 1814; in the Mexican service 1826–29; U.S. Minister to Turkey from 1831. *Cruise in the Essex*, 1815; *Constantinople*, 1835. His *Life* was pub. 1875 by his son, DAVID DIXON, U.S.N., 1813–1891, who held command on the Mississippi 1862–63, and on the Atlantic coast 1864–65, winning great distinction and the rank of Rear-admiral 1863. He became Vice-admiral 1866, and Admiral of the Navy 1870. *Allen Dare*, 1885; *Harry Marline*, 1886; *Hist. Navy in War of Rebellion*, 1887.—His brother, WILLIAM DAVID, U.S.N., 1809–1864, served with distinction in the West, and became Commodore 1862.

Porter, FITZ-JOHN, U.S.A., b. 1822. Cousin of Admiral David D.: Brig.-gen. U.S. Vols. 1861; active at Yorktown and in command of the 5th Corps; Major-gen. 1862. After distinguished service in sundry battles, he was unjustly cashiered Jan. 21, 1863, for alleged disobedience at the 2d Bull Run. He was vindicated by later investigation, and restored to the army 1886.

Porter, JAMES DAVIS, LL.D., b. 1828. Gov. of Tenn. 1874–79.

Porter, JANE, 1776–1850. English romancer. *Thaddeus of Warsaw*, 1803; *Scottish Chiefs*, 1810.—Her sister, ANNA MARIA, 1780–1832, pub. many novels.—Her brother, ROBERT KER, 1775–1842, painter, pub. several books of travel.

Porter, JOSIAS LESLIE, D.D., LL.D., 1823–1889. Prof. Bel-

fast 1860; pres. Queen's Coll. 1879. *Damascus*, 1855; *Syria and Palestine*, 1858.

Porter, NOAH, D.D., LL.D., 1811–1892. Prof. Yale from 1846, pres. 1871–86. *Human Intellect*, 1868, abridged 1871; *Moral Science*, 1885; *Kent's Ethics*, 1886.

Porter, PETER BUEL, 1773–1844. M.C. from N. Y. 1809–12 and 1815–16; officer in the war of 1812, distinguished at Chippewa, Lundy's Lane, and Fort Erie; a projector of the Erie Canal; Sec. of War 1829–33.

Porter, RUFUS, 1792–1884. American inventor of various machines; founder *Scientific American* 1845.

Porter, THOMAS CONRAD, D.D., LL.D., b. 1822. Prof. Lafayette Coll. from 1866; writer on the botany of Pa.

Porter, WILLIAM TROTTER, 1809–1858. Ed. New York *Spirit of the Times* 1831–56; writer of sporting tales.

Porter-Allen Engine. High-speed horizontal type of steam engine, embodying the improvements made upon the ALLEN ENGINE (q.v.) by Charles T. Porter. These were a weighted governor, by which sensitiveness was given to it, and the adoption of such weight in the reciprocating parts as should act at early cut-offs with high-pressure steam to absorb work in their acceleration during the first half of the stroke, and give it out on the retardation of those parts in the latter half when the cylinder pressure had fallen by expansion. This was the first development of high speeds of pistons for stationary practice, the reciprocating parts acting as a fly-wheel, and making less weight necessary in the revolving wheel. Previous to 1865 engines made 20 to 60 revolutions a minute; Porter-Allen engines of the same power make from 175 to 300 revolutions per minute, and an engine of less bulk suffices.

Porteus, BEILBY, D.D., 1731–1809. Bp. of Chester 1776, and of London 1787. *Works*, 6 vols., 1811.

Port Hudson. Village of La., on the Mississippi; fortified by Confederates 1862; passed by two out of nine Union vessels March 14, 1863; vainly attacked, with heavy loss, May 27 and June 14. After a siege, it surrendered July 9, 1863. Pop., 1890, 250.

Port Huron. Capital of St. Clair co., Mich.; at the foot of Lake Huron; founded 1686, chartered 1857. Pop., 1890, 13,543.

Portico. In Classic Architecture, the space in front of a temple, together with the order of columns and entablature by which it was inclosed.

Portillo, JACINTO DE, 1490–1566. Spanish explorer in Mexico.

Portland. Largest city of Me., capital of Cumberland co.; important seaport, on a peninsula projecting into Casco Bay; founded 1632, chartered 1786 and 1832. It has a deep, capacious and well-sheltered harbor, and is an important railroad center. Pop., 1890, 36,425.

Portland. Capital of Multnomah co. and largest city of Oregon: on the w. bank of the Willamette, 12 m. above its mouth, on tidal and navigable water, founded 1845, chartered 1851. Pop., 1890, 46,385, since increased by the addition of suburbs.

Portland, Oregon.

Portland, ISLE OF. Peninsula of Dorsetshire, on the English Channel, ab. 4½ m. by 1½; noted for its stone-quarries, its prison, and three castles. Pop., 1891, 11,000.

Portland Cement. See CEMENT and CEMENT TESTS.

Portland Vase. See GLASS, ANCIENT.

Port Louis. British capital and chief port of Mauritius, on n.w. coast. Pop., 1891, 62,046.

Port Mahon. Capital of Minorca, on s.e. coast; held 1708–56 and 1762–82 by the British, who fortified it. Pop. ab. 18,500.

Porto Alegre. City of s. Brazil, on the Jacuhy; settled 1742. Pop. ab. 40,000.

Portocarrero Laso de la Vega, MELCHOR DE, COUNT OF MANDEVA, 1636–1705. Spanish Lieut.-gen. 1666; Viceroy of Mexico 1686, and of Peru from 1689.

Porto Rico, or PUERTO RICO. One of the Spanish West India Islands, discovered by Columbus 1493; e. of Hayti; 90 m. by 36; area 3,530 sq. m. In 1510 Ponce de Leon founded the town of Caparra. The native inhabitants were soon subdued

Porto Rico.

and swept away. In 1820 a futile effort toward independence was made. Slavery was abolished in 1873. Some reforms were promised 1896–97. Pop., 1888, 813,937.

Portraits, COMPOSITE. Method of indicating the facial characteristics of a family or group of persons, but suppressing the individual peculiarities. The results are of considerable use in anthropology. They are obtained by superprinting the photographic negatives with slight exposure. A composite negative can be obtained from a succession of positives.

Portraiture. Portrait-statues of the third dynasty, 4449 B.C., have been found in Egypt. Apelles painted a portrait of Alexander the Great 4th century B.C.; there is no later record of portrait painting in Greece. From the Renaissance down to the present time both painters and sculptors have given great attention to portraiture, throughout Europe and in the U. S. The invention of photography doubtless diminished the demands for portraits by painting and sculpture.

Port Republic. In Rockingham co., Va.; scene of an engagement June 9, 1862.

Port-Royal. Abbey of Cistercian nuns, near Paris, founded 1204; center of the great Jansenist movement 1640–1700. For this cause it was much persecuted, lost control of its Parisian branch 1667, was excommunicated 1707, and destroyed 1709–10.

Port Royal. Village of Beaufort co., S. C., taken by Union forces Nov. 7, 1861. Pop., 1890, 524.

Port Said. Town of Egypt, on the Suez Canal; founded 1860, chiefly as a coaling station. Pop. ab. 21,000.

Portsmouth. Capital of Scioto co., Ohio; on the Ohio, at the mouth of the Scioto. Pop., 1890, 12,394.

Portsmouth. Capital of Norfolk co., Va.; on the Elizabeth, opposite Norfolk; site of a U. S. navy-yard. Pop., 1890, 13,268.

Portsmouth. City of Rockingham co., N. H.; on the Piscataqua, 3 m. from the sea; founded 1623, chartered 1849. It has considerable commerce. Pop., 1890, 9,827. U. S. navy-yard is on an island near by, belonging to Kittery, Me.

Portsmouth. Seaport town of s. England, on the Channel, 23 m. s.e. of Southampton. It is a very important naval station, with a fine harbor. Its fortifications were partly removed 1872. Pop., 1891, 159,255.

Portsmouth, DUCHESS OF, 1649–1734. Louise Renée de Keroualle, French mistress of Charles II.; ennobled 1673.

Portugal. Kingdom of s.w. Europe, occupying with Spain the Iberian peninsula. Its surface is mainly a somewhat elevated plateau, capped by mountain ranges. The area is 35,541 sq. m. Agriculture and manufactures are in a somewhat backward condition. The greatest attention is paid to the cultivation of the vine. The government is a limited monarchy. The capital is Lisbon. The original inhabitants were Celts and Iberians. It became a Roman province 200 B.C. as Lusitania, was conquered by Visigoths in the 5th century, by Moors in the 8th, and by Alfonso V. of Leon and Castile 1095, whose grandson Alfonso erected it into a kingdom 1139. It attained its culmination in the 14th and 15th centuries by means of its colonies; Lisbon was then the center of the world's commerce. It degenerated under Jesuit influences, and met with misfortunes; was united to Spain 1580; conquered its independence 1640 under the Braganzas. In the Napoleonic era it was partitioned, and the royal family fled to Brazil 1807. It was governed by a regency under English influence 1807–21, when John VI. returned, subverted the constitution, and began a reign of

terror. He was defeated and expelled by his brother, Dom Pedro of Brazil; Maria II. became Queen 1834; her son Luis

Country House in Portugal.

ascended the throne 1861. A peaceful constitutional development has begun.

Portuguese. See ROMANCE LANGUAGES.

Portuguese Man-of-War. A siphonophore. See PHYSALIDÆ.

Portulacaceæ. Natural family of flowering plants, of the class *Angiospermæ* and sub-class *Dicotyledons*, comprising ab. 18 genera and 175 species of herbs, widely distributed throughout all parts of the earth; called the Purslane family.

Port Wine. Portuguese red wine, made from grapes grown on the mountain slopes on the river Douro. It becomes brown by age, but is artificially colored by elderberries and strengthened by brandy during fermentation and afterward. It contains 20–23 per cent alcohol, sugar 16–34 grs. per oz., and acid 3.6–5 grs. per oz., tartaric standard. The first port was shipped in 1678. The annual production is about 14,000,000 gals., of which about 6,000,000 gals. are exported, chiefly to Great Britain.

Porus. Indian king e. of the Hydaspes; conquered by Alexander 327 B.C.

Posadas, GERVASIO ANTONIO, 1757–1832. Director or dictator of Argentina 1814–15.

Pöschl, THOMAS, 1769–1837. Austrian heresiarch, founder of a fanatical and short-lived sect.

Poseidon. Greek god of the Mediterranean sea, son of Cronos and Rhea, brother of Zeus and Hades; dwelling under the Ægean and riding the sea in a car drawn by horses with golden manes; enemy to Troy; creator of the horse and patron of horse-races. Games in his honor were held on the isthmus of Corinth. His symbols are the dolphin, horse, and trident. See NEPTUNE.

Posen. Part of Poland till 1772, when the territory n. of the Netze was given to Prussia; the remainder was added 1793–95 as S. Prussia. It became part of duchy of Warsaw 1807, but was restored to Prussia 1815. A rebellion of the Poles was suppressed 1848. Its capital, P., on the Warthe, 158 m. e. of Berlin, is strongly fortified. Pop., 1890, 69,627.

Posepny, FRANZ, 1836–1895. Mining geologist; prof. in the mining school at Przibram, Bohemia. *Archiv fur praktische Geologie*, 1880–1895.

Posey, THOMAS, 1750–1818. Va. officer, repeatedly distinguished 1777–82; Brig.-gen. under Wayne 1793–94; Lieut.-gov. of Ky. 1805–6; Major-gen. 1809; U. S. Senator from La. 1812–13; Gov. of Indiana 1813–16.

Posidonia. See PÆSTUM.

Posidonius, 128–45 B.C. Syrian Stoic, teacher at Rhodes; envoy to Rome 86 B.C. His history continuing that of Polybius extended 145–82 B.C., and, like his other works, exists only in fragments.

Position. Method of solving problems by assuming values for the unknowns. Its forms, single and double, refer to the number of assumed values.

Position Angle. Angle which the line joining two stars, as seen projected on the celestial sphere, forms with the hour circle passing through the larger one.

Positions, MILITARY. Character depends on whether the defense is to be passive or active. If passive, its front should be covered by such obstacles as would break up or impede the advance of the enemy in any regular formation, and still allow the infantry and artillery fire of the troops in position to be efficacious; its occupied lines should be free from enfilade and their flanks secure; its lines of retreat free and ample. If the defense be active, the troops should be available for a counter-attack at a favorable moment; hence the front should be free from obstacles, well swept by fire, proportioned in extent to the strength of the occupying force, strengthened by natural or temporary points of support, ample means of communication from flank to flank, and good cover in rear for the supports, reserves, and supplies. The ground in rear should also afford good subsidiary positions for defense in case of defeat.

Positive Crystal. See CRYSTALS.

Positive Eyepiece of Telescope. Formed from two plane convex lenses, the convex surfaces facing each other; the focal image lies outside the eyepiece.

Positive Law. Distinguished from natural law; definite establishment of certain laws, expressly declared and really enforced in any given society.

Positive Quantities. Those having the plus sign; opposed to negative.

Positivism. Doctrine developed 1830–57 by COMTE (q.v.), that human progress has passed through three stages, theological, metaphysical, and positive, in which knowledge is limited to phenomena, excluding access to the nature of things. In principle the doctrine does not differ from skepticism or agnosticism.

Posse-Comitatus. Power of the county, consisting in Britain of every person above 15 years old, except peers and clergymen; in the U.S., generally of all male inhabitants. It may be called to his assistance by a peace officer in the execution of the laws.

Possession. Control or custody of a thing; detention of anything as one's own, and for enjoyment; occupation, actual or constructive, of subjects of property.

Posset. Dietetic preparation made by curdling milk with rennet, beer, wine, or any acid. It is used for coughs and colds.

Post. In Mining, (1) nearly equivalent to pillar; (2) artificial prop set to support rock that would be likely to fall.

When gangways are driven in thin seams, with a fairly good roof, the coal above the gangway being self-supporting, a post, as shown in the figure, is used to support the roof.

Post, or POST-OFFICE. Children's game played by any number, in which one acts as postman. The letters are given in the form of kisses.

Post, SLEEPING ON. Grave military crime, the punishment for which is death, or such other punishment as a court-martial may direct.

Post, WRIGHT, M D., 1766–1828. Prof. Columbia 1792–1813; eminent as an operating and consulting surgeon.—His nephew, ALBERT CHARLES, M.D., LL.D., 1806–1886, was Prof. of Surgery in Univ. New York 1851–75, and of much fame as a practitioner.

Post-Abdomen. See ABDOMEN.

Postage Stamps, INVENTION OF. The adhesive postage stamp was invented not by Sir R. Hill, but by James Chalmers of Dundee 1834. The plan of the impressed stamp as proposed by Rowland Hill not finding favor, when the Penny Postage Bill was introduced into Parliament, that of the ad-

hesive stamp previously sent by Chalmers was adopted by Treasury Minute dated 26th of December, 1839.

Postal Union. Arrangement between the various countries of Europe and the U.S., agreed upon at Berne Oct. 1874, which went into effect July 1, 1875; designed to secure uniformity in postal matters, reduce rates, simplify accounts, etc. It now embraces nearly every country in the world. The central office is at Berne. Uniform rate on prepaid letters of ½ oz., 5 cts.; postal cards, 2 cts. Matter mailed in the U.S. for Canada or Mexico pays only U.S. postage.

Post-anal Gut. That portion of the neurenteric canal which lies nearest the anus and beneath the notochord.

Post-anal Vesicle. Small globular sac, close to where the anus appears in fish embyros. It represents a portion of the post-anal gut, and as such the archenteric cavity of other forms. It communicates on the one hand with the blastopore, and on the other opens into the neural cavity.

Post and Stall. Method of coal mining essentially like that of pillar and stall.

Poste Restante. Department of a post-office in which letters are kept until called for, if so addressed.

Postern. Properly a small opening for entrance and exit in the wall of a castle or fortified dwelling, but used also for subordinate entrances in other buildings.

Posticum. Portico at the rear of a temple.

Posting. Method of forwarding passengers by means of relays of horses. Still practiced in some parts of Europe and Asia.

Postliminy. Right, by Roman law, to be restored to one's former status and property, upon being recaptured from the enemy. Modern international law secures to the owner the possession of goods upon their prompt recapture.

Post Mortem Examination. Section of a body after death to examine the condition of the internal organs. It is useful as an aid to determine the cause of obscure symptoms arising in the disease and in determining the cause of death when there is a legal investigation.

Post-Obit. Bond executed by a person on the receipt of money from another, whereby the borrower binds himself to pay to the lender the sum so received, generally with high interest, upon the death of a person from whom the borrower expects to inherit property.

Post-Office. Posts, or relays of mounted men, stationed at convenient distances, were maintained by Cyrus. Augustus had like means of communication with the remoter parts of the Empire; so had Charlemagne. The first letter-post was that established in the Hanse towns ab.1200. In England letters were sent by special messengers only; in 1635 a "post or two" was established between London and Edinburgh, which was to make the round trip in 6 days. In 1640, 8 main lines were set up in the kingdom. Mail coaches came 1784. Rowland Hill's scheme of penny postage (payable by stamps) went into operation Jan. 10, 1840, before which date a letter conveyed 15 miles or less paid 4*d.*; 300 miles or over, 12*d.* Halfpenny post cards were introduced Oct. 1870. Postal orders were first issued Jan. 1881. Postal savings banks date from 1861. The telegraphs came under the direction of the postal department Feb. 5, 1870. The franking privilege ceased 1840.

In 1672 New York and Boston could exchange letters once a month. From 1692 to 1710 Thomas Neale and his successors managed the postal affairs of N. America under the royal authority. The Continental Congress established post-routes from Falmouth, Me., to Savannah. In 1792 the postage rate was 6 cts. for 30 miles or less, for more than 450 miles 25 cts. In 1845 this became 5 cts. for ½ oz. any distance under 300 miles, over that distance, 10 cts. In 1851 the rate, if prepaid, was 3 cts. for less than 3,000 miles, and 6 cts. (10 cts. in 1855) for longer distances. In 1863 the uniform rate of 3 cts. per ½ oz. was adopted, in Oct. 1883 that of 2 cts., and in July 1, 1885, 2 cts. per oz. Postage stamps were introduced 1847; stamped envelopes 1852; free delivery 1863, extended to towns of over 10,000, 1887; money orders 1864; postal cards 1873; special delivery 1885. Number of post-offices, 1895, 70,064; aggregate length of post-routes, 456,026 miles; number of pieces transmitted about 3,800,000,000, at a cost of $86,790,172; receipts, $76,983,128.

Post-Office Savings Banks. System by which the Government receives small deposits of money at each of its local post-offices, holding them for the depositor, and allowing interest, in Great Britain 2½ per cent. They were established in Great Britain 1861, and in France 1881.

Post-Scutellum. Most posterior piece of the notum in the thoracic segments of insects.

Post-Tertiary. See QUATERNARY.

Postulate. Axiom or necessary assumption made preliminary to some investigation, and not itself investigated or determined as to its validity; assumption which conditions the progress of inquiry in any given department of thought.

Post-Zygapophysis. See ZYGAPOPHYSES.

Potamogalidæ. Family of *Insectivora*, including only the *Potamogale velox* of W. Africa, an otter-like amphibious animal with rudder-like tail and webbed feet. It is ab. 18 in. long, feeds on fish, and has teeth similar to those of the Golden Moles.

Potash. See POTASSIUM HYDROXIDE.

Potassium. K. At.wt. 39.11. sp. gr. .86, sp. ht. 0.25, mpt. 62.5° C., valence I.: discovered by Davy 1807; soft, silver-white metal of bright metallic luster when freshly cut. Heated, it is converted into a green vapor; thrown upon water, hydrogen is liberated and takes fire. It is rapidly oxidized in the air, so that it must be preserved in some neutral substance, like petroleum or benzene. It is found in nature in silicates, feldspar and mica; in sea water in the form of chlorides and sulphates, also as SYLVITE (q.v.) and in the ashes of plants. It is prepared by heating a mixture of potassium carbonate and carbon in an iron retort, the vapors being condensed in a cold receiver: $K_2CO_3 + 2C = 2K + 3CO$.

Potassium Acid Carbonate. $KHCO_3$. White solid, made by passing carbon dioxide into a solution of potassium carbonate. When heated it readily yields the normal carbonate.

Potassium Acid Sulphate. $KHSO_4$. Obtained by treating saltpeter with sulphuric acid. It occurs near Naples in the Grotto del Solfo. When heated it yields potassium pyrosulphate, $K_2S_2O_7$, and sulphur trioxide. It is often used for decomposing minerals.

Potassium Aluminate. $K_2Al_2O_4 + 3H_2O$. Hard crystals, soluble in water; obtained by fusing together aluminium trioxide and caustic potash, and crystallizing from water.

Potassium Aluminium Sulphate. $K_2SO_4.Al_2(SO_4)_3 + 24H_2O$. Alum. Potassium Alum. Found in nature in volcanic regions; made from ALUM SHALE (q.v.), which occurs in large quantities. It is soluble in water, crystallizes in octahedra, has a bitter, astringent taste, is used in medicine, by bakers, and as a mordant, for the preparation of pigments, sizing paper, clarifying water, etc.

Potassium Amide. KNH_2. Yellow or flesh-colored mass; mpt. above 100° C.; decomposed by water into ammonium and potassium hydroxides; made by fusing potassium in dry ammonia.

Potassium Arsenite. See FOWLER'S SOLUTION.

Potassium Auric Chloride. $KCl.AuCl_3 + 2H_2O$. Large, bright-yellow, transparent, rhombic tablets; made by adding a solution of auric chloride and one of potassium chloride in molecular proportion.

Potassium Bromate. $KBrO_3$. Hexagonal crystals, decomposing into oxygen and potassium bromide on heating; obtained as a by-product in the preparation of POTASSIUM BROMIDE (q.v.).

Potassium Bromide. KBr. White cubes, soluble in water and alcohol; made by warming bromine with caustic potash and igniting the residue with carbon; used in medicine and photography.

Potassium Carbonate. K_2CO_3. White, deliquescent crystals, very soluble in water: the solution has an alkaline reaction. It is the chief constituent of wood ashes, and was formerly obtained from this source. The impure salt is known as potash. It is made from the sulphate and chloride by the methods used for preparing SODIUM CARBONATE (q.v.).

Potassium Carbonyl. KCO. Reddish-white substance, exploding at 100° C.; decomposing in steam; made by passing carbon monoxide into a solution of potassium amide in liquefied ammonia at —50° C.

Potassium Chlorate. $KClO_3$. White, monoclinic crystals, soluble with difficulty in water; made by passing chlorine into a solution of calcium hydroxide containing an excess of the hydroxide, and treating the product with potassium carbonate; good oxidizing agent; used for making oxygen, explosives, safety-matches, fireworks, and in medicine for throat disorders.

Potassium Chloride. KCl. Found in nature as SYLVITE and CARNALLITE (q.v.); made by treating caustic potash with hydrochloric acid; soluble in water, insoluble in alcohol.

Potassium Chromate. K_2CrO_4. Yellow crystals, soluble in water; made by heating chrome iron ore with solid caustic potash. Acids convert it into potassium dichromate.

Potassium Chromium Sulphate. See CHROME-ALUM.

Potassium Cyanide. KCN. White, deliquescent, easily fusible mass; extremely poisonous; made by heating potassium

ferrocyanide with potassium carbonate; used in photography and electroplating.

Potassium Dichromate. $K_2Cr_2O_7$. Red, triclinic plates, soluble in water; excellent oxidizing agent; made from the chromate; used in photography, dyeing, and for battery solutions.

Potassium Disulphide. K_2S_2. Pomegranate-yellow or reddish-yellow, crystalline, easily fusible substance, formed by allowing an alcoholic solution of potassium sulphydrate to stand exposed to the air. It oxidizes on standing in air to potassium thiosulphate.

Potassium Ferricyanide, or RED PRUSSIATE OF POTASH. $K_3Fe(CN)_6$. Dark-red, monoclinic prisms, soluble in water; excellent oxidizing agent. Added to the solution of a ferrous salt, it gives a dark blue precipitate, Turnbull's Blue, $Fe_3(Fe(CN)_6)_2$. It does not cause precipitation in ferric solutions.

Potassium Ferrocyanide. $K_4Fe(CN)_6+3H_2O$. Yellow prussiate of potash; large, yellow, tetragonal pyramids, soluble in water; made by melting crude potash, iron filings, and refuse animal-matter, horns, hoofs, hair, etc. Added to a ferric salt, it gives a dark blue precipitate, Prussian Blue, $Fe_4(Fe(CN)_6)_3$.

Potassium Fluoride. KFl. Substance with an alkaline reaction and salty taste, made by neutralizing hydrofluoric acid with potassium carbonate in a platinum vessel.

Potassium Fluosilicate. K_2SiFl_6. Translucent, iridescent, gelatinous substance, formed by adding hydrofluosilicic acid to a potassium compound.

Potassium Hydride. K_2H. Silver-white mass, spontaneously inflammable; made by heating potassium in an atmosphere of hydrogen to 300° C.

Potassium Hydrogen Sulphite. $KHSO_3$. Small, monoclinic crystals, decomposing at 190° C.; soluble in water; made by supersaturating a concentrated solution of potassium carbonate with sulphur dioxide and mixing it with absolute alcohol.

Potassium Hydrosulphide. KSH. White substance, oxidizing readily in the air; made by treating potassium hydroxide with hydrogen sulphide.

Potassium Hydroxide, or CAUSTIC POTASH. KOH. White, brittle, deliquescent substance, strongest of the bases, disintegrating animal tissues; made by heating lime and potassium carbonate in silver or iron vessels. It usually contains impurities, but is obtained in a pure form by dissolving in alcohol, filtering and evaporating. It is used in making soft-soap, and in the laboratory.

Potassium Hypophosphite. KH_2PO_2. Extremely deliquescent, hexagonal tablets, soluble in dilute alcohol and water; made by boiling phosphorus in an aqueous or alcoholic solution of caustic potash.

Potassium Iodate. KIO_3. Small, hard, regular crystals; mpt. 560° C.; soluble in water; obtained as a by-product in the manufacture of potassium iodide from iodine and caustic potash.

Potassium Iodide. KI. White crystals; mpt. 634° C.; soluble in water. The water solution is a good solvent for iodine. It is made by bringing iron filings and iodine together, and treating the product with potassium carbonate, and is used in photography and medicine.

Potassium Manganate. K_2MnO_4. Dark-green mass, made by fusing manganese dioxide with caustic potash and potassium chlorate. It changes readily to potassium permanganate.

Potassium Nitrate, SALTPETER, or NITER. KNO_3. White rhombic prisms or rhombohedra, dissolving in water with lowering of temperature. Much of it comes from the Bengalese saltpeter plantations on the upper Ganges River. The ground is watered at night, and in the morning the water brings the saltpeter to the surface, from which it is scraped off. This niter earth contains 12 per cent of potassium and calcium nitrates, from which the niter is obtained by solution in water, with wood-ashes, and crystallization. It is made also by treating Chili saltpeter, sodium nitrate, with potassium chloride. It is used in the laboratory as an oxidizing agent, in the arts, and in the manufacture of fireworks and gunpowder. See NITER.

Potassium Nitride. K_3N. Greenish-black, infusible mass, burning in the air with a dark red flame; decomposed by water into caustic potash and ammonia; made by passing dry ammonia over heated potassium amide.

Potassium Nitrite. KNO_2. White crystallized compound, formed by heating potassium nitrate; used in the laboratory as a source of nitrous fumes.

Potassium Oxide. K_2O. White mass, made by heating potassium in the air; extremely soluble in water, forming potassium hydroxide. A peroxide, K_2O_4, is also known.

Potassium Perbromate. Similiar to POTASSIUM PERCHLORATE (q.v.).

Potassium Pentasulphide. K_2S_5. Red or yellow, hygroscopic, fusible substance, unstable above 600° C.; soluble in water and alcohol; made by heating a mixture of potassium carbonate and sulphur in dry hydrogen sulphide.

Potassium Perchlorate. $KClO_4$. Transparent, rhombic crystals, isomorphous with the corresponding ammonium salt. It has a slight cooling, salty taste, and is slowly soluble in water. At 400° C. it decomposes into potassium chlorate and oxygen. It is made by neutralizing perchloric acid with potassium carbonate, and is used as an oxidizing agent.

Potassium Permanganate. $KMnO_4$. Dark-purple crystals, made by oxidizing manganese dioxide in presence of a base; soluble in water: the solution is a good disinfectant. It is used extensively as an oxidizing agent.

Potassium Phosphate. K_3PO_4. Small crystals, easily soluble in water; made by fusing phosphoric acid with potassium carbonate.

Potassium Phosphite. K_3PO_3. Thick, syrup-like mass, containing small crystals; obtained by neutralizing phosphorous acid with caustic potash and evaporating in a vacuum.

Potassium Polysulphides. See POTASSIUM SULPHIDE.

Potassium Stannate. K_2SnO_3. Colorless, lustrous monoclinic columns or rhombohedra, containing 3 molecules of water; soluble in water; made by fusing tin dioxide with potassium carbonate.

Potassium Subchloride. K_2Cl. Dark-blue substance, made by fusing potassium with potassium chloride in a stream of hydrogen.

Potassium Sulphate. K_2SO_4. White crystals, found in nature in combination with other salts (see KAINITE). It is made by treating potassium carbonate or hydroxide with sulphuric acid, and is used in medicine and in the preparation of alum.

Potassium Sulphide. K_2S. It crystallizes from water with $5H_2O$, in colorless prisms; the solution absorbs oxygen. It is made by heating potassium sulphate with carbon, and has the power of taking up more sulphur, forming the polysulphides of the formulæ, K_2S_2, K_2S_3, K_2S_4, and K_2S_5.

Potassium Sulphite. K_2SO_3. Small hexagonal prisms, less soluble in hot than in cold water. The dilute solution oxidizes readily to the sulphate. It is made by passing sulphur dioxide into caustic potash, and also occurs with one or two molecules of water of crystallization.

Potassium Sulphocyanate. KCNS. Mpt. 161° C. It crystallizes in columns or needles, and is soluble in water. It is made by fusing together potassium ferrocyanide, carbonate, and sulphur, and is used as a test for ferric compounds, with which it forms a deep red color.

Potassium Tellurate. K_2TeO_4. Made by heating tellurium with potassium carbonate and nitrate; used for making TELLURIC ACID (q.v.).

Potassium Tetrachromate. $K_2Cr_4O_{13}$. Mpt. 215° C. Brownish-red crusts, consisting of rhombic tablets; made by dissolving the dichromate in nitric acid, sp. gr. 1.41.

Potassium Tetrasulphide. K_2S_4. Hyacinthine, translucent, unstable substance, made by boiling a mixture of potassium sulphide, sulphur, and water, and heating the residue in a stream of hydrogen.

Potassium Tetroxide. K_2O_4. Amorphous, soluble, yellow powder. It softens at 280° C., fuses at a red heat to a black transparent liquid; decomposes in moist air with the evolution of oxygen, and is made by heating potassium in the air, nitrous or nitric oxide from 60° to 80° C.

Potassium Trichromate. $K_2Cr_3O_{10}$. Mpt. 250° C. Deep-red, monoclinic prisms; made by treating the dichromate with nitric acid, sp. gr. 1.19.

Potassium Trisulphide. K_2S_3. Yellowish-brown, crystalline solid, becoming black on fusing; stable at a red heat, soluble in water; made by heating 4 molecules potassium carbonate with 10 atoms sulphur.

Potassium Tungstate. $K_2WO_4+2H_2O$. It also occurs

in the anhydrous form, and is made by fusing the trioxide with potassium carbonate. Several more complex potassium salts are known; *e.g.*, $K_{10}W_{12}O_{41}+11H_2O$.

Potassoxyl. Radical OK.

Potato. *Solanum tuberosum.* Herb of the natural family *Solanaceæ*, native of w. America, universally cultivated for its farinaceous tubers. The soil best suited for potatoes is a sandy or gravelly one that either is naturally rich or has been made so. Potatoes usually respond well to potash fertilizers, and it is thought that coarse farmyard manure is a great cause of the potato scab. Propagation is by the tubers, either whole or cut, and cultivation is essentially like Indian corn. Potatoes suffer from the attacks of a fungus that causes the leaves to blight and the tubers to rot.

Potato, SWEET. See SWEET POTATO.

Potato Beetle, COLORADO (DORYPHORA DECEMLINEATA). First brought to notice 1859, it had spread over the country by 1874. The larvæ are short, plump, and reddish, with black head and two rows of black spots on the sides. They are very voracious, and usually attack potatoes in preference to all other plants. The adults have each wing cover marked with five longitudinal black stripes. The female lays about a thousand eggs in clusters on the lower side of leaves. They hatch in a week, and are ready to turn into the winged and sexed form two weeks later. They are held in check by frequent dusting of the potato plants with plaster mixed with Paris green. The bogus potato beetle (which, however, does not feed on the potato plant) differs from the genuine potato beetle in that the larvæ have but one row of black spots on each side.

Colorado Beetle:

a, beetle, natural size; *b*, caterpillar; *c*, eggs.

Potato Bug. Name applied to a great many different insects by farmers. See POTATO BEETLE.

Potato-Vine, WILD. See MAN-OF-THE-EARTH.

Potekhin, ALEXSEI, b.1829. Russian novelist and dramatist, dealing chiefly with low life. *The Peasant Woman; For Money; Young Inclinations*, 1879; *Village Leeches*, 1880.

Potemkin, GREGOIRE ALEXANDROVITCH, 1736–1791. Courtier and minister of Catherine II. of Russia; all-powerful at home from 1776, and greatly regarded abroad.

Potential (GRAVITATION). The potential at any point in space due to the presence of any system of masses whatever is equal to the number of units of work which must be done upon one unit of mass against the acting forces in moving it to the boundary of the field of force. Thus potential in the case of attraction is negative. It is clear that in general the potential at a point is equal in quantity to the potential energy of a unit mass placed there.

ELECTRICAL.—Amount of work that must be done upon one unit of electricity in carrying it from the point in question to the boundary of the electrical field.

MAGNETIC.—Amount of work that must be done upon a unit magnetic pole in carrying it from the point in question to the boundary of the magnetic field. In general the "difference of potential" between two points is equal to the work that must be done in carrying a unit mass, a unit of electricity, or a unit magnetic pole, as the case may be, from one point to the other by any path. The locus of all the points in a field at which the potential has the same value is called an EQUIPOTENTIAL SURFACE (q.v.). These surfaces are always perpendicular to the lines of force at every point.

Potential Capital. All things which are capable of being used to promote production, in distinction from actual capital, which should include only those things really so applied.

Potential Function. If we imagine an attracting body M to be divided into small elements, and add together all the fractions formed by taking the ratio of the mass of each element to its distance to a given point P in space, the limit of this sum, as the elements are made smaller and smaller, is called the value at P of the potential function due to M; or

$$V = \underset{\Delta m = o}{\text{limit.}} \sum \frac{\Delta m}{r}.$$

If the co-ordinates of P be (x, y, z), and those of an element (x^1, y^1, z^1), then

$$V = \int\int\int \frac{\rho\, dx^1\, dy^1\, dz^1}{[(x^1-x)^2 + (y^1-y)^2 + (z^1-z)^2]^{\frac{1}{2}}}$$

where ρ is the density at the point (x^1, y^1, z^1), and where the integration is to include the whole of the mass M. If we differentiate V twice with regard to x, y, and z, with the understanding that P is not within the mass M, and add the results together, we shall obtain

$$D_x^2V + D_y^2V + D_z^2V = 0$$

which is Laplace's Equation. The operator ($D_x^2 + D_y^2 + D_z^2$) is sometimes denoted by the symbol ∇^2, so that we may write LAPLACE'S EQUATION (q.v.) in the form $\nabla^2 V = 0$. If P be within the attracting matter M,

$$\nabla^2 V = -4\pi\rho$$

which is POISSON'S EQUATION (q.v.).

Potential Temperature. That which would be assumed by a mass of moist gas if reduced adiabatically to any adopted standard pressure.

Potgieter, EVERHARD JOHANNES, 1803–1875. Dutch writer; ed. *De Gids* 1837–67.

Pot-Herbs. Plants that are used chiefly for flavoring, as fennel and parsley.

Pothier, ROBERT JOSEPH, 1699–1772. Prof. of Law at Orleans from 1749. *Traité des Obligations*, 1768.

Pot-Hole. Vertical, cylindrical cavity in rocks, made by the gyratory motion of a current of water, the cutting being done by stones and sand. Pot-holes over 60 feet deep have been recorded. The pool found beneath a cataract is closely related to a pot-hole.

Poti. Russian fortress in the Transcaucasia, at the mouth of the Rion. It is very unhealthy on account of surrounding marshes. It commands the shore route between Russia and Persia.

Pot-Metal. Alloys of copper and lead of varying proportions.

Potomac. River heading in n. W. Va. in several large branches, flowing n.e., e., and finally s.e. into Chesapeake Bay, forming the boundary between Md. and Dist. of Columbia on the n. and Va. and W. Va. on the s.; navigable to Georgetown, D. C. Drainage area 14,479 sq. m., length ab. 400 m.

Potosi. City of Bolivia, on the Cordilleras, 13,000 ft. above the sea; famous since 1546 for its silver mines, now little worked, the ore lying too deep. Pop. ab. 12.000.

Pot-Pourri. Miscellaneous mixture. French equivalent for the OLLA PODRIDA (q.v.) of the Spaniards; also, mixture of dried flowers, spices, etc., placed in a vase with perforated cover, and used for scenting the air of rooms.

Potsdam. City of Prussia, on an island in the Havel, 17 m. s.w. of Berlin; founded 1673; noted for its palaces. Before the time of Frederick II. it was only known as a fishing village, and this place and the entire surroundings are a monument of his taste and splendor. Pop., 1890, 54,125.

Potsdam, Residence of the Emperor of Germany.

Potstone. Greenish, or dark-colored, impure soapstone, or other chloritic magnesian rock, that, owing to its softness, can be easily cut into the shape of various utensils.

Pott, AUGUST FRIEDRICH, 1802–1887. Prof. Halle 1833; fa-

mous for his investigations in Comparative Philology. *Etym. Forschungen*, 1833–76.

Pott, FRANCIS, b. 1832. English hymnist and translator.

Pott, PERCIVAL, 1713–1788. Surgeon to St. Bartholomew's Hospital, London, 1749–87; student of spinal diseases; professional writer.

Pottawatomies. Algonquin Indian tribe of Wisconsin, living near Green Bay ab.1700, but moved to a region s. of Chicago. They number now ab. 2,000, most being in Indian Territory. Black Hawk, chief of the Sacs and Foxes, was a Pottawatomie by birth.

Potter, ALONZO, D.D., LL.D., 1800–1865. Prof. Union Coll. 1831–45; Bp. of Pa. from 1845; of eminent executive ability.—His son, HENRY CODMAN, D.D., LL.D., D.C.L., b. 1835, was Rector of Grace Ch., New York, 1868; Asst. Bp. of N. Y. 1883, Bp. 1887. *Sisterhoods*, 1871.—His brother, ELIPHALET NOTT, D.D., LL.D., b. 1836, was pres. of Union Coll. 1871–84; pres. Hobart Coll. 1884–96.—Alonzo's brother, HORATIO, D.D., LL.D., D.C.L., 1802–1887, was Bp. of N. Y. from 1861.

Potter, EDWARD C., b. 1860. American sculptor. Associated with D. C. French for the landscape decorative work in the Court of Honor at the World's Columbian Exposition, Chicago. All the animals of works otherwise by French, were by him; also the horses of the Columbus Quadriga on the Triumphal Arch of the Peristyle.

Potter, JOHN, D.D., 1674–1747. Bp. of Oxford 1715; Abp. of Canterbury 1737. *Archæologia Græca*, 1698.

Potter, PAUL, 1625–1654. Dutch animal-painter of great fame. The *Young Bull* at the Hague is among his most memorable works. See DUTCH SCHOOL.

Potter, WILLIAM JAMES, 1830–1893. Long Unitarian pastor at New Bedford, Mass.; sec. Free Religious Association 1867–82, pres. from 1882; ed. *Index* 1880–87.

Potter's Clay. See CLAY.

Pottery. This ancient and universal art includes all objects made of clay to which a certain consistency is given by burning. The clays are plastic and can be molded into any form. Circular objects are formed upon the potter's wheel, which was invented in Egypt earlier than 4000 B.C. This consists of a wooden disk upon an upright shaft in a table, the lower end having a large disk which is turned by the foot or other power. The clay, freed from coarse particles and rendered plastic by kneading with water in a pug mill, is shaped by the hands or in a mold of plaster of Paris, revolving with the wheel. Articles of irregular form are made in similar molds, which are sectional and can be removed from the article. The plastic clay is flattened into sheets and laid around the interior of the mold. Another method is by casting, the clay being suspended in water and poured into the mold; after standing some time, the liquid is poured out, and some of the clay adheres to the mold, the plaster of Paris absorbing some of the water; the operation is repeated until sufficient thickness is attained. The molds with their contents, as well as the articles made without molds, are somewhat dried in a warm room, and then finished by hand with knives to remove rough edges. The ware is then baked in kilns of various forms, which render it hard and sonorous. Such ware is porous; if it is desired to be water tight, a glaze is formed on the ware, the simplest method being to throw salt into the fireplace of the kiln, when it is volatilized and glazes the ware, forming a sodium silicate with the aluminium silicate of the ware. Ordinary stoneware jugs are thus glazed. For finer ware, the baked articles are dipped into a pulverized glaze suspended in water, a portion of which adheres to the ware and is fused by rebaking. The glaze is made of feldspar, quartz, chalk, and borax, white or red lead; the mixture is fused and ground. The finest ware is PORCELAIN (q.v.).

The English Iron-stone China is composed of kaolin, 10 parts, plastic clay and flint each 20 and calcined bones 50. The glaze is similar to that last mentioned. The ware is baked in earthen pots in kilns, which requires two days, and cooling one day; the glaze is baked at a lower temperature and in less time. Colors for this ware are metallic oxides with borax applied upon the glaze and fused in a muffle. Most of the English table ware is of this variety.

Stoneware is made of kaolin, plastic clay, feldspar and quartz, the last two constituting one-half. Blue tint is given by cobalt oxide and green by chromium sesquioxide. It is glazed by salt or as with the iron-stone china.

Ordinary Stoneware is made of plastic clay with sand or cement, and is baked in long furnaces, requiring five days.

Earthenware is made of plastic clay, quartz and feldspar. Wedgewood ware has cobalt oxide for a blue tint. It is lead glazed and is twice fired. Luster ware is made by glazing with metallic solutions and heating in a muffle. Painting is applied with the glaze. Delft and Faience belong here, and the colors are laid on with the glaze.

Common Earthenware uses poorer materials, and ordinary pottery is made of potters' clay and sand with an aluminous lead glaze, the baking requiring 12 hours. Common pottery is made of ordinary clay mixed with sand and glazed with red lead; it is baked at one firing in 36 hours.

Bricks are formed by hand or by machinery and baked for four days; the red color is due to Fe_2O_3. Fire-bricks are made of fire clay and sand and require eight days for burning. Crucibles are made of similar materials. Plumbago crucibles contain fire clay with 12 per cent plumbago. See BRICKS, TERRA-COTTA, TILES, PUG-MILL.

Pottinger, SIR HENRY, 1789–1854. Irish diplomatist, in India 1804–39; Baronet 1839; Envoy to China 1841–43; Gov. of Madras from 1847.

Pott's Disease. Disease of the spinal column, usually of tuberculous origin. There is an inflammation of the bone resulting in caries, followed by curvature of the spine directly backward. The disease attacks quite young children, and is a cause of hunchback.

Pottstown. Borough of Montgomery co., Pa., on the Schuylkill, 18 m. e. of Reading. Its chief industries are iron mills. Pop., 1890, 13,285.

Pottsville. Capital of Schuylkill co., Pa., near the headwaters of the Schuylkill, in an anthracite region. Its main business is the mining and shipping of coal. Pop., 1890, 14,117.

Pottsville. Great basal conglomerate of the Coal Measures in Pa. Extending into other States, this has received other names, some of which relate to the whole and others to the different strata into which it divides. It is the equivalent of the English Millstone Grit.

Pouched Dog (THYLACINUS; ZEBRA-WOLF). Marsupial of Tasmania, resembling a wolf, but with a dozen black bars

Pouched Dog (*Thylacinus cynocephalus*).

across the back and rump. It attacks sheep, and is active only at night. The pouch is rudimentary in the male.

Poughkeepsie. Capital of Dutchess co., N. Y., on the e. bank of the Hudson; settled ab.1705; site of Vassar College. Here the Articles of Confederation were ratified by N. Y. 1778, and the U. S. Constitution 1788. Pop., 1890, 22,206.

Pouillet Pyrheliometer. Black bulb thermometer immersed in a small glass of water retained in a vessel whose inside is also blackened. The water is kept well stirred; a change of temperature of the water is measured when the sunlight is admitted and cut off.

Poultice. Mixture of certain substances, *e.g.*, the powdered bark of the slippery elm, into a mush-like mass for the purpose of applying heat and moisture to a part. Caution is required in the use of poultices, especially on suppurating surfaces, as they afford an excellent soil for the multiplication of the bacteria of suppuration and prevent an aseptic condition of the sore.

Poultry. Over a hundred varieties of Chickens are known, belonging to several races, of which the chief are: Games, Cochins, Spanish, Hamburghs, Bantams, Crested Fowls. They are believed to have descended from a single wild species, the Red Jungle Fowl (*Gallus bankwa*) of the mountains of n. India.

This was domesticated in e. Asia before 1500 B.C. In rearing fowls for eggs or breeding they should run as much as possible in a large, wooded place; but if raised simply for food (as in rearing "broilers"), incubators, close quarters, artificial food, and heat are successfully employed. The food should be proteinaceous, and bad ventilation, dampness, and dirt avoided, otherwise they easily succumb to disease. See DUCKS, GEESE, GUINEA-FOWLS, TURKEYS, GALLINACEI, and PHASIANIDÆ.

Pounce. Formerly used to prevent blotting of ink, in place of blotting paper. It consisted of powdered rosin, gum resin, or cuttle-fish bones. Sand was also used.

Pound. Unit of weight in many countries, but differing in value. The avoirdupois pound was introduced into England by Henry VIII. The British standard of mass was defined 1826 by saying that one cubic inch of water at 62° F. contained 252.458 grains, while 7,000 grains make one pound. Later it was enacted by Parliament that the British standard pound should be the weight of a certain piece of platinum marked "P. S. 1844, 1 lb.," and kept in the office of the Exchequer. Its weight is 7,000 troy grains. This is denominated the Imperial Standard Pound Avoirdupois, and was verified by Prof. W. H. Miller. Several copies have been deposited in different places for reference in the event of accident to the original. It is the pound weight that has legal authority as a standard. The pound mass is the quantity of matter in the piece of platinum above defined. The troy pound weighs 5,760 grains, and is used in weighing gold and silver and by apothecaries in compounding medicines, which are sold by avoirdupois wt.

Pound. Inclosure for stray cattle, where they are kept until the owner claims them and pays the damages.

Pound (FORCE). Weight of one pound mass on the earth's surface at the level of the sea and in latitude 45° See FORCE.

Poundal. See FORCE.

Poundal-Second. See PULSE.

Pound-Celo. Unit of mass-acceleration. It is equal to the force that would have to be applied to the mass of one pound to give it an acceleration of one foot per second (1 celo).

Pounds, JOHN, d. 1839. Shoemaker of Portsmouth, Eng., originator of ragged schools ab. 1819.

Pound Sterling. In Great Britain twenty shillings; originally a pound weight of silver; now 66 shillings are coined from a pound, as under George I.

Pound-Velo. Unit of momentum. It is equal to the momentum of a mass of one pound moving with the velocity of one foot per second (1 velo).

Pourbus, FRANS, 16th cent. Flemish painters, father, 1545–1581, and son, 1570–1622. The latter is important as a mediator between Italian and Flemish art.

Pourtales, LOUIS FRANÇOIS DE, 1824–1880. Swiss-American naturalist, pupil of Agassiz, and his successor at the Cambridge Museum; on U. S. Coast Survey 1848–73, where he did valuable work in marine zoölogy and in introducing deep-sea dredging.

Poussin, NICOLAS, 1594–1665. French painter of landscape and classical subjects; greatest of his time next to Claude Lor-

Nicolas Poussin.

raine; long in Rome; distinguished for well-balanced composition; rather deficient in color.—His brother-in-law, GASPARD (DUGHET), 1613–1675, was a landscape painter of great power, active in Rome.

Pouter. Breed of pigeons with long, feathered legs, having the characteristic habit of puffing up the breast into globular shape.

Powder. Substances used to propel projectiles from guns, or to violently rend masses into smaller fragments. First used in Europe for guns in 14th century, in the form of powder or dust, whence its name. The early powder dust burned slowly and gave low pressures; it was followed by small grained powder whose great pressure limited the size of cannon. Rodman in 1860 varied the size of the grain to suit the caliber, and from this date great guns were possible. Powders are now made either from explosive mixtures or explosive compounds. In the first a combustible substance and a supporter of combustion are brought into extremely close contact by intimate mechanical mixture, as in gunpowder, where carbon, niter, and sulphur are mixed together. In an explosive compound the elements are all in chemical combination, presenting a definite explosive molecule, which contains both the combustible and the supporter of combustion. The chief explosive compounds are formed from some organic substance containing carbon, hydrogen, and oxygen, by introducing into it, through the action of concentrated nitric acid, a certain portion of nitric peroxide (NO_2) in substitution for an equivalent amount of hydrogen. GUNPOWDER, GUN COTTON, and NITROGLYCERIN (q.v.) are the principal explosive compounds. See SMOKELESS POWDERS.

Powderly, TERENCE VINCENT, b. 1849. Mayor of Scranton, Pa., 1878–84; master workman Knights of Labor 1879–94; Com. Immigration 1897.

Powder Magazine. Chamber to contain ammunition for the service of a battery of guns. For earthen batteries it is built of timber framework, its walls covered with earth thick enough to be shot-proof and its roof covering bomb-proof. For permanent works, it is a securely located, commodious chamber ample for the full service of the guns during a protracted siege.

Powell, BADEN, F.R.S., 1796–1860. Prof. of Geometry at Oxford from 1827; writer on calculus and optics; contributor to *Essays and Reviews*, 1860. *Plurality of Worlds*, 1856; *Order of Nature*, 1859.

Powell, JOHN WESLEY, LL.D., b. 1834. Geologist who conducted 1867 an expedition to Utah, first investigated the grand cañon of the Colorado River, and was for some years chief of the Geological and Geographical Survey of the Territories; director U. S. Bureau of Ethnology 1879, director U. S. Geological Survey 1880–94.

Power. Rate of doing work. It is equal to the whole work done in a given time divided by the time. The practical unit of power is a horse-power. See WATT.

Power. Primarily, result of repeating a quantity as a factor. In a wider and more usual sense, it indicates either the power of a root or the root of a power, and is synonymous with exponent.

Power, HENRY, b. 1829. London surgeon, lecturer at St. Bartholomew's and Westminster hospitals. *Diseases of the Eye*, 1868; *Human Physiology*, 1884.

Power, TYRENE, 1797–1841. Irish actor, in the U. S. 1833–35 and 1840–41. *Impressions of America*, 1835.

Power of Attorney. Authority in writing to act for another.

Power of a Locomotive. At usual speed, measured by the load it can draw on a level track. This varies from 500 to 3,000 net tons, the former being for light passenger, the latter for heavy freight locomotives. The pull required to draw 1,000 tons on a level railroad is ab. 30 tons. See LOCOMOTIVE.

Powers. Methods resorted to, after the statute of uses was enacted, of causing a case, with its accompanying estate in land, to spring up at the will of any given person; in the U. S., generally regulated by statute.

Powers, HIRAM, 1805–1873. American sculptor, active in Florence. The *Greek Slave*, of which there are six replicas, is his best-known work.

Powers, HORATIO NELSON, D.D., 1826–1890. American poet. *Ten Years of Song*, 1887.

Power Transmission. For short distances power is usually transmitted by wire cables or by compressed air. The transmission of power by electricity through wires has been accomplished for 150 m. In 1897 cars were run by electricity

transmitted by a third rail, 93 lbs. to the yard, 13 m. on the New York, New Haven & Hartford R. R., in 18 minutes.

Powhatan, ab.1550–1618. Indian chief in s.e. Va., who gave the settlers of Jamestown much trouble; father of Pocahontas.

Powis Castle. See WELSHPOOL.

Pownall, THOMAS, LL.D., 1722–1805. Gov. of Mass. 1756–60; M.P. 1761–81, with some intervals; friend of liberty, and writer on America.

Poynter, EDWARD JOHN, R.A., b. 1836. English painter of historic and classic subjects; Slade Prof. of Fine Arts at University Coll., London, 1870–75; director of art schools at South Kensington 1875; pres. Royal Academy 1896; knighted 1896.

Pozzi, SAMUEL JEAN, b. 1846. Parisian specialist in the diseases of women.

Pozzo di Borgo, CARLO ANDREA, COUNT, 1764–1842. Corsican enemy of Napoleon, long in the Russian service; ennobled 1825; envoy to England 1834.

Pozzuoli. Town 7 m. w. of Naples, anciently Puteoli; notable for its remains of antiquity. Pop. ab. 12,000.

Pradier, JEAN JACQUES, 1792–1852. Swiss sculptor, active in Paris; influenced by Canova. He has important works in the Louvre.

Pradier-Fodéré, PAUL LOUIS ERNEST, b 1827. French writer on international, military, and commercial law.

Prado, MARIANO IGNACIO, b. 1826. Pres. of Peru 1867 and 1876–79.

Pradon, NICOLAS, 1632–1698. French playwright, rival of Racine.

Præabdomen. See ABDOMEN.

Præcoces. Young of birds like the common fowl, which, when hatched, can seek their own food at once.

Praed, WINTHROP MACKWORTH, 1802–1839. English poet, unequaled in *vers de société;* M.P. 1830. His writings were first collected in America 1844.

Præfectus. In Rome, under the kings, officer appointed to command the city in the king's absence. Under the republic, prefects were sent to some of the allied towns to administer justice in place of the prætor. The emperors established a prefect of the city, who was a species of mayor. The prætorian guards were under one or more prefects, who exerted great influence, especially in deciding the succession to the throne.

Præfloration. See ÆSTIVATION.

Præfoliation. See VERNATION.

Præmaxillæ (INTERMAXILLÆ). Bones in front of the maxillary bones of the upper jaw of Vertebrates; not distinct in adult man.

Præoperculum. Most anterior of the four bones which constitute the operculum or gill-covers of fishes.

Præraphaelites. See PRE-RAPHAELITES.

Præstomium. Præoral lobe of Annelids.

Prætor. In early Rome, supreme magistrates generally known as Consuls. Later on, a separate magistracy was created with this title, which stood next to the consuls and had charge of the judicial duties of the government. At first, one sufficed. Then a second was appointed to judge in cases between Romans and foreigners, one being called the Prætor Urbanus and the other the Prætor Peregrinus. When Sicily and Sardinia were annexed, each received a prætor. Then two more were added for Spain. Sulla increased this number still further. They were elected by the people at the assembly of the centuries.

Prætorian Guard. Personal guard of the Roman emperor, instituted by Augustus 13 B.C. Vitellius increased it from 10 to 16 cohorts, 1,000 men each. Later they assumed to depose and elect the emperor. They set the diadem for sale 193, and were disbanded 312.

Præzygapophysis. See ZYGAPOPHYSES.

Praga. Suburb of Warsaw; site of bloody battle between Poles and Russians Nov. 4, 1794, in which 30,000 Poles were killed by Suwarrow. Near it, Feb. 25, 1831, the Poles defeated the Russians, who lost 4,000 killed and wounded, 6,000 prisoners, and 12 cannon.

Pragmatic Sanction. Ordinance issued by the executive of a state; in especial, that of Charles VII. of France 1438, securing the liberties of the Gallican Church; and another, by Charles VI. of Germany 1724, settling his hereditary dominions on his eldest daughter, Maria Theresa. The name comes from the Eastern Empire.

Prague. Capital of Bohemia, on the Moldau; settled ab. 722 and again ab. 1100; taken 1424 by the Hussites. Here the Austrians defeated Frederich V. of Bohemia 1620. It was taken by the Swedes 1648, by the French under Saxe 1741, and by Frederick II. of Prussia 1744, who here defeated the Austrians 1757. It has some fine old buildings and extensive manufactures. Pop., 1890, 184,109, much increased by suburbs.

Karlsbrucke at Prague.

Prague, UNIVERSITY OF. Chartered by Charles IV. 1348; important and influential in the time of Huss, when it drew students from all parts of Germany, England and France; reconstituted 1881, with a Czech and a German section. It has over 300 instructors, ab. 3,600 students, and a library of ab. 200,000 vols.

Prairie. The prairies of N. America occupy a strip of country lying between the forested plains on the e. and the treeless plains on the w. It is a debatable ground, where through a deficiency of rainfall the conditions are somewhat unfavorable for tree growth, so that slight discouragements, such as forest fires, have greater effect than elsewhere. Prior to settlement, from 1 to perhaps 15 per cent of this area was covered with woods, the proportion decreasing westward.

Prairie Dog, or PRAIRIE MARMOT. Rodent of genus *Cynomys*, of the arid Rocky Mt. region. They are a foot long, have a short hairy tail and brown fur, live in colonies, and burrow, making extensive galleries, heaping up mounds at the

Prairie Dog (*Cynomys ludovicianus*).

entrances, on which they sit, keeping up an incessant barking. They are shy and difficult to domesticate. In their retreats live rattlesnakes and burrowing owls, mutual enemies, and both enemies of the marmots.

Prairie Grove. In Ark.; scene of a battle Dec. 7, 1862.

Prairie-Hen, or CHICKEN (TYMPANUCHOS or CUPIDONIA). Grouse of the U. S., with naked, inflatable sacs on each side of neck (beneath tufts of long feathers), by means of which a

booming sound is made in the spring. In *T. cupido* of e. U. S. the neck-tufts of the male are sharply pointed, while they are

Prairie-Hen (*Tympanuchos cupiod*).

rounded in *T. americanus* of the West. The former is nearly exterminated, the latter is rapidly decreasing in numbers.

Prakrit. Dialects of India, closely related to the Sanskrit, with inscriptions and literature as old as our era.

Pram, KRISTEN HENRIKSEN, 1756–1821. Danish critic, poet, and dramatist; ed. *Minerva*. *Works*, 6 vols., 1824–29.

Praseodymium. Pr. At. wt. 143.6. Element found in didymium; discovered by Auer von Welsbach 1885; salts of an intense leek-like green color, which give a characteristic absorption spectrum.

Praseodymium Oxides. Pr_2O_3. Greenish-white powder, soluble in acids; formed by reduction of the heptoxide. —Pr_4O_7. Heptoxide. Dark-brown powder, obtained by heating didymium nitrate or oxalate. It dissolves in acids with evolution of oxygen.

Pratinas, 5th cent. B.C. Greek dramatic and lyric poet.

Pratt, CALVIN EDWARD, 1828–1896. Justice N. Y. Supreme Court from 1869.

Pratt, ENOCH, 1808–1896. Founder of the Baltimore Free Circulating Library 1883–86.

Pratt, SILAS GAMALIEL, b. 1846. American composer of symphonies, operas, cantatas, and smaller pieces.

Pratt, PARLEY PARKER, 1807–1857. Mormon apostle and author, as was also his brother, ORSON, 1811–1881.

Pratt, THOMAS GEORGE, 1804–1869. Gov. of Md. 1844–47; U. S. Senator 1850–57.

Pratt, ZADOCK, 1790–1871. M.C. from N. Y. 1837–39 and 1843–45; founder U. S. Bureau of Statistics.

Pratt Institute. Founded by Charles Pratt of Brooklyn 1887. A faculty of 9, with 123 assistants, instruct ab. 4,000 students in high-school branches, the domestic and industrial arts, kindergarten practice, and library training. A library building, with a capacity for 200,000 vols., in 1896 contained 57,000 vols.

Pratt Truss. Bridge truss having its vertical web members in compression and its inclined web members in tension. It was invented by Caleb Pratt in 1852, and originally built mostly of timber. Numerous varieties in iron and steel are used both for highway and railroad structures.

Pratz, LEPAGE DU, ab.1690–1775. Dutch-French explorer of the Mississippi and the West 1718–34. *Hist. Louisiana*, 1758.

Praxiteles. Greek sculptor of 4th century B.C., and representing its peculiar tendencies, as contrasted with those of the 5th century and of Phidias. His was the art of grace and loveliness, as opposed to that of grandeur or sublimity. Hence his preference for subjects like Aphrodite, Eros, and Dionysos. The later type of Aphrodite or Venus is largely his creation. No original work of his was known until 1877, when his Dionysos carrying the infant Hermes on his arm was found at Olympia, where it still remains. His lizard-slaying Apollo is known by several copies; one is in the Capitol Museum at Rome.

Pray, ISAAC CLARK, 1813–1869. American playwright and journalist.

Pray, PUBLIUS RUTILIUS RUFUS, 1795–1840. Reviser of Miss. statutes 1833–36; judge 1837.

Prayer. Address to Deity, chiefly in the form of supplication; in most lands and ages the leading feature of private devotion and public worship. In the latter, precomposed forms have been generally used, except among certain Protestant bodies since the Reformation: their use is justified by the Lord's Prayer, and its introductory words, "After this manner pray ye" (Matt. vi. 9). See PRAYER BOOK.—The object of prayer has been variously conceived. In rude ages and among the unlettered it was credited with power to influence the Divine plans and change the course of nature. In a more spiritual view, it aims to elevate and purify the worshiper's mind by bringing it into harmony with and subjection to God's will. Its inward ends may be thus attained, and its external objects incidentally in a measure, in accordance with psychic laws and without imagining any violation of those of the physical world.

Prayer, BOOK OF COMMON. Drawn up under Edward VI., modified under Elizabeth, and afterward, with local variations, the universal directory of Anglican worship.

Prayers for the Dead. Offered to some extent by later Jews and early Christians; approved in R. C. and Eastern Churches, but not by Protestants.

Prayer Wheel. Mechanical contrivance used in worship in Buddhist countries to multiply the reiteration of certain formulas of invocation, or recitation of sacred writings; believed to have been in use among the Buddhists for 14 centuries; based on the idea of its being a merit to be continually

Large Praying Wheel at Soonum, Thibet.

reciting portions of the writings of Buddha. They vary greatly in size, large wheels in Thibet being turned by water power. Some of the Japanese wheels contain large collections of the sacred books. The well-known hand wheel of Thibet is frequently embossed with sacred words, and contains strips of paper or cloth inscribed with charms or prayers.

Preaching. Prominent part of the office of ministers of any religion, in proportion as it claims intellectual, moral, and spiritual character; absent in such as are fetichistic or merely formal; chiefly marked in Christianity. It consists in various degrees of instruction and exhortation, and has its place in most leading occasions of public worship. It was the main and primary portion of the work of apostles and evangelists,

and in former ages, as especially with the Puritans, was more frequent and extended than is customary now. Its influence has often been very great, as with Peter the Hermit in urging the first crusade, and Whitefield and the Wesleys in the 18th century. See HOMILETICS and SERMON.

Pre-Adamites. Men living before the time of Adam; now seldom used, the phrase Prehistoric Men being more accurate. See CAVE DWELLERS and KENT'S CAVERN.

Preble, JEDEDIAH, 1707–1784. Brig.-gen. Mass. troops 1759 and 1774.—His son, EDWARD, 1761–1807, conducted the attack on Tripoli 1803–4, which led to the abolition of the European tribute long paid to the Barbary pirates, and the peace of 1805. —His nephew, GEORGE HENRY, U.S.N., 1816–1885, served in the Mexican and Civil wars, and became Rear-Admiral 1876.

Preble, WILLIAM PITT, LL.D., 1783–1857. Judge Me. Supreme Court 1820; U. S. Minister to the Netherlands 1829.

Precedence. Order in which persons are entitled to follow one another on public occasions. In England it is dependent upon statutes of Henry VIII. and subsequently, on royal letters patent and ancient custom; disputes are decided by officers of the crown; in Scotland, the Lyon Court has jurisdiction. The peerage and baronets rank as follows: England, Scotland, Great Britain, Ireland, United Kingdom, Ireland after the Irish Union. The order of rank is as follows, after the royal family; duke, marquise, earl, viscount, baron, banneret, baronet, knight, esquire. Persons of the same rank follow the order of the creation of that rank. Married women and widows have the rank of their husbands and unmarried women the rank of their oldest brother. Marriage does not take away from a woman the precedence by birth or creation.

Precedents. Legal forms approved by usage or judicial authority, or judicial decisions which declare a legal principle.

Precepts of Noah. Supposed by the Rabbis to have been received by Noah from Adam; one who accepted them, though not circumcised, had a hope of salvation. They were seven, mainly against idolatry, blasphemy, bloodshed, uncleanness, and theft, and were observed by proselytes of the gate.

Precession of the Equinoxes. Slow motion of the equinoctial points along the ecliptic. The mean value is 50.2″ per annum, requiring 25,800 years to complete a revolution. It was discovered by Hipparchus ab.100 B.C.

Precieuses. Feminine habitués of the Hôtel de Rambouillet, Paris, 17th century, who affected superfine graces of expression like those of the English euphuists; satirized by Molière.

Precious Metals. Gold, silver, and platinum, so called from their high price compared with that of other metals employed in the arts, and from the special uses for which they are peculiarly adapted.

Precious Stones. A large number of minerals, hard, transparent, beautifully colored, and brilliant in luster, have been regarded, at one time or another, as belonging in the category of precious stones, but the diamond and the varieties of corundum known as sapphire and ruby are almost the only ones that have received a general recognition as belonging here. Originally precious stones were prized and worn principally for their talismanic virtues. Engraved emeralds have been found in Theban tombs. The Tyrians prized most highly the sardius, topaz, diamond, beryl, onyx, jasper, sapphire, emerald, and carbuncle. On the Jewish High Priest's breastplate were the sardius, topaz, emerald, carbuncle, sapphire, jasper, ligure, agate, amethyst, chrysolite, beryl, and onyx. The most precious Assyrian cylinder seals are cut out of sard, emerald, lapis lazuli, agate, onyx, jasper, and rock crystal. In Rome, after the Eastern conquests, pearls and emeralds were most eagerly sought after. Julius Cæsar paid $240,000 for one pearl to give to Servilia. Cleopatra dissolved and drank another valued at $25,000. A pearl and emerald set worn by Caligula's wife Lollia Paulina cost $1,600,000. The Romans used pearls and gems in adorning walls and ceilings. Nero's palace walls were covered with them. They were also used to embroider shoes and garments. The rich used large emeralds as a kind of lorgnette. It was fashionable to set the best gems in drinking cups, and rings, often cut out of solid stones, were largely used. The Carthaginians gathered three bushels after the battle of Cannæ. The ruby, a supposed antidote to poison, always stood first in value. Diamonds were little prized, though one is mentioned belonging to Herod the Great's sister Berenice. The diamond only ranked fifth in the 13th century, below the pearl, ruby, emerald and chrysolite. Benvenuto Cellini, 1540, classed it below the ruby and emerald, and valued it at one-eighth of the ruby. Diamond-cutting, though practiced in India and China in remote ages, was not discovered in Europe till the 15th century, after which this gem appreciated in value and favor. See JEWELRY, DIAMOND, RUBY, etc.

Precipitate Ointments. Red ointment contains red oxide of mercury and white ammoniated mercury. They are used in cutaneous eruptions.

Precipitation. In Chemistry, the deposition, by means of air, gas, or chemical reagent, of a solid previously held in solution or produced by chemical action.

Precocity. Premature development of the body or the mind. In the former the body grows rapidly with the physical signs of maturity, frequently followed by early decay. In the latter it is often a symptom of PARANOIA (q.v.). Children with precocious intellects ought to receive special care, in order to maintain a sturdy body and to train the will to control the nervous system.

Precoracoid. Anterior of the two ventral elements of the shoulder-girdle, best developed in Reptiles.

Predatory War. The wanton destruction of the person and property of non-combatants, or engaging in pillaging, plunder, and rapine are acts of predatory warfare, which, not having the sanction of absolute military necessity, are not now practiced in civilized warfare.

Predestination. Doctrine that all things, including the salvation or perdition of every man, rest upon an eternal purpose of God. See ELECTION.

Predicate. In Logic, what is affirmed or denied of the subject; in Grammar, verb, with words depending on it.

Preece, WILLIAM HENRY, F.R.S., b. 1834. English writer on electricity and telegraphy.

Pre-emption. Privilege accorded an actual settler upon a limited portion of the public lands to purchase that portion in preference to all other applicants; a forced purchase instead of confiscation.

Pre-existence. Opinion held by Plato and other Greeks, and by many in later ages, that human souls existed prior to their entrance into the bodies with which they are identified in their present state.

Prefect. Title of many officers and magistrates of ancient Rome. In modern France the chief of police of each department. See PRÆFECTUS.

Pregnancy. Condition of the females of mammals during the period of gestation, coterminous with the period of embryonic life of the offspring, which varies in different species. It begins with the fecundation of the ovum and ends with the birth of the young. In reference to woman, the medical canon differs from the legal view in that during this entire period life is considered to be present, and it is as virtually murder to destroy an embryo before quickening, which occurs in the fourth month, as after that period. The duration of pregnancy with woman is about 280 days, varying up to 10 days either way.

Prejevalski, NICOLAI, 1839–1888. Russian traveler in Asia.

Prelate. Ecclesiastical dignitary, usually a bishop or abbot, exercising inherent, not merely delegated jurisdiction.

Prelude. In Music, a preliminary movement, ostensibly an introduction to the main body of a work and frequently of intrinsic value. See OVERTURE.

Premature Delivery. Induction of the birth of a child before the expiration of the period of gestation and after the period when it is possible for the child to live. As children so born are not fully developed, especial care is necessary to preserve life.

Premillenarians. See MILLENARIANISM.

Premonstrants, PREMONSTRATENSIANS, or NORBERTINES. Order of canons founded in France 1120 by St. Norbert; confirmed by Honorius II. 1126; once numerous and powerful throughout Europe, now much decayed.

Prence, or **Prince,** THOMAS, 1601–1673. Gov. of Plymouth, Mass., 1634, 1638, and from 1657.

Prentice, GEORGE DENISON, 1802–1870. Ed. Louisville, Ky., *Journal* from 1831. *Life of Clay*, 1831; *Prenticeana*, 1859; *Poems*, 1875.

Prentiss, SERGEANT SMITH, 1808–1850. M.C. from Miss. 1837–39; eminent as an orator.—His brother, GEORGE LEWIS, D.D., became prof. in Union Theol. Sem., N.Y., 1873.—His wife, ELIZABETH (PAYSON), 1818–1878, m. 1845, pub. many juvenile books and devout poems. Her *Stepping Heavenward*, 1869, was very popular.

Preparing Salt. See SODIUM STANNATE.

Preposition. Particle, or word other than verb, governing a noun or pronoun.

Prepotency. Power of one parent to transmit its own characteristics to its offspring, no matter what the qualities of the other parent may be. This power is usually obtained through descent from a long line of ancestors all of whom have possessed in marked degree the same characteristics, but it may be present as an individual characteristic.

Prepotency. Superior attraction certain sexual cells (or nuclei) have for each other, as shown by placing pollen

upon a stigma, from flowers removed by various degrees of relationship from the female flower experimented upon. It will be found that a certain degree of removal is most favorable, as when the pollen from a flower of a different plant grows faster toward the ovule than that from a flower from the same plant, and also faster than pollen from adifferent variety or species. Same principle applies in the animal kingdom. See STERILITY.

Pre-Raphaelites. Originally, a school of German painters at Rome, headed by Cornelius and Overbeck, ab. 1820. Their tendencies were religious and transcendental, and inclined to Catholicism, which several of them adopted. The impulse to this movement came from the study of the earlier Italian painters, like Giotto and Fra Angelico; hence the name, meaning that they favored, above all, the age of primitive belief and the style of its art as contrasted with a more technically developed but less deeply religious style. The name was transplanted to a school of English painters whose aims were vaguer, though their sympathies were somewhat akin to those of the Germans. These, like W. Holman Hunt, represented a sincere and earnest spirit in art, but they committed the great mistake of attempting to revive an archaic technique in oil-painting. Hence their movement was a failure.

Presburg, or PRESSBURG. Anciently Posonium. Old town of Hungary, on the Danube, 35 m. e. of Vienna; capital 1541–1784; taken by Austrians 1621. The royal castle, on the

Royal Castle, Presburg.

Schlossberg, is a prominent feature, on a plateau 273 ft. high, overlooking the Danube. It was destroyed by fire 1811. Presburg has an important trade in grain, linen and Hungarian wines. Pop. 1890, 52,411.

Presburg, PEACE OF. Dec. 26, 1805, between Austria and France, by which Bavaria was created into a kingdom with accessions from Austria and Prussia; Würtemberg also, with Austrian lordships in Swabia was added; Venice was included in kingdom of Italy; Austria obtained only Salzburg; the German empire was dissolved, and the Confederation of the Rnine inaugurated.

Presbyopia, or LONG-SIGHT. Natural accommodation of the eye for distances longer than that of ordinary vision, so that near objects are not focused on the retina, and thus appear indistinct. The usual cause is the fact that the antero-posterior diameter of the eye is too short, the focus being behind the retina. It is corrected by using converging glasses. Condition comes on, in normal eyes, when the person is about 45 years of age. See ACCOMMODATION OF THE EYE.

Presbyter. Elder; member of the college of pastors appointed by St. Paul and other apostles in each city; in N. T. called also Bishop; soon distinguished from the latter as another clerical order.

Presbyterianism. Church polity intermediate between Episcopacy and Congregationalism. It holds the parity of all presbyters, submits each congregation to a college of elders, and the various congregations to a series of church courts. See SESSION, PRESBYTERY, SYNOD, and GENERAL ASSEMBLY.

Presbyterians. In Scotland, the Established Ch. has ab. 1,500 ministers and 600,000 communicants; the Free Ch., 1,150 and 340,000; the United Pres. Ch., 610 and 190,000; other bodies, ab. 35 and 5,000. In England, ab. 325 and 70,000. In Ireland, ab. 680 and 110,000. In Wales (chiefly Calvinistic Methodists), ab. 675 and 140,000. In Canada, ab. 1,100 and 185,000. In the U. S. the Presbyterian Ch. has ab. 7,970 and 1,100,000; Cumberland P., 1,910 and 200,000; United P., 835 and 116,000; Reformed P., Associate P., etc., 390 and 410,000. Including affiliated communions and missions, the Alliance formed 1875 and meeting since 1877 in Pan-Presbyterian Council represents more than 24,000 ministers and 4,000,000 communicants throughout the world.

Presbytery. Body of elders; among Presbyterians, delegated assembly of several churches, the first court of appeal above the session.

Prescott, ALBERT BENJAMIN, b. 1832. Prof. of Chemistry in Univ. Mich. since 1870; author of several text-books.

Prescott, GEORGE BARTLETT, b. 1830. American electrician, inventor, and writer on telegraphy.

Prescott, WILLIAM HICKLING, 1796–1859. American historian of high rank, eminent for careful research and attractive style rather than for profundity or breadth of view. *Ferdinand and Isabella*, 1837; *Conquest of Mexico*, 1843; *Miscellanies*, 1845–51; *Conquest of Peru*, 1847; *Philip II.* (incomplete), 3 vols., 1855.—His grandfather, WILLIAM, 1726–1795, served in the French war and in the Revolution till 1777; he commanded at Bunker Hill.

William Hickling Prescott.

Prescription. Rule of Roman and International law, by which the uninterrupted use of specific property for a certain time gives to the possessor legal title thereto. In English law it is confined to incorporeal hereditaments, such as rights of way and of common.

Prescription. The recipe given by the physician to the pharmacist for the preparation of a medicine. The character ℞ usually prefaces a prescription, and is the initial letter of the Latin *recipe* = take, and a portion of the symbol of Jupiter ♃, used of old as a pious invocation propitiating the gods when ordering a remedy.

Presentment. In Criminal Law, used of the official act of a grand jury in making known certain offenses, of their own motion and without a complaint from an injured party.

Preservation of Food. Meats are preserved by packing them in salt, sometimes with addition of saltpeter, or by drying and submitting them to the smoke of hard wood, the creosote of which prevents decomposition. Pemmican is lean deer flesh, dried in the sun or air. Fishes of various kinds are salted and air-dried. Dessication by hot air or vacuum was first effected by Chollet of Paris 1854, with fruit and vegetables, which were afterward compressed. Canning of cooked meats, vegetables, or fruits was first accomplished by Werthenner 1839–41, the cans being filled with the cooked food, water, gravy, or sugar and water are added to fill spaces, the cover, with small opening, soldered on, then brought to boiling in a water bath, and finally closed. Green vegetables are preserved in salt water or vinegar. Sardines are preserved in olive or cotton-seed oil. Potted meats are covered with melted lard. Sawdust protects fruit, and charcoal preserves meat from decomposition. Preserved fruit is prepared by cooking it in syrup with equal weight of sugar. Alcoholic liquors are sometimes added. Eggs may be kept in salt or lime-water. Cold storage and refrigerators are now used for preserving all kinds of food from decomposition.

Preservation of Timber. Timber in structures is exposed to dry-rot and to the attacks of boring insects. Preservatives are introduced to arrest or prevent attacks from these directions. To prevent dry-rot, the object is to displace or coagulate the albuminous matter in the sap-ducts, and if this can be effected by a material deterrent to boring insects, the object is secured. Timber continually immersed in water or imbedded completely in cement deteriorates very slowly. The best known preservative processes are the creosote, known as Bethell's, the sulphate of copper, known as Margary's or Boucherie's, the perchloride of mercury, known as Kyan's, and the chloride of zinc, known as Burnett's, processes. The creo-

sote process is applied either hot in open tanks, or at high pressure in closed tanks, and is the most used. The wood is more inflammable, but will not be attacked by boring insects. See CREOSOTING, KYANIZING, and BURNETTIZING.

President. Chief executive officer of U. S. since 1789; elected quadrennially; succeeded by vice-pres. in case of death or disability during his term; eligible for re-election. The other republics use the same title.

Presidential Electoral Commission. See ELECTORAL COMMISSION, PRESIDENTIAL.

Presl, KARL BORIWOG, 1794–1852. Prof. of Natural History and Technology at Prague. *Flora sicula*, 1826; *Reliquiæ Hænkeanæ*, 1830–36; *Symbolæ botanicæ*, 1832–33; *Tentamen pteridographiæ*, 1845.

Press, HYDRAULIC. See HYDRAULIC PRESS.

Press, PRINTING. Machine by which the paper of books and journals is pressed upon the inked type to produce printed pages. The earliest presses were worked by hand, were of wooden frames, and could print but a small area at one pressure of the platen. The power was obtained by turning a screw. The Stanhope press of 1798 was an iron frame press, with levers to act upon the pressure screw in an easier way. The Columbian press of G. Clymer of Phila., 1817, counterweighted the platen, and replaced the screw by levers: the Washington press of S. Rust 1829 used the elbow-joint to produce the pressure in combination with levers, thus improving on O. Tuft's elbow-joint press of 1813. The power presses either use a flat bed of type, or put the type upon the surface of a revolving cylinder. The Adams press, Boston, 1830–36, pressed the flat form of type upward against a flat platen above it, the upward pressure being produced by an elbow-joint driven by a link from a crank, the same crank-shaft causing inking rollers to traverse the type at each stroke, with intervals of rest when the impression is made. These are caused by the shape of slots in the links which drive the rollers. The Adams press is used for fine work and will supply 800 impressions per hour. To replace the flat impression plate or platen by a cylinder was the fundamental idea of the earlier inventors of power presses, as in the first

Hoe Double-web Machine.

press of König 1811, and Applegath and Cowper's of 1827. In the stop-cylinder press, the form of type slides on ways under inking rollers, and the impression cylinder above it has either a flat side or a part of less radius by which contact is avoided during the return of the type. Such presses will make 1,000 impressions per hour. To put the type on the revolving cylinder required the perfection of the stereotyping processes. Previous to the patents of Col. R. M. Hoe 1842, Nicholson had used wedge-shaped type to avoid the difficulties of the curvature of the cylinder, and Napier 1841 used tapering rules between the lines of straight type. When the curved stereotype had become commercially practicable, the Hoe rotary press was evolved, where the form was borne on a large drum, the drum of such size that one-quarter of the circumference only bore the type, and the rest was inking surface. Two, four, six, or eight impression cylinders were grouped about this drum, fed each by an attendant. The largest size of these lightning presses, with five feeders on each side, could print 20,000 impressions per hour. The last improvement has been to use a continuous web of paper. The "web perfecting" presses can print from 12,000 to 72,000 newspapers per hour, according to number of pages, cut, pasted, folded, and counted in lots.

Pressburg. See PRESBURG.

Pressed Brick. Brick subjected to pressure before being burned, so as to render them harder and smoother than common BRICK (q.v.).

Pressensé, EDMOND DE, D.D., 1824–1891. Protestant pastor in Paris 1847–70; deputy 1871–76; life senator 1873. *Christianity and Social Questions*, 1849; *The Redeemer*, 1854, tr. 1864; *Three First Centuries*, 1859–77, tr. 1869–78; *Ch. and French Revolution*, 1864, tr. 1869; *Jesus Christ*, tr. 1866; *Contemporary Portraits*, tr. 1880; *Study of Origins*, tr. 1883.

Pressgang. Means of securing forced recruits for the English navy from early days till ab. 1830; an atrocious system, which scorned personal liberty and wrought untold misery.

Pressing to Death. See PEINE FORTE ET DURE.

Pressirostres. See PALUDICOLÆ.

Pressure. See FORCE and TOUCH.

Pressure Gauge. Device for estimating the pressure upon the base of the chamber of a gun caused by the explosion of the charge. Rodman's gauge consists of a housing screwed into the bore, containing a soft copper disk, upon which a steel cutter, terminating in a piston, rests. Upon firing the charge the cutter is driven into the disk, making a cut. A similar cut by the same cutter is obtained by static pressure in a similar disk, and this pressure per square inch is taken to be that of the interior of the chamber. In the crusher gauge, the shortening of a soft copper cylinder is employed instead of the cutter. See GAUGE, STEAM, and PIEZOMETER.

Pressure Head. Height of a column of water which will balance the pressure of the water at a point in a pipe or closed vessel is the pressure head at that point. If the water in the pipe is in motion the pressure head is less than the static head. See HEAD.

Pressure of Population. Its increase beyond the amount of subsistence which in the existing condition of knowledge and of the natural agents of production the country is able to provide.

Pressure of the Wind AGAINST A FIXED OBSTACLE. This depends approximately on the velocity of the wind and the size of the body; its shape, which is frequently neglected, is equally important. The pressure may be stated in pounds per sq. foot, and is usually computed by the formula,

$$p. = 0.5\ v^2.$$

This relates strictly to a thin plate one foot square, and has no simple relation to bodies of other shapes and sizes.

Prester John. Mythical Christian emperor, Presbyter Johannes, who ab. 1150 was rumored in Europe to be reigning in Asia, where he had defeated the Mussulmans and was coming to the assistance of the Crusaders. Pope Alexander III. sent an ambassador to him 1177, who never returned. When the story was proven false, the seat of Prester John was shifted to Abyssinia. The myth is said to have arisen in the reports of the Nestorian successes in the East.

Preston. Old town of Lancashire, on the Ribble, 31 m. n.w. of Manchester; important for its cotton and other manufactures. Near it Cromwell signally defeated a royalist army Aug. 17, 1648. Pop., 1893, 110,225.

Preston, HARRIET WATERS, b. ab. 1843. American author and translator, chiefly from the French. *Aspendale*, 1872; tr. Mistral's *Mireio*, 1873; tr. Virgil's *Georgics*, 1881. Her studies of Cicero and other ancient and mediæval authors are valuable.

Preston, MRS. MARGARET (JUNKIN), 1820–1897, m. 1857. American poet. *Beechenbrook*, 1866; *Colonial Ballads*, 1887.

Preston, THOMAS SCOTT, 1824–1891. Vicar-gen. of N. Y. 1873; devotional writer.

Preston, WILLIAM CAMPBELL, LL.D., 1794–1860. U. S. Senator 1837–43; pres. Coll. of S. C. 1845–51; nephew of Patrick Henry; considered the most finished of Southern orators.—Of his cousins, WILLIAM, 1806–1887, was M.C. from Ky. 1852–55, and U. S. Minister to Spain 1857–61; WILLIAM BALLARD, 1805–1862, was M.C. from Va. 1847, and U. S. Sec. of War 1847–48. Others of this family attained distinction.

Preston Pans. Village 8 m. e. of Edinburgh, where the young Pretender, at the head of his Scotch adherents, defeated 2,000 English under Sir John Cope, Sept. 21, 1745. The royal force was cut in pieces by a single charge of the Highlanders. Pop. ab. 2,650.

Prestwich, SIR JOSEPH, 1812–1896. Prof. of Geology at Oxford 1874–88; author of papers on Tertiary Geology, followed by two on the Quaternary beds of the valley of the Somme, in which he was the first to show on sufficient evidence that man was contemporaneous with the extinct Mammalia; author also of memoirs on submarine and underground temperatures. *Geology*, 1886–88.

Presumptions. Inferences of the existence or non-existence of a material fact, which a judge or jury is legally warranted in drawing from the evidence in the case.

Pretenders. Son and grandson of James II. of England, James Francis Edward Stuart and Charles Edward, who strove to recover the throne by Jacobite risings in Scotland 1715 and 1745.

Pretoria. Capital of S. African Republic; 1,040 m. n.e. of

Capetown, and 285 m. w. of Lorenzo Marques, its nearest port; important from its vicinity to the gold region. Here

Pretoria.

Jameson and his companions were confined 1896 after their raid. Pop. ab. 7,000.

Prévalaye, PIERRE DIMAS, MARQUIS DE, 1745–1816. French naval officer, in America 1778–81; Commander 1783, Admiral 1815; author of several memoirs.

Preventive Checks to Population. Influences which tend to prevent the procreation of children, as the desire to keep up a high standard of living in food, dress, the decencies or luxuries of life.

Previous Question, or CLOSURE. In England and U.S., parliamentary means of closing debate.

Previtale, ANDREA, d. 1528. Italian painter.

Prévost, LOUIS CONSTANT, 1787–1856. French geologist. His researches in volcanic phenomena led to his opposing the theories of Von Buch and Elie de Beaumont on the elevation of mountain chains, ascribing such apparent elevation to gradual contraction of the nucleus.

Prévost d'Exiles, ANTOINE FRANÇOIS, 1697–1763. French novelist, originally a monk; author of near 200 vols. *Marion Lescant*, 1733.

Prévost-Paradol, LUCIEN ANATOLE, 1829–1870. Parisian essayist; Minister to the U. S. 1870. *Contemporary History*, 1862–66; *French Moralists*, 1864.

Prévost's Theory. See THEORY OF EXCHANGES.

Preyer, THIERRY, b. 1841. Prof. Jena 1869; writer on physiology.

Priam. Last king of Troy; too old to be active in the war; father of 50 sons.

Priapulidæ. See ACHÆTA.

Priapus. Greek and Roman god of fruitfulness, protector of flocks, vineyards and gardens; son of Bacchus and Venus.

Pribylof Islands. In Bering Sea; important as a resort of seals.

Price. Purchasing power of an article expressed in terms of money, or more exactly, of any one commodity other than itself.

Price, BARTHOLEMEW, b. 1818. English mathematician, Prof. of Natural Philosophy at Oxford 1853. *Infinitesimal Calculus*, 4 vols., 1848–69.

Price, BONAMY, 1807–1888. Prof. of Political Economy at Oxford from 1868. *Currency*, 1869; *Banking*, 1876; *Political Economy*, 1878.

Price, RICHARD, D.D., LL.D., F.R.S., 1723–1791. English philosopher and moralist, of the intellectualist school as opposed to Hedonism and the absolutism of Hobbes, and also to the moral sense doctrine of the æsthetic school. Chief work, *Questions in Morals*, 1758; *Reversionary Payments*, 1768; *National Debt*, 1771; *Civil Liberty*, 1776. He warmly defended American rights.

Price, RODMAN MCCAMLEY, 1816–1894. M.C. 1851–53; Gov. of N. J. 1854–56; active in founding public and normal schools.

Price, STERLING, 1809–1867. M.C. 1845–46; Brig.-gen. 1847, in the Mexican war; Gov. of Mo. 1853–57; Major-gen. of Mo. troops 1861, and active against the Union; Major-gen. C.S.A. 1862, operating in the West.

Price Current. Table of prices of any special set of commodities at a given time in a certain market.

Prichard, JAMES COWLES, 1786–1848. English ethnologist. *Physical History of Mankind*, 1813; *Egyptian Mythology*, 1819; *Eastern Origin of Celtic Nations*, 1831; *Natural History of Man*, 1843.

Prickle. In Botany, any sharp-pointed stiff epidermal appendage.

Prickly Ash. See ASH, PRICKLY.

Prickly Heat. Disease of the skin characterized by suddenly appearing eruptions covering large areas, accompanied by an intolerable prickling or burning and excessive sweating. It is a disease of hot weather. Washing the inflamed parts with a cooling lotion as with vinegar and water, or dusting with a powder containing equal parts of starch and zinc oxide, to which may be added ten per cent of powdered camphor; keeping the patient quiet and cool and the digestive apparatus in a normal condition is all that is needed for treatment in temperate climes.

Pride. Satisfaction in or admiration of one's self, without requiring the sympathy or help of others.

Pride, THOMAS, d. 1658. Officer under Cromwell; instrument of the "purge" which excluded above 100 from the Commons Dec. 1648: regicide.

Prideaux, HUMPHREY, D.D., 1648–1724. Dean of Norwich 1702. *Life of Mahomet*, 1697. His *Old and New Testament Connected*, 1715–17, has been widely used.

Pride of India. *Melia azedarach.* Showy-flowered tree of the natural family *Meliaceæ*, native of India, widely planted for ornament in warm countries; known as Bead-tree, the seeds being made into necklaces by savage tribes.

Prie-Dieu. Chair used for kneeling in prayer.

Priessnitz, VINCENT, 1799–1851. Founder of hydropathy and of the first water-cure, at Gräfenberg, Austria.

Priest. Minister of religion, duly appointed, especially under Judaism and Christianity. In the R. C., Eastern and Anglican Churches he is ordained by a bishop, and is alone authorized to consecrate the eucharistic elements. The episcopal order or character includes all the powers of the priesthood, with others peculiar to itself.

Priestley, JOSEPH, LL.D., F.R.S., 1733–1804. English philosopher and divine, discoverer of oxygen 1774, and later of nitrous, carbonic, and sulphurous oxides and other gases; famous for the union of scientific and religious sympathies; Unitarian minister at Birmingham 1780–91; radical in politics; in

Joseph Priestley.

Pa. from 1794, chiefly at Northumberland. *Electricity*, 1767; *Disquisitions relating to Matter and Spirit*, 1777; *Institutes of Natural and Revealed Religion*, 1772; *Corruptions of Christianity*, 1782. *Works*, 26 vols., 1817–32.—His great-nephew, SIR WILLIAM OVEREND, M.D., LL.D., b. 1829, knighted 1893, is prominent as a London practitioner and writer on obstetrics.

Prieto, JOAQUIN, 1786–1854. Pres. of Chili 1831–41.

Prim. See PRIVET.

Prim, JUAN, 1814–1870. Spanish soldier and politician, Marquis 1860; banished 1864; all-powerful in his last years. He

procured the expulsion of Isabella 1868, the election of Amadeus 1870, gave the nominal occasion for the Franco-Prussian war, and was murdered.

Prima Donna. Leading female singer in an opera.

Primaries (PRIMARY REMIGES). Quill feathers of a bird's wing that grow on the pinion or outer (hand) portion of the wing. They number nine or ten.

Primaries. In the U. S., meetings of voters to nominate candidates for office.

Primary Alcohols. Alcohols which upon oxidation yield an aldehyde and then an acid. They are regarded as derived from methyl alcohol by replacing one hydrogen atom with a hydrocarbon radical. Methyl alcohol, $H.CH_2.OH$; ethyl alcohol, $CH_3.CH_2.OH$. See SECONDARY and TERTIARY ALCOHOLS.

Primary Coil. See INDUCTORIUM.

Primary Compounds. Compounds conceived to be formed by substitution in a CH_3 or methyl group. Thus $CH_3.CH_2.CH_2.CH_2OH$ is a primary butyl alcohol.

Primary Root. That resulting from the first growth of the vegetable embryo; also the tap-root.

Primary Schools. In U. S., schools for children, from 6 to 14 years of age, including primary, intermediate, and grammar schools, and provided usually by the State or towns. See SCHOOLS, COMMON SCHOOLS, and COMPULSORY EDUCATION.

Primary Triangulation. Largest and most accurate triangulation upon which the location of all other stations is based. Some primary triangles have lines over 100 m. in length. The angles are usually determined with an uncertainty less than half a second.

Primate. Archbishop of the first rank, as of Canterbury and York in England, Dublin and Armagh in Ireland; a shadowy title, and, except in Hungary, a vanishing jurisdiction.

Primates. Highest order of Mammals, characterized by having perfect clavicles that articulate with the top of the sternum. The radius, ulna, tibia, and fibula are complete and distinct, and the limbs admit of pronation and supination. The digits are armed with nails, and the thumb is opposable, forming a true hand. The teeth number 32 or 36, and the molars have broad tuberculate crowns. The mammæ are two and thoracic in position. The placenta is discoidal. Some authors include Lemurs in this order, but the old orders, *Quadrumana* (Apes and Monkeys) and *Bimana* (Man), are here alone included as the sub-orders *Simiadæ* and *Anthropidæ*.

Primaticcio, FRANCESCO, 1490–1570. Italian painter, in later life active in France and in decorating the Château of Fontainebleau with stucco work and frescoes, the latter now

Mystic Marriage of St. Catherine, by F. Primaticcio.

mainly destroyed. His style is allied to that of Giulio Romano, whom he had assisted at Mantua, and represents a falling off in quality as compared with the generation immediately preceding, but is still vigorous and decorative.

Prime, FREDERICK, b. 1846. Prof. Lafayette 1870–79; assistant in Ohio Geological Survey 1869, and on 2d Pa. Survey 1874; Prof. Girard Coll. 1894.

Prime, SAMUEL IRENÆUS, D.D., 1812–1885. Ed. *N.Y. Observer* from 1840. His *Power of Prayer*, 1858, was widely circulated. *Letters*, 1880–86.—His brother, WILLIAM COWPER, LL.D., b. 1825, is an author and journalist. *Boat Life in Egypt*, 1854; *I go a-fishing*, 1878; *Pottery and Porcelain*, 1878.

Prime Cost. Expenses which a producer incurs directly and specially, in the production of a given article, apart from the general expenses of his business.

Prime Mover. See MOTOR.

Prime Number. One exactly divisible by no number save itself and unity; opposed to composite.

Primer. Two copper tubes at right angles to each other, the one containing a charge of fine powder inserted into the vent of a gun, and the other containing a friction composition of antimony sulphide and potassium chlorate within which is imbedded a copper wire flattened and roughened at one end. When this wire is withdrawn quickly by the lanyard the composition is ignited and sets fire to the powder in the vent tube which communicates fire to the charge in the gun. The electric primer consists of two insulated copper wires joined by a small platinum wire. The junction is imbedded in some dry gun-cotton and inclosed in a copper tube containing also some small-arms powder. When the circuit is closed ignition occurs. To prevent erosion of the vent an obturating device, which prevents the escape of the powder gas, is now generally added to both primers.

Primero. English 16th century game of cards of the poker family.

Prime Vertical. Vertical circle whose plane is perpendicular to the meridian. It passes through the east and west points.

Primine. Outer layer of cells of the ovule which in ripening forms the testa of the seed.

Priming. Foaming or frothing of the water at its surface in a steam boiler, by which the entrainment of water into the cylinder is effected. Dirty or greasy waters are most liable to this difficulty, and it is favored by having insufficient disengagement area for steam from water surface, by defective circulation, by too high water level within the shell, by too small a size and too high velocity of current in the dome, and by heavy driving of a small boiler. Excessive priming of water endangers the cylinder when the entire living force in the fly-wheel and reciprocating parts is arrested by incompressible water which more than fills the clearances; it is uneconomical to exhaust water which has been heated but has no expansive energy in the cylinder; and it increases the losses from re-evaporation when the water is evaporated during the fall of pressure due to expansion, and takes heat for this change from the working steam and from the cylinder walls.

Primitive. First, plutonic and metamorphic rocks; afterward, any crystalline formation.

Primitive Groove (AND STREAK). First signs of an axis on the embryonic shield in the developing egg of birds, mammals, etc. The groove is the representative of the blastopore, the streak is the thickened edges of the elongated blastopore. The medulary folds and groove appear anterior to these structures.

Primogeniture. Common-law rule of descent, by which the eldest son inherits to the exclusion of other children; not adopted in the U. S.

Primordial Cranium. See CARTILAGINOUS CRANIUM.

Primordial Utricle. Exterior portions of protoplasm in plant cells.

Primordial Zone. Barrande's lowest fossiliferous strata, now included in the Cambrian.

Primrose. Showy-flowered herbs of genus *Primula*, natural family *Primulaceæ*, natives of the n. temperate zone, much planted for ornament. Except a slight acridity, they are of no economic importance beyond the beauty of their blossoms.

Primrose (*Primula veris*).

Primrose, EVENING. Plants of the genus *Onagra*, natural order *Onagraceæ*, herbs bearing

showy yellow or red flowers, several species of which are night-blooming; natives of N. and S. America.

Primrose League. English conservative political society, founded Nov. 1883. Lord Beaconsfield was fond of flowers, and especially of the primrose. After his death it became the emblem of the principles he represented. The society has ab. 1,000,000 members of both sexes.

Primulaceæ. Natural family of flowering plants, of the class *Angiospermæ*, sub-class *Dicotyledons*, and series *Gamopetalæ*, comprising ab. 25 genera and 315 species, very numerous in the temperate regions of the n. hemisphere; called the Primrose family.

Primuline. Yellow azo dye-stuff, which combines with cotton and then can be acted upon by phenols, producing insoluble colored compounds on the fiber.

Primum Mobile. In the Ptolemaic Astronomy, imaginary crystalline sphere revolving from east to west every 24 hours, carrying with it the spheres of the planets and fixed stars.

Prince. English noble ranking above a viscount, but practically princes of the blood are the only ones so designated. On the Continent, there are princes who are not related to the ruling families.

Prince, THOMAS, 1687–1758. Pastor at Boston from 1718; reviser of the *Bay Psalm Book*, 1758. His *Chronological History of New England*, 1736–55, extends only to 1633.

Prince Edward Island. E. of New Brunswick; discovered 1497; held by Gt. Britain since 1764; now part of the Dominion of Canada. Area 2,133 sq. m.; pop., 1891, 109,088.

Prince of Wales Land. Large island of N. America, in the Arctic Ocean.

Prince Patrick Island. N. America; in Arctic Ocean.

Princeps. Civil title of the Roman emperors.

Prince Rupert's Drops. Drops of glass which have fallen in a melted state into cold water and have assumed a tadpole-like shape. When the point of the tail is broken off the whole of it will burst into small pieces with a loud explosion, due to tension from the rapid cooling.

Prince's Feather. *Amaranthus caudatus.* Crimson-flowered plant of the natural family *Amarantaceæ*, and *Polygonum orientale*, a rose-flowered plant of the *Polygonaceæ*, both natives of the Old World, but widely cultivated in gardens.

Princes Islands. Group in the e. of the Sea of Marmora, 13 m. s. of Constantinople, near the coast of Asia Minor, con-

Princes Islands.

sisting of 9 islands, the largest being Prinkipo and Khalki. Visited by many for the beauty of their scenery and agreeable climate.

Prince's Pine. See PIPSISSEWA.

Princeton. Borough of Mercer co., N. J.; seat of a famous college. The British were defeated here by Washington Jan. 3, 1777. Pop., 1890, 3,422.

Princeton Theological Seminary. Presbyterian, founded 1812, professors 9, students 300, library 47,000.

Princeton University. At Princeton, N. J.; assumed its present name at the sesquicentennial celebration of the "College of New Jersey," chartered in 1746. During the Revolutionary war Nassau Hall was occupied by both Colonial and British troops, and the Continental Congress met in it in 1783. Within 20 years the college has received gifts amounting to $4,000,000. In 1896 there were 82 instructors, 1,045 students, and 185,000 volumes in the various libraries. Number of alumni, 7,493.

Principal, IN ETHICS. Person who commits an offense or takes such part as makes him equally guilty with the prepetrator.

Principal Axis of a Conic. That passing through the foci.

Principal Plane. That of a surface of the second order is one which bisects systems of parallel chords of surface at right angles.

Principal Planes. See CARDINAL POINTS.

Principle of Archimedes. See ARCHIMEDES, BUOYANCY, CENTER OF BUOYANCY, and METACENTER.

Principle of Least Action. Suppose any dynamical system to move unconstrained from one given position to another, then the actual motion is such that $\int E\,dt$ [t refers to time] is less than if the system were constrained, without violating any geometrical conditions, to move in some other manner from the one position to the other with the same energy, provided that these other motions be such throughout that E (energy) is the same function of the coördinates and their differential coëfficients. This is the principle of least action.

Principle of Least Squares. See LEAST SQUARES.

Principle of Moments. One which applies to the equilibrium of any rigid body when acted upon by any system of forces. It may be stated as follows: that a rigid body may have no motion of rotation, it is necessary and sufficient that the algebraic sum of the moments about any three mutually perpendicular axes of all the forces acting upon it shall be separately equal to zero. See MOMENT.

Principles, IN ETHICS. Accepted laws of action or rules of conduct, as those of the Stoics.

Principles, MILITARY. Armies are bodies of men, equipped with weapons and organized for combat, command and supply. The general rules for combat form the principles of the military art and are laid down in the text-books and taught in the schools: they are derived from experience, and are subject to the modifications which experience and progress suggest. The theory of organization rests upon a system of individual responsibility, discipline and subordination, based on the controlling idea that there is but one sole responsible commander of the forces of the nation, and that he is the Head of the State. Under him is a system of subordinate commanders, called the military hierarchy, each of whom has specific duties and powers in his own particular sphere of command.

Principles of Action, IN ETHICS. Human affections, desires, and dispositions, as they act in a steady and consistent manner in influencing actions.

Pringle, THOMAS, 1789–1834. Scottish poet and journalist. *Ephemerides*, 1828; *African Sketches*, 1834; *Works*, 1839.

Pringsheim, NATAN, 1823–1895. Prof. in Berlin. *Untersuchungen ueber den Bau und die Bildung der Pflanzenzelle*, 1854; *Ueber die Befruchtung und Keimung der Algen*, 1855–57.

Printer's Ink. See INK.

Printing, INVENTION OF. The Assyrians and Egyptians applied stamps engraved in relief to plastic clay, but failed to develop and apply the art which had almost revealed itself to them. Practical use was first made of the principle by the Chinese, probably in the 2d century. Printed books were common among them in the 10th century, and the use of wooden blocks for their production may be traced back to the 6th cent-

Invention of Printing—Gutenberg, Fust, and Schoeffer examining the First Proof.

ury. The earliest example of block-printing in Japan dates from ab.765, and a "printed" book (brought from China) is definitely named in a journal of 987. Movable types (of clay) are said to have been employed by the Chinese from ab.1050. The Coreans used them 1337, and are believed to have invented copper types early in the 15th century. There is no evidence that these inventions were communicated to Europeans. When block-printing first appeared in the West is unknown, but its

products were abundant in Germany and Holland ab.1400. Impressions seem to have been taken in the 12th century on cloth and vellum, and on paper ab.1375. In these blocks the letters and illustrations were exhibited in relief as in wood-engraving. The only apparatus needed was the blocks, ink, and a rubber to press the paper upon the type. The earliest dated woodcut now in existence is of 1423. Of this style of printing in Germany 20 examples are extant, containing 7 to 50 leaves each, while the Netherlands furnish 10 more. The earliest work done with movable types which has come down to us with authentic date is of 1454, Nov. 15, being copies of letters of indulgence printed, as is believed, at Mainz. Here at this time were two rival printers, one of whom may have been Johan Gutenberg (aided perhaps by the money of Johan Fust), and the other Peter Schoeffer. Albrecht Pfister was printing in the same city in Feb. 1461, and is supposed to have produced various books which appeared in 1455, 1457, and after, among them a Bible in 2 vols. folio, which is believed to antedate 1461. The Mazarine Bible was completed before Aug. 15, 1456. Gutenberg was printing 1460, and probably continued till his death in 1468. From Mainz the new art spread to other cities. Printing offices were in operation in Bamberg 1461, Subiaco 1465, Cologne 1466 (1463?), Eltville and Rome 1467, Augsburg, Basel, and Marienthal 1468, Venice 1469, Nuremberg and Paris 1470, Westminster (Caxton) 1477, Edinburgh 1505, Dublin 1551, Mexico 1540, Lima 1584, Cambridge, Mass., 1638, New York 1693. By 1500 the art was practiced in 220 different towns. As to the place and date of the invention of movable metal types there has been much controversy, some placing it in 1430 and even earlier; but it is generally agreed that Haarlem was the place, and Lourens Janszoon Coster the inventor, probably ab.1445. Gothic type or black letter was first employed; Roman type appeared ab.1464; Venetian, Aldine, or Italic type was introduced by Aldus Manutius of Venice 1500; a rude Greek type first appeared 1465, Hebrew 1475, Anglo-Saxon 1574, music type 1495. Printing for the blind was first used in Paris 1784; in raised characters, in Edinburgh, 1827. See PRESS, PRINTING.

Prior AND **Prioress.** Assistant of an abbot or abbess, or head of an inferior monastery, sometimes dependent on an abbey.

Prior, MATTHEW, 1664–1721. English poet and diplomatist, notable for wit and epigram; M.P. 1701; imprisoned 1715–17. *Works*, 1709–18–40.

Priscian, 6th cent. Latin grammarian, long at Constantinople in the pay of the Greek empire. His *Commentariorum* and some other works are extant.

Priscianus, THEODORUS, 4th cent. Medical writer at Constantinople. His book was pub. 1532.

Priscillian, d.385. Spanish bishop, irregularly consecrated; excommunicated 381; first victim of a trial for heresy; founder or head of an ascetic Gnostic sect which survived till ab.563. Some writings of his came to light 1885.

Prism. Polyhedron having two parallel and equal polygons as bases, and its other faces parallelograms whose bases are the equal and parallel sides of the equal polygons: right when lateral edges are perpendicular to base: regular when its bases

Images of objects seen through Prisms.

are regular polygons: classified according to bases as triangular, quadrangular, etc. An optical prism is a portion of a transparent medium bounded by at least two inclined plane surfaces. The diedral angle between the plane faces is called the refracting angle of the prism. Prisms are usually made of glass, and are used to deviate a ray of light and also to disperse composite light into its various colors. See ANGLE OF DEVIATION and MINIMUM DEVIATION.

Prismoidal Formula. Let l be the length of a solid, A_1 and A_2 its end areas, and M the area of a section half way between them. Then the cubic contents is

$$C=\frac{1}{6}l(A_1+4M+A_2).$$

This formula applies to solids bounded by plane or warped surfaces or by curved surfaces generated by conic sections. It is extensively used in earthwork computations.

Prison. General term for all the various buildings maintained for the confinement of persons in judicial custody. They have been in use from early times, being mentioned in the Bible. In ancient times prisons were very unhealthy, generally being low and filthy. The prisons of the Inquisition were places of cruel and protracted punishments.

Prison Discipline. There are three systems in operation for the proper care and regulation of prisoners. 1. The Auburn or Congregate Silent System. In this system, which is almost universal in the U. S., the prisoner is separated from the other prisoners by night and in daytime work together in silence. 2. The Philadelphia or Separate Cell System. This is practiced in the Eastern penitentiary at Philadelphia, which is the only State prison using it. Other prisons in Pa. and those of Belgium use it in a modified form. In this the prisoner is always isolated in recreation and work. It has proved unsatisfactory. 3. The System of Progressive Classification. This was originated by Capt. Alexander Maconochie in 1840, while in charge of the British penal colony of Norfolk Island. In this the convict is treated as a laborer, and receives a certain amount for his work, and whatever he saves out of his earnings helps toward reducing his term of imprisonment, and by this means trains the convict to habits of industry and frugality. The men are not sentenced to a term of years, but are fined; the fine has to be paid by what he earns above his keep. The prisoner's fate is in his own hands, and after reaching a certain stage they are promoted and allowed to form partnerships, etc. Idleness and bad conduct thus keep him in a condition of restraint. This system was carried to Ireland by Walter Crofton, and is sometimes called the Irish or Crofton System. Reformatories have been established in nearly all the States using the general principles of this system.

Prisoner's Base. In this game from six to ten players on a side take part. These sides are chosen by two captains. Two inclosed spaces side by side are marked out, large enough to hold all the players: these are called the Home Bases. From 100 to 200 ft. away are marked out two other similar spaces, called Prison Bases. All the players take their places in the Home Bases, each side in its own. Then a leader goes out, and when perhaps half way toward the Prison bases, calls out "Chase!" One of the other side goes after him and attempts to touch him before he can return home. One of the leader's side goes after the second man, and so on: the one leaving last cannot be caught by one who has left before him, but may be in turn pursued by a player leaving later. When a man is caught he is taken to the Prison Base. So the game continues until one side has made prisoners of all its opponents. If a home base is left unoccupied, it may be taken possession of by an opponent.

Prisoners of War. Military persons captured by the armed forces of a nation, when engaged in the legitimate exercise of their profession. They are deprived of their liberty and subjected to such treatment as is provided for by the laws of war, until they are duly exchanged or otherwise regain their liberty.

Privateering. Waging hostilities by means of private ships. Modern international law discountenances the practice, and most European states have expressly consented to its abolition.

Private War. Right of each individual in primitive societies to obtain justice for and punish injury to himself by force of arms, instead of appealing to a government which acts as the guardian of justice.

Private Wrongs. Injuries inflicted upon another person, not violently but under the guise of law and good order.

Privet. *Ligustrum vulgare.* Shrub of the natural family *Oleaceæ*, native of Europe, planted for hedges, and introduced into N. America; also called Prim.

Privileges. 1. Of legislators, secured by modern constitutions. 2. Of citizens.

Privy Council. In England, formerly a portion of the king's council, selected by and attendant on the sovereign; at present a body of ab. 200, some of whom exercise judicial functions, others, with the crown, possess legislative powers, and still others, organized in committees, exercise only administrative functions.

Privy Seal. In Great Britain, subsidiary to the great

Great Seal of William the Conqueror.

seal; used on state papers; kept by a cabinet minister, who at one time was called the Keeper and now the Lord Privy-seal.

Prize. Vessel seized at sea and condemned in an admiralty or other court. Prize-money comes from the sale of such a ship, and is divided between the officers and men who took it.

Proa. Malay vessel of canoe shape, with one large sail; formerly dreaded from their piratical character.

Proamonin. That part of the amniotic fold which surrounds the head in mammalian embryos. It consists of epiblast and hypoblast, but no mesoblast.

Probabilities. Term applied by Prof. Cleveland Abbe to his daily weather predictions 1869, in Cincinnati; adopted 1871 by Gen. Myer, for the official predictions as made at Washington; also by Prof. Abbe for the Signal Office. It had been similarly used by Le Verrier in Paris since 1859, and was supposed to suggest that the so-called predictions were really but a statement of probabilities as to the coming weather.

Probability. Likelihood; amount of expectation below certitude; possessed of infinite degrees.

Probability, MATHEMATICAL. Ratio of the chances in favor of the happening of a certain event, to the number of chances both for and against it. The theory of probabilities treats at length the determination of this probability under various conditions.

Probable Error. In a physical experiment the arithmetical mean of the results of a series of observations is in general the most probable value of the quantity to be determined; and the most probable error of a single observation, as well as that of the result, can be found by the following rule. Let δ denote a difference between the mean and a single observation; δ will in general have n values if there are n different observations: then

$$\text{mean error of a single observation} = \sqrt{\frac{\Sigma(\delta^2)}{n-1}},$$

$$\text{" " " the result} = \sqrt{\frac{\Sigma(\delta^2)}{n(n-1)}},$$

$$\text{probable error of a single observation} = \pm 0.6745\sqrt{\frac{\Sigma(\delta^2)}{n-1}},$$

$$\text{" " " the result} = \pm 0.6745\sqrt{\frac{\Sigma(\delta^2)}{n(n-1)}}.$$

Probang. Rod of whalebone or other flexible material used in the diagnosis and treatment of the diseases of the pharynx and esophagus. It is sometimes tipped with a ball varying in size to dilate strictures, or it may have a sponge on the extremity for the purpose of applying medicine topically.

Probate Courts. Court having general probate jurisdiction; that is, to take proof of wills, to issue letters testamentary, letters of guardianship, of administration, and cognate matters.

Probation, FUTURE. Doctrine that for some souls, especially such as have not known Christ here, the opportunity of regeneration may be given hereafter. See PUNISHMENT, FUTURE.

Probity. General uprightness, especially in the sense of respect for the rights of property.

Problem OF THE THREE BODIES. To find the paths described by three bodies (as the earth, sun, and moon), acted upon only by their mutual attractions; famous in the history of celestial mechanics. No strictly general solution has ever been found.

Proboscidia (CHELOPHORA). Order of Subungulates, including the Elephants. The skin is thick and sparsely haired, the nose is prolonged into a long proboscis, with the nostrils opening at end. The feet are five-toed, some of which carry hoofs. There is a pad-like sole, and the legs are stout, with vertical femur. In living elephants there are no lower incisors, and the two upper incisors grow from permanent pulps and constitute the tusks. There are no canines and only a few large, transversely ridged, and tuberculate molars. Clavicles are absent; there is no scrotum; the two mammæ are pectoral, and the placenta is deciduate and zonary. The brain cavity is small; the huge skull is principally made up of vast air sinuses in the bones. The tusks are preceded by "milk-tusks." The molars cut the gum from before backward, so that only two or three are in use at one time; when a new one is added behind, the front one is lost. The period of gestation is more than twenty months. Elephants are monogamous, gregarious, and strictly phytophagous. The Miocene period furnishes fossil forms known as the Deinotherium; the Pliocene furnishes the Mastodon, and in Quaternary and recent times flourished the Mammoth. See ELEPHANT.

Probus, MARCUS AURELIUS. 232-282. Roman emperor 276, with Florian for rival at first; victorious over Germans, Sarmatians, and Persians. Eminent as general, ruler, and patriot. Bred to the sword, he dreamed of restoring the ancient liberties, and checking the dangerous power of the army. His conquests finished, he set the soldiers to work on roads and other public improvements, and was slain in a momentary tumult. His coinage is the most varied and beautiful of the later empire.

Probus, MARCUS VALERIUS, 1st cent. Syrian editor of Latin classics at Rome.

Procambium. Young cells of fibro-vascular bundles in plants, before they are differentiated into phloëm and xylem.

Procamelus. See POEBROTHERIUM.

Procarp. Female organ of certain *Algæ* before fertilization by the pollinoids.

Procedure. Body of legal rules regulating the pleadings and proceedings in litigated cases.

Procelariidæ (PETRELS). Family of longipennate Natatores, with three toed, webbed feet, and the upper mandible of the beak strongly hooked. They resemble Gulls. The plumage is somber, the nests are on rocks, the male and female take turns at incubating the single egg. The smaller petrels are known to sailors as Mother Carey's Chickens. They fly at dusk or at night. The Albatross is a gigantic member of this family, some having a spread of wings equal to 15 ft.

Procephalic Lobes. Two eminences at the front end of the ventral plate, from which the eyes and cerebral ganglia develop in Arthropods.

Process. Instrumentality by which a court enforces its will.

Procession of the Spirit. The Nicene-Constantinopolitan Creed of 381 derived the Holy Ghost "from the Father." The Latin Ch., following the teachings of St. Augustine, in 589 added *filioque*, "and from the Son." To this the Greeks would not agree: much controversy ensued, and the schism remains.

Processus Falciformis. Vascular process of the choroid into the eyeball in fishes and reptiles. It corresponds to the pecten of birds.

Prochein Ami. Next friend. Person by whom an infant or a married woman may bring suit or do other acts on behalf of an infant, such as are authorized by law.

Proclamation of Emancipation. See EMANCIPATION, PROCLAMATION OF.

Proclus, 411-485. Greek philosopher of the Neo-Platonic school at Athens. He held devoutly to a multitude of deities, and was once banished for his attacks on Christianity. His surviving works are numerous; some were edited in 6 vols. 1820-27, and some were tr. 1788 and later.

Procne. Wife of Tereus. See ITYS.

Procœlia (existing CROCODILIA). They have procœlous vertebræ, a compressed tail, effective for swimming, and bearing in front a double crest of plates, but single behind; the front feet have five, the hinder have four, webbed toes. They live in the mouths of rivers of tropical parts of both hemispheres, lay eggs with hard shells in the sand on the shore, leaving them to be self-incubated, though the female keeps watch from a distance. They hunt their prey at night, which consists of animals living in or near the water. Three families are included. See GAVIALS, CROCODILES, and ALLIGATORS.

Procœlous. Vertebræ having the anterior faces hollow and the posterior convex, to fit into the concavity of the next succeeding vertebra, as in Frogs.

Proconsul. Roman officer governing a province.

Procopius, d. ab.565. Byzantine historian and secretary of Belisarius, whom he accompanied through his Italian campaigns; made senator and prefect of Constantinople by Justinian. His histories of the wars with Persians, Vandals, and Goths, in 8 books, tr. 1653, is highly valued. *Anekdota*, tr. 1674.

Procopius, ANDREW, 1380-1434. Hussite (Taborite) general, succeeding Ziska 1424; victor in many battles; leader in the vengeful and destructive attacks on countries around Bohemia,

"obsequies of Huss"; prominent at the Council of Basel 1433; killed at Lipau, in conflict with the Calixtines.

Procoracoid. See PRECORACOID.

Procrustes. Legendary robber of Attica, who fitted his victims to a bed by lopping the limbs of such as were too long and stretching those who were too short.

Procter, BRYAN WALLER ("BARRY CORNWALL"), 1787–1874. English poet, biographer of Kean, 1835, and Lamb, 1866. *Dramatic Scenes*, 1819: *Mirandola*, a tragedy, 1821; *Songs*, 1832. —His daughter, ADELAIDE ANNE, 1825–1864, was yet more successful in verse. Her *Legends and Lyrics*, 1858–60, are eminently sweet and pure, and largely devotional.

Proctodæum. Invagination in the embryo which develops into the cloaca.

Proctor. Attorney in admiralty courts and in English ecclesiastical courts.

Proctor, A. PHIMISTES. b. 1867. American sculptor, noted for his work on the animals on the grounds of the World's Columbian Exposition, Chicago;—polar bear, elk, deer, etc.

Proctor, EDNA DEAN, b. 1838. American poet.

Proctor, HENRY A., 1787–1859. English officer, defeated by Gen. Harrison at the Thames, Ohio, Oct. 5, 1813.

Proctor, LUCIEN BROCK, b. 1826. Author of sundry books of N. Y. legal history and biography.

Proctor, REDFIELD, b. 1831. Gov. of Vt. 1878; U. S. Sec. of War 1889–93.

Proctor, RICHARD ANTHONY. 1837–1888. English popularizer of astronomy; founder of *Knowledge*, 1881; author of 57 books. *Saturn*, 1865; *Other Suns than Ours*, 1887.

Procurator. Roman officer who managed the imperial revenue in a province; sometimes charged also with the civil administration, as Pilate in Judæa.

Procyon = α-CANIS MINORIS. First magnitude star; right ascension = 7h. 33m. 29s., declination = 5° 30′ 32″ N. The parallax according to Anwers is 0.123″, or the time required for light to pass from the star to the earth 26.5 years.

Procyonidæ. Family of *Arctoidea*, including small American bear-like carnivores. They differ from Bears in having a larger tympanic bulla and one molar less on each side of the

Kinkajou (*Cercoleptes caudivolvulus*).

mandible. The Kinkajou, the S. American coon-bear, resembles a cat, yellow in color, with tail long and prehensile. It shuns the light, lives in trees, and feeds on honey. The RACCOON (q.v.) is another example.

Producer Gas. Made by passing a limited stream of air through glowing coke; the coke burns to carbonic acid, and this, passing through the remainder of the glowing coke, takes up carbon and becomes largely carbonic oxide. It is employed in firing boilers, heating the furnaces in metallurgical operations, in glass and pottery making, etc., and offers a remedy for the imperfections of the ordinary fire and fuels. In the Siemens gas producer, the fuel is converted into a mixture containing 30.5 CO, 2.5 H, 4 CO_2, 59.5 N, and 3.5 CH_4. The air and gas, after passing through a system of regenerators, meet in the furnace itself, combustion ensues, and intense heat is produced. The usual yield in the Siemens producer from bituminous coal is ab. 160,000 cu. ft. and from coke ab. 175,000 cu. ft. per ton, or ab. 60–68 per cent of the respective materials employed.

Producer's Goods. Such as satisfy wants only indirectly, by contributing toward the production of such goods as directly satisfy them.

Producer's Rent, or SURPLUS. Amount which the possessor of any rare or exceptional natural facilities for the production of a thing receives over that received by producers who have no special facilities.

Product. In Mathematics, result of combining two or more quantities as factors.

Production of Wealth. Creation of values; all those acts by which an article comes to give its possessor the power of demanding in exchange for it the labor or results of the labor of others; first great division of the study of political economy.

Productive Agents. Primary agents in the production of wealth; viz., land, labor, and capital.

Productive Labor. Such as is directed to the creation of the means of production, and of lasting sources of enjoyment; as distinguished from that which gives personal services or creates ephemeral luxuries.

Proembryo. Chain of cells produced in the nucleus of an ovule after fertilization by the pollen tube; resulting from the repeated division of the cells of the embryonal vesicle or corpuscula; known also as the Suspensor.

Profert and Oyer. Practice of proffering a written instrument as a cause of action and desiring an inspection before pleading.

Professional. In Athletics, one who has competed for a money prize or staked bet, or with or against a professional for any prize, or who has taught, pursued, or assisted in the practice of athletic exercises as a means of obtaining a livelihood.

Professor. Officer in the higher institutions of learning who instructs students or teaches by lectures; used in a loose sense to denote the teacher of any science. It is also used by instructors in boxing, dancing, etc.

Profile. Drawing of the outline of an object; or showing the curve of intersection of the surface of the ground with a vertical plane; made in order to establish the grade of a road or sewer.

Profile Paper. Paper ruled with horizontal and vertical lines, and used for plotting profiles.

Profit à Prendre. Mere rights of convenience without profit, while EASEMENTS (q.v.) are rights of profits.

Profits. That part of the product of industry which goes to the business employer; amount of return from a business operation after rent, wages, and interest are deducted.

Profit-Sharing. See INDUSTRIAL PARTNERSHIP.

Proglottis. One of the segments of a tapeworm, which, when the eggs with which it is filled become ripe, is detached from the rest of the body.

Prognathi. Division of mankind having skulls with prominent jaws and teeth, as in most savage races. They have a low facial angle. See MAN.

Prognosis. Opinion regarding the outcome of any disease or case of sickness.

Prognostics. All features that indicate coming changes in the weather. Large collections of popular prognostics from the animal and vegetable phenomena have been published; but those used by meteorologists are based on the study of the clouds and weather maps, and not on myths.

Programme Music. Instrumental music designed to depict natural scenes, incidents, events, or emotional processes, to which the composer gives the clew by means of a descriptive title or a motto.

Progressive Taxation. Taxation so calculated that the larger the income or the bequest, the larger the proportion, as well as the actual amount, taken by the government.

Prohibition Party. In 1857 the Independent Order of Good Templars declared it to be one of its cardinal purposes to elect men to office who were against the liquor traffic, and the outcome of a meeting of the Grand Lodge of this order, at Oswego, N. Y., May, 1869, was the naming of a committee, which called a convention at Chicago, 1869, for the purpose of organizing a National Prohibition Party. One of the essentials of their platform always is a clause against the liquor traffic. Their first national convention was held in Columbus, Ohio, 1872. James Black was nominated for President and John Russel for Vice-President. Electoral tickets were placed in six States and they received 5,607 votes. In 1896, Bidwell, the Prohibition nominee, received a popular vote of 264,133.

Projectile. Body thrown in any direction and in general acted on by the force of gravity. Its path is called its trajectory. The greatest horizontal distance it can traverse is called its range. If we neglect the resistance of the air, the path of a projectile may be shown to be a parabola. In practice, however, it varies widely from this curve, on account of friction; it is somewhat straight at the start, and ends with a rather

abrupt fall. This friction varies approximately as the velocity when the latter is small, but more nearly as the cube of this for velocities like that of a cannon ball. To obtain the maximum range, if we neglect the air resistance, the angle of projection should be 45° with the horizon.

Projectiles. Modern projectiles are classified, according to their structure, into solid shot, shell, and case shot: to their use, into small arms, field, siege, and seacoast projectiles: and to their shape, into spherical and oblong. Spherical projectiles are rapidly becoming obsolete. The only solid projectiles are now those for small arms. Elongated chilled cast-iron cored shot and chrome steel forged and tempered shot are designed for armor piercing: these have a closed hollow interior. A shell is a hollow elongated projectile containing a bursting charge of gunpowder or high explosive, with a fuse to ignite it at any desired point in its flight. The 12 in. deck-piercing shell and 12-in. mortar shell are of forged steel carrying heavy bursting charges of high explosives: the 5-in. siege shells are similar to these and are used for both direct and curved fire against earthen parapets and masonry structures. The field shells, 3.2-in. and 3.6-in., are designed to burst into many fragments and have sufficient remaining velocity to destroy men and material. Modern shrapnel consists of a wrought-iron tube with cast-iron base, the tube filled with bullets, held in place by a skeleton matrix of cast iron, and a bursting charge. See HOTCHKISS PROJECTILES.

Projectiles, PENETRATION OF. The following data pertain to modern projectiles of the U. S. Service:

Gun.	Muzzle velocity.	Muzzle energy.	Penetration into steel at muzzle.	At 3,500 yards.
3.2-in. field.	1,685 f.s.	266 ft.tons.	3.8 in.	
3.6 " "	1,550 "	333 " "	3.9 "	
5.0 " siege.	1,830 "	1,045 " "	6.2 "	2.5 in.
7.0 " siege how'zer.	1,085 "	857 " "	3.8 "	2.4 "
7.0 " siege mortar.	690 "	412 " "	2.2 "	
8.0 " seacoast.	1,950 "	7,907 " "	16.0 "	10.6 "
10.0 " "	1,975 "	15,548 " "	20.4 "	14.6 "
12.0 " "	2,100 "	30,570 " "	27.1 "	20.6 "
16.0 " "	1,975 "	64,084 " "	33.8 "	27.5 "
12.0 " s.c. mortar.	1,140 "	7,207 " "	9.7 "	

Projection. Development with greater or less distortion of the spherical surface of the earth on a plane. That in most general use is the polyconic, which consists in the development of a series of cones, tangent to the earth's surface on parallels of latitude. In some cases a single tangent cone is employed, points upon the earth's surface being projected upon the cone by means of radial lines from the earth's center. The secant cone projection consists in the development of a cone which cuts the earth's surface in two parallels of latitude. The MERCATOR PROJECTION (q.v.) is the development of a cylinder. Many other projections more or less arbitrary are in use.

Prolapsus Ani. Protrusion of the walls of the rectum through the anus.

Prolapsus Uteri. Falling of the womb from its normal position toward the floor of the pelvis, or even beyond so that it extrudes either partially or entirely through the vulva.

Prolate Cycloid, or TROCHOID. One in which the generating point lies within the rolling circle; determined by the equations

$$x = r(\varphi - m, \operatorname{Sin} \varphi)$$
$$y = r(1 - m, \operatorname{Cos} \varphi) \text{ when } m > 1.$$

Prolegs. Abdominal feet of caterpillars.

Proletariate. Originally, mass of the lower classes of Rome; now, a class entirely without productive property, especially the laboring class in the cities.

Proliferation. Production of buds, and consequently flowers or branches, in unusual positions.—In Zoölogy, cell-multiplication in tissues.

Prolification. Extension of a floral axis beyond or through a flower, sometimes bearing another flower, or tuft of leaves.

Prologue. Introduction to a discourse. The discourse or poem spoken before a dramatic performance, corresponding to the EPILOGUE (q.v.) at the end.

Prometheus. One of the Titans, benefactor of mankind, who brought fire from heaven in a reed, taught men useful arts, and was chained to a crag on Mt. Caucasus, where an eagle gnawed his liver, but was at last released by Hercules.

Prominences, SOLAR. Projections rising above the general surface of the sun, sometimes to a height of 30,000 or 40,000 m. They become visible in a total eclipse of the sun, and are shown by means of the spectroscope. They are composed largely of hydrogen.

Solar Prominences.

Promise. Intention expressed by one person to another to do some action in the future, the person promised being likely to regulate his actions according to this expectation.

Promissory Note. Writing by which the signer unconditionally promises to pay a certain sum of money to another at a determinable future time.

Promorphology. Science of the causes of the morphological structures in living things, or the speculation concerning the types or geometrical ideas expressed in animal groups. These types are the different forms of SYMMETRY (q.v.); also the different sorts of MEROMORPHISM or MEROGENESIS (q.v.)

Promotion. Elevation of a military person to a higher rank than that which he then holds. With some exceptions, it is by seniority in the U.S. Service.

Promycelium. First growth from the spores of certain *Fungi*.

Pronephric (ARCHINEPHRIC) **Duct.** See PRONEPHROS.

Pronaos. In Classic Architecture, that part of a temple in front of the outer wall.

Pronephros. Head kidney of larval vertebrates, especially of fishes. In the Fowl it extends from the seventh to the eleventh somites, counting from the front. Its duct is the archinephric, which has one or several nephrostomata at its anterior extremity; posteriorly it empties into the cloaca.

Prong-Buck. Antelope of the Rocky Mts., having a short prong on the front of its horns, belonging however only to the sheath, which is cast every autumn (the rutting season).

Prong-Buck (*Antilocapra americana*).

The horns are rudimentary in the female. In color these fleet-footed animals are yellowish brown, with white buttocks; no dew-claws are present. Length 4½ ft., ht. 2½ ft.

Pronotum. Dorsal or tergal portion of the prothorax of insects.

Pronouns. Words which do or may take the place of nouns; long classified as personal, relative, and adjective.

Pronuclei (MALE and FEMALE). Nuclei which unite in the fertilized egg to form the segmentation nucleus. The female pronucleus is formed, after the polar globules are extruded, from the remnant of the germinal vesicle. The male pronucleus is formed principally from the head of the spermatozoön; it represents a portion of the nucleus of the cell which was metamorphosed into the spermatozoön.

Pronucleus. In Botany, nucleus of a conjugating cell.

Proof. Sometimes any method of establishing certitude, whether intuitive, ratiocinative, or experiential; sometimes deductive or syllogistic method, called probation: the latter is exclusively logical or ratiocinative, and the correct technical use of the term; but it establishes no certitude which does not already belong to the premises.

Proof of Death. The most reliable indications that life is extinct are the glary eyeball, with the pupil fixed in dilation, rigidity of limbs, and cadaveric discoloration by surface pressure.

Proofs for the Press, CORRECTION OF.

WILLIAM FALCONER.

Caps.[1]

[2] S. Caps. *William Falconer* was the son of a ¢ barber in [4] a/ Edinburgh, ¢nd was born in 1730. He had very few [6] d/ avantages of education, and (went to sea (in early life) in the merchant service. He afterwards became mate [6] was/ of a vessel that wrecked in the Levant and was saved [9] ⊙ with only two of his crew: ¢his catastrophe formed [25] Lead the subject of his poem entitled "The Shipwreck, on [12] × which his reputation as a writer chiefly rests. Early [13] wf. in 1769, his "*Marine Dictionary*" appear ⌒ed, which [16] # hasbeen highly spoken of by those capable of estimating its merits.

[6] same/ (In this ~~seam~~ year, he embarked on the AURORA but the vessel was never heard of after she passed the [4] :/ Cape; the poet of the Shipwreck is therefore sup- [4] e/ posed to have perish'd by the same disaster he had [27] Stet ~~himself~~ so graphically described. ¶ The subject of [21] ___ the "Shipwreck" and its authors fate demand our [21] ___ interest and sympathy. If we pay respect to the ingenuous scholar who can produce agreeable verses in leisure and retirement, how much more interest must we take in the "shipboy on the high and giddy [23] [11] ⌄ mast', cherishing the hour which he may casually snatch from danger and fatigue.

refined visions of fancy at/ [6]

1. Alteration of type. 2. Small caps. One line is drawn under the word for *italics*, two for SMALL CAPITALS, three for CAPITALS. 3. A word or letter to be deleted. 4. A wrong letter. A line is drawn through the wrong letter, and the proper one written in the margin. After every mark of correction a line | should be drawn, to prevent its being confounded with any other in the same line. 5. A turned letter. 6. Letter or words to be inserted. 7. A word or letter to be transposed. Where letters only are to be transposed, it is better to strike them out, and write them in their proper sequence in the margin, like a correction. 8. Change to italics. 9. Period, or close of sentence. 10. A space or quadrat sticking up. 11. The manner in which the apostrophe, inverted commas, the star and other references, and superior letters and figures, are marked. 12. Indicates a broken letter. 13. A letter of a wrong fount. 14. Roman type. 15. The space to be removed and the letters closed up. 16. A space wanted. This mark is also used when the spacing is insufficient. 17. Denotes slip of a letter, either up or down, and is to be straightened. 18. No new paragraph; the lines to be run on. 19. Directs a capital letter or word to be made small. 20. A new paragraph. This should be avoided as much as possible, as it causes great trouble and expense. 21. When letters or lines do not stand even. 22. Em-dash; hyphen. 23. Denotes that the lines do not range. 24. Lead to be taken out. 25. Lead to be put in. 26. Bad spacing between the words. 27. A word struck out, and afterwards approved of (Lat. *stet*, let it stand).

Proof Plane. Small conducting disk or sphere attached to an insulating handle, made preferably of shellac. Its use is to convey small quantities of electricity from one place to another. For example, in examining the surface density at different points on a conductor, the proof plane conveys the charges to the torsion balance or electrometer by which they are measured.

Proöstracum. Anterior pen-shaped part of the guard of a Belemnite.

Proötic. Anterior of the two ventral elements of the ear capsule of the vertebrate cranium.

Propaganda. Congregation of 30 Cardinals, in charge, under the Pope, of all missionary jurisdictions among Protestants, Orientals, Mohammedans, and Pagans.

Propagation. Any means by which new individuals are produced by other than sexual processes, such as budding or by spores, fission, etc.

Propagula. Buds or gemmæ of peculiar structure, which, becoming detached from certain plants which produce them (various Algæ, Lycopods, Pondweeds, etc.), grow and propagate the plant; also runners or stolons.

Propane. C_3H_8. Gaseous hydrocarbon of the marsh gas series; present in solution in crude petroleum. It burns readily to carbonic acid and water, and is prepared by treating the propyl iodides with nascent hydrogen.

Propargyl Alcohol. $CH{:}C.CH_2OH$. Propinyl alcohol, bpt. 114° C.; mobile liquid of a pleasant odor, unsaturated.

Propargylic Acid. See PROPIOLIC ACID.

Propeller. Wheel with helical blades or vanes, used in the screw propulsion of vessels. They have two, three, or four blades, and are cast all in one piece, or have the blades bolted to a hub. The latter plan makes it unnecessary to renew a whole wheel when accident has happened to one blade only. Larger ones are of cast iron, smaller ones

Twin Screw of the S S. City of Paris.

often of brass composition, on account of the curious pitting corrosion which occurs capriciously in salt water. There is great variety in designs for the blades. Some have constant pitch from root to tip, others vary it radially or axially, on account of the greater linear velocity of the ends of the outer radii. Some blades are wider at the tip than anywhere else, used especially for tug-boats, others have the edges parallel. Many smaller vessels have twin screws; in some European designs a bow screw is used as well as one at the stern. The best known propeller designs are Griffith, Hirsch, Isherwood, and Ericsson, besides the common or true helical screw. The greater the number of blades, the less the jarring of the vessel from the revolutions of the screw. In the U. S. Navy the custom has been to curve the blades backward, the generatrix of the helicoid retreating in the plane of the axis. This diminishes shocks to the stern-post. The Kunstädter system of screw-propulsion has behind the main screw a small screw whose shaft has its bearings in the rudder and is deflected sidewise as the rudder turns. This smaller screw shaft is driven by the main shaft by a universal joint, and increased maneuvering power results from the capacity for quick turning.

Propertius, SEXTUS, ab.48–ab.14 B.C. Most famous of the Latin writers of elegy. His works, though harsh in style, have high poetic merit. They were tr. in part 1782, and more fully 1870 and 1875.

Property. That which may be owned and may possess a pecuniary value.

Property, RIGHT OF. Legal right of ownership in anything, as distinguished from the mere right of possession or occupancy. It has arisen, historically, from an earlier form of tribal, communal, or family ownership.

Prophases. Stages of KARYOKINESIS (q.v.) preceding the formation of the equatorial plate.

Prophecy. In Scripture, utterance, under the prevailing influence of God, of some truth respecting His attributes or purposes. It included, incidentally, the prediction of future events, which is its popular meaning.

Prophet. One who speaks for a superior, especially those who in Israel spoke for God against popular corruption, regal tyranny, and sacerdotal formalism. The sons of the prophets were young men trained by them, in hope of a special Divine vocation. Only a few prophets have left writings. The greater, Isaiah, Jeremiah, Ezekiel, Daniel, and the minor, Hosea, Joel, Amos, Obadiah, Jonah, Micah, Nahum, Habakkuk, Zephaniah, Haggai, Zechariah, Malachi, are so called from the comparative length or brevity of their books.

Prophetic Type. See SYNTHETIC TYPE.

Prophloëm. In Plant Anatomy, early formed phloëm cells of fibro-vascular bundles.

Propiolic Acid. CH ⋮ C.COOH. Propargylic acid; liquid, bpt. 144° C. It forms silky crystals below 6° C. It unites easily with bromine and chlorine. Commercial propiolic acid is the NITROPHENYLPROPIOLIC ACID, ORTHO (q.v.).

Propionic Acid. $CH_3.CH_2.COOH$. Liquid acid, bpt. 141° C., with acrid odor; much like acetic acid in its characteristics; usually prepared by the action of water upon ethyl cyanide; formed by the fermentation of acrylic and lactic acids.

Propionic Aldehyde. $CH_3.CH_2.CHO$. Aldehyde corresponding to propionic acid; bpt. 49° C.; liquid with a suffocating odor, prepared from propionic acid.

Propionitrile. See ETHYL CYANIDE.

Propodial. First element of the limb of a vertebrated animal, including the femur of the posterior, and humerus of the anterior extremity.

Propodite. Next to the last segment of the endopodite (walking leg of a lobster, etc.).

Propodium. 1. Anterior portion or lobe of the Gastropod foot. 2. Anterior abdominal segment, fused with the thorax in bees.

Propontis. See MARMORA, SEA OF.

Proportion. Equality of ratios. A : B : : C : D is read, A is to B as C is to D. The same may be written, $\frac{A}{B} = \frac{C}{D}$. The first and third terms of a proportion are antecedents, the second and fourth consequents; the first and fourth are extremes, the second and third means. The product of the extremes always equals that of the means. A proportion may be transformed: by alternation, inversion, composition; by multiplying or dividing by the same number any two terms, one being an extreme, the other a mean; or by raising all the terms to any positive power.

Proportion, CONTINUED. Succession of equal ratios, in which the consequent of each becomes the antecedent in the subsequent ratio.

Proportional Dividers. Double pair of dividers, having a common joint so that the distance between the points of two legs can be made any convenient multiple of that between the points of the other two; used for enlarging or reducing drawings.

Propostscutellum. Postscutellar plate in the prothorax of Insects.

Propylæum. In Classic Architecture, a decorative or symbolical structure forming the entrance to the forecourt of a temple or other inclosure. Originally it was a fortified gateway, and generally had gates more or less important in its later development.

Propyl Alcohol. $CH_3.CH_2.CH_2OH$. Bpt. 97° C. The normal alcohol is a constituent of fusel oil, and is obtained from it by distillation. It is a liquid, with an odor like that of ordinary alcohol. See ISOPROPYL ALCOHOL.

Propyl Compounds. Compounds containing the group C_3H_7 (propyl), conceived to be derived from propane by the removal of a hydrogen atom. Propane Propyl $C_3H_8—H = C_3H_7$.

Propylene. C_3H_6. Gaseous hydrocarbon of the ethylene series. It can be made by the action of sulphuric acid upon propyl alcohol. It is formed by destructive distillation, and is one of the light-giving constituents of illuminating gas.

Propylene Bromide. $C_3H_6Br_2$. Bpt. 141° C. Heavy liquid, formed by the union of propyl bromide with bromine.

Propyl Iodide. C_3H_7I. Bpt. 102° C. Heavy liquid, formed by the action of phosphorous iodide on propyl alcohol; often used in organic chemistry in synthesis.

Propylite. Volcanic rock of the Washoe, Nevada, and Hungary silver mining districts. Also called greenstone trachyte.

Prorogation. Suspension of Parliament at end of a session.

Proscenium. In classic theaters, the stage. In modern theaters, a structure forming the frame of the stage-opening, expanding toward the auditorium and often furnished with tiers of boxes.

Proscolex. First embryonic stage that develops from the egg of the Tapeworm. When it is swallowed by any animal, it burrows into the flesh of its host and becomes encysted as a hydatid, from which the scolex (or scolices) is produced as a head (or heads) of the future tapeworms.

Proscutellum. Scutellar plate of the prothorax in insects.

Prosecutor. One who acts for government in bringing persons to trial on criminal charges, and arraying the evidence against them.

Proselytes. Converts from paganism. Those "of the Covenant" were circumcised; those "of the Gate" accepted the Jewish beliefs but not the entire ritual. See PRECEPTS OF NOAH.

Prosenchyma. Vegetable tissue composed of elongated cells, mostly with lignified walls, variously combined with ducts, forming the wood of plants. It is absent in the *Thallophyta* and *Bryophyta.*

Proserpine, or PERSEPHONE. Daughter of Jupiter and Ceres, wife of Pluto, who carried her off while gathering

Proserpine Enthroned.

flowers, according to the Latin poets; long sought in vain by her mother. The pigeon and cock were sacred to her.

Prosimii (PROSIMIÆ, DAUBENTONOIDEA, LEMURS). This group of animals is usually placed in a separate order of *Placentalia,* but good authorities treat them as a section of Primates, while others put them into the Strepsirhine division of *Quadrumana.* They are connecting links between the Monkeys and the fossil groups *Condylarthra, Mesodonta,* etc., which are generalized ancestors of the Rodents, Carnivores, and Ungulates. See LEMURS and CHEIROMYDÆ.

Prosobranchiata (REPTANTIA, ANISOBRANCHIATA, PECTINOBRANCHIATA, etc.). Diœcious Gastropods, with a shell, and with gills in front of the heart. As a rule only one gill (the left) is present. The sub-orders included are *Placophora, Cyclobranchia, Zeugobranchiata,* and *Ctenobranchiata.* Some authors omit the first two and group the others as *Holochlamyda, Siphonochlamyda,* and *Pneumochlamyda.* See REPTANTIA.

Prosodus. Canal leading water into a sponge ampulla from a general incurrent canal; it abruptly terminates in the ampulla, at which point the endoderm (composed of choanocytes) begins.

Prosody. Science of metrical forms, or of verse in general. The meters of poetry originated in the primitive choral dance, which combined step, melody, and words. This unit was differentiated into the arts of dancing, music, and poetry; but metrical terms like *foot*, *verse* ("a turning"), *arsis*, *thesis*, betray their origin. Classical prosody is based on the principle of quantity, or the relative length of syllables; while modern verse depends chiefly on accent, although quantity plays its part. Repetition (harmony) of a certain arrangement of long and short, of heavy and light syllables is the principle of all prosody. This rhythm, or recurrence, has its natural analogy in the beat of the heart, the ebb and flow of the sea, and can hardly be, as some modern writers claim, a pure invention. Other elements of prosody are tone-color (including rhyme, alliteration, onomatopœia) and the arrangement of verses in a stanza.

Prosoma. Muscular anterior portion of a Nautilus, which usually projects from the shell.

Prosopen (PERSONA). Bion consisting of metameres, or idorgans, as an individual plant, lobster, or fish.

Prosopology. Branch of Biology which treats of the Prosopens.

Prosopygii. Subdivision of Vermes, including the GEPHYREA and the MOLLUSCOIDEA (q.v.).

Prosopyle. Opening from an incurrent canal, or from a prosodus into a sponge ampulla.

Prospecting. Miner's search after ore deposits in a district unknown or little known.

Prosper of Aquitaine, ST., ab.400–460. Latin poet and controversialist, who supported Augustine's doctrine against the semi-Pelagians. He left much theological verse, a *Liber Sententiarum*, and a chronicle to 455. His day is June 25.

Prostate Gland. Glandular substance surrounding the neck of the bladder in the male which frequently enlarges in the aged, rendering micturation difficult.

Prostomium. Lobe or proboscis in front of the mouth of Planarian worms.

Protagon. $C_{160}H_{308}N_6PO_{35}$. Fatty compound forming the chief constituent of nervous tissue.

Protagoras, ab.485–411 B. C. First Greek sophist at Athens, expelled for impiety. His books are lost: Plato wrote against them.

Protamœba. See GYMNOMONERA.

Proteaceæ. Natural family of flowering plants, of the class *Angiospermæ* and sub-class *Dicotyledons*, comprising 52 genera and ab. 950 species of trees and shrubs, mostly natives of Australia and Africa, with a few in S. America.

Proteana. Section of *Gymnomyxa*, including most of Haeckel's *Monera;* class *Proteomyxa*.

Protection. Legislative restriction of importation by duties, or granting bounties on production, to encourage the industries of the nation.

Protector. Title of a few English regents, as Somerset 1547–48, and Cromwell 1653–58.

Proteida. See PERENNIBRANCHIATA.

Proteids. Those albuminous constituents of protoplasm and its products, which when used as food by animals can be again converted into protoplasm. Examples are: albumen, globulin, myosin, casein, vitellin and peptones. Proteid food is absolutely necessary to sustain animal life and for tissue increase. Other nitrogenous foods, though chemically like proteids, are incapable of forming tissue, unless eaten with proteids. Such are called Albuminoids; *e.g.*, Gelatin.

Protein. Roughly speaking, those constituents of fodders that contain nitrogen. Upon the relation of these substances to the other constituents depends largely the whole system of compounding rations for stock feeding. They are the most important, most costly, and most often lacking constituents of fodders. Protein is estimated by multiplying the amount of nitrogen in a fodder by 6¼.

Protein Substances. See ALBUMENS and ALBUMINOIDS.

Protenchyma. In Plant Anatomy, all tissues not referable to the fibro-vascular system.

Proteomyxa. See PROTEANA.

Proterandrous. Flowers whose anthers ripen and discharge the pollen before their stigmas are mature, thus preventing self-fertilization; also termed Synacmy.

Proteranthous. Plants whose flowers unfold before the leaves.

Proteroglossa. See PHANEROGLOSSA.

Proteroglypha (ELAPINA). Sub-order of *Ophidia*, including poisonous snakes, having teeth, resembling those of the *Colubriformia*, and in the front of the mouth one or more

Coral Snake (*Elaps corallinus*).

fixed, erect fangs that convey poison from a poison gland. There are two families, the HYDROPHIDÆ and ELAPIDÆ (q.v.).

Proterogynous. Flowers whose stigmas mature before the pollen is discharged from the anthers, thus preventing self-fertilization; also known as Heteracmy.

Proterosauria. Order of extinct Lizards, having biconcave vertebræ and bifid spinous processes. It includes the oldest Lizards.

Proterospongia. See CHOANOFLAGELLATA.

Protesilaus. First Greek killed at Troy. See LAODAMIA.

Protest. 1. Formal objection to a demand, as against duties on goods. 2. Formal statement by a notary upon the dishonor of commercial paper.

Protestanten-Verein. Association formed in Germany 1863–65 to further religious liberty and progress; stigmatized by conservatives as rationalistic, and not favored by the authorities.

Protestants. Christians who in the 16th century detached themselves from Rome; so named 1529 at the Diet of Spires; divided into Evangelical or Lutherans, and Reformed or Calvinists. They include Christians not of the R. C. or Greek churches. The number of Protestants in the world is estimated to be in Europe 80,812,000, America 57,294,014, Oceanica 2,724,781, Africa 1,744,080, Asia 662,750; total 143,237,625.

Protestant Union. Formed May 4, 1608, by Frederic IV., elector of the Pfalz; joined by Wurtemburg, and the Margraves of Franconia and Brandenburg, for mutual protection against infringements of the Peace of Augsburg.

Proteus. Legendary prophet, who tended the flocks of Poseidon; he rose from the sea at midday and slept in the shade of the rocks. Whoever would consult him must seize him then, and hold him fast through all the various forms he might assume. If he could not escape, he resumed his proper shape and told the truth.

Proteus. See PERENNIBRANCHIATA.

Protevangelium. 1. Supposed original of the Gospels. 2. Apocryphal gospel ascribed to St. James.

Prothallium. Small green growth resulting from the germination of the spores of ferns, clubmosses and other *Pteridophyta*, and bearing the antherids and archegones, the reproductive organs; it is the sexual or gametophyte stage of these plants.

Prothorax. Anterior of the three segments of an insect's thorax. It bears the front pair of legs.

Protobathybius. See BATHYBIUS.

Protocatechuic Acid. $C_6H_3(OH)_2COOH$. Mpt. 199°C. Dihydroxy-benzoic acid. Colorless plates, easily soluble in water; product obtained by fusing various resins, as gum benzoin, with alkali; made synthetically by heating pyrocatechin with ammonium carbonate.

Protocercal. See DIPHYCERCAL.

Protococcaceæ. Order of *Chlorophyceæ* or green *Algæ*, including minute forms with isolated cells, or these aggregated into irregular colonies, mainly reproduced by zoöspores.

Protococcoideæ. Class of *Protophyta*, including numerous unicellular green forms, by some regarded as the

undeveloped conditions of *Algæ;* also known as *Chlorophyllophyceæ*, and often placed as a series of *Chlorophyceæ* or green *Algæ*.

Protocol. Original draft of any document, as a treaty; minutes of diplomatic proceedings.

Protodont Dentition. Molar teeth of mammals, whose crowns are compressed and fitted for cutting, rudimentary tubercles being developed on the edges of a main tubercle. The loss of these accessory serrations converts the tooth into the haplodont type.

Protogenes, 4th cent. B.C. Greek painter of Caria, active at Rhodes.

Protogenesis. In Biology, propagation by budding.

Protogenic. In Plant Anatomy, intercellular spaces in plants which are formed coincidently with the growth of surrounding tissues.

Protohydra. See ARCHEGASTRULA.

Protonema. First filamentous growth from the germinating spore of the mosses, on which the moss-plant is subsequently developed from a lateral bud.

Protophyta. Sub-kingdom of plants, including the smallest and simplest members of the vegetable kingdom; usually restricted to those whose increase is effected only by vegetative propagation.

Protoplasm (BIOPLASM). Jelly-like substance contained in the cambium cells of plants; so named by von Mohl 1846; identified 1863 with the Dujardin's Sarcode, 1835, of animal tissues. In it inheres the essential characteristics of living things; viz., irritability, contractility, assimilation, reproduction, heredity, variability or adaptability to environment, etc. To manifest these properties of life it requires an environment containing moisture, a temperature between 32° and 110° F., and organic food compounds of considerable complexity, though if chlorophyl be present it can utilize water and carbonic acid by absorbing the energy of light. Protoplasm consists of various highly complex proteids, built up into a complicated mechanism of unknown structure, but of which we have some glimpses in the phenomena of KARYOKINESIS (q.v.).

Protoplast. Plant or animal cell in its simplest form.

Protopodite. Basal or proximal portion of the appendages of a Crustacean. It consists of two joints, a proximal coxopodite and a distal basipodite. The latter bears two branches, endopodite and exopodite.

Protopteri. See DIPNOI.

Protopterus. See DIPNEUMONA.

Prototheria (AMASTA, ORNITHODELPHIA, MONOTREMATA). Sub-class of non-placental *Mammalia*, including the single order *Monotremata*. The jaws are toothless in the adult, and sheathed with a beak. Marsupial bones (and pouch) are present. There is a large coracoid. The reproductive organs are bird-like; the testes remain in the body cavity; a cloaca is present, and meroblastic eggs are laid. Two genera are included, ORNITHORHYNCHUS and ECHIDNA (q.v.).

Prototracheata. See ONYCHOPHORA.

Protozoa. First animals, and lowest in scale of organization. They are single cells or colonies of similar cells, and reproduction takes place by cell-division or by spore formation, sometimes preceded by conjugation or by copulation. They are divided into *Rhizopods* and *Infusoria*, or more broadly into *Gymnomyxa* and *Corticata*. The group includes most of the animalcules.

Protractor. Circular or semi-circular sheet of paper or metal, graduated along its edge, and used for plotting angles.

Protractor.

The most precise forms are provided with a vernier and tangent screw, by which minutes as well as degrees may be laid off.

Protriæne. Form of spicule found in the sponge genus *Tethia*. It is a rhabdus with one end forked into three branches.

Proud, JOSEPH, 1745–1826. English Swedenborgian, author of above 300 hymns, of which 164 are used by the New Church.

Proud, ROBERT, 1728–1813. Historian of Pa. 1797–98.

Proud Flesh. Granulations of an inflamed wound. They form part of the process of repair and only when excessive should they be interfered with.

Proudhon, PIERRE JOSEPH, 1809–1865. French socialist, repeatedly fined, imprisoned, or exiled for his publications. *Qu'est-ce que la Propriété?* 1840; *Contradictions Economiques*, 1846; *Confessions d'un Révolutionnaire*, 1849; *La Révolution Sociale*, 1852.

Pro-ungulata. See UNGULATA.

Proust, JOSÈPHE LOUIS, 1755–1826. French chemist; teacher in Spain. *Essai d'une Statique Chimique*, 1803.

Proustite. $3Ag_2S+As_2S_3$. Light red silver ore containing 65.5 per cent silver when pure. It occurs at Freiberg, Mexico, and Idaho.

Prout, FATHER. See MAHONY, F.

Provençal. Romance dialect of s. France, the *langue d'oc* and tongue of the troubadours, flourishing as a literary language chiefly ab.1100–1300.

Provence. Former French province, on the Mediterranean; famous in the Middle Ages; absorbed 1481. It was overrun in

Ruins in Provence.

the 5th century by the Visigoths and Burgundians, and was under the Saracens later. It contains many ruins.

Proventriculus. 1. Masticatory stomach inserted between the crop and the chylific ventricle of certain insects. 2. Dilatation of the œsophagus of birds in front of the gizzard. 3. Similar expansion in front of the stomach in frogs, etc.

Proverbs. Brief, pithy sayings, "sententious and true, long since accepted as such by common consent"; "short sentences drawn from long experience"; "the wisdom of many and the wit of one." They are found among all nations, and have been collected by many hands, as by Erasmus, 1500.

Proverbs, BOOK OF. 20th O. T. book; collection of gnomic utterances as to the conduct of life, prefaced by nine chapters of admonitory poetry, rising in ch. viii. to high religious sublimity; ascribed to Solomon, with appendices by Agur and others.

Providence. Deity, not as first cause, but as present cause interfering to regulate the lot and condition of his creatures in their own behalf.

Providence. Chief city of R. I., at the head of Narragansett Bay; seat of Brown Univ. Its coastwise commerce is extensive, but the principal industry is manufactures, especially of cotton and woolen goods, iron and steel, and jewelry. It was settled 1636 by Roger Williams, and chartered as a city 1832. Pop., 1890, 132,146.

Provincial. Monastic superior, who, besides his own house, has appellate authority over all the houses of his order within a certain district.

Proving-Ground. Establishment for the proving of ordnance before it is finally issued for service. At Sandy Hook, N. J., all the heavy guns, carriages, and rapid-fire guns for service in the U. S. Army are proved, and experimental tests are there made upon trial pieces of ordnance, by ordnance officers under the direction of the Chief of Ordnance.

Provocation, IN ETHICS. Such degree of inducement to a crime as mitigates the offense.

Provoost, SAMUEL, D.D., 1742–1815. Bp. of N. Y. 1787; chaplain of Congress 1785.

Provost. Dignitary at the head of a college, church, or other corporation; in Scotland, chief officer of a town. His rights and duties vary greatly.

Provost-Marshal. Commissioned officer of the army, appointed by the commanding officer to superintend the preservation of order and to act as the chief of police of the camp or army during time of war. He possesses summary power to punish offenders, has charge of the guard and prisoners, and regulates the conduct of camp-followers.

Proxy. Authorization to act for another, as in voting, and he who exercises it.

Proxylem. In Plant Anatomy, first-formed xylem cells in a fibro-vascular bundle.

Prudden, THEOPHILE MITCHELL, M.D., b. 1849. Prof. College of Physicians and Surgeons New York 1892; writer on pathology. *Histology*, 1881; *Bacteria*, 1889; *Dust*, 1891.

Prudence. Intellectual virtue by which we select the right means to a given end, assumed to be the proper object of action.

Prudentius, AURELIUS CLEMENS, 348–ab.413. Spanish Christian poet; lawyer, judge, and ab.394 official at Rome. His hymns (*Cathemerinon* and *Peristephanon*) and other works, mostly doctrinal and controversial, are all in Latin verse, and were produced probably after 405.

Prud'hon, PIERRE PAUL, 1758–1823. French historical and portrait painter. At Rome he met Canova, which influ-

Cupid Caressing before Wounding, by Prud'hon.

enced his style. He forms an interesting figure in French art. His pictures have a grace and tenderness which is wanting in all the pictures of his contemporaries.

Pruinose. Surfaces of fruits or other organs when covered with a bloom.

Prune. Dried fruits of certain varieties of the cultivated plum.

Prunella. Thin woolen or mixed stuff, formerly used for clergymen's gowns, but now employed for covering shoes.

Pruning. Cutting off the branches of trees or shrubs, for the purpose of improving the fruit or timber. Early spring or late winter is the best time for pruning.

Prurigo. Skin disease attended with intense itching (pruritus). Like so many of the terms employed by dermatologists, it is used variously by different authors. At present it is most commonly applied to a chronic, almost incurable, disease beginning early in life and accompanied by an eruption closely resembling the hives (urticaria).

Prussia. Largest and most important state of Germany. It is mainly a plain, being mountainous only in the s. part. Its area is 136,075 sq. m. The culture of rye, the beet root, and the vine, with the raising of cattle, constitute the principal occupation of the rural population. Manufactures are extensively carried on and are varied. The mineral resources are great, and the state has a large internal and external commerce. The government is a limited monarchy, the king of P. being emperor of Germany. The capital is Berlin. The Slavonic tribes that early occupied the Baltic shore were known in the 10th century as Borussi. Bishop Adalbert of Prague suffered martyrdom among them 997. Boleslas of Poland forced them to be baptized 1018, but they rebelled 1161. Their inroads on neighboring states provoked the crusade of the Teutonic knights, who in 1283 became masters of the country; they founded cities, introduced German colonists, laws, and civilization. In 1454 the municipal and noble classes, aided by Poland, rebelled. The knights, by treaty of Thorn 1466, ceded territory to Poland, retaining part in fealty to her. In 1511 the Markgraf, Albert of Anspach and Baireuth, a Hohenzollern, was chosen Grandmaster, and was acknowledged as Duke of P. 1525. Johann Sigismund, elector of Brandenburg, was founder of the Hohenzollern-Brandenburg house 1609.

The territory between the Elbe and Oder, which had belonged from the 12th century to descendants of Albert the Bear, now fell in. The whole country was soon desolated by the Thirty Years' War, but its finances were restored by the Great Elector, Frederic William; and under Frederic II., who added Silesia, its prestige reached a high point. Further additions of territory resulted from the partitions of Poland. Frederic William III., having left his neutral position in the conflict with Napoleon, was defeated 1806, and lost most of his territory. Reorganization of the army, educational and social measures, restored the strength of the nation, which joined the Allies 1813 in their struggle against France. The demand for a constitution, promised 1815, was followed by efforts to check the growth of liberalism. After the revolution of 1848, some conciliatory measures were taken, and plans to promote German unity were welcomed. The Schleswig-Holstein troubles resulted, 1866, in a victorious war of 6 weeks with Austria; the states n. of the Main were partly annexed to P., partly joined with her in the N. German Confederation; Schleswig-Holstein was also annexed. War with France, 1870–71, in which P. was joined by the rest of Germany, ended in the coronation of William I. as emperor of Germany. A struggle with the papal power followed. The guiding spirit in these events was Prince Bismarck. The present period is marked by the growth of Socialism. Pop., 1890, 29,957,367.

Prussian Blue. Various forms are known. The most common is the blue insoluble powder, $Fe_4(Fe(CN)_6)_3$, FERRIC FERROCYANIDE (q.v.), prepared by mixing ferric solutions with a solution of yellow prussiate of potash. It is used as a pigment.

Prussian Language, OLD. See LETTISH.

Prussic Acid. See HYDROCYANIC ACID.

Prutenic Tables. Astronomical tables, based on the system of Copernicus, and corrected by Brahe.

Pruth. River in s.e. Europe, Austria, Roumania and Russia, rising in Austrian Bukovina, flowing e. and s., forming

Banks of the Pruth.

the frontier between Roumania and Russia and joining the Danube at Reni. Length 380 m.

Prutz, ROBERT EDUARD, 1816–1872. Prof. Halle 1849–51; poet, dramatist, critic, and historian of German journalism and the stage.

Prynne, WILLIAM, 1600–1669. English controversialist, imprisoned 1634–40 for his *Histrio-mastix*, 1633; twice fined and pilloried, and cropped; branded in both cheeks 1627; jailed by Cromwell 1650–52; M.P. 1648 and 1658; keeper of records in the Tower 1660.

Pryor, ROGER ATKINSON, LL.D., b. 1828. M.C. from Va. 1859–60; Brig.-gen. C.S.A. 1863; prominent at New York bar from 1865; Judge of Common Pleas 1891, and of N. Y. Supreme Court 1896.

Prytanis. Greek magisterial title, whose meaning varied in different cities. At Rhodes they were the supreme magistrates, while at Athens the fifty prytanes, for the time being, represented a tribe and presided at the meetings of the council of five hundred. They held office for a tenth of a year, when another tribe assumed the office. These officers in Greek states had certain religious functions, as the care of the sacred fire at the prytaneum, from which the hearth of a new colony must be lighted.

Psalm. Hymn, or sacred song, the prevailing sentiment being of thanksgiving and praise, sung to the accompaniment of a harp or similar stringed instrument and constituting the principal liturgical element in the Hebrew temple service.

David was plainly a composer and regulator of the Temple service as well as a poet. The Psalms were carried over into the Christian service in the form of unisonous antiphonal song, and were among the first of the sacred texts to be utilized by the composers when artistic music entered the church.

Psalmanazar, GEORGE, ab. 1680–1763. Impostor, of unknown origin, whose *Description of Formosa*, 1704, deceived the English for some years. He confessed, amended his ways, wrote other books, and was highly esteemed by Dr. Johnson.

Psalmody. Singing of psalms, either by Jews or Christians; hence the study and translation of them, with all that relates to the accompanying tunes. Versions of psalms, chiefly those of Sternhold and Hopkins, 1549–62, and Tate and Brady, 1696, were almost exclusively used in English worship till after 1700, and formed the chief metrical provision till long after 1800. In Germany and other Protestant lands hymns came into use much earlier.

Psalms. 19th O. T. book (subdivided by the Hebrews into five), containing 150 religious odes, of varying poetic excellence and spiritual depth, ranging in date of composition perhaps from 1000 to 150 B.C.; 73 are doubtfully credited to King David, and 12 to Asaph.

Psalterium. Manyplies, or third pouch of the ruminant stomach. Its walls are deeply folded into longitudinal septa. It receives the food after it has been chewed as cud, and also liquid food directly. It acts as a strainer at the entrance of the fourth stomach, to prevent the passage of coarse particles.

Psaltery. A dulcimer, played with the fingers or a plectrum instead of by hammers. The psaltery was the prototype of the spinet and harpsichord. Notwithstanding the general use of keyed instruments in 1650, it was considered second to none when played with a skilled hand.

Psaltery.

Psammetichus I. King of Egypt 666–612 B.C.; able ruler and extensive builder.

Psammitic. In Geology, having a structure like sandstone, made up of rounded grains of sand. If the grains are sharp, the structure is called gritty.

Pseudamnion. Membrane secreted inward from the pseudo-chorion in *Mustelus*, and tense with amniotic fluid.

Pseudarachna. Division of *Arachnida*, including *Pantopoda* and *Tardigrada*.

Pseudembryo. Larva of an Echinoderm, in which by a new and peculiar developmental process the young of the adult is formed. The process is analogous to the metamorphosis of certain insects.

Pseudepigrapha. Uncanonical writings, falsely attributed to prophets and apostles; akin to the APOCRYPHA (q.v.) of O. T. and N. T., but arbitrarily distinguished from them, less familiarly known, and usually inferior. *The Teaching of the Apostles*, pub. 1883, has historical value.

Pseudhæmal, or PSEUDOHÆMAL. Blood system of Annelids, Echinoderms, etc. It in some cases communicates with the body cavity, and even the external water can in some instances be directly mixed with this false blood. It contains a few corpuscles.

Pseudoadiabatic. Atmospheric changes in which the quantity of contained heat is unchanged, but its effect is changed by reason of the precipitation of condensed vapor.

Pseudobranch. Remnant of a gill in the spiracle, on the mandibular arch of sharks; also a similar remnant on the operculum or hyoid arch in Teleosts.

Pseudobulb. Enlarged basal parts of epiphytic orchids and some other plants.

Pseudo Butyl Alcohol. $CH_3.CH_2.CHOH.CH_3$. Secondary butyl alcohol; liquid boiling at 87° C. See BUTYL ALCOHOL.

Pseudochorion. Membrane derived from the fœtal compartments of the oviduct of *Mustelus*.

Pseudocœl. See ARCHICŒL.

Pseudocumene. $C_6H_3(CH_3)_3$. Bpt. 170° C. Trimethylbenzene. Liquid hydrocarbon, constituent of coal tar, from which it is prepared indirectly.

Pseudocysts. Masses of protoplasm, containing chlorophyll, a number of which compose the minute individual organisms of the classes *Protococcoideæ* and *Cyanophyceæ;* called gonids by some authorities.

Pseudodipteral. In Classic Architecture, denoting that the inner row of columns is omitted and the space from the outer colonnade to the wall of the cella retained.

Pseudofilariæ. Little nematode-like vermiform bodies, produced in pairs at the end of certain Gregarines for purposes of reproduction.

Pseudogaster. Secondary cavity, occurring in sponges by growth, folding, coalescence, or even fusion of different individuals: into it excurrent or even paragastric canals open.

Pseudogastrula. Stage in the development of calcareous sponges, in which the granular cells of the amphiblastula are temporarily invaginated within the flagellated cells. This stage occurs while the embryo is receiving nutriment from the maternal tissues; when the larva is set free, the inner cells are evaginated so as to restore the amphiblastula which precedes true gastrulation.

Pseudoisidorian Decretals. Collection of spurious decrees of the earlier Church, immensely enhancing episcopal and papal authority. It appeared probably ab.850.

Pseudomorphs. Minerals which deviate from the form of crystallization peculiar to that species, either by alteration or substitution.

Pseudonavicellæ. Little spindle-shaped, incased spores resulting from the division of encysted and conjugated Gregarines.

Pseudoneuroptera. Group of *Orthoptera*, including three tribes, *Physopoda*, *Corrodentia*, and *Amphibiotica*.

Pseudonym, NOM DE PLUME, or PEN-NAME. Assumed by an author; often retained through life, and sometimes more familiarly known than the real name, as in the cases of George Sand, George Eliot, Jean Paul, Pierre Loti, Ouida, Mark Twain, Artemus Ward, E. Marlitt, Lewis Carroll.

Pseudoparenchyma. Mycological term for fungus-tissues composed entirely of matted or interlacing hyphæ.

Pseudopodia. The projecting masses of protoplasm from the body of a Protozoan or from the swarm spores of the *Myxomycetes;* also certain stalks supporting the capsule in the Bog-mosses, and certain stalked gemmæ in the genus *Aulacomnion* and other mosses.—In Zoölogy, protrusions which can be produced from the wall or the substance of amœboid cells and retracted at pleasure: the substance of the protrusion again becoming a part of the general protoplasm. Lobose pseudopodia are the locomotor organs of the amœba, hence the name False-feet.

Pseudoprocts. See OSCULUM and PSEUDOSCULA.

Pseudopupa. Stage which intervenes between the larval stage and the pupa in bees and wasps.

Pseudoraphideæ. Order of *Diatomaceæ*, comprising the genera characterized by elongated forms, but an absence of the raphe or median line connecting the nodules.

Pseudoscope. Variety of stereoscope, through which, if one look at a solid object, the concave parts appear convex and the convex parts, concave.

Pseudoscorpionidæ, or CHELIFERIDÆ. Small Arachnids, resembling Scorpions, but without caudal spine and poison gland; the hinder part of the abdomen does not form a narrow, special post-abdomen. They have two or four eyes, two pairs of stigmata, and spinning glands. The book-scorpion is an example.

Book Scorpion (*Chelifer cancroides*).

Pseudoscula (PSEUDOSTOMES). Secondary pores produced in Sponges by proliferation and foldings of the cortical portions. There are two sorts: (1) vestibular, those leading to incurrent canals; to these the word pseudostomes should be restricted; and (2) cloacal, those leading from excurrent canals; these should be called pseudoprocts.

Pseudotetramera. See TETRAMERA.

Pseudotrimera. See TRIMERA.

Pseudovaries. Ovaries as in Aphides. They produce ova capable of development without fertilization. See PARTHENOGENESIS.

Psilomelane. Important ore of manganese, frequently associated with pyrolusite. It is often impure or of less definite chemical composition than the other ores from which manganese is obtained. See MANGANESE ORES.

Psiloteæ. Small and unimportant family of *Lycopodiaceæ*, natives of tropical regions. Three species are known, two in the genus *Psilotum*, one in *Tmesipteris*.

Psittacidæ, or PSITTACI (PSITTACOMORPHA; PARROTS). Group of Scansorial Birds, living in warm climates, especially of America. The beak is stout, the upper mandible is movably joined to the frontal bone, and curved over the short and broad lower beak. The tongue is fleshy, the legs short, strong, and with very short metatarsus. The four toes are

Arara Cockatoo (*Microglossus aterrimus*).

arranged in pairs, so as to be opposable, and can be used like a hand to grasp with. The plumage is usually green. Here belong the PARROTS, MACAWS, and COCKATOOS (q.v.). The last are Australian, and bear an erectile crest of feathers on the head. Most of the Parrots are African; a few are neotropical. The Macaws are wholly neotropical, and are distinguished by their long tails.

Psittacomorphæ. Order of Birds, including the Parrots. See SCANSORES.

Psoriasis. Disease of the skin, chronic in form, and apt to recur, with an eruption, at first of circular patches, afterward spreading and assuming different shapes. These patches are dry and inflamed, and covered with a crust of mother-of-pearl-like scales, a distinction from PITYRIASIS (q.v.). It very frequently attacks the scalp. Arsenic has probably been relied upon more than any other remedy in the treatment of this disease.

Psorosperms. Little spore-like Gregarines, living parasitically in the tissues of Mammals, gills of Fishes, etc. Their full life history is not known.

Psyche. Personification of the soul, loved by Cupid, abused by Venus; finally made immortal and united to Cupid; in art represented as a maiden with the wings of a butterfly.

Psychic Theory of Heredity. This refers the phenomena of development, transmission, sex, phylogenetic variation, etc., to the powers of mind. Protoplasm is conceived to be living and different from other matter; first, because it is a mechanism rather than a substance, and, secondly, is under the control of spirit forces. Hence it is educable and capable of developing into brain tissue, and exhibiting powers of memory, sensibility, volition, and other powers distinguished strictly as psychic. See ARCHÆSTHETISM, PANÆSTHETISM, and LAMARCKIANISM.

Psychology. Science of mind. Leaving out of account the nature of mind, which becomes a problem of metaphysics, it concerns itself solely with mental processes. The contents of the mind, as sensations, thoughts, feelings, impulses, judgments, and their processes, make up its subject matter. But these processes are facts of inner experience, and just here lies one of the greatest difficulties and dangers for the science, for in any mental investigation the court of last resort must be one's own observation of one's own states of consciousness, or introspection, an act notoriously difficult; and to make the difficulty still greater, these states are altered by the very fact of observation. It has been the aim of modern psychology to obviate this difficulty, so far as may be, by obtaining conditions and relations to which methods of greater exactness might be applied. From the beginning of philosophic thought among the Greeks, psychology was inextricably interwoven with metaphysics and epistemology, and it is only within comparatively recent times that it has attained an independent footing as a subject of investigation. This separation from general philosophy and the application of scientific methods have been the chief characteristics of modern psychological progress. Regarded as a science, it is still in the early stages. Its followers are busy with analysis and accurate description, and attempts at synthesis, more or less successful as they may be, are never final. Having achieved independence, psychology has proceeded to subdivide itself. A glance at these subordinate fields will give perhaps the clearest idea of the scope of the general subject. If we may disregard introspective psychology, the foremost of these minor divisions, at least from the number and zeal of its workers, is Experimental Psychology. This is an attempt to apply purely scientific methods to mental phenomena, and the underlying idea is usually Measurement. This quantitative estimate is arrived at by experimental treatment of the body and observation of consequent changes of consciousness, the assumption being made that every mental change has its accompanying nervous change. By obtaining thus a quantitative expression of the nervous series, it is argued that it may be possible in the light of this to determine the relations of the corresponding mental series. Numerous laboratories for the prosecution of such experiments have been founded in different countries, notably in Germany and the U. S., and many experimental psychologists are at work. (See PSYCHOMETRY, PSYCHO-PHYSICS, and FECHNER'S LAW.) Physiological Psychology is the study of the physiology of the nervous system in so far as it bears upon the facts of consciousness. The relation between mind and brain is the highest expression of its subject matter, and as usually conceived it includes such topics as hypnotism, etc., the nature of which is not well enough understood to allow their reference to any distinct division of psychology. Abnormal Psychology deals with abnormal states of mind in their relation to the normal, and much light has been thrown upon mental processes by the study of insanity, idiocy, hysteria, and the various mental affections of pathological nervous states. Comparative Psychology includes two great divisions; first, the comparative study of man in different levels of civilization and development, sometimes called Folk Psychology and depending upon the results of anthropology and ethnology for its material; second, the manifestations of consciousness of the lower animals, a side of the science of particular value and suggestiveness. Child Psychology is an extension of this comparative and genetic study to a field where we can inspect the human mind in its simplest expressions. Practical applications of the knowledge won by all this modern activity are already being seen in various fields, notably in education, as a result of child study, and in the treatment of the insane and the defective and delinquent classes generally.

Psychometry. Science which deals with the measurement of the duration of mental acts; often spoken of in psychology as the measurement of reaction times. *E.g.*, if an observer be required at a given signal, say of sound, to press a telegraphic key, and the moment at which the signal is given be recorded, as well as the moment at which the key is pressed, the difference between the two records will represent the simple reaction time of the observer for an auditory stimulus. This time does not represent a purely mental process. It is made up of the time taken for the stimulus to pass from the external ear to the brain center, the time of perception, and the act of will leading to the proper motor response, and the time of transmission of the motor impulse from the brain to the responding finger. The rate of transmission of sensory and motor impulses being approximately known, by subtracting those two elements from the whole reaction time we obtain the duration of the purely mental processes of perception and volition. The separation of these two elements is more difficult. The same principles are applied to the measurement of association times. See PERSONAL EQUATION and PERSONAL EQUATION MACHINE.

Psychophysics. That side of experimental psychology which deals with the measurement of the intensity of sensation. The problem is to obtain a formula of the relation existing between the intensity of the external stimulus and that of the resulting sensation, for the different senses. Such a formula, which within certain limits holds good for most of the senses, has been found in Weber's Law, which is, roughly, that in order that the intensities of sensations may increase in an arithmetical series, the stimuli must increase in a geometrical

series. The true interpretation of Weber's Law, or its mathematical expansion, known as FECHNER'S LAW (q.v.), is a matter of dispute. There are practically three theories in the field: (1) that held by Fechner himself, that it is a formula of ultimate relation between mind and body; (2) that it is purely psychological in character; and (3) that it is purely physiological. The two latter theories have adherents; Fechner's interpretation is now practically abandoned.

Psychrometer. Instrument for determining the amount of moisture in the air. It is sometimes called the wet and dry bulb hygrometer, and was devised by Mason, although on the Continent it is known as AUGUST'S PSYCHROMETER (q.v.).

Ptah. Probably the oldest of the Egyptian deities. The father of the gods. He was regarded as the creator of the world.

Ptenoglossa. Division of *Ctenobranchiata*, including forms having the lip of aperture of the shell entire, siphons absent, and the radula armed with transverse rows of numerous small hooks, but with no median teeth. *Janthina* and *Solarium* are examples.

Pteranodon. Genus of flying Saurians, with jaws toothless and tail short and slender; comprising gigantic forms from the Cretaceous of N. America.

Pteraspis. Primitive type of small Cephalaspidian Upper Silurian fishes(?), having a bony snout, and the head and the fore part of the body covered with bony plates.

Pterichthys. Placoganoid with arm-like fins; first discovered by Hugh Miller in the Old Red Sandstone of Scotland. See PLACODERMS.

Pteridium. See SAMARA.

Pteridology. Study of Ferns.

Pteridophyta. Sub-kingdom of plants, also known as Acrogens and Vascular Cryptogams. It includes the ferns and their allies, lycopods or club-mosses, *Equisetæ* or horsetails, *Rhizocarpeæ* and *Selaginellaceæ*, having their greatest development in tropical regions, and a very great antiquity dating from the Silurian. They were the first land plants.

Pterobranchia. See POLYZOA and ASPIDOPHORA.

Pterocardiac Ossicle. See GASTRIC MILL.

Pterodactyls. Flying reptiles of the Mesozoic period. They resembled bats, but had only 4 fingers, the outermost alone being elongated to hold the web. They had 4 toes. The

Pterodactylus crassirostris.

head was birdlike with a beak, usually toothed. Some were fish eaters, and some large, the allied *Pteranodon* of the American Cretaceous having a spread of wing of 20 ft. They belong to the order *Pterosauria* (*Ornithosauria*).

Pteromys. See SCIUROMORPHA.

Pteropoda. Class of *Mollusca*, including forms not having a sharply defined head, but with two wings or fin-like expansions (epipodia), on the rudimentary foot. The mouth is surrounded by tentacles, or by two tentacles bearing suckers (cephalic cones). Sometimes a shell is present. They are hermaphrodite and pelagic (free swimming). Two orders are included, *Thecosomata* and *Gymnosomata*.

Pteropodidæ. See BATS.

Pterotic. Posterior and most external of the projecting bones in the cranium of a fish. It is an element in the ear capsule.

Pterotracheidæ. Family including slug-like pelagic Mollusks: without a shell, and with a well developed mesopodium, bearing a sucker in the males. See HETEROPODA.

Pterygotus. Gigantic Crustacean, very similar to *Eurypterus*, but with the eyes marginal and bilobate tail; called by the Scotch quarrymen Seraphim, from the wing-like form and feather-like ornament of the thoracic appendage.

Pterylæ. Areas on a bird's body that bear feathers. They are separated by apteria or naked spaces. See PTERYLOSIS.

Pterylography. Science, originated by Nitzsch, treating on PTERYLOSIS (q.v.).

Pterylosis. Distribution of the ptilosis or plumage of a bird in PTERYLÆ (q.v.). In Penguins and struthious birds there are no apterial spaces, but in more highly developed birds there are definite pterylæ, with considerable variety. Apteria are generally present along the middle of the back, and especially along the belly.

Ptolemaic System OF THE UNIVERSE. The earth was supposed to be the central body, the sun, moon, and stars revolving about it once per day. Special devices were imagined for representing the motions of the planets and moon, so that their places could be predicted with such accuracy as was demanded at that time.

Ptolemaic System of the Universe.

Ptolemy. Thirteen kings of Egypt of this name, who reigned from 323 to 30 B.C. The founder of the dynasty was Soter, who had been a general of Alexander the Great, and became gov. of Egypt at his death. In 306 he assumed royal power, and in 301, after the battle of Ipsus, added Syria and Cyprus to his dominion.—II. PHILADELPHUS, 284–246, built canals, roads, and the lighthouse on Pharos, and fostered schools and literature.—III. EUERGETES, 246–221, restored the gods Cambyses had carried off, made conquests in Arabia and toward India, and favored scholars at home. The line became extinct in Cleopatra VII.

Ptolemy (CLAUDIUS PTOLEMÆUS), 2d cent. Egyptian mathematician, astronomer, and geographer. His great work on astronomy, commonly known as the *Almagest*, and his treatise on geography were the great authorities on those subjects for 1,400 years.

Ptolemy's Law. If a ray of light or other form of wave motion pass from a point A to a point B in the same medium, but reflected in its course by a plane surface, there is no path from A to B by way of any point of the surface so short as that actually traversed by the ray under the law of reflection; viz., that the angle of reflection equals the angle of incidence.

Ptomains. Substances produced in the process of decomposition of nitrogenous bodies; sometimes called putrefactive alkaloids. They are more or less directly the product of the action of bacteria, each ptomain being generated by its specific bacterium. Many of them are quite poisonous and give rise to the sickness occasioned by eating meats, cheese, ice cream, etc., after the putrefactive changes have begun.

Ptosis. Drooping of the upper eyelid, usually due to a paralysis of the muscle that lifts the lid.

Ptychodont Dentition. Mammalian molar teeth with the sides folded longitudinally, the folds often crossing the crown, as in the Rabbit.

Ptyxis. Folding or coiling of leaves in the bud.

Puberty. Time at which the procreative power develops; in European girls ab. 12 to 14, in boys later; somewhat earlier in the tropics; attended with dangers to health, especially with girls.

Puberulent. Diminutive of pubescent.

Pubescent. In Botany, organs covered with soft, simple hairs.

Publicans. Roman knights who farmed the public taxes: in the Gospels, their subordinates, odious to their Jewish countrymen alike as extortioners and as agents of foreign tyrants.

Public Debts. See APPENDIX.

Public Houses. See HOTEL.

Public Lands of U. S. The western boundary of U. S. was originally the Mississippi River and the southern the 31st parallel of latitude. There have been added.

1808	Louisiana purchase . . .	1,171,931 sq. m.
1821	Florida purchase	59,268 " "
1845	Texas annexed	375,239 " "
1848	Mexican cession	545,783 " "
1853	Gadsden purchase	45,535 " "
1867	Alaska purchase	577,390 " "
		2,775,146 sq. m.

All these increased the government's land holdings except Texas. The total public lands, including those above, was 2,836,757 sq.m.; the total area of U. S. is 3,595,600 sq. m. Exclusive of Alaska, and military and Indian reservations, there remain vacant and subject to entry 600,040,671 acres, June 3, 1895. About 900,000,000 acres have been disposed of. See HOMESTEAD and PRE-EMPTION.

Public Parks. See PARK.

Public Revenue. That of the state, whether it comes from voluntary contributions, from public property, or from taxation.

Public Schools. See SCHOOLS, COMMON SCHOOLS, and COMPULSORY EDUCATION.

Public Wrongs, IN ETHICS. Injuries to others, accompanied with such degree of violence, disorder, or bad example that the state must take cognizance of the action as a crime.

Publilius, or PUBLIUS SYRUS, 1st cent. B.C. Syrian slave in Rome, who wrote and acted Mimes or farces. A collection of his Maxims, *Sententiæ*, survives.

Puccinotti, FRANCESCO, 1794–1872. Prof. of Medicine at Maceraba and Pisa; professional writer of high rank. *Storia della Medicina*, 3 vols.

Puccoon. See GROMWELL.

Puccoon, YELLOW. See ORANGE-ROOT.

Puck, or ROBIN GOODFELLOW. Fairy, prominent in English legends, and in *Midsummer Night's Dream*.

Pückler-Muskau, HERMANN LUDWIG HEINRICH, PRINCE OF, 1785–1871. Prussian author. *Travels in England*, tr. 1832; *Tutti Frutti*, 5 vols., tr. 1834; *Egypt*, tr. 1848.

Pud, or POOD. Russian weight of forty pounds.

Pudding Stone. Conglomerate, containing rounded, waterworn pebbles easily distinguishable in the mass of the rock.

Puddle Wall. Made by compacting wet clay in a ditch; often used in reservoir embankments to prevent leakage.

Puddling. Process of converting cast into wrought iron by boiling and stirring in connection with the decarbonizing action of the atmosphere. Invented and patented by Henry Cort 1784. See IRON, METALLURGY OF, and FURNACES.

Puebla, or PUEBLA DE LOS ANGELES. City of Mexico, capital of the State of La Puebla, on the tableland, 76 m. e. of

Puebla.—View taken from the south.

the city of Mexico, and 7,215 ft. above sea; settled 1531; occupied by Americans 1847; taken by the French 1863. It has a good trade and some manufactures. Pop. ab. 100,000.

Pueblo. Capital of P. co., Col.; on the Arkansas, 118 m. s. of Denver; important for its manufactures of iron and steel. Pop., 1890, 24,558.

Pueblo Indians. On the Upper Rio Grande and adjacent tributaries of the Colorado in s. Utah, n. Arizona, and w. Mexico. See MOQUIS and ZUNI. They are probably not closely related either to the Aztecs or the Moundbuilders. The Moquis belong to the Shoshone group of tribes. The houses are large communistic structures, made of adobe and stone, and built around an inner court toward which the roofs are terraced, corresponding to the stories. Ladders are used instead of stairs. Each room is occupied by a family, and some houses accommodate 3,000 people. Ab. 30 villages are now occupied. See CLIFF-DWELLERS.

Puerperal Fever. Acute, febrile affection, probably due to septic infection following childbirth. It varies in severity in different cases, although always a disease with a high mortality rate. The history of some outbreaks affords strong presumption of its contagiousness.

Puerperal Insanity. Mental alienation occurring after childbirth, usually within 5 or 10 days after the birth of the child. Statistics by different observers vary, but it may be safely stated that many more recover health and reason than die during the attack of mania, when it assumes that form, or than fail to secure their reason.

Puerto Principe. City in the interior of Cuba. Pop. ab. 28,000.

Puerto Rico. See PORTO RICO.

Puff Ball. Fungi of the natural order *Gasteromycetes*, especially of the genus *Lycoperdon*, of wide geographical distribution.

Puffendorf, or **Pufendorf,** SAMUEL, BARON VON, 1632–1694. Prof. Heidelberg 1661, and Lund 1670; Swedish historiographer 1677–88. *Elementa Jurisprudentiæ Universalis*, 1659. His *De Statu Reipublicæ Germanicæ*, 1667, attacked the Holy Roman Empire, and caused much discussion. His *De Jure Naturæ et Gentium*, 1672, is still valued, not so his history of Sweden.

Puffers. See PLECTOGNATHI.

Puffin. See ALCIDÆ.

Pugatcheff, YEMELYAN, 1720–1775. Cossack impostor, who personated Peter III. 1773.

Pug-Dog. Variety of the Bull-dog, with a gentle disposition. Its muzzle is very short, the forehead inflated, and eyes large. The Japanese pug has been so changed by domestica-

Pug-Dog (*Canis familiaris molossus fricator*).

tion, breeding, and a vegetable diet as to present a peculiar dentition. Sometimes only 16 teeth are present, thus: $I\frac{0}{3}\,C\frac{1}{1}\,P\frac{1}{2}\,M\frac{2}{1}$. The hair is long and not curly, sense of smell rudimentary, and size that of a small black and tan terrier.

Puget, PIERRE, 1622–1694. French builder, painter, and decorator.

Puget Sound. Arm of the Pacific Ocean, extending into Washington. It affords excellent harbors.

Pugh, GEORGE ELLIS, 1822–1876. U. S. Senator from Ohio 1855–61; defender of C. L. Vallandigham 1863.

Pugh, JAMES LAWRENCE, b. 1820. M.C. from Ala. 1859–61; U. S. Senator from 1879.

Pugilism. Fighting with the fists has been recognized with more or less respect from the early ages. The classical cestus which with its wicked metal additions gave fatality to the blow of the boxer of old has given place to the modern boxing glove, and the bare-knuckle fights which came in between

the two are now abandoned. The reason for this, however, is not on the score of humanity, but the fighter finds that his hands need the protection of the glove. The pugilistic encounters that have engrossed attention in the days of modern contests have been the Heenan-Sayers international fight 1860, Sullivan-Ryan 1882, Sullivan-Mitchell 1888, Sullivan-Kilrain 1889, Corbett-Sullivan 1892, Corbett-Mitchell 1894, and Fitzsimmons-Corbett 1897. The Heenan-Sayers and Sullivan-Mitchell fights were draws; in the others the first named combatant was the winner.

Pugin, AUGUSTUS, 1762–1832. French-English architect, writer on old buildings in England and Normandy.—His son, AUGUSTUS WELBY, 1812–1852, wrought on similar lines, with much regard for the Gothic. *Principles of Christian Architecture*, 1841.—His son, EDWARD WELBY, 1834–1875, built many R.C. churches.

Pug-Mill. Mill for grinding and mixing clay for bricks and pottery. It consists of an upright iron cylinder with steel knives projecting toward the center; in this a shaft, carrying similar knives, revolves. The clay is worked to a plastic state with water by the action and flows from an opening at the bottom. See BRICK MANUFACTURE.

Pulaski, CASIMIR, COUNT, 1748–1779. Leader of Polish insurgents, outlawed 1772; in the American service from 1777; active in Pa., N. J., and the South; killed before Savannah. —His father, JOSEPH, 1705–1769, organized the Confederation of Bar 1768, and died, with two other sons, in the struggle for national freedom.

Pulaski, FORT. On an islet in Savannah River; blockaded by Union forces Feb. 22, 1861, and taken April 11.

Pulci, LUIGI, 1432–1484. Italian poet and satirist. *Il Morgante Maggiori*, 1481–83.—His brothers, BERNARDO and LUCA, produced less notable verse.

Pulex (PULICIDÆ). See APHANIPTERA.

Pulgar, FERNANDO DEL, d. 1486. Spanish biographer and letter-writer.

Pulitzer, JOSEPH, b. 1847 in Hungary. Owner and ed. St. Louis *Post-Dispatch* 1878, and New York *World* since 1883.

Pulkowa. Village near St. Petersburg, 10 m. s. of a famous observatory, erected 1838–39. Its huge telescope dates from 1882. See OBSERVATORY.

Pulley. Flat or grooved wheel or drum, used for transmitting power by a flat or round belt. The simplest use of a pulley is merely to change the direction of application of a force applied to a cord, in which case the pulley is fixed as in Fig. 1. Fig. 2 represents a movable pulley, in which the mechanical advantage is 2; *i.e.*, the weight of P is supported by a tension of only ½P on the cord. Evidently the tension ½P on each side of the pulley just balances the weight of P down; but if P were to be raised, twice as much rope will have to be taken in as in Fig. 1, for the product FS or the work done must be the same. When made of cast iron, the rim is thin, and the

arms are either curved to avoid difficulties from contraction in the cooling of the castings, or if straight must be tapered with special regard to this matter. The section of the arms should be fusiform to cleave the air as they revolve. There are five or more of such arms. There should be metal enough in the hub to enable the pulley to be secured to the shaft by set-screws or keys. Wooden rim pulleys on an iron hub center give lightness and less centrifugal force at high speeds; pressed paper has also been recently introduced for the same uses. Pulleys are called riggers by many English writers. The term pulley is often used in text-books for that form of ELEMENTARY MACHINE (q.v.) in which the lever appears as a wheel to be used with a rope or chain. The wheel or sheave in the block may be called the pulley, but at best the machine should be called a pulley-block.

Pullman Cars. First built 1863; introduced in England 1874; invented by George Mortimer Pullman, b. 1831, who made sleeping-cars 1859, and founded the town of Pullman, Ill., 1880. Standard car is 68 ft. 5 in. long over all, 10 ft. wide, weight 100,000 to 110,000 lbs., with 24 double berths, in all 48 berths, and costs from $15,000 to $20,000.

Pullulating. Phenomena of budding exhibited by the cells of the yeast-plant.

Pulmogastropoda. See PULMONATA.

Pulmograda. See SCYPHOMEDUSÆ and HYDROMEDUSÆ.

Pulmonary Consumption. See PHTHISIS.

Pulmonata (PULMONIFERA, PULMOGASTROPODA). Order of *Gastropoda*, including air-breathing and fresh water snails. The respiratory organ lies in front of the heart; otherwise the internal structure resembles that of Opisthobranchs. The shell is usually right-handed and the respiratory, renal, anal, and generative apertures are then on the right side. The shell may be absent or rudimentary. A true operculum is absent. The radula has a great number of toothed plates on it. Pulmonates are hermaphrodite; a few are viviparous. There are two groups, the *Basommatophora* and the *Stylommatophora*. These belong to the Inoperculate division. Certain Prosobranchs (the *Pneumochlamyda*) are sometimes included here and termed the *Operculata*.

Pulmonifera. See PULMONATA.

Pulp. In Ore Dressing, mass of crushed ore held in suspension in water, or carried along in a muddy current.

Pulpit. Small raised platform in a church, generally protected by a railing, upon which the preacher stands. In modern use they are commonly of wood, though in the Middle Ages many were built of stone.

Pulque. Popular beverage of Mexico; fermented juice of the maguey and other species of *Agave*. A liquor, called Tequila, is distilled from this.

Pulse. Unit of impulse. It is equal to the impulse which acting on the mass of one pound will produce the velocity of one foot per second (1 velo). One pulse evidently has the same effect as one poundal acting for one second, hence the pulse might be termed a Poundal-second.

Pulse. Peas, beans, lentils, and other plants of the natural family *Leguminosæ*, which produce edible pods and seeds.

Pulse. Change in shape and size of the arteries due to the wave of blood sent out by the heart's beat. Observation of the character of the pulse enables one to know the rapidity of the heart's action, the strength of its impulse, the volume of blood forced by each beat, and other facts of a similar nature. These are helpful facts in determining the nature of a disease. The artery usually felt is the radial at the wrist. Rapidity of pulse varies with age; at 2 yrs. 100–115 per minute, 7–14 yrs. 80–90, 14–21 yrs. 75–85, 21–60 yrs. 70–75. In sickness it may reach 200 or fall to 20. Exercise increases it. In the horse it is 32–38, cow 35–42, sheep 70–77, dog 90–100.

Pulse Glass. Device of B. Franklin. It consists of a glass tube, bent twice at right angles and terminating in a bulb at each end. The vessel is partly filled with some colored liquid and partly with air. If one of the bulbs be held in the warm hand the air in the upper part expands and drives out all the liquid, and then the air begins to bubble up in the other bulb, quite vigorously if the hand be sufficiently warm. Its motions obviously have no connection with the pulse.

Pulsellum. Flagellum which propels a cell by a sort of screw motion, the cell being pushed in front; *e.g.*, the tail of the spermatozoön; opposite of tractellum.

Pulsometer. Form of pumping engine in which the steam is made to act directly upon the surface of the water to be displaced for the forcing action, and its condensation by the water causes a vacuum in the pump chamber, which is filled through the suction pipe, by atmospheric pressure as usual on the lifting part of the cycle. It is the original Savery engine (see ENGINE, HISTORY OF) in principle. Two pear-shaped cast-iron vessels connect to a common rising column pipe for water and a common suction pipe. Steam enters each chamber alternately as controlled by a ball valve which floats against

the opening into the empty chamber, and presses the contents of the full chamber upward into the delivery. The other chamber meanwhile is filling, and, when full, reverses the ball valve, to have the preceding action occur in it. There are foot

Pulsometer.

valves in the bottom of each chamber, opening and closing by excess of pressure below or above. Such pumps warm the water, and are well adapted for foul and gritty water, as in drainage and wrecking, as there are no moving parts to be abraded.

Pulszky, Francois Aurele, b. 1814. Hungarian author; outlawed 1852–67. *Memoirs*, 4 vols., 1879–82.

Pultaceous. Soft, wet pollen of some species of the orchid genus *Cypripedium*.

Pulteney, William, Earl of Bath, 1682–1764. M.P. 1705; Sec. of War 1714–17; friend of Walpole till 1728, then his dangerous enemy; Privy Councilor and Earl 1742.

Pultowa, or Poltava. Town of s. Russia, 88 m. w. of Kharkov, where Charles XII. of Sweden was totally defeated by Peter the Great June 27, 1709.

Pulu. Soft substance obtained from the stems of certain large ferns, natives of the Sandwich Islands, consisting of their long silky hairs; used to a limited extent for stuffing cushions, beds, etc.

Pulvillus. Terminal joint of an insect's foot (tarsus), as seen beyond and between the ungues, or claws.

Pulvinus. Organ formed by the thickening of the petiole of a leaf at its point of insertion in the blade or on the stem, which has for its function the movements which leaves thus provided exhibit; *e.g.*, the Sensitive Plants and Sleeping Movements.

Puma (Felis concolor). American Lion, Cougar, Panther, or Catamount. Arboreal cat, reddish brown or gray,

Puma (*Felis concolor*).

attaining a length of 5 ft. It inhabits subtropical and temperate latitudes of both Americas. It can conquer a grizzly bear; feeds on pigs, deer, and other herbivores, and is especially fond of peccaries.

Pumice. Vesicular lava, similar to obsidian in composition. It owes its structure to a rapid solidification while still in motion, and to the imprisoning of bubbles of gas in a manner analogous to the formation of froth or scum.

Pumice Foot. In Farriery, a form of laminitis, wherein the sole of the animal's foot becomes convex instead of concave, the horn spongy within and brittle outside.

Pump, Cornish. See Cornish Engine.

Pumpelly, Raphael, b. 1837. American geologist, employed in the exploration of Yezo 1861, and of the coal fields of China 1864; in the survey of the copper regions and Missouri 1870–73; member of U. S. Geological Survey from 1879.

Pumpernickel. Rye bread made of unbolted flour; much used in Westphalia.

Pumping. Oscillation of the mercury in the tube of the barometer that results from sudden movements of the instrument; especially troublesome when the barometer is on a vessel at sea, and apt to damage the instrument.

Pumping Engine. Usually of such size and continuous use as to merit a more distinctive name than pump. For city water-works or for mines it is usually either condensing or compound, and either of the fly-wheel type, of the direct acting duplex, or of the Cornish type. In a very few places it is driven by water power, utilizing turbines as motors. The fly-wheel condensing engines are of the river-boat type, with beam and poppet valves: the beam compound have the steam cylinders on the same end of the beam, or on opposite ends. The pump cylinders are vertical in the great majority of cases, and in a very few only are the steam cylinders horizontal, acting on a bell-crank beam. There are few fly-wheel designs

High Duty Pumping Engine.

with horizontal water cylinders, although these few are doing excellent work. There are not many geared engines, the pump pistons reciprocating less often than the steam piston. A Corliss engine with cylinders for steam and water arranged radially all around a central vertical shaft which carries the crank disk and pin to which all the connecting rods converge is a type of pumping engine not amenable to the above classification (see Cornish Engine). Pumping engines are usually rated by their Duty (q.v.). For direct acting pumps of ordinary performance, the duty is from 65 to 80 million foot-pounds; with compensators and other improvements this rises to 100 or 110 million. For compound fly-wheel engines of best design 122½ million has been obtained.

Pumpkin. *Cucurbita maxima.* Trailing vine of the natural family *Cucurbitaceæ*, native of America; widely cultivated for its large edible fruit, used in pies; almost always raised as a catch or meslin crop in Indian corn. They furnish a succulent food, useful for milch cows and swine.

Pumps, Belt, or Power. Types of machines for displacing water, in which the power from the motor is transmitted to them by a belt. The simplest of these are simply plunger or piston pumps, in which the rotary motion of the belt pulley is reduced in velocity by cog gear, and the reciprocating motion is produced by a crank. For feed pumps, the stroke of the plunger can be made variable for slow or fast pumping, either by having a slotted link drive a slider which carries the crank-pin, or the equivalent device of having the crank-pin adjustable on a diameter of a wrist-plate by a screw. The Centrifugal Pumps (q.v.) have a rotary disk with vanes, and compel the revolving water to fly outward radially. The

driving axis may be horizontal or vertical. Rotary pumps have one or more revolving radial pistons which fit the flat heads of their casing endwise, and the cylindrical part of it on the outer edge (see ROTARY PUMP). Crank pumps are suitable for relatively small volumes at greater pressures; centrifugal pumps to large volumes at low lifts; rotary pumps to conditions which are a mean between the other two.

Pumps, STEAM. Those in which the pressure and expansive force of steam is applied directly to displace the water, without intervention of transmissive machinery. The primitive type is represented by the PULSOMETER (q.v.): there is also a rotary steam pump, in which each of the two revolving shafts of the pump has on its other end the rotating piston of a ROTARY ENGINE (q.v.): but the more usual type is the piston-pump. This appears in two forms, the fly-wheel and the direct-acting pumps. The fly-wheel pump is an engine with crank, fly-wheel, and a slide-valve driven by an eccentric, the resistance to the engine piston's motion being that due to the water on the pump piston, which is often on the same rod as the steam piston. The fly-wheel makes it possible to work the steam with a degree of expansion, and enables the engine to turn the centers without stopping with the valve over both steam ports in the engine cylinder. Such pumps, however, cannot be worked very slowly, and the regular rotation of the

Steam Pump.

crank compels the water in front of the piston to be accelerated and retarded. The crank-shaft is rotated by the usual connecting rod from a cross-head, or else the crank-pin is made to slide in a yoke on the straight rod. In direct-acting pumps there is no fly-wheel, nor any continuous rotation to move the valve to reverse the steam action in the engine-cylinder. Hence the steam piston or rod must inaugurate some motion before it ceases to move, which shall act while it is at rest at the end of its stroke to reverse its valve. This is universally done by means of an auxiliary piston in a cylinder, the rod from the piston being the valve rod for the main engine. To this auxiliary cylinder the main pumping piston admits steam, either by moving a valve or in some other way causing unbalanced pressure on the proper sides of the auxiliary piston. When this auxiliary cylinder is made also to be a pumping or primary cylinder, the duplex pump results. The direct-acting pump can be run as slow as desired, or as fast as the water column will admit; it will start itself when in good order when pressure is turned on without necessity of being reached by hand, having no dead centers. Pumps may be non-condensing, condensing, or compound; may be horizontal or vertical.

Pun. Play upon words of different meaning, though the same or similar in sound; familiar among Hebrews, Greeks, and Romans; formerly more highly esteemed in England than now; probably carried to the furthest extreme by T. Hood.

Punch. Drink made from rum or other liquor, with water, lemon-juice, sugar, and sometimes other materials; native in India, where arrack is the chief element.

Punch. Humorous weekly, started in London 1841, and ever since conducted with unrivaled success; contributed to by many eminent writers and illustrators, including Jerrold, Thackeray, Hood, Doyle, Leech, and eminently Du Maurier.

Punch. Machine for making holes in metal sheets. A bar of steel of the desired size, shape, and hardness is forced to shear its way through the plate, which rests upon a die on an unyielding surface. This die is a steel block with a hole in it enough larger than the punch to allow of the latter entering easily and with clearance, but which upholds the metal at the edges where the punch is forcing its way. The punch cuts either with a flat face, or the face is milled to a helical surface so that the cut is a successive shear all around the periphery of the hole, instead of acting on the whole area at once. Such

Hydraulic Punch.

punches take less power. The punch is forced through either by a crank motion (appearing either as an eccentric or a simple crank with a slider in a yoke), by a lever driven by a cam, or by a toggle-joint, or else by hydraulic pressure. The total power necessary to punch a hole in a plate is found by multiplying the circumference of the hole into its depth, both in inches, and this product by the shearing strength of the metal per sq. inch. It is objected to punching as a method of making holes that the process fatigues the metal, especially steel (see FATIGUE). This is counteracted either by reaming the hole out all round, or in steel by annealing it. See FLOW OF SOLIDS.

Punch and Judy. English puppet show, the origin of which has been the subject of much discussion. Punch has been identified with Pilate, Judy with the Jews and with Judas, the play being referred to an old mystery. A similar character to Punch exists in the puppet dramas of Italy, Egypt, Syria, Turkey, Persia, Hindustan, Siam, Ava, Cochin China, China, and Japan. He is probably an importation into England from Italy, and his name an abbreviation of the Neapolitan Policinella.

Punctarieæ. Family of brown *Algæ* inhabiting the sea.

Punctate. Leaves or other organs when dotted with minute, translucent areas.

Punctuation. Ab. 350 B.C. it became customary to separate words by points. The modern system was largely the invention of Aldus Manutius, d. 1515, and his son Paulus. Caxton marked the divisions of discourse by oblique lines.

Pundit. Oriental, usually a Brahman, versed in the Sanskrit literature and in the philosophy, laws, and religion of the Hindus.

Punic Wars. Between Rome and Carthage. The first, 265–242 B.C., resulted in the loss of Sicily by Carthage. The second began with the siege of Saguntum 218, and ended with the humiliation of Carthage at Zama 201. The third ended in the storming and destruction of Carthage 146, after a three years' siege.

Punishment. That which is inflicted upon an offender because of his breach of the law. The tendency of modern legislation has been to lessen the number of capital crimes, to inflict punishment in private, and to treat the criminal with greater humanity.

Punishment, FUTURE. Commonly held to be eternal; supposed by some to issue in extinction, by others in possible or certain restoration and participation in eternal life.

Punishments, MILITARY. The punishments to which an officer or soldier of the U. S. Army are liable are embodied in the Articles of War. Some of these are explicit for particular crimes and others are imposed at the discretion of a court-martial. In the latter cases, in times of peace, they shall not be in excess of a limit which the President of the U. S. may prescribe; at present these limits are set forth in the Manual for Courts-Martial published by authority of the Secretary of War.

Punjab. Province in n.w. India, watered by the Indus and its five great branches; conquered by the British from the

Map of Punjab.

Sikhs 1845–49. Capital, Lahore. Area 106,632 sq. m; pop., 1891, 20,803,000, besides 4,256,670 in the dependent states.

Punkah. Large ventilating fan, swung from the ceiling, used chiefly in India.

Punshon, WILLIAM MORLEY, LL.D., b. 1824. Pres. English Wesleyan Conference 1874. *Life Thoughts*, 1863.

Punt. Flat-bottomed boat, much used in English inland waters for fishing and shooting.

Punt. Uncertain region on the shores of the Red Sea, anciently in commercial relations with Egypt.

Pupa, OF CIRRIPEDS. Stage in the development of certain Barnacles, intervening between the free Nauplius stage and the fixed adult, in which the larva resembles certain Ostracodes; hence called the Cypris stage.

Pupa, OF INSECTS. Stage in insect metamorphosis in which the larva becomes quiescent and usually protected by a case or a cocoon, and during which the parts of the adult insect or imago (which often differs much from the larva) are formed. If the last larval skin surrounds the pupa, it is coarctate. If the wings, legs, etc., of the adult, are free in the pupa, as in *Coleoptera*, it is a pupa libera; but if cemented close against the pupa skin, as in *Lepidoptera*, it is a pupa obtecta.

Pupienus Maximus, MARCUS CLODIUS, 164–238. Roman emperor with Balbinus 238.

Pupipara. Sub-order of *Diptera* or Flies, whose members are parasitic, like lice, on Mammals and Birds. They are stout, have the thoracic segments fused, and the abdomen broad and flat. The antennæ are short; the proboscis is formed from the labrum and maxillæ. The wings are rudimentary. They are viviparous, and the young are mature when born.

Puracé. Volcano of s.w. Colombia. Height 15,420 ft.

Puranas. Class of old Sanskrit poems, probably composed for the enlightenment of the lower castes. They are theological, and include 800,000 lines in three groups of six each.

Purcell, HENRY, ab.1658–1695. Greatest English musical composer; organist of Westminster Abbey from 1680. He wrote many odes and anthems, and operas. *King Arthur*, 1691.

Purchas, SAMUEL, 1577–1626. English author and compiler. His *Pilgrimage*, 1613–26, and *Pilgrims*, 4 vols., 1625, drew from many sources, and aimed to give "a history of the world, in sea voyages and land travels."

Purdue University. At La Fayette, Ind.; a land-grant college, founded 1862; named from John Purdue, who gave it $150,000 and 100 acres of land. Instruction is given in the various applied sciences and agriculture by 30 professors and 12 assistants to 500 graduate and collegiate students; total number, 635.

Pure Mathematics. See MATHEMATICS.

Pure Tone. Sound in which there are no overtones present. It is emitted by a vibrating body, the motion of which is represented by a simple sine curve. The nearest approach to a pure tone in practice is that emitted by a tuning-fork when carefully bowed across its ends.

Purgatives. See CATHARTICS.

Purgatory. In R.C. theology, a penal state, for the purification through suffering of imperfect heirs of salvation, by the infliction of such measure of the temporal punishment of their forgiven sins as is still owing, except so far as this may be diminished by the Church's intercession, especially in the sacrifice of the Mass. The doctrine of the Greeks is similar, but less defined.

Puri. Town of the Bay of Bengal, India. It is one of the most sacred towns, which for 2,000 years has been the holy land of the Hindus. It is a great resort for pilgrims, being the

Garden Seat at Jagganath, Puri.

seat of the shrine of Juggernaut, and at the time of the festival ab. 100,000 persons assemble. Cholera invariably breaks out, and many pilgrims die upon the journey. Pop. 28,800.

Purification of B. V. M. Feast occurring Feb. 2 in R. C., Eastern, and Anglican Churches; introduced at Rome 494.

Purifications. By the Mosaic Law, contact with a dead body, and various physical infirmities and functions, involved a ceremonial defilement, extended by the touch of the unclean person, and to be removed (the cause ceasing) by bathing and washing the clothes. See MEATS, LAW OF.

Purim. Jewish festival, 14 or 15 of Adar (Feb.–March), in commemoration of the abortive casting of lots by Haman for the destruction of the Jews.

Puritans. English Protestants who desired a purer church discipline, more thorough instruction, and a less prelatical polity. They gradually became in great measure Presbyterians, then Congregationalists and Baptists.

Purity. Control of the appetites and desires, the lower parts of man's nature, by moral sentiments and reason, the higher parts.

Purkinje's Figures. Outlines of the blood-vessels of the retina of the eye made visible to the eye itself. They are obtained by throwing a bright ray of light sidewise through the

cornea upon the retina. The reflected rays from this image cause shadows of the blood-vessels on the retina, which in a darkened room will be projected outward through the nodal point of the eye, and are visible, greatly magnified, upon a favorably placed sheet or wall. The figures are made more distinct by moving the light to and fro. See EYE.

Purl. Mixture of ale, milk, spirits, and sugar.

Purlin. Horizontal beam connecting two main rafters or roof trusses, and serving to support the roof covering.

Purple, TYRIAN. See TYRIAN PURPLE.

Purple Emperor (APATURA IRIS). One of the richest colored and largest butterflies. The expanse of wings is from 2 to 3¼ in., are strong and thick. It frequents the top of oak trees.

Purple Emperor (larva and pupa shown below).

Purple Glow (RED, or ROSY GLOW). Broad colored disk from 5° to 50° above the horizon, over the sun, lasting a few minutes, and reappearing as the sun sinks.

Purple of Cassius. See GOLD TRICHLORIDE.

Purpura. Several conditions and causes other than violence produce extravasation of blood under the skin or mucous membrane. To these extravasations so produced the general term Purpura is given. When the extravasation is due to an external injury, it is called an Ecchymosis. The treatment tends to correct the condition of the blood by strong diet and tonics, if low and the reverse if the condition is excited.

Purpuric Acid. $C_8H_5N_5O_6$. The free acid is unknown. Its ammonium salt is MUREXIDE (q.v.).

Purpurin. $C_{14}H_8O_5$. Trihydroxy anthraquinone; red coloring matter, present in the madder root, and prepared artificially by the oxidation of alizarine; orange needles; usually sold as an alizarine.

Purree, or INDIAN YELLOW. Coloring matter made in India from the urine of cows fed on mango leaves. A single cow produces ab. 2 oz. a day. Often adulterated with chrome yellow. It consists mainly of the calcium and magnesium salts of euxanthic acid.

Purser. Officer having charge of pay, clothing and provisions on a vessel; in the navy displaced by paymaster.

Pursh, FRIEDRICH FRANGOTT, 1794–1820. Botanist. *Flora Americæ septentrionalis*, 1814.

Purslane. *Portulaca oleracea.* Weed of the natural family *Portulacaceæ*, native of Europe, introduced into N. America; probably the worst weed in gardens in the U. S. The only successful method of combating it is to keep the ground stirred as often as the young plants make their appearance.

Purslane, SEA. Low, fleshy herbs of the genus *Sesuvium*, natural family *Ficoideæ*, natives of the seacoast of the s.e. U. S.

Purslane, WATER. *Isuardia palustris.* Low, smooth aquatic herb of the natural family *Onagraceæ*, native of the n. temperate zone.

Pursuivant. Member of the third or lowest office in the college of heralds.

Purus. River in S. America, flowing across Bolivia and Brazil, emptying into the Amazon ab. 100 m. s.w. of Manaos. Length ab. 1,900 m.

Pus. Fluid formed in the process of suppuration. It is a breaking down of the material binding together the cell elements of a tissue, which liquefies and is mingled with the cells, along with others, usually the escaped white corpuscle of the blood. This condition is brought about by the action of certain forms of micro-organisms.

Pusey, EDWARD BOUVERIE, D.D., D.C.L., 1800–1882. Hebrew Prof. at Oxford from 1828; one of the authors of *Tracts for the Times* (Nos. 18, 40, 67), and a leader in the movement which, to his displeasure, long bore his name; a man of retiring manners, ascetic piety, and deep learning, rather than of original thought. His sermons had great influence. *The Real Presence*, 1855–57; *Minor Prophets*, 1860–77; *Daniel*, 1864; *An Eirenicon*, 1865. See TRACTARIANISM.

Puseyism. See TRACTARIANISM.

Pushkin, ALEXANDER SERGEIVITCH, 1799–1837. Russian national poet, eminent alike for epics and lyrics. *The Gypsies*, 1827; *Eugene Onegin*, 1828, tr. 1881; *Poltava*, 1829; *Boris Godunov*, a tragedy, 1830. Some of his prose tales were tr. 1875, and his poems 1889.

Pustule. Small tumor or pimple containing pus. It is of inflammatory origin and usually has a reddened area surrounding the pustule.

Putamen. Shell of a peach-pit or similar vegetable structure. It is morphologically the endocarp of the fruit rendered dense and crustaceous, and contained in the sarcocarp, or pulpy layer.

Putnam, FREDERICK WARD, b. 1839. Director Peabody Academy of Sciences at Salem, Mass., 1867–76; curator Peabody Museum at Cambridge 1874; Prof. of Archæology and Ethnology at Harvard 1886.

Putnam, GEORGE PALMER, 1814–1872. Grand-nephew of Israel; publisher in New York; author of several books of travel; founder of *Putnam's Mag.*, 1853–56.—His son, GEORGE HAVEN, b. 1844, pub. *Books and their Makers*, 1896, and did much for international copyright.

Putnam, ISRAEL, 1718–1790. General of the Revolution, distinguished for his courage and daring. He won renown at Bunker Hill and held commands in N. Y. 1776–77.—His cousin, RUFUS, served through the Revolution, founded Marietta, O.,

Israel Putnam.

1788, was a Judge of the Supreme Court of Northwest Territory 1789, Brig.-gen. under Wayne 1792, and U. S. Surveyor-gen. 1793–1803.—A nephew, GIDEON, 1764–1812, founded Saratoga Springs.

Putnam, MARY TRAILL SPENCE (LOWELL), b. 1810. Biographer of her father, Charles Lowell. *Tragedy of Errors*, 1862.—Her son, WILLIAM LOWELL, 1840–1861, was killed at Bull's Bluff, Va., and celebrated, with two cousins, by their uncle, J. R. Lowell, in a famous passage of the *Harvard Commemoration Ode.*

Putorius. See MUSTELIDÆ.

Putrefaction. Decomposition of organic matter under the influence of micro-organisms. The complex molecule is broken up by a succession of chemical changes through simpler forms of organic compounds into inorganic substances. Disagreeable odors are generated during the process.

Putrid Fever. See TYPHUS FEVER.

Puts and Calls. See OPTIONS.

Putty. Mixture of whiting and oil, used by glaziers and painters.

Putty-Powder. Binoxide of tin, used to polish stone, glass, etc., and in making enamel.

Putty-Root. See ADAM-AND-EVE.

Putumayo. Left branch of the Amazon, rising in Colombia. Length ab. 950 m.

Purvis de Chavannes, PIERRE, b. 1814. French historical and decorative painter of high rank.

Puysegur, ANTOINE HYACINTHE DE, COMTE DE CHASTENET, 1752–1809. French naval officer, in America 1778–79; Portuguese Vico-admiral 1795–1803. *Côtes de St. Dominique*, 1787.

Puzzles. Variety of ingenious devices, now used as means of diversion, in which the object is usually to unravel or disclose some hidden principle or idea by the aid of mechanical skill. Mechanical puzzles, which are very numerous, may all be referred to a few simple principles. Those now extant are practically represented by the well-known ball and cord, the wire ring puzzle, the Chinese geometrical puzzle, the arrangement of numbered blocks called the Fifteen Puzzle, and the American Pigs in Clover. Mechanical puzzles identical with those of Europe and Asia exist among the aboriginal tribes of N. and S. America. No satisfactory explanation has yet been offered of their origin.

Puzzolano. Volcanic earth found near Pozzuoli in Italy, which hardens when mixed with lime and water, forming a hydraulic cement; sometimes called Roman cement. Other varieties are found along the Rhine, near Andernach.

Pyat, FELIX, 1810–1889. French dramatist, in exile 1849–70 and 1871–80; condemned to death 1873 as a leader of the Commune; Deputy 1888.

Pycnidia. Sacs producing propagative bodies known as pycnospores, developed in certain ascomycetous *Fungi*.

Pycnodonts. Family of Mesozoic fish, having the mouth provided with a dense pavement of thick, round, flat teeth.

Pycnodus. Lepidoganoid fish, with large, round, flat-crowned teeth, covering broad jaws as with a pavement of from three to five rows.

Pycnogonida (PODOSOMATA or PANTOPODA; SEA SPIDERS). Group of Arachnids of small size, with four pairs of slender, long, and many-jointed legs, and, in the male, an accessory pair for carrying eggs. They have a conical proboscis, a rudimentary abdomen, and live among seaweeds. Recent students of this group place it apart from the other Arachnids in a class by itself.

Pycnogonum littorale.

Pycnospores. Propagative bodies of certain *Fungi* and contained in sacs called pycnidia.

Pydna. Town of Macedonia; scene of the defeat of Perseus by the Romans under L. Æmilius Paulus 168 B.C., which ended the war.

Pye, HENRY JAMES, D.C.L., 1745–1813. M.P. 1784; poet-laureate from 1790. *Alfred*, 1801.

Pyemia. Condition of the blood when poisoned by the presence of pus-producing micro-organisms; wherever these micro-organisms lodge, secondary abscesses are apt to form. The disease is very often fatal.

Pygidium. Caudal portion of a Trilobite.—Also, last segment of a Coleopter's abdomen, left uncovered by the wing-cases.

Pygmalion. King of Cyprus; lover of a maiden brought to life by Aphrodite from a statue.

Pygmies. 1. Fabulous race of dwarfs represented by Homer as dwelling on the shores of the ocean and attacked by cranes in the spring. 2. Undersized tribes of Africa, found and described by Du Chaillu, Stanley, and other travelers. Ancient writers located pygmy races beyond the limits of the then known world both northward and southward. Aristotle and Herodotus specifically located them in the heart of Africa; the facts that the undersized Bushmen show evidence of once having been spread over a wide area, and that the presence of a tribe of pygmies in Central Africa has been discovered by modern explorers, go to show that the ancient rumors were well founded. Many small people are found in Central America, with all their faculties, but there does not appear to be a tribe.

Pygobranchia. Group of tubicolous Annelids, characterized by having branchiæ on the posterior segments only, as in *Arenicola*.

Pygobranchia (ANTHOBRANCHIATA). Group of Nudibranchs, including the *Doridæ*. These are slug-like Mollusks, crawling about upon seaweed. The gills form a circle surrounding the anus. There is a false mantle fold, and sometimes accessory gills.

Pygopodes (BREVIPENNATI). Group of schizognathous Natatores, with small wings, useless for flight. There are two groups, *Impennes* and *Urinatores* or Pygopodes proper.

Pygostyle. Plowshare-shaped bone at the end of a bird's caudal vertebral column, representing from four to six coalesced vertebræ. It bears the rectrices or tail feathers.

Pylades. Cousin and friend of Orestes, whom he aided to avenge the murder of Agamemnon.

Pylangium. Conus arteriosus of the amphibian heart. It has a row of valves at each end, and one of the anterior valves extends longitudinally toward the posterior row.

Pyle, HOWARD, b. 1853. American author, chiefly of juvenile books, and illustrator. *Men of Iron*, 1891.

Pylon. Monumental gateway to an Egyptian temple. It is sometimes in the form of a truncated pyramid, but was more typically a combination of two such structures connected. They were usually covered with hieroglyphic decorations. It is often used synonymously with propylon.

Pylon of Ptolemy Euergetes.

Pyloric Appendages (CÆCAL APPENDAGES). Finger-like diverticula of the digestive tract of fishes, situated at the beginning of the small intestine.

Pyloric Cæca. 1. Finger-like processes from the duodenum of various fishes. 2. Large pouches from the stomach, one in each ray, of the star-fish.

Pym, JOHN, 1584–1643. One of the managers of Buckingham's impeachment 1626; recognized leader of Short Parliament 1640, and Long Parliament 1641; manager of the impeachment of Stafford and trial of Laud; presenter of the "Grand Remonstrance"; chief of the five members whose attempted seizure brought on the Civil War; real head of the provisional government after the flight of Charles I. His ability was great, his influence enormous; his death, like that of Hampden, was a heavy loss to the nation.

Pynchon, WILLIAM, 1590–1662. Founder of Agawam or Springfield, Mass., 1636; author of a book condemned as anti-Calvinistic 1650; in England from 1652.—His son, JOHN, 1621–1703, took his place, and was prominent in Mass. affairs.—A descendant, THOMAS RUGGLES, D.D., LL.B., b. 1823, has been prof. of Trinity Coll. since 1854, and was its pres. 1874–83. *Chemical Physics*, 1869.

Pyogenic Bacteria. Pus-producing bacteria of wounds.

Pyramid. Polyhedron having a polygon as a base and the other faces triangles meeting at a common point called the vertex; right, when the base is a regular polygon; classified, according to base, as triangular, quadrangular, etc. The altitude of a pyramid is the perpendicular distance from the vertex to the plane of the base. The slant height of a right pyramid is the altitude of any one of its lateral faces.

Pyramid. Variety of the game of marbles, in which the

marbles are placed in a pyramid in the center of a ring; the players shoot at this pile, each taking the ones he knocks out of the circle.

Pyramid, GREAT. Oldest engineering construction, and most expensive one ever built; erected as a tomb for Cheops, king of Egypt, 3733–3666 B.C. It was 481 ft. high, 774 ft. on each side of the base, and contained ab. 89,000,000 cu. ft. of

The Pyramid of Cheops and the great Sphinx.

limestone and granite. Its cost is variously estimated at from 150 to 600 million dollars. It has passages and interior chambers, the chief of which are called the King's Chamber and the Queen's Chamber; the masonry work of these is of the most perfect kind.

Pyramid Lake. In Nevada; drained by Truckee River. Area 205 sq. m.

Pyramids, BATTLES OF. In these Bonaparte defeated the Mamelukes and made himself master of Lower Egypt, July 13 and 21, 1798.

Pyramus and Thisbe. Hero and heroine of a story told in Ovid's *Metamorphoses*, and parodied in *Midsummer Night's Dream*.

Pyrargyrite. $3Ag_2S+Sb_2S_3$. Silver ore dark red in color and very brittle, found in Mexico, Nevada, and Idaho.

Pyrena. In Botany, seed-like endocarps of certain small drupes of several cells which ripen into a berry-like fruit, as in the Huckleberries.

Pyrene. $C_{16}H_{10}$. Hydrocarbon contained in coal tar and obtained from the portion boiling above 360° C.; solid, crystallizing in white plates.

Pyrenees. Range of high mountains traversing from e. to w. the isthmus connecting the Iberian peninsula with the mainland of Europe, and serving as a boundary between France and Spain. It is a comparatively narrow continuous range, having but two passes available for carriage roads. The core

The Cirque of Gavarnie, on the Pau.

is granite, with sedimentary formations down to the Cretaceous flanking its slopes and in many places extending to its summits. Its length is ab. 270 m., with a mean height of 8,000 ft. The highest summit is Pic de Nethou or Maladetta, 11,168 ft. The Cantabrian Mts. are a continuation westward.

Pyrenees, BATTLES OF. Between the English under Wellington and the French under Soult, July 25–Aug. 1, 1813. The latter was driven into France with loss of more than 20,000 men.

Pyrenocarps, or PERITHECIA. Sporocarps of the *Pyrenomycetes*.

Pyrenoids. Minute, rounded bodies found in the chromatophores of certain *Algæ*.

Pyrenomycetes. Order of *Fungi* belonging to the subclass *Ascomycetes*, having flask-shaped sporocarps open only at the neck. Most of the numerous species are parasites.

Pyrheliometer. Instrument devised 1876 by Pouillet for measuring the intensity of the sun's radiation. It consists of a shallow circular box of thin copper or silver, blackened and filled with water, in which is immersed the bulb of a thermometer, the stem being partially inclosed in the tube which supports the box. At the lower end of this tube is a disk, equal

Ericsson's Pyrheliometer.

and parallel to the bottom of the cylindrical box. This is for receiving the shadow of the box, and enables the face of the latter to be directed accurately toward the sun. By noting the effect of the sun's rays on the temperature of the water during a given time, a measure of the power of the sun's heat is obtained. Herschel's actinometer was designed for the same purpose and is similar in construction.

Pyridine. C_5H_5N. Bpt. 117° C. Liquid, with a very disagreeable odor, present in bone-oil and obtained from it. It is a strong base. Hydrogen changes it to piperidine. Its constitution is

and from it numerous derivatives are formed by replacing the hydrogen atoms by groups. It is made by treating nicotinic acid with lime.

Pyriform. In Botany and Zoölogy, pear-shaped organs or organisms.

Pyriphlegothon. River of the lower world.

Pyrite. FeS_2. Iron pyrites; a very common mineral, containing sulphur and iron, 53.4 per cent of sulphur, and 46.6 per cent of iron. It occurs in many different forms and diverse conditions. When crystallized the form is usually a cube or a pentagonal dodecahedron. It is a common accessory and harmful ingredient in mineral coal, in slate, and in sandstone. In mineral veins it is abundant as a gangue, and is frequently sufficiently auriferous to be treated as a gold ore. It has no value for the iron it contains, but is largely and increasingly utilized in the manufacture of sulphuric acid. The largest commercial producers of pyrite are Spain, Germany, and Mass. and Va., where it occurs in mass deposits of great extent and often carries enough copper to be of value as a source of that metal: 210,000 tons were imported into U. S 1892.

Pyrites. In the plural, a considerable number of metallic sulphides, allied in some of their properties to pyrite (iron pyrites), though differing widely in others. The most of these sulphides have value for the metal they contain, as copper, nickel, and cobalt.

Pyro Acids. If from two molecules of the ortho acid one molecule of water be abstracted, a pyro acid is formed; *e.g.*, $2H_3PO_4—H_2O=H_4P_2O_7$, pyrophosphoric acid.

Pyrocatechin. $C_6H_4(OH)_2$. Mpt. 104° C., bpt. 245° C.

Orthodihydroxybenzene. White crystals with a phenol odor, present in raw beet sugar, and prepared by the fusion of many resins with potash; commonly made by the decomposition of its methyl ether, GUAIACOL (q.v.).

Pyro-Electricity. Electrification produced by heat. Certain minerals, when heated or cooled, become electrically polarized, or exhibit opposite electric properties in different parts. Tourmaline is a substance of this kind.

Pyrogallol, or PYROGALLIC ACID. $C_6H_3(OH)_3$. White plates, melting at 115° C.; prepared by heating gallic acid and splitting out carbonic acid from it. It has a powerful affinity for oxygen, and is hence used as a reducing agent. It takes oxygen from silver salts, depositing the metal. It is used in photography.

Pyroligneous Acid. Impure ACETIC ACID (q.v.), formed by the destructive distillation of wood.

Pyrolusite. MnO_2. Manganese dioxide; one of the most important ores of manganese; worked extensively in many parts of Europe and of the U. S.

Pyromagnetic Generator. Apparatus devised by Edison for utilizing the change of magnetism in a magnetic metal by heat for the purpose of generating an electric current. The metal to be heated is in the form of a thin sheet rolled up and surrounded by a coil of wire. The thin sheet he called an interstitial armature, since it connects the poles of a powerful electromagnet. When this armature is heated by the passage through it of a current of hot air it loses its magnetism, and when a current of cold air is sent through it, it gains it, this magnetization and demagnetization being used to generate a current in the coil.

Pyromancy. DIVINATION (q.v.) by fire or the forms appearing in fire.

Pyrometer. Apparatus for measuring high temperatures above the limits of ordinary thermometers; used for furnaces, flues, chimneys, and hot blast ducts. There are three types. The first uses two bars of metals which expand unequally by heat, fastened together, and their free end so connected to a needle that the amount of curve given to the compound strip by a given heat shall move the needle through so many graduations. Objection to this type is that prolonged action of heat gives the bars a permanent change in length, which vitiates the readings. The second type depends on the different electrical conductivity of platinum wire at different temperatures. A battery cell and a galvanometer are required, and the cell which produces a given deflection of the needle when the conducting wire is cold deflects the needle a less amount when the wire is heated in the gas or flame to be measured. Heats are determined by fusion of metals or alloys of known character, or by

Differential Water Pyrometer.

other methods, and a table of deflections worked out for the particular instrument in question. The third type uses a ball or lump of some material of known weight and specific heat, which is placed in the material whose temperature is sought, and kept there till it reaches the same heat. It is quickly removed and dropped into a known weight of water, and it is observed by how many degrees the water is warmed. Then, if W = weight of water, w = weight of ball, T = original temperature of water, t = final temperature of water and ball, x = unknown temperature of heated ball, and c = its specific heat, and radiation and evaporation be prevented, we have $W \times 1 \times t - T = w \times c \times (x - t)$, in which x is the only unknown quantity. This is an exact method if a material is used whose specific heat has been determined exactly for the range of temperatures in question. For temperatures within the yielding point of glass, the AIR THERMOMETER (q.v.) can be successfully used as a pyrometer.

Pyrope. Bright red garnet, much used in cheap jewelry; Bohemian garnet.

Pyrophone. Instrument devised by arranging a set of tubes of different lengths, which are made to sound by SINGING FLAMES (q.v.).

Pyrophorous. Said of any substances which take fire from the rapidity with which they oxidize. If tartrate of lead is heated in a tube until the organic matter is charred and then poured into the air, it will take fire.

Pyrophosphates. Derivatives of pyrophosphoric acid.

Pyrophosphoric Acid. $H_4P_2O_7$. Made by heating phosphoric acid to 200°–300° C. The pyrophosphates are formed by heating secondary phosphates.

Pyrosis. Abnormal condition of the stomach where there is a burning sensation accompanied by belchings of an acid or bitter fluid. It is a form of dyspepsia and may be relieved by moderate doses of some alkaline substance (baking soda, magnesia), but the cure depends upon removing the causes leading to the condition. See HEARTBURN.

Pyrosoma. See ASCIDIANS.

Pyrosulphuric Acid. See DISULPHURIC ACID.

Pyrotechny. Art of preparing combustible compositions which give a pleasing effect when set on fire; of unknown antiquity, practiced by the Chinese from early times. These compositions are solid mixtures of combustible and oxidizing agents, to which some substances to modify the rate of burning and some to give color effects are added. The principal ingredient of pyrotechnic composition is mealed gunpowder, which burns slowly when well tamped, and evolves large volumes of gas. The decorations placed in paper shells, Roman candles and rockets are principally stars, serpents, marrons, gold rain, and rain of fire; these are formed from niter, sulphur, mealed powder, charcoal, metallic filings and the salts of various metals for color effects, such as sodium for yellow, calcium for red, strontium for crimson, barium for green, and copper for green or blue: iron and steel filings give sparks. Formerly the construction of fire-balls, carcasses, rockets, port-fires, slow and quick match, and other military pyrotechnics was a branch of military instruction, but having recently lost much of their importance, due to the introduction of electricity, they are now for the greater part practically obsolete.

Pyroxene. Mineral closely allied to amphibole in almost all respects. The name includes several varieties of aluminous and non-aluminous anhydrous silicates of calcium, magnesium, and iron. Among these varieties the most important are diallage and augite, which are common ingredients in crystalline rocks.

Pyroxylin. Usually, the explosive hexa-nitrate. See NITROCELLULOSE and GUN COTTON.

Pyrrha. Wife of Deucalion, the Noah of Greek legend.

Pyrrhic Dance. Native in Crete; performed by Spartans

Pyrrhic Dance.

and other Greeks in full armor, with warlike movements. The prototype in Crete was the dance instituted by the Curetes to

drown the cries of the infant Zeus. It was a mimic fight, intended to show the art of attack and defense.

Pyrrho, OF ELIS, ab.360–ab.270 B.C. Greek philosopher of the Skeptical school, who denied all knowledge of the nature of things.

Pyrrhonism. Absolute skepticism, named from Pyrrho, who maintained that we cannot know that we know anything; uncertainty attaches to every proposition the human mind can frame.

Pyrrhotite. Fe_nS_{n+1}. Magnetic pyrites; compound of iron and sulphur, in which the value of n ranges from 5 to 16. It often contains enough nickel to be of value as a nickel-ore.

Pyrrhus, 318–272 B.C. King of Epirus 307, expelled 302, restored 295; in Italy, as ally of Tarentum, warring with Rome 280–278, and in Sicily, with Carthage, 278–276; defeated by Dentatus near Beneventura 275; conqueror of most of Macedonia 274; at war with Sparta 272; killed at Argos by a tile thrown by a woman.

Pyrrol. C_4H_4NH. Basic liquid, bpt. 126° C.; present in coal tar, but usually prepared from bone-oil. It has an odor like that of chloroform. It is thus constituted,

and the ring C_4N is called the pyrrol ring.

Pyruvic Acid. $CH_3.CO.COOH$. Bpt. 165° C. Ketone and acid; liquid, strong acid, produced by heating tartaric and similar organic acids.

Pythagoras, 582–504 B.C. Greek philosopher, founder of the Pythagorean school and of a republic at Crotona, Italy, which treated its citizens as brothers and equals. He applied mathematical conceptions of numbers to metaphysics, was one of the first to maintain the immortality of the soul in the form of metempsychosis, and was ascetic in the theory and practice of morals. He is supposed to have discovered the famous proposition that "the square on the hypotenuse of a right triangle is equivalent to the sum of the squares on the other two sides."

Pythia. See PYTHONESS.

Pythian Games. Festival in honor of Apollo and Artemis, celebrated originally at Delphi once in 8 years, later in a plain near by every 4 years, alternating with the festival at Olympia; so called from 581 B.C., when gymnastic contests were added to the musical; managed by the Amphictyons after 346 B.C. Musical and artistic contests were always the most prominent feature; the prizes were a chaplet of laurel, a symbolic palm-branch, and a statue in the plain where the contests were held. They lasted till 400.

Pythias. See DAMON.

Python. Serpent which sprang from the mud left by the deluge of Deucalion, lived in the caves of Mt. Parnassus, and was slain by Apollo, who founded the Pythian games to commemorate his victory.

Python. See PEROPODA and AGLYPHODONTA.

Pythoness. Priestess of Apollo at Delphi, through whom the oracle gave responses.

Pythonomorpha (SEA SERPENTS). Group of Saurians of the Cretaceous period, represented by fossils from N. J., Ala., Kansas, etc. The body was serpentine in shape, the limbs small, the teeth and jaws adapted for swallowing large prey whole. They lived in the warm seas that covered the e. plains of the Appalachian and Rocky Mt. systems. Members of the genus *Clidastes* ranged from 12 to 40 ft. in length, those of *Mosasaurus* reached a length of 80 ft., and of *Liodon* even more, perhaps 100 ft.

Pyx. 1. In the R.C. Church, name given to the box in which the host is kept. 2. Box in which coins are kept of each successive coinage, these coins to be examined by experts as to their accuracy in weight and fineness. The examination thereof is called the trial of the pyx, and takes place at the Philadelphia mint the second Wednesday of February, annually.

Pyxis (PYXIDIUM). Capsular dry fruit which opens by the top falling away as a lid, the dehiscence being circumscissile, as in the Henbane and Plantain.

Q

Q. S. Abbreviation for quantum sufficit (as much as needed), used in writing medical prescriptions.

Quackenbos, GEORGE PAYN, LL.D., 1826–1881. American author of text-books, as is his son, JOHN DUNCAN, b. 1848, prof. Columbia 1884.

Quackenbush, STEPHEN PLATT, U.S.N., 1823–1890. Lieut. 1855, Lieut.-commander 1862; distinguished on the Atlantic coast in the war; Commodore 1880, Rear-admiral 1885.

Quack Grass. *Agropyron repens.* One of the worst weeds of cultivated grounds. It spreads by seed, but more rapidly by its vigorous underground stems, and is eradicated only by the most vigorous and thorough culture. In grass fields it is not so troublesome, as it is nutritious and cattle are fond of it. It is also known as couch, switch, and quitch grass.

Quadragesima. First Sunday in Lent; name now little used.

Quadrangle. Having four angles. A complete quadrangle is one each of whose sides intersects the other three.—Also an open space or courtyard having four sides and quite or nearly surrounded by buildings. Public buildings, such as castles, colleges, city halls, etc., are usually planned in this way.

Quadrangle of Arundel Castle, England.

Quadrant. Arc of 90°; one-fourth of a circle. In trigonometry the circle of reference is divided by horizontal and vertical diameters into four quadrants: the first is that above the horizontal and to the right of the vertical diameter; the others are numbered to the left, second, third, fourth.

Quadrant. The dimensions of inductance being simply a length, the unit in the C.G.S. system is a centimeter. In practice a unit 1,000,000,000 times as large is chosen and called a quadrant, this being the number of centimeters in a quadrant of the earth.

Quadrant. See OCTANT.

Quadrantal Deviation. Deviation from its normal position produced upon a magnetic needle by horizontal masses of iron or steel magnetized inductively by the earth. The phenomenon occurs on shipboard in the case of the compass needle. In swinging the ship round there are four positions in which the influence would be a maximum, and four in which it would be a minimum: hence the name.

Quadrantal Pendulum. Body moving about an axis according to the same law with reference to a quadrant on each side of its position of equilibrium, as a common pendulum with reference to a half circle on each side.

Quadrantal Triangle. In Spherical Trigonometry, triangle having one side a quadrant. Such triangles are solved by their polar right triangles. If each side be a quadrant, the triangle is called triquadrantal.

Quadrate. Bone to which the lower jaw is articulated in vertebrates below mammals. In the latter this bone has become the incus, or middle bone of the three auditory ossicles, and the jaw articulates directly with the skull.

Quadratic Equation. One involving the second power of the unknown quantity and none higher. A quantic may be quadratic in respect to one variable and not so for another. A complete quadratic has both first and second powers of the unknown.

Quadratic Expression. Product of two binomial factors of the first degree, each containing the variable associated with a constant which with changed sign is one of the roots of the equation formed by equating the quadratic expression with zero.

$$x^2-5x+6=(x-3)(x-2)$$
$$\text{If } x^2-5x+6=0,\ x=3 \text{ or } 2.$$

Quadratic Reciprocity. Law established by Legendre and called by Gauss the gem of arithmetic, connecting any two odd primes.

Quadratojugal. Bone in the upper jaw, between the quadrate and jugal, in Vertebrates below Mammals.

Quadrature. Obtaining the measure of any surface in terms of the unit applied to rectilinear plane surfaces.

Quadrature. Position of the moon when 90° from the sun, and therefore in first and last quarter; also of a planet when 90° from the sun.

Quadratus. Christian apologist 125. A fragment is preserved by Eusebius.

Quadribasic Acids. See ACID.

Quadric. Algebraic expression of the second degree between two or more variables, as

$$ax^2+bxy+y^2+c.$$

Quadrifoliolate. Compound leaves with four leaflets.

Quadriga. Greek or Roman chariot drawn by four horses, as a biga by two. The two center ones were only yoked while

Quadriga.

the two outside ones were attached by ropes. It was the common racing chariot of the circus and in processions.

Quadrigarius, 1st cent. B.C. Historian of Rome from the invasion of the Gauls to Sulla. Of his 23 books only fragments remain.

Quadrigemminal Bodies. Optic lobes of the midbrain in the higher Vertebrates; on each side divided by a transverse groove into an anterior natis and posterior testis.

Quadrijugate. Pinnately compound leaves with four pairs of leaflets.

Quadrilatera. See CRABS.

Quadrilateral. Surface bounded by four lines. A complete quadrilateral is one each of whose sides intersect the other three. By placing conditions upon the relations of the sides, specific forms of the quadrilateral are obtained.

Quadrilateral. Four strong fortresses in n. Italy, Verona and Legnago on the Adige, Mantua and Peschiera on the Mincio; surrendered by Austria to the Italians Oct. 16, 1866. The Turkish quadrilateral was Shumla, Varna, Rustchuk, and Silistria; lost by treaty of Berlin July 13, 1878, which secured the

The Quadrilateral.

autonomy of Bulgaria. Novogeorgievsk, Warsaw, Ivangorod and Brest Litovsk constitute another in Russian Poland.

Quadrille. 1. French dance of four or more couples, popular in England since 1808. 2. Card game, resembling l'hombre, which was a three hand game and preceded it; much played ab.1670–1740.

Quadrilocular. Four-celled anthers in the flowers of certain plants.

Quadrivium. See SEVEN LIBERAL ARTS.

Quadroon. Person with one-fourth negro blood.

Quadrumana. See SIMIADÆ.

Quadrupeds. Broadly, all four-footed vertebrated animals; but usually and popularly, mammals that walk on all four feet.

Quadruple Alliance. Between England, France and the German emperor, July 22, 1718; joined by Holland Feb. 8, 1719. It guaranteed the succession to the reigning houses of England and France.

Quadruplex (TELEGRAPHY). System of multiple transmission in telegraphy, by which two messages in each direction may be transmitted over the same wire at the same time. Suggestions of the possibility of such a system were made 1855 by Dr. Stark of Vienna, but the first practical instruments were brought out by Edison in New York in 1874.

Quadruplicate Ratio. Ratio of the fourth powers of quantities.

Quæstor. Roman annual magistrate, who assisted the higher officials. He had the supervision of the treasury, of the streets of the city, and of certain courts. From 421 B.C., military quæstors accompanied the commander to his province and had charge of the finances and commissariat.

Quagga. S. African wild horse, reddish brown above and whitish beneath, with dark zebra-like stripes on the forward

Quagga (*Equus quagga*).

part of the body. Height 4 ft. 6 in. at the withers. Its flesh is esteemed as food by the Bushmen. It occurs in large herds

on the wild plains, but is rare near civilized communities. See ZEBRA.

Quahaug. See ISOMYA.

Quails. Gallinaceous partridge-like birds, including the Old World genera *Coturnix*, *Turnix*, *Perdicula*, etc., and the New World *Colinus* (*Ortyx*), *Lophortyx*, *Oreortyx*, etc. *C. communis*, the European quail, can cross the Mediterranean in its migrations. *C. virginianus*, the quail of e. U. S., or Bob White, known as partridge in the South, resembles grouse but is smaller. Length 9 in. Its head is not crested, the plumage is chestnut red, and greatly barred and streaked. They nest in May. *L. californicus*, of the Pacific coast, has a black crest, blue breast, plumage chestnut, each feather edged with black. *O. pictus*, the Mountain quail of the same region, is also crested, and a large, handsomely marked bird. See PARTRIDGES.

Quain, JONES, 1796–1865. Prof. at London Univ. 1833–61. His *Anatomy*, 1828, was much used.—His brother, RICHARD, F.R.S., 1800–1887, prominent as practitioner and writer, was pres. Royal Coll. of Surgeons 1868. *Anatomy of Arteries*, 1845. —A half-brother, SIR JOHN RICHARD, 1817–1876, became a judge of Queen's Bench 1872.—Their cousin, SIR RICHARD, LL.D., b. 1816, a leading physician and medical writer, was made Baronet 1891.

Quaker Bridge Dam. See DAMS.

Quaker Guns. False guns made of logs and placed in embrasures to deceive the enemy.

Quaker Hill. In R. I.; scene of a battle between British and Americans, Aug. 29, 1778, the latter holding the field.

Quakers. Name given to FRIENDS (q.v.) in derision, and largely though unofficially used.

Quaking Grass. Grasses of the genus *Briza*, mainly natives of the Old World, sparingly introduced as weeds into N. America.

Quality. 1. Property of anything, determining its kind. 2. That characteristic of sound which depends upon the wave-form, or of radiation, which depends on the state of polarization.

Quamash. See CAMASS.

Quantic. General term covering all algebraic functions of two or more variables. The number of variables is indicated by an adjective ending in "ary," binary, ternary, quaternary, "n"-ary, designating quantities having two, three, four, or "n" variables respectively.

Quantin, ALBERT MARIE JÉRÔME, b. 1850. Parisian printer. *Origines de l'Imprimerie*, 1877.

Quantitative Hedonism. That form of judging moral actions by their felicific character, in which it is recognized that all pleasures and pains have definite degrees of desirability or its opposite, in addition to their pleasurable or painful quality. See HEDONISM.

Quantity. In a limited sense, anything capable of measurement, increase, or decrease. In wider mathematical use, anything subject to mathematical processes and investigation.

Quantity. Relative length of a syllable, not to be confounded with its force or accent. It is of grammatical as well as prosodical importance, particularly in Latin.

Quantivalence. See VALENCE.

Quaquaversal. Rocks dipping in all directions from a common point.

Quarantine. Methods involving the isolation of the sick having communicable diseases. The word was applied in the Middle Ages to the 40 days' detention of vessels in the Mediterranean ports when they had sailed from countries infected with plague. Out of this has grown the modern system of maritime quarantine, which includes inspection of incoming vessels, isolation of the sick with certain communicable diseases, more especially cholera and yellow fever, detention and observation of the well of the vessels where cases of communicable diseases are found, or are suspected, and disinfection. The word has been applied to inland quarantine, when non-intercourse with a district where communicable diseases are epidemic is enforced; and to domiciliary quarantine, when the inmates of a house are isolated because of the presence of a communicable disease. Regulations against the plague were first established at Venice, then the foremost port on the Mediterranean, ab.1448. A century earlier the household property of such as had died was destroyed to prevent infection. In the U. S. quarantine laws were passed by the colonies, and afterward by the several States. A national act was passed April 29, 1878. The rules now in force were promulgated April 26, 1894.

Quarles, FRANCIS, 1592–1644. English sacred poet. *Feast for Worms*, 1620; *Argalus and Parthenia*, 1622; *Divine Poems*, 1630; *Enchiridion* (prose), 1640. His *Emblems*, 1635, have often been reprinted, sometimes with *School of the Heart* and *Hieroglyphics of the Life of Man*, 1638. He had wit and a gift for epigram: Thoreau said, "He uses language sometimes as grandly as Shakespeare."—His son JOHN, 1624–1665, was a poet.

Quarry. In distinction from a mine, excavation in rock or

Granite Quarries, Monson, Mass.

in ore at the earth's surface; also sometimes underground excavations in non-metalliferous formation, as in gypsum.

Quarry Bed. Stone is said to be laid on its quarry bed when so placed that its strata have the same position as they had in the quarry. This position is conducive to durability.

Quarrying. Stone is quarried by hand tools, by explosives, and by CHANNELING MACHINES (q.v.), the last being extensively used since 1880. By the use of explosives large blocks are detached which are afterward split by hand, but by channeling machines blocks can be cut to dimension size on five of the six sides.

Quart. Fourth part of a gallon, capacity of U. S. 57.75 cu. in., English quart 69.318 cu. in. The ordinary "quart bottle" contains ab. the sixth part of a gallon in U. S.

Quartan Fever. INTERMITTENT FEVER (q.v.), the paroxysms of which occur every fourth day.

Quarter Crack. Separation of the horn fibers in a horse's hoof, caused by bad shoes and bad shoeing. Weakness of the fiber is generally found in hoofs subject to inflammation.

Quarter Days. Four days in the year upon which, by law or custom, moneys payable in quarter-yearly installments are collectable. They differ in different jurisdictions. In N. Y. City, as between landlord and tenant, they are the first days of Feb., May, Aug., and Nov.

Quarter Deck. Uppermost deck of a ship between the main and mizzen masts, when there is a poop; otherwise from the mainmast to the stern. It is the place of honor, and on ships of war this forms the parade.

Quarter Evil. Form of malignant vesicle frequently fatal to the lower order of animals.

Quarterly Review. Founded in London by John Murray 1809; edited by W. Gifford till 1824, and by J. G. Lockhart 1826–53. Scott, Southey, and Croker were among the chief contributors.

Quartermaster. Officer having charge of supplies and transportation in a regiment. For the whole army these are controlled by a quartermaster-general.

Quartermaster's Department, U.S.A. This is under the Quartermaster-general (Brigadier-general), and is charged with the duty of providing means of transportation of every character, either under contract or in kind, which may be needed in the movement of troops and material of war. It furnishes all public animals employed in the service of the army, the forage consumed by them, wagons and all articles necessary for their use, except the equipment of cavalry and artillery. It furnishes clothing, camp and garrison equipage, barracks, store-houses, and other buildings; constructs and repairs roads, railways, bridges; builds and charters ships, boats, docks, and wharfs needed for military purposes, and attends to all matters connected with military operations which are not expressly assigned to some other bureau of the War Department.

Quarter Sessions. Courts of general sessions of the

peace, which are held quarterly. They are mostly for the trial of criminals.

Quarter Staff. Defensive weapon formerly used in England, consisting of a pole ab. 6½ ft. long, which was grasped with both hands, one near the middle and the other between the middle and the end. Dr. Johnson explains its name by this manner of holding. Combats with quarter staves were a common rustic amusement.

Quartet. Composition for four instruments or voices. Quartets for stringed instruments originated with Haydn, and were developed by Mozart and Beethoven. Vocal quartets, up to the time of Wagner, were frequent features in operas.

Quarter-twist Belt. Arrangements of a flat endless belt which transmits power from a pulley on one shaft to another on a shaft at right angles to it and not in the same plane as the first. In the simplest case, with no guide pulleys, the driving pulley must be placed so that the plane through the center of the face passes tangent to the driven pulley at the point where the belt leaves it. The belt in this case drives by an edge only; a wider belt is necessary than for parallel shafts, and the shafts should not be too near, nor should there be too great difference in the diameters of the pulleys. If a guide pulley is introduced, or two, so that the lateral stiffness of the belt is not called upon to help keep the belt in place, more friction is introduced, but the full driving power of the belt can be used. For round or triangular belts with grooved pulleys, no appreciable loss occurs.

Quarter Undulation Plate. Plate of some doubly refracting substance, of such a thickness that, when interposed in the path of a beam of plane polarized light of a particular color, and with its principal section making an angle $\pm 45°$ with the plane of polarization, it converts that beam into circularly polarized light. This result may be brought about in two ways; either a small plate may be of just the right thickness to cause a relative retardation of a quarter wave length in the two rays produced by double refraction, or two thicker plates may be used, so placed that their differential action produces the same retardation.

Quartic. Quantic of the fourth degree; as, $x^4+y^4+4x^3y+6x^2y^2+4x^3y+C$.

Quartine. In Botany, fourth coat in the wall of certain ovules.

Quartley, ARTHUR, 1839–1886. American painter of marine subjects.

Quartz. SiO_2. One of the most abundant minerals in the earth's crust; silica, containing 46⅔ per cent of silicon and 53⅓ per cent of oxygen. It occurs in many forms, colors, and conditions, but is usually recognized with ease by its hardness and its power of resisting the ordinary chemical reagents. When occurring by itself in crystalline masses of great extent, it forms the rock known as quartzite; in rounded grains cemented together, it constitutes sandstone. Associated with other minerals, as feldspar, mica, or amphibole, it is an important constituent of many of the common crystalline rocks. See AMETHYST, CHALCEDONY, CARNELIAN, AGATE, ONYX, FLINT and JASPER.

Quartz Mining. Mining for gold on veins of auriferous quartz, in distinction from the methods employed in the hydraulic process or in working placer deposits.

Quartz Porphyry. Porphyry consisting of feldspar and quartz with large grains of the latter.

Quartz Rock, or QUARTZITE. See QUARTZ.

Quasi Contract. Obligation created by law and not by a true contract. It may be redressed in a contract action.

Quasimodo Sunday. In France and Germany name given to LOW SUNDAY (q.v.).

Quasi-moral Sentiments. Sentiments of repugnance at the performance of actions which we believe to be right and yet have been in the habit of considering as dubious or which would in other circumstances be wrong.

Quasi Rent. Payment received by those who at any time have special advantages or facilities for production, not accessible to all; differing from Rent as usually understood, principally in its more temporary character.

Quasi Taxes. Sources of revenue to the State which are in their nature not exactly the exploitation of public property, nor ordinary taxes collected from individuals, but something between the two, such as the granting of monopolies and lotteries, and fees for public services.

Quassia. *Quassia amara.* Small tree of the natural family *Simarubaceæ*, native of n. S. America; the whole plant is intensely bitter, as are others of the same family. The name Quassia is now transferred to the bitterwood of W. Indies; the *Quassia excelsa*, which contains quassiin, $C_{10}H_{12}O_3$, a bitter principle. The chips have been used in making beer and the decoction of it in medicine and in killing flies.

Quassia (*Quassia amara*).

Quaternary. Division of the Cænozoic age, often called the era of Man, including the Glacial period and all subsequent time. See COLUMN.

Quaternion. In the Roman army, guard of four soldiers, "corporal's guard"; mentioned in Acts xii. 4, in the narrative of St. Peter's imprisonment and deliverance.

Quaternions. System of analysis devised by Sir W. R. Hamilton ab. 1843. It grew out of efforts to interpret the imaginaries of algebra. The elements are: Vectors ≡ V, tensors ≡ T, versors ≡ U, scalars ≡ S, and quaternions. A vector is a symbol of transference in direction or a directed line. The unit vector is the same for all lines having the same direction. That which repeats the unit vector to produce any line is called the tensor, and is a coefficient of the unit vector. A vector operating to turn another at right angles to itself is a versor. A unit vector as an operator turns a perpendicular vector through a quadrant at each operation, and is a quadrantal versor. The $\sqrt{-1}$ is an indeterminate unit vector. Tensor and versor are operators. A quaternion is the quotient of two vectors: it is shown to be the product of a tensor and a versor, and also the sum of two parts, one a scalar and the other a vector at right angles to the plane of the two vectors involved.

Quatre-Bras. Hamlet of Belgium; scene of conflict June 16, 1815, two days before Waterloo, between the French under Ney and the Allies. The Duke of Brunswick was slain: Ney withdrew, having lost over 4,000 men.

Quatrefages, JEAN LOUIS ARMAND DE, 1810–1892. Prof. Paris 1850; naturalist and anthropologist. *Souvenirs*, 1854, tr. 1857; *History of Man*, 1869, tr. 1875; *Les Pygmées*, 1887.

Quatrefoil. In Gothic Architecture, a four-leaved perforation.

Quatremère, ÉTIENNE MARC, 1782–1857. Prof. Rouen 1809, Paris 1819. *Language and Literature of Egypt*, 1808; *The Nabatheans*, 1835. He tr. histories of the *Mongols of Persia*, 1836, and the *Mameluke Sultans*, 1837–40.

Quatremère de Quincy, ANTOINE CHRYSOSTOME, 1755–1849. Prof. Paris 1818. *Jupiter*, 1814; *Fine Arts*, 1823; *Raphael*, 1824; *Historic Dict. of Architecture*, 2 vols., 1833; *Canova*, 1834; *Michelangelo*, 1835.

Quay, MATTHEW STANLEY, b. 1833. U. S. Senator from Pa. since 1887; chairman Republican National Committee 1888–91; manager of the State machine.

Quebec. Province of Canada. Its area is 228,960 sq. m. The surface is undulating and hilly, consisting of a gentle southward slope from the summit, which divides the waters of the St. Lawrence, the chief river, from those flowing into Hudson's Bay. It has an extensive commerce, fisheries, a large lumber business, furnished by the forests which cover it, and some agriculture. The capital is Q. The province was formerly Lower Canada. It was entered 1534 by Cartier, who took possession for France. The first permanent settlement was at Q. 1608: in 1759 the city was taken by Gen. Wolfe. The entire French possessions were surrendered to England 1760. The provinces of Upper and Lower Canada were formed 1791,

but united 1841, and the seat of government finally established at Ottawa. The various provinces were united 1867 into the Dominion of Canada. Pop., 1891, 1,488,535, of whom some 300,000 speak English; seven-eighths are Roman Catholics.

Quebec. Capital of the province of Q., on the n. bank of the St. Lawrence; naturally a strong place; founded 1608 by Champlain. Its citadel was originally designed by Vauban; but the modern one, built 1823, is after Wellington's plans. Q. was the scene of the memorable conflict between Wolfe and

Citadel of Quebec.

Montcalm 1759, which marked the end of the French rule in N. America. It was unsuccessfully besieged by the Americans under Montgomery 1775, and suffered greatly by fires 1815, 1845 twice, 1866, 1870, 1876, 1881. Pop., 1891, 63,090.

Quebracho. *Aspidosperma quebracho.* Tree of the natural family *Apocynaceæ*, native of S. America, where its bark is used as a febrifuge. It contains the alkaloid Aspidospermine.

Queen Anne's Farthings. Farthings struck for the improvement of the coinage in 1713–14.

Queen Anne Style. See RENAISSANCE.

Queen Anne's War. War of the Spanish Succession, 1702–14, so far as it concerned the American colonies. It included the massacre at Deerfield, Mass., 1704, the destruction of several Spanish settlements in Fla. 1704–5, an attack of the French on Charleston 1706, and three attempts by New England troops to capture Acadia, of which the last, 1710, was successful.

Queen Charlotte Islands. In the Pacific, off British Columbia; area ab. 5,000 sq. m. They have some mineral resources, and a small Indian population.

Queen of Heaven. Oriental goddess Astarte, the Moon; sometimes the planet Venus. Her worship was exceedingly licentious.

Queenpost. One of two principals of a trussed roof.

Queen Post Truss. Bridge truss having only two vertical members, the top of each being connected to the abutment

Queen Post Truss.

by an inclined strut; used only for highway bridges of less span than 50 feet.

Queensberry, JOHN SHOLTO DOUGLAS, MARQUIS OF, b. 1844, Marquess 1858. He drew up rules for glove fights which fixed the time of rounds to three minutes, the time between rounds to one minute, and the time allowance for a fallen man to rise to ten seconds. Wrestling and hugging were forbidden.

Queen's College and University. At Kingston, Canada; incorporated 1841. It has 64 instructors, organized in five faculties: Arts, Theology, Medicine, Law, and Practical Science. The last includes the various branches of engineering, with chemistry, biology, architecture and navigation.

Queen's (or KING'S) **Counsel.** Barristers and sergeants appointed by letters patent, and who may not, except by license from the crown, take a brief against the crown; they also renounce written pleadings.

Queen's (or KING'S) **Evidence.** When an accused person turns queen's evidence, he confesses his guilt and offers himself as a witness against his accomplices. Unless his testimony is corroborated, the prisoners are acquitted notwithstanding. See STATE'S EVIDENCE.

Queensland. British colony in n.e. Australia. The surface is mainly made up of semi-arid plains. Nearly parallel to the e. coast is a range of low mountains. Area, 668,224 sq. m.; capital, Brisbane; pop., 1891, 422,776.

Queen's Metal. Alloy, consisting of 75 per cent tin, 8.5 antimony, 8 bismuth, and 8.5 lead, used for table ware.

Queenstown. Irish seaport, in Cork harbor; stopping-place of transatlantic steamers, to land and take on mails. Pop., 1891, 9,123.

Queenstown Heights. In Ontario, Canada. Here ab. 1,000 Americans attacked Oct. 13, 1812, but had to surrender to the British, most of their forces refusing to cross the river.

Queiros, PEDRO FERNANDES DE, 1560–1614. Portuguese seaman in Spanish service; explorer of the Pacific 1605–6; discoverer of the Hebrides and other islands.

Quenstedt, FRIEDRICH AUGUST, 1809–1889. German paleontologist and mineralogist. *Grundriss der bestimmenden Krystallographie*, 1873; *Handbuch der Mineralogie*, 1853 to 1877.

Querard, LOUIS FRANÇOIS, 1706–1749. San Domingan poet.

Quercia, JACOPO DELLA, 15th cent. Italian sculptor.

Quercite. $C_6H_7(OH)_5$. Mpt. 235° C. Hard prisms of sweet taste, soluble in eight parts water; found in acorns. It does not produce alcohol by fermentation.

Quercitin. $C_{24}H_{16}O_{11}+3H_2O$. Lemon-yellow crystals, produced by the decomposition of quercitrin by sulphuric acid; yellow dye-stuff and a constituent of commercial flavine prepared from oak bark.

Quercitrin. $C_{36}H_{38}O_{20}$. Substance crystallizing in yellow needles, present in the quercitron oak bark and probably in bark liquor. Dilute acids charge it to quercitin.

Quercitron. *Quercus tinctoria.* Black Oak of e. N. America.

Queretaro. Capital of the State of Q., Mexico, 153 m. n.w. of the city of Mexico. It has large manufactures of cigars. Pop. ab. 36,000.

Quern. Rude mill for grinding corn by hand, still used in parts of Ireland and elsewhere. The most usual form consists

Quern.

of two flat circular stones. The grain is dropped in the central opening, while the upper stone is revolved by a handle inserted near the outer edge.

Querouaille, LOUISE DE. See PORTSMOUTH, DUCHESS OF.

Quesada, GONZALO XIMENEZ DE, 1498–ab.1596. Explorer of Colombia 1536; conqueror of Bogota, and founder of the Spanish city 1537–38. His claims to be governor were disowned by Charles V.

Quesada, MANUEL DE, ab.1830–1886. Leader of the Cuban insurrection 1868–70.

Quesada, VICENTE GASPAR, b. 1820. Argentine author and journalist.

Quesnay, FRANÇOIS, 1694–1774. French economist, founder of the school of the Physiocrates; physician and adviser of Louis XV.; encyclopedist. *Tableau Economique*, 1758; *Physiocratic*, 1768.

Quesnel, PASQUIER, 1634–1719. French Oratorian and Jansenist, in exile from 1685. He edited the works of Leo I., 1675. His *Moral Reflections on N.T.*, 8 vols., 1663–99, tr. 1719–25 and 1790, were condemned by the papal bull *Unigenitus*, 1713.

Quételet, LAMBERT ADOLPHE JACQUES, 1796–1874. Director Brussel's Observatory from 1828; writer on meteorology, physics, and statistics. *Sur l'Homme*, 1835; *Du Système Social*, 1848.

Quetelet's Law. Law connecting the phenomena of phænology and of the weather, or general principle that a given stage of growth requires given definite preceding climatic conditions.

Quetzaltenango. Second city of Guatemala, 95 m. n.w. of Guatemala City. It is the center of the trade in native cloth. Its port is Champerico on the Pacific. Pop. ab.20,000, mostly Indians.

Quevedo, José Heriberto Garcia de, 1819–1871. Spanish poet, b. in Venezuela.

Quevedo Villegas, Francisco Gomez de, 1580–1645. Spanish poet and prose satirist; Sicilian Finance Minister 1611–19; imprisoned 1639–43. *Gran Tocaño*, 1626; *Politica de Dios*, 1626; *Visions*, 1627; *Hell Reformed*, 1628. He wrote also many serious works, much fugitive verse, and some dramatic pieces.

Quezalcoatl. "Feathered Serpent," god of the wind; a Toltec divinity, averse to human sacrifices, whom the Aztecs worshiped but dreaded, and for whose return as their deliverer the Toltecs longed. The identification of Cortez with Q. paralyzed the resistance of Montezuma until too late.

Quiberon Bay. In w. France; scene of engagements between French and English, Nov. 20, 1759, and June, 1795. In the last Hoche defeated 4,000 Chouans and other royalists, supported by a British fleet.

Quichua. Chief Indian tribe of Peru, and modern representatives of the Incas; now reduced from 30,000,000 to 2,000.000. They are of an olive complexion, beardless, with well-developed bodies, large chests, and short legs. A special "Wormian" bone known as the Inca bone is present in the skull. They are distrustful of the whites, obstinate, and lazy, but kind to their families and domestic animals. The latter

Quichua Indians.

are rarely killed, even for food, and kept in the house, which is a circular hut of unhewn stone. They live principally on corn, potatoes, and barley, chew coco, and drink chicka liquor to excess. Many are peons. Little or no clothing is worn, even in cold weather. The language is guttural, but rich in words of sentiment and poetry. Erotic songs, some of which date from the time of the ancient Incas, are sung. The people are pious, nominally Catholic, but very superstitious.

Quick, Robert Hebert, 1832–1891. Anglican divine and teacher. *Educational Reformers*, 1868.

Quick Lime. Produced by burning limestone. It slakes when water is applied to it. See Mortar.

Quick-return Motions. Mechanical movements in a machine tool operating by reciprocation, by which the return traverse is made more rapidly when the tool is not cutting than the acting traverse when the tool is at work. The driving work is equalized also, as the slow stroke gives greater power to oppose the greater resistance. When the motion comes from a crank-pin, as in shapers and slotters, the Whitworth quick-return is the most usual. The driving disk revolves uniformly upon an axis of large diameter, and carries a crank-pin. This fits a slot in the crank-arm which drives the tool, the center of this last arm not coinciding with the axis of the first shaft, but eccentric to it. While the lever-arm R of the power is constant, the lever-arm of the tool-crank varies between (R+e) and (R—e), e being the eccentricity or distance between centers of the two cranks. The tool moves quickest when R is driving (R—e). For tools driven by rack and pinion movements, the quick return may be effected by one belt in connection with two trains of gear, or by two belts and one train of gear. The latter simpler plan has open and crossed belts, which are shifted by the adjustable dogs, the driving pulleys being of different diameters for the forward and the back strokes and the followers of the same diameter, or else the difference is made on both shafts. The fast pulleys on the tool are on the same shafts, and the same reducing train is driven slowly forward and fast back. With one belt and two different trains of gear, the forward motion from one belt pulley has an odd number of wheels in it with greater reduction of velocity, and the return belt pulley drives a train of gears with an even number of wheels and less reduction of speed, both trains connecting at the driving arbor of the tool. This same method has been applied, using an outside gear of small diameter and an inside gear of large size on the same shaft, so that one pulley drove the large gear forward and the other drove the smaller gear for the return. Or, again, two concentric bevel wheels were driven by wheels on opposite sides of their common center. The driving wheels of the same or different sizes drove the concentric wheels opposite ways and at different speeds. The quick-return is usually 2 to 1 or 3 to 2. See Planer, Shaper, and Slotter.

Quicksand. Bed of sand in its place in the earth, in which the cohesion of the grains is so much reduced by the pressure of water that the whole mass has a tendency to move like a liquid, when opposing resistances are removed.

Quicksilver. See Mercury.

Quietism. Mystical movement started ab.1675 by Molinos (q.v.). Its congeners were Jansenism and Pietism; its chief exponent was Mme. Guyon.

Quiller-Couch, Arthur T. ("Q."), b. 1863. English novelist and essayist. *Dead Man's Rock*, 1887; *Splendid Spur*, 1889; *Adventures in Criticism*, 1896; *Wandering Heath*, 1896.

Quin, James, 1693–1766. English comedian; prominent 1716–51, and considered the chief immediate predecessor of Garrick, who appeared 1741. His best parts were *Falstaff* and *Captain Macheath*.

Quinaldine. $C_{10}H_9N$. Methylquinoline. Liquid, bpt. 138° C., of peculiar odor, present in coal tar; isomer of lepidine.

Quinault, Philippe, 1635–1688. French dramatist, Academician 1670.

Quinby, Isaac Ferdinand, 1821–1891. Prof. Univ. Rochester 1851–61 and from 1864; Brig.-gen. U.S.A. 1862–63, serving in the West and commanding the Yazoo Pass expedition, Miss., 1863.

Quince. *Cydonia vulgaris.* Low tree of the Apple family, native of temperate Europe and Asia, widely cultivated for its edible fruit. The Japan Quince, *Cydonia japonica*, is a well-known red-flowered shrub, much planted for ornament.

Japan Quince.
a, ripe fruit; *b*, section of same.

Quincuncial. In Botany, imbricated æstivation of certain five-parted flowers.

Quincy. Capital of Adams co., Ill., on the Mississippi, 160 m. n.w. of St. Louis; founded 1822, chartered 1839. It is entered by 5 railroads, and has a good trade and extensive manufactures. It is supplied with water by pumping. Pop., 1890, 31,494.

Quincy. City of Norfolk co., Mass., 8 m. s. of Boston; founded 1625; part of Braintree till 1792; chartered 1888; noted as the birthplace of John Hancock, John and J. Q. Adams, for its granite, and for its public schools. Pop., 1890, 16,723.

Quincy, Josiah, 1744–1775. Boston patriot and orator of high degree, in England 1774. His character resembled that of Joseph Warren; his early death was a public loss.—His son, Josiah, LL.D., 1772–1864, was M.C. 1805–13, and in 1811 advocated disunion in a famous speech denouncing the Southwest. He is memorable as Mayor of Boston 1823–28, and Pres. of Harvard 1829–45. *Hist. Harvard Univ.*, 1840; *Speeches*, 1874. His *Life*, 1867, was written by his son, Edmund, 1808–1877. *Wensley*, 1854.

Quincy, Quatremere de. See Quatremere de Quincy.

Quindecagon. Polygon of fifteen sides.

Quinet, Edgar, 1803–1875. Prof. Lyons 1839, Paris 1842–46; in exile 1852–70; author of three epics, *Ahasuerus*, 1833; *Napoleon*, 1836; *Prometheus*, 1838; and of many prose works, especially *Genius of Religions*, 1842; *Merlin*, 1860; and *The Revolution*, 1865.

Quinette de Rochemont, Emile Théodore, b. 1848. French civil engineer and professional writer.

Quinidine. Mixture of cinchona alkaloids, found in trade. The commercial sulphate is largely cinchonidine sulphate. Some consider that an alkaloid called quinidine is present.

Quinine. $C_{20}H_{24}N_2O_2.3H_2O$. Intensely bitter base, prepared from Cinchona bark; white needles, mpt. 177° C. The common salts are the sulphate and chloride, both used as febrifuges. See PERUVIAN BARK.

Quinisext Council. At Constantinople 692; called as a supplement to the 5th and 6th councils 555 and 680; not recognized by R.C. Ch.

Quinnat. See ONCORHYNCHUS.

Quinoa. *Chenopodium quinoa.* Herb of the natural family *Chenopodiaceæ*, native of Peru, extensively cultivated in the Andes for its seeds, which when ground into meal are an important article of food.

Quinoline. C_9H_7N. Bpt. 236° C. Liquid, of characteristic odor and basic properties; present in coal-tar and produced by the distillation of many bases, such as quinine; prepared by the action of sulphuric acid and glycerin upon a mixture of aniline and nitrobenzene; used in the production of certain dye-stuffs.

Quinoline Blue. See CYANINE.

Quinoline Red. $C_{26}H_{18}N_2Cl$. Product of the action of benzotrichloride upon a mixture of quinaldine and a chinoline; dark brown needles, soluble in hot water; used in photography.

Quinoline Yellow. $C_{18}H_{11}NO_2$. Yellow product, prepared by the action of phthalic anhydride and zinc chloride on quinaldine; soluble in alcohol, but not in water; used to color varnishes and lacquers. The water-soluble quinoline yellow is produced by the action of sulphuric acid upon the compound described above. It is a sodium salt of a sulfo acid, and is used in dying wool.

Quinone. $C_6H_4O_2$. Mpt. 116° C. Yellow needles or prisms of a pungent odor, soluble in alcohol and ether; made by oxidizing hydroquinone. As a class the quinones are mainly yellow crystalline substances, obtained by the oxidation of paradihydroxy compounds.

Quinquagesima. Sunday before Lent.

Quinquefoliolate. Compound leaves composed of five leaflets, as the Virginia Creeper.

Quinquejugate. Pinnately compound leaves with five pairs of leaflets.

Quinquelocular. In Botany, ovaries or pericarps with five cavities.

Quinqueremes. Ancient vessels with five banks of oars. See TRIREME.

Quinsy. Inflammation of the tonsils, causing great distress and discomfort. Persons having one attack are subject to repetitions. It usually forms an abscess, which, when lanced or spontaneously ruptured, brings prompt relief.

Quintain. Post with a cross-bar from which hung a bag of sand and a board, to be tilted at by horsemen; sometimes

Quintain.

in other forms. The object was to strike the board at such speed as to be well past before the bag of sand could strike the tilter on the back.

Quintal. 100 wt., mostly for weighing fish. The old French weight was ab. 108 lbs., the modern weight is equal to 100 kilograms, ab. 220 lbs. In Newfoundland 112 lbs.

Quintana, MANUEL JOSÉ, 1772–1857. Spanish poet and biographer, imprisoned 1814–20; senator 1833. *Espanoles celebres*, 1807–34.

Quintard, CHARLES TODD, M.D., LL.D., b. 1824. Prof. Memphis Medical College 1851; took orders in the Protestant Episcopal Church 1855; Bp. of Tenn. 1865.

Quintic. Quantic of the fifth degree; as, $ax^5+bx^4y+cx^3y^2+dx^2y^3+exy^4+y^5$.

Quintilian (MARCUS FABIUS), ab.35–ab.96. Latin writer on Eloquence and Oratorical training. His chief work is *De Institutione Oratoria Libri XII.*

Quintus Curtius Rufus, 1st cent. Latin biographer of Alexander the Great. His book is unreliable: most of it survives.

Quintus Smyrnæus, 4th cent. Greek epic poet, whose *Posthomerica*, in 14 books, completes the story of Troy from the point where the *Iliad* leaves it. His style is not attractive.

Quipu. Means of conveying instructions, commands, and records by knotted cords, used in Peru before the conquest.

Quirinal. One of the hills of Rome, n.e. of the Forum.

Quirinus. See ROMULUS.

Quirites. In ancient Rome, burgesses, or warrior-citizens; sometimes citizens as opposed to soldiers. Mommsen says the word originally meant lancemen: others derive it from Cures, a Sabine town incorporated with Rome.

Quitch Grass. See COUCH GRASS and QUACK GRASS.

Quit-Claim. Conveyance of such title as the grantor has, without covenants of any kind.

Quitman, JOHN ANTHONY, 1799–1858. Chancellor of Miss. 1828–34; Brig.-gen. U.S.A. 1846; highly distinguished in the war with Mexico; Gov. of Miss. 1850; M.C. from 1855; advocate of extreme Southern ideas, anticipating 1851 secession and the Confederacy.

Quito. Capital of Ecuador; on e. slope of the volcano Pichincha, 9,300 ft. above the sea; subjected to the Incas ab.

Market Scene in Quito.

1470; taken by Spaniards 1534. An earthquake in Feb., 1797, destroyed ab. 40,000 persons; another, March, 1859, ab. 5,000. Pop. ab. 35,000.

Quit Rent. Certain established rents of the freeholders, which when paid make the tenant quit and free of all other services.

Quittor. Ulcer or abscess of the foot of a horse, due to a nail prick, thrush, or bruise which may finally attack the pedal bone.

Quoin. In Architecture, a squared stone, employed at the

angles of walls or in the frames of openings, in connection with rubble or brick-work, in order to secure a true line, or to strengthen the wall.

Quoin. Corner of a masonry wall projecting beyond the two faces, so as to give the appearance of a corner pier.

Quoits. Game is played by any number, usually even, sides being chosen. It consists of pitching round metal disks, convex on the top and flat on the bottom, with an aperture in the center, at a peg called a hob, set in the ground and projecting therefrom ab. 2½ in. There are two of these hobs, set 18 or 21 yds. apart, for large or smaller quoits. The players stand at one hob while pitching for the other. The side having one, two, or more quoits nearer the hob scores accordingly. The game was probably derived from "throwing the discus" of the Greeks and Romans.

Quorum. Number of members of a body whose presence is requisite for the transaction of business. T. B. Reed, as Speaker of the House, ruled, Sept. 1890, that a quorum was determined by the number present, whether voting or not. It had previously been ascertained by the votes actually cast.

Quotidian. That which takes place every day. Quotidian fever is an intermittent, the paroxysms of which occur every day. It may be simple, double or triple, according to the number of paroxysms occurring in 24 hours.

Quotient. Result of division; expression showing how many times one quantity is contained in another.

Quo Warranto. Old common-law writ to inquire by what authority a person or corporation held an office or exercised a franchise.

R

Ra. Ancient solar deity of Egypt, worshiped especially at Heliopolis.

Raabe, WILHELM, b. 1831. German humoristic novelist. *Horacker*, 1876; *Der Lar*, 1889.

Rabanus, or **Hrabanus,** MAURUS, ab.776–856. Abbot of Fulda 822–842, Abp. of Mainz 847; eminent for learning; opponent of transubstantiation and predestination.

Rabat. Seaport of Morocco, now much impaired; on the Atlantic; noted for its carpets and other manufactures. Pop. ab. 26,000.

Rabaud, CHARLES HECTOR, 1711–1764. Writer on the laws, etc., of the French West Indies. His work, 6 vols., 1761–65, is of historical value.

Rabbis. Jewish teachers of the Law; authors or compilers of a large body of literature, of which the most important examples are the Mishnah and Talmud, with sundry commentaries upon them.

Rabbit. See LEPUS and HARES.

Rabelais, FRANÇOIS, ab.1495–1553. French humorist, originally a Franciscan monk. His *Gargantua*, 1532, burlesqued familiar legends, and was continued in a higher vein in *Pantagruel*, 1535–63, whose breadth and freedom of thought provoked much criticism: it bears marks of learning as well as of riotous mirth. He held benefices, practiced medicine, made almanacs, and was a more reputable person than the legends represent him.

Francois Rabelais.

Rabener, GOTTLIEB WILHELM, 1714–1771. German satirical poet.

Rabenhorst, GOTTLOB LUDWIG, 1806–1881. German botanist; prolific writer.

Rabies. See HYDROPHOBIA.

Rabourdin, HENRI ÉTIENNE, 1711–1764. French abbot, writer on America.

Rabshakeh. Assyrian officer, herald of Sennacherib's invasion of Judea 702 B.C.; mentioned Isa. xxxvi.; perhaps title rather than name.

Rabulas, d. 435. Bp. of Edessa; strict promoter of orthodoxy. Some of his works survive, and were pub. 1865.

Rabutin. See SÉVIGNÉ.

Racahout. Arabian substitute for chocolate; a preparation of roasted acorns powdered with sugar and aromatics.

Racan, HONORAT DE BUEIL, MARQUIS DE, 1589–1670. French poet and Academician.

Raccoons. *Procyon lotor*, the common "coon," is found in all woods of U. S. It is 3 ft. long, including tail of nearly a foot. Its fur is extra dense, gray in color mixed with black, and tail ringed. The body is stout; the muzzle pointed, with a black stripe across the face. It walks either planti-

Raccoons (*Procyon lotor*).

grade or digitigrade. It is fond of eggs, chickens, green corn, and fish, and souses ordinary meat in water before swallowing it. It can be tamed. Its cunning is proverbial among hunters. It nests in trees or in holes in banks. Three to six young are born at a time. California has the Black-footed Raccoon (*P. hernandezii*), and in S. America is *P. cancrivorus*, the Crab-eater. See PROCYONIDÆ.

Race, CAPE. Southeast point of Newfoundland.

Raceme. Elongated, indeterminate flower-cluster, having the flowers borne on pedicels of about equal length, as in the Lily of the Valley and Locust.

Racemic Acid. Optically inactive form of TARTARIC ACID (q.v.).

Racemose. Flowers arranged in racemes, or forms of flower-clusters resembling racemes.

Racemose Vesicles. Branched water-sacs that project upward from the circumoral ring into the body cavity of a star-fish. They are nine, one for each radius and interradius, except the one occupied by the Stone Canal.

Racemulose. Diminutive of racemose.

Races of Men. See MAN.

Rachel. Daughter of the Mesopotamian Laban, wife of his nephew Jacob; mother of Joseph, and ancestress of the tribes of Ephraim, Manasseh, and Benjamin.

Rachel (ÉLISA RACHEL FELIX), 1820–1858. French tragic actress of highest rank, born a Swiss Jewess; famous from 1838; unsurpassed, if not unequaled, in passionate parts, as Phèdre and Marie Stuart.

Rachidian Teeth. Those of the rachis or central row of the lingual ribbon (radula) of the Gastropods.

Rachilla. In Botany, axis of the spikelet in *Gramineæ*.

Rachis, or RHACHIS. Axis of elongated flower-clusters; also the midrib of compound leaves, especially those of ferns.

Rachitis, or RHACHITIS. See RICKETS.

Racine. Capital of R. co., Wis., on Lake Michigan; founded 1836, chartered 1848; seat of R. Coll., established by P. E. Ch. 1852. It has considerable manufactures, and a good lake trade. Pop., 1890, 21,014.

Racine, JEAN BAPTISTE, 1639–1699. French tragic dramatist of the first rank; Academician 1673. His masterpieces are *Iphigénie*, 1675; *Phèdre*, 1677; *Esther*, 1689, and *Athalie*, 1691. Other plays are *Andromaque*, 1667; *Britannicus*, 1667; *Bérénice*, 1670; *Bajazet*, 1672; *Mithridate*, 1673; and a comedy, *Les Plaideurs*, 1688.—His son LOUIS, 1692–1763, wrote *Religion*, 1742, and other serious poems.

Racing. The record for pacing one mile was lowered to 1.59¼ seconds by Star Pointer and the double team record to 2.09¼ seconds by John R. Gentry and Robert J. in 1897. See HORSERACING.

Rack. In Ore-dressing, form of apparatus in which small charges of pulp are separately treated on a smooth inclined surface, the poorer portions running to waste and the richer being washed off at frequent intervals.

Rack. Machine of torture used from ancient times to force confessions; wooden frame on which the accused lay,

The Racking of Cutbert Symson, in the Tower of London.

while his legs and arms were stretched to dislocation by a windlass. Its employment was long general: in England this extended 1447–1628.

Rack. Toothed wheel whose radius is infinity or whose pitch surface is a plane (see GEAR WHEELS); useful to transform rotary into reciprocating motion; also fixed arcs of toothed surfaces with finite radius, upon which a pinion rolls for moving drawbridge spans, turntables, etc.

Rackarock. Sprengel explosive, 79 per cent potassium chlorate and 21 nitrobenzene for maximum intensity, which under water is 1.08 times that of No. 1 dynamite. It was used to blow up Flood Gate in N. Y. Harbor. It will explode by percussion.

Rackets. Later variety of game with bat and ball, derived from Tennis (see COURT TENNIS). A racket-court may be from 50 to 80 ft. long, and 30 to 40 wide, with a very high roof and a back wall of less height, having at its top a gallery for spectators. Running along the front wall, which is usually black, is a board or balk a little over 2 ft. high, and a white line called the cut line is traced across this wall nearly 8 ft. from the floor. The floor is of level asphalt and divided into sections (see diagram). The game is begun by one of the players serving the ball against the front wall above the white line so that it shall on the rebound strike in either C or D, according as he serves from B or A. The opponent then returns it either on the fly volley or first bound, so that it strikes the front wall above the lower line.

A and B. The server must have one or both feet inside one of these spaces when serving.

C and D. The spaces into which the server must send the ball on the rebound from the front wall. If he serves from B, the ball must strike in C; if from A, in D.

Rack Railroads. Those having rails with pinions which engage in cogs on the locomotive wheels, so as to permit the ascent of steep grades. In the Abt system there are three series of racks so alternating that a tooth of the wheel is always between two pinions. In the Riggenbach system a series of horizontal bars like rounds of a ladder is used. Friction clutches are also employed as an additional safeguard.

Rack Railroad.

Rack railroads have been built on Mt. Pilatus in Switzerland and up many other mountains of Europe. Pike's Peak, Col., is ascended by a rack road on the Abt system, its length being 8¾ miles and its rise 7,600 ft.; the locomotives weigh 25 tons and push two loaded cars up the grade at a speed of ab. 4 miles per hour. Mt. Washington, N. H., is ascended by a road having a maximum grade of 1,980 ft. per mile, a rack rail of simpler type than the Abt being used.

Rack Rent. Rent whose amount is determined by open competition in a country where land is in demand, instead of being either of a customary amount or settled by private arrangement.

Radbertus, PASCHASIUS, ab.790–865. Benedictine; Abbot of Corbie, n. France, 844–851; canonized 1073, chiefly for his book on *The Lord's Body and Blood*, which urged the doctrine since called transubstantiation.

Radcliffe, MRS. ANN (WARD), 1764–1823. English romancer. Her *Mysteries of Udolpho*, 1794, and other wild tales were long popular.

Radcliffe, CHARLES BLAND, M.D., 1822–1889. English medical writer. *Epilepsy*, 1854.

Radcliffe, JOHN, 1650–1714. London physician of eminent popularity; M.P. 1713.

Radcliffe College. At Cambridge, Mass.; was chartered 1893. It grew out of "A Society for the Collegiate Instruction of Women," organized 1878, and was known for a time as The Harvard Annex, instruction being given by some of the Harvard faculty. Its degrees are signed by the Pres. of Harvard. It has 90 instructors, 358 students, and a library of 9,734 vols.

Raddi, GIUSEPPE, 1770–1829. Italian explorer in Brazil 1817; writer on its cryptogams and plants, 1822–25.

Radetzky, JOHANN JOSEPH, GRAF VON, 1766–1858. Austrian officer, field-marshal 1836; distinguished in the wars against Napoleon, and 1848–49 in n. Italy, where he suppressed the risings and was Gov. till 1857.

Radford, WILLIAM, U.S.N., 1808–1890. Commander 1855, Commodore 1863, Rear-admiral 1866; prominent in the attack on Fort Fisher Dec. 1864, and its capture Jan. 1865.

Radial Canals. Tubes that radiate from the central stomach, to open into a circular canal at the margin of the umbrella of *Medusæ*.

Radial Drill. Form of machine tool for drilling, in which the revolving spindle is carried upon a horizontal arm or radius, which swings around an upright column. The spindle carriage can be traversed horizontally along the radius, to adjust the point of the tool over the center of holes in a heavy

Radial Drill.

work which it would be hard to locate under a fixed spindle. Moreover, the spindle can operate easily on end of work too tall to stand under ordinary upright drills. Sometimes, though rarely, the radius has horizontal adjustment on the column. See DRILL.

Radial Plates (or RADIALIA OF CRINOIDS). See BASAL PLATES.

Radial Symmetry. Displayed in radiated animals, as jelly-fishes, star-fishes, and coral polyps. Their bodies are divisible into a number of similar segments. In some corals and in ctenophores there are two kinds of segments, one sort being situated at right angles to the other; such symmetry is biradial. The radial axes through the center of each sector are known as perradii; those that separate the sectors are interradii; those that lie on each side of a perradius are adradii, while those near interradii are subradii. See ANTIMERES, PARAMERES, and ACTINOMERES.

Radial Valve Gear. Type of mechanical motions, to which the Joy, Brown, and Marshall gears belong, for operating the valves of steam engines, and permitting a variable cut-off and reversal of the direction of motion of engine. The eccentric rod proper is usually at right angles to the valve stem, which is pinned to the former at one point, and while one end of the eccentric rod travels in a closed curve, such as a circle or an ellipse, another point is compelled by links or slides to a motion in an open or closed curve. The variation in cut-off and the reversal are made by varying the angle which the axis of this last curve makes with the mean line of direction of the eccentric rod.

Radian. Circular arc, equal in length to the radius of the circle; used as the unit in arcual or "π" measure of arcs and angles. The radian $= 57° 17' 44.8''$ in degree measure. Its ratio to the semi-circumference is $3.14159+(\equiv \pi)$.

Radiant. Large, neutral flowers of certain shrubs of the genera *Viburnum*, *Hydrangea*, and others.

Radiant Energy. Any wave motion in the ether. See RADIATION.

Radiant Heat. Misnomer for radiation of wave-length longer than that of visible radiation. See RADIATION.

Radiant Matter. Fourth form of matter, called by Faraday 1816 "as far beyond vaporization as that is above fluidity." When the gaseous contents of a glass globe have been rarefied to an extreme degree, the residue assumes peculiar properties. That these properties may manifest themselves, the mean free path of the molecules must be at least as long as the largest dimension of the inclosing tube. A body of particles in this condition is known as a Crookes' layer. If the discharge of an induction coil be passed through the tube, the particles of radiant matter seem to shoot off in straight lines from the negative pole with very great velocity; often in coming in contact with solid matter, glass, for instance, brilliant phosphorescence is produced. The colors are various and characteristic, and thus a new field for the spectroscope has been opened. Radiant matter is also capable, when electrified, of producing many interesting mechanical effects. If the stream of molecules be directed upon the vanes of a small revolving wheel, it will arrest or produce great velocity almost immediately. If the negative pole within the tube be a concave surface, so that the particles are directed to a focus on a platinum strip, the latter may be heated nearly to the fusing point. Very elaborate and ingenious experiments have lately been made on this ultragaseous state of matter by W. Crookes. See CROOKES' TUBES.

Radiata. Animals possessing radial symmetry; now included in the Cœlenterates and Echinoderms.

Radiating Power. Property of emitting a greater or less quantity of radiant energy. Lampblack is one of the best radiators known. The radiating and absorbing powers of bodies are found to be equal in value, good radiators being good absorbers. Polished surfaces are poor radiators. See ABSORBING POWER, RADIATION and NON-CONDUCTORS.

Radiation. Process of energy transference from one source to another by a wave motion, propagated by transverse vibrations in the so-called luminiferous ether. [The ether wave-motion itself is sometimes called radiant energy.] Radiation is set up in the ether by the vibration of the molecules of ordinary matter. It may be due entirely to the motion of the molecule as a whole, or partly to the vibrations of the parts of the molecules, this latter condition being similar to that of a plate when vibrating in segments. All bodies not at the absolute zero of temperature are radiators. The minimum wave length of the radiant energy sent out is an inverse function of the absolute temperature of the body, though all waves longer than this minimum are present at the same time. If the temperature of the radiator is above ab. 525° C., the rays are capable of affecting the eye and are called light. Of two bodies at the same temperature, that one is said to have the greater radiating power which is capable of emitting the larger amount of radiant energy per unit of surface. The radiating power of the sun is ab. 7,000 horse-power per sq. foot of his surface: of this ab. $\frac{1}{225} \times 10^{-7}$ part reaches the earth, and is equivalent to ab. 83 foot-pounds per sq. foot of the earth's surface per second. Radiant energy is sometimes divided into three parts, for convenience of reference; viz., radiant heat (sometimes called the DARK HEAT [q.v.] rays), light, and the actinic rays. The actinism or power of decomposition of any particular set of rays depends entirely upon the nature of the compound to be affected; hence it cannot be said that the actinic rays occupy one position in the scale of wave-lengths any more than another. The wave-length of radiant energy varies through a very wide range. The length of waves radiated from a piece of ice have been measured by Prof. Langley. From this lower limit we pass through the range of the visible rays, *i.e.*, from ab. $\frac{1}{18000}$ of a centimeter to ab. $\frac{1}{25000}$ of a centimeter, to the shortest waves which can be rendered visible only by fluorescence. The vibration frequency is said by Langley to lie between the limits of ab. 107×10^{12} and ab. 40.000×10^{12} per

second, comprising by musical analogy ab. 8.5 octaves. Of these light occupies hardly one octave, the limits of frequency being ab. 392×10^{12} and 757×10^{12} per second.

Radiator. Closed vessel within which steam or hot water circulates to keep it hot, and which heats objects by radiation of its heat, and air by contact for warming buildings. The simplest is a coil of wrought-iron pipe, of ¾″ or 1″ in diameter, the rows of pipes being joined at the ends into return bends or into a header or manifold or special base casting at one of the ends. The efficiency of the pipe surface has been increased by adding an amount of coiled flat wire, fastened to the outside of the pipe, which increases the area of the heating surface, especially for air warming by contact. Cast-iron radiators are best of the pin-type, which also acts most efficiently on air by contact. In direct radiators for apartments, ab. half a sq. ft. is allowed per sq. ft. of condensing area, or one sq. ft. of heating surface per hundred cubic feet of volume; for indirect radiation, where the radiators are in a cellar or out of the room, and warmed air is to enter through flues, the allowance is made one and a half times or twice that for direct radiation.

Radiator.

Radical. In Chemistry, group of atoms which behave as a whole in any reaction, or one of the groups of atoms serving to make up a molecule. Thus C_6H_5, phenyl, is a radical in diphenyl, C_6H_5-C_6H_5.—In Botany, organs approximate to the root, as radical leaves.

Radical Axis OF TWO CIRCLES. Straight line from any point of which tangents to the circles will be equal. If the circles intersect, it is their common chord indefinitely extended.

Radical Center. If three circles be taken in pairs, the three radical axes will meet at a common point so called.

Radicals. Algebraic expressions subject to a sign indicating that some root of the expression is to be taken. The radical sign is $\sqrt{}$. This sign is followed when necessary by a vinculum covering the expression subject to the sign. The radical sign without index denotes square root: in other cases the root to be taken is shown by an index to the left and just above the radical sign. Radicals of any degree may also be indicated by fractional exponents having the index of the root as denominator. The calculus of radicals is best discussed by means of the fractional exponents modifying the fundamental rules for combination to meet the fractional character of the exponents.

Radicals. English Liberals of the extremer sort, aiming at thorough political reform, with a more or less clear and conscious tendency to democracy. They came into being ab. 1790. Similar parties or schools exist in every free or partially free country.

Radicant. Plants producing aerial or secondary roots.

Radication. Arrangement of roots of a plant either in the soil or with relation to each other.

Radicellati. See CYCLOSTOMATA (*Molluscoida*).

Radicle. Rootlets of Mosses. See CAULICLE.

Radicolous. Plants parasitic on the roots of others.

Radiculose. Plants or parts of plants bearing numerous rootlets; used especially in Bryology.

Radient of Meteoric Showers. Point in the heavens from which the paths of the meteors appear to radiate during a meteoric shower.

Radii of Radiates. See RADIAL SYMMETRY.

Radiograph. Invention of Olivier, designed to regulate the time of exposure of photographic plates by the mechanical action of the light rays. It consists essentially of a radiometer connected to a very light and delicately constructed speed indicator. In strong sunlight the vanes of the radiometer will rotate more rapidly and cause the index to advance step by step at a proportionally more rapid rate, but when exposed to a weaker light the pointer will require a longer time to traverse the spaces between the graduations. Thus the measure of the light action for any given time is obtained.

Radiolaria. Class of Rhizopods, including forms that resemble the *Heliozoa*, but are marine, and have a central capsule and no contractile vesicle. They usually have a silicious skeleton, which is either all outside the capsule (*Ectolithia*) or partly within it (*Entolithia*). They may be solitary (*Monozoa*)

Radiolaria.

or colonial (*Polycyttaria*). The skeleton may consist of spicules loosely joined, or of complicated radiating spokes, penetrating latticed concentric spheres. Yellow cells are often present. See SILICOSKELETA and ACANTHOMETRIDÆ.

Radiometer. Instrument devised by Dr. Crookes, and depending for its action upon the properties of a Crookes' layer. It consists of a small highly exhausted bulb of glass, in the middle of which are fixed upon a freely rotating vertical shaft four radial arms in the form of a rectangular cross. At the end of each arm is a little aluminium disk with its plane vertical and blackened on one side. The black surface absorbs radiant energy, while the bright side reflects it. The reaction of each molecule then, when it comes in contact with the black face of the vane, is more energetic than the impulse of a similar molecule on the cooler reverse side. When the instrument is placed in the path of any radiation whatever, these unbalanced forces will tend to produce rotation of the flies, bright side foremost.

Radiophone. Instrument constructed for converting the energy of an intermittent beam of light or radiant energy into that of sound. If such a beam be incident upon some surface readily capable of rapid changes of temperature, the surface will expand and contract: if these changes succeed one another with sufficient rapidity, a sound will result. It has been shown that the amplitude of the motion may exceed the ten-millionth part of a centimeter. Graham Bell has pointed out that the properties required for this conversion are possessed by nearly all substances.

Radish. *Raphanus sativus.* Fleshy-rooted herb of the natural family *Cruciferæ*, unknown in the wild state, cultivated from remote antiquity, and supposed to have been derived from *R. raphanistrum*, which is native of Europe and widely diffused as a weed in America.

Long-rooted and Turnip-rooted Radishes.

Radius. Constant distance from a fixed point to any point on the circumference of the circle, or surface of the sphere, of which the fixed point is the center.

Radius. Second vein of an insect's wing, counting from the anterior margin.

Radius-Arc. Arc used on the surface of a sphere to describe, from a fixed point called the pole, any circle on that sphere.

Radius of Curvature OF ANY CURVE. Radius of the osculatory circle at the given point.

Radius of Gyration. See GYRATION, RADIUS OF, and MOMENT OF INERTIA.

Radius of Oscillation. See PENDULUM.

Radius Vector. 1. One of the co-ordinates in the polar system. 2. Variable distance from a fixed point called the pole to a moving point.

Radowitz, JOSEPH MARIA VON, 1797–1853. Prussian officer, diplomatist, and writer. *Schriften*, 5 vols., 1852–53.

Radula. Lingual ribbon; movable, tape-like structure, carrying transverse rows of teeth. It lies on the ventral wall of the œsophagus of univalve Mollusks.

Rae, JOHN, M.D., LL.D., 1813–1893. English Arctic explorer, who went in search of Sir John Franklin 1848–51, and found the first signs of his fate.

Raeburn, SIR HENRY, 1756–1823. Scottish portrait-painter; R.A. 1815, knighted 1822.

Raff, JOSEPH JOACHIM, 1822–1882. Swiss composer in all forms, but chiefly successful as symphonist; early and enthusiastic champion of Wagner and his theories. His compositions number over 200 and include an opera, *König Alfred*, 1851, eleven symphonies, an oratorio, several overtures, suites, concertos, chamber pieces, pianoforte pieces, and songs.

Raffinose. $C_{12}H_{22}O_{11},3H_2O$. Melitose; species of sugar found in the sugar beet and molasses in small quantities. Its appearance is like that of cane sugar, but is nearly tasteless. It does not reduce Fehling's solution.

Raffles, THOMAS, D.D., LL.D., 1788–1863. Cong. pastor at Liverpool 1812–61; hymnist.

Raffles, SIR THOMAS STAMFORD, 1781–1826. Lieut.-gov. of Java 1811–16, and of Bencoolen, Sumatra, 1818–23; knighted 1817. *Hist. Java*, 1817.

Rafinesque, CONSTANTINO SAMUEL, 1784–1842. Prof. Transylvania Univ. 1818. *Florula Ludoviciana*, 1817; *Medical Flora*, 1828–30; *Botany of N. America*, 1836; *Conchology*, 1864.

Rafn, KARL CHRISTIAN, 1795–1864. Danish antiquarian, prof. Copenhagen 1826. *Antiquitates Americanæ*, 1837.

Rafter. Beam or joist of a roof laid parallel to the main trusses, and serving to support the purlins or the roof covering. In large roofs the rafters are made of iron or steel angles and plates. The lower end of a rafter, if supported by a wall, exerts a horizontal thrust upon it which often renders necessary a tie rod.

Raga Raga. Malay name for the ball used in the most popular athletic game in s.e. Asia. The ball consists of intertwined rings of rattan, and is thrown from any part of the body, including the foot, but may not be touched with the hand. The game is played in Siam, Burmah, the Malay Peninsula, and the Philippines.

Ragged Schools. Begun in England 1819 by John Pounds (d. 1839), a Portsmouth cobbler; urged and extended by Dr. T. Guthrie of Edinburgh 1847; first opened on Sunday in London 1838; first supplied with food at Aberdeen 1841. They have done much to lessen juvenile offenses.

Ragging. Preliminary breaking by hand and rough classification of ore for further mechanical treatment. The work is performed with hammers weighing from 6 to 8 lbs.

Raglan, FITZROY JAMES HENRY SOMERSET, BARON, 1788–1855. English soldier, prominent in youth in Spain and at

Lord Raglan.

Waterloo, where he lost an arm; knighted 1815; Baron 1852; commander in the Crimea 1854, where he won great victories and endured a severe defeat; Field-marshal Nov. 1854.

Ragman-Roll. Collection of parchments kept in the Tower of London, on which the Scottish nobility and clergy subscribed their allegiance to Edward I. 1296.

Ragnarok. Norse destruction of the earth and the gods, heralding a new order.

Ragozin, ZENAIDE, b. ab.1835. Russian-American writer, especially on ancient history of the East.

Raguet, CONDY, LL.D., 1784–1842. U. S. Consul at Rio Janeiro 1822–27. *Free Trade*, 1835; *Currency and Banking*, 1839.

Ragusa. Dalmatian town, on the Adriatic; important and powerful in the Middle Ages; held by Austria since 1815; now greatly decayed. Pop., 1891, 7,143. See GRAVOSA.

Ragweed. Plants of the genus *Ambrosia*, weeds of the Composite family, natives of N. America.

Ragwort. *Senecio aureus.* Yellow-flowered herb of the natural family *Compositæ*, native of N. America; known also as Squaw-weed; also other species of the genus.

Rahab. Woman of Jericho, who entertained and concealed the spies sent out by Joshua, was spared by the Israelites, married to a Jewish prince, and became an ancestress of Christ.

Rahbek, KNUD LYNE, 1760–1830. Danish poet, dramatist, and editor.

Raikes, ROBERT, 1735–1811. English printer of Gloucester, founder of modern Sunday-schools, 1780.

Rail Bender. Apparatus for curving railroad rails;

Hydraulic Rail Bender.

either portable like a Jim Crow, or made of other rails and cross-ties, upon which the bending is done by a lever. It has

two curved branches on which the rail rests, while a powerful screw or a hydraulic plunger is brought upon a point midway between them.

Railroad Accidents. The number of train accidents in the U. S. in 1895 was 1,487, of which 602 were due to collisions, 810 to derailments, and 75 to other causes. In these accidents 1,811 employees, 170 passengers, and 4,155 other persons were killed. In 1892 in Great Britain one passenger out of 6,701,000 was killed, in U. S. one out of 2,984,832 in 1895; in U. S., 1895, one out of 213,651 was injured; of employees, one out of 433 was killed and one out of 31 injured: of trainmen, one out of 155 was killed and one out of 10 injured. The increasing use of the block system and of automatic car couplers tends to decrease the number of accidents. "Other persons" includes casualties at stations and crossings and trespassers.

Railroad Bagatelle. Game resembling Tivoli, in which balls are rolled down an inclined trough or a spiral tube upon a board containing pins, and numbered holes or stalls.

Railroad Gauge. Distance between the inner sides of the heads of the rails; for the standard gauge 4 ft. 8½ in. The standard gauge is used for main lines in U. S., England, France and Germany, the narrow gauges of 3½ and 3 ft. being adopted only for branch roads in mountainous districts. Ireland has a gauge of 5 ft. 3 in.; Spain and Portugal have 5 ft. 6½ in.; in India 5 ft. 5½ in. is mostly used. Of the total railroad mileage of the world 76 per cent is of standard gauge, 10 of larger, and 14 of smaller gauges. See BATTLE OF THE GAUGES.

Railroad Rails. The earliest tramway rails were of wood or stone, but in 1805 cast-iron rails ab. 5 ft. long were introduced. Ab. 1820 a strap rail of wrought-iron fastened upon longitudinal wooden stringers came into use. These were soon followed by the double-headed rail, which is still used in England. The rail with flat base was invented by R. L. Stevens, and first used 1831 on the Camden and Amboy R.R. The cross-section of the early rails was pear-shaped, but this has been gradually modified to the present form, the head being with sides almost vertical while the web is comparatively thin. Prior to 1860 rails were rolled of wrought-iron, but the invention of Bessemer 1862 caused steel to be used, and the cost of production has been lowered from $150 to $20 per ton. The weight and size of rails has gradually increased with the growth of traffic and the decrease in their cost. The minimum weight now used is 50 or 60 lbs. per yard, while 80, 90 and 100 lbs. per yard are frequently found on roads of heavy traffic. The average distribution of the metal in the best forms is ab. 42 per cent in the head, 21 in the web, and 37 in the base.

Railroads. At the beginning of the 19th century a number of tramways were in use in Great Britain for transporting coal and freight; these had timber or cast-iron rails, and the motive power was horses. The first locomotives were introduced by Trevithick 1804, who used waste steam in the chimney for draft, and by Blinkinsop 1811. In 1825 the Stockton and Darlington road, 38 m. long, was opened, and a train weighing 90 tons was drawn at a speed of 5 m. per hour by an engine built by George Stephenson. In 1829 the Liverpool and Manchester road was opened with a train weighing 12¾ tons drawn at an average speed of 13.8 m. per hour by an engine, the *Rocket*, weighing 4½ tons, built by Robert Stephenson; a maximum speed of 29 m. was attained. In the U. S. railroad construction began 1826, when a tramway for transporting stone was built at Quincy, Mass.; in 1827 one for coal traffic was built at Mauch Chunk, Pa.: horses were used in both cases. The first locomotive was operated at Honesdale, Pa., on the Delaware and Hudson road, by Horatio Allen, on Aug. 8, 1829. In 1830 the Baltimore and Ohio, the S. Carolina, the Mohawk and Hudson, and the Camden and Amboy railroads were under construction, and soon after locomotive power was rapidly introduced. The railroads of the world in 1840 had a total length of 4,933 m., of which 2,117 m. were in Europe, and 2,816 m. in U. S. In 1850 the total mileage was 23,473, of which

The Rocket.

Modern Locomotive.

14,458 was in Europe and 9,015 in U.S. The rapid growth since 1850 is shown by the following table of miles in operation:

	1860	1870	1880	1890
Europe	32,147	64,153	104,733	133,007
Asia	840	5,085	9,856	20,031
Africa	296	950	2,878	5,791
Australasia	347	1,035	4,858	11,128
United States	30,600	52,856	93,526	161,397
Canada	1,880	2,670	6,886	13,436
Central America		215	1,765	6,234
South America	371	2,021	6,618	16,430
Total	66,481	128,985	231,120	367,455

At the close of 1896 the number of miles of railroad in U.S. was 182,600, and in the world 405,583. The total railroad capital of U.S. was $12,107,853,637, of which 45 per cent was in stock, 46 in funded debt, and 9 in other forms. The average cost of construction has been $47,000 per mile, and that of equipment $5,000. The number of passengers carried one mile was 13,054,840,243, and of the tons of freight carried one mile 93,885,853,634. The average cost of carrying a passenger one mile is 1.91 cents; the revenue received is 2.14 cents. The average cost of carrying one ton of freight one mile is 0.58 cents; the revenue received is 0.89 cents. The average cost of running a train one mile is 97 cents, the revenue received 147 cents. The net earnings are less than 4 per cent upon the capital invested.

Railroad Weather Signal. Introduced by the Ohio State Weather Service 1881, to be borne on the side of a baggage or freight car, and changed daily by orders from the central weather bureau, announcing the weather to be expected during the next 24 hours; subsequently adopted by U.S. Signal Office and all State Weather services.

Rails (MARSH HENS). Grallatory birds of relatively small size, with long toes, short wings, fairly long bill and legs, and a turned-up tail. They are strong fliers, but prefer to run when pursued. They nest in the long grass of marshes. The plumage is dun or mud-colored, streaked with ashy and dark bars posteriorly. *Rallus elegans*, Fresh-water Marsh Hen, is 18 in. long and with ruddier color, while *R. longirostris* (*crepitans*), the Clapper Rail of salt marshes, is 15 in. long, with a more ashy brown hue. The former has one, the latter two broods in a season. The Virginia Rail and the Sora resemble the *elegans* and *crepitans* respectively, but are only 9 or 10 in. long.

Raimondi, ANTONIO, 1826–1890. Naturalist, b. at Milan; prof. at Lima from 1851. *El Peru*, 3 vols., 1874–97. His explorations, collections, and notes furnish material for 20 vols.

Raimondi. See MARK ANTONIO.

Rain. The amount of moisture contained in a cubic foot of saturated air increases with the temperature, being 2.13 gns. at 32° F., 4.09 at 50°, 6.15 at 62°, 7.99 at 70°, 10.90 at 80°, 14.81 at 90° and 19.79 at 100°. When the air is saturated the humidity is 100; if it contains three-fourths the moisture possible at the given temperature the humidity is 75. Rains, fogs, and clouds are due to the cooling of moist air, warm air moving into cooler regions, or warm and cold air coming together and reducing the temperature below the saturation point. The mean annual rainfall is the depth of rain and melted snow in a year and in Boston is 45 inches, New York 44.8, Philadelphia 39.8, Baltimore 43.8, Washington 43.5, Charleston 56.7, Mobile 62.2, New Orleans 60.5, Louisville 45.8, Chicago 34.8, Dubuque 35.5, Oswego 35, Cincinnati 39.9, Leavenworth 38.4, Bismarck 18.4, Santa Fe 14.2, Fort Grant, Ariz. 16.5, Sacramento 20.9, Portland, Ore., 46.8, Cheyenne 12.2, London 25, Paris 71, Berlin 24, Vienna 19, St. Petersburg 17, Valdivia 106, Vera Cruz 180, San Domingo 108, Maranham 277, Hong Kong 101, Port Said 2, Astrakhan 6, Cherrapongee in Assam, 610 inches. See HUMIDITY and HYGROMETRY.

Rainbow. Optical phenomenon consisting of an arch of concentric colored bands, arranged in prismatic order, red being on the outside. It occurs when the sun or moon, not far above the horizon, throws its beams upon a sheet of falling

drops on the opposite side of the heavens. A secondary bow is sometimes seen, in which the order of the colors is reversed.

Rainey's Corpuscles. See SPOROZOA.

Rain Gauge. Funnel-shaped dish, having a graduated small cylinder below it, whereby the depth of the rainfall during a shower can be measured. It should be placed near the level of the ground in a location unobstructed by trees.

Rain Gauge.

Rainier, MT., or TACOMA. An extinct volcano in the Cascade Range of Washington. Elevation 14,444 feet.

Rains, GEORGE WASHINGTON, b. 1817. Brigadier-gen. C.S.A.; founder of Confederate powder works at Augusta, Ga.; prof. Univ. Ga. 1867; improver of portable steam engines. *Chemistry*, 1872; *Qualitative Analysis*, 1879.—His brother, GABRIEL JAMES, 1803–1881, was distinguished in the Seminole, Mexican, and Civil wars, especially (as brig.-gen. C.S.A.) at Fair Oaks.

Rainsford, WILLIAM STEPHEN, D.D., b. 1850 in Ireland. Rector of St. George's, New York, since 1883; prominent in reforms and charities.

Rain Tree. Plant of Peru, which, according to Rotolf, condenses the atmospheric moisture so freely as to produce a swampy ground beneath its shade.

Rainy Lake. Between Minnesota and Ontario; connected with Lake of the Woods by Rainy River. Area 146 sq. m.

Raisin River. In s.e. Mich.; scene of a massacre of Ky. forces by Indians, Jan. 22, 1813.

Raisins. Dried grapes, deriving their names from the place where they grow, as Smyrnas, Valencias, etc.; or from the species of grape, as muscatels, blooms, and sultanas. The finest are cured by cutting the stalk half through, when the grapes are nearly ripe, and allowing them to dry on the vine; or when fully ripe, by dipping them in a lye made from the ashes of the burned tendrils, after which they are dried by the sun. Inferior sorts are often dried in ovens.

Rajah. Title of a native sovereign in India; now extended to chiefs and prominent persons.

Rajides. See RAYS.

Rajon, PAUL ADOLPHO, 1842–1888. French etcher.

Rajputana. Twenty States of n. India, under British protection. Area 132,461 sq. m.; pop., 1891, 12,089,330, of which the Rajputs, the ruling race, are less than 7 per cent.

Rake Vein. In n. England, a highly inclined fissure vein, as contrasted with pipe veins or flats.

Raking Prop. In Mining; (1) short piece of timber used to support a curb during the excavation of the sides of a shaft; (2) prop set in an inclined position to prevent the fall of a loose roof.

Rákóczy, FRANCIS LEOPOLD, 1676–1735. Prince of Transylvania; head of an insurrection against Austria. The independence of Hungary was proclaimed May 31, 1707, but overthrown 1708–11.

Rakoczy March. National air of Hungary and Transylvania. The composer is not known. It is named in honor of Francis Rakoczy II.

Rale. Sound observed in ausculting the lungs in certain diseased conditions. It is formed by the breaking of the air through fluid in the air passages.

Raleigh. Capital of N. C., in Wake co., on the Neuse. Pop., 1890, 12,678.

Raleigh, SIR WALTER, 1552–1618. Leader of the expedition which discovered Virginia 1585; prominently connected with the defeat of the Spanish Armada 1588; organizer of an expedition to S. America for the discovery of Eldorado 1595; imprisoned and condemned to death 1603 by James I.; during his imprisonment in the Tower he wrote a *History of the World* and some poetical pieces; released 1616 and permitted to make an expedition to Guiana, 1617, which proved a failure; foully executed, nominally on the sentence passed 16 years before. His brilliant abilities and chivalrous character made him one

Sir Walter Raleigh.

of the chief adornments of that great age. *Works*, 8 vols., 1829.

Rallidæ (RAILS). Family of Grallatores, having characters intermediate between Natatores and Gallinacei. There are four elongated toes; the wings are small, the beak, neck, and legs not long. See RAILS.

Ralph, JAMES, ab.1696–1762. American versifier, in England from 1724; lampooned by Pope in the *Dunciad*.

Ralph, JULIAN, b. 1852. American magazinist, traveler, and author. *Our Great West*, 1894; *Dixie*, 1895; *People we Pass*, 1895; *Alone in China*, 1896.

Ralston, WILLIAM C., 1826–1875. Pres. Bank of Cal.; active in the development of San Francisco and the Pacific Coast; ruined by a combination against him.

Ralston, WILLIAM SHODDEN, 1828–1889. English author. *Kriloff and His Fables*, 1869; *Russian Folk-Tales*, 1873.

Ram. Ironclad vessel, armed at the prow, below the water line, with a sharp, heavy, steel beak, with a sloping edge on the upper side. This is of the strongest formation and built as an independent adjunct of the ship for the purpose of attack.

Ramadan, or RAMAZAN. Mohammedan 9th month, during which the strictest fasting is obligatory in daylight.

Ramah. 1. Town of Benjamin, 5 m. n. of Jerusalem; identified 1838. 2. Home of the prophet Samuel; in Ephraim, not located.

Ramases. See RAMESES.

Ramayana. Oldest of the Sanskrit epic poems, written by the sage Valmiki; attributed to the 5th century B.C. It celebrates the life and exploits of Rama, and his wife Sita, and the rape of the latter by Ravana, the demon king of Ceylon. The story closes with her death and vindication and Rama's translation to heaven.

Rambach, JOHANN JAKOB, D.D., 1693–1735. German hymnist; prof. Halle 1723–31, and Giessen from 1731.

Rambler, 1750–52. Periodical founded and mainly written by Dr. Johnson. It consisted of short essays on topics of the times, moral subjects, and follies of the day, after the manner of the *Spectator*.

Rambouillet, CATHERINE DE VIVONNE, MARQUISE DE, 1588–1665. Founder of a salon which long included the best brains and accomplishments of Paris.

Rameau, JEAN PHILIPPE, 1683–1764. French musician, founder of the science of harmony, organist and composer. *Traité de l'harmonie*, 1721, was approved by the Academy 1737. Louis XV. created the post of *Compositeur de Cabinet* for him. He composed over 30 operas, several cantatas, motets, and clavichord pieces.

Raments. Thin scales borne on the leaves and petioles of certain plants, especially ferns.

Rameses, or RAMSES. Thirteen Egyptian kings of the 19th and 20th dynasties. The second (Sesostris) built temples throughout his empire, the Ramesseum opposite Karnak among them, intended for the worship of his manes; fought in Nubia and Libya, conquered the Hittites, and reigned 66

years. The third had a brilliant reign; waged war with the Libyans and Hittites, and received tribute from Punt and Ethiopia. He is supposed to be the Pharaoh of the Exodus. The mummies of Rameses I., II., and III. were discovered 1881, and are now at the Gizeh Museum.

Ramie. *Bœhmeria nivea.* Herb of the natural family *Urticaceæ*, native of Asia; widely cultivated in tropical countries for its valuable fiber, known also as China grass and rhea and used for making rope, cordage and grass-cloth.

Ramie (*Bœmeria nivea*).

Ramification. System of branching of a plant or animal.

Ramillies. Village of Belgium; scene of a brilliant victory of Marlborough, May 23, 1706, over the French, who were thereby driven out of the Low Countries.

Ramirez, ALEJANDRO, 1777–1821. Spanish official in Guatemala and Cuba, eminent for financial and other reforms, and for beneficent foundations.

Ramirez, IGNACIO, 1818–1879. Mexican poet and scholar, of native descent; Minister of Justice 1860–61; banished 1865; Judge of the Supreme Court from 1867; imprisoned 1876.

Rammelsberg, KARL FRIEDRICH, b. 1813. German scientist; a leading investigator of the chemical nature and relations of minerals. *Handwörterbuch des chemischen Theils der Mineralogie*, 1841; *Handbuch der Mineralchemie*, 1860; *Handbuch der krystallographisch-physikalischen Chemie*, 1881.

Rammelsbergite. $NiAs_2$. Rare mineral, containing nickel and arsenic, found in Saxony associated with other minerals containing nickel and cobalt.

Rammohun Roy, 1772–1833. Bengalese reformer, founder of the Brahmo Somaj 1828; in England from 1831. He opposed idolatry and suttee, tr. the *Vedanta*, 1816, and pub. *Precepts of Jesus*, 1820.

Ramnes. See ROME.

Ramose. Branching plants, especially if the number of branches is large.

Ramoth Gilead. Amorite town, made a city of refuge and held by Levites; identified with Es-Salt, e. of the Jordan. Pop. ab. 4,000.

Rampant Arch. One whose abutments are not on the same level.

Ramsay, ALLAN, 1686–1758. Scottish poet. *The Gentle Shepherd*, 1725. His *Evergreen*, 1724, and *Tea-Table Miscellany*, 4 vols., 1724–40, were collections of old songs and ballads.—His son, ALLAN, 1713–1784, was a portrait painter of repute.

Ramsay, SIR ANDREW CROMBIE, 1814–1891. Prof. Univ. Coll., London, 1848; director of the geological survey of Great Britain 1872; knighted 1881; advocate of the theory that many lake basins have been eroded by glacier ice. *Physical Geology*, 1863.

Ramsay, DAVID, M.D., 1749–1815. Historian of the American Revolution, 1785–89, of S. C., 1809, and of the U. S., 1816–17.

Ramsay, EDWARD BANNERMAN BURNETT, LL.D., 1793–1872. Dean of Edinburgh 1846. He declined three bishoprics, and pub. several books, chief of which is *Scottish Life and Character*, 1856–61.

Ramsay, WILLIAM MITCHELL, D.C.L., b. 1851. Prof. Aberdeen 1886. *St. Paul's Travels*, 1895.

Ramsden, JESSE, 1735–1800. English maker of telescopes and astronomical instruments.

Ramses. See RAMESES.

Ramsey, ALEXANDER, b. 1815. Gov. of Minn. 1849–53 and 1860–63; U. S. Senator 1863–75; Sec. of War 1879–81.

Ramsgate. Seaport on e. coast of the Isle of Thanet in England, 72 m. s.e. of London. It is a harbor of refuge and

Entrance to Ramsgate Harbor.

steam packet station, and does considerable trade in coal and fish. It is a fashionable watering place. Its harbor covers 47 acres. Pop., 1891, 24,700.

Ramus, PETRUS (or **Ramée,** PIERRE DE LA), 1515–1572. French humanist, prof. at Paris 1551. His book attacking scholasticism and the Aristotelian logic, 1543, caused much wrath and the suspension of his lectures for some years. He wrote luminously on mathematics, language, theology, philosophy, and ethics, became a Protestant ab. 1562, and was one of the most illustrious victims of the massacre of St. Bartholomew.

Rana. See OXYDACTYLIA and RANIDÆ.

Rancagua. Town of Chili, 43 m. s. of Santiago. Here Gen. O'Higgins was besieged by Spanish troops, and defeated Oct. 1–2, 1814. Pop. ab. 8,000.

Rancé, ARMAND JEAN LE BOUTHILLIER DE, 1626–1700. Abbot of La Trappe 1662, author of its severe discipline, of a work thereon, in 4 vols., 1696, of *Monastic Life*, 1683, and other books. See TRAPPISTS.

Rancidity of Fats. This is due to the absorption of oxygen and the decomposition of mucilaginous and albuminous substances, which in decaying react on the fat, setting free fatty acids and decomposing the glycerin. The exciting cause is probably bacteria. It may be removed by melting the fat, washing it with hot water, and then with a weak, cold solution of sodium hydroxide.

Rancor. Fixed hatred which by its inward working has diseased the mind.

Randall. ALEXANDER WILLIAMS, 1819–1872. Gov. of Wis. 1857–60; U. S. Minister to Italy 1861–62; Postmaster-gen. 1866–69.

Randall, HENRY STEPHENS, 1811–1876. American writer on sheep-keeping. *Practical Shepherd*, 1864.

Randall, JAMES RYDER, b. 1839. Author of the Confederate song, *My Maryland*, 1861.

Randall, ROBERT RICHARD, ab. 1740–1801. Founder of Sailors' Snug Harbor, New York, removed to Staten Is. 1833.

Randall, SAMUEL JACKSON, 1828–1890. M.C. from Pa. from 1863; Speaker 1876–81; prominent chiefly as a Protectionist.

Randolph, BEVERLEY, 1755–1797. Gov. of Va. 1788–92.

Randolph, EDMUND JENNINGS, 1753–1813. Member of Congress 1779–83, and of the convention which framed the Constitution; Gov. of Va. 1788; first U. S. Atty.-gen. 1789; Sec. of State 1794–95. Accused by Fauchet, the French Minister, he was sacrificed to public exigencies. His memory has been vindicated by M. D. Conway 1888.

Randolph, EDWARD, ab. 1620–1694. British agent in America from 1676; noted for his misrepresentations and oppressions. He procured the recall of the charter of Mass. 1684, and was imprisoned with Gov. Andros 1689.

Randolph, JOHN, 1773–1833. M.C. from Va. 1799–1813 and 1815–25; U. S. Senator 1825–27; Minister to Russia 1830–31. His brilliant abilities, fierce sarcasm, and strange peculiarities made him long the most prominent member of the House. He spared Clay's life in a duel 1826.

Randolph, PEYTON, 1721–1775. Va. patriot, uncle of Edmund; Atty.-gen. 1748–66; Pres. of Congress 1774 and 1775.

Randolph, THEODORE FRELINGHUYSEN, 1816–1883. Gov. of N. J. 1868–72; U. S. Senator 1875–81.—His father, JAMES FITZ, 1791–1871, was M.C. 1829–33.

Randolph, THOMAS, 1605–1635. English dramatist and lyric poet.

Randolph, THOMAS MANN, 1768–1828. M.C. 1803–7; Gov. of Va. 1819–21.—His son, THOMAS JEFFERSON, 1792–1875, was a grandson of the third President, and his biographer 1829.

Random Stone. Large angular stones used in building embankments and breakwaters.

Random Work. Rough masonry not laid in courses. Random coursed work applies to stones brought to horizontal beds, but of unequal height.

Ranelagh. Hall at Chelsea, London, rival of Vauxhall as a place of amusement and resort; built 1742, demolished 1803–4.

Rangabé, ALEXANDER RHIZOS, 1810–1892. Modern Greek dramatic poet.

Range. In Gunnery, the horizontal distance from the muzzle to the point where the trajectory pierces the horizontal plane passing through the muzzle of the gun: it varies with the elevation, the initial velocity, resistance of the air, character of the projectile, etc.

Range Finders. Instruments by which the distance of a target from the gun may be readily determined: based on the trigonometric relations of the circular functions of the angles of a triangle to the length of its sides. In those with fixed angles and variable bases, the latter are taken in some simple ratio, such as $\frac{1}{20}$, $\frac{1}{40}$, etc., of the range: thus angles of 88° 34′ at the base correspond to bases $\frac{1}{40}$ of the range. With fixed bases and variable angles, the angles must be so carefully read as to require the use of a telescope. Fiske's Range and Position finder employs a galvanometer and Wheatstone's bridge to find the angle at the target for a fixed base.

Range (or RUN) **of Points.** Figure made up of points on a straight line, the base of the range. A range joined by straight lines with any point without the base forms a pencil. A transversal cutting a flat pencil forms a range.

Rangifer. See DEER and REINDEER.

Rangoon. City of British Burmah, in the Delta of the Irrawaddy, 20 m. from the sea; held by England since 1852, and

The Signal Pagoda, Rangoon.

of commercial importance. It ranks third among the seaports of British India, having two-thirds of the exports and nearly all the imports. Pop., 1891, 180,324.

Ranidæ. Family of anurous *Amphibia*, *i.e.* Frogs, including 248 species, the majority of which are East Indian. Of these forms some burrow, others are arboreal, like the Tree Toads (Tree-frogs). One species has expanded webs on hands and feet, which act as parachutes when it takes flying leaps; others have opposable fingers for grasping twigs. The genus *Rana* is represented by 110 species. *R. catesbiana*, the Bullfrog, is largest, approaching 8 in. in length. It is noted for its bellowing voice, but as a rule the frogs are not so noisy as are the *Hylidæ*. *R. temporaria* lives in dry woods, seeking the water only to spawn.

Ranjit Singh, 1780–1839. Sikh chieftain, founder of the Punjab kingdom; owner of the Kohinoor diamond which was presented to Queen Victoria 1850, on the confiscation of the property of the state.

Rank. In Botany, vertical row of leaves.

Rank, BREVET. Rank conferred upon an officer, by a commission giving him a grade in the army additional to and higher than that which he holds by virtue of his commission in a particular corps of the legally established military organization. He thus becomes eligible for assignment by the President to the rank which it confers: without such assignment it has no effect on the officer's status.

Rank, MILITARY. In U. S. army the grades are: 1, major-gen.; 2, brig.-gen.; 3, colonel; 4, lieut.-colonel; 5, major; 6, captain; 7, 1st lieutenant; 8, 2d lieut.; 9, cadet; 10, sergeant-major (regimental); 11, quartermaster-sergeant (regimental); 12, ordnance, commissary, and post quartermaster-sergeant, hospital steward, first-class sergeant of the signal corps, chief musician, principal musician, chief trumpeter, and saddler-sergeant; 13, first sergeant; 14, sergeant and acting hospital steward; 15, corporal. In each grade date of commission, appointment, or warrant, determines the order of precedence.

Ranke, JOHANNES, b. 1836. Prof. Munich; writer on anthropology.

Ranke, LEOPOLD VON, 1795–1886. Prof. Berlin 1825–72; historiographer of Prussia 1841; ennobled 1865. *Popes of Rome*, 1834–37, tr. 1840; *Germany in the Reformation*, 6 vols., 1839–47; *House of Brandenburg*, 1847–48; *Hist. England*, 6 vols., 1859–67, tr. 1875. His works to 1868 were collected in 47 vols.; his *Weltgeschichte*, 9 vols., 1881–88, occupied his later years.

Rankine, WILLIAM JOHN MACQUORN, 1820–1872. Scientist and civil engineer; prof. Glasgow 1855. *Applied Mechanics*, 1868; *Civil Engineering*, 1862–65; *Machinery and Mill Work*, 1869–83.

Rank of Motives. Their relation in the order of their comparative excellence or ethical value.

Ransom. In early English law, pecuniary fine in lieu of bodily punishment; in international law, payment to secure the surrender of military captives or of captured vessels.

Ransom, GEORGE MARCELLUS, U.S.N., b. 1820. Commander 1863, Captain 1870, Commodore 1877; engaged on the Gulf 1862, and on the Atlantic coast 1863–64.

Ransom, MATTHEW WHITAKER, b. 1826. Brig.-gen. C.S.A. 1863; U. S. Senator from N. C. 1872–95; Minister to Mexico 1895.

Ransom, ROBERT, 1829–1892. Brig.-gen. C.S.A. 1862; Major-gen. 1863; engineer on U. S. rivers and harbors from 1878.

Ransom, THOMAS EDWARD GREENFIELD, 1834–1864. Brig.-gen. U.S.A. 1862; distinguished in the West, as at Forts Henry and Donelson.—His father, TRUMAN BISHOP, 1802–1847, pres. of Norwich Univ., Vt., was killed at Chapultepec.

Ransom of Prisoners. Soldiers captured during war are now regarded as prisoners of the government of the belligerent that captures them and are exchanged by cartel or agreement determined upon by the belligerents: formerly, in feudal times and among barbarous peoples they were considered the property of the captors and were released upon the payment of ransom.

Ranstead-Weed. See BUTTER-AND-EGGS.

Ranters. 1. Anabaptist sect in England ab. 1645; Antinomians in theory and practice; short-lived. 2. Primitive Methodists.

Rantoul, ROBERT, 1805–1852. U. S. District-attorney for Mass. 1845–49; M. C. 1851; active in the anti-slavery cause and other reforms, as was his father, ROBERT, 1778–1858.

Ranunculaceæ. Natural family of flowering plants, of the class *Angiospermæ* and sub-class *Dicotyledons*, comprising ab. 45 genera and 750 species, widely distributed throughout all parts of the earth; called the Buttercup or Crowfoot family.

Ranunculus asiaticus, garden varieties.

Ranvier, LOUIS, b. 1835. Prof. Coll. de France; writer on histology.

Ranz des Vaches. Melodies of the Swiss Alps, played by herdsmen on the keep-horn; painfully effective when heard by natives in exile.

Rapacia. See POLYPROTODONTIA.

Rapateaceæ. Natural family of flowering plants, of the class *Angiospermæ* and sub-class *Monocotyledons*, comprising 6 genera and ab. 20 species, natives of Brazil and Guiana.

Rape. *Brassica napus.* Herb of the Mustard family, native of Europe; extensively cultivated for its seeds, from which Rape-seed Oil is expressed. *Brassica campestris,* another variety, is largely grown in Europe as a forage crop and for soiling purposes. An oil is extracted from the seed and the refuse cake makes an excellent nitrogenous cattle food. Rape has only recently been introduced into the U. S., and is still comparatively little known. It is sown late in summer as a late autumn or early winter soiling crop.

Rape. Carnal knowledge of a woman forcibly and against her will: more minutely defined by modern statutes, which also prescribe various punishments.

Raphael. Archangel, celebrated in the apocryphal book of Tobit.

Raphael (RAFFAELLE SANTI), 1483–1520. Italian painter, b. at Urbino, active at Perugia, Florence, and after 1508 at Rome. In oil paintings his manners or styles are therefore distinguished as Peruginesque, Florentine, and Roman, according to this sequence of time and local influence. His greatest works are the wall paintings in the Vatican, partly in the room known as the Stanze, and partly on the ceiling of a corridor known as the Loggie. The cartoons for tapestries, subjects from the lives of the apostles, are now in the South Kensington Museum at London. The tapestries themselves were intended for and long hung in the Sistine Chapel. There are ten of these tapestries and seven surviving cartoons. A duplicate set of the tapestries is mainly in the Berlin Museum, where they decorate the upper part of the great rotunda. In the Farnesian Villa at Rome is a series of frescoes from the story of Cupid and Psyche, from designs by R., done by scholars. The *Galatea* of this villa is his original work. His oil paintings are numerous, especially the Madonnas. The greatest of these is the *Sistine* in Dresden. Otherwise may be quoted especially the *St. Cecilia* in Bologna and the *Betrothal of Mary and Joseph* in Milan. All of R.'s pictures are distinguished by a symmetry of balance and arrangement in line effect in which he stands quite alone among modern painters. He was by turns, according to his age, first, ingenuous and simple, then sprightly and vivacious, finally powerful and thought-stirring, but always industrious, successful, and happy.

Raphael

Raphall, MORRIS JACOB, Ph.D., 1798–1868. Rabbi, b. in Sweden, long in England; in New York from 1849; tr. *Mishna,* 1840, with D. A. de Sola. *Post-Biblical History of the Jews,* 1855.

Raphe, or RHAPHE. Ridge along the side of the anatropous or amphitropous ovule; also this structure in the seed; also the median rib connecting the nodules of a diatom frustule.

Raphideæ. Order of *Diatomaceæ,* comprising the genera which have a well-defined raphe, or median rib connecting the nodules.

Raphides. Needle-like crystals occurring in the parenchyma of certain plants; generally composed of oxalate of lime, and especially abundant in plants of the natural orders *Araceæ* and *Onagraceæ.*

Raphidian. In Plant Anatomy, cells containing raphides.

Rapidan. River of Va., flowing e. to the Rappahannock ab. 10 m. above Fredericksburg, ab. 80 m. long.

Rapid-Fire Guns. The necessity of preventing torpedo boats from coming within effective range to destroy battleships brought about the development of the rapid-fire gun. It consists of a single barreled breech-loading rifle capable of being trained quickly and kept easily upon a swiftly moving object, and of firing with great accuracy a large number of projectiles in a very short time. The rapidity of fire results from the quickness with which the different operations of loading and laying the gun can be performed. The use of fixed ammunition in metallic cases shortens the time of loading and saves that of inserting the primer. In the recoil mounts the gun returns automatically to the firing position and in the non-recoil carriage no time is lost, the gun always remaining in the firing position. The intervals of time between firings is diminished to the least possible by the rapidity with which the gunner operates the handle bar for opening and closing the breech, the cocking of the hammer taking place also during the latter operation. Since their first invention in 1880 they have increased rapidly in size, range, and destructive power. The use of smokeless powder in the cartridge has enormously increased the initial velocity, as shown by the Armstrong 6-in., which, in Jan. 1893, gave 3,711 f. s. to a 70 lb. shot, and this has brought about a corresponding increase in the thickness of the protective armor of torpedo vessels. These guns are named from their designers and from the weight of the projectile or diameter of the bore in inches or millimeters. They comprise two classes; first, those whose breech mechanism consists of a wedge-shaped breech block, and, second, those having an interrupted-screw breech block. The principal types of the former are the Hotchkiss, Nordenfelt, Gruson, Krupp, and Driggs-Schroeder, and of the latter are the Canét, Schneider, Seabury, Dashiell and Gordon. The following data of the 6-in. Driggs-Schroeder, tested by the Ordnance Board at Sandy Hook proving grounds in June 1894, will serve as an example of the capacity of the modern rapid-fire gun. Weight 786 lbs.: caliber 2.244 in.: length 50 calibers: weight of breech mechanism 35¼ lbs.: number of rounds fired in one minute 32: time of firing 100 rounds 275⅜ seconds: mean initial velocity 1,891 f. s. Hotchkiss and Nordenfelt monopolized the construction of these guns until ab. 1885, but since that time more than eighteen firms were engaged in their manufacture. Of the Hotchkiss, there are 21 types, varying from 37 mm. or 1-pdr. caliber to the 155 mm. or 100-pdr. caliber. The armament of a modern battleship would be ten 100-pdrs., sixteen 6-pdrs., eight 3-pdrs., with a capacity of seven, twelve, and twelve rounds respectively per gun per minute. Rapid-fire guns will probably hereafter have a wider field of usefulness on land for the protection of stationary torpedo lines and in the defense of fortified places. See HOTCHKISS GUNS.

Rapier. Word of Spanish origin, signifying a gentleman's sword; a light, thrusting weapon, about three feet long, worn on occasions of court ceremonials.

Rapin de Thoyras, PAUL DE, 1661–1725. French Protestant, resident mostly in Holland and w. Prussia. His *History of England,* 8 vols., 1724, tr. in 15 vols., 1725–31, was considered by Voltaire the best then extant. It was enlarged 1749 and later.

Rapp, GEORGE, 1770–1847. German-American founder of the Harmonists or Rappists, and of settlements at Harmony, Pa., 1803, New Harmony, Ind., 1815, and Economy, Beaver co., Pa., 1824.

Rapp, JEAN, 1772–1821. French general 1805, Count 1809; distinguished at Austerlitz and in the defense of Dantzig; prisoner in Russia 1813–14; Peer of France 1819. *Memoires,* 1823.

Rappahannock. River of Va., rising near the Blue Ridge, and navigable from Fredericksburg; length ab. 250 m. Several battles were fought on it and its tributary, the Rapidan, during the Civil War.

Rapparees. In 17th and 18th centuries in Ireland, ejected tenants, who waged a sort of guerrilla warfare on their successors.

Rappee. Strong snuff, made from the darker and ranker tobacco leaves, or from the veins and fibers.

Rappen. Smallest coin of the Swiss cantons, worth ab. a centime or fifth of a cent.

Raptatores (RAPTORES, ÆTOMORPHÆ, ACCIPITRES). Birds of Prey. Order of *Insessores,* including powerfully built birds,

with curved beak hooked at the point, and feet strongly clawed (*Insidentes*). The outer toe can be turned backward or forward. The legs are rarely feathered below the intertarsal joint. They feed principally on warm-blooded animals. The young are altrices, and number ab. four to a nest, which is usually placed in inaccessible places. The male is more powerful than the female. The latter incubates the eggs, but the male assists in procuring food. There are three subgroups: STRIGES, PANDIONES and FALCONES (q.v.).

Rarey, JOHN S., 1828–1866. American horse-tamer, prominent as an exhibitor from 1856; in Europe 1860–61. *Horse-Taming*, 1858.

Raritan. River of e. N. J., navigable from New Brunswick to its mouth at Perth Amboy.

Rash. Eruption of the skin accompanying the eruptive fevers, *e.g.*, scarlet fever, measles; or resembling the eruptions of such fevers.

Rashi (RABBI SHELOMOH BEN IZAAKI). 1040–1105. Greatest of Jewish commentators. He lived at Troyes, s. France, and elucidated all the O. T. books except Chronicles. His work on the Pentateuch was the first book printed in Hebrew, 1574. It was tr. into German 1833–38, and the whole into Latin 1710–14.

Rask, RASMUS CHRISTIAN. 1787–1832. Danish philologist, prof. Copenhagen 1825. He traveled through Russia, Persia, and India, 1819–23, and brought back many MSS. His works on *Icelandic Language*, 1808–18, *Danish Orthography*, 1826, and edition of the *Eddas*, 1818, are highly valued. Among his other works are grammars of Anglo-Saxon, 1817, tr. 1830, Spanish, Frisian, and Italian. He partly anticipated GRIMM'S LAW (q.v.).

Raskolniks. Russian schismatics, who adhere to the old ritual and reject all reforms or alterations; extant since ab. 1666, and from an early period in two sects, one practically Congregationalists or Presbyterians. They are numerous, and of high character.

Rasle, SEBASTIEN, 1658–1724. French missionary in Maine from 1695. His Abenaki dictionary was pub. 1833.

Rasores. Order of birds, including the *Gallinacei* or *Gallinæ;* scratching birds, of which the domestic fowl is a type. Some authors also include the *Columbinæ*, and even the *Crypturi*.

Raspail, FRANÇOIS VINCENT. 1794–1878. French surgeon, introducer 1845 of a camphor system of antiseptic surgery.

Raspberry. Shrubs of the genus *Rubus*, natural family *Rosaceæ*, natives of Europe and N. America, bearing delicious edible aggregate fruits consisting of numerous small drupes borne on an elongated receptacle. The Black Raspberry or Thimbleberry of e. N. America is *R. occidentalis*.

Raspberry (*Rubus idæus*).

Raspe, HENRY, d. 1247. Landgrave of Thuringia; proclaimed emperor of Germany by the Rhenish archbishops 1246; defeated by the regent Conrad.

Rassam, HORMUZD, b. 1826. Mesopotamian Assyriologist, helper and successor of Layard in explorations; envoy to Abyssinia, and prisoner there 1866–68; discoverer of sites and relics for the British Museum. *Mission to Theodore*, 1869.

Rastadt, or RASTATT. Town of Baden, strongest fortress since 1848. Here was signed the treaty which ended the war of the Spanish succession 1714; here met the Congress which aimed to settle the differences between France and the Empire 1797–99.

Rastell, WILLIAM, 1508–1565. English writer on law. *Statutes*, 1594; *Collection of Entries*, 1596.

Rat. See RATS.

Ratafia. French cordial composed of alcohol, sugar and a flavoring substance, fruit or berry juice, kernels and flowers; as almonds, cherries, raspberries, coffee, orange blossoms, etc.

Ratchet Wheel. Form of toothed wheel, whose teeth are designed not so much to transmit motion to another wheel, as to fit them to resist the impact of the pawl or dog which opposes motion in one direction. The pawl is a lever, usually curved, and pivoted at one end. It is so mounted with respect to the wheel that when gravity or a spring shall cause it to fall into the space between two teeth, pressure against the end of the pawl is transmitted to the pin on which it is pivoted, and rotation of the wheel in that direction is prevented. When the wheel is turned the other way, the under side of the pawl is lifted by the slope of the ratchet teeth, and the pawl clicks harmlessly as it passes over the crests. Conversely, the wheel may be driven by the pawl. The back of the ratchet tooth is therefore usually a sloping curve, and the front a straight face, the normal to the latter at the common contact of tooth and dog passing outside the pivot in pulling dogs and between the centers of ratchet and dog for pushing and holding ones. The pawl and half pawl arrangement on a ratchet wheel secures less fall-back where the teeth are large. It is used on winding machinery to hold the strain of weight or spring, and on hoisting machinery, such as derricks, cranes, and capstans, to retain the load.

Ratel (HONEY BADGER). Burrowing, skunk-like animal, 2 ft. long besides the short tail, with anal glands that eject a

Cape Ratel (*Mellivora ratel*).

pungent liquid; black on the sides and gray along the back. One species is Indian, two are tropical African. They are skillful bee-hunters.

Rate of a Clock. Amount which the clock gains or loses in a given time, usually a day.

Rates, METHOD OF. Advanced by some as the basis of the differential calculus. The differential of a variable at any value is defined as the measure of its rate of change at that value: the differential of the function is the measure of its simultaneous rate of change. The first differential coefficient is the ratio of the rate of change of the function to that of its variable.

Ratich, WOLFGANG, 1571–1635. Educationist, whose system of education, based on Bacon's philosophy, he put into practice in Germany, at Köthen, 1618, and at Magdeburg, 1620, without success.

Ratification. Adoption by one of an unauthorized act done on his behalf by another. It must be made with a knowledge of all material circumstances, or with intent to take the consequences without knowledge. It has the legal effect, generally, of a precedent authority to do the act.

Ratio. Measure of the comparison of two magnitudes. Arithmetical ratio gives the difference, geometrical ratio the quotient: the latter is the general meaning. The terms of a geometrical ratio are antecedent and consequent; it is indicated by two dots (:) or by the fractional form.

Ratiocination. Process of reasoning, usually limited to syllogistic method, in which the proof of a proposition is effected by two premises and a middle term; a process of determining knowledge which is mediate, and contrasted with the immediate act of intuition and experience.

Ration. In U. S. Army, the ration is allowance for subsistence of one person per day and consists of meat, flour, vegetables, coffee and sugar, the seasoning, and soap and candle; its value is estimated at 18 cts. When troops travel otherwise than by marching, or when they are separated from cooking facilities, and do not carry cooked rations, the travel ration is issued, consisting of bread, canned beef and baked beans, roasted coffee and sugar; this ration is valued at 40 cts.

Rationalism. Doctrine denoting the dependence upon internal functions, the reason of the subject, for the determination of truth. It opposes all forms of external authority for the validity of belief and knowledge. In philosophy, it is opposed to sensationalism, which has denied the contributing agency of Reason to the products of knowledge. In theology, it substitutes Reason for authority as arbiter in matters of faith. It has existed in every age, but chiefly since the Reformation, when Socinus and Zwingli were its chief exponents; opposed to a formal and traditional orthodoxy, from which it is a reaction. The word was used by Comenius 1661, and from ab.1750 was applied especially to a series of professors, whose cool and dry views were long prevalent in Germany. It has only recently emerged from the disrepute of this narrow use, and come to mean a tendency or ruling idea rather than a system of doctrines. The history of rationalism has been traced by several writers, eminently by W. E. H. Lecky, 1865.

Rational Psychology. Branch of philosophy which concerns itself with the nature of conscious activity or of mind, and related questions. It is thus contrasted with modern empirical psychology, which concerns itself solely with the accurate description of the observable phenomena of consciousness and the inference of the laws which underlie them, by scientific methods. See PSYCHOLOGY.

Rational Quantity. One having, in its simplest form, only integral exponents; opposed to irrational.

Ratisbon, or REGENSBURG. Town of Bavaria; frontier fortress of the Romans; free imperial city 1245; taken by the Swedish-German forces 1633; scene of severe fighting between

Cathedral in Ratisbon.

Napoleon and Archduke Charles April 19–23, 1809; ceded to Bavaria 1810. A Catholic league was formed here, July 6, 1524, to enforce the edict of Worms. Pop., 1890, 37,635.

Ratisbon, CONFERENCE OF. April 27 to May 25, 1541, between 3 Lutherans and 3 R. Catholics, Melanchthon and Eck the most eminent. They came to agreement as to justification by faith and on nothing else.

Ratitæ. Sub-class of *Aves*, characterized as having no keel to the sternum, no firm rectrices or remiges; the wings are more or less rudimentary, the birds being cursorial and incapable of flight. The orders included are CURSORES, APTERYGIA, and DINORNITHIDÆ (q.v.).

Ratlines. Small ropes attached to the shrouds, forming the steps of a ladder by which sailors go aloft.

Ratramnus (miscalled BERTRAM), d. after 868. Monk of Corbie, n. France. He refuted the transubstantiation doctrine of his abbot, Radbert, in a tract of the same title, *On Christ's Body and Blood*, tr. 1549 and often reprinted. Its genuineness was denied by the Council of Trent.

Rats. Largest species of genus *Mus*. The common brown rat, improperly called Norway rat, came originally from Asia, entering Europe 1727. It has overrun Europe and the New World, driving out the black rat. The latter was introduced into America 1544, but is now rare. Feral rats live in burrows. The wood rat (*Neotomus*) has hairy tail and sole of foot, with soft lustrous fur, brown above and white below. In the Rocky Mts. is an edible species with tail resembling a squirrel's. See MYOMORPHA.

Rattans. Slender stems of species of *Calamus*, a genus of Palms, native of India.

Rattazzi, URBANO, 1808–1873. Italian Minister of Justice 1853–58; Premier 1862 and 1867.

Rattle. *Rhinanthus crista-galli*. Yellow-flowered herb of the Figwort family, native of the n. temperate zone.

Rattle-Box. Yellow-flowered herbs of the genus *Crotalaria*, natural family *Leguminosæ;* of wide geographical distribution in temperate and tropical regions. When ripe, the seeds become loose in the pods and rattle when shaken.

Rattlesnake Master. See SNAKEROOT, BUTTON.

Rattlesnake-Plantain. Orchids of the genus *Peramium*, natives of the n. temperate zone, bearing small flowers and mostly striped or mottled leaves.

Rattlesnake-Root. Coarse herbs of the genus *Prenanthes*, natural family *Compositæ*, natives of N. America. *P. alba* is known also as White Lettuce.

Rattlesnakes. There are fifteen species of *Crotalus*, with true rattles on the tail. These are rings of epidermis loosely jointed together, so as to make a rattling noise, which can be imitated by several harmless snakes by vibration of the tail amid dry leaves. The animal uses these organs to warn enemies of its presence, that they may flee and the snake not be endangered. All rattlesnakes are more or less sluggish, and assume the defensive rather than the offensive attitude. *C.*

Rattlesnake (*Crotalus durissus*).

horridus, the species most common in the e. U. S., is now restricted to mountain regions remote from habitations. It lives on rats and squirrels or rabbits. The largest rarely exceed four feet, and have twenty-three rattles. It is marked by lozenge-shaped bands. *C. lucifer*, the Western Rattler, has large dorsal markings with dark margins; the ground color is reddish brown. The Prairie Rattler (*C. confluentes*) is most sluggish of all. *C. durissus* is the rattler of the Southwest and extends into S. America. It has about 30 rows of scales, with swollen keels. See COPPERHEAD and SOLENOGLYPHA.

Rattlesnake-Weed. *Hieracium venosum*. Yellow-flowered herb of the Composite family, with purple-veined leaves, native of e. N. America.

Rauch, CHRISTIAN DANIEL, 1777–1857. German sculptor, memorable for the monument of Frederick II. at Berlin, and statues of Queen Louisa, Blücher, Goethe, and others.

Rauch, FRIEDRICK AUGUST, 1806–1841. Pres. Marshall Coll., Mercersburg, Pa., 1836. *Psychology*, 1840.

Rauch, JOHN HENRY, M.D., b. 1828. Sec. Ill. Board of Health; medical writer.

Rauhe Haus. Institution founded 1831 at Horn, near Hamburg, by J. H. Wichern, for poor children; since grown to vast size and varied uses, with a training-school for teachers attached 1845.

Raumer, FRIEDRICH LUDWIG GEORG VON, 1781–1873. Prof. Breslau 1811, Berlin 1819. *The Hohenstaufens*, 6 vols., 1823–25; *Hist. Europe Since 1500*, 8 vols., 1832–50; *Recent History*, 5 vols., 1836–39. He wrote several books of travel, as *America*, 1845.—His brother, KARL GEORG VON, 1783–1865, Prof Breslau 1811, Halle 1819, and Erlangen 1827, wrote many scientific works. *Geographie*, 1832; *Geschichte der Pedagogik*, 1843–51.

Ravaillac, FRANÇOIS, 1578–1610. French fanatic, murderer of Henry IV.; executed with hideous tortures.

Ravel Family. French pantomimists and dancers, well known in the U. S. 1832–34 and 1837–48.

Ravelin. In Fortifications, a detached work having a parapet and ditch forming a salient angle in front of the CURTAIN (q.v.). It may be considered a REDAN (q.v.) upon the counterscarp, upon which it is erected.

Raven. Bird differing from the CROW (q.v.) by its larger size and the lanceolate feathers of its throat. It can mimic the human voice and by superstitious persons is regarded as a bird of evil omen.

Ravenel, HENRY WILLIAM, LL.D., 1814–1887. Botanist of S. C.; writer on *Fungi*.

Ravenna. City of n.e. Italy; taken by Romans 187 B.C.; capital of Western Empire 404; given by Pepin of France to Pope Stephen 754; held by Venice 1440–1509; scene of a victory of the French under Gaston de Foix over the Spanish and Papal armies, April 11, 1512 Pop. ab. 20,000; commune ab. 61,000.

Tomb of Dante at Ravenna.

Ravenscroft, THOMAS, 1592–1640. English composer, especially of psalm tunes. *Melismata*, 1611.

Ravenstein, ERNEST GEORGE, b. 1834. German-English geographer.

Ravignan, GUSTAVE FRANÇOIS XAVIER DELACROIX DE, 1795–1858. Preacher at Notre Dame, Paris, 1837–48; writer on the Jesuits, 1844. *Clement XIII. and XIV.*, 1854.

Ravinala. See TRAVELER'S TREE.

Rawal Pindi. Town of the Punjab, n. India, 160 m. n.w. of Lahore; scene of the Sikh submission 1849, and of a review held by Lord Dufferin 1885 for the Afghan Ameer. Pop., 1891, 73,460.

Rawdon-Hastings, FRANCIS, 1754–1826. Irish soldier, in America 1773–81; Baron 1783; Earl of Moira 1793; Lord-lieut. of Ireland 1805; Gov.-gen. of India 1813–23; Marquis of Hastings 1816.

Rawle, WILLIAM, 1759–1836. U. S. Dist.-attorney for Pa. 1791. *View of the Constitution*, 1825.—His son, WILLIAM, 1788–1858, pub. 25 vols. of Pa. Supreme Court Reports, 1818–33. —His son, WILLIAM HENRY, LL.D., 1823–1889, pub. *Covenants for Title*, 1852.

Rawlins, JOHN AARON, 1831–1869. Brig.-gen U. S. Vols. 1863; on Gen. Grant's staff 1861–65; Brig.-gen. U.S.A 1865; Sec. of War 1869.

Rawlinson, GEORGE, b. 1815. Prof. Oxford 1861–89; Canon of Canterbury 1872. Tr. Herodotus, 1858–60; *Five Great Monarchies*, 1862–67; *Parthia*, 1873; *Sassanian Empire*, 1876; *Ancient Egypt*, 1881; *Phœnicia*, 1889.—His brother, Sir HENRY CRESWICKE, D.C.L., 1810–1895, was long an official in India, Persia, and Turkey; knighted 1856; M.P. 1858 and 1865–68; Baronet 1891. *Hist Assyria*, 1852; *Cuneiform Inscriptions of w. Asia* (with E. Norris and G. Smith), 5 vols., 1861–70; *England and Russia in the East*, 1874.

Rawson, ALBERT LEIGHTON, LL.D., b. 1829. American traveler and Orientalist.

Rawson, GEORGE, 1807–1889. English hymnist.

Ray. Main branches of an umbel or cyme; also ligulate flowers of plants of the Composite family.

Ray. In the propagation of a wave-motion of any kind through an elastic medium, the imaginary straight line drawn at right angles to the wave-front at any point is called a ray passing through that point. A collection of parallel rays constitutes a beam.

Ray, ISAAC, M.D., LL.D., 1807–1881. Supt. Me. insane asylum 1841, and at Providence, R. I., 1845–66. *Medical Jurisprudence of Insanity*, 1838; *Mental Hygiene*, 1863.

Ray, JAMES BROWN, 1794–1848. Gov. of Ind. 1825–31.

Ray, or **Wray,** JOHN, F.R.S., 1627–1705. English botanist and zoölogist. *Historia Plantarum*, 3 vols., 1686–1704; *Synopsis Methodica Animalium*, 1693. *Memorials*, 1844–48, pub. by the Ray Society.

Ray, JOHN, 1816–1888. Reviser of the La. Code. *Digest*, 1870.

Rayahs. Peasants in Servia, Bulgaria, etc., while under

Mussulmans and Rayahs.

Turkish rule. They were treated as cattle by their Turkish masters, hence the word Rayahs, which means cattle.

Rayleigh, JOHN WILLIAM STRUTT, BARON, D.C.L., LL.D., F.R.S., b. 1842. Prof. Cambridge 1879–84, and Royal Inst., London, since 1887; discoverer, with Ramsay, of argon 1894. *Theory of Sound*, 1877–78.

Raymond VI., d. 1222. Count of Toulouse 1194; ruler of the rich territory of s. France, blighted by the Albigensian crusade; defeated by Simon de Montfort 1211 and 1213; memorable for his vacillating course under cruel persecutions.

Raymond, HENRY JARVIS, 1820–1869. Founder, 1851, and editor of N. Y. *Times*; Speaker of N. Y. Assembly 1850 and 1861; Lieut.-gov. of N. Y. 1855; one of the organizers and leaders of the Republican party; M.C. 1865–67. *Life of Lincoln*, 1865.

Raymond, HIPPOLYTE, d. 1895. French playwright.

Raymond, JOHN T. (orig. O'BRIEN), 1836–1887. American actor, best known as Mulberry Sellers in *The Gilded Age*, 1874.

Raymond, ROBERT, LORD, 1673–1733. Chief-justice of King's Bench 1727–33. *Entries on Pleadings*, 1767.

Raymond, ROSSITER WORTHINGTON, b. 1840. American mining engineer; ed. *Am. Jour. Mining*, 1867; U. S. commissioner of mining statistics 1868; pres. Am. Inst. Mining Engineers 1872.

Raymond, SIR THOMAS, 1626–1683. Justice of King's Bench 1680–83. *Reports*, 1696.

Raymond of Sabunde, d. 1437. Spanish mystic, prof. at Toulouse ab.1430. His *Theologia Naturalis*, 1436, was tr. into Latin 1487, and into French by Montaigne 1569.

Raymund Lully. See LULLY.

Raynal, GUILLAUME THOMAS FRANÇOIS, 1713–1796. French encyclopedist, previously a Jesuit. *Divorce of Henry VIII.*, 1763. His *Establishments of Commerce in the Two Indies*, 5 vols., 1770–80, caused his exile till 1787. *Revolution in America*, 1781.

Raynouard, FRANÇOIS JUSTE MARIE, 1761–1836. French dramatist and poet; Deputy 1791 and later. After narrowly escaping the guillotine, he entered the Academy 1807, and turned to the language and literature of his native Provence. His chief works are: *Poems of the Troubadours*, 6 vols., 1816–21; *Romance Grammars*, 1816–21; and a *Romance Dictionary*, 6 vols., 1838–44.

Rayon, IGNACIO LOPEZ, 1773–1827. Mexican patriot, prominent in resistance to the Spaniards, as was also his brother RAMON, 1775–1839.

Rays (RAJIDES, BATTIDES, BATOIDEA). Plagiostome fishes, with bodies flattened horizontally; with five gill-slits on the ventral side, internal to the pectoral fins. They have complete pectoral girdle, and cranial fin cartilages, but no anal fins. Many Rays attain a length of ten or more feet. They live on the bottom of the sea and feed principally on Crustaceans and Mollusks. The Electric Rays (*Torpedo*) have the electric organ between the fin cartilages and the gills. The Sting-Rays (*Try-*

gon) have one or more spines on the slender tail, which can be used as powerful stings. The family *Rajidæ* includes the Skates and Rays. They live in shallow water, feed on shell fish, and nearly all bring forth their young alive. The eggs are inclosed in squarish cases (sea-purses) with slender projections from each corner, as in many sharks. The Sawfish has

Rays (*Raja clavata*).

a flat snout 5 ft. long, set with numerous sharp teeth on the edges, and projecting sidewise, a powerful weapon. The *Miliobatidæ* include Sea Devils or Devil fishes: the latter name is also applied to Cephalopods. Some of these grow to a size exceeding 15 ft. in breadth, and weigh a ton. The males and females live in pairs and have only one young, which they carefully tend.

Razor-Bill. 1. *Alca torda.* Auk of n. temperate coast of the Atlantic, ranging from the Arctic seas to L. I.; noted for its laterally compressed beak. 2. *Rynchops.* Skimmer or Cut-water, of warmer Atlantic shores, occasionally n. as far as L. I. Its lower mandible is ab. an inch longer than the upper, and laterally compressed. In flight the lower mandible is held in the water, thus dipping up small fishes.

Reach. Distance between two points on the bank of a river where the current flows without interruption.

Reaction. See SUGGESTION.

Reaction, CHEMICAL. Occurring when two or more substances, brought into contact, unite or decompose to form other substances.

Reaction-Time. See PSYCHOMETRY.

Read, GEORGE, 1733–1798. Delegate to Congress 1774–77; signer of the Declaration of Independence; framer of the first constitution of Del.; member of the constitutional convention of 1787; U. S. Senator 1789–93; Chief-justice of Del. from 1793. —His brother, THOMAS, 1740–1788, was Commodore of the Pa. navy 1775, and in the Continental service 1776–77.

Read, JOHN MEREDITH, LL.D., 1797–1874. Grandson of George; Chief-justice of Pa. from 1860.—His son and namesake, 1837–1896, was U. S. Consul-gen. for France 1869–73, acting also for Germany 1870–72, and U. S. Minister to Greece 1873–79. *Henry Hudson*, 1866.

Read, NATHAN, 1759–1849. American inventor of a tubular boiler and high-pressure engine.

Read, THOMAS BUCHANAN, 1822–1872. American artist and poet; best known by his verses on *Sheridan's Ride*, and picture of Longfellow's daughters. *New Pastoral*, 1854; *House by the Sea*, 1856; *Sylvia*, 1857; *Wagoner of the Alleghanies*, 1862.

Reade, CHARLES, 1814–1884. English novelist and dramatist. His chief work, *The Cloister and the Hearth*, 1861, presents the 15th century with great force. *Never too late to Mend*, 1856, attacked prison abuses, and *Hard Cash*, 1863, private asylums. Others of note are *Peg Woffington*, 1852; *Christie Johnstone*, 1863; *Griffith Gaunt*, 1866; *Foul Play*, 1869; *A Woman-hater*, 1877.—His nephew, WILLIAM WINWOOD, 1839–1875, novelist and traveler, pub. *Veil of Isis*, 1861; *Savage Africa*, 1863; *Martyrdom of Man*, 1872; *Ashantee Campaign*, 1875; and *The Outcast*, 1875.

Reading. Borough of Berkshire, on the Thames at the mouth of the Kennet, 39 m. w. of London. The town has some fine buildings, especially the town hall block, with an excellent

Assize Courts, Reading.

public library and museum, the latter containing the most valuable collection of Romano-British remains in England. Pop., 1891, 55,752.

Reading. City of Berks co., Pa., on the e. bank of the Schuylkill; settled 1748, chartered 1783 and 1847; center of an iron manufacturing district. Pop., 1890, 58,661.

Reading Microscope. One arranged for reading the circles of fine astronomical and geodetic instruments.

Reagan, JOHN HENNIGER, b. 1818. M.C. from Texas 1857–61; Postmaster-gen. C.S.A. 1861–65; M.C. 1875–87; U. S. Senator 1887–93.

Real. Spanish silver coin from 1497; one-eighth of a dollar till ab. 1830; now one-twentieth.

Real Actions. Proceedings at common law for the recovery of lands: COVENANTS, those in real estate conveyances which affect the nature, quality, or mode of enjoyment of such estate: ESTATE, an estate for life or in fee in lands, tenements and hereditaments.

Real and Money Income. All the new economic goods which come to a person during any given period, less whatever he has had to part with to obtain these, make up his real income; but income frequently means only that part of the above which comes to him in the form of money.

Real Cost of Production. Sum of the exertions of all the different kinds of labor involved in making the given article, and of the abstinences required for saving the capital used in making it.

Real Estate. See REAL ACTIONS.

Realf, RICHARD, 1834–1878. Anglo-American poet.

Realgar. 1. As_2S_2. Red or orange-yellow mineral, containing sulphur and arsenic, frequently associated in small quantity with silver and lead ores, as in Hungary, Bohemia, and Saxony; also found at several localities in the w. U. S. 2. Artificial product. See ARSENIC DISULPHIDE.

Realism. Two different theories, one epistemological, the other philosophical. The former is opposed to idealism and asserts the existence of something other than mind in the world; namely, matter: the second affirms that general conceptions represent a real essence in existence, which corresponds to them, and is opposed to nominalism.

Reality. 1. Objective as opposed to subjective, real as opposed to illusory; 2. The actual, whether subjective or objective; 3. The permanent as opposed to the transient. The first contrasts it with the mental, the second includes the mental, the third makes no implications as to its metaphysical nature.

Realized Wealth. That part of a man's income which he has saved, whether in present use as capital or laid away for future use; so called as distinguished from income, in questions of taxation.

Real Presence. Doctrine variously held and defined in

the Catholic and Lutheran Churches, that Christ is corporeally, or at least spiritually, present in the elements consecrated and administered in Holy Communion.

Real Quantity. One involving in its combination no impossible operations.

Real Wages. See NOMINAL WAGES.

Reamer. Steel tool for enlarging a hole that has been made. Taper reamers have this as their primary function, and are much used in riveted work, where the hole is made intentionally too small, so that the metal fatigued by punching may be reamed away (see PUNCH). Also where holes in a riveted seam do not come opposite, but are "half-blind," a taper reamer enlarges both holes till the rivet will pass through. The reamer also appears as a cylindrical bar into which flutes have been milled, so that the tool, when introduced into an untrue hole, will cut it cylindrical, straight, and of exact diameter to gauge. Standard tapers for assembling work are also produced by the use of similar reamers of exact taper and size.

Reaper. Machine used for harvesting grain. It delivers the grain in loose bundles or gavels at the side of the machine.

Sweep-rake Reaper.

It was the forerunner of the binder, which has now superseded it, except on small farms in the rougher portions of the country, where but little grain is raised.

Reason. In its most general sense, conscious intelligence, which is able to adapt means to a given end; also loosely used in many other senses, but most particularly to designate that logical faculty by which the mind arrives at a judgment by any process of inference from previous judgments. In a simple process of reasoning the main steps are assimilation and association; *e.g.*, I see the flame of a candle, and believe that if I place my finger in the flame it will be burned. If I perform this process with conscious reflection, the steps are these: I first recognize and identify, *i.e.*, assimilate, the presentation of the flame; I next associate it with previous experiences of other similar flames accompanied by painful sensations of heat under certain circumstances, and from these premises draw the conclusion that the flame in question will produce a similar sensation under similar conditions; viz., a sufficiently close approximation of the flame and finger. The process is even in its simple form a complex one, involving recollection and discrimination, but the chief factors are assimilation and association.

Réaumur, RENÉ ANTOINE FERCHAULT DE, 1683–1757. French physicist, pensioned 1722; discoverer of methods of making steel and opaque glass; inventor of the thermometer named from him, of which zero is the freezing point of water and 80° is the boiling point of alcohol. *Hist. des Insectes*, 6 vols., 1734–42.

Reaumur's Porcelain. Opaque glass, devitrified by sudden heating and cooling, invented by R. 1739. It is tougher and less fragile than ordinary glass.

Rebecca Riots. Series of outbreaks in England 1843–44, due to the indignation of the people at the great increase of toll-gates on the public highways. Men in female attire tore down the toll-bars by night. Their motto was from Gen. xxiv. 60.

Rebekah. In Genesis, daughter of Bethuel, greatniece of Abraham, wife of Isaac, and mother of Jacob and Esau.

Rebellion. Rising, not permanently successful, against a government; as that of the Parliament against Charles I., 1642, the results of which were overthrown 1660 by the reëstablishment of the Stuarts. Lasting success, as in England 1688–89, and in America 1775–83, converts rebellion into revolution.

Rebolledo. BERNARDINO, COUNT DE, 1597–1676. Spanish poet and official, Envoy to Denmark and Sweden. He versified Job and the Psalms.

Rebus. Puzzle in which words or phrases are represented by pictures of objects, the names of which are similar in sound to the syllables or words intended. The picture-writing of the Aztecs was of this character, they not having advanced to the alphabetic stage.

Récamier, JEANNE FRANÇOISE JULIE ADELAIDE (BERNARD), MME., 1777–1849. French beauty of high character, head of a famous salon; exiled 1811–14; friend of Mme. de Staël and Chateaubriand.

Recaption. Remedy, which the common law allows one to enforce, of retaking, without legal process, goods, wife, child, or servant wrongfully taken and withheld. Statutes and modern judicial decisions have limited its exercise.

Recapture. In International Law, taking of a captured vessel by one of the same state or of an ally. It entitles the recaptor to salvage.

Receipt. Taking possession of a thing, or written acknowledgment of such taking. It is not a contract, and may be explained by parol evidence.

Receiver. Court appointee whose duty is to take and hold the property of another, in the interest of all parties interested therein. The power of appointment is generally defined by modern statutes: the exercise of the power in each case is largely a matter of judicial discretion. Receiver's certificates are non-negotiable instruments for the payment of money, issued by receivers under the order of a court.

Receiver, TELEPHONE. Instrument employed on telephone lines to receive the electric currents and deliver their energy to the air in the form of sound waves. A convenient form is that invented by Bell, consisting of a straight steel magnet upon one pole of which is a bobbin of fine insulated copper wire. In front of and very near to this pole is a thin

Bell's Telephone Receiver.

circular iron diaphragm, capable of vibrating to and fro, following the fluctuations in the strength of the magnet caused by the varying current which passes round the bobbin. Thus sound waves are started in the air by the vibrations of the plate.

AIR-PUMP.—Bell-glass in connection with an air-pump from which the air may be exhausted. Its lower edge is ground flat, and it rests on a flat metal or ground glass plate. See AIR-PUMP.

Receptacle. In Botany, end of the peduncle. See TORUS.

Rechabites. 1. Tribe or family of Midianite origin, at Jerusalem ab. 600 B.C.; they lived in tents and used no wine. Jer. xxxv. 2–19. 2. Order of total abstainers in England and the U. S.

Recife. See PERNAMBUCO.

Reciprocal OF A QUANTITY. Unity divided by the quantity. It is indicated either in fractional form or by placing a minus sign before its exponent.

Reciprocal Equation. One in which the substitution of the reciprocal of the variable for the variable will not alter the equation. If a be a root, then will $\frac{1}{a}$ be also a root.

Reciprocally Proportional. Quality of variables when their product is constant.

Reciprocal Rectangles. Those equivalent and not equal; so called since altitudes are proportional to reciprocals of bases.

Reciprocity. Treaty relation between states, by which each is bound to accord to the other certain privileges, chiefly commercial, in return for like benefits.

Reciprocity, PRINCIPLE OF. Idea assumed to unite the interests of the individual with the good of society, his good actions gaining him esteem and advantages, and benefiting society by leading others to imitate his example.

Reciprocity Treaty. Between U. S. and Canada; concluded June 5 and ratified Sept. 9, 1854; abrogated 1866, on notice given by U. S. 1865.

Recitative. Kind of music used in opera, oratorio, and cantata, between plain speech and melody, and connecting the set or more highly organized forms of the work. In its simplest form it foregoes the raised rhythms used in artificially constructed pieces, and depends chiefly on variety of pitch; its most useful purpose is to hasten the action. When accompanied simply by an occasional chord on double bass and violoncello or pianoforte, it is called *recitativo secco* or dry recitative; when treated more melodiously and accompanied by the orchestra, it is *recitativo stromentato* or accompanied recitative. It came in with the invention of the opera.

Recke, ERNST VON DER, b. 1848. Danish dramatist, poet, and critic.

Recklinghausen, FRIEDRICH DANIEL VON, b. 1833. Prof. Würzburg 1866, and Strassburg 1872; writer on pathology.

Reclinate, or INFLEXED. Method of vernation where the upper part of a leaf is bent on the lower, as in the Tulip-tree.

Reclus, JEAN JACQUES ÉLISÉE, b. 1830. French geographer and communist, banished 1871–79. *The Earth*, 1867, tr. 1871; *Geographie Universelle*, 19 vols., 1874–94.

Reclus, PAUL, b. 1847. French surgeon. *Clinics*, 1887.

Recluse. 1. Monk or nun occupying a sealed cell, ab. 1000–1200. 2. Nun of Port Royal. 17th century. 3. Any one living in retirement.

Recognition. Feeling of familiarity accompanying the presentation of an object which has already affected consciousness. It implies reproduction and comparison. When one recognizes a familiar face, the present object of consciousness, viz., the face itself, is compared with an image which is the result of previous experiences of the same face, and is itself recognized: this comparison results in the recognition, which is clear and complete according as the image is clear and complete. The object of recognition may be either a material object or an image. The recognition of an image depends upon the completeness of the reproduction of the circumstances and associations attendant upon the original perception.

Recognizance. Common law obligation entered into before a court of record or authorized magistrate, by which the obligor acknowledges or recognizes his liability; now regulated by statute.

Recollection. See MEMORY.

Recollet. Branch of the Franciscan order, established 1592 in France; also of Augustinians, founded 1530, and others. The name marks a return to the original rule.

Reconciliation. Removal of estrangement between God and man, through the mediation or atonement of Christ.

Reconnaissance. Rough preliminary survey of a country to select an approximate location for a road or canal. Levels are taken by the barometer, angles measured by the prismatic compass, and distances determined by the pedometer or odometer.

Record, ROBERT, M.D., 1510–1558. Physician to Edward VI. and Mary; introducer of the sign of equality in algebra; author of an arithmetic, *Grounde of Artes*, 1540, and an algebra, *Whetstone of Wit*, 1557.

Recorder. 1. Class of judicial officers, having original criminal jurisdiction within a locality. 2. Officer, charged with making and keeping official written memorials and transcripts of transactions.

Recording Acts. Modern statutes providing for the public record of conveyances of property, and prescribing the legal effect of such records.

Recoupement. Legal defense which cuts down plaintiff's claim, but does not entitle defendant to an affirmative judgment.

Recovery, COMMON. Obsolete method of conveying land by a fictitious suit.

Recruit. Person who voluntarily enlists in the army. See ENLISTMENT.

Rectangle. Parallelogram having right angles only.

Rectification. Determination of the length of any curve or arc in terms of the rectilinear unit. Some familiar curves may be rectified geometrically, but the processes of the calculus are generally required.

Rectifying. Second and subsequent distillations of a volatile liquid, to free it from impurities which may have been carried over in the first distillation; particularly applied to alcohol.

Rectilinear, or RECTILINEAL. Composed of or bounded by straight lines.

Rectipetality. Tendency of vegetable organs to grow in straight lines when all external directive influences are removed.

Rector. In English Ch. and P. E. Ch., incumbent of a parish; also in Scottish Episcopal Ch. since 1890; sometimes head of a ch., school, or other establishment. See VICAR.

Rectrices. Long tail-feathers of birds.

Rectum, DISEASES OF. Those affecting the last division of the intestines. Inflammation of the part is known as proctitis; it may be the seat of malignant growths. See PROLAPSUS ANI and HEMORRHOIDS.

Recurring Equation. One in which the coefficients of terms equidistant from the extremes are the same, having the signs of the corresponding terms either all like or all unlike: *e.g.*, $x^5-3x^4+8x^3+8x^2-3x+1=0$. A recurring equation of odd degree has $+1$ or -1 as a root, as the corresponding terms have unlike or like signs; one of even degree, having all like signs, can be transformed to an equation of one-half the degree: one of even degree, having unlike signs and the middle term missing, has both $+1$ and -1 as roots.

Recurring Sines. One each of whose terms after a certain number is related to a number of preceding terms through a sequence of multipliers which remains unchanged throughout the series. This sequence of multipliers is called the scale of relation, and the number of terms in the scale determines the order of the series. A geometrical progression is a recurring series of the first order, the constant ratio being the scale. A recurring series of the second order will have a scale of two terms and two terms given as a basis for the series. The scale of a recurring series of the nth order can be determined if 2n terms be known.

Recurvirostridæ. See LIMICOLÆ.

Recusants. Those who fail to attend services of an Established Ch. Statutes of Elizabeth were in force against Protestant Dissenters till 1688, and against R. Catholics till 1791.

Redan, BATTLE OF. At Sevastopol, Sept. 8, 1855; the English made a successful attack on the Great R., and the French on the Little R., but were compelled to retire with great loss

Redan—View of portion of interior.

after a desperate struggle. The English lost 71 officers and 2,450 in all; the French, 1,646 killed, including 5 generals and 140 officers, 4,500 wounded, and 1,400 missing. The Russians abandoned the s. part of Sevastopol the following night.

Redan. See FIELD WORKS.

Red Bud. See JUDAS TREE.

Red Cedar. See CEDAR.

Red Cedar. River ab. 120 m. in length, rising in a series of small lakes in Wis., flowing s.w. and emptying into the Chippewa.

Red Chalk. See HEMATITE.

Red Copper Ore. See CUPRITE.

Red Cross. Societies organized to succor the wounded and dying in time of war. At a conference in Geneva, Oct. 1863, a treaty was drawn up which, after some modifications in the convention of Aug. 1864, was signed before adjournment by representatives of 12 governments, a number now more than trebled. All hospitals, ambulances, materials, etc., under the Red Cross are treated as neutral. The American association (Clara Barton, pres.) aims also to relieve sufferers from fires, cyclones, famine, and other far-reaching calamities. The symbol of the various relief societies is a red cross on a white ground.

Red Deer. See STAG.

Reddle. See HEMATITE.

Redemption. Work of Christ for his people; variously interpreted in different ages and schools of theology; nearly equivalent to salvation, which is sometimes of more personal application. See ATONEMENT.

Redemptionists, or TRINITARIANS. French order, confirmed by the Pope 1199, for the ransom of Christian slaves in the Barbary States.

Redemptorists. Severe monastic order founded by Liguori in Italy 1732, confirmed 1749. It has many houses in the U. S.

Redesdale. Valley of Northumberland, near the Scottish frontier, famous in border legends. The battles of Otterburn and Redeswire, 1575, were fought in the vicinity.

Redfield, ISAAC FLETCHER, LL.D., 1804–1876. Judge Vt. Supreme Court 1835, Chief-justice 1852–60; prof. Dartmouth 1857–61. *Law of Railways*, 1857; *Law of Wills*, 1864–70; *Law of Carriers*, 1869.

Redfield, JUSTUS STARR, 1810–1888. American publisher.

Redfield, WILLIAM C., 1789–1857. American meteorologist, prominent also in connection with steamboats, railroads, and street railways.

Red Fire. Used in pyrotechnics; usually consisting of an intimate mixture of dry strontium nitrate, sulphur, potassium chlorate, and lampblack.

Redgrave, RICHARD, 1804–1888. English landscape and genre painter, R.A. 1851, Inspector-gen. of art schools 1857–80. *Manual of Colors*, 1863; *Century of Painters*, 1866; *Reminiscences*, 1891.

Red Hand, IN HERALDRY. Sinister hand granted to baronets in England and Ireland 1611, and now to those of the United Kingdom.

Red Hematite. Fe_2O_3. One of the commonest of iron ores, in which the red color of the mineral or of its powder is a prominent character. See HEMATITE.

Red-hot Shot. Spherical shot heated to a red heat and fired from smooth-bore muzzle-loading cannon, to set vessels, wooden buildings, etc., on fire. Many of the masonry forts constructed in U. S. before the Civil war were provided with hot-shot furnaces: the use of rifled guns and elongated projectiles have made hot shot an obsolete projectile.

Redia. See DISTOMUM.

Redif Pasha, b. 1827. Turkish officer, prominent in the war with Russia 1877; since in exile.

Reding, ALOYS VON, 1755–1818. Swiss patriot, who defeated the French at Morgarten 1798, opposed the Helvetic confederation, and was Landamman of Canton Schwyz 1803 and 1809.

Red Ink. See INK.

Red Jacket, or SAGOYEWATHA, 1751–1830. Seneca chief, distinguished for his eloquence and for his services to the U. S.

Red Lead. See MINIUM.

Red-Letter Days. In the Anglican Calendar, the days of the greater feasts were printed in red letters, and the lesser in black, whence the Black-Letter Saints' Days.

Red Liquor. Solution of aluminium acetate in water; usually prepared by the action of solutions of acetate of lime and alum upon each other, when sulphate of lime is precipitated; used in dyeing.

Redoubt. Important earthen field work, completely inclosing a position to be defended: generally of four or five faces, with sufficient interior space to lodge the temporary garrison. When it is commanded by the defenses in rear its gorge is often stockaded, to prevent its being used by the enemy in the event of its capture. See FIELD WORKS.

Taking a Turkish Redoubt at Loftcha, Bulgaria.

Redpath, JAMES, 1833–1891. Scottish-American journalist and author; active against slavery; founder of lecture bureaus in Boston. *John Brown*, 1860.

Red-Polled. See CATTLE.

Red Precipitate. See MERCURIC OXIDE.

Red Prussiate of Potash. See POTASSIUM FERRICYANIDE.

Red River. Branch of the Mississippi. It heads in the Staked Plains of Texas, flows generally e. between Texas and Indian Territory, then s.e. across a corner of Ark., and through La. to its mouth. Length 1,550 m., drainage area ab. 90,000 sq. m., average flow 57,000 cu. ft. per second.

Red River Expedition. Planned by Gen. Halleck; conducted by Gen. Banks, who started March 25, was defeated at Sabine Cross-Roads by Kirby Smith April 8, and began his retreat; defeated the Confederates at Pleasant Hill April 9, and reached Alexandria April 22.

Red River of the North. Heads in Lake Elbow on the boundary between Minn. and Dakota, flows n. into Canada, and into Lake Winnipeg. The region it traverses is a nearly level plain, once the bed of Lake Agassiz, and is famed for the excellence of its wheat harvest. Drainage area ab. 44,000 sq. m., three-fourths of it being in the U. S. Length 750 m.

Boundary Post between U. S. and Rupert's Land, at Pembina, N. Dak., on Red River.

Redroot. 1. *Gyrotheca tinctoria.* Woolly herb of the natural family *Hæmodoraceæ*, growing in swampy places in the e. U. S. 2. Certain shrubs of the genus *Ceanothus*, natural family *Rhamnaceæ*, natives of N. America.

Redruthite. Cu_2S. Variety of the mineral chalcocite, occurring in well-formed crystals at Redruth in Cornwall.

Red Sea. Long narrow arm of the Indian Ocean, between Asia and Africa, separating Arabia from Egypt, the Soudan and Abyssinia. It connects with the Indian Ocean by the Strait of Babel Mandeb and the Gulf of Aden. Length 1,450 m., maximum breadth 230 m.

Red Seaweeds. See ALGÆ and SEAWEEDS.

Red Silver Ore. Common name for the minerals PYRARGYRITE and PROUSTITE (q.v.). The former is known as the dark red, the proustite as the light red ore.

Red Snow. *Protococcus nivalis.* Minute red plant of the sub-kingdom *Protophyta*, occurring abundantly in arctic and alpine regions, and superstitiously regarded as blood.

Red Sulphur Springs. Watering place in W. Va., 38 m. s.w. of White Sulphur Springs. The water contains phosphorus and a gelatinous sulphur compound which is its distinctive feature.

Red Sunset. Peculiar rich and long-enduring sunset phenomena, observed, as also a red sunrise, throughout the n. temperate zone 1883, and enduring for three years, but slowly diminishing in intensity. Similar phenomena, but less extensively distributed, were observed 1831 and other years.

Red Top. *Agrostis vulgaris.* Pasture grass of n. hemisphere; in its habits somewhat similar to blue grass, but taller and finer. It is especially adapted to moist and wet soils, and makes a fine hay of excellent quality.

Red Top, FALSE. *Poa serotina.* Tall meadow grass of the n. hemisphere, known also as Fowl Meadow-Grass.

Reduced Length OF AN ELECTRIC CONDUCTOR. Length of a column of mercury of one square millimeter cross section which offers the same resistance as the conductor.

Reduced Thickness OF A DIELECTRIC. Thickness of a layer of air that would have the same inductive capacity as the dielectric. It is equal to $\frac{t}{k}$, in which t is the thickness of the dielectric and k its specific inductive capacity.

Reducing Agent. Substance which will readily abstract oxygen from other substances; *e.g.*, hydrogen and carbon.

Reductio ad Absurdum. Process of reasoning by which a proposition is proved by proving the falsity of its contradictory opposite.

Reduction. Process occurring when a chemical compound containing oxygen gives up a portion or all of its oxygen to some other compound or element. When compounds containing other elements give up these, reduction is also said to have taken place; *e.g.*, when $FeCl_3$ becomes $FeCl_2$.

Reduction, IN MATHEMATICS. 1. Process of changing form without changing value or relations. 2. Process of reaching a result in general terms applicable to all cases under the form which is discussed.

Reduction Factor. See GALVANOMETER.

Reduplication. In Botany, regular doubling of flowers.

Reduplication. Repetition of part of the root of a verb in order to express change of tense; common in Greek and Latin, and even in Gothic; best shown in English by the preterit *did* from the present *do*.

Redwald. King of East Angles 597; Bretwalda.

Redwitz-Schmölz, OSCAR, FREIHERR VON, 1823–1891. Bavarian poet and novelist. *Amaranth*, 1849; *Odilo*, 1878; *Hymen*, 1887.

Red-Wood. *Sequoia sempervirens.* Very large tree of the natural family *Coniferæ*, native of the Pacific coast of the U. S.; extensively lumbered.

Redwood, ABRAHAM, 1709–1788. Founder of the Redwood Library at Newport, R. I., 1747–50.

Reed. *Phragmites phragmites.* Large grass, growing in swamps in the n. temperate zone.

Reed. Simple elastic tongue of metal or wood contained in many musical instruments, and designed to set the air into vibration. It is usually moved by a current of air, though it is vibrated in the Jew's-harp by the finger. If it vibrates freely in an aperture and just escapes grazing the edges, it is

Organ Reed. *a*, Bagpipe Reed. *b*, Bassoon Reed.

called a free reed; *e.g.*, that of a harmonium or concertina. If it is larger than the orifice and strikes against the edges at each oscillation, it is called a beating reed; *e.g.*, that of the clarionet or bassoon. See ORGAN PIPE.

Reed, ANDREW, D.D., 1787–1862. Cong. pastor in London 1811–61. Some of his hymns, 1817–25–42, are widely used.—His wife, ELIZA (HOLMES), 1794–1867, was also a hymnist.

Reed, DAVID BOSWELL, M.D., 1805–1864. Scottish chemist and writer, interested especially in ventilation; in the U. S. from 1856.

Reed, SIR EDWARD JAMES, b. 1830. English designer of ironclads; chief constructor of the navy ab.1860–70; M.P. 1874–92; knighted 1878. *Japan*, 1880.

Reed, HENRY, LL.D., 1808–1854. Grandson of Joseph; prof. Univ. Pa. from 1831. His *Lectures on English Literature*, 1855, and on the *British Poets*, 1857, were edited by his brother, WILLIAM BRADFORD, 1806–1876, prof. Univ. Pa. 1850, Minister to China 1857–60, and biographer of Joseph Reed, 1847.—Henry's son, HENRY, 1846–1896, was Judge of Common Pleas in Phila. from 1886. *Statute of Frauds*, 3 vols., 1884.

Reed, JOSEPH, 1741–1785. Sec. and aid to Washington 1775–78; active in several battles; Brig.-gen. 1777; delegate to Congress 1778; Pres. Pa. Executive Council 1778–81, and practically Governor. When offered a bribe of £10,000, he replied: "I am not worth purchasing, but, such as I am, the king is not rich enough to do it."

Reed, THOMAS BRACKETT, b. 1839. Attorney-gen. of Me. 1870–72; M.C. since 1877, and Speaker of the House 1889–91 and 1895–97; Republican leader.

Reed Bird. See BOBOLINK.

Reeder, ANDREW HORATIO, 1807–1864. First Gov. of Kansas 1854–55. He denounced the fraudulent Legislature, and by the Freesoilers was elected to Congress and the U. S. Senate, but not admitted.—His son, FRANK, b. 1845, is prominent in Pa. Republican politics.

Reed Instruments. Generic name of a class of instruments, the tones of which are produced by a reed. They were known among the Chinese, but most are of modern invention. See ORGAN, HARMONIUM, and MELODEON.

Reed-Mace. See CAT-TAIL.

Reef. See CORAL.—In Australia, auriferous quartz vein.

Reel. Scottish dance, varied in the Va. form.

Re-entrant Angle. Interior angle of a polygon greater than 180°.

Re-entrant Polygon. One having one or more re-entrant angles.

Rees, or ARICKAREES. Indian tribe of Pawnee origin, which lived on the upper Missouri, whither they had migrated; unfriendly to the whites. They now number ab.1,000, on a reservation with the Mandans. See PAWNEES.

Rees, ABRAHAM, LL.D., F.R.S., 1743–1825. Unitarian minister in London from 1768; ed. *New Cyclopedia*, 45 vols., 1802–20.

Rees, JOHN KROM, b. 1851. Astronomer; prof. Columbia Coll. 1881.

Reeve. English local magistrate of former times.

Reeve, CLARA, 1725–1803. English novelist. Tr. Barclay's *Argenis*, 1772; *Old English Baron*, 1777–78.

Reeve, HENRY, D.C.L., 1813–1895. Registrar of Privy Council 1837–87; ed. *Edinburgh Review* 1855; historical writer.

Reeve, TAPPING, LL.D., 1744–1823. Founder and head of the first law school in the U. S., at Litchfield, Conn., 1784–1820. *Law of Baron and Femme*, 1816; *Law of Descents*, 1825.

Reeves, JOHN, 1752–1829. Chief-justice of Newfoundland 1791–92 *History of the Law of Shipping*, 1792; *History of English Law*, 5 vols., 1784–1829.

Reeves, JOHN SIMS, b. 1822. English singer, highly popular as a tenor 1847–91.

Reeving. Passing a rope through a hole or channel of a block made to receive it.

Re-exchange. Loss resulting from the dishonor of a bill of exchange in a different country from that where it is drawn or indorsed.

Refectory. Dining hall or fratery, of a convent or college. The arrangements were similar to those of the ordinary

Refectory, Convent of St Catherine, Mt. Sinai.

domestic halls. It was usually provided with a pulpit, from which one of the inmates read to the others during meal time.

Referendum. Submission by the legislature of a proposed law to popular vote.

Reflecting-Anemometer. Aime's apparatus, invented 1846, for observing the direction and velocity of motion of the clouds, *i.e.*, of the upper winds. This and similar apparatus are now styled NEPHOSCOPE (q.v.).

Reflecting Power. Property of a surface by which it reflects regularly a greater or less proportion of the radiant energy incident upon it. Its value is the ratio of the energy reflected to the whole amount incident. This quantity is always inversely proportional to the absorbing power of the medium beyond the surface. The reflecting power increases with the angle of incidence. That for water at a perpendicular incidence, according to Bouguet, is ab. 0.018; for an incidence of 89.5° it is 0.721. Again the differences in the reflecting powers of different substances are much more marked at small than at great incidences. Thus water and mercury reflect about the same proportion of the incident light at 89.5°, while at a perpendicular incidence mercury has a far higher reflecting power.

Reflecting Telescope. The image is formed by means of a concave mirror; the eye-piece may be placed in the focus of the mirror in front, or a reflector may be employed to throw the image back through an orifice in the mirror to the eye-piece placed behind it. Four different forms have been employed, the NEWTONIAN, GREGORIAN, HERSCHELIAN, and CASSEGRANIAN (q.v.).

Reflection. Abrupt change in the direction of propagation of a wave front in an elastic medium when it is incident upon a surface. The laws of reflection are: (1) The ANGLE OF REFLECTION (q.v.) is equal to the ANGLE OF INCIDENCE (q.v.): (2) the incident ray, the reflected ray, and the normal are all in the same plane. In the case of radiant energy these two laws apply to specular or regular reflection, such as takes place from polished surfaces. The phenomenon of total reflection takes place when a ray of radiant energy is incident upon the surface of a medium optically less dense, and at an angle greater than the critical angle for that particular wave length.

Total Reflection.

Reflex Action. Muscular or other activity caused immediately by a sensory impulse without the necessary intervention of consciousness; *e.g.*, if the sole of the foot be tickled, the foot will be withdrawn; or if a foreign body approach the cornea of the eye, the eyelid winks. The necessary elements are a sensory impulse carried along a sensory tract, a reflex nervous center, and a motor tract and organ. The great center for reflex action is the spinal cord. Certain parts of the brain however have reflex functions. The most marked feature of reflex actions is their purposeful character, the kind of activity being determined largely by the kind of sensory impulse. This characteristic is a strong support for the theory that reflexes were originally voluntary movements of a purposeful kind, which became habitual and involuntary, and are now inherited. The character of the reflex movement is also influenced by the intensity of the stimulus, a slight stimulus calling out one movement, and a strong stimulus at the same spot calling out a response quite different. Further, the movement varies according to the part of the body stimulated; *e.g.*, a cinder in the eye may cause active winking, while the same body on the mucous membrane of the larynx will bring about violent reflex coughing, directed toward the expulsion of the irritating substance. Reflex actions may be partly or wholly arrested by act of will or by another sensory impulse. The time required for a reflex act varies with the act and with the stimulus, the greater part of the whole time being taken up in the central change by which the sensory is transformed into a motor impulse. The nature of this central function is unknown. Certain of these reflexes are absent in diseased conditions, others are not present in health. Consequently, a study of the reflexes assists in determining the presence of some diseases.

Reflex Sentiments. Those feelings and desires which arise from our recognition of other men's feelings toward ourselves, as our desire of esteem, the love of fame, or of glory.

Reformation. Movement, first conspicuous under Luther 1517, by which a great part of western Christendom was rent away from ecclesiastical obedience to Rome. It was most effective in Germany, Switzerland, Holland, the Scandinavian countries, Scotland, and England. In Spain and Italy it was stamped out; in France it occasioned the Huguenot wars; in Bohemia, where it had been anticipated by a century, its fruits were destroyed, as in parts of Germany, by the Thirty Years' War.

Reformatories. See PRISON and PRISON DISCIPLINE.

Reformed Church IN THE UNITED STATES. Organized 1747; called German Reformed till 1867. It has ab. 950 ministers and 225,000 communicants.

Reformed Church OF AMERICA. Organized in New Amsterdam 1628; called Reformed Protestant Dutch till 1867; especially strong near the Hudson. Ministers ab. 620, communicants above 100,000.

Reformed Episcopal Church. Founded 1873 by the secession of Bp. Cummins of Ky. from the P. E. Ch. It acknowledges non-episcopal ordination, has 8 bishops, ab. 110 ministers, and ab. 11,000 members.

Reformed Presbyterians, CAMERONIANS, or COVENANTERS. Organized in Scotland 1680, and in America 1774; connected with Associate Pres. 1782. See PRESBYTERIANS.

Refracting Angle. In an optical prism, angle between the face upon which the radiation is incident and that from which it is emergent. See PRISM.

Refracting System. Mode of lighting a lighthouse. A central lamp is used, the rays from which are transmitted through a combination of lenses surrounding it. Also called the Dioptric System.

Refraction. In general, when any form of wave motion passes from one medium into another, the direction of the propagation is changed; this bending or change of direction is refraction. It takes place notably in the case of sound, as demonstrated by the experiments of M. Sondhaus; also in the case of radiant energy, which presents by far the most scientific interest. The laws governing the refraction of light were first stated by Snell, but were made more generally known by Descartes. The INDEX OF REFRACTION (q.v.) is usually indicated by μ. The diamond is one of the most refractive media known, and owes its brilliancy to this property. The index

Appearance of Stick in Water.

varies from 2.44 to 2.75. The index for water is 1.33, and that for crown glass ab. 1.56. The refractive power of organic substances has been found to be closely related to their composition. If a substance whose density is ρ contains carbon, hydrogen, and oxygen, the numerical quantity, $\frac{m(\mu-1)}{\rho}$, in which m is the molecular mass, is constant. This quantity is called the MOLECULAR REFRACTIVE (q.v.) energy of the substance. This number may be predicted from the chemical formula of the substance, $C_aH_bO_c$, by finding the value of $(5a+1.3b+3c)$. See LAWS OF REFRACTION.

Refractional Focus, NODAL POINT, and PRINCIPAL POINT. Three of the six CARDINAL POINTS (q.v.), of an optical lens system.

Refractory Ores. Ores, especially of silver and lead, that are difficult to treat by the simpler smelting processes, owing to the presence of antimony or other chemical element, that is liable to form an undesirable alloy with the metal sought, or will necessitate an unusually high heat in the furnaces.

Refugees. Those who fled to England from persecution in the Low Countries under Philip II., and in France 1685; thence any exile from religious or political reasons.

Refunding. Process of substituting for interest-bearing bonds representing a national debt other bonds bearing a lower rate of interest. The option is generally given to the holders of the bonds of either receiving their face value or accepting the reduced rate of interest.

Regaldi, GIUSEPPE, 1809–1883. Italian poet, noted in early life as an improvisator; prof. Bologna from 1866.

Regalia. Crown, scepter, and other emblems of royalty, used chiefly at coronations. Those of England are mostly kept in the Tower of London, and valued at £3,000,000.

Regel. EDUARD VON, 1815–1892. Director of the botanical gardens in St. Petersburg 1875. *Die Parthenogenesis im Pflanzenreiche*, 1859; *Monographia Betulacearum*, 1861; *Tentamen Floræ ussuriensis*, 1861.

Regelation. Phenomenon noticed 1850 by Faraday, that two pieces of ice at 0° C. if brought in contact would freeze into one piece. The cause has been the subject of wide discussion. As the melting point of ice is lowered by 0.0074° C. for every atmosphere of pressure applied, a slight pressure upon the pieces in contact will melt a very thin layer of liquid between them, which will immediately refreeze if the pressure be removed. The motion of the glaciers in the Alps has been supposed by Tyndall to be dependent on this principle of regelation, instead of being due to ice viscosity, as contended by J. D. Forbes.

Regeneration. New birth or awakening to spiritual life; by some connected with baptism, by others with conversion. Like every other doctrine, it has been variously held; but in all views except the Pelagian it implies innate depravity and divine grace.

Regensburg. See RATISBON.

Regent. One who temporarily exercises royal authority, as during the minority of Louis XIV., when his mother, Anne of Austria, was regent; or the madness of George III., when the Prince of Wales was appointed to this position; or now in Bavaria, where Prince Luitpold is regent, on account of the insanity of King Otto.

Reggio. Anciently Rhegium; town of s.w. Italy, on Strait of Messina; founded from Chalcis ab.725 B.C.; ruined by Syracusans 387 B.C.; restored under Roman rule; taken by

Reggio.

Goths 410 and 549, by Saracens 918, by Normans 1060, and by Ottomans 1552 and 1597; destroyed by an earthquake 1783. Pop., with suburbs, ab. 43,000.—Another Reggio, 17 m. s.e. of Parma, gave birth to Ariosto, and has a notable cathedral.

Regicides. 150 commissioners appointed to try King Charles I. of England: 70 acted, 59 signed the death warrant Jan. 1649; of these, 29 were tried and 10 executed Oct. 1660; others were imprisoned. Three of them, Whalley, Goffe, and Dixwell, escaped to New England. The first two were concealed for some two years at New Haven and Milford, Conn., and afterward in Hadley, Mass. Whalley d. 1674; Goffe d. 1679.

Regillus, LAKE. In Latium, Italy; scene of a victory of Romans over Latins, 498 B.C., celebrated in Macaulay's *Lays*.

Regiment. Military organization composed of officers, non-commissioned officers and men, forming a relatively permanent association, and commanded by a colonel. It is the unit of administration in all armies and often the tactical unit also: it is the center of instruction and recruiting and the organization referred to in historical and other records. Regiments are combined into brigades, brigades into divisions, and divisions into corps. A battalion comprises two or more companies of a regiment. In the U. S. service the infantry regiment consists at present of 35 commissioned officers and 517 enlisted men. A German regiment had, until recently, three battalions of four companies each. There are now four battalions. On the peace footing, a company numbers 150 men rank and file. During war and during the maneuvers the effective strength is raised to 250 men. A German regiment is thus 4,000 strong.

Regimental Colors. In U. S., a silken standard carried in battle, upon campaigns, and at reviews and inspections. For Infantry, the colors are of blue silk bearing the coat-of-arms of the U. S. and on a red scroll the name of the regiment embroidered in white. For Cavalry, yellow silk similarly adorned; and for Artillery and Engineers, scarlet silk with the

appropriate emblems of crossed cannon or the castle embroidered upon them. The cord and tassels of the regimental colors correspond in color to that of the arm of service, but the fringes are yellow for all except engineers, which is white.

Regimental Courts-Martial. Courts composed of regimental officers to try soldiers for offenses not capital: jurisdiction does not extend to capital cases nor for the trial of officers: they cannot inflict a fine exceeding one month's pay, nor can they sentence a soldier to imprisonment or to hard labor for a longer period than one month.

Regiomontanus (JOHANN MÜLLER). 1436–1476. German mathematician, at Rome from 1474. He introduced a number of important improvements into practical astronomy, as the employment of clocks driven by weights. The calendars computed by him were of great service to Columbus and other navigators of that day. His work *De Triangulis* was the first modern systematic discussion of Plane and Spherical Trigonometry.

Registration of Land. Compulsory entry on a public register of sales and mortgages of land, to facilitate transfers and assure the validity of titles.

Regma. Fruits of plants of the family *Euphorbiaceæ*.

Regnard, JEAN FRANÇOIS, 1656–1709. French dramatist of the school of Molière; noted for broadly humorous dialogue.

Regnault, HENRI VICTOR, 1810–1878. French chemist and physicist, pupil of Liebig; prof. Coll. de France 1841; director porcelain works at Sevres 1854; best known by his investigations in organic chemistry and physico-chemistry. *Cours Élémentaire de Chimie*, 1847–49.—His son, ALEXANDRE GEORGES HENRI, 1843–1871, a painter of great power and promise, was killed in the war with Germany.

Regnault, JEAN BAPTISTE, BARON, 1754–1829. French painter, eminent in classical subjects.

Regnier, MATHURIN, 1573–1613. French satirical and elegiac poet.

Regular. Flowers in which the parts of each circle are alike in form and size.

Regular Clergy. In R.C. Ch., members of a monastic order, as opposed to the secular or ordinary parish priests.

Regular Figure. One in which the elements of each kind are equal; *e.g.*, a regular polygon is equilateral and equiangular. A regular pyramid has its lateral faces equal and its base a regular polygon.

Regularia (SEA URCHINS). See ENDOCYCLICA.

Regulars. Catholic Christians, male or female, lay or clerical, who follow a *regula pietatis*, and take at least the three vows of chastity, poverty, and obedience to special superiors. Nuns in U. S. usually take simple vows, from which they are more easily released.

Regulus. Alchemistic term meaning the little king; first applied to antimony. In Metallurgy, an impure metal obtained from its oxide or sulphide by fusion with a reducing agent.

Regulus = α-LEONIS. First magnitude star. Right ascension 10h. 2m. 28s., declination 12° 30′ 34″ N.

Regulus, MARCUS ATILIUS. Consul of Rome 267 and 256 B.C.; general in first Punic war, taken prisoner 255. The tale of his dissuading the Senate from making peace or exchanging prisoners, and of his tortures and death at Carthage, is not now accepted.

Rehan, ADA, b. 1859 in Ireland. American actress, prominent in comedy parts since 1876; well known in England since 1888.

Rehoboam. King of Judah ab.975–958 B.C.; son and successor of Solomon. By his harshness of reply to a popular demand for a reduction of taxes he lost all his kingdom except the tribes of Judah and Benjamin.

Rehoboth. 1. Name of one of the four Assyrian cities founded by Asshur (Gen. x. 11). 2. Well dug by Isaac, 20 m. s. of Beersheba (Gen. xxvi. 22). 3. City of an Edomite king, supposed to be Rachaba, 4 m. e. of the Euphrates (Gen. xxxvi. 37).

Reichenbach. Town of Silesia, s.e. Prussia; scene of a defeat of Austrians under Daun by Frederic II., Aug. 16, 1762.

Reichenbach, HEINRICH GOTTLIEB LUDWIG, 1793–1879. Prof. Dresden 1820. *Taschenbuch für Gartenfreunde*, 1827; *Iconographia botanica exotica*, 1827–30; *Iconographia botanica, seu criticæ*, 1823–32; *Flora germanica*, 1830–32; *Flora exotica*, 1834–36; *Icones Floræ mediæ europeæ*, with H. G. Reichenbach, 1834–70.

Reichenbach, KARL, BARON VON, 1788–1869. German chemist, discoverer of paraffin, creosote, and the odic force; prolific writer.

Reichenhall. Summer resort in s.e. Bavaria, 10 m. s.w. of Salzburg; noted for its springs and salt-works. It has the

Reichenhall.

most important salt mines of Bavaria. The saline and ferruginous springs of Achselmannstein are much frequented, and have been famous since the 8th century. Pop. ab. 4,000.

Reichensperger, AUGUST, 1808–1895. German R. C. leader in Reichstag; writer on archæology and art.

Reichert, EDWARD TYSON, M.D., b. 1855. Prof. Univ. Pa. 1886. *Physiology*, 1894.

Reichstadt, DUKE OF. See NAPOLEON II.

Reichstag. See GERMANY.

Reid, CHRISTIAN. See TIERNAN, MRS.

Reid, GEORGE, b. 1841. Scottish portrait and flower painter and illustrator.

Reid, MAYNE, 1818–1883. Born in Ireland; resident in the U. S. 1838–49; Captain in the war with Mexico; author of ab. 50 tales of adventure for boys.

Reid, ROBERT RAYMOND, 1789–1841. Judge Ga. Superior Court 1816–19 and 1823–25; M.C. 1819–23; Gov. of Fla. from 1839.

Reid, SAMUEL CHESTER, 1783–1861. Seaman, who with a privateer at Fayal fought three British vessels Sept. 26 and 27, 1814; sailing-master U.S.N. from 1815; designer of the U. S. flag in its present form.

Reid, THOMAS, 1710–1796. Prof. Aberdeen 1752, and Glasgow 1763–81; founder of the Scottish school of philosophy. His system is an attempt to refute the skepticism of Hume and the idealism of Berkeley by an appeal to common sense. *Inquiry into the Human Mind*, 1764; *Intellectual Powers*, 1785; *Active Powers*, 1788.

Reid, WHITELAW, b. 1837. Ed. New York *Tribune* 1869, chief owner 1872; U. S. Minister to France 1889–92. Special Ambassador to Queen Victoria's Jubilee 1897. *Newspaper Tendencies*, 1879.

Reign of Terror. In France 1793–94, under Robespierre and the Jacobins.

Reimarus, HERMANN SAMUEL, 1694–1768. Prof. Hamburg from 1729. His *Wolfenbuttel Fragments*, pub. 1777, are of the extreme rationalist school.

Reims. See RHEIMS.

Rein, JOHANNES JUSTUS, b. 1835. Prof. Marburg 1875, and Bonn 1883. *Japan*, 1881–86, tr. 1884–89.

Rein, WILHELM, Ph.D., b. 1847. Prof. Jena 1886; writer on pedagogy.

Reinaud, JOSEPH TOUSSAINT, 1795–1867. French orientalist.

Reindeer (RANGIFER TARANDUS). Arctic deer, with horns on both sexes, antlers palmated at tip, and one or both bearing a palmated brow-antler. The horns are cast in Dec., and fully restored by Sept., the time of rut. The hoofs are spreading, adapted for walking on bogs and frozen snow. A breast-mane is present in winter. There is one wild variety, and, in the Old World, also two domesticated and smaller varieties, Mountain and Forest Reindeer; the latter pasture all the year

in woods, which are shunned by the former in summer because of gad-flies and bot-flies. The food in winter consists of buds and lichens. These animals are polygamous; the stronger males secure large harems through contest. The female drops a single fawn, often on a snowdrift, in April or May. The average herd of the Lapp does not exceed 500; but herds of 50,000 are known among other tribes. Wild Reindeer also go in large herds. A female yields half a pint of rich milk, equal to eight times as much cow's milk. Reindeer are used also for draft purposes, and are even ridden by the Kamchatdales. The Caribou, which is the American Reindeer, is found in the northern parts of Canada. There are two species. 1. *Rangifer grœnlandicus*, the Barren-ground Caribou, is smaller than (2),

Reindeer (*Rangifer tarandus*).

but with larger horns. The summer coat is reddish-brown, whiter in winter. The does migrate toward Greenland in May, drop their young, and lose their horns. They live on grasses. In Sept. the deer return to the southwest and live on lichens on the trees or under the snow. After the rut the bucks lose their horns in Nov. 2. Woodland Caribou, (*R. caribou*) is more southern in habitat; dun gray in color in summer. They migrate at night in spring and autumn, average 42 in. high at shoulder and are much hunted, especially in Dec. U. S. Government has introduced reindeer into Alaska from Siberia, as a food supply for the Eskimos, and Lapps to instruct them in rearing them (1892–95).

Reindeer Moss. *Cladonia rangiferina.* Finely-branched lichen, native of the n. hemisphere, and especially abundant in sub-arctic regions. It is an important food plant to the reindeer.

Reinecke, KARL, b. 1824. German composer and teacher of music; prof. Leipzig Conservatory 1860.

Reinhart, BENJAMIN FRANKLIN, 1829–1885. American painter, especially of portraits.—His nephew, CHARLES STANLEY, 1844–1896, was noted as an illustrator.

Reinick, ROBERT, 1805–1852. German lyric poet.

Reinkens, JOSEPH HUBERT, D.D., 1821–1896. Prof. at Breslau 1853; suspended for his protest against papal infallibility 1870; Old Catholic bishop 1873. *Revolution and Church*, 1876; *Unity*, 1877.

Reinmar, ab.1160–ab.1207. German minnesinger.

Reis Effendi. Presiding effendi. Medium of communication between the Turkish government and the representatives of foreign powers. The office has been abolished. See EFFENDI.

Reiset, JULES, 1818–1896. French chemist.

Reisig, CHRISTIAN KARL, 1792–1829. German philologist, prof. at Halle 1824.

Reiske, JOHANN JACOB, 1716–1774. Head of the gymnasium at Leipzig 1759; tr. Plutarch, 1782; editor of sundry Greek classics.

Reiss, WILHELM, b. 1838. German traveler in S. America. With A. Stübel he pub. *The Cemetery of Ancon*, 3 vols., 1880–87.

Rejuvenescence. In Biology, formation of a new cell from the contents of an old one.

Reland, HADRIAN, 1676–1718. Prof. Utrecht 1699. *Palestine from Old Monuments*, 1714.

Relapsing Fever. Specific disease manifested by a febrile paroxysm lasting about six days, followed by a remission of the same length, and a second paroxysm. These paroxysms and remissions may be repeated three or four times, whence the name. Also called Famine Fever. Classed among the infectious diseases and caused by the spirilum of Obermeier.

Relation. Connection of some kind between two terms or phenomena; reducible to three fundamental forms, of space, time, and cause.

Relative Ethics. Distinguished from absolute ethics; system concerning the conduct of imperfect men living under present imperfect social conditions.

Relative Humidity. See HYGROMETRY.

Relativity. Psychological principle according to which change of some sort is necessary to consciousness. This dependence was formulated by Hobbes in his famous dictum, "Semper idem sentire ac non sentire ad idem revertunt," which is, roughly, the presence of always the same sensation would be the same as the presence of no sensation at all. The principle is spoken of usually as the Law of Relativity. It is also extended to the whole subject of the variability of sensation according to preceding and accompanying circumstances, as in the phenomena of contrast.

Relay. Device employed on long telegraph lines for translating the signals of a feeble current from a distance into those of a stronger current from a local battery. It consists of an electromagnet of many turns of fine wire, the armature of which is carried upon a lever, forming a part of the new cir-

Relay.

cuit. Whenever the armature is attracted toward the poles of the magnet, the local circuit is closed by a contact point at the top of the lever, and a current from the battery flows through the local circuit containing the sounder.

Release. Legal extinguishment of a right, by act of the parties or by operation of law.

Relics. Remains or belongings of saints and martyrs; valued in the Ch. from an early period; held in extreme reverence and endowed with wonder-working powers in the Middle Ages; hence fraudulently multiplied on so large a scale that several Councils attempted to restrict their use except when of approved genuineness.

Relief. In Architecture, raised carving.

Relief, PRESBYTERY OF. Formed in Scotland 1761; synod constituted 1774; merged, with the Secession Ch., into the United Presbyterian Ch. 1847. See PRESBYTERIANS.

Relieving Arch. One constructed at the back of a retaining wall to prevent the full pressure of the earth being brought against the wall.

Religion. Belief in and worship of supernatural forces or beings. Mere belief in their existence does not go beyond the philosophic stage of thought, and hence a cult, mode of worship, propitiation, or attitude of reverence toward divine beings is necessary to complete religion and to give it the practical influence upon life which it actually exercises. The instinct of worship is almost universal, and has found vent in innumerable forms of belief. Christianity, in its various shapes, is dominant in Europe and America, Islamism in s.w. Asia and parts of Africa. Brahminism, Jainism, and Buddhism arose in India; the latter, varying with time and place, has penetrated to China and Japan, which it shares with Confucianism and Taoism. Many forms of fetichism are found among barbarous

tribes. The science of Comparative Religion has arisen of late years, largely from the study of Hindu, Persian, and Chinese sacred books, and is as yet scarcely beyond its infancy.

Relly, JAMES, 1729–ab.1780. Father of Universalism in England; zealous and prolific but feeble writer in prose and verse. *Union*, 1759.

Remainder. Estate which is not to take effect and be enjoyed until another estate is determined.

Remaining Velocity. The velocity that a projectile has at the instant of striking.

Remak, ROBERT, 1815–1865. Prof. Berlin; microscopist and electrician.

Remakian Schema OF CELL DIVISION. Form of division in which the nucleolus constricts into two pieces, followed successively and similarly by the nucleus and later by the cytoplasm; also called direct cell division.

Remarque Proofs. The first proofs of a regular published edition of an engraving or etching. A sketch is made in the margin of the plate, which shows in the proof; this is erased after a certain number of impressions are taken.

Rembrandt van Ryn, 1607–1669. Greatest of Dutch painters. Besides his masterly portraits, of which a number are in the U. S., especially in the N. Y. Metropolitan Museum, his best known works are the *Night Watch* and the *Cloth Masters* in Amsterdam, and the *Anatomy Lesson* at the Hague. His forte in painting was the use of light and shadow in such ways as to bring out character and accent thought. As a colorist and brush painter Velasquez is his only rival among men of his time. Aside from the pictures named, the Hague, St. Petersburg, and Cassel probably have the finest examples.

Anatomical Lecture of Dr. Tulp, by Rembrandt.

He was also the greatest master of etching that ever lived. He put his thoughts on the copper in the simplest and most artistic manner. His best known plate is *Christ Healing the Sick*, also known as the Hundred Guilder Print, because R. sold one for that sum, ab. $40. An impression in good preservation has recently been sold for nearly $6,000. *Hagar dismissed by Abraham* is one of the most delicate and valued of his works, and *The Descent from the Cross* and *The Death of the Virgin* are important plates. He etched several fine portraits of himself.

Remenyi, EDWARD, b. 1830. Hungarian violinist, known in U. S. and Europe from 1849.

Remiges. Quill feathers of the wing of birds.

Remigius. 1. 437–533; Bp. of Rheims 459; converter of the Franks; canonized. 2. Abp. of Lyons 853; supporter of Gottschalk's predestinarian doctrine. 3. Monk of Auxerre, teacher at Rheims 882; commentator; d. ab.908.

Remington, FREDERICK, b. 1861. American artist, illustrator, and writer, noted for his delineations of cowboys, Indians, and soldiers in the West.

Remington, PHILO, b. 1816. American inventor or improver and manufacturer of breech-loading rifles and typewriters.

Remington Rifle. Breech-loader whose block is practically a circular steel sector hinged at the center of the circle to the frame in rear of the barrel. When the block is rotated to the front it closes the breech. In this position it is locked by the hammer, which in falling to fire the cartridge bears against an accurately shaped surface on the rear radial surface of the sector: the hammer after firing the cartridge locks the block. The hammer is cocked and the block rotated to the rear by pressing the thumb on a projection on the block, which also withdraws the empty cartridge case. The extractor works in a recess cut on the left side of the chamber. The cartridge is fired by a firing pin located in the block.

Remittent Fever. Form of malarial fever where the temperature does not become normal during the intermissions between the paroxysms. The fever remits in intensity but does not intermit.

Remonstrance. Moved by Pym, Nov. 22, 1641, against sundry acts of Charles I., and carried in the Commons; a turning-point in the struggle for liberty.

Remonstrants. Followers of Arminius, who protested to the States of Holland 1610 against their condemnation as heretics by the Synod of Dort.

Remora. See DISCOCEPHALI.

Remsen, IRA, M.D., LL.D., b. 1846. Prof. Williams Coll. 1872–76, and Johns Hopkins Univ. since 1876; founder and ed. *American Chemical Journal*, 1879; author of five text-books on chemistry, several of which have been tr. in Europe and Asia.

Remus. See ROMULUS.

Rémusat, MME. CLAIRE ELISABETH JEANNE (GRAVIER DE VERGENNES), COMTESSE DE, 1780–1821, m. 1796. Lady-in-waiting on Empress Josephine. Her *Memoirs*, pub. in 3 vols., 1879–80, and *Letters*, 1881, have an important place in the history of Napoleon.—Her son, CHARLES FRANÇOIS MARIE, 1797–1875, held government posts, was exiled 1851, and wrote on *Abelard*, 1845; *St. Anselm*, 1853; *Bacon*, 1857; *Wesley*, 1870; and *Philosophy in England*, 1875.—His son, PAUL, 1831–1897, was a journalist, Deputy, and Senator.

Rémusat, JEAN PIERRE ABEL, 1788–1832. Sinologist; prof. Coll. de France 1814. *Langues Tartares*, 1820; *Chinese Grammar*, 1822; *Melanges Asiatiques*, 4 vols., 1825–28.

Rémy, JULES, b. 1826. French traveler, chiefly in America. *Hawaii*, 1859–62; *Mormon Country*, tr. 1860.

Rémy, PAUL EDOUARD, 1711–1784. French historical writer.

Renaissance, or RENASCENCE. Revival of Art and Learning, dating, in Italy, from ab.1420; style of Architecture was introduced in France ab.1530, in England and Germany ab. 1550.

Renaissance Architecture. That which originated in Italy in the 15th century, and was an attempt to revive the modes of building of classical Rome. It is also known as the Revived Classic and sometimes simply as Modern Architecture,

Chateau of Chambord, France.

in contradistinction to the Mediæval Architecture which preceded it. All modern building which employs the classic orders, unless in direct reproduction or imitation of Greek or Roman buildings, is loosely called Renaissance. It was derived in

part from an actual inspection of the remains of ancient buildings and in part from the account of ancient methods of design given by Vitruvius. Its introduction was due to Alberti and Brunelleschi, and it was extended by Bramante, Palladio, Vognola, Serlio, Michelangelo and other Italians. In France the Renaissance took a special character, on account of the stronger tradition in that country of mediæval methods of design and workmanship, and at first consisted of little more than the addition of classic or classicized detail to Gothic buildings. In Germany, and in England also, the Italian Renaissance was much modified, becoming in England the style known as Elizabethan and subsequently Jacobean. Queen Anne is applied to the modification of Renaissance architecture practiced in England during the reign of that sovereign and indeed throughout the 18th century. An attempt was made in England and the U. S. ab. 1876 to revive the so-called style, especially for domestic purposes, but its vogue was short-lived.

Renal Diseases. A variety of diseases may attack the kidneys. Those most frequently thought of are the various forms of Bright's disease (characterized by the presence of albumen in the urine) and renal and nephritic colic, which is caused by the passage of a calculus from the kidney to the bladder.

Renal Portal System. Seen in the Frog, most reptiles, and some vertebrate embryos. In these a portion of the blood from the hind limbs passes through the kidney and joins the capillary system that transfers blood from the renal arteries to the renal veins, and thence to the postcava.

Renan, JOSEPH ERNEST, 1823–1892. French critic, Orientalist, and historian, eminent for learning, imagination, and descriptive power; educated as a Jesuit; prof. Hebrew Coll. de France 1860–62 and from 1870; Academician 1878. His chief work, *Hist. Origins of Christianity*, includes the famous *Life of Jesus*, 1863, which caused an immense sensation and called forth many answers; *The Apostles*, 1866; *St. Paul*, 1867; *Antichrist*, 1873; *The Gospels*, 1877; *The Church*, 1878; *Marcus Aurelius*, 1880; *Hist. People of Israel*, 4 vols., 1887–93. In these he attempts to reconstruct the sacred history with a free hand from scanty materials. Among his other works are *Recollections of Youth*, 1883; *Philosophic Dramas*, 1888; *Future of Science*, 1890. Most of his books have been tr., widely read, and have exerted great influence. Opinions vary as to the value of his teachings, but not as to his genius and style.

Renard, GUSTAVE HENRI, 1673–1741. French explorer of Central America, New Granada, and Guiana, 1718–24. *De naturalibus Antillorum*, 1739.

Renauld, CÉSAR AUGUSTE, 1701–1734. Negro poet of Martinique. *Romances et Mélodies*, 1761.

Renault, PHILIPPE FRANÇOIS, d. ab. 1750. French colonist in Illinois 1719–44; introducer of slaves from W. Indies. Traces of his settlement on the Mississippi, 15 m. n. of Kaskaskia, Ill., remain.

Rendel, SIR ALEXANDER MEADOWS, b. 1829. English civil engineer, active in India; constructor of many docks and railroads.

Rendel, GEORGE WHITWICK, b. 1832. English engineer, prominent in connection with ordnance.

Rene I., "THE GOOD," 1409–1480. Count of Provence; titular King of the Two Sicilies; patron of letters and art. *Works*, 4 vols., 1845.

Renegade. Deserter from military service; faithless to the principles of honor or to the obligations which have been freely assumed by him.

Reni, GUIDO. See GUIDO RENI.

Reniform. Leaves or other organs which are kidney-shaped in outline.

Renilla. See PENNATULIDÆ.

Rennell, JAMES, F.R.S., 1742–1830. English geographer, long in India; Surveyor-gen. of Bengal till 1777; father of oceanography. *Geog. of Africa*, 1792; *Geog. System of Herodotus*, 1800; *Plain of Troy*, 1814; *Expedition of Cyrus*, 1816; *Western Asia*, 1831; *Atlantic Currents*, 1832.

Rennes. City of France, at the junction of the rivers Ille and Vilaine; once capital of Brittany. It has a large trade and varied manufactures. Pop., 1891, 69.232.

Rennet. Digestive unorganized ferment found in the stomachs of the young of all mammals. It has the power of rendering the casein of milk insoluble, and is used to cause coagulation of milk in the process of cheese making. Commercial rennet is usually prepared from the stomachs of calves, though those of swine are sometimes used. The best rennets are now imported from Bavaria.

Rennet Stomach. See ABOMASUM.

Rennie, JOHN, 1761–1821. Civil engineer; first to use the steam engine to drive mill machinery, builder of the Plymouth breakwater and the Southwark bridge. His work was con-

John Rennie, the elder.

tinued and extended by his sons, GEORGE, 1791–1866, and SIR JOHN, F.R.S., 1794–1874, embracing public works of nearly every description. Sir John pub. *British and Foreign Harbors*, 1854; and *Autobiography*, 1875.

Reno, JESSE LEE, U.S.A., 1823–1862. Brig.-gen. U. S. Vols., 1861, Major-gen. 1862; killed at South Mountain, Va.

Reno, MARCUS A., U.S.A., 1835–1889. Major of cavalry, associated with Custer in the campaign against the Sioux 1876, but not engaged in the fatal battle of Little Big Horn.

Renouf, ÉMILE, b. 1845. French painter.

Renouf, PETER LEPAGE, b. 1824. English archæologist, noted chiefly for his writings on Egypt.

Rensselaerite. Variety of the mineral talc, found in considerable quantity in n. N. Y. and Canada, and evidently a product of the alteration of anhydrous magnesian silicates of the pyroxene type.

Rent. The remuneration received by the owners of land for the use of the native and indestructible powers of the soil; including pasture, timber lands, mineral deposits, water privileges, and building sites; at common law, definite profit issuing at stated intervals out of real property. The term has been modified by statute.

Rent, LAW OF. Rent exists because of the difference of the productiveness of different soils under cultivation at the same time for the supply of the same market: its amount in any given case is determined by the difference between the annual yield and that of the least productive land cultivated for the same market, other conditions being normal.

Renwick, JAMES, 1662–1688. Scottish martyr of the Covenant.

Renwick, JAMES, LL.D., 1790–1863. Prof. Columbia 1820–53. *Natural Philosophy*, 1822–23; *Steam Engine*, 1830; *Mechanics*, 1832–40.—His son, JAMES, 1818–1895, was the architect of Grace Ch., 1845, St. Patrick's Cathedral, 1858–79, and other notable buildings in New York.

Reordination. Catholic theology teaches the effect of true ordination to be indelible. The R.C. Ch. ignores, but has not decisively denied the validity of Anglican orders, and acknowledges all Oriental orders.

Repanel. See UNDULATE.

Repeated Stresses. Stresses applied at regular intervals, such as those caused by the passage of trains over a bridge. These produce molecular changes in the material if they approach the elastic limit in intensity. The factor of safety should be higher for repeated than for steady stresses.

Repentance. Sorrow for sin, issuing in turning from it; distinguished from remorse, which is merely emotional and ineffectual.

Repercussion of Taxes. Process by which indirect taxes are supposed to diffuse themselves evenly on the population, irrespective of the persons on whom they are originally laid.

Repetend. Sequence of figures which recur in regular order in a circulating decimal.

Rephaim. 1. Tribe e. of Jordan, repeatedly mentioned in O. T.; regarded as giants. 2. Spirits of the departed. 3. Valley s. of Jerusalem.

Rephidim. Scene of a defeat of Amalek by Israel, near Mt. Sinai, Ex. xvii.

Replenisher. Instrument devised by W. Thomson to be used in connection with his quadrant electrometer for keeping the Leyden jar connected with the suspended needle at a constant potential. It consists of two small metal plates, one at each end of an insulating bar. These may be brought in alternate contact with the two coatings of the jar: the arrangement is such that by rotating in one direction it raises the potential of the jar, but in the opposite direction it lowers it.

Replevin. Common-law action to recover specific goods; now regulated by statute.

Reports. Collections of judicial decisions. In English Law they begin with the Year Books, ab.1300.

Reposianus, 4th cent. Latin poet.

Repoussé. Ornamental metal work, formed in relief by striking up the metal from behind, with a punch or hammer

Repoussé Work.

until the required forms are roughly produced in relief upon the surface; the work is finished by chasing.

Representation. Idea or image of an object which stands for it when the object itself is not immediately present to the senses. We may thus mediately know an object by means of its image or representation, whereas in sense experience we know an object immediately by means of its presentation. Representation as a function depends upon a quality of consciousness called retentiveness, and further upon an activity called reproduction. A representation, therefore, is a reproduction of a past impression, which takes place according to the laws of ASSOCIATION (q.v.).

Representative Government. See DEMOCRACY.

Reprieve. Respite from penalty. Criminals under sentence of death may be granted a reprieve, upon doubt as to the justice of the conviction; to allow time for further investigation; or because the convict has become insane, or is pregnant.

Reprisals. In International Law, seizing property of another nation and holding it, until the latter makes reparation for a wrong.

Reprobation. Supposed consignment of some, by divine decrees, to eternal death; opposed to Election.

Reproduction. In Biology, expression of the power living organisms have of separating a portion of the protoplasm of their bodies, which portion after growth and greater or less developmental change becomes like the parent. Usually two primary sorts of reproduction are distinguished, sexual and asexual. In the latter, the part set free may be a single cell, as in spores and parthenogenetic ova, or it may be a bud which includes all the tissues or else undifferentiated tissue, or the process may be effected by fission or splitting of the organism into two nearly equal parts. Each part then produces any lacking organs it may need to make it like the parent, which has disappeared as a separate existence, or, better, has become two new beings now recognized as its children. In sexual reproduction the separated protoplasm is always two cells (gametes) between which division of labor has been effected. One has taken the function of making more or less of food yolk for the early nutrition of the future embryo: this is the egg or ovum. The other (or sperm) has developed a special organ, the flagellum, by which it is enabled to find and penetrate the ovum: this process is known as fertilization. Essentially, this phenomenon consists in the union of the chromatin of the sperm cell with that of the egg-cell; just before union each exists as a pronucleus in the egg, and usually no difference is discernible between them. The result of fertilization or fecundation is a cell which contains protoplasm representing two different individuals, the father and mother, but also including the characteristics of the opposite sex latent in each parent. As this egg multiplies by fission during development, it follows that each cell of the offspring is a resultant of the union of two different natures. In case of alternation of generations, this nature is transferred into all the zoöids produced asexually. Comparing the complete history of reproductive and developmental processes among all plants and animals, all the varieties of reproduction are seen to conform to a simple formula: viz., first, growth of protoplasm by assimilation; second, its fission or separation into cells and zoöids, between which more or less division of labor may obtain; and third, at more or less regular intervals, the union of protoplasm of slightly different character into a single reproductive cell, producing a rejuvenating (?) effect that is transmitted for an indefinite period by asexual multiplication of cells, zoöids, etc. See AMPHIGENESIS, SPOROGENESIS, ARCHIGENESIS, BIOGENESIS, etc.—In Botany, any sexual process by means of which new individuals are produced through ova, sperm, or seeds, etc.

Reptantia (see also PROSOBRANCHIATA). Group of *Streptoneura*, including forms having the foot well developed as a creeping organ. In the *Holochlamyda* the lip of the shell is unnotched. In the *Siphonochlamyda*, which includes marine forms with operculum and the mouth on a proboscis as in Conchs, the lip of the shell is notched to lodge a siphon produced upon the margin of the mantle. In the terrestrial *Pneumochlamyda* the pallial chamber is modified into a lung-sac, the mouth is borne on a rostrum, and a gill is absent. These forms are often included with the Pulmonates.

Reptilia. Scaly, or armored, cold-blooded Vertebrates with exclusively pulmonary respiration and incomplete separation of the ventricular cavities in the heart. The embryos have amnion and allantois. Snakes, Lizards, Tortoises and Crocodiles are included. Thus there is great diversity as to form, development of limbs, etc., but ribs are generally present and numerous; there is one occipital condyle; a basisphenoid bone is present (in place of the parasphenoid); and the

Anatomy of a Serpent.

t, tongue and glottis; *œ*, œsophagus (partly removed to show heart, etc.); *tr*, trachea; *ca*, *ca*, carotid arteries; *c*, left auricle; *c'*, right auricle; *vt*, ventricle of heart; *vc*, vena cava inferior; *p*, *p*, principal lung; *p'*, rudimentary lung; *i*, stomach; *int*, intestines; *cl*, cloaca; *an*, anus; *o*, ovary; *o o'*, ova.

reproduction, as in Birds, is oviparous (with few exceptions); but, except with some Pythons, the eggs are left to hatch of themselves. The males are furnished with intromittent organs. Many Reptiles pass the winter hibernating, while tropical forms suffer æstivation, or summer-sleep, during the dry season. They can exist a long time without food, and with limited respiration. The living species number 3,400. There are three sub-classes, *Lepidosauria* (Snakes and Lizards), *Hydrosauria* (Crocodiles), and *Chelonia* (Turtles), and several orders of fossil Reptiles. See LACERTILIA, DINOSAURIA, and ARCHOSAURIA.

Republic. Form of government in which the sovereign power is confided to, and immediately exercised by representatives and officers chosen by popular will.

Republican Party. Term first applied in American politics to the anti-Federalists, the Federalists advocating a strong central government, the Republicans favoring the sovereignty of the States and the rights of the people. During the War of 1812, the Republicans were stigmatized by their opponents as Democrats. The Federalists adopted the name National Republicans, and afterward that of Whigs. The present Republican party came into existence in 1856, and grew up mainly out of the elements opposing slavery and secession. It was the party of Union and Freedom during the Civil War, and has continued in power for the greater part of the time since. Its present tendencies are toward a strong centralized government and the advocacy of a high protective tariff. See DEMOCRAT.

Repudiation. Disowning of national debts, in whole or part, as by sundry States after the panic of 1837 and the war of 1861–65. The partial operation has been called readjustment. Such action destroys for a time the credit of the state or nation.

Repulsion. See FORCE.

Repulsive Crystal. See NEGATIVE CRYSTAL.

Reputation, RIGHT OF. Moral and legal right to have one's good name protected from the results of malicious or slanderous words spoken or published.

Requiem Mass. R. C. mass for the dead, so called from the beginning of the introit. It omits the *Gloria* and *Credo* of the ordinary missal text, and in musical settings, of which the most famous are those of Mozart and Cherubini, it generally has the following sub-divisions: Introit, *Kyrie*, Graduale (with the tractus *Absolve* and the sequence *Dies iræ*); Offertory, *Domine Jesu Christe; Sanctus*, and *Benedictus* with the Communion *Lux æterna*. See MASS.

Requisitions. Formal demands by one government upon another for a criminal, or for military supplies.

Reredos. Wall or screen at the back of an altar or chancel, usually ornamented with paneling, sometimes with pinnacles,

Reredos of St. Paul's Cathedral, London.

niches and statues, and brilliantly painted.—Also the iron plate in the open fireplace in 15th century.

Resaca. Village in Gordon co., Ga., scene of a Union victory May 14–15, 1864.

Resaca de la Palma. In s.e. Texas; scene of Gen. Taylor's victory over a superior Mexican force May 9, 1846.

Resaw. Machine for cutting thin boards from thick plank, with least loss of wood in kerf and sawdust. It is not advisable to saw lumber thin at the forest mills, because of the action of sun and water on thin stuff, and the danger to tools from the grit which all lumber acquires on its surface in transit to factories. Resawing is best done by a band saw which can have a very thin blade and hence entail small loss in kerf spaces. It is also done by circular saws, either segmental or with a heavy flange on one side to admit of very thin gauge of steel for the blade. Less desirable is the reciprocating resaw, which is slower. The lumber is fed on edge by vertical feeding rolls to the saw.

Rescission. Abrogation of a contract, either by act of the parties to it, or by judicial decree.

Rescripts. Declarations on points of law by emperors and popes, answering inquiries; important in the Middle Ages.

Resedaceæ. Natural family of flowering plants of the class *Angiospermæ*, and sub-class *Dicotyledons*, comprising 6 genera and ab.50 species of herbs, distributed throughout Europe, w. and middle Asia, n. and s. Africa; called the Mignonette family.

Resentment. Natural repulsion or sentiment of anger awakened by an attack or show of hostility toward us.

Reservation, MENTAL. Keeping back some essential portion of a statement; *e.g.*, "I do not know (officially)"; practice justified by some Jesuits, and denounced by Pascal in his *Provincial Letters*, 1656.

Reservation, MILITARY. Land set aside from the public domain for military purposes, such as for the erection of fortifications, the establishment of the Military Academy, etc.: or this land may be ceded by a State to the general government for military purposes.

Reservations, PAPAL. Right of appointment to benefices, claimed by the popes in certain cases, as (1265) when the incumbent died in Rome or (1286) made his resignation to the pope.

Reserve, ARMY. Portion of the army held in reserve to strengthen the main line, to retrieve disaster or to decide victory at the supreme moment: generally composed of tried and experienced soldiers not easily affected by panic.

Reservoir. Artificial basin for collecting, storing, or distributing water. The earliest were those built in Egypt and India for irrigating purposes, earthen embankments being universally used. There are now in India 40,000 reservoirs, one of which has a dam 30 m. long and a storage area of 60 sq. m. In the U. S. many reservoirs are built with rock-fill dams and with solid masonry dams, one in California being 176 ft. high. The collecting reservoirs of the Croton water supply for New York have a total capacity of 15,000 million gallons. Distributing reservoirs are usually built on hillsides rather

Nethertrees Reservoir Embankment, Paisley, Scotland.

than by impounding streams, and puddle bottoms are made to prevent leakage; the new one in Central Park, New York, holds 1,500 million gallons. Distributing reservoirs allow opportunity for the purification of water by sedimentation and aeration, and may be cleaned more easily than collecting reservoirs. Failures of embankments have resulted in great destruction of life and property; notable failures are those of the Dale Dyke dam near Sheffield, Eng., 1861; of one at Williamsburg, Mass., 1874; and of the South Fork dam at Johnstown, Pa., 1889. See JOHNSTOWN, FLOODS, and DAMS.

Reshid Pasha, 1802–1858. Turkish Foreign Minister 1839–41; Vizier 1846–52 and 1853–56.

Residence. One's fixed place of habitation; generally synonymous with domicile, but often a more transient place of abode.

Residence OF CLERGY IN THEIR BENEFICES. Required by Councils of Nice, 325, and Antioch, 341; disregarded by pluralists and others in most ages. The evils of non-residence were vainly attacked by the Council of Trent, and existed in England, Sweden, and elsewhere, till 1800 or later, many regarding their posts as sinecures.

Residual Charge. Phenomenon frequently observed in Leyden jars or electric condensers. When a jar previously charged is discharged and then allowed to stand a short time, it exhibits a second charge comparatively feeble, which is called the residual charge or electric residue. The magnitude of this depends upon the initial charge, the thickness and nature of the dielectric, and the interval of time between the charging and discharging. The phenomenon is due to electric absorption.

Residual Magnetism. When the exciting current of an electromagnet is interrupted, the demagnetization is not complete, especially when the magnetic circuit is closed. The remaining magnetization, or residual magnetism, is often strong enough to hold the armature in contact, unless a powerful opposing spring is employed. This fact is of great value in practice in a dynamo electric machine, since the residual magnetism starts the initial current.

Resilience. Physical property of materials of construction, whose presence or absence fits or unfits it for use in springs. It is proportional to the work required to stretch the piece, when undergoing a test, to the point at which the deformations become irregular under constant increment of load (see ELASTIC LIMIT). It is calculated for any material by multiplying the alteration in length up to that point by the mean load which has acted up to that limit of strain.

Resin-Cells. Specialized cells containing resinous substances. They are of various forms, and are found in the parenchyma of numerous plants.

Resin-Opal. See OPAL.

Resinous. See ELECTRIFICATION.

Resins. Vitreous gums which appear as exudations upon trees, either as free resins or as resins mixed with or dissolved in hydrocarbons. They are mixtures of organic acids, and dissolve in alcohol and alkalies. Tolu balsam, copal, lac, and turpentine are examples. Mineral resins occur in a great variety of form and composition, and in very many localities, especially in connection with brown coal or bituminous coal. They are usually classed with the oxygenated hydrocarbons which,

Resin Gathering in the Pine Forests of the Landes, France.

primarily of vegetable origin, have assumed a mineral character under the action of natural causes. Amber and asphalt are examples. Solutions of resins in alcohol, oil of turpentine, and drying oils furnish varnishes. The gum-resins are the dried juices of certain plants; they are mixtures of gum and resin, the former soluble in water, the latter in alcohol. They are used in medicine or perfumery. Asafetida, gamboge, and myrrh are examples.

Resistance. That passive agent on account of which it is necessary to apply force to produce momentum. Friction is the most important resistance in mechanics. When an electric current passes through a wire, it is said to experience resistance. In this case the resistance is the energy through which the electric energy is transformed into some other form of energy; *e.g.*, heat and light. The specific resistance of a substance is the reciprocal of its specific conductivity, *i.e.*; the resistance of a cube 1 centimeter square and 1 centimeter long.

Resistance of Materials. Science which treats of the strength of materials and their behavior under stresses. It includes elastic resistances, where the material springs back to its original form, and the ultimate resistances which accompany rupture. The first investigations were made by Galileo 1638 on the resistance of beams. Hooke in 1678 stated the first law of elastic resistance; modern experimental researches begin with the work of Hodgkinson and Tredgold ab.1810.

Resistivity. Specific RESISTANCE (q.v.).

Res Judicata. A matter adjudged; meaning that the subject matter of an action has already been acted upon by the court, and hence cannot be used as a ground of action again.

Resolution. Process of ascertaining the structural elements of an expression. A quantity is resolved into its factors. Solution seeks specific values from an equation; resolution seeks interrelated elements.

Resonance. The re-enforcement of sounds by the sympathetic vibrations of bodies in the vicinity. The note produced by a tuning fork is often strengthened by mounting it on a box of the proper size and shape containing a column of air. In this case the column of air is called a resonator. Helmholtz made use of the principle of sympathetic vibration in

Koenig's Resonator.

the construction of a set of resonators in the form of brass globes open at the opposite ends of a diameter. These globes are of different sizes and are accurately tuned to respond to notes of known pitch. By their means a very complex sound may be analyzed, each component causing the air in the corresponding resonator to vibrate and produce a sound.

Resonator. See RESONANCE.

Resorcin. $C_6H_4(OH)_2$. Metadihydroxybenzene; first prepared by fusing gums with potash; now prepared on a large scale by fusing the benzenedisulphonic acids with sodium hydroxide. It is a white crystalline solid, mpt. 119°C., and is used in pharmacy and in the preparation of dye-stuffs.

Resorcin Blue. $C_{12}H_9NO_4$.? Produced by heating resorcin with sodium nitrite; violet solid, soluble in water. It turns red with acids, and is used as an indicator under the name of lacmoid.

Resorcin Brown. $C_{20}H_{17}N_4O_9SNa$. Brown dye-stuff, produced by the action of the diazo compound of xylidine on tropäoline O; soluble in water.

Resorcin Phthalein. See FLUORESCEINE.

Respiration, ORGANS OF. The apparatus employed in the process of breathing. It is simplest in insects, where it is merely a series of tubes branching through the interior of the body, opening externally by small openings along the side of the body. In fishes and many marine animals the process is carried on by means of the gills, which are delicate tufts or combs of membrane so situated that the water has free access to them. The gills make use of the air dissolved in the water. The apparatus for the air-breathing vertebrates are the lungs. The lungs are spongy-like bodies inclosed in the thorax, consisting, essentially, of a number of small cavities having free access to the outer air, being minute subdivisions of the bronchial tubes. These cavities are bounded by thin, elastic walls, over which are spread the capillary blood-vessels. These air-chambers are $\frac{1}{100}$ in. diameter, and their total number in the lungs of a man 725 millions, with a total surface of 2,000 sq. ft. By the expansion of the thorax, the outer air is drawn into the lungs (inspiration), where some of the oxygen is absorbed

The Trachea (windpipe), Bronchi, and left human Lung in section.

by the blood vessels and carbonic anhydride and some other substances given off. The contraction of the thorax (expiration) expels the vitiated air. The oxygen is carried by the blood to all parts of the body and is given up to the body at all points. The tissues give to the blood carbonic anhydride, urea, water and other blood products and the blood returns to the lungs to be oxygenized again. The inspired air contains 21 parts oxygen, 79 nitrogen, 0.03 carbonic anhydride. The expired air contains 15 to 16 parts oxygen, 79 nitrogen, and 4.7 carbonic anhydride. The amount of air passing through the lungs in 24 hours is variable, depending upon habits and bodily condition; it has been estimated to be from 466 to 908 cu. ft. The water given off in the same time amounts to 11 oz., and the carbonic anhydride from 7.1 to 11.7 oz. The number of respirations of a healthy adult is 16 to 20 per minute, and the amount of air at each inspiration 20 cu. in., which may be forced to 120 cu. in. The total capacity of the respiratory organs is 230 cu. in. See BLOOD, CIRCULATION OF THE BLOOD, and HEART.

Respiratory Sounds. The various sounds produced by the respiratory organs in the processes of breathing. They are made use of in that form of physical diagnosis called AUSCULTATION (q.v.). See also RALES.

Respiratory Trees. Two tree-like, hollow, gill-like organs, attached to the cloaca of Holothurians, which water is alternately drawn into and expelled from.

Respond. Half-column attached to the wall at the end of a series of free standing columns forming an arcade.

Respondentia. Loan of money for which a ship's cargo or a part thereof is hypothecated, but is hazarded on the safe arrival of the ship. The contract is usually in the form of a bond.

Rest. One point is said to be relatively at rest with respect to another when the straight line joining them has a constant length and direction. We have no conception of absolute rest, as we know of no point of reference fixed in space.

Rest Cure. Method of treatment devised by Dr. S. Weir Mitchell, of Philadelphia, for certain classes of patients having abnormal conditions of the nervous system; *e.g.*, neurasthenia and certain forms of hysteria. It includes rest, isolation, systematic feeding, massage, and electricity.

Restiaceæ. Natural family of flowering plants, of the class *Angiospermæ* and sub-class *Monocotyledons*, comprising 20 genera and ab. 240 species, natives of s.w. Africa and Australia.

Restif de la Bretonne, NICOLAS EDMOND, 1734–1806. French novelist, author of some 200 volumes.

Restigouche. River of Quebec and New Brunswick, noted for its salmon. Length ab. 200 m.

Resting-Spore. Spore which takes on a thick cell-wall and does not germinate for a considerable time.

Resting Stage OF NUCLEI. Period intervening between the times of nuclear activity during cell-division. In the latter the chromatin granules are concentrated into definite bodies; in the resting stage they are scattered throughout the nuclear sap as much as possible, suggesting that in this stage the processes of nutrition and granular reproduction take place.

Restitution, EDICT OF. March 6, 1629, by Ferdinand II., ordering all the property of the R. C. Ch. acquired or secularized since the peace of Passau 1552, to be restored.

Restitution Pressure. See COEFFICIENT OF RESTITUTION.

Restoration. By the accession of Charles II. to the throne of Gt. Britain, May 29, 1660, monarchial government was restored after eleven years of republican rule, which followed the death of Charles I., beheaded Jan. 30, 1649. It was a festival of the Church of England till 1859.

Restoration. Doctrine held by Origen, and now by many, which substitutes temporary punishment and probation hereafter for an endless hell; sometimes called "the larger hope."

Restraint of Trade. Evil which was supposed to give its criminality to a conspiracy to raise the rate of wages, in English common law.

Restrepo, JOSÉ MANUEL, 1780–ab.1860. Historian of the Colombian Revolution, 1827.

Restriction, IN ECONOMIC HISTORY. Permission or requirement imposed by government on the Bank of England, 1797–1821, to refuse to redeem its notes in coin.

Resultant. Determinant the elements of which are the coefficients of the variables in "n" homogeneous equations of "n" variables. It must equal zero if the equations are simultaneous.

Resultant. Any directed physical quantity which is equivalent in effect to two or more similar quantities is called their resultant, and these quantities are called components; *e.g*, the resultant of two or more forces is that force which can replace them and can produce the same effect.

Resultant Tone. See COMBINATIONAL TONE.

Resumption. Return to a par of value between gold or silver coin and a previously inconvertible paper money, accomplished by the U. S. for its legal tender notes 1879.

Resupinate. In Botany, inverted organs.

Resurrection. Return to life of the human body and spirit, in ways necessarily unknown; subject of much vain speculation; matter of faith, based on the recorded rising and promise of Christ.

Resurrection, CONGREGATION OF THE. Society, founded by Rev. J. Kajsiewicz in 1836 at Rome, consisting of R. C. priests. A few missions are in the U. S.

Resurrection Plant. In Cal. and Arizona, *Selaginella lepidophylla*, which curls up into a round ball when dry, but expands when wet; also *Anastetica hierochuntia*, a plant of the *Cruciferæ*, native of Arabia and Syria, which has a similar habit, and is known also as Rose of Jericho.

Rose of Jericho.

Resuscitation. Restoration of suspended respiration to one apparently dead from suffocation. The effort is made to inflate the lungs with air, then to empty them in a rhythmical manner, simulating the respiratory process. The person is placed upon his back, with a roll of clothing under it, and hand pressure applied to both sides of the chest between the short ribs, with sudden release, and repeated five times a minute, increasing to twelve. In another method the elbows are elevated outwardly two seconds, then depressed to the sides the same time, fourteen times a minute. These efforts should be prolonged two hours. After breathing is natural, give stimulants and keep warm.

Retained Pay. The U. S. government retains one dollar per month of the pay of a re-enlisted soldier until his discharge from this re-enlistment. It is subject to forfeiture for desertion and unless he serves honestly and faithfully to the time of his discharge: retained pay draws interest at the rate of 4 per cent.

Retaining Wall. One nearly vertical and subject to the pressure of earth against its back. The top should be 2 ft. thick, and the thickness of the base should be about four-tenths of the height, in order to secure proper stability. Retaining walls fail either by sliding on the base or by overturning, the latter being the more liable to occur.

Retardation OF THE EARTH'S ROTATION. Theoretically, the tidal waves must act as a break upon the earth to diminish its angular velocity. There are some indications that this diminution has reached an appreciable value, but it is still undecided.

Rete Mirabile. Net formed by the breaking up of an artery into branches and reuniting into an arterial trunk again. More particularly the network formed by the intercranial portion of the internal carotid artery of some animals.

Retene. $C_{18}H_{18}$. Solid hydrocarbon, found in the high-boiling oils obtained by the distillation of coal tar.

Retention of Urine. Inability to empty the bladder voluntarily. It may be due to obstruction (as a stone in the bladder), a spasm of the muscles employed, or their paralysis. It may be caused by the prolonged voluntary retention of the urine and overdistention of the bladder. A warm hip bath, or the application of cloths wrung out of hot water over the distended bladder and to the perineum will often bring relief. Failing this, the services of a surgeon will be required.

Retentivity. See SATURATION POINT.

Rethel, ALFRED, 1816–1859. German painter.

Reticle of Telescope. This consists ordinarily of a number of spider webs placed in the common focus of the ob-

ject glass and eye-piece, forming fine sharp lines, over which the transits of stars or other bodies may be observed. Sometimes lines ruled on glass are used instead.

Reticularia. Marine Rhizopods or FORAMINIFERA (q.v.) proper. They have usually a calcareous, perforated shell with one chamber (*Monothalamia*), or several chambers (*Folythalamia*). They may be perforate or imperforate, and they have slender anastomosing pseudopodia.

Reticulate Veined. Leaves in which the veins anastomose so as to form a network, as in most dicotyledonous plants.

Reticulum. 1. Special network of protoplasmic fibrillæ in cells and nuclei. 2. Second chamber in the stomach of a ruminating or cud-chewing animal. In this the wall is lined with compartments, into which the food from the paunch is pressed and molded into pellets or cuds, which are regurgitated to be more thoroughly chewed.—In Botany, fibrous membrane at base of palm-leaves.

Retimo. The ancient Rhithymna; seaport of Turkey, on the n. coast of the Isle of Crete, 38 m. w. of Candia. The

Retimo, seen from the Anchorage.

citadel is in ruins and the port is full of sand banks. Its bazaars and streets have a Turkish appearance. Pop. 9,100.

Retina. Innermost coating of the eye, composed essentially of the net-like expansion of the optic nerve. It is here that the light motion is transposed into nervous energy, which, being carried to the visual center of the brain, gives the sensation of vision. See EYE.

Retinacula. Lateral retractor muscles of the proboscis of the *Acanthocephala*.

Retinaculum. System of hooks that hold the anterior and posterior wings together by their edges in certain moths. —In Botany, one of the arms supporting the pollen-masses in Milkweeds and Orchids.

Retinalite. Variety of massive serpentine, found in Canada, and having a resinous luster.

Retinophoræ. See OMMATIDIUM.

Retinulæ. Nerve-rods, made up of several elongated cells placed side by side behind the crystalline cones in compound eyes. See OMMATIDIUM.

Retinulate Eye. One having retinulæ. It may be monomeniscous (central eye of *Limulus*), or polymeniscous (lateral eyes of *Limulus*, compound eyes of insects, etc.). Each sort may again be either monostichous or diplostichous.

Retro-Choir, or BACK CHOIR. In Gothic Architecture, the space between the back of the high altar and the wall of the chancel, or the chapel at the rear of the church.

Retired List. In U. S. Army Register there are published lists of officers retired from active service: an unlimited list comprising mainly those who have passed beyond 64 years of age, and a limited list, 350 in number, of those who have been retired from various causes incident to the service: when those on the limited list reach 64 years of age they are transferred to the unlimited list. At present, 1897, there are 647 officers and 1,034 men upon the retired list.

Retirement. The honorable cessation of the active military service of an officer or soldier by reason of reaching the legal age, or on account of sickness, wounds or other cause incident to faithful service. In U. S. army, soldiers are retired on their own application after 30 years' active service. When an officer has served 40 years either as an officer or soldier in the regular or volunteer service or both, he shall, if he makes application therefor to the President, be retired. When he has served 30 years or is 62 years of age he may be retired at the discretion of the President; when he becomes 64 years of age his retirement is compulsory. Retired pay is 75 per cent of the pay of the actual rank held by the officer or soldier. Retired officers are withdrawn from command and line of promotion, but are subject to the rules and articles of war, and to trial by court-martial. An officer may be wholly retired and thus cease his connection with the military service, upon the recommendation of an Army Retiring Board, approved by the War Department: in this case one year's pay and allowances are granted him.

Retitelariæ (INÆQUITELÆ). See SPIDERS.

Retort. Vessel made of glass, earthenware, or metal, in which distillation is effected by means of heat.

Retreat. Time or place of brief retirement for religious exercises; long observed in R. C. Ch., and of late by Anglicans.

Retreat of the Ten Thousand. Return of Greek mercenaries in Cyrus' army after the battle of Cunaxa, along the Tigris and through Armenia to Trapezus (Trebizond) on the Black Sea. The story is told by Xenophon, who was one of the officers.

Retriever. Dog that is trained to seek out and bring in game that is shot; there are two breeds, crosses with the Newfoundland, the wavy-coated with the setter, and the curly-coated with the spaniel or poodle. Attention was paid to these breeds ab.1850.

Retrograde Motion of Planets. The planets appear at certain times to move backward among the stars. This motion is only apparent, and is caused by the composition of the planet's motion with that of the earth.

Retrogressive Development, or RETROGRESSIVE METAMORPHOSES. The ontogeny of organisms that have become degraded through a secondary habit of parasitism, which habit has rendered the presence of locomotor, prehensile, digestive, etc., organs unnecessary; so these organs, present in the larva, become lost in the later stages of development. The law governing this change is similar to that by which these organs were acquired; ontogenetically, such change is to be looked on as a progress, as more involved and complicated, the life-history passing beyond that of the larval form, which, if no cenogenetic changes have occurred, represents the state of development of the ancestors. Should an individual fail to undergo this retrogressive metamorphosis but retain the more perfect organs of the larva, it would be a case of atavism or reversion.

Retting. Process to which the stems of flax are subjected to facilitate the separation of the woody part from the useful fiber. This consists in the fermentation of the resinous matter present in the plant, by exposing it to the weather for a considerable time; or by soaking it in soft water for 10 to 14 days; the former is practiced in Russia and the latter elsewhere.

Returned-Letter Office. See DEAD-LETTER OFFICE.

Retuse. Leaves or other organs with a rounded but notched apex.

Retz, or **Rais,** GILLES DE, 1396–1440. Marshal of France; executed for many murders and other crimes.

Retz, JEAN FRANÇOIS PAUL D' GONDI, 1614–1679. French intriguer, coadjutor to Abp. of Paris 1643; Cardinal 1651; imprisoned by Mazarin 1652, in exile 1654–62; Abbot of St. Denis 1662. His *Memoirs*, pub. 1717, extend to 1655.

Retzius, ANDERS JOHAN, 1742–1821. Prof. Lund 1777. *Floræ Scandinaviæ Prodromus*, 1779; *De plantis cibariis Romanorum*, 1808; *Flora Virgiliana*, 1809.

Retzius, MAGNUS GUSTAV. b. 1842. Swedish anthropologist.

Retzsch, FRIEDRICH AUGUST MORITZ, 1779–1857. German artist, whose highly poetical outline illustrations of Goethe's *Faust*, Schiller's *Song of the Bell*, Burger's ballads, some plays of Shakespeare, etc., are widely known. In this field he had many imitators but no equal.

Reuben. Eldest son of the patriarch Jacob; ancestor of one of the twelve tribes of Israel.

Reuchlin, or **Capnio,** JOHANN, 1455–1522. German humanist, promoter of Hebrew and Greek study; uncle of Melanchthon; prof. Ingolstadt 1520; accused of heresy and persecuted by Dominicans. Among his works are a Latin lexicon, 1476, a satirical play, *Sergius*, ab.1495, and a Hebrew grammar, 1506.

Reumont, ALFRED VON, 1808–1887. German writer on Italy. *Lorenzo de' Medici*, tr. 1876.

Reunion. Island 350 m. e. of Madagascar; discovered 1545; held by France since 1649, except 1810–15; called Ile de Bourbon till 1793. Area 970 sq. m., pop. ab. 180,000. Capital St. Denis, on n. coast.

Reuss, AUGUST EMANUEL, RITTER VON, 1811–1873. Prof. of Mineralogy in Vienna, and distinguished as a paleontologist.

Reuss, ÉDOUARD GUILLAUME EUGÈNE, D.D., Ph.D., LL.D., 1804–1891. Prof. Strassburg 1834–88; historian of N. T. 1842, tr. 1874; O. T. 1881; *Theology in Apostolic Age*, 1852, tr. 1872, and *Canon of Scripture*, 1862, tr. 1884; editor of Calvin's works.

Reuss, FRANZ AMBROSIUS, 1761–1830. German mineralogist and geologist. His special field of study was in Bohemia. *Lehrbuch der Mineralogie*, 3 vols., 1801–6.

Reuss Greiz AND **Reuss Schleiz.** Two principalities of central Germany, n. of Bavaria. Area of former 123 sq. m.; pop., 1890, 62,754. Area of Schleiz 320 sq. m.; pop., 1890, 119,811.

Reuter, FRITZ, 1810–1874. Low-German humorist, novelist, and poet, imprisoned 1833–40. *Lauschen un Primels*, 1853–58; *Ut mine Stromtid*, 1862–64; *In the Year '13*, 1860, tr. 1873; *Seed-time and Harvest; Works*, 15 vols., 1863–75.

Reuter, HERMANN FERDINAND, D.D., Ph.D., 1817–1889. Prof. at Breslau 1855, Griefswald 1866, and Göttingen 1876. *Middle Ages*, 1875–77.

Reuter, PAUL JULIUS, BARON, b. 1821. Organizer of a news agency at Aix 1849, removed to London 1851, and since greatly expanded; constructor of submarine cables and telegraph lines.

Reuterdahl, HENRIK, 1795–1870. Abp. of Upsala 1856. *Swedish Ch. Hist.*, 5 vols., 1838–63.

Reutlingen. Old town of Würtemberg, 20 m. s. of Stuttgart; long a free city of the empire. Pop., 1890, 18,542.

Reval, or REVEL. Russian seaport, on s. shore of Gulf of Finland; founded 1219; one of the Hanse towns; held by

Reval.

Sweden 1561–1710. The town and castle were founded by Waldemar II. of Denmark 1218. Pop., 1890, 52,404.

Reveal. Vertical side of an aperture between the front of the wall and of the window or door frame.

Reveille. The drum beat and gun fire which announces the beginning of the official day at military posts.

Revelation. See BIBLE and INSPIRATION.

Revelation. Last N. T. book, describing visions, probably of St. John, when in exile in Patmos, ab. 68 or 96. The authorship is disputed.

Revenue. Income of a state or nation derived from taxes, duties and other sources for public use; properly applicable to expenses of government.

Reverberatory Furnace. See FURNACES.

Revere, PAUL, 1735–1818. Engraver of Boston, whose memorable midnight ride, April 18, 1775, to Concord and Lexington, to warn the people of the approach of the British, was made famous by Longfellow.—Three of his grandsons served in the Civil War: JOSEPH WARREN, 1812–1880, was Brig.-gen. U. S. Vols. 1862–63; Col. PAUL JOSEPH, 1832–63, was killed at Gettysburg.

Reverend. Honorary title usually allowed clergymen. In English Ch. and P.E.Ch., bishops are "Right Rev." "Very Rev." indicates a dean, or a moderator in Scotland; "Most Rev." an Abp.

Reversible Pendulum. Any compound pendulum so constructed that it can be suspended also from its center of oscillation.

Reversing Layer OF SOLAR ATMOSPHERE. Comparatively thin layer above the photosphere, where the dark lines of the solar spectrum are changed to bright ones. The observation is possible only at time of a total eclipse, and, although there seems to be good authority for the reality of this layer, its existence is doubted by some, particularly Lockyer.

Reversion. Operation in Mathematics similar to the exchange of subject for predicate. Given a quantity ($=y$) equal to certain combinations dependent on a second quantity ($=x$); reversion gives the second (x) as equal to certain combinations of the first (y).

Reversion. In Biology, occurrence of an organ or organism in an ancestral form. See RETROGRESSIVE DEVELOPMENT.

Reville, ALBERT, D.D., b. 1826. French Protestant; pastor at Rotterdam 1851–72; Professor Hist. Religions, Coll. de France, 1880. *Philosophy and Religion*, 1859, tr. 1864; *Deity of Jesus*, 1869, tr. 1870; *History of Religions*, 4 vols., 1883–88.

Revised Version OF THE BIBLE. Begun in England 1870, and in the U. S. 1871, by two committees: N. T. pub. 1881, O. T. 1885. Though a great improvement, it has by no means supplanted the version of 1611, which holds its place by force of long association.

Revival. Religious awakening, whether general or local. Such occurred in England under the Wesleys and Whitefield from 1739, and later in America. Methodism has always aimed at these results through camp-meetings and continued special services: the Salvation Army employs similar methods.

Revival of Letters. In s., central, and w. Europe, in 15th century; stimulated by Eastern scholars, who carried Greek literature with them from Constantinople.

Revolt. An act of rebellion against the constituted government by which allegiance to its authority is renounced.

Revolute. Method of vernation where the leaf is rolled up from both margins on the lower surface, as in *Rhododendron*.

Revolutions. The American Revolution may be dated from 1765, the war lasting 1775–83. English revolutions occurred 1649 and 1688; French 1789, 1830, 1848, 1871; Hungarian 1848; Italian 1859; in Rome 1798, 1848. See REBELLION.

Revolver. Weapon for personal defense at distances not greater than 60 yards, employed principally by officers and mounted troops. The Colt's double-action revolvers, caliber 0.38 in. and 0.45 in., are adopted for the U. S. service. In this the breech revolves automatically after each discharge so as to bring a new charge to the barrel; it may be used as a single action or self-cocking piece at the will of the firer.

Revue des Deux Mondes. Foremost of literary periodicals; issued fortnightly in Paris since 1829; conducted 1831–77 by François Buloz, and since by his son Charles.

Reward. Offer of compensation to any one who performs a prescribed act. Doing the act with knowledge of the offer binds the offerer to pay the reward.

Reybaud, MARIE ROCH LOUIS, 1799–1879. French writer, chiefly on economic subjects; Academician 1850. *Modern Socialists*, 1840–43; *Jerome Paturot*, 1843–48.

Reyer, LOUIS ÉTIENNE ERNEST, b. 1823. French composer of operas. *Salammbo*, 1893.

Reykjavik. Capital of Iceland; founded 874 on s.w. coast. Pop. ab. 1,500.

Reynard the Fox. Satiric fable of dubious origin, which received gradual accretions till it grew into a kind of epic ab.1150; long popular in Germany in one or another ver-

sion; tr. by Caxton 1481. One of the earliest versions was written in Low German by Hinreck van Alckmer, thought to be the pseudonym of Hermann Barkhusen, a printer of Rostock; it was printed at Lübeck 1498. The substance of it was derived from Flemish sources.

Reynolds, ELMER ROBERT. b. 1846. American ethnologist.

Reynolds, HENRY ROBERT, D.D., b. 1825. President of Cheshunt Coll. 1860; ed. *Quarterly Review*, 1866–74. *Athanasius*, 1889.

Reynolds, or **Rainolds,** JOHN, D.D., 1549–1607. Puritan leader; Dean of Lincoln 1593–98; proposer of the Bible version made 1604–11.

Reynolds, JOHN, 1789–1865. Gov. of Ill. 1832–34; M.C. 1835–37 and 1839–43. *Pioneer Hist. Illinois*, 1848.

Reynolds, JOHN FULTON, U.S.A., 1820–1863. Brig.-gen. U. S. Vols. 1861, Major-gen. 1862; distinguished in the Va. campaigns; killed at Gettysburg. Heroic statues of him are there and in Phila.—His brother, WILLIAM, U.S.N., 1815–1879, became Rear-admiral 1873, and was twice acting Sec. of the Navy.

Reynolds, JOSEPH JONES, U.S.A., b. 1822. Brig.-gen. U. S. Vols. 1861, Major-gen. 1862, serving in the West.

Reynolds, SIR JOSHUA, 1723–1792. Greatest English painter of his century, especially famed for portraits; knighted 1769; pres. R.A. 1768–90. The large painting from the Gallery of the Earls of Westmoreland in the New York Metropolitan

The Young Widow, by Reynolds.

Museum is the finest example in America, and equal to any in England, where the National Gallery has many of his paintings. He was an excellent critic: his *Discourses on Painting* is a standard work.

Reynsso, ALVARO, b. ab. 1820. Cuban writer on sugar-cane.

Rezin, d. 732 B.C. King of Damascus, at war with Judah; destroyed by Assyria.

Rezonville. See GRAVELOTTE.

Rhabdocarpon. Ribbed nut-like fruit, found in the Coal Measures.

Rhabdocœla, or RHABDOCŒLIDA. Fresh water turbellarian worms, of small size and simple organization. The intestine is simple or slightly saccate; the mouth varies in position on the ventral side from the anterior end to the posterior. The body is ciliated.

Rhabdoid. In Plant Anatomy, needle-like body occurring in the cells of the leaves of insectivorous plants of the family *Droseraceæ*.

Rhabdophora. 1. Group of Nematode worms, free, marine, slender, bristled, and with two rows of præanal rods, by which they creep. 2. See GRAPTOLITIDÆ.

Rhabdopleura. See PHYLACTOLÆMATA and ASPIDOPHORA.

Rhabdus. Sponge spicule, developed along a single axis, but growing at both ends. There are several kinds; oxea, strongyle, tylote, and triæne.

Rhachiglossa. Group of ctenobranchiate Gastropods, including forms having a long proboscis, invaginable from the base, with a narrow radula having only three teeth in each transverse row. A siphon is present. The *Volutidæ*, *Olividæ*, *Fusus* (*Muricidæ* or *Canaliferæ*), and the Whelks (*Buccinum*, *Nassa*, and *Purpura*) are illustrations.

Rhachis. 1. Tergum or middle area of the back of all the segments of Trilobites. 2. Shaft of the feather, which bears the vane. See RACHIS.

Rhadamanthus. Son of Zeus and Europa; brother of Minos, King of Crete; for his justice, made one of the judges in the lower world.

Rhætia. Roman province, including what are now Tyrol and Canton Grisons. Its natives were conquered under Augustus and Tiberius.

Rhætizite. White variety of the mineral CYANITE (q.v.), found in the Tyrol.

Rhæto-Romance. Dialects, varying greatly in vocabulary, phonology, and inflections, between German and Italian speech, spoken in Switzerland, the Tyrol, and in parts of Italy by ab. 550,000 people.

Rhagon Type OF SPONGE (or DYSSYCUS TYPE). Including sponges with spherical chambers or ampullæ, to which het choanocytes are restricted, and to which incurrent canals run from the sponge-pores. This type may be simple or compound. In the latter case there are radial buds from the paragastric cavity, that receive each several apopyles or excurrent canals. Rhagons may be EURYPYLOUS, APHODAL, or DIPLODAL (q.v.).

Rhagophora (SCHIZONEMERTEA). Group of nemertean worms, characterized by having ciliated grooves on the head.

Rhamnaceæ. Natural family of flowering plants of the class *Angiospermæ*, and sub-class *Dicotyledons*, comprising ab. 45 genera and ab. 600 species of trees and shrubs, widely distributed throughout the globe; called the Buckthorn family.

Rhamphotheca. Sheath of the jaws of Birds.

Rhampsinitus. Egyptian king, perhaps Rameses III., owner of a treasure-house which, according to Herodotus, was robbed by the architect's two sons. The story has variants in almost every langugage.

Rhaphe. See RAPHE.

Rhapsodists. Reciters of Homer, Hesiod, and other poets in ancient Greece; itinerant performers, often artistic, highly valued, and important in their day for the preservation and popular diffusion of literature.

Rhatany. *Krameria triandra.* Low shrubby plant of the natural family *Krameriaceæ*, native of Peru and Bolivia. The roots are astringent, and are used medicinally.

Rhea. Greek goddess of the earth, daughter of Uranus, wife of Cronos, and mother of Zeus, Hera, Poseidon, Hades, and other gods; later identified with the Asiatic goddess, "the great mother," Cybele or Dindymene, and worshiped in Phrygia and throughout Greece; regarded by the Romans as Ops, wife of Saturn. Her priests in Phrygia were the Corybantes, in Rome, the Galli. In works of art she sits on a throne, wears a mural crown, and is attended by a lion on either hand.

Rhea (AMERICAN OSTRICH). Cursorial bird of S. American pampas. It differs from the African Ostrich in smaller size and in having 3 toes, feathered neck, and no tail or wing-plumes. Its feathers are worth about $5 per bird for rugs, dusters, etc. It is being exterminated. The Indians hunt it with the bolas. It is polygamous; the male bird incubates the eggs. Three species have been described.

Rhegium. See REGGIO.

Rheidæ. See CURSORES (*Ratitæ*), and RHEA.

Rheims, or REIMS. Ancient city of n.e. France, on the Vesle, 100 m. e.n.e. of Paris; famous for the cathedral of Notre Dame, rebuilt 13th century, in which the kings, except Henri IV., were crowned 1179–1774. Councils were held here 1119

Façade of the Cathedral of Rheims.

and 1148. By the 10th century R. was celebrated for its schools. The English R. C. N. T. was issued here 1582. The city is a center of the woolen manufacture and the wine trade. Pop., 1891, 104,186.

Rheinberger, JOSEPH GABRIEL, b. 1839. German composer, director Royal School of Music in Munich since 1867.

Rhenanus, BEATUS, 1485–1547. Alsatian editor of Livy, Tacitus, and other Latin classics.

Rhenish, or RHINE WINES. In a restricted sense those grown in the Rheingau, the southwest portion of Hesse Nassau, ab.25 m. long and 8 m. wide, on the right bank of the Rhine; in a general way the Moselle and Pfalz wines are included. The wines of the Rheingau of first growth or quality are Johannisberger, Steinberg, Rauenthaler, Gräfenberger, Rudesheimer, Marcobrunner, and Assmannshausen, the last being red, the others white wines. The Johannisberger is esteemed the best white wine of the world; the vineyard belongs to the Metternich estate and yields ab.7,200 gals. per annum. The total annual production of the district is 2,000,000 to 2,500,000 gals. The leading grape is the Riesling. The wines contain no sugar; of alcohol and tartaric acid as follows: Marcobrunner, 9.6 per cent alcohol, 6 grs. acid per oz.: Rudesheimer, 11.7 alcohol, 5.3 grs. acid; Steinberger, 13 per cent alcohol, 5.3 grs. acid. The Pfalz district (Bavarian Palatinate) gives the largest quantity of good Rhine wine; the first growths are Forst, Rupertsberger, Deidesheimer, Dürkheimer, Wachenheimer, and Ungsteiner. The province of Rheinhessen produces one first growth wine, Liebfrauenmilch. Moselle wines are produced in the triangle between the Moselle, Saar and Nahe rivers; they have an agreeable bouquet. Among the first growths are Braune-berger, Piesporter, and Zeltinger; the first named contains 9.4 per cent of alcohol and 9.8 grs. tartaric acid per oz. Scharzhofberger, one of the best of the wines of the Saar, which are usually sold as Moselle wines, contains 8.7 per cent of alcohol and 4.8 grs. of tartaric acid per oz. The wines of the Nahe, when of good quality, are sold as Rhine wine, otherwise as Moselle wine. The best of these white wines acquire in four or five years a delightful bouquet and a very pleasant taste, but of both of these they lose more or less as they grow older, and gain more strength and body. See MOSELLE WINES.

Rhenish Alliance. Formed July 12, 1806, under Napoleon's direction, by 16 princes of w. Germany.

Rhenish Architecture. Unique styles of building that have prevailed upon the banks of the Rhine, especially applied to the German Romanesque from the 9th to the 13th centuries. In its earlier phases the style has much in common with the Romanesque in Lombard architecture of n. Italy, but in the 12th century it attained a very individual expression. Among its chief monuments are the cathedrals at Spires, Worms, and

Church of the Benedictine Abbey at Laach, near Coblentz, Germ.

Mayence, and the churches at Cologne, Bonn, and Laach. In secular architecture the chief examples of the style are the palaces of Gelnhausen and the Wartburg.

Rheochord. Long wire, usually platinum or German silver, so arranged, either in a straight line, circle, or spiral, that any required proportion of it may be put into an electric circuit by a sliding contact, and thus a corresponding resistance interposed in the circuit.

Rheolyser. Apparatus devised by Wartmann for maintaining constant the strength of an electric current by the automatic adjustment of a variable resistance.

Rheometer. Instrument for measuring flow, as that of a Voltaic current.

Rheoscope. Instrument to detect flow, as that of a current of electricity or of water.

Rheostat. Instrument by which the resistance of any electric circuit can be varied without opening the circuit. It consists ordinarily of a set of wire coils of variable resistance, placed in a box, their ends being joined to pieces of brass fastened on the cover. Whenever these pieces are not in contact, the current

Rheostat with Solid Top.

is obliged to pass through the wire coils, but if a plug of metal be inserted between any two brass pieces, that coil which has its ends joined to them is short-circuited and the resistance of the circuit decreased proportionately. Wheatstone's rheostat, which is capable of more gradual variations, consists of two

parallel revolving cylinders, one conducting, the other insulating. On the latter a spiral groove is cut, in which is coiled part of ab. 40 meters of brass wire, the rest being wound on the conducting cylinder. If one end of a circuit be attached to the latter and the other be joined to the end of the brass wire which is on the insulating cylinder, the current will experience resistance from that part of the brass wire only which is coiled in the groove: by turning the cylinders and so transferring more of the wire from one cylinder to the other, this can be regulated at will.

Rheotrope. See COMMUTATOR.

Rheotropism. Phenomena exhibited by vegetable organs when exposed to currents of water, some assuming their direction of growth with that of the current, others against it.

Rhetoric. Art of discourse; variously defined, divided, and treated, by innumerable teachers and authors; very seriously regarded and practiced in classic and mediæval times; more loosely and variously handled, and less esteemed, with us. The chief ancient writers upon it were Aristotle, Longinus, and Quintilian; the chief English authorities are Blair, Kames, Campbell, and Whately.

Rhett, ROBERT BARNWELL, 1800–1876. M.C. from S. C. 1837–49; U. S. Senator 1851–52; ed. Charleston *Mercury;* secession leader.

Rheumatism. Diseased condition characterized by an excess of acid in the body. In the acute form, rheumatic fever, inflammatory rheumatism, there is great pain, inflammatory swelling of the joints, and high fever. Other serous membranes, *e.g.*, the endocardium, are liable to be attacked, hence the frequent dependence of some forms of heart disease upon rheumatism. The chronic form is more apt to occur in older people, and is characterized by pain, stiffness of the joints, and deformity. Among the medicines used are rochelle salt, colchicum, potassium iodide, and lithium carbonate.

Rhianus, 3d cent. B.C. Greek epic poet of Crete.

Rhigolene. See PETROLEUM.

Rhind, ALEXANDER COLDEN, U.S.N., b. 1821. Commander 1863; distinguished in the attacks on Charleston, Fort Wagner, and Fort Fisher; Captain 1870, Commodore 1876, Rear-admiral 1883.

Rhine. River of Europe, famous for its beauty and historic associations. It heads in the Swiss Alps, flows through the Lake of Constance, and forms the n. boundary of Switzerland. At Basle it turns n. and enters Germany. At Mayence it turns n.w., entering Holland, then w., reaching the North Sea through an extensive delta. Length 960 m., drainage area 76,000 sq. m.

Rhine, CONFEDERATION OF. See CONFEDERATION OF THE RHINE.

Rhinoceroses. Of living forms there are three subgenera, each with two species. 1. *Rhinoceros* of India, Java,

Rhinoceros (*Atelodus bicornis*).

etc., has one nasal horn, canines, one pair lower incisors, and shields of thickened skin on neck, shoulders, and hind quarters. 2. *Atelodus* of Africa has a nasal horn and a frontal horn, but lacks incisors, canines, and skin shields. 3. *Ceratorhinus* of the Malay peninsula, etc., has dentition of *Rhinoceros* and horns like *Atelodus*. The largest Rhinoceroses exceed 6 ft. in ht. and 10 ft. in length. The White Rhinoceros. *A. simis*, of w. Africa, is now rare. It has a square head and feeds on grass. Its anterior horn may reach 4 ft. in length, and posterior one 2 ft. *A. bicornis*, the Black, and *A. keitloa*, the Blue Rhinoceros (which latter has horns of equal length), range s. from Abyssinia, and feed on bushes. These African forms differ but little in color. There are 27 fossil species, half being American, and most Eocene. They died out in the Miocene, but in Europe survived the Mammoth. A woolly Rhinoceros has been found incased in Siberian ice.

Rhinocerotidæ (RHINOCERIDÆ). Family of *Perissodactyla*, comprising the Rhinoceroses. One or two horns, consisting of agglutinated, strongly developed hairs, are present, and the nasal bones are greatly developed. The Indian Rhinoceros, being one horned, was probably the Unicorn of the Ancients. The *Diceratherium*, from the Miocene deposits of Oregon, had two horns side by side on the nose, and differed further, in having four toes on the forefeet.

Rhinolophidæ. See BATS.

Rhinoplastic Operation. Plastic operation on the nose to replace lost tissue. A flap is taken from some other part of the body; *e.g.*, the forehead, the cheek or the arm, stitched to the healthy margins surrounding the destroyed portion of the nose. When a new circulation is established, the flap is severed from its original site.

Rhinotheca. Sheath of the upper jaw of Birds.

Rhinthon, 4th cent. B.C. Greek poet of Tarentum.

Rhipidium. Modification of the cymose flower-cluster.

Rhipidoglossa. Group of ctenobranchiate Gastropods, including forms having numerous lateral plates in each transverse row of teeth of the radula, which are arrayed in a fan-like manner. Here belong the *Trochidæ*, with conical shells and spiral operculum, the foot prolonged into cirri and lobes, and eyes on short stalks; also the *Neritidæ*, with thick hemispherical shells and stalked eyes behind two long tentacles: the foot is triangular, the proboscis is short and sometimes bilobed. In a broad sense the group comprises the ZEUGOBRANCHIA and SCUTIBRANCHIA (q.v.) (restricted), and is then the equivalent of *Aspidobranchia* (*Podophthalma*).

Rhizocarpeæ. Class of the heterosporous *Pteridophyta*, comprising some floating plants such as *Marsilea*, *Pilularia*, and *Salvinia*, having their spore-cases borne mainly near the roots.

Rhizocephala. See SUCTORIA.

Rhizodus. Crossopterygian, lepidoganoid fish of the Carboniferous, formerly confounded with *Megalichthys* and *Holoptychius*, but distinguished from the former by the circular shape of its scales, and from the latter by the form and strength of its teeth.

Rhizogen. Plants parasitic upon the roots of others.

Rhizogenetic. Certain cells in the roots of plants which give rise to the rootlets.

Rhizoids. Rootlets arising from the lower surfaces of lichens and other *Thallophytes*, and from the prothallia of ferns.

Rhizome. Portion of a perennial stem or branch lying prostrate or wholly subterranean, as in many ferns; synonymous with Rootstock.

Rhizomorphs. Strands and fibers of mycelia of various *Fungi* developed in the dark, having much the appearance of roots. They are found especially in mines and under logs.

Rhizophaga, or GLIRINA. Tribe of diprotodont Marsupials of the size of a Badger, with rodent-like teeth, close soft fur, short limbs, claws on the toes, except the rudimentary inner toe of the hind foot, and a rudimentary tail. The Wombat (*Phascolomys*) is an example.

Rhizophoraceæ. Natural family of flowering plants, of the class *Angiospermæ* and sub-class *Dicotyledons*, comprising 17 genera and ab. 50 species, all growing within the tropics, many being found on the miry shores of rivers; called the Mangrove family.

Rhizophore. Structure intermediate between the stem and the roots, found in certain *Selaginellaceæ*.

Rhizopoda, or SARCODINA. Class of *Protozoa*, whose soft protoplasmic body can form pseudopodia, and which is not differentiated into a firm membrane at the surface, although usually a silicious skeleton or a calcareous shell is present. There are three sub-classes, *Foraminifera*, *Heliozoa*, and *Radiolaria*. See also GYMNOMYXA.

Rhizostomeæ (or RHIZOSTOMIDA; POLYSTOMÆ). Discophorous jelly-fish, without a central mouth, because the eight oral arms have united, leaving funnel-shaped slits, through which food is sucked in. There are no marginal tentacles, but eight (or twelve) sense organs. *Cassiopeia* is an example. See CRAMBESSIDÆ.

Rhizotaxis. Arrangement of roots on plants.

Rhodamine. $C_{28}H_{31}N_2O_3Cl$. Product of the action of phthalic anhydride upon diethylmetaamidophenol; green crystals, soluble in water. It dyes wool and silk red, and cotton a beautiful violet red upon a tannin mordant.

Rhode Island. One of the n.e. States. Its area is 1,250 sq. m. The surface is undulating and in many parts even hilly, the hills being of glacial origin. It has no navigable rivers of any consequence, but has a large extent of seacoast upon Narragansett Bay, which projects far inland, and has given it, from the first, an important commerce. In later years, with the decline of that industry, very extensive manufactures have developed, to which the water power of the numerous small streams has greatly contributed. In 1890 there was invested in manufactures $126,483,401, and the manufactured product was valued at $142,500,625. It is the most densely settled of the States, having a population of 276 per sq. m. The principal cities are Providence, Pawtucket, Woonsocket, and Newport. The first settlement of R. I. was made 1636 at Providence by Roger Williams, who had been driven from Mass. In 1643 he went to England and obtained a patent, which remained in force until 1663, when a charter was granted by Charles II., incorporating the colony of R. I. and Providence Plantations. This instrument was long the fundamental law of R. I. When in 1686 the charters were withdrawn from Mass. and other colonies, R. I., with Conn., resisted the demand. It was active in the war for independence, but was the last of the 13 States to accept the constitution. After its entrance into the Union, it adhered to its colonial charter until 1842. It is the only State which still has two capitals, the general assembly meeting for a short session at Newport and adjourning for the transaction of actual business to Providence. Pop., 1890, 345,506. (See Map, p. 1288.)

Rhodes. Island off s.w. coast of Asia Minor; taken by Vespasian 71; held by Knights Hospitalers 1309–1523, and since by the Turks. The chief city, at its e. end, was anciently famed for its COLOSSUS, (q.v.) one of the Seven Wonders of the World. Area 420 sq. miles, present pop. ab. 36,000.

Bird's-eye View of Rhodes.

Rhodes, CECIL, b. 1853 in England. In S. Africa from 1873; Prime Minister of Cape Colony 1890; founder and head of British S. African Co.; of great ability, wealth, and influence; examined in London 1897 as to his connection with Dr. Jameson's raid into the Transvaal. His aim has long been to bring all S. Africa under British rule.

Rhodes, KNIGHTS OF. See KNIGHTS OF ST. JOHN.

Rhodium. Rh. At. wt. 103, sp. gr. 12.1, sp. ht. .054, mpt. 2,000° C., valence II. IV. VI. Discovered by Wollaston 1803; it occurs with platinum, 0.4 to 3 per cent; heavy metal. When pure, it is not attacked by acids or aqua regia, but dissolves in the latter when alloyed with platinum. It forms three oxides, RhO, Rh_2O_3 and RhO_2, and one chloride, Rh_2Cl_6. The element and its compounds are rare.

Rhodium, OIL OF. Perfume possessing cordial and tonic virtues, obtained from the root of *Rhodoriza scoparia* and *R. florida*. Horses, fishes, and rats are very fond of the odor.

Rhodium Dichloride. $RhCl_2$. Grayish red to dirty violet powder, made by treating the hydrated oxide with hydrochloric acid.

Rhodium Hydroxide. $Rh_2(OH)_6$. Porous gray substance, of metallic luster, made by treating the double chloride of sodium and rhodium with caustic potash; used as a starting point in the preparation of other rhodium salts.

Rhodium Monosulphide. RhS. Blue-white metallic substance, made by fusing rhodium and pyrites together.

Rhodium Nitrate. $Rh_2(NO_3)_6+4H_2O$. Red amorphous substance, obtained by dissolving the hydroxide in nitric acid.

Rhodium Oxides. RhO. Monoxide. Metallic gray powder, indifferent to acids; obtained by igniting finely divided rhodium.—Rh_2O_3. Sesquioxide. Fibrous substance of metallic luster; obtained by heating the nitrate.—RhO_2. Dioxide. Brown powder, insoluble in acids and boiling potash; made by repeated fusing of the metal with potassium nitrate and hydroxide.

Rhodium Sesquichloride. Rh_2Cl_6. Bright red crystalline powder, insoluble in hydrochloric acid or aqua regia; made by heating an alloy of tin and rhodium in a current of chlorine.

Rhodium Sesquisulphide. Rh_2S_3. Black crystalline leaflets, soluble in bromine and aqua regia; made by heating the dry sesquichloride in hydrogen sulphide at 360° C.

Rhodium Sulphate. $Rh_2(SO_4)_3+12H_2O$. White or lemon yellow crystals. It forms alums, and is made by dissolving the hydroxide in sulphuric acid.

Rhodochrosite. $MnCO_3$. Manganese carbonate, of rather rare occurrence as a mineral, except in association in veins with ores of silver and lead. In crystallization and general appearance it strongly resembles calcite, but its color is usually some shade of red. See MANGANESE ORES.

Rhododendron. Genus of showy-flowered shrubs of the natural family *Ericaceæ*, widely distributed, and much

Rhododendrons.

planted for ornament; known as Rose-bay and Great Laurel. Rhodora, *Rhododendron canadense*, is a native of the n.e. U.S., flowering in spring before its leaves appear.

Rhodology. Study of roses.

Rhodonite. $MnSiO_3$. Mineral manganese silicate, of a reddish color, and frequently having a strong resemblance to some varieties of feldspar. The manganese is often replaced in part by iron or calcium, sometimes, as in n. N. J., by zinc. See MANGANESE ORES.

Rhodope. Mountain chain in Thrace, reaching heights of near 7,500 ft.; noted for its monasteries, especially Rils.

Rhodophyll. Pigment found in the *Florideæ* or red *Algæ*.

Rhodospermeæ. See FLORIDEÆ.

Rhodospermin. Coloring matter of red seaweeds.

Rhodosporeæ. See FLORIDEÆ.

Rhombohedron. Polyhedron bounded by six faces, each a rhombus.

Rhomboid. Oblique-angled parallelogram.

Rhombus. Equilateral oblique-angled parallelogram.

Rhone. River of s.e. France. It rises in the Swiss Alps, flows through the Lake of Geneva, and thence by a s. course reaches its mouth, in the Gulf of Lyons. Length 525 m., drainage area 36,781 sq. m.

Rhopalocera. Tribe of *Lepidoptera*, including the butter-

flies. They are of slender build, and usually have brightly colored wings. The antennæ are knobbed at the end; the legs are slender. They fly by day, and when at rest hold the wings vertical. The caterpillars have 16 feet, are naked, hairy or spiny, and develop mostly without cocoons. The pupa is often of a metallic color, and is attached to objects by threads.

Rhubarb. Perennial herbs of the genus *Rheum*, natural family *Polygonaceæ*, natives of Russia and n. Asia, their roots are extensively collected for medicine. *R. rhaponticum* is widely cultivated in gardens for its large leaf-stalk, used as a culinary vegetable and for domestic wine.

Rhubarb (*Rheum officinale*).

Rhumb Line. Course of a vessel cutting all meridians at the same angle.

Rhyme (better RIME, as it has nothing to do with rhythm). Harmony or agreement, in whole or part, of accented syllables. It may be (*a*) *Perfect*, as in Chaucerian English and in modern French; (*b*) *Partial*, which may be (1) agreement of initial sounds, or Alliteration (*brave : bring*), or (2) agreement of final sounds, ordinary Rhyme (*bring : sing*); (c) agreement of vowels alone, Assonance, as in Spanish ballads (*black : dance*). Rhyme as a fixed principle of verse is modern, but it occurs sporadically in Greek and Latin classics. It came in ab.400, advanced slowly, and reached its acme in the mediæval Latin hymns. It appeals to and is judged by the ear, not the eye; thus "off" and "cough" are rhymes, "been" and "seen" are not. See PROSODY.

Rhymer, THOMAS, THE. Scottish poet, probably T. Learmount of Ercildoune, ab.1280; supposed author of *Prophecies*, pub. 1603, and of *Sir Tristram*, ed. by Sir W. Scott 1806.

Rhynchobdellidæ. Leeches with a protrusible proboscis in the pharynx, a sucker at each end of body, and paired eyes on the anterior sucker. Here belong *Clepsine* and the Mexican medicinal leech.

Rhynchocephalia. Order of Reptiles including *Hatteria* (or *Sphenodon*) of New Zealand and several extinct species. *Hatteria* resembles an *Iguana;* the lungs are amphibian-like, the pecten of eye and copulatory organ are absent, the

Hatteria (*Sphenodon punctatus*).

vertebræ are biconcave, the ribs have uncinate processes, the teeth are in rows on jaws and palate. The length of body is 20 inches. As the natives use them for food, they are being exterminated. *Proterosaurus* is a fossil aquatic reptile belonging in this group.

Rhynchoceti (HYPERODONTIDÆ). See ODONTOCETI.

Rhynchocœla. See NEMERTEA.

Rhynchodus. Fish of the corniferous limestone of Ohio, whose shearing teeth somewhat resembled on a large scale those of the modern *Chimœra*.

Rhynchoflagellata (CYSTOFLAGELLATA). Sub-class of *Flagellata*, including *Noctiluca*. This is one of the large Protozoöns, being visible to the naked eye. It has a peach-shaped body, consisting of a sac-like envelope lined by protoplasm, pitted in at one point, from which a thick stem-like tentacle projects. A large mass of protoplasm is situated near the base of this stem, containing the nucleus, and sending branched pseudopodia to different parts of the envelope. There is also a slender flagellum. They reproduce by bud-like spores. A large part of the phosphorescence of the sea is due to the presence of these animals, each of which emits a bright light when the water near it is agitated. *Pyrocystis* is probably an encysted resting noctiluca. A second genus, *Leptodiscus*, is also included in this group. It is saucer-shaped like a Medusa.

Pyrocystis noctiluca.

Noctiluca miliaris.

Rhyncholites. Fossil beaks of Cephalopods.

Rhyncholophidæ (RINOLOPHIDÆ). See BATS.

Rhynchonella. See TESTICARDINES.

Rhynchota (HEMIPTERA). Insects with a jointed rostrum or tube, formed from the labium, in which the mandibles and maxillæ work to suck up fluid food. (Some *Hemiptera* have biting mouth parts.) The prothorax is usually free. The metamorphosis is incomplete. The group includes four suborders: *Aptera*, *Phytophthires*, *Homoptera*, and *Hemiptera* (restricted).

Rhys, JOHN, b. 1840. Prof. of Celtic at Oxford 1877. *Welsh Philology*, 1877; *Celtic Britain*, 1882; *Arthurian Legends*, 1891.

Rhythm. Succession of small, approximately equal intervals of time, separated by corresponding stimuli of sound, sight or muscular movement; also phenomena of the physical world characterized by regular succession or alternation; *e.g.*, alternation of day and night, or regular succession of the seasons. In these cases the term periodicity is preferable. In physiology the term rhythm is applied to alternating periods of activity and comparative rest; *e.g.*, the heart beat, or respiration. The basal principle of the so-called arts of motion, music, poetry, and the dance, is rhythm. The psychological basis of the esthetic value of rhythm is matter of dispute. See PROSODY.

Rialto. One of the islets on which Venice is built. The bridge, built 1588 by Antonio da Ponte, is a marble arch with

Bridge of the Rialto.

a span of 91 ft. and a height above water of 24½ ft. The footway is 72 ft. wide.

Rib. In Gothic Architecture, the arch forming the subdivision of a vault.

Rib. Narrow block or strip of coal or ore, left standing in a mine as a protection to a shaft or gallery, or as a support for the roof.

Ribalba, FRANCISCO, 1551–1628. Spanish painter.

Ribas, JOSÉ FELIX, 1775–1815. Venezuelan general, shot by Spaniards.

Ribaut, or **Ribault,** JEAN, 1520–1565. Leader of French Protestant colonies to Fla. 1562–65; murdered by Spaniards.

Ribbeck, JOHANN KARL OTTO, b. 1827. Prof. of Classical Philology at Leipzig. Best known by his edition of *Virgil*, 1859–69, and histories of different departments of Roman literature.

Ribbed Arch. Metallic arch having two ribs connected by radial or diagonal ribs. They have been used for spans of 550 ft., as in the bridge over the Mississippi at St. Louis.

Ribbon. Narrow bands of silk, used chiefly in ornamentation. It was used from remote antiquity, though only extensively from the 17th century. Ribbon made by hand looms is superior to that made by power looms.

Ribbonism. See RIBBONMEN.

Ribbonmen. Members of secret associations in Ireland 1820–70; named from a green badge; said to have originated in opposition to the Orange society. Their main object was fixity of tenure in regard to holdings of land. The R. C. clergy condemned the organization, to which were attributed many of the agrarian disorders and murders between 1858 and 1879.

Ribeiro, BERNARDIN, ab.1485–ab.1550. Portuguese poet, noted for his eclogues. *Menina e Moça*, 1554.

Ribera, JUSEPE DE ("SPAGNOLETTO"), 1588–1656. Spanish painter, educated in Rome and resident mostly in Naples. His

Martyrdom of St. Bartholomew, by Ribera.

best work is in n. Europe: the *St. Mary of Egypt* is in Dresden. In Madrid are his *Jacob's Ladder*, *St. Bartholomew*, and many others.

Ribgrass. *Plantago lanceolata.* Long-leaved herb of the Plantain family, native of Europe, introduced as a weed into America; known as Ripplegrass and English Plantain.

Ribot, ALEXANDRE FÉLIX JOSEPH, b. 1842. French Deputy 1878; Foreign Minister 1890; Premier 1892–93 and 1895.

Ribot, AUGUSTIN THÉODULE, 1823–1891. French artist of great power, painting in low tones.

Ribot, THEODULE ARMAND, b. 1839. Prof. Coll. de France 1888; ed. *Revue Philosophique*, 1876–94; writer on psychology. *Maladies de la Memoire*, 1881.

Ribs. Long, flat, curved bones, articulating with the vertebræ on the back and the breast-bone in front. They form the sides of the bony wall of the chest and by their rise and fall assist in respiration. There are 12 pairs of ribs in man; 7 true ribs directly attached to the sternum, 5 false ribs not directly so attached, the last two floating ribs, with one end free.

Ribs (IN BOTANY). See VEINS.

Ricardo, DAVID, 1772–1823. English economist of Jewish parentage. He became wealthy as member of the stock exchange, and was a student of mathematics and the natural sciences. His *Principles of Political Economy and Taxation*, 1817, was notable for the doctrines of rent and of wages.

Ricasoli, BETTINO, BARON, 1809–1880. Florentine patriot; dictator or gov. of Tuscany 1859–61; premier of Italy 1861–62 and 1866–67.

Ricaurte, ANTONIO, 1792–1814. Colombian patriot, who won a battle for freedom by his heroic sacrifice.

Ricci, LORENZO, 1709–1775. General of the Jesuits 1758–73. —His nephew, SCIPIONE, 1741–1810, Bp. of Pistoia and Prato 1780–91, attempted reforms, and left *Memoirs*, pub. 1865.

Ricci, MATTEO, 1552–1610. Jesuit missionary in China.

Ricciaceæ. Family of aquatic Liverworts (*Hepaticæ*).

Riccio, DAVID. See RIZZIO.

Rice. *Oryza sativa.* Annual grass, native of India; universally cultivated in warm countries for its grain, which is the

Culture of Rice in Japan.

principal food of the natives of s. Asia. U. S., in 1889, produced 128,590,434 lbs., on 161,312 acres of land, chiefly in S. C. and La.

Rice, MOUNTAIN. Woodland grasses of the genus *Oryzopsis*, natives of N. America.

Rice, WATER. *Zizania aquatica.* Tall marsh grass, native of N. America; known also as Water Oats and Indian Rice.

Rice, ALEXANDER HAMILTON, 1818–1895. Mayor of Boston 1855 and 1857; M.C. 1859–67; Gov. of Mass. 1876–79.

Rice, ALLEN THORNDIKE, 1853–1889. Owner (1876) and ed. *N. American Review.*

Rice, JAMES, 1844–1882. English novelist, in collaboration with Besant; ed. *Once a Week*, 1868–72.

Rice Bird. See BOBOLINK.

Rice Paper. Chinese paper, made from the pith of *Fatsia papyrifera* of Formosa, 10 by 15 in. The pith is opened out into a sheet. It is used for colored drawings. The rice paper used in cigarettes is made by the ordinary paper process.

Rich, CLAUDIUS JAMES, 1787–1821. English traveler and Orientalist.

Rich, EDMUND, ab.1170–1240. Abp. of Canterbury 1234; supporter of popular rights against King and Pope; exiled 1240; canonized 1247.

Richard I., "CŒUR DE LION," 1157–1199. King of England 1189; son of Henry II.; distinguished in 3d crusade 1190; imprisoned in Austria 1192–94; killed in war with France.

Richard II., 1366–1400. King of England 1377; son of the Black Prince; defeated and deposed by his cousin Henry IV. 1399; probably murdered.

Richard III., 1452–1485. King of England 1483; son

Richard III.

of Richard of York; guardian of his nephews, sons of Edward IV., whom he is suspected of murdering; defeated

and killed by the Earl of Richmond (Henry VII.) at Bosworth. He was probably not a hunchback, as represented in legends.

Richard OF CIRENCESTER, ab.1335–1401. Monk of Westminster; chronicler. *De Situ Britanniæ*, pub. 1758 by C. J. Bertram, long passed as his.

Richard OF CORNWALL, 1209–1272. Son of King John; King of the Romans 1257, with some shadowy rights in Germany.

Richard, ACHILLE, 1794–1859. Prof. of Botany in Paris 1831. *Botanique et de physiologie vegetale*, 1819; *Botanique medicale*, 1823; *Dictionaire des drogues*, 1827–29; *Elemens d'histoire naturelle medicale*, 1831; *Tentamen Floræ Abyssinicæ*, 1847–51.

Richard, LOUIS CLAUDE MARIE, 1754–1821. French botanist. *Demonstrations botaniques*, 1808, tr. 1819; *Commentatio botanica de Coniferiis et Cycadeis*, 1826; *Flora boreali-americana*, 1803.

Richard OF ST. VICTOR, d. 1173. Scottish mystic, prior of the Augustinian abbey at Paris.

Richards, BRINLEY, 1819–1885. English composer, chiefly of songs.

Richards, JOSEPH WILLIAM, Ph.D., b. 1864. Asst. prof. Lehigh Univ. 1897. *Aluminium: its Properties, Metallurgy, and Alloys*, 1887–96.

Richards, THOMAS ADDISON, b. 1820. N. A. 1851. Landscape painter and illustrator; Prof. of Art in Univ. New York 1867.

Richards, WILLIAM TROST, b. 1833. American painter.

Richardson, SIR BENJAMIN WARD, M.D., LL.D., F.R.S., 1828–1896. London practitioner, knighted 1893; inventor of several medical appliances; founder *Journal of Health*, 1855, and *Social Science Review*, 1862. *Alcohol*, 1869–75; *Hygeia*, 1876; *Health*, 1887–90; *Vita Medica*, 1897.

Richardson, CHARLES, 1775–1865. English lexicographer. *Philology*, 1815; *Study of Language*, 1854. His *New Dictionary*, 1837, was in its day considered the best.

Richardson, CHARLES FRANCIS, b. 1851. Prof. Dartmouth 1882. *Choice of Books*, 1881; *American Literature*, 1887–88.

Richardson, HENRY HOBSON, 1838–1886. American architect of highest repute, active chiefly in and near Boston, where Trinity Ch. is one of his most noted erections.

Richardson, ISRAEL BUSH, U.S.A., 1815–1862. Brig.-gen. U. S. Vols. 1861, Major-gen. 1862; distinguished in Va.; mortally wounded at Antietam.

Richardson, JAMES, 1809–1851. English traveler in Africa 1845–46 and 1850–51.

Richardson, SIR JOHN, 1787–1865. Scottish surgeon and Arctic explorer, knighted 1846. *Fauna Boreali Americana*, 4 vols., 1829–1837.

Richardson, SAMUEL, 1689–1761. English novelist. His *Pamela*, 1740, *Clarissa Harlowe*, 1748, and *Sir Charles Grandison*, 1754, are in epistolary form, and deal at inordinate length with the motives, manners, and costumes of women. They were very popular, and were forerunners of the modern society novel: the best, *Clarissa*, is still read in a recent abridgment.

Richardson, WILLIAM ADAMS, LL.D., 1821–1896. Judge U. S. Court of Claims 1874, Chief-justice 1885. *Banking Laws of Mass.*, 1855; *Public Debt of U. S.*, 1872; *Hist. Court of Claims*, 1882–85.

Richardson, WILLIAM MERCHANT, LL.D., 1774–1838. Chief-justice of New Hampshire 1812–34. *Reports*, 11 vols., 1819–44.

Richardt, CHRISTIAN ERNST, 1831–1893. Danish lyric and dramatic poet.

Riché, JEAN BAPTISTE, 1780–1847. Haytian general 1807, Pres. 1846; noted for cruelty.

Richel, NICOLAS ANTOINE, 1745–1799. Haytian botanist. *Flore de St. Domingue*, 6 vols., 1785–90.

Richelieu, ARMAND JEAN DUPLESSIS, DUC DE, 1585–1642. Bp. of Luçon 1607; State Councilor 1614; Cardinal 1622; one of the greatest rulers of France, and ally of German Protestants in the Thirty Years' War; from 1624 Prime Minister with absolute power. He humiliated the rival power of Austria, established the absolute supremacy of the crown, suppressed

Richelieu.

conspiracies, overawed the king, crushed the Huguenots at Rochelle, and encouraged art and letters.

Richepin, JEAN, b. 1849. French poet, novelist, and dramatist.

Richer, EDMOND, 1560–1631. French theologian, syndic of the Sorbonne 1608; deposed 1613 for his defense of Gallicanism. *De eccles. et politica potestate*, 1611, and forced to recant 1629.

Richer, PAUL, b. 1849. French alienist, writer on epilepsy and hysteria.

Richet, ALFRED LOUIS, 1816–1891. French surgeon. *Anatomie medico-chirurgicale*, 1857.

Richet, CHARLES, b. 1850. Prof. Paris; ed. *Revue Scientifique* from 1878; writer on physiology.

Richfield Springs. Fashionable resort in N. Y., 60 m. s.e. of Syracuse. It has sulphur springs, celebrated for the cure of rheumatism and cutaneous diseases. Pop., 1890, 1,623.

Richings, PETER, 1797–1871. Anglo-American actor.

Richmond. Old town of Surrey, 9 m. w. of London; noted for its park and its historic associations.

Richmond. Capital of Wayne co., Ind., on the Whitewater. Pop., 1890, 16,608.

Richmond. Capital of Madison co., Ky., scene of a battle Aug. 30, 1862. Pop., 1890, 5,073.

Richmond. Capital of Va. (since 1779) and of Henrico co., on the James, at the head of tide and navigation; chartered 1742; burned by Arnold 1781; capital C.S.A. 1861–65. The "seven days' battles," June 25–July 1, 1862, was fought near it. It has some commerce and considerable manufactures, especially of tobacco. Pop., 1890, 81,388.

Richmond, CHARLES GORDON LENNOX, 4TH DUKE OF, 1764–1820. Lord-lieut. of Ireland 1808; Gov.-gen. of Canada 1819.—His uncle, CHARLES, 1735–1806, 3d Duke, was Envoy to France 1765 and Sec. of State 1766.

Richmond, DEAN, 1804–1866. Financier; pres. N. Y. Central R.R. 1864.

Richmond, GEORGE, R.A., D.C.L., LL.D., 1809–1896. English portrait painter.

Richmond, LEGH, 1772–1827. English clergyman, of the Evangelical school. *The Dairyman's Daughter*, an immensely popular tract, formed part of his *Annals of the Poor*, 1814.

Richmond, MARGARET BEAUFORT, COUNTESS OF, ab.1440–1509. Descendant of Edward III. and John of Gaunt, mother of Henry VII.; patron of learning at Cambridge.

Richmond College. At Richmond, Va.; founded 1830–40; reorganized 1866 in 8 schools. It has near 200 students.

Richter, ÆMILIUS LUDWIG, 1808–1864. Prof. at Leipzig 1835, Marburg 1838, and Berlin 1846; writer on canon law.

Richter, CHRISTIAN FRIEDRICH, 1676–1711. Physician to Francke's institutions at Halle. Some of his hymns are much used in Germany, and in English versions.

Richter, GUSTAV KARL LUDWIG, 1823–1884. German painter, eminent chiefly for his portraits.

Richter, JEAN PAUL FRIEDRICH, 1763–1825. German novelist, notable for imagination, humor, eccentricity, and lack of literary form. Most of his romances have been translated; the chief are: *The Invisible Lodge*, 1793; *Hesperus*, 1795; *Flower, Fruit and Thorn*, 1796–97; *Titan*, 1800–3; and *Wild Oats*, 1804–5. He wrote also on *Æsthetics*, 1805–12; on education, *Levana*, 1807; and an incomplete *Autobiography*, 1826.

Richthofen, FERDINAND, BARON VON, b. 1833. German traveler and author. *Volcanic Rocks*, 1867; *China*. 4 vols., 1877–82.

Richu Mountain. In Va.; scene of a Union victory July 11, 1861.

Richweed. See CLEARWEED and HORSE-BALM.

Ricimer, COUNT, d. 472. Goth, commanding the foreign troops of Rome; known as the "King-Maker." He compelled the abdication of the Emperor Avitus 456; put Majorian on the throne 457–461; ruled through his puppet Severus 461–465; and accepted Anthemius from the Emperor Leo 467, but displaced him 472 by Olybrius.

Ricinoleic Acid, or RICINIC ACID. $C_{18}H_{34}O_3$. Thick oil, which, combined with glycerin as a glyceride, forms the main constituent of castor oil; prepared by the decomposition of this oil. A solution of the sodium salt of ricinoleic acid made by the action of caustic soda is found in trade as soluble oil, and is used in dyeing and finishing textiles.

Rickets. Disease of the bones in childhood. The mineral constituents are deficient and there is an excessive cell growth; the bones are, consequently, less rigid than when normal. Various deformities result from the consequent bending of the bones. The technical name for the condition is rachitis.

Ricketts, JAMES BREWERTON, U.S.A., 1817–1887. Brig.-gen. U. S. Vols. 1861; active in the Va. campaigns.

Ricketts, PALMER CHAMBERLAIN, b. 1856. Civil engineer and educator, Prof. of Mechanics, 1884 and, since 1892, director of the Rensselaer Polytechnic Institute.

Rickman, THOMAS, 1776–1841. English architect. *Styles of Architecture*, 1817.

Ricochet. The successive rebounding of a round shot after the first impact on ground or on the surface of water. The elongated projectiles of modern artillery are deflected upon striking but do not ricochet.

Ricord, PHILIPPE, 1800–1889. American-French surgeon, specially eminent as a pathologist; writer on ophthalmia, syphilis, and cancer.

Ricotti, CÆSAR FRANCIS, b. 1822. Italian general 1864; Minister of War 1870, 1873, 1884, and 1896.

Ricotti, ERCOLE, 1816–1883. Italian historian; prof. Turin 1846, Senator 1862.

Rictus. Space or distance on the upper jaw of Birds, from the base of the horny beak to the angle of the mouth.

Ridderstad, KARL FREDRIK, 1807–1886. Swedish novelist, lyric poet, and dramatist.

Riddle. Form of puzzle anciently popular; similar to the ENIGMA (q.v.). Examples are found in O. T. (Judges xiv. 12–18) and the Koran.

Riddle, GEORGE, b. 1853. New England elocutionist and reader.

Riddle, JOSEPH EDMOND, ab.1804–1859. Anglican divine. *Latin Dictionary*, 1836–38; *Christian Antiquities*, 1839.

Riddle, MATTHEW BROWN, D.D., b. 1836. Prof. Hartford 1871–87, and since in Western Theol. Sem.; editor of sundry Fathers and Commentaries.

Riddleberger, HARRISON HOLT, 1844–1890. U. S. Senator from Va. 1883–89; prominent as a readjuster.

Rideau. Lake in Ontario, Canada, drained by R. river into the Ottawa river; together with canals, the lake and river, Ottawa, on Ottawa River, is connected with Kingston on the St. Lawrence; this waterway was originally established for military purposes between 1826–34; length of navigation, 126¼ m.; number of locks 47; navigable depth 4½ ft.

Rider. See BALANCE.

Ridge. In Building, the line of the summit of a pitched roof, at which the rafters join. In Mediæval Architecture, it was often emphasized and decorated with a cresting of metal, wood, or baked clay; in the last case called ridge-tiles.

Ridge OF HIGH PRESSURE. Long, rather narrow region of the earth over which the barometric pressure is higher than on either side. See BELT OF HIGH PRESSURE.

Ridgway, ROBERT, b. 1850. Curator U. S. Nat. Museum 1879. Joint author with S. F. Baird and T. M. Brewer of *North American Birds*, 3 vols., 1874, and *Water Birds of N. A.*, 2 vols., 1884. American ornithologist.

Ridinger, JOHANN ELIAS, 1695–1767. German animal painter and engraver. His works as a painter are few and

The Stag, by Ridinger.

little known, but in his etchings he displays uncommon ability. He had been brought up a huntsman, and applied himself to the illustration of animal life and of the modes of the chase.

Ridings. Three divisions of the county of York. The original word was thridings, meaning thirds.

Ridley, NICHOLAS, D.D., ab.1500–1555. English martyr; chaplain to Cranmer 1537 and to Henry VIII. 1540; Bp. of Rochester 1547, and of London 1550; active as a reformer. He defended Jane Gray's title, was imprisoned 1553 on Mary's accession, and burned with Latimer at Oxford.

Ridolfo, ZENO. Name given to SCHADOW, RUDOLPH (q.v.).

Ridpath, JOHN CLARK, LL.D., b. 1840. American writer, chiefly on history and biography.

Riedesel, FRIEDRICH ADOLPH, BARON VON, 1738–1800. Hessian general, in America 1776. He fought at Ticonderoga, Stillwater, and Saratoga, surrendered with Burgoyne Oct. 17, 1777, returned to Germany 1783, and commanded the Brunswick soldiers in Holland 1787–94. His *Letters and Journals*, with those of his wife, were tr. 1867–68.

Riehl, ALOIS, b. 1844. Austrian writer on philosophy; prof. at Gratz 1873 and Freiburg 1883.

Riehl, WILHELM HEINRICH, b. 1823. Prof. Munich; novelist and historical writer.

Riehm, EDUARD KARL AUGUST, D.D., 1830–1888. Prof. Halle 1862. *Messianic Prophecies*, 1875, tr. 1890; *Introduction to O. T.*, 1888–90.

Riel's Rebellion. When the Red River settlement came under the control of Canada 1869, the Bois-Brulés, headed by Louis Riel (1844–1885), revolted and proclaimed an independent republic, but were put down by Col. Wolseley with a force of 1,400 men in Aug. 1870. In 1885 Riel led another insurrection of half-breeds in the same territory, and was executed for treason.

Riemann, GEORGE FRIEDRICH BERNHARD, 1826–1866. German mathematician. *Fundamental Hypotheses of Geometry*, 1854; *Multiple Periodic Functions*, 1857. *Works*, 1892.

Rienzi, COLA DI, 1313–1354. Political reformer; proclaimed as tribune of the Roman Republic May 19, 1347. He restored order in the city and reigned seven months, when he was driven from Rome, the populace being offended by the taxes levied, and the nobles by his arrogance. A second attempt, in Aug. 1354, was a failure, and he was slain by a mob on the steps of the Capitol.

Ries, FERDINAND, 1784–1838. German musician. *Biographischen Notizen über L. van Beethoven*, 1838. He composed three operas, two oratorios, six symphonies and many smaller pieces.

Riese, ADAM, 1489–1559. German mathematician, author of an algebraic arithmetic, 1536.

Riesengebirge. Range between Silesia and Bohemia. Length ab. 60 m., greatest ht. 5,260 ft.

Rietz, JULIUS. 1812–1877. German musician, Mendelssohn's successor 1848 as director of the Gewandhaus concerts in Leipzig, and teacher of composition at the Conservatory. He wrote four symphonies and many other works.

Riffle. In placer mining or gold washings, device whereby the current of water in a sluice-box or a tunnel is checked, so as to facilitate the collection of the gold or the amalgam; usually a strip of wood. Also called Riffle Bar.

Rifle, INFANTRY. Small arm whose bore is cut into spiral grooves separated by lands, so as to impart a rotary motion to the bullet. Rifling with straight grooves was used as early as 1498 in Germany, but the advantage of spiral grooves in imparting a rotary motion to the bullet, steadying its flight, and increasing the range, was an accidental discovery, probably ab.1520 or later. The rifle with spherical bullets began to be used as a military weapon ab.1600, but elongated bullets were not used until 1729. Rifles were in common use by the American soldiers during the Revolutionary War. As early as 1814 military rifles, caliber 0.53 in., were made at the Harper's Ferry arsenal, but the smooth bore continued to be the main infantry arm till 1855. In 1818, however, ten thousand breech-loading flint-lock rifle muskets, caliber 0.512 in. (Hall's pattern), were issued to the U. S. troops. The great objection, at first, to the use of the rifle as a military weapon was the difficulty experienced in loading it. The bullet had either to be driven in by a mallet or when home to be rammed so as to interlock in the grooves. This difficulty led to the introduction of the carabine-à-tige 1821, in which there was a short cylinder or steel pin at the bottom of the bore, upon which the bullet rested and which acted as an anvil when the bullet was rammed. Repeated experiments finally led to the adoption of the elongated bullet having an open conical base, which the expansion of the powder forced to take the grooves, and Captain Minie, an instructor of the school at Vincennes, in 1847 further improved this, by introducing a wrought iron cup in the base of the bullet. The Minie rifle now became the favorite infantry arm, and though never generally issued to the English army was used by them in the Caffre war of 1851 and in the Crimea in the battles of the Alma and Inkerman. This was followed by the Enfield rifle, introduced in 1855, which resulted from the improvements and alterations suggested by many experiments at Enfield, and it held its place until the adoption of the breech-loading rifle in 1867. The Prussians were the first to foresee the great advantage of the breech-loader and adopted the needle-gun in 1848, which they used with effect in the Danish war of 1864, the Austrian in 1866, and the French in 1870. The French followed with the Chassepot in 1866, an improved needle-gun, with a simpler action and smaller bore than the Prussian arm. The Germans adopted the Mauser in 1871 and the French superseded the Chassepot by the Gras, a modification of the latter, in 1874. A scientific investigation of the proper relation between the charge, the caliber and the bullet, based on the result of Prof. Bashford's experiments (begun in 1865), soon led to a marked advance in the rifle. The Martini-Henry rifle (1869) was issued to the English troops in 1871 and held for a long time the first place among military small arms. This gun was made up of a combination of the Henry barrel with the Martini breech action, and this latter was, in principle, a complete copy of the Peabody breech mechanism invented in the U. S. The development of small arms has been most rapid in recent years, owing to the introduction of metallic cartridges, and has been along the lines of smaller bore and the use of smokeless powder. The Krug-Jörgensen magazine rifle, used by the Danish troops, has been improved in many particulars and adopted as the infantry arm in the U. S. army. It is a magazine breech-loader, caliber 0.30 in. It has a magazine cut-off so that the five shots in the magazine can be held in reserve, for an emergency, and be used ordinarily as a single loader. The magazine is of the fixed type, lying horizontally under and to the left of the receiver. The bullet is of lead with nickel-steel jacket, 220 grains' weight, and is given a velocity of nearly 2,000 f.s. with a charge of 42 grains of American smokeless powder. See CHASSEPOT, ENFIELD RIFLE, MAGAZINE GUN, MINIE BALL, NEEDLE GUN, and REMINGTON RIFLE.

Rifled Guns. Modern firearms are breech-loading rifles in which the surface of the bore is cut into spiral grooves and bands, so that a rotary motion may be given to the projectile. The number of these is six times the caliber of the gun in inches; thus giving 48 for the 8 in., 60 for the 10 in., etc. To impart the angular motion gradually and to bring a minimum strain upon the gun, the twist is an increasing one, commencing with one turn in 50 calibers at the chamber and increasing to one turn in 25 calibers until a point two calibers from the muzzle is reached, and from this point to the muzzle the twist is uniform. The curve of the twist when developed upon a plane is a cubic parabola whose equation is $y^{\frac{3}{2}} = 2px$. In small arms the grooves are made as shallow as possible to facilitate cleaning of the bore.

Rifled Projectiles. The most recent device to give rifled projectiles of heavy guns the rotating motion consists of a rotating band of copper fitted into an undercut groove near the base of the projectile, having a steeper slope than that of the part of the chamber upon which it rests, so that when pushed home it is centered for firing. To facilitate its readily taking the rifling a number of grooves or cannelures are cut on the copper band. The systems of rifled projectiles for the now obsolete muzzle-loading rifles comprised the studded or flanged, and the expanding classes, and are known by the names of their inventors, as Hotchkiss, Parrott, Palliser, Butler, etc.

Riga. City and seaport of Russia, at n. end of Gulf of R.; capital of Livonia; founded ab.1200; taken by Swedes 1621, by

Riga.

Russia 1710. It has a large commerce, ranking in this respect second only to St. Petersburg. Pop., 1890, 180,278.

Riga, GULF OF. Arm of the Baltic, extending into Russia. Dimensions 105 m. by 60.

Rigaud, HYACINTHE. 1659–1743. French portrait painter of marked talent.—His brother, GASPARD, was also a fine portrait painter.

Rigdon, SIDNEY. 1793–1876. Copyist and editor of the *Book of Mormon;* associate of Joseph Smith in founding the sect, and elder in it; rival of Brigham Young; excommunicated 1844.

Rigg, JAMES HARRISON, D.D., b. 1821. English Wesleyan, pres. of Conference 1878–79 and 1892–93; ed. *Quarterly Review*, 1885. *Modern Anglican Theology*, 1857–79; *Wesley*, 1875–91.

Rigging. Combination of numerous ropes, chains, etc., which are employed to support and work all masts, yards,

Rigging.

Spars, etc.—A, Mast: B, Topmast: C, Topgallantmast: D, Royal-mast: E, Yard: F, Topsailyard: G, Topgallantsail-yard: H, Royal-yard: K, Truck: L, Bowsprit: M, Jib-boom: N, Flying Jib-boom: O, Martingale: P, Chains: Q, Top: R, Cap: S, Crosstrees: T, Topmast Cap: U, Gaff: V, Boom, or Spanker-Boom.
Sails.—*a*, Mainsail: *b*, Topsail: *c*, Topgallantsail: *d*, Royal: *e*, Spanker.
Standing Rigging.—I. Shrouds: II. Topmast Shrouds, crossed by Ratlings: III. Topgallant Shrouds: IV. Stays: V. Topmast Stay: VI. Topgallantmast Stay: VII. Royal Stay: VIII. Topmast Backstay: IX. Topgallantmast Backstay: X. Royal Backstay: XI. Flying Jib-boom Martingale Stays: XII. Jib-boom Martingale Stays: XIII. Martingale Backstays: XIV. Bobstays.
Running Rigging.—1, Lifts: 2, Topsail Lifts: 3, Topgallantsail Lifts: 4, Royal Lifts: 5, Braces: 6, Topsail Braces: 7, Topgallant Braces: 8, Royal Braces: 9, Signal Halyards: 10, Jib-stay: 11, Flying Jib-stay: 12, Sheet: 13, Peak Halyards: 14, Vangs: 15, Topping Lifts: 16, Spanker Sheet.

sails, etc., in a ship. Standing rigging is that which is set up permanently, as shrouds and stays. Running rigging com-

prises all the ropes hauled upon to brace yards, make and take in sail, etc., such as buntlines and halyards.

Riggs, ELIAS, D.D., LL.D., b. 1810. American missionary in Greece 1832, at Smyrna 1838, and at Constantinople since 1853; tr. Bible; author of Armenian, Bulgarian, and Turkish grammars, 1847–56.

Riggs, STEPHEN RETURN, D.D., LL.D., 1812–1883. Missionary to and writer on the Dakotas.

Right. 1. That quality of conduct which gives it moral merit and makes it obligatory. 2. Claim to liberty of action, in which either alternative open to the will may be chosen with impunity. In right as morality this impunity does not exist.

Right. In some European legislative assemblies, the conservative members, supporters of the government, have seats on the right of the presiding officer, the opposition on his left.

Right Angle. When two straight lines so intersect that the adjacent angles are equal, each is a right angle.

Right Ascension OF A STAR. Arc of the celestial equator included between the vernal equinox and the great circle drawn through the star perpendicular to the equator.

Right Conduct. That which conforms to certain precepts of duty recognized to be unconditionally binding.

Righteousness, IMPUTED. Doctrine, long prominent in Protestant theology, that Christ's merits are credited to the believer. The modern view is that they are meant to be stimulants to and producers of Christian character, not substitutes for it.

Right Figure. One in which the elements are at right angles, as in a right prism. Here the lateral edges are perpendicular to the base. In a right cone, the axis is perpendicular to the base.

Right-Handedness. This is due to lack of symmetry in the human body, the right side weighing ab. 15 ounces more than the left side.

Right Line. Straight line; opposed to curved.

Right of Way. Right enjoyed by a person or corporation of passing over land the fee of which is vested in another party. Rights may be limited both as to intervals at which they may be exercised and as to the extent authorized.

Right Reverend. Title of a bishop, of a mitered abbot, and of some other dignitaries.

Rights. Abstract possessions vested in individuals by moral rules; such as rights to liberty, to personal safety, and to property.

Rights, DECLARATION OF. Adopted in Parliament Feb. 1689, condemning the conduct of James II., and announcing his abdication. The BILL OF RIGHTS (q.v.), Oct. 1689, was of similar tenor and more voluminous.

Rights of Government. Rights possessed by the State, or by persons representing the community, to enforce the rules of human action necessary for the preservation and well-being of society.

Rights of Man, DECLARATION OF. Adopted by French Assembly Aug. 1789.

Right Sphere. Celestial sphere as seen from a point on the earth's equator. All the celestial bodies appear to describe circles perpendicular to the horizon.

Right to Employment. Claim conceded by some governments, that it is the duty of the state to provide employment for those unable to find work and wages otherwise.

Right Whale. See BALEEN WHALE.

Rigi, or RIGHI. Mountain near Lake Lucerne; in Canton

The Rigi, from Lucerne.

Schwyz; noted for its fine views; ascended by two railroads, and frequented by many tourists. From the highest point, the Kulm, is seen a magnificent panorama, also the curious mirage phenomenon, "The Specter of the Rigi." Altitude 5,906 ft.

Rigidity. That of any body is determined by the force which must be applied to produce a change of shape. Fluids have none. That of a solid may be defined as the ratio of the force applied per unit area, to the shear which is produced by it. In no actual case is the rigidity perfect, and the ratio of stress to strain is sometimes called the coefficient of rigidity. The torsional rigidity of a rod or prism is the ratio of the twist per unit of length to the moment of the couple producing it. One end is supposed fixed; to the other the couple is applied perpendicular to the length of the rod. If a body be subjected to stress, producing uniform distortion, the ratio of the normal traction or pressure per unit area to twice the elongation or contraction in the direction of the stress is called the modulus of rigidity.

Rigveda. First of the four VEDAS (q.v.).

Rigor Mortis. Stiffening of a body after death, due to chemical changes in the muscles. In cases of sudden death from violence, it is not uncommon for rigor mortis to fix the body at the moment of death; this accounts for posture of many bodies on the battle field or after a railway accident: this is known as instantaneous rigor mortis. Usually, while the time of its appearance and disappearance varies greatly, it comes on from 7 to 18 hours after death and lasts for from 24 to 36 hours.

Riley, CHARLES VALENTINE, 1843–1895. Entomologist of Mo. 1868, of U. S. 1878; author of many reports and papers. *Potato Pests*, 1876; *Locust Plague*, 1877.

Riley, HENRY HIRAM, 1813–1888. Lawyer and judge in Michigan. *Puddleford Papers*, 1857.

Riley, JAMES, 1777–1840. American seaman, slave in Africa 1815–16. His *Narrative* circulated widely.

Riley, JAMES WHITCOMB, b. 1853. American dialect poet. *The Old Swimmin' Hole*, 1883; *The Boss Girl*, 1886; *Afterwhiles*, 1887; *Pipes o' Pan*, 1888; *Rhymes of Childhood*, 1890; *Neighborly Poems*, 1891; *Armazindy*, 1895.

Rime-Frost. Formation of frostwork from the air by secretion of minute globules of mist. The vapor is deposited as water and frozen after or at the moment of deposition: it is always added to the windward side of the receiving surface, and on the summits of mountains the growth is often of enormous size, owing to the strong winds. It is opaque and snowy, as contrasted with hail.

Rimini. Ancient Umbrian and Etruscan city, on the Adriatic, 69 m. s.e. of Bologna; held by Rome from 286 B.C., by the Malatestas 1237–1503, and by the popes 1528–1860. It has a fine cathedral and some remains of antiquity. The story of Francesca has been celebrated by many poets. Pop., with suburbs, ab.20,000.

Rimmer, WILLIAM, 1816–1879. American sculptor, painter, and art teacher. *Elements of Design*, 1872–79; *Art Anatomy*, 1877.

Rimose. In Botany, structures with numerous cracks or chinks.

Rim-Rock. Borders or edges of the old channels or basins in Cal., in which the large quantities of gold-bearing gravels have collected.

Rimsky-Korsakow, NICHOLAS ANDREJEWITSCH, b. 1844. Russian composer; since 1871 Prof. of Composition at the Conservatory in St. Petersburg; musical inspector of the navy; an uncompromising champion of the young Russian school. See RUSSIAN MUSIC.

Rinderpest. See CATTLE PLAGUE.

Rindfleisch, GEORG EDUARD, b. 1836. Prof. Zurich, Bonn, and Würzburg; writer on pathology.

Rinehart, WILLIAM HENRY, 1825–1874. American sculptor, noted for many bronze busts and statues.

Ring, BERNARD JAQUES JOSEPH MAXIMILIAN, 1799–1875. Alsatian antiquarian, who wrote in French on old German buildings, establishments, and usages.

Ringbone. Exostosis on the coronet of the horse. It often occurs in newly dropped foals, but is most commonly due to overwork and strains. It stiffens a horse and is practically incurable.

Ring-Canal. Encircling canal in the outer edge of the umbrella of Jelly fish, and uniting with the radiating canals from the central stomach.

Ringent. Irregular, wide-mouthed corolla of certain plants of the gamopetalous families, especially *Scrophulariaceæ* and *Labiatæ*.

Ringgold, SAMUEL, 1770–1829. M.C. from Md. 1811–15.—Of his sons, SAMUEL, U.S.A., 1800–1846, inventor of the McClelland

saddle, was killed at Palo Alto; CADWALADER, U.S.N., 1802–1867, became Rear-admiral 1866.

Ring Money. Used in ancient Egypt, and later in Europe, before the introduction of coinage, as still in parts of Africa.

Ring Puzzle. Ingenious toy, consisting of a series of rings attached to a rod from which they may be removed and replaced. Tradition ascribes its invention to the hero Hung Ming (181–234), who gave it to his wife when he went to the war, that she might forget her sorrow for his absence. In Corea this puzzle is popular under the name of Delay Guest Instrument.

Rings, SYMBOLISM OF. From earliest historic times, finger-rings are found employed as personal emblems and badges of rank. Marked with a distinguishing sign upon the bezel or enlarged part, they were used as a seal to give authenticity to writings, and delivered, as by a royal personage, as a means of delegating authority to a subordinate. In China, the jade rings, formerly used in drawing the bow, survive as insignia of military rank. A ring is given to a bishop, with his crozier, upon his consecration, as a mark of ecclesiastical rank; a bishop's ring is an amethyst; a cardinal's, a sapphire. The custom of exchanging rings as a pledge of fidelity or friendship is widespread, the wedding ring being a conspicuous survival.

Jewish Marriage-Ring.

Ring Toss. Indoor and outdoor sport. A post set firmly upon a circular wooden base is the target: at this rings of varying size are tossed, the object being to land them upon the post. The smaller rings count the most.

Ringwaldt, BARTHOLOMAUS, 1532–ab.1599. German hymnist.

Ring Worm. Name given to several diseases of the skin whose eruption is usually circular in form. When it spreads and the part first attacked heals, the resemblance to a ring is quite marked. They are communicable, are caused by the presence of one of several vegetable parasites, and frequently attack the scalp or the beard. Dermatologists are not agreed in their limitations of the use of this word. It is an object of many popular superstitions.

Rink, HEINRICH JOHANN, 1819–1894. Danish geographer and official. *Greenland*, 1877; *Eskimo Tribes*, 1887.

Rinkart, MARTIN, 1586–1649. German hymnist.

Rink-Ball. Game belonging to the roller skating rink; similar to Rink-Polo, except that no sticks are used, the ball being large and driven with the foot, so that the play amounts to a species of Association football on roller skates.

Rink-Polo. Variety of Hockey, but played on a smooth made surface within doors, the players wearing roller skates. The rules are similar to those of Hockey or Shinney as played upon ice.

Rinmann's Green. $ZnCoO_2$. Green mass, made by heating a zinc salt moistened with cobalt nitrate on charcoal.

Rio, ANDRES MANUEL DEL, b. ab.1769. Mexican mineralogist. His principal works were pub. 1790–1830.

Rio, ANTONIO DEL, 1745–ab.1789. Spanish discoverer of the ruins near Palenque, s. Mexico. His *Description* of them was pub. 1794.

Rio de Janeiro. Metropolis and capital of Brazil, a seaport on the Atlantic, with a fine harbor; founded 1566; capital of the viceroy 1763, and of the empire 1822. It has a large export trade, mainly of sugar, cotton, coffee, and hides. Pop., 1890, ab. 380,000.

Rio de Janeiro.

Rio de la Plata. River of S. America, with its branches the largest next to the Amazon. They drain nearly the entire breadth of the continent from lat. 15° S. to 35° S., an area of more than a million sq. m. It is formed by the junction of the Parana and the Uruguay, the name being applied only to the estuary below their junction.

Rio Grande. One of the large rivers of the U. S. It heads in the San Juan Mts., in Colorado, where it collects most of its waters, flows s. across New Mexico, then s.e. to the Gulf of Mexico, forming the boundary between Texas and Mexico. Its entire course is through an arid region, and though 1,800 m. long, it carries comparatively little water. Drainage area 128,792 sq. m.

Rioja, FRANCISCO DE, ab.1585–1659. Spanish poet.

Rio Negro. 1. Left hand branch of the Amazon, rising in s. Colombia; navigable for 600 of its 1,350 m. 2. River of Argentina, formerly Patagonia; rising in the Andes and flowing e. to the Atlantic. Length ab. 600 m.

Rio Pilcomayo. See PILCOMAYO.

Rio Salado. Tributary of the Parana, rising in the Andes and flowing e. and s.e. across Argentina.

Riot. At Common Law, unlawful act of violence by three or more. It is defined, and the punishment prescribed, by modern statutes.

Rio Tinto. River in Spain uniting with the Odiel a little above its mouth in the Gulf of Cadiz. Columbus set sail from the port, formed by the combined estuary, for the discovery of America. Length 70 m.

Riouw Lingga. Archipelago, at s. end of the Malay Peninsula, composed of two groups of islands, Riouw to the n. and Lingga to the s. Most of the islands are covered with thick forest and some have deposits of tin, now almost exhausted. Pop., mixed races, ab.100,000.

Riparian. Plants or animals occurring naturally along streams.

Riparian Rights. Those attending the ownership of real property bounded by natural water courses.

Ripidolite. Some of the varieties of the mineral chlorite; so called in allusion to their fan-like shapes.

Ripley, ELEAZAR WHEELOCK, 1782–1839. Brig.-gen. U.S.A. 1814; distinguished on the Canada border, especially at Fort Erie; M.C. from La. from 1835.

Ripley, GEORGE, LL.D., 1802–1880. Founder of BROOK FARM (q.v.), Mass., 1841; critic of N. Y. *Tribune* from 1849; ed. *American Cyclopædia*, 1858–63 and 1873–76.

Ripley, HENRY JONES, D.D., 1798–1875. Prof. Newton Theol. Inst., Mass., from 1826; N. T. commentator.

Ripon, FREDERICK JOHN ROBINSON, EARL OF, 1782–1859. M.P. 1806; member of several cabinets; Viscount Goderich and Premier 1827; Earl 1833.—His son, GEORGE FREDERICK SAMUEL, b. 1827, became M.P. 1852, Earl 1859, Sec. for War 1863, for India 1866, and Marquis 1871; Viceroy of India 1880–84.

Ripon College. Founded 1854 at Ripon, Wis. It has preparatory, collegiate, musical, and art departments, the second including classical, scientific, and literary courses, with 16 teachers and ab. 240 students.

Ripple Marks. Ridges like miniature waves on the surface of a stratum, produced by the oscillation of shallow water.

Rippon, JOHN, D.D., 1751–1836. Baptist pastor in London from 1773. His *Selection of Hymns*, 1787, was the most important of many supplements to Dr. Watts', and contained numerous originals by various writers: it went through many editions, and exerted wide influence.

Riprap. Loose stones used to form an embankment or jetty, or for protection of a pier.

Rip Van Winkle. Hero of a famous story by W. Irving, 1820, and of a play by Boucicault, 1865, in which Joseph Jefferson gained his chief fame.

Rishanger, WILLIAM, b. 1250. English monk of St. Alban's Abbey, author in 1312 of a chronicle extending 1259–1307.

Rishi. Poets of the Vedas.

Risley, JOHN EWING, b. 1843. U. S. Minister to Denmark 1893.

Risotto. Italian preparation of rice, onions, and butter.

Rist, JOHANN, 1607–1667. Author of ab. 680 German hymns, many of them long popular, and some known in English versions.

Ristic, JOHN, b. 1831. Servian author and state official; head of the regency 1889–93.

Ristori, ADELAIDE, b. 1821. Marchioness del Grillo 1847. Italian actress, admired in Paris 1855, and in the U. S. 1866 and 1875. Her chief parts were Mary Stuart, Queen Elizabeth, Medea, Marie Antoinette, Lady Macbeth, and Judith.

Ritchie, MRS. ANNE ISABELLA, b. 1838, m. 1877. Daughter of W. M. Thackeray; author of *Old Kensington*, 1873, *Miss Angel*, 1875, and several vols. of reminiscences.

Ritchie, THOMAS, 1778–1854. Ed. Richmond *Enquirer*, 1804–45.

Ritchie, SIR WILLIAM JOHNSTON, 1813–1892. Chief-justice of New Brunswick Supreme Court 1855, and of Canada 1879; knighted 1881.

Rite. 1. Ceremony. 2. Body of ritual, differing in different churches or countries.

Rites, CONGREGATION OF. Created by Pope Sixtus V., 1585–90.

Ritschl, ALBRECHT, D.D., Ph.D., 1822–1889. Prof. Bonn 1853, Göttingen 1864; founder of an important school independent alike of the traditional orthodoxy and of Tübingen rationalism: it denies much, but affirms God, Christ, and redemption. His chief work is *Justification and Reconciliation*, 1870–74.

Ritschl, FRIEDRICH WILHELM, 1806–1876. Prof. at Halle 1832, Breslau 1833, Bonn 1839, and Leipzig 1865. His most celebrated work was upon Plautus, which his pupils have continued and completed. He combined precision and rare critical insight.

Ritson, JOSEPH, 1752–1803. English antiquarian, editor of old songs and poems. *Robin Hood*, 1795; *Metrical Romances*, 1802.

Rittenhouse, DAVID, LL.D., F.R.S., 1732–1796. Maker of clocks and mathematical instruments at Phila.; eminent for

David Rittenhouse.

many services to astronomy and to the State, in some of which his brother, BENJAMIN, 1740–1789, was associated.

Ritter, FREDERIC LOUIS, b. 1834 at Strassburg. Composer, conductor, and writer on the history of music.

Ritter, HEINRICH, 1791–1869. Prof. Berlin 1824, Kiel 1833, and Göttingen from 1837. *Hist. Philosophy*, 12 vols., 1829–55; *Christian Philosophy*, 1858–59.

Ritter, KARL, 1779–1859. Prof. Berlin 1820; author of *Geography, Nature, and Man*, 19 vols., 1817–59, and other valuable geographical works. *Palestine*, 4 vols., tr. 1866.

Ritteric Rays. Ultra-red parts of the solar spectrum.

Ritter's Pile. Constructed 1803; differing from the pile of Volta only in the fact that all the plates were of copper, alternating with disks of moistened cardboard. On connecting this with the Volta pile, Ritter found that it became charged and was capable of producing an inverse current. Volta (1805) explained correctly the result as depending upon the decomposition of the electrolyte between the plates, as due in fact to the polarization of the electrodes.

Rittinger, PETER, RITTER VON, 1811–1872. Austrian mining engineer, inventor, and author of many papers on mining and ore-dressing machinery. His *Lehrbuch der Aufbereitungskunde*, 1867, was a standard authority.

Rittingerite. Rare mineral, found in Bohemia and Hungary, containing silver, arsenic, and selenium.

Ritual OF THE DEAD. See BOOK OF THE DEAD.

Ritual, ROMAN. Set forth by Paul V. 1614, to enforce uniformity of usages in R. C. service. Many different forms had previously been in use.

Ritualism. Effect of the Anglo-Catholic, Puseyite, or Tractarian movement in the English and P. E. Churches, in emphasizing fullness and propriety of rite. Services in general are more carefully planned and conducted, and more largely musical, than before 1850; but the motives for this are often æsthetic or utilitarian, and have little to do with Tractarian or Catholic doctrine.

Riva. Winter resort in the Tyrol at the n. extremity of Lago di Garda. It has a castle, and some monasteries. Its

Riva.

port is the largest on the lake and its vicinity furnishes tropical fruits in abundance. Pop. ab.6,000.

Rivadavia, BERNARDINO, 1780–1845. Pres. of Argentina 1826–27; exiled 1834.

Rival Commodities. Commodities capable of fulfilling the same function, one or another of which will be used according as it can be provided most cheaply.

Riva Palacio, MARIANO, 1803–1880. Premier of Mexico 1851; defender of Maximilian 1867; one of the first and purest of Mexican statesmen.

Rivarol, ANTOINE, 1753–1801. French satirist and royalist pamphleteer, in exile from 1792. *Langue Française*, 1784; *Petit Almanach*, 1788.

River. Agency by which the surplus rainfall is collected and carried back to the sea. Its source of supply is rain and melted snow, either directly or by means of springs. Its volume depends upon its drainage area, the rainfall, and the proportion of the latter which reaches the stream. The last factor varies with the slope of the ground, the character of the soil and vegetation, and the aridity of the atmosphere, ranging from 10 to 65 per cent of the rainfall. The variability of flow of the stream depends on the character and distribution of the rainfall and the surface and vegetation of the drainage basin. The maximum flow is often in cases of small rivers 10 to 20 times the ordinary flow. The velocity of current depends upon the slope of the bed and the volume. It is greatest in midstream, and least near the banks and bottom. The slope of the river's bed is normally greatest near its head and diminishes toward its mouth, and every river tends to establish this profile. Lakes and waterfalls upon its course are ephemeral features. Rivers are the most efficient of the agents of erosion, transportation and deposition of detritus. The greater the velocity, the greater its erosive and transporting power. Erosion is most extensive on the upper waters of the stream, where the slope is greatest and deposition takes place mainly in its lower course and at its mouth. A delta is a deposit of detritus near its mouth, through which by several channels the river finds its way to the sea. A bar is a deposit across the mouth, where the river's velocity is suddenly checked on entering the sea. A small stream is known variously as creek, brook, branch, fork, prong, etc.

Rivera, JOSÉ FRUCTUOSO, 1790–1854. Pres. of Uruguay 1830–35 and 1838–42.

River and Harbor Improvements. In U. S. this work is in charge of the Corps of Engineers of the army. The country is divided into five sections, the Northwest, Southwest, Northeast, Southeast, and Pacific, each in charge of a Colonel or senior officer. These sections are subdivided into ab. 50 districts, each in charge of an officer who is assisted by other

officers and by civilians. The first appropriation by Congress for this work was $9,500 in 1820. The total amount expended 1820–94 was $262,845,900. The largest annual appropriation was $25,136,300 in 1890 for 436 separate rivers and harbors.

River Engineering. Improvement of navigable streams by dredging, dams, and locks. In U. S. this work is in charge of the Corps of Engineers, U. S. Army.

River Hydraulics. Flow of water in rivers, determined by actual gauging or by computations. Only the simplest case of uniform permanent flow is well understood. If a be the area of cross-section, r the hydraulic radius, s the slope, and q the discharge, then $q = ca\sqrt{rs}$, where c is a number depending largely upon the roughness of surface. For a small rise of one per cent of the total depth the velocity increases 0.5 per cent and the discharge increases 1.5 per cent.

River Pollution. Rivers whose water has been polluted tend to purify themselves by deposition and aeration, but this should not be relied upon as effective. Polluted streams whose water is used for the supply of cities and towns are always suspicious, if not dangerous. Pollution can be prevented only by legal enactments; in Europe these are often very stringent. In U. S. many States have such laws but their enforcement is difficult.

Rivers, RICHARD HENDERSON, D.D., 1814–1894. Educator in M. E. Ch. South. *Mental Philosophy*, 1860.

Rivers, RICHARD WOODVILLE, EARL, d. 1469. Father-in-law of Edward IV.; knighted 1425; Baron 1448, Earl 1466; executed, as was his son ANTHONY in 1483.

River-Weed. Insignificant aquatic herbs of the genus *Podostemon*, natural family *Podostemaceæ*, of wide geographical distribution.

Rives, AMÉLIE. See CHANLER, MRS. She became Princess Troubetzkoy 1896.—Her grandfather, WILLIAM CABELL, 1793–1868, was M.C. from Va. 1823–27, U. S. Senator 1833–34 and 1835–45, and Minister to France 1829–32 and 1849–53.

Riveters. Machines for riveting by power instead of by hand (see RIVETING). There are four types: lever, steam, hydraulic, and air machines. All have an abutment or stake which holds a cup or swage to resist the pressure brought by a moving die or ram against the red-hot rivet in place in the seam. The stake is inside the cylinder or other work being operated on, the pressure coming on the outside. The differences are in the way in which power is applied to the moving ram. The lever machines force the ram forward by an elbow-joint combination of links, whose stationary point is the back of the machine, and the links are straightened out by a ram revolving under the joint of the links which hang down when the ram is back. The objection to this type of machine is the constant travel of the ram, so that varying thickness of work can be handled only by changing the dies or swages. This has been remedied by putting the abutment joint of the links on a hydraulic plunger connected with an ACCUMULATOR (q.v.), so the heading pressure cannot exceed the accumulator load, and pins between the plates are avoided. In steam riveters the ram is moved forward by a steam piston of large area, operated by steam of ordinary pressure; in hydraulic riveters a small plunger is protruded by high pressure of water from an accumulator directly, or in portable machines, to increase lightness, the hydraulic piston works a toggle-joint. The steam riveters act with a rapid impact followed by pressure; in hydraulic riveters there is no impact, but pressure only. In many of the best ones, the plate is pressed and held together by an annular die before the heading is done by a second inner die, so that no pin may be forced between the sheets. The air riveters act either by air pressure on a cylinder operating a toggle-joint, or else by a rapid series of blows from a small cylinder operated like a rock-drill. Air riveters are adapted for work in winter in open bridge sheds, where condensation or freezing would be against the other types.

Steam Riveter.

Riveting. Operation of uniting plates of metal by lapping one part over another, and inserting, through holes which match as the parts are superposed, what are known as rivets. These are short cylinders of the same metal as the plates, with a head on one end, which are passed red-hot through the holes, and are then headed over, either by hand or by machine (see RIVETER). In hand riveting, a heavy sledge is held against the formed head, and two men with alternating blows of their hammers upon the protruding shank upset it and form an overlapping cone, which is the other head of the rivet. The contraction of the rivet as it cools, moreover, makes a stronger and tighter joint than any other, at less cost and with better resistance to fire and to corrosion. Riveted seams are single-riveted or double-riveted, according as one or two rows of rivets are used parallel to the joint. In chain riveting the holes are staggered, and not one behind the other. The aim is to get the shearing strength of the aggregate rivet area of the joint equal to the tensile strength of the plate when diminished by the holes, but in boilers and tanks usually the rivet area is in excess, to make the joint water- or steam-tight. Riveted joints are lap or butt. In the latter, the plates butt, and a welt or cover-piece is riveted to both. Where two cover-strips are used, the strain passes through the axis of the sheets without a tendency to flex. The relative strengths are usually rated thus: Original plate, 100 per cent; double riveted butt, 76 to 80 per cent; double riveted lap, 70 to 75 per cent; single riveted lap, 56 to 62 per cent. The usual sizes are $\frac{3}{4}$, $\frac{7}{8}$, and 1 in. in diameter.

Riviera. Coast of Italy from Spezia w.; usually including also that of France to Nice; famous and highly popular as a winter resort. It is divided into the eastern and western section at Genoa. The western is the mildest, most frequented, and also has the most beautiful scenery.

Riviera on the Taggia.

Rivière, BRITON, b. 1840. English painter, chiefly of animals; R.A. 1881; widely known through engravings.

Rivington, JAMES, 1724–1802. Tory journalist in New York, prominent before and during the British occupation. Rivington's *N. Y. Gazetteer*, 1773, *Loyal Gazette*, 1777, *Gazette and Universal Advertiser*, 1783.

Rivoli. Village of n. Italy, 12 m. n.w. of Verona. Near it the Austrians defeated the French Nov. 17, 1796, and were defeated by Bonaparte Jan. 14–15, 1797.

Rivulariaceæ. Family of *Cyanophyceæ* or blue-green *Algæ*, comprising forms with filaments divided by transverse septæ, their two ends being quite different, one consisting of a globose cell, the other of a terminal hair.

Rix-Dollar. Former coin of Sweden and some other countries, varying in value from ab. 38 cents to $1.10.

Rizzio, or **Riccio,** DAVID, 1540–1566. Page, secretary, and favorite of Mary Stuart; hated by the Reformers, and by some regarded as her paramour; assassinated by a conspiracy of Scottish nobles.

Roach, JOHN, 1815–1887. Irish-American shipbuilder.

Road Law. Body of rules applicable to persons using a public highway either on land or sea.

Road Locomotives. For use on common roads; made in France by Cugnot 1770, in England by Murdock 1782, and in U. S. by Evans 1799. Numerous inventions in this direction have been patented, but none has proved financially successful.

A boiler supplies steam to one or two cylinders, and the shaft of such engine is connected by tooth or chain gearing to the driving wheels. These latter are fitted with a very broad tire, to distribute the weight and prevent rutting of soft earth, the tire having grooves to increase adhesion and to avoid difficulties from small inequalities of surface. The front end or truck is pivoted to serve as steering apparatus. There is usually a DIFFERENTIAL GEAR (q.v.) on the drivers to enable them to turn easily. Such machines have also been applied for heavy plowing, with a number of plows abreast or en echelon, on prairie or large colonial farming. See AGRICULTURE.

Road Roller. Heavy cylinder driven by steam power or drawn by horses for consolidating the surface of a road. The

Road Roller.

heaviest weigh from 15 to 20 tons and cost ab. $6,000. A macadam road should be rolled from 50 to 100 times during the process of construction, to form a first-class pavement.

Roads. A road should be so located that the distance may be short and the grade low, but grade is more important than distance. Old roads were usually too steep. Toll roads were introduced in England ab. 1400. Road improvement began in France ab. 1750; the labors of McAdam and Telford ab. 1800–1820 did much to influence road-construction in Great Britain. Since 1880 the movement for good roads in U. S. has produced much improvement through the introduction of better methods of administration. Road construction is the simplest problem in civil engineering, and the presence of poor roads is always an indication that no engineering talent is employed upon them. The common methods of repair by scraping the mud of the gutters upon the road surface is an extravagant waste of money; a good road can never be made by this process. Broken stone coverings, well rolled, constructed under the supervision of an engineer, form a far more durable and economical surface. In N. Y. during 1893 the repair of common roads cost $2,716,000, nearly all of which was practically wasted. The appointment of road commissioners in several States has proved most advantageous in improving the condition of the public highways. See MACADAM ROAD and PAVEMENTS.

Roanoke. City of R. co., Va., on the R.; chartered 1884. Its rapid recent growth is due chiefly to iron industries. Pop., 1890, 16,159.

Roanoke College. At Salem, Va.; founded 1853. It has ab. 175 students.

Roanoke Island. On N. C. coast; settled by Sir Walter Raleigh unsuccessfully 1585. Gen. Wise with three forts and 2,500 men surrendered here to Gen. Burnside Feb. 8, 1862.

Roanoke River. In Va. and N. C. It heads in the Blue Ridge, flows generally s.e. to the head of Albemarle Sound, and is navigable to Weldon, N. C. Drainage area 9,237 sq. m., length 250 m.

Roaring Forties. Region of the Southern Ocean lying s. of 40° S. lat., especially s. of 45°, where there are strong w.n.w. and n.w. winds. The term is used by sailors, and is also applied to the region in the N. Atlantic.

Roasting. Consists in exposing the material to be treated to a temperature above the average red heat with access of air. It is done to render the material more friable, as in ore which contains a quartz gangue, more permeable to gases, or to drive off volatile elements as water and sulphur. When limestone is heated it is called calcination.

Robbery. At Common Law, open and violent larceny from the person, a capital felony; but modern statutes must be consulted for its definition and punishment in each jurisdiction.

Robbing. In Coal Mining, process of working away, as far as possible without extreme danger, the pillars or other blocks of coal that had been left standing at an earlier stage of the operations to prevent a premature falling in of the overlying rock.

Robert II., 1316–1390. Grandson of Bruce; Regent of Scotland 1338–41; King 1371; founder of the Stuart dynasty.

Robert II

Scotland was invaded by the English 1384–85, and retaliated 1388.—His son, ROBERT III., ab. 1340–1406, succeeded 1390. His realm was invaded 1400, and his army overthrown at Homildon Hill 1402.

Robert II., OF NORMANDY, d. 1035. Duke 1028; capable and ruthless sovereign; father of William I. of England.

Robert, LOUIS LEOPOLD, 1794–1835. Swiss painter.

Robert College. Founded 1863 at Constantinople by Americans; named from its benefactor, C. R. Robert, 1802–1878. It has done much for Christian education in that region.

Robert-Fleury, JOSEPH NICOLAS, 1797–1890. French painter, as is his son TONY, b. 1838.

Robert le Diable. See DAMIENS.

Robert of Brunne. Translator of French poem, *Manuel des Pèchés*, 1303.

Robert of Gloucester. 13th century. Metrical chronicler of early British affairs. His work was pub. 1724.

Roberts, BENJAMIN STONE, U.S.A., 1811–1875. Brig.-gen. U. S. Vols. 1861–65; inventor of a breech-loading rifle.

Roberts, CHARLES GEORGE DOUGLAS, b. 1860. Canadian poet and novelist; prof. at Windsor, N. S., 1885–96. *In Divers Tones*, 1887; *Songs of the Common Day*, 1893; *Earth's Enigmas*, 1896; *Forge in the Forest*, 1897.

Roberts, DAVID, 1796–1864. Scottish painter, chiefly of buildings; R.A. 1841. *Spain*, 1837; *Holy Land*, 4 vols., 1842–49; *Italy*, 1859.

Roberts, EDMUND, 1784–1836. First U. S. diplomatic agent in Asia. *Embassy to Eastern Courts*, 1837.

Roberts, ELLIS HENRY, LL.D., b. 1827. M.C. from N. Y. 1871–75; Asst. U. S. Treas. at N. Y. 1889–93. *Revenue*, 1884; *Empire State*, 1887.

Roberts, ISAAC PHILLIPS, b. 1833. Prof. Iowa Agricultural Coll. and Cornell Univ.; director of Cornell Univ. Agricultural Experiment Station.

Roberts, JOSEPH JENKINS, 1809–1876. Pres. of Liberia 1849–53 and 1871–75.

Roberts, ROBERT RICHFORD, 1778–1843. M. E. bishop 1816; active in western missionary work.

Roberts, SOLOMON WHITE, 1811–1882. Civil engineer, active in constructing railways in Pa.

Roberts, SIR WILLIAM, F.R.S., b. 1830. English physician and medical writer.

Roberts, WILLIAM HENRY, D.D., LL.D., b. 1844. Prof. Lane Sem. 1886–93; clerk Presb. Gen. Assembly from 1884. *Hist. Presb. Ch. in U. S.*, 1888.

Roberts, WILLIAM MILNOR, 1810–1881. Chief engineer Northern Pacific Railway 1870; Pres. American Soc. of Civil Engineers 1879.

Roberts of Kandahar, FREDERICK SLEIGH ROBERTS,

LORD, b. 1832. Anglo-Indian general, made famous by brilliant campaigns in Afghanistan 1878–80, culminating in the relief of Kandahar; knighted 1879, Baronet 1881, Baron 1892; commander in India 1885–93, in Ireland 1895.

Robertson, FREDERICK WILLIAM, 1816–1853. Minister of Trinity Chapel, Brighton, Eng., from 1857; greatest preacher of his time. His fame was merely local during his life, but his *Sermons*, 5 vols., 1855–63, showed rare insight into spiritual truth, and his *Life and Letters*, 1865, revealed a character of singular manliness, purity, and beauty. These, with his *Lectures and Addresses*, 1858, were eagerly read, and exerted a wide and deep influence. He was a solitary figure, disdaining connection with any party: his views resembled those of F. D. Maurice, but his power was more immediately and generally felt in the English Ch., and far beyond, than that of any other leader of liberal thought. *Lectures on Corinthians*, 1859; *Notes on Genesis*, 1877.

Robertson, GEORGE CROOM, 1842–1892. Prof. Univ. Coll., London, from 1866; ed. *Mind*, 1876–91; *Hobbes*, 1886; *Philosophical Remains*, 1893.

Robertson, JAMES, ab.1710–1788. British general; Gov. of N. Y. 1780–83.

Robertson, JAMES, 1742–1814. Pioneer and Indian fighter, prominent with Sevier in the settlement of Tenn.; General U.S.A. 1790–96.

Robertson, JAMES, D.D., b. 1840. Missionary in Syria 1864–75; prof. Glasgow 1877. *Early Religion of Israel*, 1889; *The Psalms*, 1894.

Robertson, JAMES CRAIGIE, 1813–1882. Canon of Canterbury 1859; Prof. King's Coll., London, 1864–74. *Hist. Ch. to Reformation*, 8 vols., 1853–75.

Robertson, JOSEPH, LL.D., 1810–1866. Scottish antiquarian.

Robertson, THOMAS WILLIAM, 1829–1871. English playwright. *Garrick*, 1864; *Society, Ours, Caste, Play, School, Home, Dreams, M.P.*, 1865–70; *Works*, 1889.

Robertson, WILLIAM, D.D., 1721–1793. Scottish historian; pastor at Edinburgh from 1759, and principal Univ. Edinburgh 1762. His *Scotland*, 1758–59, and *Charles V.*, 1769, were long valued. *America*, 1777; *India*, 1791.

Robert the Bruce. See BRUCE, ROBERT.

Roberval, GILES PERSONNE DE, 1602–1675. French mathematician, who claimed to have preceded Cavalieri in inventing the method of Indivisibles; best known for his treatment of tangents.

Robeson, GEORGE MAXWELL, 1827–1897. Sec. U. S. Navy 1869–77; M.C. from N. J. 1879–83.

Robespierre, MAXIMILIEN MARIE ISIDORE, 1758–1794. Leader in the French Revolution, lawyer, enthusiast and theorizer; member of the Constitutional Assembly; head of the Jacobins; member of the National Convention for Paris 1792, leader of the Radicals or Mountain; as pres. of Committee of Public Safety, he inaugurated the Reign of Terror, destroyed the King, the Girondists, his own party opponents, and was virtual dictator till accused of tyranny, condemned unheard, and guillotined.

Maximilien Robespierre.

Robin, or RED-BREAST. 1. *Merula migratoria.* Well known American thrush, length 10 in. It appears in Feb. ab. lat. 40° N., and nests in May, two broods being raised. It feeds principally on earth worms, grasshoppers, and in Oct. on cedar berries. It goes s. in Nov. 2. *Erythacus rubicola*, English Robin, length 5½ inches, belonging to the Warbler family.

Robin, CHARLES PHILIPPE, 1821–1885. Prof. Paris from 1847; Senator 1875; ed. *Journal de l'anatomie et de la physiologie* 1864–85. *Traité du microscope*, 1871.

Robin, CLAUDE, b. ab.1750. French botanist. *Voyages dans La., Fla.*, etc., 1802–6.

Robin Goodfellow, or PUCK. Fairy of English legends, exploited in *Midsummer Night's Dream.* See PUCK.

Robin Hood. Legendary English outlaw, robbing the rich and helping the poor; hero of many ballads from ab. 1380.

Robins, BENJAMIN, 1707–1751. English engineer and physicist. His *Gunnery*, 1742, had great effect.

Robinson, CHARLES, 1818–1894. Gov. of Kansas 1856 and 1858–59.

Robinson, CHARLES SEYMOUR, D.D., LL.D., b. 1829. Presb. pastor in New York from 1870; compiler of several popular hymnals.

Robinson, CONWAY, 1805–1884. Va. jurist. *Principles and Practice*, 1855–75.

Robinson, EDWARD, D.D., LL.D., 1794–1863. Ed. *Biblical Repository*, 1831–35, and *Bibliotheca Sacra*, 1843; tr. Gesenius' *Hebrew Lexicon*, 1836; prof. Union Theol. Sem., N. Y., from 1837. *Lexicon N. T.*, 1836. His *Biblical Researches in Palestine*, 1841–56, is an important work.—His wife, THERESE ALBERTINE LUISE, 1797–1869, daughter of Prof. L. H. von Jacob of Halle, m. 1828, wrote several books in German and English.

Robinson, EZEKIEL GILMAN, D.D., LL.D., b. 1815. Prof. Rochester Theol. Sem. 1853, pres. 1860; pres. Brown Univ. 1872–90. *Yale Lectures*, 1883; *Morality*, 1888.

Robinson, GEORGE DEXTER, 1834–1896. M. C. 1877–83; Gov. of Mass. 1883–86.

Robinson, HENRY CRABB, 1775–1867. English lawyer, retired 1828. *Diary, Reminiscences, and Correspondence*, 1867.

Robinson, HORATIO NELSON, 1806–1867. American author of a series of mathematical text-books.

Robinson, JOHN, ab.1575–1625. English separatist 1604, pastor of the Pilgrim Fathers at Leyden 1609; author of several treatises, and of a memorable saying, "God hath yet more light to break forth out of his Holy Word." *Works*, 3 vols., 1851.

Robinson, JOHN CLEVELAND, U.S.A., 1817–1897. Brig.-gen. U. S. Vols. 1862; distinguished in the Va. campaigns and at Gettysburg; Major-gen. 1869; Lieut.-gov. of N. Y. 1872.

Robinson, LUCIUS, LL.D., 1810–1891. Gov. of N. Y. 1876.

Robinson, MONCURE, 1802–1889. Civil engineer; locator of the first railroads of Pa.; chief engineer Phila. and Reading R. R.

Robinson, ROBERT, 1735–1790. Baptist pastor at Cambridge from 1759; tr. Saurin's *Sermons*, 1774–84; author of "Come Thou Fount," 1758, and other hymns. *Arcana*, 1774; *Hist. Baptism*, 1790.

Robinson, SOLON, 1803–1880. American journalist. *Hot Corn*, 1853.

Robinson, STUART, 1814–1881. Presb. pastor and journalist in Ky.

Robinson, WILLIAM ERIGENA ("RICHELIEU"), 1814–1892. Irish-American journalist, M. C. from N. Y. 1867–69 and 1882–85.

Robinson, WILLIAM STEVENS ("WARRINGTON"), 1818–1876. Journalist, influential in Mass. *Parliamentary Law*, 1875; *Pen Portraits*, 1877.

Robinson's Anemometer. See ANEMOMETER.

Robison, JOHN, 1739–1805. Prof. Edinburgh 1774. *Mechanical Philosophy*, 1822.

Rob Roy (ROBERT MACGREGOR), 1660–1734. Scottish outlaw, who joined the Pretender 1715, celebrated by Scott.

Robsart, AMY, ab.1532–1560. Wife of Dudley, afterward Earl of Leicester, by whom she is said to have been murdered.

Robson, FREDERICK (BROWNHILL), 1821–1864. English actor, eminent in burlesque.

Robson, STUART, b. 1836. American actor.

Roburite. Flameless explosive patented by C. Roth in 1887. It is composed of a mixture of ammonium nitrate and purified chlorinated dinitrobenzene. It must be used dry and is not sensitive to shock.

Robusti, JACOPO. See TINTORETTO.

Roby, HENRY JOHN, b. 1830. Sec. to Schools Commissions 1864–75; M.P. 1890. *Latin Grammar*, 1871–74.

Roc (RUC). See ÆPYORNIS.

Roca, JULIO, b. 1843. Pres. of Argentina 1880–86.

Rocafuerte, VICENTE, 1783–1847. Pres. of Ecuador 1835–39; publicist.

Roccellin. $C_{20}H_{12}N_2O_4SNa$. Sodium salt of the acid, formed by action of the diazo compound of naphthionic acid upon α-naphtholsulphonic acid; brown powder. It dyes wool red in an acid bath.

Roccus. See ACANTHOPTERI and BASS.

Rochambeau, JEAN BAPTISTE DONATIEN DE VIMEUR, COMTE DE, 1725–1807. French general; sent with 6,000 soldiers to America, where he rendered valuable help, especially at Yorktown; Marshal 1791; imprisoned by Robespierre 1793, when he narrowly escaped the guillotine. *Memoires*, 1809, tr. 1838.—His son, DONATIEN MARIE, 1750–1813, became Lieut.-gen. 1792, was Gov. of St. Domingo 1796 and 1802–3, and long in prison in France and England.

Rocha Pitta, SEBASTIAO DA, 1660–1738. Historian of Brazil 1730.

Rochdale. Manufacturing borough of Lancashire, Eng., on the Roche, 11 m. n.e. of Manchester. Its leading product is woolen goods. Pop., 1891, 71,458.

Rochdale Pioneers. Group of workingmen who opened a little store on a co-operative basis in 1846, and, achieving great success, have become the classical example and model for co-operative distribution.

Rochefort, HENRI (VICTOR HENRI, MARQUIS DE ROCHEFORT-LUÇAY), b. 1832. Parisian journalist, founder of *La Lanterne*, 1868, and other radical papers; Deputy 1869; repeatedly condemned; deported 1871 to New Caledonia, whence he escaped 1874; in exile till 1880; supporter of Boulanger 1888. *Mes Aventures*, 1896.

Rochefort-sur-Mer. French seaport, on the Charente, 9 m. from the Atlantic; founded 1665 as a naval station; fortified by Vauban. Pop., 1891, 33,334.

Rochefoucauld. See LA ROCHEFOUCAULD.

Rochefoucauld-Liancourt d'Estrissaè, FRANÇOIS ALEXANDRE FRÉDERIC, DUC DE LA, 1747–1827. French Lieut.-gen. 1790; in U. S. 1794–97; Peer 1815; founder of the first savings-bank in Paris; noted for benevolence. *Voyage*, 8 vols., 1795–97.

Rochejacquelein. See LA ROCHEJACQUELEIN.

Rochelle, LA. Seaport of w. France, on the Atlantic. As a Huguenot stronghold of the Calvinist party, vainly besieged by Anjou 1573; taken by Richelieu 1628, after a 14

The Harbor of La Rochelle.

months' siege. The fortifications are 3½ m. round, with seven gates and three towers, the oldest dating from 1834, and the lantern tower having seven stories. Vauban constructed the present fortifications. Pop., 1891, 26,800.

Rochelle Salt. COONa.CHOH.CHOH.COOK. Sodium potassium tartrate; white crystalline solid, soluble in water; prepared by neutralizing cream of tartar with soda; used in dyeing and in pharmacy.

Roches Moutonnées. Name given by Swiss peasants to the rounded, smooth, hummocky bosses and undulating surfaces of rock, occurring in glacial regions. When seen from above they resemble a flock of sheep lying down.

Rochester. City of Kent, on the Medway, 29 m. e.s.e. of London; seat of a bishopric since 604. Pop., 1891, 26,170.

Rochester. City of Monroe co., N. Y., on both banks of the Genesee; settled 1812; chartered 1817 and 1834. It has communications by means of 8 railroads, and has a large trade and extensive manufactures, especially of clothing and shoes. Pop., 1890, 133,896.

Rochester, JOHN WILMOT, EARL OF, 1648–1680. English lyric poet, noted for wickedness and wit, but chiefly through Bp. Burnet's account of his late repentance.

Rochester (N. Y.), UNIVERSITY OF. Founded 1850. It has four courses of study, 15 instructors, 185 students, and an endowment of ab. $1,200,000.

Rochester (N. Y.) **Theological Seminary.** Baptist; established 1850. It has 10 professors and ab. 100 students.

Rochet. Surplice without sleeves, worn by bishops.

Rochet, LOUIS, 1813–1878. French sculptor.

Rock Breaker. Machine in which blocks of rock or ore are reduced in size by being subjected to a crushing action between powerful movable jaws, or between a movable jaw and a fixed surface.

Rock-Butter. Butter-like alum efflorescence oozing from alum shale. See ALUNITE.

Rock Crystal. Transparent, glassy quartz, free from color or nearly so, whether distinctly crystallized or not; used largely in jewelry and in the manufacture of ornaments.

Rock Drill. Mechanical contrivance of some kind, adapted for boring holes in rock in any desired direction, whether for blasting or for prospecting purposes, and driven by some power other than hand-power. The two prominent types are distinguished as percussion drills and rotary drills; of each many different styles and patterns have been used.

Rock Drill.

In underground mining compressed air has been the principal motive power employed, though the application of electricity has increased in recent years. The first American percussion drill (Couch's) was patented 1849; the earliest European drill (Cavé's) dates from 1851; and the extensive use of diamonds in rotary drills began with Leschot's invention of 1863. See DIAMOND DRILL and ELECTRIC DRILL.

Rocker. Piece of apparatus used in washing gold-bearing sands, the material to be washed being treated in small quantities at a time, and subjected to an oscillatory shaking, while a current of water carries away the light and worthless portions; a cradle.

Rocket. Cylindrical paper or metal case containing a slow burning gunpowder composition, conically bored around the axis, so that when ignited a great volume of gas escapes through suitably arranged vents at the base, and by its reaction against the head of the rocket sets it in motion. Congreve's rocket has a stick attached to give steadiness of flight. Hale's rocket is maintained in its flight by imparting a rotary motion about its axis: this is accomplished by three or more subsidiary vents placed obliquely to the axis. Hale's war rockets were adopted in the U. S. Service ab. 1855, but are now discarded.

Rock Fill Dam. Dam formed by dumping rocks of all

sizes so as to make an embankment across a stream. It has the advantage of cheap construction where rock is abundant, and usually its strength and tightness increases with age.

Rockford. Capital of Winnebago co., Ill., on Rock River; founded 1836, chartered 1852, enlarged 1890. Pop., 1890, 23,584.

Rockingham, CHARLES WATSON WENTWORTH, MARQUIS OF, 1730–1782. Whig leader; Prime Minister 1765–66 and 1782; repealer of the Stamp Act 1766.

Rocking Stones, or LOGANS. Druidical stone, often of an immense size, so placed and accurately adjusted on another

Rocking-stone of Tandil, Argentine Republic.

stone as to rock at the slightest touch. They are common in Brittany, France, and Cornwall, England.

Rock Island. Capital of R. I. co., Ill., on the Mississippi. Pop., 1890, 13,634. The adjoining island has a U. S. arsenal and armory.

Rock Oil. See PETROLEUM.

Rock River. Branch of the Mississippi in s. Wis. and n. Ill. Length 386 m., drainage area 9,792 sq. m., average flow 9,944 cu. ft. per second.

Rock Rose. Widely distributed shrubs of the genus *Helianthemum*, natural family *Cistaceæ*, many of them bearing very showy yellow flowers and cultivated for ornament.

Rock Salt. Common SALT (q.v.) as found in nature. See SODIUM CHLORIDE and HALITE.

Rock Soap. Mineral substances of a clay-like aspect and consistency, which soften in water and have an unctuous feel; product of the alteration and decomposition of older feldspathic rocks.

Rock Temple. Temples cut in rocks in w. India and in Missouri and Ohio in the U. S. See ELEPHANTA and ELLORA.

Rockweed. Common dark-green *Algæ* growing attached to rocks and other solid objects between tide marks, especially *Fucus vesiculosus*. Also known as Bladder Wrack, from its bladder-like floats.

Rocky Mountain Goat (HAPLOCERUS MONTANUS). Species of antelope found in the mountains of Colorado and Idaho and British Columbia. It has short legs, long, white, woolly hair, horns curved backward, and a short beard. Its flesh is of no value. This and the PRONG BUCK (q.v.) are the only species of antelope found in the New World.

Rocky Mountains. System on the e. border of the summit of the Cordilleran plateau of N. America. It extends from the s. U. S. n. with a w. trend into Canada, as far at least as Peace River. It forms the e. member of what may be called the Cordilleras of N. America. It is composed of numerous individual ranges, arranged for the most part *en echelon*, as they have a more westerly trend than the system itself. It traverses New Mexico, Colorado, Wyoming, Montana, Idaho, and Canada. The plateau upon which it stands has its greatest elevation in Colorado, where at the e. base of the mountains it has an elevation of 6,000 ft. Thence it diminishes s. and n., and at Peace River is not higher than 2,000 ft. The mountain ranges conform roughly to this, being in Colorado 13,000 to 15,000 ft. high, in Montana 10,000 to 11,000 ft., and in Canada gradually diminishing.

Rocky Mountain Sheep (OVIS MONTANA). Grayish-brown sheep inhabiting the higher mountains of the w. U. S. It is also called Bighorn, from the immense size of its horns, which curve backward. It stands ab. 3½ ft. high and is stoutly built. Its flesh is excellent mutton.

Rococo. Over-elaborate style of decoration, prevalent in France and elsewhere ab. 1600–1800. Scroll and shell orna-

Rococo Ornament.

ments abound; sometimes birds and fishes are combined with enormous flowers, and all meaning is sacrificed to a profuse effect.

Rocroi. Village of n.e. France, 24 m. n.w. of Sedan. Here Condé routed a Spanish army May 19, 1643. Pop. ab. 1,800.

Rodbertus, JOHANN KARL, 1805–1875. German statesman, economist, and Socialist, in the Prussian state service 1827–36; prominent in the events of 1848; in retirement through most of his life. His works have laid the foundation of modern scientific socialism.

Rode, JACQUES PIERRE JOSEPH, 1774–1830. French violinist, pupil of Viotti, first prof. of violin playing at Paris Conservatory 1794; solo violinist to Alexander I. of Russia 1803–8. Beethoven finished his sonata for pianoforte and violin Op. 96. A set of variations composed by him achieved great celebrity, and is still heard at times in a transcription for voice.

Rodentia (GLIRES). Order of placental, deciduate Mammals, which with the *Bunotheria* are known as *Pro-Ungulata*. They are characterized by having two large chisel-like and curved mesial incisors, growing from permanent pulps. Canines are absent, and a wide diastema exists in front of the flat-crowned molars. The latter have transverse ridges. The movement of the mandible is longitudinal or in the axis of the skull. To effect this the lower jaw is short and the glenoid cavity is laterally compressed. The feet are usually five-toed and unguiculate. The uterus is completely divided. The placenta is deciduate and discoidal. Rodents are small, active, and prolific animals, having several litters each year. The brain is smooth. They are widely distributed, but naturally absent from the Pacific Islands. In cold regions they usually hibernate. The food is principally vegetable (roots, nuts, or seeds). The chisel shape of the incisors is due to the wearing away of the softer posterior part of the teeth, the front face being strongly enameled. Most have but two incisors in each jaw, and they constitute the section *Simplicidentata*, arranged into three groups: *Sciuromorpha*, *Myomorpha*, and *Hystricomorpha*. The families *Leporidæ* (Rabbits) and *Lagomydæ* have a small second pair of incisors behind the first, and constitute the section *Duplicidentata*.

Roderick, d. 711. "Last of the Goths," King of the Visigoths in Spain 709; killed in the battle of Xeres de la Frontera, by which the Saracens routed a great Gothic army and gained possession of most of Spain.

Rodgers, JOHN, U.S.N., 1771–1838. Captain 1799; distinguished in the war with Tripoli and that of 1812.—His son, JOHN, U.S.N., 1812–1882. Captain 1862, Commodore 1863, Rear-admiral 1869, was active in the Civil War.—His cousin, CHRISTOPHER RAYMOND PERRY, U.S.N., 1819–1892, Commander 1861, Rear-admiral 1874, won distinction on the Atlantic coast. —His brother, GEORGE WASHINGTON, U.S.N., 1822–1863, Commander 1862, was killed at Fort Wagner.

Rödiger, EMIL, 1801–1874. Prof. Halle 1835, Berlin 1860; Orientalist. *Chrestomathia Syriaca*. 1838.

Rodin, AUGUSTE, b. 1840. French sculptor.

Rodman, ISAAC PEACE, 1822–1862. Brig.-gen. U. S. Vols. 1862; killed at Antietam.

Rodman, THOMAS JEFFERSON, U.S.A., 1815–1871. Inventor of hollow casting for cannons.

Rodman Gun. Captain Rodman, U. S. Ordnance De-

partment, devised a method by which heavy guns could be cast hollow and cooled from the interior by a stream of water circulating in the hollow core. By his method the unequal and uncertain strains arising in solid castings by unequal cooling from the exterior were held to be obviated. His system was adopted by the Government about the time of the rebellion, and he succeeded in constructing columbiads of 15 and 20 in. caliber, guns greatly exceeding in power and dimensions the solid cast-iron guns previously constructed.

Rodney, CÆSAR, 1728–1784. Delegate to Congress from Del. 1775–76; signer of the Declaration of Independence; Brig.-gen. 1775–77; Pres. of Del. 1778–82.—His nephew, CÆSAR AUGUSTUS, 1772–1824, was M.C. 1803–7 and 1821–22, U. S. Atty.-gen. 1807–11, U. S. Senator 1822–23, and Minister to La Plata 1823.

Rodney, GEORGE BRYDGES, R.N., BARON, 1718–1792. Rear-admiral 1759, Baronet 1764, Baron 1782; victorious over a Spanish fleet near Cape St. Vincent Jan. 16, 1780, and a French one off Dominica April 12, 1782.

Rodriguez. Volcanic island in Indian Ocean, 370 m. e.n.e. of Mauritius; discovered 1645: held by Britain since 1814. Pop., 1893, 2,068.

Roe, EDWARD PAYSON, 1838–1888. American novelist and horticulturist. *Barriers Burned Away*, 1872; *My Garden*, 1873; *A Chestnut Burr*, 1874; *A Face Illumined*, 1878; *Small Fruits*, 1880; *Nature's Serial Story*, 1884; *Miss Lou*, 1888. His books had a large sale.

Roe, RICHARD. See DOE, JOHN.

Roe, SIR THOMAS, ab.1568–1644. English ambassador to India 1615–18, Turkey 1621–28, and other countries.

Roebling, JOHN AUGUSTUS, 1806–1869. Civil engineer, first to adapt suspension bridges to railroad traffic; builder of the Niagara and Brooklyn bridges. The latter was completed by his son, WASHINGTON AUGUSTUS, b. 1837.

Roebuck, JOHN ARTHUR, 1802–1879. M.P. 1832; prominent as a Radical. *Colonies*, 1849.

Roe Deer (CAPREOLUS CAPRÆA). European reddish brown deer, 2½ ft. high, with erect three-tined antlers in the male;

Roe Deer (*Capreolus capræa*).

rare, except in parks. They love high, forest-clad regions, and range east into Syria. The rutting season is midsummer.

Roemer, JOHANN JACOB, 1763–1819. Prof. Zürich. *Magazin für die Botanik*, 1785–90; *Archiv für die Botanik*, 1796–1805; *Flora europæa inchoata*, 1797–1811; *Caroli a Linné Equitis Systema vegetabilium*, 1817–30.

Roentgen Rays. Probable form of radiation discovered Dec. 1895 by Wilhelm Conrad Roentgen, b. 1856, prof. Giessen 1879 and Würzburg 1888. The name suggested by him and adopted by the world was "x-rays," indicating the unknown. The rays are best produced by the impact of the cathode rays within a Crookes tube upon a platinum disk placed in the focus of a concave aluminium projector used as the cathode of the tube. It is supposed that at the surface of the platinum the energy transformation takes place from cathode ray energy to x-ray energy. The real nature of the x-rays is not yet known, the best authorities wavering between a radiation theory and a material one. They are transmitted through various media with varying degrees of facility and affect silver salts. They are applicable to medical and surgical diagnosis; and silver negatives of bones, bullets, etc., which do not transmit the rays readily, in the soft tissues of the bodies, may be produced. This is called a Skotograph or Skiagraph. By interposing the substance to be examined between the Crookes' tube and a tube with a diaphragm covered with calcium tungstate, called a fluorescope, the effect is heightened, and the bullets, etc., may be readily observed.

Roepper, WILLIAM THEODORE, 1810–1880. Prof. Lehigh Univ. 1865–69; well known among mineralogists for his studies of crystalline forms.

Roepperite. 1. Mineral of the chrysolite group, containing iron, manganese, and zinc, found at Sterling Hill and Franklin Furnace, N. J. 2. Mineral carbonate containing large amounts of calcium and manganese with small quantities of magnesium and iron.

Roestone. See OÖLITE.

Rogation Days. Monday, Tuesday, and Wednesday, preceding Ascension Day: observed since ab. 450 as litany days.

Roger I., 1031–1101. Brother of Robert Guiscard, and his successor 1085 in Naples; conqueror 1060–90, and Count of Sicily.—His son, ROGER II., 1097–1154, was crowned King of Sicily 1130, conquered the n. coast of Africa, and was a wise and powerful monarch.

Roger OF WENDOVER, d. 1237. English monk, author of a Latin chronicle 1189–1235, tr. 1849, and continued by Matthew Paris.

Rogers, FAIRMAN, b. 1833. Prof. Univ. Pa. 1858–70; civil engineer. *Magnetism*, 1883.

Rogers, HENRY, 1806–1877. Prof. Univ. Coll., London, 1839; pres. Lancashire Coll. 1858. *Essays*, 1850–55. His *Eclipse of Faith*, 1852, and its *Defense*, 1854, answered F. W. Newman's *Phases of Faith*, 1850–53.

Rogers, HENRY DARWIN, LL.D., 1808–1866. Prof. of Geology Univ. Pa. 1835–46; prof. Glasgow 1858. He made a geological survey of N. J., and pub. a report and map 1835, and a final report 1840; 1836–55 he was engaged in making a survey of Pa., giving especial attention to structural and dynamic geology.

Rogers, HENRY J., 1811–1879. Inventor of the system of signals adopted by U. S. Navy 1846, modified 1861.

Rogers, HENRY WADE, LL.D., b. 1853. Law Prof. Univ. Mich. 1883; pres. Northwestern Univ. 1890. *Illinois Citations*, 1880; *Expert Testimony*, 1883.

Rogers, JAMES EDWIN THOROLD, 1823–1890. Prof. Political Economy at Oxford 1862–68 and 1888; M.P. 1880–86. *Hist. Agriculture and Prices*, 6 vols., 1866–88; *Economic Interpretation of History*, 1888; *Industry and Commerce*, 1892.

Rogers, JOHN, ab.1505–1555. Chaplain at Antwerp 1534; tr. Bible 1537; canon of St. Paul's, London, ab.1549; burned at Smithfield, first of the martyrs under Mary.

Rogers, JOHN, b. 1829. American sculptor, many of whose statuette groups have been largely reproduced in composition.

Rogers, RANDOLPH, 1825–1892. American sculptor, in Italy from 1855.

Rogers. RICHARD, ab.1550–1618. English Puritan. *Seven Treatises*, 1605.

Rogers, ROBERT, 1727–1800. Soldier of N. H., prominent in the French war, and as a Tory 1776; author of several books.

Rogers, ROBERT WILLIAM, D.D., b. 1864. Prof. Haverford 1887, Dickinson 1890, and Drew Theol. Sem. 1893; Orientalist.

Rogers, SAMUEL, 1763–1855. English banker and poet. *Pleasures of Memory*, 1792; *Italy*, 1822; *Table-talk*, 1856.

Rogers, WILLIAM AUGUSTUS, F.R.S., b. 1832. Prof. Harvard 1877, and Colby Univ. 1886; astronomer.

Rogers, WILLIAM BARTON, LL.D., 1804–1882. Brother of Henry D.; Prof. of Natural Philosophy and Geology in Univ. Va. 1835–53; Pres. Mass. Inst. Tech. 1862–68. He examined the region of mineral springs of Va., and organized a State Geological Survey 1835–42.—Of his brothers, JAMES BLYTHE, 1802–1852, was Prof. of Chemistry at Univ. Pa. 1847, and ROBERT EMPIC, 1813–1884, at Univ. Va. 1842–52, Univ. Pa. 1852–77, and Jefferson Medical Coll. 1877.

Roget, PETER MARK, F.R.S., 1779–1869. London physician, prof. Royal Institution 1833. *Physiology*, 1834; *Thesaurus of English Words and Phrases*, 1852.

Rogue Money. Assessment formerly levied in Scotland, for defraying the expenses of apprehending criminals.

Rogue River Indians. Tribe of Indians living in Oregon and belonging to the ATHAPASCAN (q.v.) family.

Rogue's March. When a soldier was sentenced to be drummed out of the service he was escorted by a file of soldiers

in front of the command while the drum and fife played a derisive tune, called the rogue's march: this sentence has of late years been entirely abrogated in the U. S. Service.

Rohan, HENRI, DUC DE, 1579–1638. French soldier, leader in Huguenot revolts. *Mémoires*, pub. 1644–1758.

Rohan, LOUIS RENÉ EDOUARD, PRINCE DE, 1735–1803. Cardinal 1778; Bp. of Strassburg 1779. See DIAMOND NECKLACE.

Rohillas. Afghan Pathans who rose in power in Rohilcund, India, ab.1750. They were subdued in 1773.

Rohlfs, MRS. ANNA KATHERINE (GREEN), b. 1846, m. 1884. American writer of detective stories. *The Leavenworth Case*, 1878; *X Y Z*, 1883; *Mill Mystery*, 1886; *Behind Closed Doors*, 1888; *Marked Personal*, 1893.

Rohlfs, GERHARD, 1832–1896. German explorer in Africa; author of many books of travel. *Morocco*, 1868, tr. 1874; *Abyssinia*, 1869, tr. 1883.

Rojas, JUAN RAMON, 1784–1824. Poet of the Argentine revolution. *Poesias patrias*, 1820.

Rojas y Zorilla, FRANCISCO DE, 1607–ab.1680. Spanish dramatist.

Rokitansky, KARL, BARON VON, 1804–1878. Prof. Vienna 1834–75. His *Handbook of Pathological Anatomy*, 5 vols., 1842–46, tr. 1849–52, is of great importance.

Roland. Hero of legend and poetry; warden of Brittany under Charlemagne; killed 778 at Roncesvalles in Spanish Navarre.

Roland de la Platière, JEAN MARIE, 1734–1793. French official, author of a *Dictionary of Manufactures*, 1785.—His wife, MANON JEANNE PHLIPON, 1754–1793, a Girondist leader, was guillotined, leaving *Memoirs*, pub. 1864, and *Letters*, 1867.

Rolander, DANIEL, 1720–1774. Swedish naturalist, who studied and described the flora of Guiana.

Rolfe, WILLIAM JAMES, b. 1827. American editor (1870–83) and critic of Shakespeare. *Shakespeare the Boy*, 1896.

Roll, ALFRED PHILIPPE, b. 1847. French painter.

Rolled Sections OF IRON. The usual sections of structural iron are the I-BEAM (q.v.), channel-iron, angle-iron (of equal and unequal legs), tee-iron, deck-beam (or bulb-iron), and rail rolled from iron or steel billets. The usual merchant sections are the flat, square, round, hexagon, and octagon. The usual strength per sq. in. of these sections is from 50,000 to 55,000 lbs.

Roller-Ball. Sport aiming at the propulsion of a large ball between two goals. Attempts have been made to develop this in many ingenious ways, but no great advance has been made.

Roller Mill. Form of flouring machine in which the grain is crushed by passing between two rolls either smooth or toothed and revolving in the same or opposite direction at different velocities. The rolls are made of hardened steel or porcelain. See FLOUR.

Rollers. Picarian Old World birds of bright colors, common in the Ethiopic-Indian region. They, like the Tumbler

Roller (*Coracias garrula*).

pigeon, have the habit of turning somersaults during flight. The common Roller of Europe (*Coracias garrula*) is blue-green, with cinnamon color on the wings. *Eurystomus* of India and Australia includes the Broad-billed Rollers.

Rolleston, GEORGE, F.R.S., 1829–1881. Prof. Oxford 1860. *Forms of Animal Life*, 1870.

Rollin, CHARLES, 1661–1741. French historian, prof. Paris 1688, and Beauvais 1699–1711 and 1720. His *Ancient History*, 13 vols., 1730–38, was widely used. *Traité des Etudes*, 4 vols., 1726–31; *Roman History*, 16 vols., 1738–48.

Rolling Mill. See ROLL TRAIN.

Rollin Ledru. See LEDRU-ROLLIN.

Rollins, EDWARD HENRY, 1824–1889. M.C. from N. H. 1861–67; U. S. Senator 1877–83.

Rollo, or ROLF, ab.850–930. Chief of the Northmen, who headed piratical expeditions against Scotland, England, and Flanders, and in 912 established himself on the Seine, acknowledged Charles III. as his overlord, and founded the duchy of Normandy.

Rolls, or CORNISH ROLLS. Machine used in mining districts, in which rock or ore is reduced in size by passing between revolving cylinders, either smooth or corrugated, lying side by side, the fine material produced dropping between the cylinders into proper receptacles below.

Roll Sulphur. See SULPHUR.

Roll-Train. Machine by which spongy and porous masses of weld-metal are compacted and welded, and market shapes produced from rectangular billets, blooms, or ingots by pressure. A roll consists of a body smooth and cylindrical for plate metal, but with grooves and fillets of various profile for shapes. At the ends of the body are the two necks, which are the journals on which the roll turns, and beyond the necks are the pods by which rolls are coupled by junction-rods and boxes. These junction-rods permit vertical adjustment of one set of rolls without distress to the next set, and the junction-boxes are calculated so as to break under undue strain, before accident to the rolls. The rolls are carried in a housing at each end, and are two-high or three-high. Where but two rolls are used, the rolling engine must be reversed, or the work passed back over the top roll, so as always to be entered from the same side. The three-high train involves the use of a table for heavy work, where rolls are large for stiffness. The opening part in one roll and part in the other is called a pass. Passes are classified according to function, as welding, shaping, drawing, edging, flatting, and polishing passes; according to shape, as flat, box, gothic, square, round, polygonal and shape passes; according to construction, as open or closed, eccentric, spiral and intermittent. The first set of rolls for operating on hottest and roughest work is called the roughing or breaking down rolls, and in England the cogging rolls. For perfecting the profiles, the train is called the finishing train. For adjusting the spaces between rolls, the brasses under the necks of the rolls are adjusted by screws in the housings. The middle roll of three may be screwed up and down, or the upper and lower roll may move together toward the middle roll. The weight of the roll or rolls is largely borne by counterweights below the floor level. Reversing trains are driven by a double engine without fly-wheel and with cranks at 90°, the valve-gear link-motion being operated by a hydraulic cylinder. Similarly the feeding tables of three-high trains are raised and lowered by hydraulic power, and the feeding rolls in them are driven by a smaller engine with link-motion. Turning of the piece is done by sets of fingers coming up between the rolls as the table is lowered. The largest roll-trains in this country are those of Carnegie, Phipps & Co., which are 32 in. by 115 in. long. Krupp's large rolls, at Essen, Prussia, are 34 in. diam. by 120 in. long.

Romagna. N. part of Papal States till 1861; now provinces of Bologna, Ravenna, Ferrara, and Forli.

Romagnosi, GIAN DOMENICO, 1761–1835. Law prof. at Parma 1802, and Milan 1807; legal and philosophical writer. *Works*, 19 vols., 1832–35.

Romaic. Modern Greek, descendant of classical Hellenic speech.

Romaine, WILLIAM, 1714–1795. London divine, prominent in the Evangelical party. His *Life*, *Walk*, and *Triumph of Faith*, 1763–71–94, were long popular. *Works*, 8 vols., 1796.

Roman and Romanesque Architecture. Roman building employed the arch, but the decorative elements of Roman architecture were those of the Grecian construction, of which the structural elements were the post and lintel. The Roman temples were imitations of those of Greece and the Greek colonies, and resembled them in all essentials, although they substituted for the simplicity and lucidity of the Grecian examples a method of decoration at once more ornate and less refined. The Doric and Ionic orders were thus only mixed in their Roman use. Only in the Corinthian order can it be

maintained that the Roman examples will bear a comparison with those of Greece. In other works than temples the Romans undertook to combine the Greek architecture with an arched construction. This was done both on exteriors and in interiors, and in both cases with awkwardness and want of success. On the exterior they employed a system of columns and entablatures to decorate a wall pierced with arched openings. Sometimes, as in the temple at Baalbec, the order extended through several stories or stages, and sometimes, as in the Colosseum at Rome, it was repeated with or without variations at every stage. In the interiors, the entablature was retained and the arches opening from it. In the case of a detached column a fragment of entablature was interposed under the springing of the arch or vault. The omission of this undermost fragment, and the imposition of the arch directly upon the column, was the beginning of ROMANESQUE ARCHITECTURE, the architecture of the column and round arch. This was derived from classical Roman architecture, and obtained in w. Europe after the fall of the Roman Empire. The earliest building to which this innovation has been traced is the palace of Diocletian at

Courtyard of Diocletian's Palace at Spalato, Dalmatia.

Spalato, which is accordingly regarded as the beginning of Romanesque architecture. From Italy the Romanesque spread until it prevailed in Spain, France, Germany, and England. The local variations were numerous and so important that many of them are treated as separate styles, under the names of Italian, Provençal, Rhenish, and Norman. But all the variations had in common the use of the Roman features of construction, the column and the round arch, with a divergency from the forms of classical Roman, increasing with the distance, in space and time, from the Roman examples. For nearly a thousand years the influence of Roman architecture is more or less distinctly perceptible in all the ambitious and important buildings of w. Europe. The modifications in it produced in the 13th century, beginning in France, by the development of groined vaulting, were so great as to deserve and obtain the name of a new style, the Gothic; but this was nevertheless the product as well as the successor of Romanesque, and the transition from the style of the round arch to that of the pointed arch affords one of the most interesting chapters in the history of architecture. See ARCHITECTURE.

Roman Archæology. See ARCHITECTURE, SCULPTURE, PAINTING, THERMÆ, TRIUMPHAL ARCH, CARACALLA, FORUM, AMPHITHEATER, COLOSSEUM, PANTHEON, etc.; also BATHS, ROMAN.

Roman Aqueducts. See AQUEDUCT.

Roman Baths. See BATHS, ROMAN.

Roman Catholic Church. Aggregate of those churches, forming about half of Christendom, which, under their bishops, acknowledge the Pope as having by divine right, as defined 1870, "ordinary and immediate" episcopal authority. Most of these follow the Latin rite. The number of Roman Catholics in the world in 1892 was estimated to be as follows: Europe, 160,165,000; America, 58,393,882; Oceanica, 6,574,481; Africa, 2,655,920; Asia, 3,007,250; total, 230,866,533. Total number of Christians in the world was estimated to be 477,080,158. In U. S. 1895 there were 7,474,850 members of R. C. Ch. out of a total of 23,231,490 members of all denominations.

Romance Languages. Made up of Italian, French, Provençal, Spanish, Portuguese, Rhæto-Romanic, Wallachian or Roumanian, and other dialects, all descended from the lingua rustica or vulgar tongue of the Romans. Rhæto-Romanic and Roumanian play but a small part, and have few monuments. French, with its enormous literature and linguistic influences, is reckoned from the Strassburg Oaths 842. Italian begins ab.1200. Spanish and Portuguese begin as independent and literary tongues ab. 1200. The Romance Languages are receiving increased attention at universities everywhere, and form a prominent part of philological investigation.

Roman Cement. Hydraulic cement made from volcanic rock by the Romans. See PUZZOLANA.

Romances of Arthur. Originating with Nennius, a Breton monk of 9th century, these were enlarged by Geoffrey of Monmouth 1140, and completed by Sir T. Malory, whose *Morte d'Arthur*, 1470, was the source of Tennyson's *Idylls of the King*.

Romances of Chivalry. Third form of Spanish writings in order of development. They were the literature of the knightly classes, as the ballads were of the people. During the 16th century the passion for them was intense.

Roman Colonies. See COLONIES, ROMAN.

Roman de la Rose. Allegorical French poem begun ab.1237 by Guillaume de Lorris, and finished by Jean de Meung ab.1277, in a coarse and satirical vein; tr. by Chaucer.

Roman Empire. See HOLY ROMAN EMPIRE.

Romanes, GEORGE JOHN, LL.D., F.R.S., 1848–1894. B. in Canada; prof. Royal Institution, 1888–91, and at Oxford. *Theism*, 1878; *Animal Intelligence*, 1881; *Mental Evolution*, 1883–88; *Darwin*, 1896.

Roman Games. See CIRCUS, GLADIATORS, CÆSTUS, etc.

Roman Law. System of jurisprudence developed by the Roman Republic and Empire. Its earliest records are contained in the Twelve Tables, adopted ab.450 B.C.; its final reduction into systematic form occurred under Justinian ab.527–534, when the *Institutes*, *Digest*, and *Code* were published. This body of rules forms the basis of the modern law of every country in Europe except England; it has also affected the English common law both in Britain and the U. S.

Romano, GIULIO. See GIULIO ROMANO.

Romanoff, HOUSE OF. Descended from Andrew Kobyla, who came from Prussia to Moscow 1341. Fifth in descent from him was Roman Juricvitch, d. 1543, whose daughter married Ivan the Terrible, and whose son, Nikita Jurief, also allied himself by marriage with the royal house of Rurik. His grandson, Michael Romanoff, was chosen Czar 1612, after the false Dmitri. The succeeding names are: Alexei, 1648–76; Feodor, 1676–82; Peter the Great, 1682–1725. After the death of Catharine I., Peter II., 1727–30, last of the male line: Anna Ivanovna, daughter of Ivan, brother of Peter I., 1730–40; Ivan IV., 1740–41; Elizabeth, daughter of Peter I. and Catharine, 1741–61; Peter III., 1761–62, assassinated. After Catharine II., Paul I., 1796–1801; Alexander I., 1801–25; Nicholas I., 1825–55; Alexander II., 1855–81; Alexander III., 1881–94; Nicholas II., 1894.

Roman Roads. These were stone pavements from 3 to 16 ft. in width, built on a foundation of masonry laid in cement. Twenty-nine roads centered at the Forum in Rome, and the length of these, with their branches, was 52,964 Roman miles. They were laid out for long distances in straight lines with little regard to grade, were built by soldiers and slaves, and under present conditions would be uneconomical.

Roman Roads:
Example of early basalt road by the temple of Saturn on the Clivus Capitolinus. A. Travertine paving. B. Polygonal basalt blocks. C Concrete bedding. D. Rain-water gutter. The curb shown is taken from another part of the road.

Romans, EPISTLE TO THE. Sixth N. T. book, written by St. Paul ab.58, developing the doctrine of Salvation through Faith, as engendering a more perfect, because internally prompted, obedience.

Romans, KING OF THE. Title assumed by Henry II. prior to his coronation as emperor, and by his successors till Maximilian.

Romantic. In musical criticism, as in literary, the antithesis of classical; word of inexact meaning, often applied very arbitrarily. Its origin and significance are plain as applied to operas or other vocal compositions which tell stories of chivalry and knighthood, either drawn from romance liter-

atures or imitative of them, as the operas of Weber, Marschner, and Wagner. It can be used in instrumental music, in which the composer gives a clew to his aims by means of titles, superscriptions, or mottoes (see PROGRAMME MUSIC); in general it is independent of conventional restrictions in its strivings for expression, or has a preponderance of the subjective element, or its content outweighs form, whereas classical music has been developed to the highest pitch of perfection on its formal side in obedience to generally accepted laws, placing æsthetic beauty over emotional content, or refusing to sacrifice form to characteristic expression.

Romanticism. Literary movement opposed ab.1800 to classicism, and more recently to realism. It aimed at a wider range of topics and motives, and a freer admission of the imagination and emotions. In its earlier form it revolted against cold formality, in its later against superficiality and "the deadly commonplace." Though often extravagant, its work has been essential to breadth and health. Victor Hugo, one of its chief apostles, called it simply liberalism in literature.

Romany, or ROMMANY. Language spoken by GYPSIES (q.v.). Rom signifies a man in their dialect.

Roma Quadrata. Original settlement of Rome on the Palatine Hill, with some portion of the land adjacent, all surrounded by walls in quadrangular form.

Romberg, ANDREAS JAKOB, 1767–1821. German violinist and composer, who succeeded Spohr 1815 as Hofkapellmeister at Gotha. He wrote eight operas and many other works, now forgotten, except a setting of Schiller's *Die Glocke.*

Romberg, BERNHARD, 1742–1814. German violoncello virtuoso and composer.

Rome. Capital of Italy, on the Tiber, 14 m. from its mouth. Its history is that of a municipality. Tradition alleges that the city was founded 753 B.C. by Romulus upon the Palatine Hill. The union of the Latins on the Palatine and the Sabines on the Quirinal Hill, tribes belonging to the two great races of Central Italy, Latin and Oscan, was prophetic of the Roman policy of incorporation, which was the source of her strength. Early R. was a non-hereditary monarchy till 510. There was also a council of elders, the Senate, and an assembly of the people, Comitia. After the expulsion of the kings this power fell to two magistrates, Consuls, elected annually. Very early two distinct classes appear in the city; Patricians, heads of families, who alone were citizens and eligible to the magistracies, and Plebeians, a class recruited from former clients, emancipated slaves, refugees, traders, etc. The Plebeians became numerous and prosperous, and were admitted to the citizen army, but not to citizenship. The internal history of the Republic for two centuries is the struggle of the Plebs for political equality. Their secession from the city 494 B.C. secured them the Tribuneship, an inviolable office and independent of the Senate, created for the protection of the Plebs; but politically it separated rather than united the two classes, and was liable to great abuse. The Plebs obtained political equality ab.300 B.C., with a separate assembly, Comitis Tribula, and the right of legislation. R. then became in name a democracy, but in fact it was administered by a narrow aristocracy. The conduct of foreign affairs required some such arrangement. But the aristocrats turned their power to private ends, and the attempt of the popular party to recover its power caused the overthrow of the Republic.

The expansion of R. steadily followed upon her numerous successful wars. The Etruscans were conquered 396 B.C., but the city was destroyed by the Gauls of n. Italy 390 B.C. A series of wars began ab.343 with the Samnites and Latins, who were jealous of R.'s growing power. It resulted in Roman supremacy over Central Italy. R. came next in contact with the Greeks of s. Italy, who appealed to Pyrrhus for aid 281. He was conquered and s. Italy subjugated. R. was now neighbor to Carthage, and rivalry was inevitable. The Punic wars began 264 B.C. Carthage was defeated and Sicily annexed 241 B.C.; this was the beginning of R.'s provincial system. The second Punic war, 218–202 B.C., was a desperate life-and-death struggle, noted for Hannibal's march over the Alps to Italy, where he repeatedly defeated the Romans. The fidelity of R.'s Italian allies and her own superb courage saved her; Carthage was subjugated. R.'s power had now become immensely augmented. She bound her allies to herself by a prudent system of colonization and local segregation and a network of military roads; but citizenship was charily granted.

R.'s alliance was now courted by rival factions in the East, and the Macedonian wars, 214–168 B.C., broke out, resulting in the subjection of Greece and the Macedonian provinces. R. was now inevitably launched upon her career of conquest. Her commercial rivals, Corinth and Carthage, were cruelly crushed. The subjugation of Spain, and later of Gaul, followed. R. had thus become the virtual mistress of the world. Her provinces lined the Mediterranean. Meanwhile the municipal constitution had remained unchanged. The aristocracy had become intrenched in power and enriched with the wealth of the subjugated. The problem of administration was yet to be solved. The strain upon the inadequate municipal constitution became insupportable. The incongruousness of a municipal empire was evident. Flagrant misgovernment resulted. The provinces were systematically pillaged. The enormous increase of slaves, with vicious economic legislation, pauperized free laborers. Small farms were replaced by latifundia. Millionaires and paupers confronted each other in sullen hate. The rabble of the city had swelled to a dangerous mob. Greed of wealth corrupted the aristocracy. A contest was inevitable. Tiberius Gracchus began it 133 B.C. by demanding a surrender of the public lands illegally occupied, and their redistribution among the poor. He was murdered by the aristocrats, as was his brother Caius, 123 B.C., who followed in his steps. The Jugurthine war, which followed, illustrated the venality of the administration. Marius, the victor, became the popular leader; he utterly failed as a statesman. The murder of Drusus for favoring the admission to citizenship of the Italian allies incited them to arms 90 B.C. The social war was ended by the grudging concession of citizenship. Thus the municipality was virtually destroyed. The opposition of Optimates and Populares continued, and resulted in the Civil war, 88–81 B.C., with Sulla and Marius as leaders. Sulla's success in the Mithradatic war, 85 B.C., secured to him the army, and he easily destroyed the popular forces, proscribed his enemies, and reconstructed the government upon an aristocratic basis, subjecting the troublesome tribunate to the senate. The antagonism was, however, only aggravated. The popular party only awaited a leader. Insurrections of slaves and gladiators, the formidable conspiracy of Cataline, revolts of provinces, revealed the incapacity of the aristocracy. This confusion furnished the opportunity of ambitious men. Pompey, a successful general, Crassus, a wealthy politician, and Cæsar formed a triumvirate to divide among themselves the power and profits of the incapable aristocracy. The death of Crassus was followed by a rupture between Cæsar and Pompey, whereupon civil war ensued. Cæsar, with a disciplined and devoted army, seized R., conquered Pompey at Pharsalia, 48 B.C., and established the military monarchy with great skill and moderation. His assassination by Brutus and others, March 15, 44 B.C., was a grave calamity to the state. Civil war again broke out, and resulted (30 B.C.) in the ultimate supremacy of Octavianus, nephew of Cæsar, by whose judicious management the foundations of the empire were securely laid. The Augustan age was R.'s most illustrious period. There was, however, no formal revolution. The fiction of a lifelong magistracy was successfully maintained until Diocletian, 284, threw off disguise and revealed a monarchy supported by soldiers. The commonwealth had gradually ceased to exist. The inhabitants of the provinces had been admitted to Roman citizenship, and all merged in the empire. The succession was maintained for a while in the family of Augustus and affiliated branches. Peace and wise administration secured the prosperity of the empire. But from the time of Marcus Aurelius, 161–180, dates the period of decline. Emperors were declared and dethroned by the army, or the throne was sold to the highest bidder. Rival emperors contended, provinces revolted, and the barbarians were pouring in on all sides. Diocletian divided the empire into four parts. R. was deserted by the emperors; Constantine transferred the seat of government to Constantinople 330, and fixed the absolutism of imperial authority. Accelerated decline followed. Julian fell before the Persians, and Valens was destroyed by an irruption of the Visigoths 378. Theodosius conquered his rivals and was acknowledged ruler of the whole empire 394. Under his imbecile successors it was again divided. The barbarians were subsidized, and then turned against their incapable rulers. R. was sacked by Alaric 410, by the Vandals 451. The emperors became the tools of their generals, and Romulus Augustulus was deposed 476. The Eastern empire at Constantinople continued till overthrown by the Turks 1453. The Western empire was revived by Charlemagne 800, and continued in the German line until terminated by Napoleon 1806. Meantime R. gained new importance as the seat of the popes, and suffered heavily in the wars between Guelphs and Ghibellines, being repeatedly taken, sacked, and burned. It was held by the French 1797–1814, and was a nominal republic 1799 and 1848. Since 1871 it has been the capital of Italy. It is celebrated for its architectural works, chief among which are the cathedral of St. Peter and the palace of the Vatican, and its treasures of art. R. is situated on an undulating plain (85 by 25 m.) of marine and alluvial deposits, intersected by volcanic masses. It lies chiefly on the left bank of the Tiber, on the plain; on the same side are the Seven Hills of R., the Capitoline, Palatine, Aventine, Cœlian, Esquiline, Viminal, and Quirinal, and upon these

was the ancient city; in the Middle Ages these were uninhabited. On the right bank is the smaller portion of the city, connected with the greater by several bridges. The Tiber flows through the city in an artificial channel, constructed in 1876. The average width of the river is 195 ft. and its depth 20 ft., sometimes rising 35 ft. more. The first walls of R. were about the Palatine hill, 48 ft. high, with 3 gates; under Servius Tullius they were 7 m. long, across the valleys only, with 37 gates; under Aurelian, they were 11 m. long, with 14 gates and 8 bridges across the Tiber; under Vespasian, they were 13 m. long, with 13 gates; they were built of tufa concrete, faced with brick, 55 ft. high. The walls now are 10 m. on the left bank and 4 m. on the right. The area within the walls is 3,880

The Bridge and Castle of St. Angelo.

acres. Since 1870 R. has been fortified by 30 forts in a 30 m. circle. Its manufactures are of little importance, mostly in jewelry, silk and the fine arts. The university, founded 1303, had 81 instructors and 1,543 students in 1891. The public libraries have ab. 1,000,000 books and manuscripts. Under Augustus the population was 1,300,000, one-half slaves; under Vespasian it was 2,000,000; in 1894, it was 463,790. See AQUEDUCT.

Rome. City of Oneida co., N. Y., on the Mohawk; chartered 1819 and 1870: site of Fort Stanwix, besieged by the British 1777. Gen. Herkimer, going to its relief, was ambuscaded at Oriskany, 6 m. s.e. Pop., 1890, 14,991.

Rome, PRIX DE. Prize given by the Conservatory and the School of Fine Arts in Paris. The recipient is expected to study painting at Rome and to lodge in the Villa Medici. It continues for four years. The second prize is a gold medal.

Rome, RELIGION OF ANCIENT. This was the outgrowth of the mythological and legendary beliefs of the various peoples who migrated to Italy. The predominant features were those of the Etruscans, Sabines, and Latins, later influenced by the Greeks, and the gods were derived from these sources. The Romans regarded the highest duty to be submission to authority, they worshiped an abstraction. Every event, act, thing, and person had a tutelary deity, and the promises to the gods were carried out to the letter. They had prayers, vows, offerings, sacrifices, libations, songs, dances, and games. Their sacred places were hallowed spots on hills or in groves; or special temples were provided with altars for libations and burnt offerings. A priesthood grew up, which gradually acquired privileges; the Augurs, Vestal Virgins, Pontifices, Sibyls, Fetiales, and Salii. The gods were grouped in sets as Jupiter, Juno, Minerva, the Capitoline deities of power, womanliness, and wisdom; Sol, Luna, Tellus, the stars; Orcus, Dives, Libitina, the infernal regions; Vulcan, Fire, and Vesta, the domestic hearth; Saturnus and Ops, agriculture; Pales, flocks: Faunus and Fauna, oracles; Parcæ, fates; Fortuna, luck; Lares, life, Manes, death, Penates, after death, the household gods; Mars, war, comes next to Jupiter. The Romans addressed their prayers directly to the god, without any mediator. This religion held firm hold of the people until the Roman simple and industrious life degenerated into luxurious ease, when it was replaced by unbelief, sectarianism, and mysticism, under mercenary and ignorant priests. Constantine the Great established Christianity as the state religion, and abolished the last trace of the Roman religion.

Römer, OLE, 1644–1710. Prof. of Mathematics and Astronomy at Copenhagen 1681; inventor of the transit instrument, and discoverer of the fact that light occupies an appreciable time in its passage through space.

Romero, MATIAS, b. 1837. Mexican minister at Washington 1863–68, 1882, and since 1884; Sec. Treasury 1868–73 and 1876–79.

Rome-Scot. See PETER'S PENCE.

Romilly, SIR SAMUEL, 1757–1818. London lawyer, knighted 1806; M.P. and Solicitor-gen. 1806; active and able reformer, especially of the criminal law, wherein his success was posthumous. *Speeches*, 1820; *Autobiography*, 1840.—His son, JOHN, 1802–1874, was M.P. 1832–35 and 1846–52, Solicitor-gen. 1848, Attorney-gen. 1850, Master of the Rolls 1851–72, and Baron 1866.

Romney, GEORGE, 1734–1802. English portrait painter, ranking next to Reynolds and Gainsborough.

Romsdal. Mountain valley of s.w. Norway, noted for its wild scenery. It comprises the R. Fiord, an inlet of the sea,

Veblungsnaes.

60 m. in length and on an arm of which are the villages R. and Veblungsnaes. Area 6,030 sq. m., pop. 117,200.

Romulus. Mythical founder of Rome. He and Remus, sons of the Vestal Rhea Silvia by Mars, were suckled by a wolf and reared by a shepherd. Disagreeing as to the site of their city, Remus was slain by R., who reigned 37 years, and was taken to heaven in a fiery chariot and worshiped under the name of Quirinus.

Romulus Augustulus. Last emperor of Rome 475–476; deposed by Odoacer.

Roncesvalles. In the Pyrenees: place where Roland, Charlemagne's paladin, is said to have been defeated and slain by the Basques 778. The French under Soult were defeated here July 25, 1813.

Rondeau. Short poem involving a refrain or repetition; popular in 17th century, and recently revived in English verse.

Rondeau, JOSÉ, 1773–1834. Argentine director or dictator 1815 and 1819–20; Pres. 1828–29.

Rondo. Musical form, frequently used for the last movement of sonatas, concertos and symphonies, copied after the French verse form, rondeau. In it the principal theme is repeated several times, like the literary refrain, the repetitions being separated by new themes called episodes.

Ronge, JOHANNES, 1813–1887. German-Catholic leader, excommunicated 1844, in exile 1849–61.

Ronins. Japanese swordsmen, subjects of a famous romance.

Ronsard, PIERRE DE, 1524–1585. French poet, founder of the classical school; extremely popular in his day. *Odes*, 1550–52; *Amours*, 1552–56; *Hymns*, 1555. *Works*, 1560–84.

Rood. See HOLY ROOD.

Rood. In Gothic Architecture, a crucifix, especially when placed upon a screen in front of the chancel.

Rood, OGDEN NICHOLAS, LL.D., b. 1831. Prof. of Physics at Columbia 1863; microscopist and inventor. *Modern Chromatics*, 1881.

Rood-Loft, or ROOD-SCREEN. Partition, sometimes of masonry, but more commonly of wood, between the nave or part appropriated to the congregation and choir, or place reserved for the clergy, in a church or cathedral. They were often of great elaboration and elegance. One of the most famous, a work of the French Renaissance, is in the church of St. Etiènne du Mont in Paris.

Rood Tower. Name sometimes given to a tower erected

at the crossing or intersection of the nave and transepts of a Gothic church.

Roof. In Mining, rock overlying a seam of coal or any nearly horizontal ore deposit; corresponding to the hanging-wall of veins or the more highly inclined deposits.

Roofs. The largest roof ever constructed was that over the Manufactures and Liberal Arts building at the World's Columbian Exposition of 1893 in Chicago. Its total width was 787 ft., supported by three trusses, and its length 1,687 ft., the total area being 30½ acres. The central court was covered with arches 210 ft. high and 368 ft. in span, and the entire floor area, including galleries, nearly 40 acres. The train shed of the Pa. R.R. at Philadelphia has a roof 304 ft. span and 598 ft. long, while that at Jersey City is 256 ft. span and 653 ft. long.

Roof Truss. Truss, containing tensile and compressive members, for supporting the roof covering of a building. See ROOFS.

Rooke, SIR GEORGE, R.N., 1650–1709. Rear-admiral 1689; knighted and pensioned for a battle with the French off Cape La Hogue 1692; prominent in war with Spain 1702 and the taking of Gibraltar 1704; engaged in a severe but indecisive battle with a French fleet off Malaga Aug. 1704; retired 1705.

Room. Portion of a coal mine in which the actual work of getting the coal is carried on; a breast or stall.

Roon, ALBRECHT THEODOR EMIL, GRAF VON, 1803–1879. Prussian Minister of War 1859–72 and of Marine 1861–71; reorganizer of the army; Count 1871, Field-marshal 1873.

Roosevelt, ROBERT BARNWELL, b. 1829. N. Y. Fishery Commissioner 1867; M.C. 1871–73; Minister to the Netherlands 1888–89; author of *Game Fishes*, 1860; *Game Birds*, 1866; *Florida*, 1868.—His nephew, THEODORE, b. 1859, U. S. Civil Service Commissioner 1889, Asst. Sec. Navy 1897, has pub. *Hunting Trips*, 1883; *War of 1812*, 1885; *Life of Benton*, 1887; *Ranch Life*, 1888; *Winning of the West*, 4 vols., 1889–95; *Hist. New York City*, 1891; *The Wilderness Hunter*, 1893.

Root. Descending axis of a plant. It is the organ which is most efficient in the absorption of water. It is generally entirely subterranean, but portions, or all of it, may be aerial. See SECONDARY ROOTS, AERIAL ROOTS, EPIPHYTES and PARASITES.

Root. In Philology, essential and primitive part of a word; monosyllabic, uninflected, without modifications of any sort, expressing the general idea at the basis of the word. It is the germ or nucleus of all later formations.

Root OF AN EQUATION. Value which, substituted for the unknown quantity, satisfies the equation.

Root OF A QUANTITY. One of its equal factors. The index of the root shows how many such factors enter into the quantity. A root is indicated by the radical sign $\sqrt{}$. Having the index of the root to the left and slightly above, as $\sqrt[3]{a}$, indicates the cube root of a; or by a fractional exponent having the index as the denominator, as $a.^{\frac{1}{3}}$, indicates the cube root of a. Roots are real or imaginary. Even roots of a negative quantity are imaginary: as two or any even number of negative factors give a positive product, there is no real factor, which, repeated an even number of times, will give a negative quantity. Any quantity has as many roots, real or imaginary, as the order of the root.

Root, GEORGE FREDERICK, Mus.Doc., 1820–1895. American composer of many popular songs.

Root, JESSE, 1736–1822. Delegate to Congress 1778–83; Chief-justice of Conn. 1796–1807. *Reports*, 1789–1802.

Root, OREN, D.D., L.H.D., b. 1838. Prof. Univ. Mo. 1866–71; pres. Pritchett Coll. 1871–80; Prof. of Mathematics, Hamilton Coll., 1881.—His brother, ELIHU, b. 1845, was U. S. Dist.-atty. in New York 1883–85.

Root and Branch Men. Opponents of Episcopacy in House of Commons 1641.

Root-Cap. Tip of an advancing subterranean root, composed of empty cells, pushed ahead by the formation of new ones immediately behind.

Root-Hairs. Cellular prolongations from the epidermis of roots. They form a very large portion of the absorbing surface.

Rootlets. Small roots, especially when the roots are numerous and all small.

Root Parasites. Plants which grow upon and derive their nourishment from the roots of other plants. Such are species of Thesium, the Rafflesias, and the broom rape or strangle weed, *Orobanche minor*, which develops upon the roots of many plants, especially that of clover in its second year.

Strangle Weed.

Rootstock. See RHIZOME.

Ropes. Ropes are made of manilla, of hemp, and of iron or steel with a hemp center. A hemp rope 1 in. in diameter has an ultimate strength of ab. 15,000 lbs., while one of wrought iron has 125,000 lbs. (see WIRE ROPE). Yarns are spun right-handed. Several yarns, formed into a strand or "ready," make it left-handed. Three strands laid up right-handed are called plain-laid or hawser-laid rope: four strands around a central core or heart of ab. ⅓ size of the strands are called shroud-laid; cable-laid is a left-handed rope of nine strands, each three being laid up in a group. Hemp makes the best ropes. To find strength of hemp rope in pounds, multiply the square of circumference in inches by 1371.4; or the breaking weight in tons = square of half the circumference. Ropes are known by their circumference measure.

Ropes, JOHN CODMAN, b. 1836. American writer on military history.

Roque, ST., d. 1327. Patron of plague patients.

Roquefort. Village of s.e. France, 44 m. n. by w. of Beziers; noted for its white cheeses.

Roqueplan, JOSEPH ÉTIENNE CAMILLE, 1802–1855. French genre and landscape painter.

Roraima. Isolated mountain in British Guiana on the Venezuelan frontier, rising on an immense parallelogram, 1,300–1,600 ft. high, with walls cut to the summit. Altitude 8,600 ft.

Rorke's Drift. In S. Africa, on the Tugela; defended by 80 British soldiers against 4,000 Zulus Jan. 22–23, 1879.

Rorquals. Whales with short, broad baleen plates, including Humpbacks, Finbacks, the California Gray Whale (30 to 70 ft. long), and the Sulphur Bottom or Razorback, the largest of living animals, ranging in length from 60 to 100 ft.

Rosa, CARL, 1842–1889. German violinist and manager, producer of English operas. See PAREPA-ROSA.

Rosa, PIETRO, ab.1815–1891. Italian archæologist and Senator, who did much for the study of Roman antiquities.

Rosa, SALVATOR, 1615–1673. Most romantic and inspired painter of the School of Naples; best in battle scenes and landscapes. His two best landscapes are in the Pitti Gallery at Florence, and have no superiors.

Salvator Rosa.

Rosaceæ. Natural family of flowering plants of the class *Angiospermæ* and sub-class *Dicotyledons*, comprising ab. 79 genera and 1,200 species, widely dispersed throughout all parts of the earth; called the Rose family.

Rosaceous. Corolla of plants of the *Rosaceæ*, having

broad rounded petals on very short claws; also flowers similar to roses.

Rosaniline. See FUCHSINE.

Rosa of Lima (ISABEL FLORES), 1586–1617. Peruvian nun, canonized 1671.

Rosario. City of the Argentine Republic, on the w. bank of the Parana; founded 1725. It has a large trade in grain, cattle, wool and hides, which it exports direct to Europe. Its growth and importance are of the last half century. Pop. ab. 75,000.

Rosary. 1. String of beads on which prayers are counted; used by Christians, Mohammedans, Buddhists, and Brahmins. The Mohammedan rosary has 100 beads; that universally employed by the Buddhists, as well as the Brahminical rosary used in Vishnu and Krishna worship, have 108. The rosary is clearly an inheritance from primitive conditions, and its original significance was cosmical, the beads referring to the various divisions of the terrestrial and celestial circuits. In R.C. Ch., the string usually has 5 beads for Paters and 50 for Aves, to keep tally of prayers repeated; it was probably brought to Europe from the East by Crusaders. 2. Set of R.C. prayers, each including 5 Paters, 5 Glorias, 50 Aves, and 5 Meditations. This is the lesser rosary, 3 of which constitute the greater.

Rosas, JUAN MANUEL DE, 1793–1877. Dictator of Buenos Ayres 1835–52, ruling by fear and blood; invader of Uruguay 1839 and later; attacked by England and France 1845; overthrown by a coalition with Brazil; in England from 1852; denounced by Argentine Congress 1861 as a murderer and robber.

Rosazurine B. $C_{36}H_{30}N_6O_6S_2Na_2$. Sodium salt of the compound, formed by the action of the diazo compound of tolidine on a methyl-β-naphtholsulphonic acid. It dyes cotton red without mordant, and is a brown powder. Other similar rosazurines are known.

Rosbeke. Village of Flanders, where Philip van Artevelde with 20,000 Flemings was defeated and slain by the French Nov. 27, 1382.

Roscelin, or RUCELINUS, ab.1050–ab.1122. French priest, Canon of Compiègne, condemned at Soissons 1092 for tritheism; teacher of Abelard, with whom he had a violent controversy; supposed founder of Nominalism.

Roscher, WILHELM GEORG FRIEDRICH, Ph.D., 1817–1894. Prof. Göttingen 1843, and Leipzig from 1848; prolific writer on political economy, of the historical school. *System der Volkswirthschaft*, 1854–88; *Geschichte der Nationalökonomie in Deutschland*, 1874.

Roscius, QUINTUS, d. 62 B.C. Greatest of Roman actors; most eminent in comedy.

Roscoe, WILLIAM, 1753–1831. English biographer of Lorenzo di Medici 1796, and Leo X. 1805. *Poems*, 1857.—His grandson, SIR HENRY ENFIELD, LL.D., D.C.L., F.R.S., b. 1833, Prof. of Chemistry at Owens Coll., Manchester, 1858–86, M.P. 1885, was knighted 1884. *Spectrum Analysis*, 1868; *Elementary Chemistry*, 1870.

Roscoelite. Rare mineral, resembling small scales of brown or greenish-brown mica, and containing an unusually large percentage of vanadium. It has been found in small quantity associated with gold in California.

Roscommon, WENTWORTH DILLON, EARL OF, ab.1633–1684. Irish poet. *Essay on Translated Verse*, 1660; tr. Horace's *Art of Poetry*, 1684.

Rose. Showy-flowered, prickly shrubs of the genus *Rosa*,

Rose.
a, Tea-rose; *b*, Hybrid perpetual.

natural family *Rosaceæ*, widely distributed throughout the n. temperate zone, and extensively cultivated for ornament. Their characteristics are shrubby growth, prickly stems, terminal flowers and leaves alternate. In color they are white, pink, yellow or red.

Rose, ERNESTINE LOUISE LASMOND (POTOWSKI), 1810–1892. Polish-American reformer, active for Woman's rights.

Rose, GUSTAV, 1798–1873. German mineralogist, widely known for his researches on the relations between crystalline form and physical properties. His *Mineral System*, 1852, is based on crystallographic and chemical principles. *Elemente der Krystallographie*, 1833. The science of Petrography originated with him, and he was the first to teach the method of studying rocks by means of their microscopic sections.—His brother, HEINRICH, 1795–1864, prof. Berlin from 1822, was eminent as an analytical chemist. *Handbuch*, 1829.

Rose, HUGH JAMES, 1795–1838. Prof. Durham 1833; pres. King's Coll., London, 1836; ed. *Encyc. Metropolitana*, 1836; active in the Tractarian movement, though a Cambridge man.

Rose, SIR JOHN, b. 1820. Canadian official, in England since 1869; knighted 1870.

Rose, THOMAS ELLWOOD, b. 1830. Col. U. S. Vols. 1863; organizer of a famous escape from Libby prison, Richmond, Feb. 1864.

Rose-Acacia. *Robinia hispida*. Bristly-stemmed shrub of the natural family *Leguminosæ*, bearing showy, rose-colored flowers, native of the s. Alleganies; much planted for ornament; called also Bristly Locust.

Roseala. Bright, usually dark-red rash accompanied with little or no fever. It occurs usually in children and is sometimes mistaken for scarlet fever or measles. The absence of the throat symptoms distinguish it from the former and of the cold in the head from the latter. The eruption lasts for a few days, is never severe, and hardly needs any treatment.

Rose Apple. *Eugenia jambos*. Small tree of the Myrtle family, native of the E. Indies, and cultivated in tropical countries for its ornamental flowers and fruit.

Rose-Bay. See RHODODENDRON and OLEANDER.

Rose Bengal. $C_{20}H_4Cl_2I_4O_5K_2$. Potassium salt of tetraiododichlorfluorescein, made by the action of iodine on dichlorfluorescein; brown powder, easily soluble in water. It dyes wool red in an acid bath.

Rosebery, ARCHIBALD PHILIP PRIMROSE, LL.D., EARL OF, b. 1847. Fifth Earl 1868; Foreign Sec. 1886 and 1892; Premier 1894.

Rosebug, or ROSE-CHAFER. Beetle, $\frac{3}{4}$ in. long, yellowish brown. It feeds on leaves, fruit, and flowers, preferring the rose. They appear on grapes about the time Concords are in bloom, and may be checked by spraying with water at 130° F., or whale-oil soap; or they can be collected by knocking off into sheets and killing with kerosene.

Rosebug, or Rose-chafer (*Cetonia aurata*), larva and cocoon.

Rosecrans, WILLIAM STARKE, U.S.A., b. 1819. Prof. at West Point 1843–47; Brig.-gen. 1861, Major-gen. U. S. Vols. 1862. He commanded the army of the Mississippi 1862, winning the battles of Iuka and Corinth, and that of the Cumberland, defeating Bragg at Murfreesboro Jan. 2, 1863, but beaten at Chickamauga Sept. 19–20. In 1864 he drove Price from Mo. He resigned from the army 1867; was Minister to Mexico 1868–69; M.C. from Cal. 1881–85, and Register U. S. Treasury 1885–93.

Rose Gall. Gall produced on roses by an insect. See GALLICOLA.

Rosegger, PETRI KETTENFEIER, b. 1843. Austrian novelist and poet, dealing with humble life in Styria.

Roseine. Usually rosaniline acetate; sometimes FUCHSINE (q.v.).

Roselius, CHRISTIAN, 1803–1873. Head of La. bar; Prof. Civil Law in Univ. La. from 1850.

Roselli, COSIMO, 1439–1507. Florentine painter. He has frescoes in the Sistine Chapel at Rome.

Rosellini, IPPOLITO, 1800–1843. Prof. Pisa 1824; in Egypt with Champollion 1827–28. *Monuments of Egypt and Nubia*, 12 vols., 1832–44.

Roselly de Lorgues, b. 1805. French author. *Christ before the Age*, 1835; *The Cross*, 1844; *Columbus*, 1856–85.

Rosemary. *Rosmarinus officinalis*. Shrub of the Mint

family, native of s. Europe; cultivated for its essential oil, used in perfumery; anciently used as a love charm, and regarded as an emblem of remembrance.

Rosen, FRIEDRICH AUGUST, Ph.D., 1805–1837. Prof Univ. London 1829. *Radices Sanscritæ*, 1827; ed. *Vedas*, 1836–38.

Rosendale Cement. Natural hydraulic cement, manufactured out of limestone from the Rosendale quarries near Rondout, N. Y.; also often any natural hydraulic cement. It is quicker setting but not as strong as the artificial Portland cement. See CEMENT and CEMENT TESTS.

Rosenkranz, JOHANN KARL FRIEDRICH, Ph.D., 1805–1879. Prof. Halle 1831, and Königsberg from 1833; historian of poetry and philosophy. *Hegel*, 1844–70; *Pedagogics*, 1848, tr. 1886.

Rosenmüller, JOHANN GEORG, 1736–1815. Prof. Erlangen 1773. Giessen 1783, Leipzig 1785; voluminous theologian. *Scholia in N.T.*, 10 vols., 1777–90.—His son, ERNST FRIEDRICH KARL, 1768–1835, Prof. Leipzig 1796, pub. *Scholia in V.T.*, 16 vols., 1788–1817, and *Analecta Arabica*, 1824–27.

Rosenmüller's Organ. See EPO-OPHORON.

Rose-Noble. English gold coin, minted ab. 1340–1420; value ab. $1.65.

Rosenthal, ISIDOR, b. 1836. Prof. Erlangen 1867; writer on physiology and biology.

Rosenthal, MORITZ, b. 1833. Prof. Vienna 1875; writer on the nerves.

Rose of Jericho. See RESURRECTION PLANT and ALTHÆA.

Rose of Sharon. *Hibiscus syriacus.* Ornamental malvaceous plant. The one mentioned in the Bible was probably a kind of narcissus. See RESURRECTION PLANT.

Roseroot. *Sedum roseum.* Fleshy herb of the natural family *Crassulaceæ*, growing in rocky places in the colder and Alpine regions of the n. hemisphere.

Roses, WAR OF THE. 1455–85, between princes of the houses of York and Lancaster, each claiming the throne by descent from Edward III. The York rose was white; that of Lancaster red.

Rose's Metal. Easily fusible alloy consisting of lead 1, tin 1, and bismuth 2. It expands up to 44° C., then contracts up to 69° C., when it has less volume than at 0° C., and then expands up to its mpt. 94° C.

Rose Quartz. Pink or pale red variety of quartz, transparent, and crystalline in structure. The color is supposed to be due to the presence of manganese. The mineral is commonly too easily cracked to be of use as an ornament.

Rosetta. Town of Egypt, near the Nile's mouth; taken by the French 1798; by the British and Turks April 19, 1801. The R. stone, discovered here 1799, received much attention, and was important in the study of hieroglyphics. It contains a tritingual inscription (hieroglyphic, demotic, and Greek) by means of which, aided also by a bitingual inscription on an obelisk, Champollion in 1822 obtained clews leading to the decipherment of the hieroglyphic writings. It is now in the British Museum.

Rosette. 1. Ambulacral areas of the dorsal surface of echinoids. 2. In Sponges, spicule consisting of several equal axes, each of which is terminated by trichites.

Rosette. In Botany, tuft of leaves arranged something like the petals of a doubled rose.

Rosetti, CONSTANTIN, 1816–1885. Roumanian poet, journalist, deputy, official, and senator.

Rose Water. Product obtained when rose petals and water are distilled. Sometimes oil of roses is used instead of petals.

Rose Window, or WHEEL WINDOW. In Gothic Architecture, a circular opening decorated with tracery, sometimes composed of circles and segments of circles, and sometimes arranged with reference to base radiating from the center like the spokes of a wheel.

Rosewood. Timber of numerous trees of tropical regions. The best is considered to be obtained from species of *Dalbergia*, natural family *Leguminosæ*, natives of tropical America.

Rosherville Gardens. Pleasure resort near Gravesend, Eng., formed by Mr. Rosher in old chalk-quarries.

Rosicrucians. Mystification, describing the disciples of the Rosy Cross as a wonderful society of semi-magicians and healers; set afloat probably by J. V. Andreä 1614. The pamphlet, *Fama Fraternitatis*, made a great sensation and led to much controversy. This and other works, 1615–16, professed to describe a society founded 200 years before by Christian Rosenkreutz, who had acquired the wisdom of the East by travel in Arabia and Egypt. Besides its medical secrets, it possessed the art of making gold.

Rosin. See COLOPHONIUM.

Rosin Bible. Name given to the Douay Bible, from Jeremiah viii. 22. See DOUAY VERSION.

Rosini, GIOVANNI, 1776–1855. Italian critic, poet, and writer of historical romances.

Rosin Plant. Coarse yellow-flowered herbs of the genus *Silphium*, of the Composite family, with an abundant resinous juice, natives of N. America.

Rosmini, ANTONIO, 1797–1855. Tyrolese priest, founder of an Institute of Brethren of Charity, 1830, for clerical education; philosophic writer of high grade, much calumniated and greatly honored. *Origin of Ideas*, 4 vols., 1830, tr. 1883–84; *Philosophic System*, 1845, tr. 1882; *Psychology*, 1846–48, tr. 1884–88; *Theosophy*, 5 vols., 1859–74.

Rosny, LEON DE, b. 1837. Prof. Paris 1868; writer on Chinese and Japanese philology and antiquities.

Rosolan. See MAUVE.

Rosolic Acid. $C_{20}H_{16}O_3$. Methylaurine. The pure acid can be made from rosaniline by diazotizing it. Commercially, it is not to be distinguished from AURINE (q.v.), in which it is present. It is used as an indicator in volumetric analysis. See CORALLIN.

Ross, ALEXANDER, 1699–1784. Scottish poet. *Helenore*, 1768.

Ross, ALEXANDER MILTON, b. 1832. Canadian naturalist.

Ross, EDMUND GIBSON, b. 1826. U. S. Senator from Kansas 1866–71; Gov. of New Mexico 1885.

Ross, GEORGE, 1730–1779. Delegate to Congress from Pa. 1774–77; signer of the Declaration of Independence.

Ross, JAMES, 1762–1847. Pa. Federalist, prominent in suppressing the whisky rebellion of 1794; U. S. Senator 1794–1803.

Ross, SIR JOHN, R.N., 1777–1856. Scottish Arctic explorer 1818 and 1829–33; knighted 1834; Rear-admiral 1851, after an expedition in search of Sir John Franklin *Voyage of Discovery*, 1819; *Navigation by Steam*, 1828; *Narrative*, 1835.—His nephew, SIR JAMES CLARK, R.N., F.R.S., 1800–1862, bore part in several Arctic voyages, discovered the north magnetic pole 1831, conducted a magnetic survey of the British isles 1835–38, explored the Antarctic seas 1839–43, was knighted 1844, and went in search of Franklin 1848. *Narrative*, 1847.

Rear-admiral Sir John Ross, K.C.B.

Ross, JOHN, ab. 1790–1866. Cherokee chief, leader in opposing the removal of his tribe from Ga. 1835.

Ross, SIR JOHN, b. 1829. English general, prominent in the Afghan war 1878–80; knighted 1880; Lieut.-gen. 1886; commanding in Canada 1888.

Ross, LUDWIG, 1806–1859. Prof. Halle 1845; student of Greek archæology.

Ross, ROBERT, 1770–1814. British officer, who won an action at Bladensburg, Md., Aug. 24, 1814, burned Washington, and was killed near Baltimore.

Ross, SIR WILLIAM CHARLES, R.A., 1794–1860. English painter, chiefly of miniatures, knighted 1842.

Rossall College. Public school founded 1844 on the coast of Lancashire, 2½ m. s.w. of Fleetwood, Eng. It has ab. 30 professors and ab. 400 students.

Rossbach. Village of Prussian Saxony, 22 m. w. by s. of Leipzig; scene of a rout of French and Austrians, Nov. 5, 1757, by Frederic II.

Rossbrunn. Village of Bavaria, scene of a Prussian victory July 26, 1866.

Rosse, WILLIAM PARSONS, 3D EARL OF, 1800–1867. M.P. 1821; Earl 1841; Peer for Ireland 1845; pres. Royal Society 1848–54; noted for his scientific researches, especially in Optics and Astronomy. In 1842 he constructed his great reflecting telescope of 6 ft. aperture, which is mounted at his observatory, Parsonstown, Ireland.

Rossel, ELIZABETH PAUL EDOUARD DE, 1765–1829. French Rear-admiral 1822; editor of several books of voyages and discoveries.

Rosselli, COSIMO. See ROSELLI.

Rossellini, BERNARDO, 1409–1464. Florentine sculptor and architect, restorer of many churches.

Rosser, THOMAS LAFAYETTE, b. 1836. Brig.-gen. C.S.A. 1863; Major-gen. 1864; prominent as a cavalry commander in Va.; chief engineer Canadian Pacific R.R. 1881–82.

Rossetti, CHRISTINA, 1830–1894. English poet, eminent for delicacy of style and depth of feeling; daughter of Gabriele. *Goblin Market*, 1862; *Prince's Progress*, 1866; *Singsong*, 1872; *A Pageant*, 1881. In prose, *Stories*, 1870; *Speaking Likenesses*, 1874; *Letter and Spirit*, 1883. Her poems, collected 1890, are mainly lyrical and often devotional.

Rossetti, GABRIEL CHARLES DANTE, called DANTE GABRIEL, 1828–1882. Son of Gabriele; English poet and painter; one of the founders of the preraphaelite school; a mystic and transcendentalist, whose pictures have a markedly individual stamp and character, but are not wholly free from affectation and self-consciousness. As a poet he ranks best. *The Blessed Damozel* is his most noted lyric. *Letters*, 1896.

Rossetti, GABRIELE, 1783–1854. Italian poet and patriot, proscribed 1821; prof. King's Coll., London, 1827. *Dante*, 1826; *Anti-papal Spirit*, 1832.—His oldest child, MARIA FRANCESCA, 1827–1876, pub. *A Shadow of Dante*.—His second son, WILLIAM MICHAEL, b. 1829, tr. Dante's *Hell*, 1865, ed. Shelley, 1869, and other poets, and pub. *Fine Art*, 1867, and *Life of Keats*, 1887.

Rossi, ERNESTO, 1829–1896. Italian actor, noted in Shakespearian parts: in the U. S. 1881.

Rossi, FRANCESCO DE, 1510–1563. Italian painter.

Rossi, GIOVANNI, 1754–1827. Italian writer of fables, comedies, and art studies.

Rossi, GIOVANNI BATTISTA, 1822–1894. Italian archæologist, noted for researches in the Catacombs. *Inscriptions*, 1861–88; *Subterranean Christian Rome*, 1864–77.

Rossi, PELLEGRINO, 1787–1848. Prof. at Bologna 1812, Geneva 1815, and Paris 1833; French envoy to Rome 1845. *Penal Law*, 1830; *Constitutional Law*, 1836; *Political Economy*, 1840.

Rossini, GIOACCHINO ANTONIO, 1792–1868. Italian operatic composer, in whose works the characteristics of the national style reached their climax. He produced his first opera 1810 and his last 1829. After the last date he lived chiefly in Paris, composing only a few trifles and the famous *Stabat Mater*,

Rossini.

1832. His best works are *Tancredi*, 1813; *L'Italiana in Algeri*, 1813; *Il Barbiere di Seviglia*, 1816; *Otello*, 1816; *Cenerentola*, 1817; *La Gazza ladra*, 1817; *Mosè in Egitto*, 1818; *Semiramide*, 1823; *Guillaume Tell*, 1829. His operas number 38, exclusive of revisions.

Rossiter, THOMAS PRICHARD, 1817–1871. N.A. 1849. American painter.

Rosso, IL, 1494–1541. Italian painter, much employed in France, especially in decorating the Château of Fontainebleau.

Rost, REINHOLD, 1822–1896. German-English Orientalist.

Rostellate. Diminutive of rostrate.

Rostellum. Conical projection, armed with hooks, on the head of *Cestodes*, as in the Tapeworm.—In Orchidology, projection from the column of the flower which bears the pollen-masses.

Roster. 1. Army list. 2. List of classes and studies in a college or school.

Rostock. City and river-port of Mecklenburg-Schwerin, on the Warnow, 9 m. from the Baltic; old Hanse town. Its small coinage is abundant ab. 1600–1865. Its university, founded 1418, rebuilt 1867, has 40 instructors, ab. 420 students, and a library of 140,000 vols. Pop., 1890, 44,388.

Rostoff. 1. Town of s. Russia, on the Don, near its mouth; founded 1761; important for commerce and manufactures. Pop. ab. 70,000. 2. Town of central Russia, 129 m. n.n.e. of Moscow; noted for its annual fair. Pop. ab. 17,000.

Rostopchin, FEDOR VASILIWICH, COUNT, 1763–1826. Russian general, Gov. of Moscow 1812. He denied the burning of the city, except his own house. *Works*, 1853.

Rostra. Name of the pulpit or orator's seat in the Roman Forum, which was decorated with the prows of vessels taken from the enemy.

Rostrate. In Botany and Zoölogy, organ extended into a slender prolongation or beak.

Rostrum. 1. Beak or sucking organ of certain insects. 2. Anterior prolongation of the carapace of Lobsters.

Rosulate. In Botany, organs arranged in a rosette.

Rosy Cross. See ROSICRUCIANS.

Rot. See SHEEP ROT.

Rotalidea. Order of perforate *Foraminifera*, with calcareous shells spirally coiled in such a way that all the turns are discovered upon one side and only the last turn upon the under side, where the terminal aperture is situated.

Rotary Engine. Steam engine in which it is sought to produce continuous rotation of the driving-shaft by the action of steam upon pistons borne at the end of a revolving crank in the cylinder. The steam enters at one point, acts upon the

Rotary Engine.

pistons by means of its pressure, and escapes at the opposite side, being obliged by the presence of an abutment (see ROTARY PUMP) to press so as to turn the shaft always in one direction, and to be prevented from passing from inlet to exhaust without doing work. The advantages of the rotary type of engine are direct application of the power on the shaft, compactness and portability, easy reversibility even from a distance, with no dead centers; all parts are inclosed within the casing, and not affected by weather or by missiles in quarry and similar work. The disadvantages are unequal wear of packing of pistons and consequent leakage, due to the different paths described by different points; excessive clearance and waste-room in the cylinder; the difficulty in attaining expansive working of the steam, and hence their extravagant use of steam; the difficulty in securing piston-area for large sizes, or, if area is obtained, adequate piston-speed. Expansive working of steam has been secured by compounding several engines on

the same shaft, each of larger size in succession and driven successively by the exhaust steam from the previous one. When packings and fit have worn somewhat, rotary engines are also noisy.

Rotary Gales. Those in which the winds gradually veer from one point of the compass to another until they have, at a given station, embraced a wide range of azimuth. See WHIRLWINDS and CYCLONES.

Rotary Pump. Machine for displacing water or other liquid by the continuous revolution of a piston or pistons rotating around a shaft. These pistons revolve in a casing, the two heads or ends being parallel, and the pistons fitting the heads fluid tight by means of packing or by a close fit. The pistons also fit such part of the casing as is cylindrical by similar means at their outer edge. Water enters at one side of the casing and leaves at the other. To separate the inlet and outlet parts of the casing, there has to be some sort of abutment or partition revolving with or displaced by the pistons, with which it shall always remain in water-tight contact. Such abutments are either revolving rings or else are a second series of revolving pistons, mates to the former, so that each functions alternately as piston and as abutment (see BLOWER). Such pumps deliver water continuously, can overcome considerable pressures, and have no shock from closure of valves. They are much used for fire purposes. See PUMP.

Rotate. Spreading wheel-shaped corolla of the Potato and related plants.

Rotation. Such motion of a body as takes place when every line in that body not parallel to a line called the axis of rotation is continually changing its direction, but without any motion, also of the body in the direction of that axis. Its velocity is called ANGULAR VELOCITY (q.v.).

Rotation of Crops. See CROP ROTATION.

Rotatoria (ROTIFERA, ROTIFERS; WHEEL-ANIMALCULES). Microscopic worms, with a conical body, whose posterior extremity forms a tapering segmented foot with forceps for attachment. The anterior end bears the trochal disk, on whose edge is a double circle of cilia. The mouth leads into a gizzard or mastax, provided with teeth that appear constantly in

Rotifers, magnified.

motion. The anus opens at the junction of the foot and body. There is a cerebral ganglion, a true vascular system is absent, but excretory organs are present. The sexes are separate; the males are often small, or wanting; parthenogenesis takes place in many forms. There are four groups, ZYGOTROCHA, SCHIZOTROCHA, GASTRODELA, and HOLOTROCHA (q.v.).

Rotatory Polarization. See POLARIZATION.

Roth, ALBRECHT WILHELM, 1757–1834. Physician and botanist at Vegesack, near Bremen. *Tentamen Floræ Germanicæ*, 1788–1800; *Catalecta botanica*, 1797–1806; *Manuale botanicum*, 1830.

Roth, JUSTUS LUDWIG ADOLF, 1818–1892. German geologist, mineralogist and petrographer. His *Allgemeinen und Chemische Geologie*, 1879, treats especially of the rock-forming minerals, their composition, and their transformations.

Roth, RUDOLF VON, 1821–1895. Prof. Tübingen from 1856. *Vedic Literature*, 1846; *Sanskrit Dict.* (with Böhtlingk), 7 vols., 1852–75.

Rothe, JOHANN ANDREAS, 1688–1758. German hymnist.

Rothe, RICHARD, 1799–1867. Prof. Wittenberg 1828–39, Bonn 1849–54, Heidelberg 1839–49 and from 1854; theologian of a lofty and independent type, strongly anti-clerical, ignoring any distinction between sacred and secular. His *Beginnings of the Ch.*, 1837, made it the Church's function to spiritualize the state and then retire. His *Theol. Ethik*, 3 vols., 1845–48, identified morals with religion. His *Dogmatik*, 3 vols., 1870–71, made the Bible a mere record of revealed truth. *Sermons*, 1869–72, tr. 1877; *Still Hour*, 1872, tr. 1886.

Rothermel, PETER FREDERICK, 1817–1895. American historical painter.

Rothesay. Capital of Buteshire, 40 m. w. of Glasgow; noted as a summer resort, and for its ruined castle. Pop., 1891, 9,034.

Rothrock, JOSEPH TRIMBLE, M.D., b. 1839. Prof. of Botany in Univ. Pa. 1877. *Flora of Alaska*, 1867.

Rothschild, MEYER ANSELM, 1743–1812. Founder of a banking-house at Frankfort.—His son, NATHAN, 1777–1836, introduced the negotiation of foreign loans into England, and supplied the Allies against Napoleon with funds.—His son, LIONEL NATHAN, 1808–1879, was the first Jewish member of Parliament 1858–74.—His son, LIONEL NATHANS, b. 1840, was made a Baron 1885.

Rotifers. See ROTATORIA.

Rotrou, JEAN DE, 1609–1650. French dramatist. His best comedy is *Don Betrand;* his chief tragedies are *St. Genest* and *Venceslas;* the latter long held the stage. His 35 extant plays were collected in 5 vols., 1820–22.

Rotteck, KARL WENCESLAUS RODECKER VON, 1775–1840. Prof. Freiburg 1798–1832; deprived for liberalism. His *Universal History*, 9 vols., 1813–26, was highly valued.

Rottenstone. Soft and crumbly variety of stone, consisting chiefly of fine siliceous grains; used as a polishing material. See TRIPOLI.

Rotterdam. Important commercial city of s. Holland, on the Maas, 20 m. from its mouth; taken by Buderode 1488,

Rotterdam.

by Austrians 1489, and by Spaniards 1572; birthplace of Erasmus. It has varied manufacturing industries. Pop., 1890, 203,472, having nearly doubled in 30 years.

Rotunda. Space beneath a dome.

Rouarie, ARMAND TAFFIN, MARQUIS DE LA, 1756–1793. In the American service 1777–83; royalist leader in Brittany 1791–92.

Roubaix. Town of n. France, 6 m. n.e. of Lille, having large woolen manufactures; of recent growth. Pop., 1891, 114,917.

Roubillac, LOUIS FRANÇOIS, 1695–1762. French-English sculptor.

Rouble. Russian silver coin, unit of their system; valued at 100 kopecks, or (nominally) 77 cents.

Roudaire, FRANÇOIS ELIE, 1836–1885. French officer, author of the project (1873–76) of letting the waters of the Mediterranean into the Sahara.

Rouen. Ancient capital of Normandy, on the Seine, 87 m. n.w. of Paris; captured by Philip II. 1204, by Henry V. of England 1419, and by the French 1449. Joan of Arc was burned here 1431. It resisted Henry IV. 1592. The Cathedral and the Church of St. Ouen are famous specimens of Gothic archi-

tecture. The former was built 1200–20, and is 434 ft. long by 103 wide, 89 ft. high at the nave, and 470 in the transept. It contains the tomb of Richard Cœur de Lion. There are a public library of 110,000 vols., a picture gallery, a botanical garden, and large cotton and woolen manufactures. Pop., 1891, 112,352.

Rouge. See SONGKOI.

Rougé, OLIVIER CHARLES CAMILLE EMMANUEL, VICOMTE DE, 1811–1872. Keeper of Egyptian Antiquities at the Louvre 1849; prof. Coll. de France 1860. He wrote much on the monuments and inscriptions of Egypt.

Rouge et Noir, TRENTE ET QUARANTE, or TRENTE ET UN. Game of chance, invented in France in 1789, prohibited there 1838 and in Germany in 1872. It is played with 6 packs, the court-cards counting 10, the others, including the aces, according to the number of pips. The dealer deals cards for the Noir, laying them side by side, face upward, till their value is 31 or more; he then deals similarly for the Rouge. Whichever is nearer to 31 wins. Couleur wins if the first card dealt is of the some color as the winning color; Inverse wins if the first card is of the opposite color. The players therefore may win upon 2 of the 4 points. When the deals each amount to 31, the players pay half their stakes to the bank, or the whole is placed in Prison, to await the result of the next deal. The above is called Refait de trente-et-un, and the chance of its occurrence is 1 in 64. When the two deals are alike, 32 or more, neither the players nor the bank win. The name, taken from the colors of the suit marks on French and English cards, may be traced back through them to primitive culture, in which the two colors, one symbolic of life, day, and the masculine principle, the other of death, night, and the feminine principle, constantly occur as symbols in divinatory games. This game and Roulette are played at Monte Carlo.

Rouget, GEORGES, 1781–1869. French historical and portrait painter.

Rouget de Lisle, CLAUDE JOSEPH, 1760–1836. Author of the *Marseillaise*, words and tune, April 25, 1792. His *Essais*, 1796, and other works are insignificant.

Rough-Cast. Thin plaster of lime and gravel, thrown on the outside of a wall.

Rouher, EUGÈNE, 1814–1884. Chief adviser of Napoleon III.; Minister of Justice 1849–52, of Commerce 1855–63, of State 1863–70; Senator 1856; Bonapartist Deputy 1872–75.

Roulette. Game of chance invented in Paris 1789, and forbidden 1838 and in Germany 1872; played by means of an ivory ball and a wheel in motion, the latter being set in motion in one direction and the ball in the inverse; the latter finally rolls into a compartment in the wheel. These compartments are alternately red and black, and are numbered from 1 to 36, with 0 and 00. The stakes are laid on the number of the compartment into which the ball rolls. If successful, the player receives 35 times the stake. Winning on one of a column of 12 numbers, as shown on the table, he receives 3-fold; on 6 numbers, 6-fold; 4 numbers, 9-fold; 3 numbers, 12-fold; 2 numbers, 18-fold; on Rouge red, Noir black, Pair even, Impair odd, Manque 1 to 18, Passe 19 to 36, he wins the amount of his stake. The ball in 0, those betting on Noir, Pair and Passe lose; those betting on Rouge, Impair and Manque have their bets in prison for the result of the next round. If the ball goes into 00, those betting on Rouge, Impair and Manque lose and the others stand over. One of these two last events happens once in 38 rolls, from which the bank derives a profit of 2½ per cent on all stakes, in addition to 5 per cent on the other stakes.

Roulette Table.

Roulettes. Curves traced by a fixed point connected with a curve which rolls without sliding upon any fixed curved base.

Roumania. Kingdom of s. Europe, formed 1859 by the union of Moldavia and Wallachia; area 49,463 sq. m. The country is mainly flat or undulating. The government is a limited monarchy. The capital is Bucharest. Prince Charles of Hohenzollern became its ruler 1866, and king 1881. The Dobrudja was added 1878, and Bessarabia taken by Russia. Pop. ab. 5,750,000.

Roumanian. See WALLACHIAN.

Roumelia. Turkey in Europe. "Eastern R." was joined to Bulgaria 1885.

Round-abouts. Progressive revolving gales of Redfield and Reid, or cyclones of modern meteorology; so called only in the Bermudas.

Roundheads. Puritans or Parliamentarians in England during the Civil War; so called by the Cavaliers from wearing their hair short, while Royalists wore it long.

Round House. Building, usually semicircular, for housing and cleaning locomotives, the walls being usually of brick, with wooden or iron roof-trusses. A turn-table in front serves to reverse all the locomotives, or to transfer any one to another track. Smoke-stacks are provided over each stall.

Round Robin. Remonstrance or petition signed in a circle, so that no one appears the leader in it; supposed to be of French origin.

Round Table. In Arthurian legend, made by Merlin, and given to Arthur at his marriage with Guinevere by her father. It seated 150 knights, and had a place also for the Holy Grail. There was a smaller Round Table for the accommodation of 12 favorite knights.

Round Tower. Built by Christians and for Christian purposes, between the 5th and 13th centuries. They are frequently described as bell towers and as treasuries and places

Round Tower, Ardmore, Ireland.

of refuge, and for the purpose of displaying lights. Most of them are found in Ireland and Scotland. In nearly all cases they seem to have been connected with a church.

Roundway Down. Hill in Wiltshire, near Devizes, Eng.; scene of a defeat of Waller and his parliamentary troops by royalists under Lord Wilmot, July 13, 1643.

Round-Worms. See NEMATHELMINTHES.

Roup. Disease of gallinaceous birds, existing in many forms. The symptoms are swelled eyes and heads, discharge from nostrils, hoarse breathing and drooping wings. It is incurable.

Rouquette, ADRIEN EMMANUEL, 1813–1887. R. C. missionary to La. Indians; poet, writing in French and English, as did his brother, FRANÇOIS DOMINIQUE, b. 1810.

Rous, FRANCIS, 1579–1659. Provost of Eton and M.P. 1643 lay member of the Westminster Assembly. His *Psalms* 1641, were recommended to that body by the Commons, and after revision by it and by two Scotch committees was adopted by the Kirk, which has used it since 1650.

Rousseau, JEAN BAPTISTE, 1670–1741. French lyric poet, banished 1712. *Works*, 1723.

Rousseau, JEAN JACQUES, 1712–1778. Swiss-French author of unquestioned genius and great influence, but of wandering and disreputable life. His principal books are *The New Heloïse*, 1760, a sentimental romance; *The Social Contract*, 1762, full of radical politics; *Emile, or Education*, 1762, which caused his condemnation and exile till 1770; and the extraordinary *Confessions*, partly written in England 1766–67, when sheltered by Hume. His *Works* were collected in 10 vols. 1764 and in 25 vols. 1822.

Rousseau and Madame D'Épinay.

Rousseau, LOVELL HARRISON, 1818–1869. Ky. lawyer and Senator; Brig.-gen. U. S. Vols. 1861, Major-gen. 1862, serving in the West; M.C. from Ky. 1865–67; Brig.-gen. U.S.A. 1867.

Rousseau, PHILIPPE, 1816–1887. French painter, chiefly of animals.

Rousseau, PIERRE ÉTIENNE THÉODORE, 1812–1867. Greatest landscape artist since Constable, by whom he was influenced and inspired; leader in modern French landscape; long unrecognized by the French academic school; a poetic nature of vigorous power, broad execution, and absolutely true feeling in color.

Roussel, GERARD, ab.1480–ab.1550. French reformer; Bp. of Oleron 1536.

Rousset, CAMILLE FELIX MICHEL, 1821–1892. French historian; Academician 1871. *Louvois*, 4 vols., 1861–63; *Crimean War*, 1877; *Algeria, 1830–40*, 1887.

Routh, MARTIN JOSEPH, D.D., 1755–1854. Pres. Magdalen Coll., Oxford, from 1791. His *Reliquiæ Sacræ*, 5 vols., 1814–48, collected the fragments of Christian writers before 300, whose works in the main were lost.

Roveredo. Tyrolese town, on the Adige, 14 m. s. of Trent; scene of a French victory over Austrians Sept. 3–4, 1796; birthplace of Rossmini. Pop., 1890, 9,030.

Rovigo, DUKE OF. See SAVARY.

Rovuma. River of e. Africa, rising e. of Lake Nyassa and flowing e. to the Indian Ocean; explored 1862. Length ab.470 m.

Row, JOHN, ab.1525–ab.1575. Scottish reformer.—His son JOHN, 1568–1646, left a *History of the Kirk*, pub. 1842.

Rowan, JOHN. 1773–1853. M. C. from Ky. 1807–9; U. S. Senator 1825–31; Minister to Naples 1848–50.

Rowan, STEPHEN CLEGG, U.S.N., 1808–1890. Commodore 1862; active on the Atlantic coast 1861–64; Rear-admiral 1866.

Rowan-Tree. European Mountain-ash. *Sorbus aucuparia.*

Rowe, ELIZABETH (SINGER), 1674–1737. English sacred poet.

Rowe, NICHOLAS, 1674–1718. English dramatist; ed. Shakespeare 1709; tr. Lucan's *Pharsalia*, 1718. *Tamerlane*, 1702; *Jane Shore*, 1714.

Rowing. One of the most popular of modern pastimes. As a racing amusement it is principally continued by university boat clubs, though other amateur clubs and a few professional scullers engage in it. The favorite courses and distances are, in England, the Putney course on the Thames from Putney to Mortlake, four miles and a quarter, and the Henley course, a mile and five hundred yards. In America the favored courses are the Thames at New London, the Hudson at Poughkeepsie, the Connecticut at Springfield, and Saratoga Lake, each four miles; in Australia the Paramatta River, four miles. The records are affected materially by the fact that in a majority of these courses there is a more or less perceptible current. The record for the Putney course is 18 min. 47 sec., for New London 20 min. 10 sec., for Poughkeepsie 19 min. 29 sec., for Springfield 22 min. 2 sec. All these records were made by eight-oared crews in shells. The Oxford-Cambridge and Yale-Harvard rowing contests alone have lasted through a long succession of years; but the Henley races have also furnished a meeting-place where comparisons of style and speed during a term of years could be made.

Rowland, HENRY AUGUSTUS, b. 1848. Prof. of Physics at Johns Hopkins Univ. 1876; writer on magnetism.

Rowlandson, THOMAS, 1756–1827. English caricaturist, vigorous and coarse.

Rowley, WILLIAM, ab.1585–ab.1642. English dramatist.

Rowson, SUSANNA (HASWELL), 1762–1824. Anglo-American actress, novelist, and dramatist.

Rowton Heath, BATTLE OF. Near Chester, Sept. 24, 1645; royalist defeat.

Roxana, d. 311 B.C. Queen of Alexander 327 B.C.

Roxburgh, WILLIAM, 1759–1815. Director of the Gardens in Calcutta. *Flora Indica*, 1832.

Roxburghe Club. Practical prototype of the true BOOK CLUB (q.v.), instituted in England 1813, in commemoration of the sale of the Duke of Roxburghe's library. It prints MSS. and rare works for its members. At the Roxburghe sale the first edition of the *Decameron* brought £2,260, perhaps the highest price ever paid for a single printed volume.

Roxburghiaceæ. Natural family of flowering plants, of the class *Angiospermæ* and sub-class *Monocotyledons*, comprising 3 genera and ab. 8 species of herbs, natives of the tropics of Asia and Australia, Japan, and Florida.

Roy, WILLIAM, 1726–1790. British Major-gen. 1781; Surveyor-gen. of coasts; pioneer of geodesy. *Military Antiquities*, 1793.

Royal, JOSEPH, b. 1837. Canadian editor, author, and legislator.

Royal Academy. Founded in London 1768; the Hibernian Academy in 1823, and the Scottish Academy in 1826. They are devoted to Art.

Royal Academy of Music. Founded 1823 in England by Lord Burghersh.

Royale, ISLE. Island of Mich., in Lake Superior. It has copper and silver mines.

Royal Geographical Society. Founded in London 1830. It has near 3,800 members.

Royal George. Vessel sunk at Spithead, Aug. 29, 1782, with Admiral Kempenfelt and nearly 900 men.

Royal Institution. Founded 1799 in England for the promotion of science, pure and applied, by lectures, and later by systematic teaching and research.

Royall, ISAAC, ab.1720–1781. Mass. loyalist, in exile from 1775; founder of the law chair at Harvard.

Royal Military Asylum. Educational government institution at Chelsea, Eng., established by the Duke of York 1803, and by whose name it is often known, for the education of sons, usually orphans, of British soldiers. A similar institution is at Dublin.

Royal Society. Outgrowth of meetings of men of scientific tastes, begun 1645; chartered 1662. It has now ab.500 Fellows and a library of near 50,000 vols., and publishes its *Proceedings* and *Philosophical Transactions*. A similar society, organized in Edinburgh 1783, has over 500 Fellows.

Royalty. Sum paid to the owner of a copyright, patent, or mine, on sales of the book or article, or amount of mineral produced.

Royce, JOSIAH, b. 1855. Prof. Harvard 1885. *California*, 1886; *Spirit of Modern Philosophy*, 1892.

Royce, STEPHEN, LL.D., 1787–1868. Judge Vt. Supreme Ct. 1829–46; Chief-justice 1846–52; Gov. 1854–56.—His nephew, HOMER ELIHU, b. 1820, was M.C. 1857–61, Judge of Vt. Supreme Ct. 1870–82, and then Chief-justice.

Roye, EDWARD JAMES, 1815–1872. Chief-justice of Liberia 1865–68; Pres. 1870.

Royer-Collard, PIERRE PAUL, 1763–1845. Prof. of Philosophy in Paris 1811; Deputy 1815; founder of the Doctrinaire school 1820; Academician 1827; pres. Chamber 1828.

Royle, JOHN FORBES, F.R.S., 1800–1858. Anglo-Indian botanist. *Himalaya Mts.*, 1839.

Ruatan, or RATTAN. Long, narrow island in the Bay of Honduras, belonging to Honduras since 1860. Area 106 sq. m., pop. ab. 2,000.

Rubber. See CAOUTCHOUC.

Rubber. Pad or cushion which in the earlier forms of electrical machines pressed against the glass cylinder or plate,

and by its contact with the moving surface generated the electricity. This cushion was made of leather, and was generally covered with an amalgam of zinc, tin, and mercury.

Rubble. Masonry formed of unsquared stones having only the rough projections knocked off, and laid either dry or with

Uncoursed rubble walling. Coursed rubble walling.

cement. It is often plastered on both sides, but only pointed externally. The cost is ab. $4 per cu. yard.

Rubefacients. Agents capable of producing redness of the skin and thus congestion by local contact. They are used to relieve undue irritability of deep-seated organs. Those most employed are heat, turpentine, capsicum, mustard, and ammonia.

Rubellane. Reddish product of the decomposition of the mineral biotite, once regarded as forming an independent mineral species.

Rubellite. Red variety of the mineral tourmaline.

Rubens, PETER PAUL, 1577–1640. Greatest Flemish painter. He studied in Italy, where he perfected himself in color. His *Descent from the Cross* is in the Antwerp Cathedral, and several of his best works in the Antwerp Gallery. His series of pictures in the Louvre, representing the life of Maria Medici, are inferior and largely by scholars. Outside of Antwerp his

The Descent from the Cross, by Rubens.

finest works are in Munich, but there are numerous examples elsewhere; *e.g.*, beautiful portraits at the Hague and in London. R. was an extremely prolific artist of vigorous and exuberant nature, sometimes tending to coarseness of type and form, but always vital and serious in his authentic work. His subjects are mainly religious, mythologic, or portrait, but his few landscapes are of the first rank. He was throughout life associated with princes, and often employed in their negotiations as ambassador.

Rubeola. See GERMAN MEASLES and MEASLES.

Ruberythric Acid. $C_{26}H_{28}O_{14}$. Lemon-yellow needles, obtained from madder-root by extracting with boiling absolute alcohol. It gives a golden-yellow solution in alcohol and a blood-red in alkalies. Rochleder considers rubian to be impure ruberythric acid.

Rubi, TOMAS RODRIQUEZ, b. 1817. Spanish writer of comedy.

Rubiaceæ. Natural family of flowering plants, of the class *Angiospermæ* and sub-class *Dicotyledons*, comprising ab. 375 genera and ab. 5,000 species, distributed throughout all parts of the earth; called the Madder family.

Rubian. $C_{26}H_{34}O_{15}$. Glucoside in madder-root. It is very soluble in water, but insoluble in ether. Its solution is very bitter, and, upon treating with baryta, yields RUBERYTHRIC ACID (q.v.).

Rubicelle. Yellow or yellowish-red variety of the mineral spinel.

Rubicon. Stream of n.e. Italy, by the passage of which Cæsar declared war against the Roman republic.

Rubidium. Rb. At. wt. 85.5, sp. gr. 1.52, mpt. 38.5° C., valence I.; discovered by Bunsen and Kirchhoff 1860 by means of the spectroscope; found in the mineral lepidolite; silvery-white metal with a yellowish tint. Its vapor is blue, it takes fire in the air, and decomposes water. It is made by the electrolysis of its chloride. The element and its compounds are rare.

Rubidium Bromide. Similar to the CHLORIDE (q.v.).

Rubidium Carbonate. Rb_2CO_3. White substance, mpt. 837° C. Its solution is strongly alkaline. It is made by treating the hydroxide with ammonium carbonate and evaporating.

Rubidium Chloride. RbCl. It crystallizes in cubes, sp. gr. 2.20, is soluble in water, and is made by neutralizing the hydroxide with hydrochloric acid.

Rubidium Hydroxide. RbOH. Grayish-white, porous, brittle substance, which melts and volatilizes at a red heat. Its solution has an alkaline taste and reaction. It is made by precipitating the sulphate with baryta water.

Rubidium Iodide. Similar to the CHLORIDE (q.v.).

Rubidium Nitrate. $RbNO_3$. Long needles or dihexagonal columns; made by neutralizing the hydroxide with nitric acid and evaporating. It melts at a red heat.

Rubidium Oxide. Ru_2O. Formed by the action of the air upon the metal. It ignites more readily than potassium.

Rubidium Sulphate. Rb_2SO_4. Large, hard, reflecting rhombic crystals, isomorphous with potassium sulphate and of similar taste. It decrepitates on heating, melts at a white heat, and is made by neutralizing the hydroxide with sulphuric acid.

Rubine. See ACID FUCHSINE.

Rubini, GIOVANNI BATTISTA, 1795–1854. Italian opera tenor, in Paris and London 1832–43.

Rubinstein, ANTON GREGOR, 1829–1894. One of the greatest of pianoforte players and most eminent of recent com-

Anton Gregor Rubinstein.

posers. His parents were Jews living in Russia. His teacher took him to Paris 1840, where Liszt advised him to complete his studies in Germany. For three years he made concert tours

in England, Scandinavia, and Germany, and in 1844 was sent to study composition in Berlin. Thence he was driven home by the revolution of 1848. Thereafter he devoted himself to teaching, conducting, composing, and concert-giving. In 1859 he became conductor of the Russian Music Society; in 1862 he founded the St. Petersburg Conservatory, of which he was director 1862 and 1887–90. He made a concert tour in the U. S. 1872–73. His compositions are numerous in all forms, and include several examples of a form half-way between opera and oratorio, which he called Biblical Opera. Of his operas the best known are *Feramors*, 1863, *Der Dämon*, 1875, and *Nero*, 1879. His *Ocean* and *Dramatic* symphonies have maintained places in the concert repertoires; his D minor concerto for pianoforte is a favorite work of its kind in all countries.—His brother NICHOLAS, 1835–1881, founded a music society in Moscow 1859 and in 1864 the Moscow Conservatory, of which he was director till his death.

Ruble. See ROUBLE.

Rublee, HORACE, 1829–1896. Ed. Madison, Wis., *Journal*, ab.1858–59; U. S. Minister to Switzerland 1869–77; ed. Milwaukee *Sentinel* from 1881; long chairman Republican State Committee; active reformer, and leading journalist of Wis.

Rubrics. Directions in a prayer-book; orig., titles of law chapters, written in red.

Rubruquis, WILLIAM OF, ab.1220–ab.1293. French monk, traveler in Asia 1253–54.

Ruby. 1. The oriental ruby is a deep red, transparent variety of corundum, next to diamond in hardness, and in

Ruby Mines in Upper Burmah.

some cases exceeding the diamond in value. The finest stones come from Pegu in Burmah. A few small gems have been found in the corundum of N. C. 2. Red spinels and garnets.

Ruby Blende. Red, transparent, crystallized variety of sphalerite.

Ruby Copper. More finely colored varieties of cuprite or red copper ore.

Ruby Silver. Pyrargyrite and proustite.

Ruchat, ABRAHAM, 1678–1750. Prof. Lausanne 1733. *Hist. Swiss Reformation*, 6 vols., 1727–28.

Rückert, JOHANN MICHAEL FRIEDRICH, 1788–1866. German lyric poet and translator, notable for fluency, philosophic thought, and oriental learning; prof. Erlangen 1826, and Berlin 1840–48.

Rudagi, FARID AD-DIN MUHAMMAD, ab.890–ab.954. Persian poet.

Rudbeck, OLOF, 1630–1702. Swedish historical and scientific writer; prof. Upsala. *Atlantica*, 4 vols., 1675–1702; *Campi Elysii*, 1701–2.

Rudder. See STEERING.

Ruddiman, THOMAS, 1674–1757. Scottish printer and librarian, ed. Livy 1751. *Latin Rudiments*, 1714. His *Grammar*, 1725–32, was long in use.

Rude, FRANÇOIS, 1784–1855. French sculptor.

Ruderal. Plants growing in waste places.

Rudimentary Organ. One not fully developed and of no use to the adult animal or plant, although it may have served a purpose in the embryo. In any case its presence is not disadvantageous enough to the animal or plant to have set in operation the forces that could remove it, whether through natural selection or otherwise.

Rüdinger, NICOLAUS, b. 1832. Prof. Munich 1881; writer on anatomy.

Rudini, ANTONIO DI, b. 1839. Italian Prime Minister 1891–92 and 1896.

Rudlieb. First European prose fiction; written ab.1050 in Latin verse, embodying old German hero-legends.

Rudolf I., 1218–1291. German emperor from 1273; son of Albert of Hapsburg; founder of the State and dynasty of Austria; capable and upright ruler.

Rudolf II., 1552–1612. Son of Maximilian II. and grandson of Charles V.; King of Hungary 1572, of Bohemia 1575; emperor 1576; feeble and bigoted. He persecuted Protestants, provoked revolts, and was practically deposed by his brother Matthias.

Rudolf, CHRISTOF, d. ab. 1550. German mathematician, author of an algebra, *Die Coss*, 1525. He introduced the radical sign.

Rudolf, LAKE. In e. Africa, lat. 2° 16′ to 4° 47′ N.; discovered 1888 by Count Teleki. Area 3,500 sq. m.

Rudolphine Tables. Astronomical calculations begun by Tycho Brahe and continued by Kepler; named from Rudolf II., who undertook the expense, but failed.

Rudra. In Vedic Mythology, a collective name of the gods of the tempest. In Puranic Mythology, a name of Siva, and Rudras are his offspring.

Rue. *Ruta graveolens.* Odorous herb of the natural family *Rutaceæ*, native of Europe, frequently cultivated in gardens. The volatile oil of rue is used in medicine.

Rue (*Ruta graveolens*).

Rue-Anemone. *Syndesmon thalictroides;* known also as *Thalictrum anemonoides;* vernal, white, or pink-flowered herb of the natural family *Ranunculaceæ*, native of e. N. America.

Rueda, LOPE DE, 1500–1565. Spanish dramatist and poet, styled by Cervantes "the great." *Pastorals*, 1576.

Ruff. Snipe-like bird of Europe, Asia and Africa. The males are adorned with a brilliant neck-shield during the

Ruff (*Totanus pugnax*).

pairing season, and fight for supremacy in their harems. Ruff is the male and Reeve the female. The shield, which can be

elevated, consists of stiff feathers, and is developed both for protection and to attract the females. Its color is most varied, ranging in different individuals from black through brown to white, with bars and streaks, and glossed with green and blue. These birds summer in n. Europe and Asia.

Ruffed Grouse. See GROUSE.

Ruffin, ARMAND GUSTAVE, 1731–1789. French explorer of the Amazon and Orinoco.

Ruffin, EDMUND, 1795–1865. Agricultural writer of Va. He fired the first shot at Fort Sumter 1861.

Ruffin, THOMAS, LL.D., 1787–1870. Chief-justice of N. C. 1829–52 and 1856–58.

Ruffner, HENRY, D.D., LL.D., 1789–1861. Prof. Washington Coll., Va., 1819–37, pres. 1837–48. *Fathers of the Desert*, 1850.

Rufiji, or LUFIJI. River in German e. Africa, flowing n.e. and e. into the Indian Ocean.

Rugby School. 83 m. n.w. of London; founded 1567. It has some 500 students and an income from endowment of ab. £5,000. Dr. Thomas Arnold, headmaster 1828–42, made it famous and influential.

Ruge, ARNOLD, 1802–1880. German Socialist, in England from 1849; prolific writer in prose and verse. *Aus früherer Zeit*, 4 vols., 1863–67.

Rugen. Prussian island in the Baltic. Grain and cattle are exported and the fisheries are important. Area 361 sq. m.; pop., 1890, 45,185.

Ruger, THOMAS HOWARD, U.S.A., b. 1833. Brig.-gen. U. S. Vols. 1862, serving in Va. and the West; supt. at West Point 1871–76; Brig.-gen. U.S.A. 1886; Major-gen. 1896.

Ruger, WILLIAM CRAWFORD, 1824–1892. Chief judge N. Y. Court of Appeals from 1882.

Ruggles, BENJAMIN, 1783–1857. U. S. Senator from Ohio 1815–33.

Ruggles, SAMUEL BULKLEY, LL.D., 1800–1881. New York lawyer; Canal Commissioner 1840–42 and 1858.

Ruggles, TIMOTHY, 1711–1795. Mass. loyalist, in exile from 1775.

Rugosa. Corals with many symmetrically arranged septa in multiples of four. They are all Palæozoic; *e.g.*, *Cyathophyllum*. The members of this group differ from the Madrepore corals in a few other particulars, as in having fossulæ and tabulæ, in budding from the calyx, and in the absence of cœnenchyma in compound forms.

Rugose. Wrinkled surfaces, especially those of some leaves and fruits.

Rugulose. Diminutive of Rugose.

Ruhmkorff, HEINRICH DANIEL, 1803–1877. German-French electrician, inventor of a thermo-battery 1844 and an induction coil 1851.

Ruhmkorff Coil. See INDUCTORIUM.

Ruhnken, DAVID, 1723–1798. Prof. Leyden 1761. Here he labored with Hemsterhuis, and annotated Greek and Latin authors, and aided in the spread of Greek learning. *Epistolæ Criticæ*, 1749–51.

Ruhr. River of w. Prussia, rising on the Belgian frontier, emptying into the Meuse at Rœrmond. Length 67 m.

Ruisdael, or **Ruysdael,** JACOB VAN, ab.1630–1682. Great-

The Swamp, by Jacob Ruisdael.

est Dutch landscape painter, of poetic and romantic temperament, who found in nature his own moods.—His father, IZACK, d. 1677, and uncle, SOLOMON, 1600–1670, were subordinate talents. His best pictures are in the Dresden Gallery.

Ruiz, JUAN, ab.1290–ab.1370. Spanish poet and satirist.

Ruiz Lopez, HIPOLITO, 1754–1815. Spanish botanist, author (with J. Pavon) of *Flora Peruviana et Chilensis*, 1798–1802; and *Systema vegetabilium Floræ Peruvianæ et Chilensis*, 1798.

Rule Britannia. Music by Arne, 1740; words by D. Mallet.

Ruled Surface. One generated by a straight line.

Rule Nisi. Rule to show cause. Mode of invoking the authority of the court to compel a party to do some act, unless (nisi) he shall show cause why he should not be so required. If he shows sufficient cause, the rule is said to be discharged.

Rule of Faith. In Polemical Theology, the sources whence the doctrines of the faith are to be authoritatively derived.

Rule of the Road. In U. S. and on the continent of Europe, keep to the right; in England, to the left, except in passing vehicles going the same way.

Rule of Three. Arithmetical form of proportion in which three terms are given to find a fourth; single or double as the ratios are simple or compound.

Rules, IN ETHICS. Laws of human action, dependent on the commands of some external power or of conscience.

Rules and Articles of War. By Section 1342, Revised Statutes of the U. S., the armies of the U. S. are governed by certain rules and articles embraced in 128 Articles of War. By Art. 128, these are to be "read and published once in every six months, to every garrison, regiment, troop or company in the service of the U. S., and shall be duly observed and obeyed by all officers and soldiers in said service." They are printed in the Army Regulations.

Ruling Elders. In Presbyterian churches, communicants chosen for life or a term, to assist the pastor in administering discipline.

Ruling Machine. See DIVIDING ENGINE.

Rum. Spirits distilled from a mash made of the skimmings from the sugar boilers and molasses, diluted with water to contain 12 to 16 per cent of sugar and fermented with the lees from the previous mash. The best quality is made in small stills. It is colored with caramel. It contains ab. 70 per cent alcohol. That made in Jamaica, St. Croix and British Guiana is most esteemed. The flavor is due to the butyric ether formed. New England rum is made from molasses, in Mass. and Conn. In 1894, there was made in U. S. 1,864,595 gals. of rum.

Rumble. Hollow barrel rotating around a horizontal axis perpendicular to its heads at their centers, in which small castings may be put and set to tumbling about for the removal of scabs of foundry sand from the molds; hence also called tumbling barrels; applicable to castings of small weight and without fragile detail.

Rumen. See PAUNCH.

Rumford, BENJAMIN THOMPSON, COUNT, 1753–1814. Scientist and statesman; b. at Woburn, Mass. Failing to receive a commission in the Continental Army, he went over to the British, and was sent with dispatches to England; came back in 1781, raised a Tory regiment in N. Y., and served in the Carolina campaign; resided in Bavaria 1783–99, where he held several high offices in the state, effected extensive reforms in the army and in various industries, and became a count of the Holy Roman Empire 1791, taking his title from the town in N. H. where he had lived. He was active in founding the Royal Institution of London, endowed a chair in Harvard, married Lavoissier's widow 1804, and lived at Auteuil, France. His studies and experiments on light, heat, etc., were very fruitful. His *Essays*, 1796–1802, were issued in 4 vols., 1876.

Rumi, JALAL ADDIN, 1207–1273. Persian poet. *Masnavi*, partly tr. 1881.

Ruminants. Animals like domestic cattle and sheep, deer, antelopes, and camels, in which the stomach is divided into compartments; viz., (1) the paunch, or rumen, for receiving the hastily swallowed food; (2) the reticulum, in which are cells for shaping the cuds. These are regurgitated and chewed until semifluid, and when swallowed pass between the lamellæ of (3) the psalterium, omasum, or manyplies into (4) the abomasum, where true digestion takes place. Ruminants are two-toed or cloven-hoofed ungulates, but they really have four toes; the two hindermost (or dew claws) do not reach the ground. Upper incisors are absent, and usually the canines also. The lower canines resemble the incisors, which project so as to press nearly flatwise against a hard pad in the upper jaw. Thus in grazing the herbage is torn off rather than bitten. See SELENODONTIA.

Ruminant Stomach. See PAUNCH, RETICULUM, PSALTERIUM, and ABOMASUM.

Ruminated. Wrinkled surface of the endosperm of certain seeds, as those of the Papaw.

Rumohr, THEODOR WILHELM, b. 1807. Danish historical romancer.

Rump. Fag-end of the Long Parliament, after most of its members were expelled by Col. Pride Dec. 6, 1648, and is

Roasting the Rumps in Fleet Street (from an old print).

known as Pride's Purge. It sat till April 20, 1653, and for brief periods 1659 and 1660. See LONG PARLIAMENT.

Rumsey, JAMES, ab.1743–1792. One of the inventors of steam navigation. His vessel was tried on the Potomac 1784, and on the Thames 1792: societies were formed at Phila. and in England to promote the scheme.

Runcinate. Leaves with large lobes or teeth, which point backward.

Runeberg, JOHAN LUDVIG, 1804–1877. Finnish lyric, narrative, and dramatic poet of high rank; prof. Borga from 1837. His poetic romances, describing scenes from the second Finnish war, written in Swedish, are full of beauty and national feeling. *King Fjalar*, 1844; *Ensign Stal's Stories*, 1848–60.

Runes. Once subject of wildest theories; now known to be the alphabet of primitive Germanic (and other) tribes, and copied from the Roman alphabet of the empire. They were brought into the north ab.200. In our old speech rune means a mystery. Runic inscriptions are found in Denmark, Norway, Sweden, and to some extent in Germany and England; they abound on weapons, on memorial stones, and are of great importance for settling early forms of speech. The necessities of carving on stone changed the Roman curves to straight lines. A runic inscription, probably Old-Anglian, on a golden horn found at Gallehus, is probably the oldest line of poetry preserved in Germanic: Ek Hlewagastiz Holtingaz horna tawido—"I, Leogast, son of Holt, made the horn."

Runjeet Singh, 1780–1839. Ruler of the Punjab, n.w. India, from 1797. He made terms with the British, and by conquests built up a powerful state.

Runkle, JOHN DANIEL, LL.D., b. 1822. Prof. Mass. Institute of Technology from 1865, pres. 1870–78. *Analytical Geometry*, 1888.

Runner. In Botany, prostrate stem or branch which roots at the nodes.

Running. From the earliest times this was a sport which drew from all classes. The modern Marathon race is but a repetition of the Greek contest. Early English annals are full of races between gentlemen and between servants. One mile was run by W. G. George, England, in 4 min. 12¾ sec. The greatest distance run in one hour was 11 m. 1,234 yds., covered by F. E. Bacon, England, June 20, 1897. 100 yds. has been run in 9⅗ sec. by B. J. Wefers, American, 1897, 440 yds. in 47¾ sec. by W. Baker, American, ¼ m. in 1 min. 53⅗ sec. by C. H. Kilpatrick, American. The greatest distance in 6 days was 623 m., covered by G. Littlewood, England. The most popular running contests in America are the 100-yds., 220-yds., ¼-m., ½-m., 10-m., and the hurdle events; in England distance events, like the 3-m. and even the 5-m., are fancied. The older-fashioned sack races, three-legged races, and obstacle races have practically disappeared, save at village fairs.

Runnymede. Meadow on s. bank of the Thames, 35 m. above London, where King John was forced by the barons to sign Magna Charta, June 15, 1215.

Runyon, THEODORE, LL.D., 1822–1896. Brig.-gen. U. S. Vols. 1861; Chancellor of N. J. 1873–87; U. S. Minister to Germany 1893.

Rupee. Standard silver coin of India, in native states since ab.1544, and under British rule; nominally worth ab. 48 cents.

Rupert. Emperor of Germany 1400–10.

Rupert, PRINCE, 1619–1682. Son of Frederick V., elector Palatine, and grandson of James I.; brilliant cavalry officer in the English civil war; first governor of Hudson's Bay Co. 1670.

Rupert River. In Northeast Territory, Canada, connecting Lake Misstassinne with Hudson's Bay.

Rupestrine, or RUPICOLOUS. Plants growing naturally on rocks.

Rupp, ISRAEL DANIEL, 1803–1878. Historian of many Pa. counties.

Ruprecht, FRANZ J., 1814–1870. Curator of Herbarium of Royal Academy of Sciences in St. Petersburg. *Algæ Ochotenses*, 1850; *Flora boreali-uralensis*, 1847–48; *Flora Caucasi*, 1869.

Rupture. Breaking of a material by compression, tension, shear, or flexure. In a testing machine it is done by a stress applied with uniformly increasing intensity. A stress suddenly applied produces a more granular fracture than one slowly applied. See TESTING MACHINE.

Rupture. See HERNIA.

Rural Dean. English parish priest having some slight supervisory authority over part of a diocese.

Rurik, d. ab.879. Founder of the first Russian dynasty, lasting till 1598; Varangian (Scandinavian) chief, who came by

Rurik, founder of the Russian Empire.

invitation to Novgorod 862; annexed the dominions of his two brothers, took the title of grand-prince, and subdued the Slavonic tribes about him.

Rush. Grass-like plants of the genus *Juncus* and natural family *Juncaceæ*, of wide geographical distribution.

Rush, HORNED. *Rynchospora corniculata*. Large plant of the Sedge family, native of e. N. America.

Rush, BENJAMIN, M.D., LL.D., 1745–1813. Prof. Phila. Medical Coll. 1769; delegate to Congress 1776; signer Declaration of Independence; Surgeon-gen. of the army 1777–78; a founder of Phila. Dispensary, Coll. of Physicians, and Dickinson Coll. at Carlisle; member of Pa. Conventions 1787; eminent as a teacher and practitioner, especially in the yellow fever 1793. *Medical Inquiries and Observations*, 5 vols., 1789–98; *Essays*, 1798; *Diseases of the Mind*, 1812.—His son, RICHARD, 1780–1859, was U. S. Atty.-gen. 1814–17; Minister to England 1817–25, and negotiator of important treaties; Sec. U. S. Treasury 1825–29; Commissioner to England 1836–38, when he secured Smithson's legacy; Minister to France 1847–51. *Court of London*, 1833–45.—His brother, JAMES, M.D., 1786–1869, founded the Ridgeway branch of Phila. Library: his wife, PHŒBE ANN (RIDGEWAY), 1797–1857, was prominent as a social leader.

Rush, WILLIAM, 1756–1833. Wood-carver of Phila., preeminent in his day, especially by his figure-heads for vessels.

Rushworth, JOHN, ab.1607–1690. English compiler of Historical Collections (1618–48), 7 vols., 1659–1701, repub. 1721.

Rusk, JEREMIAH MCLAIN, 1830–1893. M.C. 1871–77; Gov. of Wis. 1882–88; U. S. Sec. of Agriculture 1889–93.

Rusk, THOMAS JEFFERSON, 1802–1856. Sec. of War of Texas 1836; judge Texas Supreme Court 1838–42; U. S. Senator from 1846.

Ruskin, JOHN, LL.D., D.C.L., b. 1819. English art critic; noted for his brilliant style, extreme and erratic views, and advocacy of Turner. *Modern Painters*, 5 vols., 1843–60; *Seven Lamps of Architecture*, 1849; *Pre-Raphaelitism*, 1851; *Stones of Venice*, 3 vols., 1851–53; *Lectures*, 1870–93.

Russell, ARTHUR TOZER, 1806–1874. English hymnist; biographer of T. Fuller, 1844, and Bp. Andrewes, 1859.

Russell, BENJAMIN, 1761–1845. Ed. *Columbian Centinel*, 1784–1828, and Boston *Gazette*, 1795–1830.

Russell, CHARLES, BARON, b. 1833 in Ireland. Q.C. 1872; eminent as a pleader; M.P. 1880; knighted 1886; Atty.-gen. 1886 and 1892; baron and Lord Chief-justice 1894.

Russell, DAVID ALLAN, U.S.A., 1820–1864. Brig.-gen. U.S. Vols. 1862; killed near Winchester, Va.

Russell, HENRY, b. ab.1810. English singer and composer of songs, long in America.

Russell, ISRAEL COOK, b. 1852. Assistant in U. S. geological survey from 1878, partly in Alaska; prof. Univ. Mich.

Russell, JOHN, 1745–1806. English portrait painter, R.A. 1780.

Russell, JOHN, LORD, 1792–1878. M.P. from 1813; Whig leader, prominent in the repeal of the Test and Corporation acts 1828, Catholic emancipation 1829, and the Reform Bill 1832; Home Sec. 1835–39; Sec. for War and the Colonies 1839–41; leader of opposition 1841–45; Prime Minister 1846–52 and 1865–66; Foreign Sec. 1852 and 1859; Colonial Sec. 1855; biographer of Lord Wm. Russell, 1819, and C. J. Fox, 1859–66; editor of other memoirs.

Russell, JOHN HENRY, U.S.N., 1827–1897. Distinguished on the Gulf 1861–62; Commander 1867, Captain 1874, Commodore 1883, Rear-admiral 1886.

Russell, JOHN SCOTT, F.R.S., 1808–1882. Scottish engineer; builder of the *Great Eastern*. *Naval Architecture*, 1864.

Russell, JONATHAN, 1771–1832. U. S. Minister to Sweden 1814–18; M.C. from Mass. 1821–23.

Russell, WILLIAM, LORD, 1639–1683. English patriot, who advocated the bill excluding James as a papist from the succession; falsely accused of participation in the Rye House Plot; arraigned for treason; condemned upon perjured testimony and beheaded.—His wife, RACHEL (WRIOTHESLEY), 1636–1723, a model of fidelity, left *Letters*, pub. 1773.

Russell, WILLIAM, 1758–1825. Ky. pioneer, prominent in several campaigns; commander on the frontier 1811–12.

Russell, WILLIAM, 1798–1873. Scottish-American elocutionist, teacher, writer, and lecturer.—His son, FRANCIS THAYER, b. 1828, has been Prof. of Elocution at Middletown, Conn., and in New York.

Russell, WILLIAM CLARK, b. 1844 in N. Y. English marine novelist. *John Holdsworth*, 1874; *Wreck of the Grosvenor*, 1877; *The Lady Maud*, 1882; *Marooned*, 1889; *A Three-stranded Yarn*, 1895.

Russell, WILLIAM EUSTIS, 1857–1896. Gov. of Mass. 1890–93; prominent as a reformer. *Speeches*, 1894.

Russell, WILLIAM HOWARD, LL.D., b. 1821 in Ireland. Special correspondent of the London *Times* in the Crimean, Indian, American, Austro-Prussian, and Franco German wars; author of diaries. *Dr. Brady*, 1868; *Hesperothen*, 1882; *Chile*, 1890.

Russia. Empire of e. Europe and n. Asia, comprising more than one-seventh of the habitable parts of the earth. It is popularly separated into four divisions, as below, with their estimated areas and population:

	Area sq. m.	Population
Russia in Europe . . .	2,060,940	88,356,572
Caucasus	178,839	7,084,017
Siberia	4,826,287	4,143,226
Central Asia	1,286,874	5,201,946
Total	8,352,940	104,785,741
Pop., 1897		129,211,113

The surface of European R. is one vast plain, extending from the Urals to the Baltic, from the Caucasus to the Arctic Ocean. That of Asiatic R. is elevated and mountainous in the s. and e., descending in the interior into broad semi-arid plains, the Steppes, which, becoming still lower, border the shores of the Arctic with immense areas of frozen swamp or tundra. The coast is everywhere broken with deep bays and peninsulas, and studded with islands. It contains many of the great rivers of the globe, the Volga, Obi, Yenesei, Lena, and Amoor, and several inland seas, such as the Caspian and Aral, and lakes Baikal and Balkash. The industries are in the main agricultural, and though a large part of the country is from soil or climate unfit for cultivation, and the processes somewhat rude, yet the product is enormous. Manufactures are not extensive, nor is foreign trade. Its internal trade is very great. The Ural Mts. contain much mineral wealth, gold, platinum, iron and copper being mined. Coal is found in the Crimea and the Urals, and salt is manufactured in several localities. Petroleum is abundant in the Caucasus. Railroads are being constructed by the government with almost unexampled rapidity. Sept. 1, 1896, 24,439 m. were in operation, 7,939 m. building. The government is an absolute monarchy. The regular army is very large, consisting of 880,000 officers and men. The navy comprises 327 vessels, mounting 1812 guns. The capital is St. Petersburg, on the Neva. Other leading cities are Warsaw, Moscow, Riga, Kharkov, and Odessa.

The Eastern Slavs settled near the sources of the Dniester, Don, and other rivers, Novgorod and Kieff being their chief towns. In 862, at their invitation the Norman Rurik came and took possession of Novgorod; Olga, widow and successor of Rurik's son, was baptized 955. A pagan reign followed, but Vladimir, 980–1015, accepted Christianity 988, and did much to extend and civilize his empire, afterward divided and subdivided among his descendants. A Mongol invasion took place 1222, and Batu Khan conquered R. 1235, destroying Moscow, invaded the southwest 1240, destroyed Kieff, and founded the Khanate of Kiptchak; civilization was arrested, and R. thrown 200 years behind the rest of Europe. The growth of Lithuania, annexed to Poland 1569, was favored by the prostration of other parts of R. Dmitri in e. R., 1358–89, obtained a vic-

Arrival at Siberian Post-House.

tory over the Khan 1380. The Tartars afterward twice invaded R., but under Ivan III., 1462–1505, their yoke was shaken off and the empire consolidated. During the minority of Ivan the Terrible, 1533–84, factions prevailed, but from 1547 to the death of his queen Anastasia Romanoff he administered the government with great success; he afterward became suspicious and cruel. The dynasty of Rurik ended 1598 with his son Teodor, whose brother Dmitri was murdered. Pretenders to this name arose; confusion reigned; the King of Poland invaded R., and the land was overrun by Tartars, Poles, and robber-gangs. Michael Feodorovitch Romanoff, 1612–45, being chosen Czar, soon forced the country from foreigners, and summoned a council of representatives to aid the restoration of order. Under Alexei, 1645–76, a new code was drawn up; the right of direct appeal to the Czar was granted; Little R., Smolensk, and most of White R. were added to the empire. The reign of PETER THE GREAT (q.v.), 1689–1725, was of great importance. He subjected himself and others to severe discipline to attain proficiency in the arts he sought to introduce. Much was lost under the weak rule of his successors. Peter III. was dethroned by his wife Catharine II., 1762–96, who largely extended the empire, now divided into governments. Alexander I., 1801–25, shared actively in European affairs and in the overthrow of Napoleon. Nicholas II., 1825–55, carried on war with Persia and Turkey, extending his dominions, and gaining free navigation of the Black Sea, Dardanelles, and Danube; but R. lost much of this by the Crimean War. Alexander II., 1855–81, abolished serfdom and other abuses. Poland was incorporated 1868, and the Caucasus conquered; war with Turkey was again declared 1877, in defense of the rights of Slavonic Christians, and ended by the independence of Roumania, the freedom of Bulgaria under Turkish suzerainty, and the enlargement of Servia; the new State of Eastern Roumelia was formed from Bulgaria. The succeeding period has been marked by the growth of nihilism, which led to the assassination of Alexander II. 1881. Alexander III., 1881–94, pursued a pacific policy, and fostered the national spirit. Anti-Semitic outbreaks characterized the beginning and the later years of his reign. His son, Nicholas II., succeeded.

Russian Backgammon. Game in which the men are not set on the board at the opening of the game, but are entered by both players, who move in the same direction on the same table. When doublets are thrown, the numbers on the opposite sides of the dice are also played, and the player has another throw.

Russian Language. Chief Slavonic language, with two branches, Russian proper and Ruthenian. Its records date from the 11th century, and the literature is growing in importance. There are three dialects, Little, White, and Great Russian, the last being the official and literary language and that of a large majority of the population and which can be understood by all. The alphabet is credited to St. Cyril and St. Methodius of the 9th century, the Greek alphabet with some additions, now used in devotional books. That now in use is the Cyrilian, with some omissions, introduced by Peter the Great; it consists of 36 letters.

Russian Leather. See LEATHER.

Russian Literature. This really began with the reign of Peter the Great, although the Old Church Slavonic, into which Cyril and Methodius translated the Scriptures when they Christianized the western Slavic tribes, contains a number of authors, the most important being the Chronicle of Nestor (11th cent.), the Chronicles of Novgorod, Moscow, Tver, etc., and several lives. The Tartar invasion blotted out all literary ambition and the universal ignorance soon made it impossible. The *Zadonchina*, an epic poem, and the *Domostroi, or Housekeeper's Manual*, from the time of Ivan the Terrible, are extant, the latter by the monk Sylvester. Peter the Great encouraged literature, and the theologian and economist Pososhkov, 1670–1726, the satirist poet Prince Antiokh Kantemir, and the first historian of Russia, Vasisli Tatistchev, belong to his reign. Trediaskovski, 1703–1769, was a translator; Lemonosov, 1711–1765, exerted great influence upon the form of the language and changed the syllabic prosody to the tonic system now used. Other poets were Sumarokov, 1718–1777; Khiazhnin, 1742–1791; and Kheraskov. 1733–1801. Karamzin, under Catharine II., wrote *Letters of a Traveler* and a *Russian History*. The Romantic school was founded by Alexander Pushkin, 1799–1838, and Zhukovskii, 1783–1852, and comprised Kozlov, Batiushkov, the poet Ryleev, Lermontov, Polevoi, and others, ending with Tiuchev, Koltsov, and Krylov, the latter's fables being famous. The Realistic writers begin with Gogol, 1809–1852, and comprise many novelists, the most noted being Alexander Hertzen, Tourgenief. 1818–1883; Dostoevskii, 1822–1881; Count Lev Tolstoi, b. 1828; to which we must add the lesser writers, Goncharov, Pisemskii, Pisarev, Vasilii Krestovskii, Potekhin, Sologub and Gleb Aspendii. The satirist Soltykov, the Nihilist Chernyshevskii, Garshin, and Korolenko deserve mention. Other writers of the later period are Maikov, Khomiakov, Nekrasov, Shenshin, Polonskii, Mei, Nikitin, Stcherbina, Plestcheev, and the Grand Duke Konstantin, whose poetry is admired. Several of the above have won fame as dramatists, with whom we must mention Aleksei Tolstoï. The most celebrated historians are Karamzin, Soloviev, and Kostomarov.

Russian Music. Until the very recent advent of the School of Young Russian Composers, the characteristics of Russian national music found only sporadic expression outside of the ancient melodies, preserved in the Breviary and the people's songs. Early church music was largely borrowed from Greek and Bulgarian sources. Until ab.1700 it remained unisonal. With the cultivation of artistic music in the theater under Peter the Great 1703–25 and his immediate successors, the Italian influence became dominant, and it was deemed necessary to command the use of the ancient melodies. The present style, which contains features of wonderful impressiveness, despite the fact that it is exclusively vocal, came in with BARTNANSKY (q.v.). During the 18th century foreign influences also dominated concert and opera, singers, conductors and composers who worked for the national institutions in St. Petersburg being chiefly Italians and Frenchmen, as Galuppi, Traetta, Sarti, Cimarosa, Boieldieu, and Martini. Sarti set the fashion of composing to words, and C. Cavos wrote 14 operas with Russian texts and subjects. The first distinctively national tendency manifested itself in the operas of VERSTOVSKI and GLINKA (q.v.); the latter's *Life for the Czar* won almost universal recognition. Since then distinguished operatic composers have been Lwoff, A. Rubinstein, Cui, Dargomyzski, and Rimski-Korsakow. The Young Russian School is now represented by the last three of these and Borodin. According to Cesar Cui, the foundation stones on which it has been reared are these: 1. Aside from the words, all dramatic music must have value per se, as absolute music. 2. Music written for words must reflect the spirit of the poem. 3. Every composition must reflect characteristic traits. The last element is obtained by copious borrowing and imitation of the characteristics of Russian folk song.

Russium. One of the doubtful elements; discovered 1889 accompanying thorium in monacite.

Russo-Greek Church. Number of adherents in 1892, 73,000,000. See GREEK CHURCH.

Russo-Turkish War. 1877–78; occasioned by massacres in Bulgaria; ended by the fall of Plevna, Dec. 10, after a long siege and severe conflicts. Russia was robbed of the fruits of her victory by the treaty of Berlin, July 13, 1878.

Rustam. Chief of Persian mythical heroes; celebrated by Firdausi. His duel with his son Sokrat has been sung by Matthew Arnold.

Rustchuk. Town of Bulgaria, on the Danube; taken by the Russians after a siege 1810, and held till 1812; besieged

Rustchuk.

again by the Russians 1877–78. It forms one angle of the Turkish Quadrilateral. Pop., 1893, 28,121.

Rustem Pasha, d. 1895. Turkish Ambassador to Italy, Russia, and from 1885 to England.

Rustic Work. Masonry wherein the faces of the stones are left rough, the sides where the union takes place being only wrought smooth.

Rüstow, WILHELM, 1821–1878. German-Swiss soldier and writer. *Geschichte der Infanterie*, 1857–58; *Strategie und Taktik*, 1872–75.

Rusts. Popular name of the *Uredinaceæ*, a family of parasitic *Fungi* growing on a great number of plants, to which they give a rusty or brown appearance. The number of known species is very large and many of them are highly destructive to cultivated plants. Many of them have two stages in their life history, one being produced on one plant, the other on a different species, as the wheat rust, which lives during one stage on wheat and other grasses, and during the other on the barberry.

Rust University. At Holly Springs, Miss.; opened 1868; controlled by Methodists. It has 15 instructors and ab. 320 students.

Rut. Breeding time or period of heat of animals, especially of Mammals. This is usually in spring, but in Ruminants at the close of summer, and in Swine and Carnivores in winter. The time of its occurrence is determined by the length of the period of gestation, so that the birth of the young shall occur at the most advantageous season.

Rutabaga. See TURNIP, SWEDE.

Rutaceæ. Natural family of flowering plants, of the class *Angiospermæ* and sub-class *Dicotyledons*, comprising ab. 100 genera and ab. 900 species, distributed throughout the temperate and warmer parts of the earth; most numerous in Australia and in s. Africa; called the Rue family.

Rutebeuf, d. ab.1280. French poet, strongest in lyrics and satires.

Ruten. Semitic Palestinian people with whom the Egyptians waged war under the 18th and 19th dynasties.

Rutgers College. At New Brunswick, N. J.; chartered as Queen's Coll. 1766, to prepare for the Reformed Dutch Ministry; twice suspended; reopened 1825. The Scientific School was opened 1863; the State Agricultural Coll. was located here 1864. Teaching staff, 27; students 182, 131 of whom are in science; library, 33,560 vols.

Ruth. 8th O. T. book, of uncertain authorship and date; an idyll of the fortunes of a young Moabite widow, great-grandmother of David.

Ruthenian Rite. Branch of the R. C. Ch., who as a rule speak the Russniak language. They are mostly the United Greeks of Austria-Hungary and Poland, numbering ab. 2,655,000.

Ruthenians. Slavic peasants, numbering ab. 3,000,000 in Galicia and 400,000 in n.e. Hungary. They have a language

and literature of their own, were long subject to Poland, and are mostly of the United Greek Ch., under papal rule.

Ruthenium. Ru. At. wt. 101.6, sp. gr. 12.2, sp. ht. .061, mpt. 2,000° C., valence II.–VIII.; discovered by Claus 1845. It occurs in platinum ore, in osmiridium, and in laurite, Ru_2S_3, and is obtained from the residue left after treating platinum ore with aqua regia. It is insoluble in acids, and but slightly soluble in aqua regia. Heated with potassium hydroxide and niter, it forms potassium ruthenite, K_2RuO_4. It forms six oxides, RuO, Ru_2O_3, RuO_2, RuO_3, Ru_2O_7, and RuO_4. All are rare.

Ruthenium Chlorides. Dichloride. $RuCl_2$. Black crystalline powder, completely insoluble in acids; made by treating the pulverized metal with chlorine at a low heat.—Sesquichloride. Ru_2Cl_6. Brownish-yellow crystalline substance; made by dissolving the sesquioxide in hydrochloric acid.—Tetrachloride. $RuCl_4$. Reddish-brown salt; made by dissolving the hydroxide in hydrochloric acid.

Ruthenium Oxides. Monoxide. RuO. Gray-black powder, soluble in alkalies with bluish-green color; made by treating the corresponding chloride with sodium carbonate.—Sesquioxide. Ru_2O_3. Bluish-black powder; obtained by heating the metal strongly in the air.—Dioxide. RuO_2. Made by treating the sulphate with caustic potash.—Tetroxide. RuO_4. Made from the dioxide by heating to 1,000° C.

Ruthenium Sesquiiodide. Ru_2I_6. Only compound of ruthenium and iodine; black substance, made by adding potassium iodide to the double chloride of potassium and ruthenium.

Ruthenium Sulphate. $Ru(SO_4)_2$. Orange-yellow, deliquescent, soluble substance, made by treating the sulphide with nitric acid.

Ruthenium Sulphide. This occurs naturally in Laurite, Ru_2S_3.

Rutherford, SAMUEL, ab.1600–1661. Scottish divine, prof. St. Andrews 1639-60. His *Lex Rex*, 1644, was burned by the hangman 1660. Several of his books have been reprinted, notably his *Letters*, 1664.

Rutherfurd, LEWIS MORRIS, 1816–1892. American pioneer in astronomical photography and spectrum analysis. His results were in great part achieved with instruments of his own construction.

Rutile. TiO_2. Brownish-red to black mineral of peculiar metallic adamantine luster, consisting essentially of titanium and oxygen. It has been found associated with many kinds of the older crystalline rocks, and with limestone. It is often present in transparent quartz in the form of slender, needle-like crystals.

Rutilius Claudius Numatianus. 4th cent. Latin poet of Gaul. His description of a journey from Rome is still in part extant.

Rutimeyer, LUDWIG, b. 1825. Prof. Basel 1855: writer on geology and zoölogy.

Rutland. Capital of R. co., Vt., on Otter Creek, 67 m. s. of Burlington; settled 1770; noted for its marble quarries. Pop., 1890, 11,760.

Rutledge, JOHN, 1739–1800. Delegate to Congress 1774–75 and 1782–83; Pres. of S. C. 1776–78; Gov. 1779–82; Chancellor 1784; member Constitutional Convention 1788; Chief-justice of S. C. 1790–95, and of U. S. Supreme Court July–Nov. 1795.—His brother, EDWARD, 1749–1800, was in Congress 1774–77, signed the Declaration of Independence, rendered other public services, was a prisoner in Fla. 1780–81, and Gov. of S. C. from 1798.

Rütli, or GRÜTLI. Field near Lake Lucerne, where men of Uri, Schwz, and Unterwalden swore 1307 to resist and overthrow the Austrians.

Rutuli. Tribe of Latium, early subdued by Romans.

Ruysbroek, JOHN, 1293–1381. Flemish mystic, monk of Groenendael 1353. His works were pub. in Latin 1552 and in German 1701.

Ruysch, RACHEL, 1664–1750. Dutch fruit and flower painter.

Ruysdael, JACOB. See RUISDAEL.

Ruyter, MICHAEL ADRIANSZOON VAN, 1607–1676. Dutch Rear-admiral 1645; famous chiefly in the wars with England. In 1667 he sailed up the Thames, destroyed many vessels, and brought about the peace of Breda.

Ryan, ABRAM JOSEPH, 1839–1886. R.C. pastor at Mobile, popular in the South as a lyric poet. *Poems*, 1880.

Ryan, HARRIS JOSEPH, b. 1866. Prof. Cornell 1889; writer on electricity.

Ryan, PATRICK JOHN, D.D., b. 1831 in Ireland. Coadjutor bp. of St. Louis 1872; Abp. of Phila. 1884.

Ryan, SAMUEL ERWIN, 1831–1891. Irish-American actor.

Ryan, STEPHEN VINCENT, D.D., 1825–1896. R. C. Bp. of Buffalo 1868.

Rydberg, ABRAHAM VICTOR, 1829–1895. Swedish author and journalist. *The last Athenian*, 1859; *Roman Days*, 1877; *Teutonic Mythology*, 1886, tr. 1889.

Ryder, ALBERT PINKHAM, b. 1847. American painter, active in New York; equally at home with animals, landscapes, and figures.

Ryder, JOHN ADAMS, 1852–1895. American naturalist. Prof. of Biology, Univ. Penna., 1886.

Rydquist, JOHAN ERIK, 1800–1878. Swedish grammarian.

Rye. Seaport and market town of England, 10 m. n.e. of Hastings. R. was a Cinque port, the Ypres tower being a sur-

Rye from the South.

vival of the ancient fortifications. It also has remains of its ancient walls and gates. Exports wool, timber, and hops. Pop., 1891, 4,521.

Rye. *Secale cereale.* Annual grass, supposed to be native of Asia, but unknown in the wild state; cultivated from prehistoric times for its grain. It is grown as a winter crop in localities where the soil is too poor or the climate too unfavorable for winter wheat. In the vicinity of large cities the straw is the most important part of the crop, and is kept straight in threshing, in machines specially built for the purpose. The production of rye in U. S. in 1895 was 27,210,000 bushels.

Rye-Grass. See DARNEL.

Rye House Plot. Scheme of English Whigs to assassinate Charles II. when on his way from Newmarket to London, and seat the Duke of Monmouth on the throne; discovered 1683. Russell and Sydney were executed for alleged complicity in it; Monmouth fled over sea.

Ryland, JOHN, D.D., 1753–1825. English hymnist; pres. Baptist Coll. at Bristol from 1794.

Ryle, JOHN CHARLES, D.D., b. 1816. Bp. of Liverpool 1880. *Expository Thoughts on the Gospels*, 7 vols., 1856–69; *Christian Leaders*, 1869.

Ryleev, or **Relaieff,** KONDRATI FEDOROVICH, 1796–1826. Russian poet, executed for treason. *Works*, 1872, tr. 1887.

Rymer, THOMAS, 1640–1713. English critic and collector of materials for history. *Fœdera*, 20 vols., 1704–35.

Rysbrach, MICHAEL, 1693–1770. Flemish-English sculptor.

Ryswick, PEACE OF. Concluded Sept. 20, 1697, near the Hague, between France and England and her Allies.

S

Saadi. See SADI.

Saadja ben Joseph, 892–942. Egyptian Jew, teaching at Sura in Babylonia from 928; commentator and author, writing in Arabic. His *Religions and Dogmas* was tr. into Hebrew 1186, and into German 1845. His works were edited at Paris 1893 and later.

Saale. River rising in n.e. Bavaria and flowing n. to the Elbe. Length 225 m.; navigable for 100 m.

Saalfeld. Town of Saxe-Meiningen, on the Saale; scene of a French victory over Prussians, Oct. 10, 1806. Pop., 1890, 9,801.

Saar. River flowing from its source in France, through Alsace-Lorraine and Rhenish Prussia, ab. 120 m., into the Moselle near Treves.

Saarbrück. Town of Rhenish Prussia, on the Saar; taken by the French Aug. 2, 1870; retaken Aug. 6 by the Germans,

Saarbruck.

after the battle of Forbach. The mitrailleuse was first employed here Aug. 2. It is the center of a large coal-field, and has manufactures of iron, tobacco, glass and chemicals. Pop., 1890, 13,812.

Saavedra, ANGEL DE, DUKE DE RIVAS, 1791–1865. Spanish poet, dramatist, and historian, in exile 1823–34 and 1837–43; Envoy to Naples 1843–48.

Sabæans. People of s.w. Arabia, repeatedly mentioned in O. T.; long independent and commercially important till near our era.

Sabaka. Conqueror of Egypt ab.700 B.C., and founder of its 25th dynasty.

Sabatier, PAUL, b. 1858. French Protestant, pastor at Strassburg 1885–89, and since in the Cevennes. His *Life of St. Francis of Assisi*, begun 1883, was pub. 1894, and crowned by the Academy.

Sabbatarians. Christians who hold themselves bound to observe the seventh day as the Sabbath; sometimes, all strict observers of a Sabbath.

Sabbath. Seventh day of the week, ordained, in the Ten Commandments, to be kept sacred from labor. Gentile Christians have commonly transferred more or less of the sabbatical obligation to the first day, which the Apostles celebrated as that of the Resurrection.

Sabbathai Zevi, or TSEVI, 1641–ab.1677. Jew of Smyrna, accepted by many as Messiah; imprisoned and forced to recant by the Sultan 1667.

Sabbatical Festivals. (1) 7th day; (2) 7th month, Tisri or October; (3) 7th year: see YEAR OF RELEASE; (4) 50th year, or Jubilee.

Sabella. Tubicolous Annelid worm, with body thick anteriorly, tapering to the tail. The tentacles are gathered in two groups. There is a lip above the mouth. Like *Serpula*, it secretes material which forms a crooked tube, within which the worm lives, fastened upon a shell or rock.

Sabellianism. Doctrine that God in Himself is unipersonal, but is revealed successively as Father, Son, and Spirit; named from Sabellius, an African presbyter, excommunicated at Rome ab.218 and at Alexandria 260.

Saber. Military hand arm used for cutting, or for both cutting and thrusting. The light artillery saber, used for cutting, has a short curved blade and a comparatively light hilt, to throw the center of gravity well forward. The cavalry saber for cutting and thrusting has a longer and straighter blade, and a heavier hilt, to bring the center of gravity nearer the grasp and to better protect the hand.

Sabiaceæ. Natural family of flowering plants, of the class *Angiospermæ* and sub-class *Dicotyledons*, comprising 4 genera and ab. 40 species, growing in the tropics and countries bordering thereon, especially in the n. hemisphere.

Sabine, SIR EDWARD, D.C.L., F.R.S., 1788–1883. Irish officer and physicist; Major-gen. 1856; knighted 1869. *Figure of the Earth*, 1825; *Variability of Magnetism*, 1838.

Sabine, LORENZO, 1803–1877. M.C. 1852–53; Sec. Boston Board of Trade. *American Loyalists*, 1847; *Fisheries*, 1853; *Duels*, 1855.

Sabine Cross Roads. Near Mansfield, La.; scene of a Union defeat April 8, 1864.

Sabine Pass. Mouth of S. river and lake. It has been improved by jetties and dredging.

Sabine River. In e. Texas, whence it flows s.e. and s., forming part of the La. boundary, to its mouth in Sabine Lake. Drainage area 20,440 sq. m., length ab.500 m.

Sabines. Ancient and powerful people of central Italy, sub-divided into many tribes; the last were subdued by Rome 290 B.C. See SAMNIUM.

Sabinianus. Pope 604–606.

Sabinus, MASURIUS, 1st cent. Roman jurist, whose important work on Civil Law is lost.

Sabism. Mixture of Christianity and star-worship, early prevalent in parts of w. Asia.

Sable. The American Sable or Pine Marten (*Mustela americana*) is closely related to the true Siberian Sable, *M.*

Sable (*Mustela zibellina*).

zibellina, which furnishes the beautiful black fur, worth $200 per skin, owing to the danger of trapping during the severe winter. The former is of the size of a cat, but with shorter

legs and bushy tail. The fur is dense, soft, and dark brown, the paws are black. It lives in the great virgin forests of Canada, nesting preferably in hollow trees near water. Though persistently trapped, it appears to hold its own. It is prolific, bearing 7 young at a time. *M. martes* is the yellow-breasted Marten of n. Europe. See MUSTELIDÆ.

Sable, CAPE. S. point of Fla.

Sable Island. Ab. 110 m. e. of Nova Scotia; colonized 1598–1603; sinking or dwindling in area, and dangerous to navigation.

Sabot. Thick wooden disk used in heavy smooth-bore guns to separate the cartridge from the projectile. It keeps the spherical projectile in place, reduces the windage, and diminishes the effects of balloting. In firing over troops its fragments are dangerous.

Sabots. Wooden shoes used by peasants in France and Belgium.

Sabrina. 1. Section of Antarctic coast. 2. Volcanic islet of the Azores, visible 1811–ab.1840.

Sabulose. Plants growing naturally in sandy soil.

Sac. In Botany and Zoölogy, closed or nearly closed cavities.

Sacaline. Forage plant introduced into the U. S. 1894 from the Russian island of Saghalin in the Pacific Ocean. It is a woody herb growing from 6 to 12 ft. high, and is said to resist severe drought.

Saccardo, PIETRO ANDREA, b. 1845. Prof. Padua; writer on *Fungi.*

Saccatæ. See CYDIPPIDÆ.

Saccharic Acid. $C_4H_4(OH)_4(COOH)_2$. Dibasic acid, isomeric with mucic acid; produced by the oxidation of cane sugar and glucose with nitric acid; oil, solidifying slowly when anhydrous; used in calico printing.

Saccharimeter. See HYDROMETER.

Saccharin. (a) $C_7H_5SO_3$. Orthobenzoylsulphoneimide; mpt. 220° C. This white substance possesses remarkable saccharine powers, being, when pure, 500 times sweeter than sugar. It is prepared from the tolueneorthosulphonic acid by the oxidation of the amide of this acid. It is used in pharmacy and for sweetening foods, and is called Fahlberg's saccharin. (b) $C_6H_{10}O_5$. Carbohydrate of the same composition as starch.

Saccharoidal. Crystalline, heavy-headed marble, so called as resembling white sugar.

Saccharomycetes. Class of the *Protophyta*, including yeast and other ferments whose propagation is mainly by gemmation. By some authors they are regarded as *Fungi* of the sub-class *Ascomycetes*, of which they may form the most degraded member.

Saccharose. See CANE SUGAR.

Sacchetti, FRANCO, ab.1335–1399. Florentine writer in Boccaccio's manner. His *Novelle* were collected 1724.

Sacchini, ANTONIO MARIA GASPARO, 1734–1786. Italian composer of ab.60 operas. All have disappeared from the stage and many are lost. *Semiramide*, 1762.

Saccoglossa. Sub-order of opisthobranchiate univalve Mollusks, including forms having no gills, but which may have, instead, simple dorsal appendages. The radula has one row of toothed, plates, of which the anterior, after they wear out, fall into a special pocket. *Limapontia* and *Elysia* are included. The group is sometimes placed as a sub-group under *Nudibranchiata.*

Saccule. Little expansion of the internal ear, connected with the cochlea by the canalis reuniens, and with the utricle by the aquæ ductus vestibuli.

Sacerdos, MARIUS PLOTIUS, 3d cent. Latin writer on grammar.

Sachau, KARL EDUARD, b. 1845. Prof. Vienna 1872, Berlin 1876; writer on Oriental philology.

Sacher-Masoch, LEOPOLD, 1834–1895. Polish-Austrian novelist. *Cain's Inheritance.*

Sacheverell, HENRY, D.D., 1672–1724. Tory orator, impeached 1710 for violent political sermons, and suspended till 1713; rector in London from 1714.

Sachs, BERNARD, M.D., b. 1858. Prof. New York 1888; writer on nervous diseases and insanity.

Sachs, HANS, 1494–1576. Shoemaker and poet of Nuremberg, author of 6,048 larger or smaller pieces, songs, dramas, stories, fables, and histories. He was the chief literary figure of his time in Germany after Luther, and did much to promote the Reformation. His works, or most of them, have survived temporary oblivion, and were collected in 15 vols. 1886.

Hans Sachs.

Sachs, JULIUS, b. 1832. Prof. of Botany at Bonn 1861, and Würzburg 1868. *Handbuch der Experimental-Physiologie der Pflanzen*, 1866; *Lehrbuch der Botanik*, 1870.

Sack. Wine much used in England ab.1600; probably akin to sherry and Madeira.

Sackbut. Ancient musical instrument, allied to the trumpet.

Sackett's Harbor. Village of Jefferson co., N. Y., 8 m. e. of Lake Ontario; naval station 1812–15. Pop., 1890, 787.

Sackville, GEORGE GERMAIN, LORD, 1716–1785. Lieut.-gen. 1758; M.P. 1761; Colonial Sec. 1775–82; Viscount 1782.

Sackville, LIONEL WEST, BARON, b.1827. British Minister to U. S. 1881–88.

Sackville, THOMAS, 1536–1608. Dramatist; made Lord Buckhurst 1566. Lord Treasurer 1599; Earl of Dorset 1604; author, with T. Norton, of *Gorboduc, or Ferrex and Porrex*, 1562, the first English tragedy. *Induction* to Wm. Baldwin's *Mirror for Magistrates*, 1563.—His descendant, CHARLES, 6th earl, 1637–1706, wrote songs.

Saco, JOSÉ ANTONIO, 1797–1879. Cuban historian of slavery, 1876 and later.

Saco River. In N. H. and Me., rising in the White Mts. and flowing s.e. to the Atlantic. Length 165 m.

Sacrament. Religious rite, of especial dignity and importance, instituted by our Lord. Protestants admit two, Baptism and the Lord's Supper; Roman Catholics and Greeks five more, Confirmation, Penance, Orders, Extreme Unction, and Matrimony.

Sacramentarians. 1. Zwinglians and others who denied the Real Presence; so called by Lutherans. 2. Sometimes, loosely, in England, those holding high sacramental views.

Sacramento. Capital of Cal. and a city of S. co., on the left bank of S. River, here navigable; founded by J. A. Sutter 1839. Here gold was discovered 1848. Pop., 1890, 26,386, ab. one-third of foreign birth.

Sacramento River. In n. Cal.; with its main branch, the San Joaquin, it drains the valley of Cal. and the western slopes of the Sierra Nevada, and flows into the Bay of San Francisco. Length over 500 m., drainage area 58,824 sq. m., average flow 37,632 cu. ft. per sec. at Sacramento.

Sacred Bean. See NELUMBO.

Sacred Heart. R.C. festival of French origin, made general 1856; based on a vision of a nun who d. 1690 and was beatified 1864. An order of nuns, founded 1800, has spread widely: others are less extended.

Sacred Mount. Elevation 3 m. from Rome, beyond the Arno, to which the Plebs withdrew in their controversy with the Senate.

Sacred Music. See CHANT, CHOIR, CHORALE, MASS, PLAIN SONG, etc.

Sacred Trees. Among primitive people, trees are frequently regarded as the dwelling-place of demons and ancestral and other spirits, and as such become the object of worship

and of offerings. They have been looked upon as the abode of certain gods, and resorted to, as the oracle of Dodona in Epirus, where Zeus was believed to give messages to men through the rustling of the leaves of a lofty oak.

Sacred War. Between Thebes and Bœotia 357-346 B.C.; ended by intervention of Philip.

Sacrifice. Institution of all ancient religions. With the Hebrews it was of several kinds, chiefly burnt-offerings and sin-offerings: all were propitiatory, and symbolical of the supreme sacrifice of Christ, as explained in the Epistle to the Hebrews. Human sacrifices were common among pagans, as with Phœnicians, Druids, and Aztecs.

Sacrilege. Violation of sacred things or places: punishable among Jews, capitally under Roman law, and in various degrees in Christian countries; now obsolete.

Sacristy, or VESTRY. Room in which ch. vessels and vestments are kept; formerly in care of a sacristan, whence the

Ancient Sacristy—Scuola della Misericordia, Venice, by Palladio.

word sexton. It is within the walls of the church or an Adjunct. In England it is called a Vestry.

Sacrobosco, or **Holywood,** JOHN, d. ab.1250. English mathematician, teaching at Paris. His *De Sphæra Mundi*, from an Arabic version of Ptolemy's *Almagest*, was pub. 1472 and often later.

Sacrum. Next to the last bone of the spinal column. It is wedge-shaped with its base up, inserted between the hipbones, forming, with the coccyx, the posterior wall of the pelvis.

Sacs AND **Foxes** (SAUKS and OUTAGAMIES). Branch of the Shawnees with the Kickapoos; originally discovered in the territory from Green Bay s. They number ab.1,200. Those in Iowa are farmers; those on reservations in Indian Territory are less civilized. Black Hawk, a Pottawatomie by birth, was chief of the Sacs and Foxes. They ceded their lands e. of the Mississippi to U. S. 1804.

Sacy, ANTOINE ISAAC, BARON SILVESTRE DE, 1758–1838. Great French investigator in Arabic and Persian; prof. Paris 1815; Baron 1813, Peer 1832. *Grammaire Arabe*, 1810.—His son, SAMUEL USTAZADE. 1801–1879. journalist, became an Academician 1855, and a Senator 1867. *Variétés*, 1858.

Sacy, LOUIS ISAAC LE MAISTRE DE, 1613–1684. French priest, nephew of the abbess Angélique; confessor of the Port Royal nuns; translator of the Bible 1667–72.

Saddle. Top of a convex fold in geological strata or in ore deposits; if the top has been removed by erosion, the lost portion is called an air saddle.

Saddle. Saddle-shaped casting placed upon the top of a tower of a suspension bridge to support the cables. It also allows a slight degree of motion, which prevents the horizontal pull of the cable from taking effect on the tower.

Saddle and Saddlery. The harness of horses, mules, etc. In U. S. domestic steer hides, tanned with bark, are used for harness; russet skirting is bleached after scouring. A saddle is a seat for the rider on the back of a horse. The Roman cavalry had beautiful coverings on their horses, as did the Persians. The saddle was invented ab. 350; stirrups were added in the 6th century. The English saddles of the 13th century were similar to those now used and the women sat sidewise. The saddles of the cavaliers had high peaks before and behind, like those of the present Spaniards and Mexicans, and the holsters for pistols were fastened to the pommel. The McClellan saddle of the U. S. cavalry is a modification of this. A saddle consists of the wooden saddle-tree, padded under flaps, upper flaps, seat, belly-band, stirrups and straps, and the crupper-loop. For hilly regions a breast strap is added. This is the English saddle. The McClellan saddle has no padding and is covered with rawhide. The side saddle for women originated in England in 1380, the present form with the third pommel in 1830. See HARNESS.

Saddle-Bars. Iron bars to which the lead panels are fastened in the glazing of church windows.

Sadducees. Aristocrats of later Judaism; few, but of high rank, wealthy and worldly. They adhered to the letter of Scripture, denied tradition and the life to come, asserting that the hope of it deadened the energy of patriotism; they maintained Free Will, as against the Predestinarianism of the Pharisees.

Sade, DONATIEN ALPHONSE, MARQUIS DE, 1740–1814. French novelist of the fleshly school.

Sadebeck, ALEXANDER, 1843–1879. Prof. Kiel; writer on mineralogy. *Angewandte Krystallographie*, 1876, tr. as vol. ii. of Rose's *Elements of Crystallography*.

Sadi, or SAADI (MUSLIH-UDDIN), ab.1184–1291. Persian lyric and didactic poet of great fame. Next to his *Gulistan*, or *Rose-garden*, is the *Bostan* and *Pend-Nameh*.

Sadler, SIR RALPH, 1507–1587. Thrice Envoy to Scotland; knighted 1547; Privy Councilor under Edward VI. and Elizabeth; jailer of Mary Stuart at Tutbury 1562. *Letters*, 1720, repub. 1809.

Sadlier, MARY ANNE (MADDEN), b. 1820. Irish-American R. C. novelist.

Sadoleto, JACOPO, 1477–1547. Secretary to 3 popes; Bp. of Carpentras 1517, Cardinal 1536; correspondent of several reformers; author of commentaries, letters, and books of philosophy. His works were collected 1737 and 1759.

Sadowa, or **Königgrätz,** BATTLE OF. In Bohemia; decisive Prussian victory, July 3, 1866, over the Austrians under Benedek, who lost 40,000 men. This gave the supremacy to Prussia, unity to N. Germany, Venetia to Italy, and legislative independence to Hungary.

Safe. Strong case for containing money, account-books and other valuables, provided with means to protect them from fire and burglars. See FIREPROOF SAFES and LOCK.

Safed. Town 6 m. n.w. of Sea of Galilee; site of a castle built by Crusaders 1140 and by Templars 1240; destroyed by Mohammedans 1220 and 1266; colonized by Jews in 16th century.

Safety Lamp. Lamp for use in mines, especially coal mines, where gases are liable to rise which form explosive mixtures with air. The lamp is so constructed as to hinder the flame from coming in contact with the explosive mixtures surrounding it, though the presence of a dangerous gas is often indicated by changes in the character of the flame in the interior of the lamp. The first efficient lamps of this type were invented almost simultaneously in England 1815, by George Stephenson and Sir H. Davy, the principle being that an ordinary lamp flame will not pass through the meshes of wire gauze, provided the gauze be kept from becoming too highly heated. In the lamp invented by Dr. Clanny 1814, an attempt was made to protect the flame by means of a globe of water, but the contrivance was too cumbrous for general adoption. The earlier forms of lamps have been modified many times and in many ways by different inventors, with a view to remedying defects in construction and to increasing the efficiency of the protection afforded in cases of exceptional danger. A large number of patterns are now used in different parts of the world.

Safety-Valve. Valve on a vessel in which there is pressure, which is held shut by such a force only that the valve will be pressed open for the release of pressure when that pressure exceeds a certain amount. There are four types: 1. Direct load of the valve by a weight. This is limited to relatively small pressures, and is inconvenient always. 2. Weight indirectly bearing on a lever to keep the valve shut. This is the most usual form, and has the advantage and disadvantage of allowing the amount of pressure to be easily varied: spindles may bind to prevent the valve from moving. 3. Direct pressure by a spring; much used in newer practice, and in the form of pop-valve universal on locomotives; compact and light, not easily tampered with. When the reaction groove is cut in its face, so that when once lifted a larger area is opened to the escape of steam and the valve is held up as by a less pressure, the objection is removed to the small opening which the increasing resistance of the spring would cause as the ordinary valve lifts. 4. Indirect loading by a spring through a lever. This is least used now, though once the standard locomotive method. Safety valves for steam boilers are usually misnomers, as in most cases they would not carry off all the steam which the boiler would make. The area of the orifice should be sufficient for this, even when the valve lifts but a very small distance under high pressure. This valve was invented by Denis Papin for his digester, ab.1680.

Safflower. *Carthamus tinctorius.* Prickly annual herb of the Composite family, native of Europe and Asia; cultivated for its valuable red and yellow dye, which is obtained from the flowers. The safflower colors are very fleeting.

Safflower.

Safford, JAMES MERRILL, M.D., b. 1822. First State Geologist of Tenn. 1854–60 and 1871–95; prof. Vanderbilt Univ. 1875. *Geology of Tenn.*, with map, 1869.

Safford, TRUMAN HENRY, b. 1836. Director Chicago Observatory 1865; prof. Williams Coll. 1876.

Saffranine. Largely $C_{21}H_{21}N_4Cl$. Product of the oxidation of one molecule each of toluylene diamine, aniline, and orthotoluidine, dark powder, soluble in water. It dyes silk and wool pink, and cotton also upon a tannin mordant.

Saffron. *Crocus sativus.* Herb of the natural family *Iridaceæ*, native of s. Europe; cultivated for its yellow stigmas, from which the dye saffron is obtained.

Saffron, MEADOW. See COLCHICUM.

Saffron of Mars. Hydrated sesquioxide of iron with a little undecomposed carbonate, used in medicine.

Sag. Amount of deflection from a horizontal line of a cord, tape, or chain; this is less the lighter the cord and greater the pull upon it. Let W be the weight of the cord, l its length, and P the horizontal pull, then the sag in the middle is Wl divided by 8 P.

Sagar, or SAUGOR. 1. Holy island at mouth of the Hugli, in e. India; annually visited by many pilgrims; scarcely habitable, from frequent destructive floods; area 225 sq. m. 2. Town of central India, on Lake S. Pop., 1891, 44,674.

Sagas. Ancient Scandinavian legends of considerable length, relating historical or mythical events. See SCANDINAVIAN LITERATURE.

Sagasta, PRAXEDES MATEO, b. 1827. Spanish liberal, member of several cabinets from 1868; Prime Minister 1881–83, 1885–90, 1892–95, and 1897.

Sage. Plants of the genus *Salvia*, herbs of the natural family *Labiatæ*, of wide geographical distribution. *S. officinalis*, native of Europe, is the garden sage; many species are cultivated for ornament.

Sage (*Salvia officinalis*).

Sage, JERUSALEM. *Phlomis tuberosa.* Coarse herb of the Mint family, native of Europe, sparingly introduced as a weed into N. America.

Sage, WOOD. See GERMANDER.

Sage, ALAIN RENE. See LESAGE.

Sage, GARDNER AVERY, 1813–1882. Benefactor of New Brunswick (N. J.) Theol. Sem. and other Reformed (Dutch) institutions.

Sage, HENRY WILLIAMS, 1814–1897. Founder of Sage Coll. at Ithaca, N. Y.; benefactor of Cornell Univ.

Sage, RUSSELL, b. 1816. M.C. from N. Y. 1853–57; financier and railway operator.

Sagean, MATHIEU, ab.1655–ab.1710. French-Canadian explorer of the lower Mississippi and some of its w. tributaries. His narrative was tr. 1862.

Sage Bush. Shrubs of the genus *Artemisia*, of the Composite family, with bitter aromatic foliage, natives of w. N. America.

Sage Cock. See GROUSE.

Saghalien, or SAKHALIN. Island off s.e. coast of Siberia, held by China till ab.1800, then by Japan, and since 1875 by Russia. It has relics of prehistoric times, and coal mines worked by convicts, but is unfitted for agriculture. The natives are mostly Ainos. Length 670 m., area ab.29,000 sq. m., pop. ab.12,000.

Saginaw. City of S. co., Mich., on the S. River; settled 1849, chartered 1859, enlarged 1890. Its interests consist mainly of lumber and salt manufacturing. Pop., 1890, 46,322.

Saginaw Bay. Opening from Lake Huron into Mich. It receives S. River, 30 m. long.

Sagitta. Chætognath worm, allied to the Nematodes; small, transparent, cylindrical, with a horizontal fin around the tail, which forms more than half of the body and contains a pair of cavities containing the testes. The dorsal and the ventral mesenteries of the body similarly separate two cavities containing the ovaries. The mouth is provided with bristles that act as toothed jaws.

Sagittal Plane. Median, longitudinal, vertical plane of bilaterally symmetrical animals, or any plane parallel to it.

Sagittarius. See ZODIAC.

Sagittate. Leaves or other organs with arrow-shaped bases.

Sago. Nutritive, farinaceous substance, obtained from the pith of certain species of *Sagus* and *Cycas* in Java and Singapore, by stirring with water, allowing to settle, and rubbing the deposit through sieves. Each tree yields ab. 600 pounds of sago. Graulated sago is prepared by allowing the mixture after passing through the sieve to fall into a heated vessel, so that it is slightly baked. Portland sago is a kind of arrowroot.

Sago Cheese. Name given in the U. S. to SCHNABZIGER CHEESE (q.v.).

Sago-Palm. See CYCAD.

Saguenay. River of Quebec, flowing e. from Lake St. John, tributary to the St. Lawrence; noted for salmon and scenery. Length ab.130 m., drainage area 23,716 sq. m.

Saguntum. Greek city on e. coast of Spain, besieged by Hannibal 219 B.C.; famous for the heroic resistance of its people, who perished with it: hence the 2d Punic war. The Romans rebuilt it, and it is now Murviedro.

Sahagun, BERNARDINO DE, ab.1498–1590. Spanish Franciscan, missionary in Mexico from 1529; historian of the Aztecs and of the Conquest (pub. 1829): author of an Aztec grammar and dictionary 1576–78.

Sahama. Peak of the Andes, in Peru; altitude 22,350 ft.

Sahara. Largest desert region on the earth, in n. Africa. It extends westward to the Atlantic, n. to the Barbary states, s. to the Soudan and e. to Egypt, which maintains the desert character of the country to the Red Sea. It is a region of diversified surface, containing vast plains of sand without vegetation, ranging in elevation from below sea level to 2,000 ft. above it, ranges of mountains, and numerous oases produced by springs and streams. Its area is estimated at 2,500,000 sq. m., its pop. at 1,000,000.

Sahara Landscape—Nomad Encampment.

Saharanpur. Town of n. India, 125 m. n. of Delhi; capital of a British district. Pop., 1891, 63,194.

Sahib. Appellation of Europeans in India.

Sahlite, or SALITE. Variety of pyroxene, named from Sala, in Sweden, where it has been found in characteristic form.

Saigo, TAKAMORI, 1825–1877. Japanese general, Minister of State 1870–73.

Saigon. Capital of French Cochin-China; on the S., 35 m. from the China Sea. It has large exports, especially of rice. Pop., 1890, 16,213, or, with its suburb, Cholon, 56,138.

Sail. Assemblage of several breadths of canvas sewed together by the lists, and edged round with cord, fastened to the yards of a ship to make it drive before the wind. The use of sails is known to date from remote times. See RIGGING.

Sail Cloth. Canvas for sails made of jute, hemp, cotton or flax. In thickness and weight it varies from 22 to 44 lbs. per bolt of 38 yds., 24 in. wide.

Sailor's Creek. In Va.; scene of the capture of Ewell's division, some 8,000 men, by Sheridan, April 6, 1865.

Sainfoin. *Onobrychis sativa.* Leguminous forage plant, resembling clover, but coarser and with larger leaflets. It is more grown in Europe, especially Germany, than in America. Also known as Saintfoin.

Saint. See SAINTS.

St. Alban, d. ab.303. English protomartyr.

St. Albans. Capital of Franklin co., Vt.; raided Oct. 19, 1864, by Confederates from Montreal. A Fenian expedition crossed hence into Canada 1866, but was easily repelled.

St. Albans. City of Hertfordshire, 20 m. n.n.w. of London; scene of two battles. May 22, 1455, the Lancastrians were defeated and Henry VI. made prisoner; Feb. 17, 1461, the

St Albans—The Gate-House

Yorkists under Warwick were totally defeated by Queen Margaret, and the king rescued. The ruins of the Benedictine Abbey, founded 793, rebuilt ab.1100, are of architectural importance.

St. Ambrose. See AMBROSE, ST.

Saint Andrew, ORDER OF. See ANDREW, SAINT, ORDER OF.

St. Andrews. University town in e. Scotland, 42 m. n.e. of Edinburgh. Its abp. was the Primate. The ruins of its cathedral and castle, or bishop's palace, built ab.1160–1200, with other relics, are of historic importance.

St. Andrews, UNIVERSITY OF. Founded 1411; oldest in Scotland. It acquired its 3 colleges before the Reformation: St. Salvator's was founded 1456, St. Leonard's 1512, St. Mary's 1537. Affiliated with it is University Coll., Dundee, opened 1883.

St. Andrew's Cross. *Ascyrum crux-andreæ.* Yellow-flowered herb of the natural family *Hypericaceæ*, native of the s.e. U. S.; named from the form of its flowers, the petals spreading like the arms of a Maltese cross.

St. Anthony's Fire. Erysipelas, a disease probably caused by a micrococcus; probably known in England as *Rose.*

Saint-Arnaud. See LEROY DE SAINT-ARNAUD.

St. Asaph. Town of n. Wales, site of a very old bishopric, with the smallest British cathedral. Pop. ab. 1,900.

Saint-Aubain, ANDREAS NIKOLAI DE (CARL BERNHARD), 1798–1865. Danish novelist.

St. Augustine. Capital of St. John's co., Fla.; on Matanzas Inlet; oldest city in the U. S.: founded by Menendez de Aviles 1565; occupied by the British 1762–83; acquired by U. S. 1821. There are many remains of old Spanish forts and buildings. Pop., 1890, 4,742, much increased in winter by Northern visitors.

St. Bartholomew's Day. See BARTHOLOMEW.

St. Bees. Village of Cumberland, former site of a nunnery, and since 1816 of a divinity college.

St. Bernard. See BERNARD, ST.

St. Bernard. Breed of dogs, allied to the mastiff, but resembling the Newfoundland in temper and in his disposition to fetch and carry. Until lately confined to the Alps and adjacent countries, where it is used to recover persons lost in the snowstorms. Wonderful stories are told of its intelli-

St. Bernard Dog (*Canis familiaris extrarius st. bernhardi*).

gence. There are two distinct varieties: the smooth and rough coated.

St. Bernard, LITTLE. Alpine pass on the frontier of Savoy and Piedmont, Italy, s. of Mont Blanc. Hannibal is supposed to have crossed it in his invasion of Italy. Height 7,170 ft.

St. Brandan, or BRENDAN, ab.600. Irish monk, hero of legendary voyages; celebrated by Matthew Arnold.

St. Brandan's Isle. Imaginary island in the Atlantic, found on maps of 15th century; supposed retreat of King Roderick of Spain. The legend was current in the time of Columbus and after.

St. Bride. See BRIDGET, ST.

Saint-Castin, JEAN VINCENT DE L'ABADIE, BARON DE, 1650–1712. French colonist, trader, and soldier in Acadia and Me ; founder of Castine, Me.

St. Christopher. See ST. KITTS.

St. Clair, ARTHUR, 1734–1818. British officer 1757–62, settled in Pa. 1764; Brig.-gen. 1776, Major-gen. 1777, serving in N. J., Pa., and later in the South; tried by court-martial and acquitted 1778 for evacuating Fort Ticonderoga 1777; delegate to Congress 1785–87, and its pres. 1787; Gov. Northwestern Territory 1789–1802; Commander-in-chief 1791–92; surprised and defeated by Indians in Ohio, near the Miami, Nov. 4, 1791. *Narrative*, 1812.

St. Clair, LAKE. Link in the chain of great lakes of N. America, connected with Lake Huron by St. Clair R. and with Lake Erie by Detroit R. Area 396 sq. m., elevation 576 ft.

St. Clair River. Between Lakes Huron and St. Clair. Length 41 m.

St. Cloud. Suburb of Paris, on the Seine. Its chateau, wherein Henry III. was murdered 1589 and Napoleon's coup was made 1799, was burned by the Germans 1870. Pop., 1891, 5,660.

St. Columba. See COLUMBA, ST.

St. Croix River. 1. Branch of the Mississippi, boundary between Wis. and Minn. Length 168 m., drainage area 7,164 sq. m., mean flow 6,165 cu. ft. per sec. 2. Between Me. and New Brunswick, flowing from Grand Lake s.e. to Passamaquoddy Bay. Length 75 m.

St. Cyr. Village near Versailles, site since 1806 of a military school, originally (1686–1793) one for girls of high birth. Pop., 1891, 3,613.

St. Davids. Ancient Welsh town, seat of a bishopric, in the Celtic times of metropolitan rank. The cathedral was restored 1862–78. Pop. ab.2,000.

St. Denis. 1. Suburb of Paris, site of a fine abbey-church, built 1137–44, and restored 1848 and later. 2. Capital of REUNION (q.v.). Pop., 1889, 30,560.

St. Dizier. Town of n.e. France, on the Marne, 38 m. s.e. of Chalons; besieged for 6 weeks by Charles V. 1544; scene of battles between Napoleon and the Allies, Jan. 27 and March 26, 1814. Pop., 1891, 9,476.

Ste. Anne de Beaupré. Village on the St. Lawrence, 25 m. n.e. of Quebec; resort of many pilgrims, especially on July 26, to the shrine of St. Anne, whose relics are supposed to cure diseases.

Sainte-Beuve, CHARLES AUGUSTIN, 1804–1869. French critic of highest rank; Academician 1845, Senator 1865. His early poems and a novel, *Volupté*, 1834, represent him less fairly than *Causeries du Lundi*, 13 vols., 1851–57; and *Nouveaux Lundis*, 15 vols., 1863–72, collected from the Paris *Constitutionnel* and *Moniteur*. In acuteness, penetration and delicacy he has never been surpassed. *Port Royal*, 7 vols., 1840–60; *Portraits*, tr. 1868–75.

Sainte-Claire Deville, CHARLES, 1814–1876. Prof. Coll. de France 1875; geologist and meteorologist. *Voyage géologique*

Charles Sainte-Claire Deville.

aux Antilles, 7 vols., 1856–64.—His brother, HENRI ÉTIENNE, 1818–1883, prof. Paris from 1851, proved the dissociation of chemical compounds, and produced minerals, and even jewels, artificially. *Métallurgie du platine*, 1857–63; *De l'aluminium*, 1859.

St. Elias, MT. Peak of s.e. Alaska, in lat. 60° 17′ N., long. 140° 55′ W. Elevation 18,100 ft.

St. Elmo's Fire. Brushes and stars of electric light seen at tips of masts, yards and other projecting points of a vessel, principally during thunderstorms. The luminous electric discharge which takes place from these points is similar to that

St. Elmo's Fire.

called electric brush, and observed when a metallic point is presented to the prime conductor of an electric machine. When seen in a pair, it is sometimes called Castor and Pollux. It is also known as Helena, and Corporant (holy body).

Sainte-Marguerite. See LERINS.

Sainte-Maure. See BENOIT DE SAINTE-MAURE.

Saint Esprit, ORDER OF. Founded 1578 by Henry III. of France, replacing that of St. Michael, founded 1469; not increased since 1830.

St. Etienne. City of France, on the Furens, 36 m. s.w. of Lyons; taken by Huguenots 1563 and 1570; terminus of the first French railroads, 1828–31. It is in a coal-mining region, and has extensive manufactures, especially of hardware, firearms, ribbons, and laces. Pop., 1891, 133,443.

Saint-Evremond, CHARLES MARGUETEL DE SAINT DENIS, SEIGNEUR DE, 1613–1703. French writer, in England from 1662. His works, satires, comedies, essays, and miscellanea, were collected 1705.

Saintfoin. See SAINFOIN.

St. Francis River. 1. Branch of the Mississippi, draining low alluvial lands in s.e. Mo. and n.e. Ark. Drainage area 7,884 sq. m., average flow 31,000 cu. ft. per sec., length ab. 450 m. It is navigable 150 m. to Wittsburg, Ark. 2. Branch of the St. Lawrence, in Quebec. Length ab. 120 m.

St. Francis Xavier, COLLEGE OF. Founded 1847 in New York; directed by Jesuits. It has 20 instructors, ab. 150 students in the college proper, and ab. 940 in all.

St. Gall. 1. Mountainous canton of n.e. Switzerland, adjoining Lake of Constance. Area 779 sq. m.; pop., 1888, 229,441. 2. Its capital, long the site of a famous Benedictine abbey, founded by St. Gall (554–627), closed 1798. Pop., 1888, 27,910.

Saint Gaudens, AUGUSTUS, b.1848 in Ireland. N. A. 1889. American sculptor. Among his works are *Farragut*, in New York, and *Lincoln*, in Chicago.

St. George, ORDER OF. Founded 1769 by Catharine II. of Russia; conferred on a general who had taken the enemy's capital, secured an honorable peace, or beaten an army of 50,000. There is also a Bavarian order, dating from 1729.

St. George's Channel. Between Wales and Ireland.

St. Gotthard Tunnel. On the St. Gotthard railway, between s.e. Switzerland and Italy; built 1871–1883; 48,651 ft. long, 26 ft. wide, and 21 ft. high; longest railway tunnel yet constructed. See TUNNELING.

St. Helena. Island in the s. Atlantic, belonging to Gt. Britain since 1673; discovered by a Portuguese navigator, João de Nova, in 1502. Napoleon was confined here 1815–21. Its

St. Helena—Jamestown and the Ladder, from Munden's Battery.

shores face the ocean as perpendicular cliffs from 600–2,000 ft. high, and are in many places cleft by deep, narrow valleys. The capital is Jamestown. Pop., 1891, 4,116.

St. Helens. Borough of Lancashire, 12 m. e. of Liverpool; formed 1868. Its manufactures consist largely of plate glass and chemicals. Pop., 1891, 71,288.

St. Helier. Capital of Jersey. Pop., 1891, 29,133.

Saint-Hilaire, AUGUSTIN FRANÇOIS CÉSAR PROUVENCAL DE, 1799–1853. French botanist. *Flora Brasilianæ meridionalis*, 1825–33; *Leçons de Botanique*, 1840.

Saint-Hilaire, ÉMILE MARC, ab.1790–1887. French biographer. *Vie privée de Napoleon*, 1838; *Souvenirs intimes*, 6 vols., 1838–40.

Saint-Hilaire, JULES BARTHÉLEMY. See BARTHELEMY SAINT-HILAIRE.

St. Ignatius' Beans. See IGNATIUS' BEANS.

Saintin, JULES ÉMILE, 1829–1894. French painter, in New York 1857–63.

Saintine, JOSEPH XAVIER (BONIFACE), 1798–1865. French dramatist and novelist, author of *Picciola*, 1863.

St. James, COURT OF. Named from the palace built on the site of St. James's Hospital 1530–36; official residence of the English Court since 1698. The Levees are held here, but the Drawing-Rooms at Buckingham Palace.

St. James of Compostella, ORDER OF. Of Spanish origin; sanctioned by the pope 1175. It had great military power in the Middle Ages.

St. John. Chief city of New Brunswick; on Bay of Fundy at mouth of St. John River; founded as a French fort 1635; held

St. John, New Brunswick.

by the British from 1713; populated largely by Tory refugees from Mass.; chartered 1785. It has a good harbor, a fair trade, and some manufactures. Pop., 1891, 39,179.

St. John, HENRY. See BOLINGBROKE.

St. John, ISAAC MUNROE, 1827–1880. Civil engineer, chiefly in Ky. and Va.

St. John, JAMES AUGUSTUS, 1801–1875. Welsh author, biographer of Louis Napoleon, 1857, and Sir W. Raleigh, 1868. *Egypt*, 1834–44; *Hellenes*, 1842; *Isis*, 1853.—Of his sons, PERCY BOLINGBROKE, 1821–1889, was a voluminous writer; SIR SPENSER, b. 1826, was Minister to Peru 1881, to Mexico 1884, biographer of Sir J. Brooke, 1879, and author of books on Borneo, 1862, and Haiti, 1884.

St. John, JOHN PIERCE, b. 1833. Gov. of Kan. 1878–82; Prohibitionist nominee for Pres. 1884.

St. John, KNIGHTS OF. See HOSPITALERS.

St. John River. Portion of the boundary between Me. and Canada, thence flowing s. and e. through New Brunswick to the Bay of Fundy. Length 450 m., drainage area 26,000 sq.m.

St. John's. Capital of Newfoundland; on e. coast; partly burned 1846 and 1892. It has a good harbor, and large exports of fish. Pop., 1891, 29,007.

St. John's Bread. See CAROB.

St. John's College. At Annapolis, Md.; chartered 1784; opened 1789, succeeding King William's School, which began operations 1701. The State appropriates $15,000 annually. There are 14 instructors, ab.100 students of collegiate grade, and 175 in all.

St. John's College. At Fordham, New York City; incorporated 1846. It is managed by Jesuits, has 24 instructors, 217 students, and a library of 27,000 volumes.

St. John's Dance. See DANCING MANIA.

St. John's River. In Fla., heading near the e. coast and flowing n. parallel to it; navigable for small steamers. Length ab. 400 m.

St. John's University. Founded 1857 at Collegeville, Minn.; under R. C. control; entitled univ. 1883.

St. John's Wort. Herbs and shrubs of the genus *Hypericum*, natural family *Hypericaceæ*, of wide geographical distribution. *H. perforatum*, the common field species, is native of Europe, introduced as a weed into America.

Large-flowered St. John's-Wort (*Hypericum calycinum*).

St. Joseph. Capital of Buchanan co., Mo., on the e. bank of the Missouri; settled 1826–43; chartered 1851. It is supplied with water by pumping from the Missouri, and is well sewered. It has extensive manufactures and a large trade, especially in grain and pork. Pop., 1890, 52,324.

St. Just, LOUIS ANTOINE LÉON DE, 1767–1794. French terrorist; Deputy 1792, pres. Convention Feb. 1794; associated with Robespierre; guillotined July 28.

St. Kilda. Rocky islet, of the Outer Hebrides, 7 m. in circumference, 50 m. w. of Harris. The seabirds are much used as food, their feathers and oil being exported. Sheep furnish wool from which a coarse blanket is woven. Area 1.9 sq. m.; pop., 1891, 71.

St. Kitts, or ST. CHRISTOPHER. W. India island, at n. end of Leeward group; discovered 1493; settled 1625; held by Britain since 1713. Area 68 sq. m.; pop., 1891, 30,876.

St. Lawrence. River of N. America, outlet of Lake Ontario. It makes with the system of the Great Lakes a waterway, 2,150 m. long, from the head of Lake Superior to the Gulf of St. L. Its navigability is interrupted by rapids in the river proper, by the Falls of Niagara, and by the Sault Ste. Marie, all which are passed by canals. Length of the river proper, 700 m., area of the entire river and lake system, 457,000 sq. m.

St. Lawrence, GULF OF. Between Quebec, New Brunswick, Nova Scotia, Cape Breton Island, and Newfoundland; connected with the Atlantic chiefly by a wide channel between the two latter; important for its fisheries; perilous through currents and fogs.

St. Lawrence Island. In Bering Sea; discovered 1728; adjunct of Alaska.

St. Lawrence University. At Canton, N. Y.; chartered 1856. The academic department was opened 1859, the theological 1858. It has 11 instructors and 135 students of both sexes.

St. Leger, BARRY, 1737–1789. British officer, in America 1756–85. *Journal*, 1780.

St. Leonards. Town near HASTINGS (q.v.).

St. Leonards. See SUGDEN.

St. Louis. Subdivision of the CARBONIFEROUS (q.v.) or Mountain Limestone.

St. Louis. Capital of a French colony in w. Africa, near the mouth of the Senegal. Pop. ab. 19,000.

St. Louis. Principal city of Mo., on the Mississippi, 21 m. below the mouth of the Missouri. Water is obtained from the Mississippi River by pumping. It is well sewered, the discharge being into the river below the city. It is one of the most important railroad centers in the U. S., 15 railroads entering here. The river is crossed by 5 bridges; that of Eads is of steel tubular arches, the maximum span of which is 515 ft. Its manufactures and its river commerce are very great. St. L. was founded 1764 as a trading post by the French. It passed to the U. S. 1804 with the province of Louisiana. Its early growth was slow, having in 1840 but 16,469 inhabitants, but since that time it has grown with great rapidity. Pop., 1890, 451,770.

Saint-Luc, LA CORNE DE, 1712–1784. Canadian officer, prominent in the French wars; leader of Indians on the British side in the Revolution.

St. Lucas, CAPE. S. point of lower California.

St. Lucia. One of the Windward Is., W. Indies; s. of Martinique; discovered 1502; colonized 1563; held by Great

Port Castries, St. Lucia.

Britain since 1803. Its possession was constantly disputed from 1640–1803 between the French and English. The principal products are sugar, logwood, and tobacco. Area 245 sq. m.; pop., 1891, 43,708.

St. Mahé, BATTLE OF. April 24, 1293, between English and French fleets off the coast of Brittany. The French lost 180 ships and 8,000 men.

St. Malo. Seaport of Brittany, n.w. France; attacked by British forces 1693, 1695, and 1758; birthplace of Chateaubriand and Lamennais. Pop., 1891, 9,227.

Saint-Marc Girardin. See GIRARDIN.

St. Martin. One of the Lesser Antilles, W. Indies; held jointly since 1648 by France and Holland. Area 38 sq. m., pop. ab. 7,500.

St. Martin, ALEXIS. U. S. soldier, who received a gunshot wound 1825, which healed, leaving an opening into the stomach, through which William Beaumont, M.D. (1785–1853), made many experiments on digestion.

Saint-Martin, LOUIS CLAUDE, MARQUIS DE, 1743–1803. French mystical philosopher, influenced chiefly by Jacob Boehme. His works were more appreciated in Germany than at home.

Saint-Martin, VIVIEN, 1802–1897. French geographer.

Saint Martin's Summer. Period of pleasant weather in England usually in Nov.; in other parts of the Atlantic in Sept., Oct., and Nov., succeeding a rainy period.

St. Mary's River. Between Lakes Superior and Huron; 40 m. long. Its rapids, descending 20 ft., are passed by a canal 5,400 ft. long, constructed 1853–55, improved 1870 and 1887–95.

St. Maurice River. In Quebec, tributary to the St. Lawrence. Length 363 m., drainage area 16,000 sq. m.

Saint-Mémin, CHARLES BALTHAZAR JULIEN FÉVRE DE, 1770–1852. French engraver and painter, who took many portraits in America by aid of the physionotrace, a contrivance for copying profiles.

St. Michael and St. George, ORDER OF. British order, founded 1818; designed to honor such (Ionians, Maltese, or British) as had served with distinction in the Mediterranean.

St. Michaels. Most important of the Azores. Area 300 sq. m., pop. ab.130,000. It is noted for its oranges.

St. Michael's Mount. Ancient Dinsol. Rock in Mounts Bay, Eng., resembling Mont St. Michel in Normandy. It is connected with the shore by a causeway, and is surrounded by a castle dedicated to St. Michael. Altitude 238 ft.

St. Michel, MONT. Precipitous islet on the Norman coast, n.w. France; 18 m. s.w. of Avranches; 242 ft. high; site of an old Benedictine abbey, now a museum.

St. Moritz. Watering-place with mineral springs. See ENGADINE.

St. Nicholas, or NICOLAS, d. 326. Bishop of Myra in Lycia, in time of Diocletian, by whom he was imprisoned, and released by Constantine. Patron saint of Russia and of children. His day is Dec. 6.

St. Omer. Town of n. France, 26 m. s.e. of Calais; site of an English R. C. college 1592–1794, now a theol. sem. Pop., 1891, 17,865.

Sainton, CHARLOTTE HELEN (DOLBY), 1821–1885. English contralto singer, composer of cantatas and songs.

St. Paul. City of Ramsey co., Minn., on the left bank of the Mississippi; settled 1838–41, chartered 1849–54. It is irregularly laid out, is supplied with water by gravity, from lakes back of the city, and has an excellent sewer system. Its railroad communications are ample, and its manufactures large and varied; its recent growth has been very rapid. Pop., 1890, 133,156.

St. Paul de Loanda. See LOANDA.

St. Paul's Cathedral. In London, on the site of a church founded by Ethelbert 610, burned in 962, rebuilt, and

St. Paul's Cathedral.

burned 1087, and in the great fire of 1666. It was 590 ft. long, and surmounted by a wooden spire 460 ft. high. The present edifice was erected by Sir Christopher Wren in 1675–1710, at a cost of $3,700,000. It has ab. half the area of St. Peter's, being in form of a Latin cross, 500 ft. long, 250 ft. wide at the transept and 404 ft. high to the top of the cross. The interior dome rises 225 ft. from the pavement.

St. Paul's School. Founded in London 1509 by Dean Colet, and since maintained; now in W. Kensington. Its departments now admit 400 girls and 1,000 boys.

St. Petersburg. Capital of Russia, on the banks and islands of the Neva, at its mouth in the Gulf of Finland; founded 1703 by Peter the Great. It is a beautiful city, and has extensive commerce and numerous institutions of learning and the arts. Its university, founded 1819, has four faculties, and (in 1896) 2,625 students. Pop., 1890, with suburbs, 1,036,324.

St. Petersburg Declaration. By representatives of 17 countries, Dec. 11, 1868, against the use in war of explosive rifle-balls, as causing needless suffering and death.

St. Peter's-Wort. Plants of the genus *Ascyrum*, natural family *Hypericaceæ*, natives of the s.e. U. S.

Saint-Pierre, JACQUES HENRI BERNARDIN DE, 1737–1814. French author, best known by *Paul et Virginie*, 1788. *Ile de France*, 1773; *Études de la Nature*, 3 vols., 1784. His later writings are inferior. *Works*, 12 vols., 1813–20.

St. Pierre and Miquelon. Group of islands at the mouth of the Gulf of St. Lawrence, near the s. coast of Newfoundland, belonging to the French. Several transatlantic cables touch here. It is frequented as a cod-fishing station. Area 81 sq. m.; pop., 1889, 5,983.

St. Quentin. City of n. France, on the Somme. A Spanish victory here, Aug. 10, 1557, was followed by hideous cruelties, and led to no permanent result. Jan. 19, 1871, the Germans defeated a French army here, and took 10,000 prisoners.

Saint-Réal, CÉSAR VICHARD, ABBÉ DE, 1631–1692. French historian. His *Conjuration contre Venice*, 1674, is still valued.

Saints. In N. T., all persons consecrated to God by Christian belief and profession; in Ch. use, the Apostles and others, biblical, or canonized for supposed eminent holiness and great services to religion; in popular usage, any of especially beautiful character or beneficent life.—The worship of canonical saints, *i.e.*, prayers for their intercession, grew by degrees, and was recognized in the East 787, and confirmed in the West at Trent 1563. Protestants have always rejected it.

Saint-Saëns, CHARLES CAMILLE, b. 1835. French musician, almost equally excellent as organist, pianist and composer. His most successful compositions are four symphonic poems, *Phaëton*, *Le Rouet d'Omphale*, *La Jeunesse d'Hercule*, and *Danse Macabre*, and one of his four pianoforte concertos in G minor. His operas, *Le Timbre d'Argent*, *La Princesse Jaune*, *Samson et Dalila*, *Étienne Marcel*, *Henri VIII.*, *Proserpine*, *Ascanio*, and *Phryné*, though among the best of contemporary French production, have been less successful.

Saintsbury, GEORGE EDWARD BATEMAN, b. 1845. English critic; historian of French and Elizabethan literature, 1882–87; biographer of Dryden and Marlborough, 1881–85; prof. Univ. Edinburgh 1895. *French Novelists*, 1891.

Saint-Simon, CLAUDE HENRI, COMTE DE, 1760–1825. French socialist, of strange and adventurous life, but of large economic influence. *Reorganization de la Société Européenne*, 1814; *L'Industrie*, 1817; *Le Système Industriel*, 1821; *Catechisme Industriel*, 1824; *Nouveau Christianisme*, 1825.

Saint-Simon, LOUIS DE ROUVROI, DUC DE, 1675–1755. French writer of *Memoirs*, giving a graphic picture of the court of Versailles. Parts of them were pub. 1830, and in 20 vols. 1856; tr., 4 vols., 1857. An edition, begun 1871, is in progress.

St. Simonianism. Doctrines taught by the disciples of St. Simon, departing considerably from his own tenets, and ultimately leading to the prosecution of the members of the community, which was suppressed 1832.

St. Sophia, MOSQUE OF. One of the oldest churches in existence; built at Constantinople by Justinian 532–557; since 1453 a mosque. It covers 70,000 sq. ft. See ARCHITECTURE.

St. Stephen, ORDER OF. Instituted in Hungary by Maria Theresa May 5, 1764.

St. Sulpice. Diocesan seminary for priests in Paris, near the Luxembourg.

St. Thomas. Volcanic island in Gulf of Guinea; discovered 1470; colonized by Portuguese 1493; held by them till 1641 and since 1844, and in the interval by the Dutch. Area 360 sq. m., pop. ab. 19,000.

St. Thomas. Island 36 m. e. of Porto Rico, W. Indies; colonized 1657 by the Dutch; held by Denmark. In 1870 Pres.

St. Thomas.

Grant secured the purchase of the island for the U. S. for $7,500,000, but the Senate refused to ratify the treaty. Area 33 sq. m.; pop., 1890, 12,019.

St. Victor, ADAM OF. See ADAM OF ST. VICTOR.

St. Victor, HUGO OF, 1097–1141. Flemish mystical theologian.

Saint-Victor, PAUL DE, 1827–1881. French author and journalist, noted for elaborately brilliant style. *Hommes et Dieux*, 1867; *Les Deux Masques*, 1879–83; *Victor Hugo*, 1885.

St. Vincent. One of the Windward Is., W. Indies, 105 m. w. of Barbadoes; discovered 1498; held by Caribs till 1795, and since by the British. Area 132 sq. m.; pop., 1891, 41,054.

St. Vincent, CAPE. See CAPE ST. VINCENT.

St. Vincent, JOHN JERVIS, R.N., EARL, 1734–1823. Admiral 1795, Earl 1797.

St. Vitus's Dance. See CHOREA and DANCING MANIA.

Saka. Siamese game of backgammon, played on the same board and in the same manner as the European game, except that the tunicula or little tower of the classical writers, through which the dice are thrown, is retained, the dice being discharged into it from a cannon-shaped ivory cylinder called Krabok.

Sakuntala. Sanskrit dramatic poem by Kalidasa, tr. 1789.

Sakyamuni. See BUDDHA.

Sala, GEORGE AUGUSTUS HENRY, 1828–1895. English journalist, novelist, and descriptive writer; founder of *Temple Bar*. *Life*, 1895.

Salaam. Oriental salutation, usually accompanied by the words meaning "Peace be with you!" In India the body is inclined, sometimes almost to the ground, with the palm of the right hand upon the forehead. Strict Mohammedans never give the salaam to an unbeliever.

Salaberry, CHARLES MICHEL DE, 1778–1829. Canadian officer, prominent in the war of 1812–15.

Salad. Lettuces, endive, and other herbs eaten raw, dressed with vinegar, oil, and other condiments. They contain more of the mineral matter than when boiled.

Saladin, 1137–1193. Ruler of Egypt 1171 and Syria 1184. He invaded Palestine with 80,000 men, routed the Christians at Tiberias July 4, 1187, and took Jerusalem Oct. 2. This gave rise to the 3d Crusade, 1189, and a series of brilliant conflicts between S. and Richard Cœur de Lion, followed by a 3 years' truce, Sept. 1192.

Salado, RIO. River of Argentina, rising in the Andes and flowing s.e. to the Parana; near 1,000 m. long.

Sal Alembroth. Made from corrosive sublimate. Its composition is expressed by $HgCl_2 2NH_4Cl.H_2O$.

Salamanca. Town of w. Spain, on the Tormes, 110 m. n.w. of Madrid; taken 222 B.C. by Hannibal, 1055 by Christians from Moors, and 1812 by the French, who were defeated by Wellington July 22, 1812. Its university, founded 1243, was famous and important till after 1600: it has a library of 80,000 vols., and ab. 400 students. Pop. ab.22,000.

Salamander. In America, loosely, most of the tailed Amphibians; in Europe, a single family distinct from New World forms. The common European animal has a skin which secretes much fluid, enabling it to withstand fire to a considerable degree. In s. U. S., the Gopher (*Geomys*) is called a salamander.

Salamandrina (CADUCIBRANCHIATA, MYCTODERA, SALAMANDROIDA). Sub-order of *Urodela*, characterized by having no external gills or gill apertures. They have four-toed front feet and five-toed hind limbs. The eyes are furnished with lids. The skin is covered with warty glands. The land Salamanders are viviparous, but the larvæ are deposited in the water. The aquatic Salamanders, known as Tritons or Newts, lay fertilized eggs upon plants in the water. The vertebræ are opisthocœlous. The general appearance of these animals is Lizard-like. See AXOLOTL, AMBLYSTOMA, and SALAMANDER.

Salamis. Island s.w. of Attica, held successively by Megara and Athens; memorable for the decisive defeat of the Persian fleet 480 B.C. by the Greeks under Themistocles. It

Salamis.

is irregular in shape, the surface is mountainous and wooded in some parts; on the coast, wheat, wine, and olives are grown.

Sal Ammoniac. NH_4Cl. AMMONIUM CHLORIDE (q.v.). It is found occasionally as a natural mineral substance in volcanic regions, like those of Italy and the Hawaiian Islands.

Salamstone. Reddish and bluish colored varieties of sapphires from Ceylon.

Salary Grab. General increase in Federal salaries 1873; especially retroactive section of act of March 4, which raised the salaries of members of Congress for the two years preceding. This was repealed in consequence of popular indignation, but the salaries of the President and Justices were not reduced.

Salas, MARIANO, 1797–1867. Mexican general 1839; prominent in the war of 1846–47; banished 1860–62.

Salaverry, FELIPE SANTIAGO DE, 1806–1836. Peruvian general 1834; supreme chief or dictator 1835; executed.

Salband. Term used in the same sense as FLUCAN and SELVAGE (q.v.).

Saldanha Oliveira e Daun, JOAO CARLOS, 1791–1876. Portuguese Marshal 1833; in exile 1836–46; Duke 1846; Premier 1847–49, 1851–56, and 1870; Ambassador at Rome 1862–64 and 1866–69, and to England from 1870.

Sale. Transfer of property, or contract to transfer it, for a price in money; generally, in English law, movable personal property. It is sometimes difficult to determine whether a transaction is sale or bailment, lease or mortgage: but if it is to evenutate in the transfer of the general property in a chattel for a money consideration, it is a sale. In case of a contract for the present sale of a specific chattel, title passes upon the formation of the contract, though the seller has a right to retain the chattel until the price is paid; in case of a contract to sell in the future, title will pass as soon as the chattel is unconditionally appropriated to the contract by the act or assent of both parties. At common law, no one can give a better title to goods than he possesses (except in case of sales in market overt in England); but this has been modified to some extent by Factors' acts and other statutes.

Sale, GEORGE, ab.1690–1736. English translator of the *Koran*, 1734; eminent as an Oriental scholar.

Sale, SIR ROBERT HENRY, 1782–1846. Anglo-Indian officer from 1795; Major-gen. and Knight 1839 for services in Afghanistan, especially at Ghazni; besieged at Jellalabad Nov. 1841–April 1842, but victorious; mortally wounded in battle with the Sikhs.

Salem. Poetical name of Jerusalem; as previously of a

city, probably in middle Palestine, of which MELCHIZEDEK (q.v.) was king (Gen. xiv.).

Salem, or SHELAM. Town of s. India, 120 m. s.w. of Madras; noted for its cotton manufactures. Pop., 1891, 67,750.

Salem. City of Essex co., Mass., on the n. shore of Massachusetts Bay, 16 m. n.e. of Boston; settled 1626, chartered 1836; seat of the Essex Institute and the Peabody Academy of Science. It has some fisheries and varied manufactures, principally of leather. Ab.1780–1825 its foreign commerce was extensive, but of late it has dwindled greatly. Pop., 1890, 30,801.

Salem. Capital of Oregon since 1860; in Marion co., on the Willamette, 52 m. s. of Portland; founded ab. 1835, chartered 1853; site of WILLAMETTE UNIV. (q.v.), opened 1844. Pop., 1890, 4,515, since much increased.

Salem Witchcraft. Mania against so-called witchcraft which raged generally in the American colonies, and with special violence at Salem, Mass. 19 persons were put to death 1692, and 150 lay in prison awaiting their fate, when the popular reaction against the excitement set in.

Saleratus. Term applied in the U. S. to a baking powder, consisting of a mixture of salt, cream of tartar, and carbonate of soda. Formerly potassium bicarbonate.

Salerno. Town of s. Italy, 33 m. s.e. of Naples; settled from Rome 194 B.C.; Robert Guiscard's capital 1077; sacked by Henry VI. 1195; seat of a university 1150–1817, and of a school

Salerno.

of medicine famous ab.900–1300: it began to decay by reason of the introduction of Arabian medical knowledge, and was dissolved by Napoleon I. in 1811. Pop. ab 39,000.

Sales, FRANCIS DE. See FRANCIS OF SALES.

Salette, LA. Village of s.e. France, 28 m. s.s.e. of Grenoble; noted for alleged appearances of Virgin Mary 1846 and later; hence a place of pilgrimage till disapproved 1879 by the pope.

Saleyer Is. Group of ab.30 in E. Indies, s.w. of Celebes. Area near 300 sq. m., pop. ab.50,000, chiefly Malays.

Salford. Suburb of Manchester. Pop., 1891, 198,139.

Salicaceæ. Natural family of flowering plants, of the class *Angiospermæ* and sub-class *Dicotyledons*, comprising two genera (*Salix*, the willows, and *Populus*, the poplars and aspens) and ab.200 species, most widely distributed throughout the temperate and frigid zones of the n. hemisphere; called the Willow family.

Salicetum. Garden devoted to the cultivation of willows.

Salicin. $C_{13}H_{18}O_7$. White crystalline glucoside, found in willow bark, and in the bark and leaves of poplars; decomposed by boiling with water into dextrose and saligenin. It is given in intermittent fevers.

Salic Law. Legal manual regulating the succession to private property, and supposed to exclude females and their descendants from succession to thrones. It regulated the succession to the French crown, and was the cause of the 100 years' war with England. It was operative also in Spain 1713–1830.

Salicylic Acid. C_6H_4:OH.COOH. Orthohydroxybenzoic acid; white crystalline substance, melting at 155° C., soluble in hot water; prepared by the decomposition of methyl salicylate by alkalies, but commonly by the action of carbonic acid upon sodium phenylate; important antiseptic, largely used in pharmacy, in the manufacture of methyl salicylate, and for the preservation of beer, cider, and manufactured preserves.

Salicylic Aldehyde. C_6H_3:OH.CHO. Orthohydroxybenzaldehyde, formed by the oxidation of saligenin, and found in *Spiræa;* liquid, bpt. 196.5° C., with a strong odor; easily oxidized to salicylic acid; made by treating phenol with chloroform and caustic soda.

Salicylic Methyl Ether. See METHYL SALICYLATE.

Salient Angle. Interior angle of a polygon less than 180°.

Salient Polygon. One in which all angles are salient.

Salient Polyhedron. One all plane sections of which are salient polygons.

Salieri, ANTONIO, 1750–1825. Italian opera composer and conductor, pupil of Gluck; Court Chapelmaster at Vienna 1788–1824; teacher of Schubert. His intrigues against Mozart led to the fiction that he had poisoned Mozart.

Saligenin. C_6H_4:OH.CH_2OH. Orthohydroxybenzyl alcohol; white plates, melting at 82° C.; prepared by the decomposition of salicin. It gives salicylic aldehyde and acid upon oxidation.

Salii. College of priests at Rome, dedicated by Numa to the service of Mars. Every March, with songs and dances, they made solemn processions about the city and the sacred places.

Salimeter. See HYDROMETER.

Saline. Place where salt is obtained by the evaporation of natural brines.

Saline Plants. Plants growing on the seashore or in salt water. Few of them are aquatic, except Sea-weeds. See EEL GRASS and SALTWORTS.

Salisbury, or NEW SARUM. Capital of Wiltshire, 84 m. w.s.w. of London; noted for its fine cathedral, erected 1220–1330. The cathedral is 473 ft. long and the spire 404 ft. high.

Salisbury Cathedral, from the north-east.

The old cathedral was at Old Sarum, 2 m. off, and was removed 1220. Old Sarum was an important town in Roman times. Pop., 1891, 17,362.

Salisbury, RICHARD ANTHONY, 1761–1829. English botanist. *Paradisus Londinensis*, 1806–7; *Genera of Plants*, 1866.

Salisbury, RICHARD NEVILLE, EARL OF, d. 1661. Yorkist chief in the War of the Roses; executed.

Salisbury, ROBERT ARTHUR TALBOT GASCOYNE CECIL, MARQUIS OF, b. 1830. M.P. 1853; Viscount Cranborne 1865; Sec. for India 1866–67 and 1874; Marquis 1868; Conservative leader; Foreign Sec. 1878–79; leader, with Disraeli, of opposition 1879–85; Premier 1885, 1886–92, and since 1895.

Salisbury, ROBERT CECIL, EARL OF, 1550–1612. Son of Lord Burleigh; Minister of Elizabeth and James I.; Earl 1605; Lord High Treasurer 1608.

Saliva. Mixed secretion of the salivary glands and of the mucous glands of the mouth, an alkaline fluid whose most important constituent, in man, is ptyalin, a substance changing starch into grape sugar in an alkaline medium. The other uses of saliva are chiefly mechanical, moistening the food dur-

ing mastication, rendering the resulting bolus more easily swallowed. The composition of saliva is water 99.4, ptyalin 0.14, mucus 0.15, fat 0.13, sulphocyanides 0.01, salts 0.17; also globulin and mucin in small quantities.

Salivary Glands. Three pairs of racemose glands secreting the saliva. The parotid, situated in front of the external ear down to the angle of the jaw; the submaxillary, just below the base of the lower jaw; and the sublingual, on the floor of the mouth. They communicate with the cavity of the mouth by means of ducts, through which the saliva flows.

Salivary Glands:
1, the parotid gland; 2, the submaxillary gland; 3, the sublingual gland; 4, Steno's duct; 5, Wharton's duct; 6, Bartholin's duct; 7, masseter muscle; 8, mastoid process; 9, digastric muscle; 10, internal jugular vein; 11, external carotid artery; 12, the tongue.

Sallust, CAIUS SALLUSTIUS CRISPUS, 86–34 B.C. Roman historian of great merit, from whom we have a history of the Conspiracy of Cataline, another of the War with Jugurtha, and fragments of a general history of Rome from 78 B.C.

Sally-Port. Passage by which a garrison may make a sudden attack upon besiegers.

Salmagundi. Italian dish, originally consisting of minced meat, eggs, anchovies, onions, and oil; now a mixture of various ingredients, a miscellany. The word is sometimes corrupted in English to salomon-gundy.

Salmasius, CLAUDIUS, 1588–1653. French scholar, prof. Leyden 1631; considered the most learned man of his day. His *Defensio regia pro Carolo I.*, 1649, was acrimoniously answered by Milton.

Salmo. Genus of family *Salmonidæ*, including *S. salar*, Atlantic Salmon, *S. trutta*, Sea-Trout or Salmon Trout, and the Black Spotted Trout of the rivers and lakes of Europe and w. N. America, of which *S. fario*, *S. gairdneri*, *S. irideus*, and *S. purpuratus* are examples. The Atlantic Salmon is steel blue above, with black spots, most numerous in the female, distributed on the back. There are teeth on the vomer, which disappear with age. When the salmon runs up the rivers, the color fades and the male acquires orange patches and gets a more hooked under jaw. The average weight is less than 15 lbs., though an exceptional weight of over 80 lbs. is recorded. The salmon is rare in rivers s. of Cape Cod, although, before the Hudson, Delaware, and streams of N. J. were polluted by factory waste, they ran in these streams. After spawning,

Salmon Fishery on the Rhine.

the parents are called kelts, which, unlike the quinnat, do not perish, but return to the sea. The spawning is done in the fall and the eggs hatch as parrs the next spring. They remain in the river two years, descending the third spring. When a year old, the parr is called a pink, and when it descends the river, it is a smolt. In the sea it grows rapidly into a grilse, or young Sea Salmon. The parr has two or three black spots on the opercle, several black and orange spots on the back, and 12 to 15 bluish bars on the sides. As it becomes a smolt the fins get darker. The salmon which have become land-locked are the variety *sebago*. *Salmo trutta* is a smaller, weaker fish, with smaller scales. Black Spotted Trout salmon of fresh water have the vomerine teeth persistent. *S. fario* is the European Trout, the corresponding American form being the Rainbow Trout, *S. irideus*, which is believed to become the *S. gairdneri* or Steel-head as it grows older. It returns to the sea when the fall run of Quinnat occurs. These fish are small in small streams and in warmer waters, while in lakes and the north a weight of 20 lbs. (6 in the *irideus*) is attained. For the fish which is called Brook Trout, Lake Trout, etc., in e. U. S., see SALVELINUS. In 1891 the salmon packed in Alaska was 800,000 cases, on the Columbia River 390,000 cases, and elsewhere in U. S. 200,000 cases, 48 lbs. in each case.

Salmon. Fish of this name may be referred to two genera, ONCORHYNCHUS and SALMO (q.v.). The former includes the Quinnat or Columbia River Salmon; the latter includes the Atlantic Salmon. See ISOSPONDYLI and SALMONIDÆ.

Salmon, GEORGE, D.D., LL.D., D.C.L., F.R.S., b. 1819. Prof. Trinity Coll., Dublin, 1866, Provost 1888; writer on Higher Algebra, Conic Sections, Higher Plane Curves, and Geometry of three dimensions. *Introduction to N. T.; Gnosticism*, 1887.

Salmon Brick. Brick intermediate in quality between soft and hard, and usually having a salmon color.

Salmond, STEWART DINGWALL FORDYCE, D.D., b. 1838. Prof. Free Ch. Coll., Aberdeen, 1876; ed. *Critical Review*, 1891. *Sabbath*, 1880; *Immortality*, 1894.

Salmoneus. In Grecian Mythology, son of Æolus, the founder of the Æolic race. He boasted himself the equal of Zeus, and was slain by him.

Salmonidæ. Isospondylous fishes, with elongate body covered with cycloid scales, the head naked, a supplemental bone forming the lateral margin of upper jaw, an adipose fin present, caudal fin forked, abdomen rounded, no oviduct (eggs escaping by abdominal pore), and many large cæca at pyloric end of stomach. Included are Whitefish (*Coregonus*), Grayling (*Thymallus*), Quinnat (*Oncorhynchus*), Salmon Trout (*Salmo*), and Chars (*Salvelinus*).

Salmon River. In Idaho, flowing n. and w. to the Snake; length 450 m. The S. R. Mts. are on its head waters.

Salm-Salm, FELIX, PRINCE, 1828–1870. Prussian officer, Col. U. S. Vols. 1861–65; aid to Maximilian 1866–67; killed at Gravelotte. *Diary in Mexico*, 1868.—His wife, AGNES (LECLERCQ), 1842–1881, m. 1862, American actress, bore part in his campaigns, labored to save Maximilian, and pub. *Ten Years*, 1875.

Salnave, SYLVAIN, 1832–1870. Haytian insurrectionist; Pres. 1867–69; executed.

Salò, GASPAR DA, ab.1550–1610. Italian maker of viols in Brescia. His best instruments are VIOLAS (q.v.) and bass viols. He was the teacher of MAGGINI (q.v.), and the founder of the Brescian School of violin making.

Saloff, BASILE DE, b. 1829. Russian engineer, Director-gen. of railways 1887.

Salol. $C_6H_4{:}OH.COOC_6H_5$. Phenyl salicylate; colorless crystals, prepared by the action of phosgen upon a mixture of salicylic acid and phenol; largely used as an antiseptic, and in medicine.

Salome. 1. Wife of Zebedee, mother of the Apostles James and John, perhaps sister of the Virgin Mary. 2. Daughter of Herodias (Matt. xvi.).

Salomon, JOHANN PETER, 1745–1815. German-English violinist and composer.

Salomon, LOUIS ÉTIENNE FÉLICITÉ, 1820–1888. Pres. of Hayti 1880–88.

Salomon Islands. See SOLOMON ISLANDS.

Salona. City of Dalmatia, on an arm of the Adriatic; Roman colony 78 B.C.; long a prominent seaport; destroyed by Avars 639; birthplace of Diocletian, whose vast palace, occupied 305–313, was 3 m. s.w., on the site of Spalato.

Salonica. City of Macedonia, at the head of the Gulf of S.; of much commercial importance; anciently THESSALONICA (q.v.). Pop. ab.122,000, one-half Jews.

Salpæformes. See ASCIDIANS.

Sal Prunella. Fused niter cast into sticks or balls.

Salps (SALPIDÆ). Tunicates of the class THALLIACEA (q.v.). *Salpa* is the typical example. They are cylindrical, with bodies surrounded by hoop-like bands of muscles. The sexual animals are produced by budding from solitary forms, by means of a stolon, so as to be united in chains, each hermaphrodite zoöid containing only one egg, which develops viviparously, by means of a placenta. The ovum matures before the sperma-

tozoa do, in each zoöid successively, and must be fertilized by the next older, preceding zoöid.

Salsette. Island adjoining Bombay; held by Portugal ab. 1510–1739, and by Gt. Britain since 1774; noted for its cave-

Inhabitants of the Island of Salsette.

temples; the great Keneri cave belongs mainly to the 5th century. S. has many rice-fields and palm trees. Area 241 sq. m., pop. ab.112,000.

Salsify, or OYSTER-PLANT. *Tragopogon porrifolius.* Coarse herb of the Composite family, native of Europe; extensively cultivated in gardens for its large white root, used as a vegetable; sparingly introduced as a weed into N. America.

Sal Soda. See SODIUM CARBONATE.

Salsuginous. Plants growing naturally in sandy soil.

Salt. Acid, basic, normal, neutral, double, primary, secondary, tertiary, etc. See SALTS.

Salt. NaCl. Common salt is a chemical compound of sodium and chlorine. Though readily soluble in water, it is found abundantly in rock form as an important mineral component of the earth's crust. Rock salt, known mineralogically as halite, occurs in all the more extensive geological formations from the Silurian to the Tertiary, and is sometimes found in beds hundreds of feet in thickness and of great lateral extent. Salt is also obtained from the waters of the ocean, of salt lakes, and of salt springs, as well as from the deep-seated

Salt Marshes of Oust, France.

brines in stratified porous rocks that are reached by borings through the superjacent strata. In 1895 the production of salt in the U. S. was over 13,000,000 barrels of 280 lbs. each, of which over 5,000,000 were obtained from Silurian formations in N. Y., and nearly 4,000,000 from Silurian and Subcarboniferous formations in Mich. Among the largest and best known of the salt deposits of the world are those lying in a territory that includes a large area in N. Germany and extends both e. and w. beyond its limit. The product of U. S. 1895 was 173,-662 tons of rock-salt, and 1,539,178 tons of evaporated salt.

Salt, SIR TITUS, 1803–1876. English cloth manufacturer and philanthropist; founder of a model village, Saltaire, near Bradford, with schools, workmen's institutes, etc., 1853; M.P. 1859, Baronet 1869.

Salt, SPIRIT OF. Old name for hydrochloric acid.

Saltatoria. 1. *Orthoptera*, with jumping legs. The group includes the ACRIDIIDÆ (*Grasshoppers*), LOCUSTIDÆ, and GRYLLIDÆ (q.v.). 2. Group of Australian Marsupials. See ENTOMOPHAGA.

Saltatory Evolution. 1. Development of new species suddenly by sporting or otherwise, but still biogenetically. A few instances of sporting are known, and doubtless a species could be established in this way; but such sports are the results of emphasis of the forces ordinarily at work producing variation, hence not necessary to a theory of the origin of species. 2. That form of evolution which undergoes periodic accelerations in the geologic history of the earth. Doubtless but one law need be evoked to explain all these modifications.

Salt-Cake. Anhydrous sodium sulphate. The salt-cake process for making SODIUM CARBONATE (q.v.) is so called because sodium chloride is heated with sulphuric acid, which forms salt-cake.

Salter, JOHN WILLIAM, 1820–1869. Paleontologist to Geol. Survey of Gt. Britain: with Dr. H. Woodward he prepared a tabular view of British Fossil Crustacea, showing their range in time.

Saltigradæ. See SPIDERS.

Salt Lake City. Capital of Utah and of S. L. co., at w. base of the Wasatch Mts., near the shore of Great Salt Lake. It was founded by Brigham Young July 1847; the main body of the Mormons came in the fall of 1848. After 1870 Gentiles settled here in increasing numbers. The Great Mormon

Interior of Mormon Tabernacle.

Temple, a massive granite structure, was 40 years in building and cost ab. $4,000,000: it measures 186 by 99 ft. The Tabernacle is a huge auditorium with self-supported wooden roof seating 10,000 people. The UNIV. OF UTAH (q.v.) was founded 1850. Pop., 1890, 44,843.

Salt of Saturn. Acetate of lead.

Salt of Sorrel. Binoxalate of potassium.

Salt of Tartar. Crude carbonate of potassium.

Saltonstall, SIR RICHARD, 1586–1658. First assistant of Mass. 1630; in England from 1631; Envoy to Holland 1644.—His son, RICHARD, 1610–1694, was in Mass. 1630–72, and assistant 1637.—His grandson, GURDON, 1666–1724, was Gov. of Conn. from 1708.—His nephew, RICHARD, was Judge of Mass. Superior Court 1730–55.—His grandson, LEVERETT, LL.D., 1783–1845, was Mayor of Salem, Mass., 1836–38, and M.C. 1838–43.—His grandson, LEVERETT, 1825–1895, was Collector of Boston 1885–89.

Saltpeter, NITER, or POTASSIUM NITRATE. KNO_3. Obtained principally from the natural nitrate soils of India, and the artificial niter beds of France, Germany, Sweden and Hungary: the former yields about one-fifth the weight of the soil in impure crystals, which is the source of the supply in U. S.: the artificial beds yield about a quarter of a pound per bushel of earth annually. See POTASSIUM NITRATE, NITER, and NITRIFICATION.

Salt-Rheum. Popular name for weeping form of eczema.

Salts. Generally, crystalline compounds, formed by the treatment of an acid with a base. They consist of a metal and an acid radical; *e.g.*, sodium sulphate, Na_2SO_4. Normal or neutral salts are those containing neither acid nor basic residues. They are derived from acids by the replacement of all the available hydrogen by a metal or metals. Acid salts are those derived from acids by replacing a portion of the available hydrogen by a metal; *e.g.*, acid potassium sulphate, $KHSO_4$. Basic salts are those derived from bases by replacing a portion of the hydroxyl with an acid residue; *e.g.*, basic bismuth nitrate, $Bi(OH)_2NO_3$, derived from $Bi(OH)_3$. Primary salts are those derived from polybasic acids by the replacement of one atom of hydrogen by a univalent metal; *e.g.*, primary sodium phosphate is NaH_2PO_4. If the metal is bivalent, the primary salt is derived from two molecules of the acid; thus primary calcium phosphate is $CaH_4(PO_4)_2$. Secondary salts are those derived from the acid by the replacement of two atoms of hydrogen by the metal. In a tertiary salt the metal replaces three atoms, hydrogen, etc. Double salts are those

formed by the union of molecules of different substances; *e.g.*, potassium and zinc sulphates unite to form $K_2SO_4.ZnSO_4.6H_2O$. Aluminium and sodium chlorides form $AlCl_3.3NaCl$. See ETHEREAL SALTS.

Saltus, EDGAR, b.1858. American novelist. *Philosophy of Disenchantment*, 1885; *Anatomy of Negation*, 1886; *Tristrem Varick*, 1888; *The Pace that Kills*, 1889.—His cousin, FRANCIS, 1849–1889, pub. *Honey and Gall*, 1873, and left many poems, some of which his father printed in unique and luxurious form.

Salt Water. Always heavier than fresh water. For the Gulf of Mexico the weight per cubic foot is ab.63.9 lbs., for the oceans ab.64.1, while for the Dead Sea it is ab.73.

Saltwort. *Salsola kali.* Pungent leaved plant of the seashore and saline regions, natural family *Chenopodiaceæ*, of wide geographical range; also other species of the genus. Soda ash was formerly obtained from its ashes in Britain. *S. sativa* was used for the same purpose in Spain.

Salutation. Greeting by words, shake of the hands, bowing, embracing, or kissing.

Salute. Graded compliment by the Army or Navy to persons of distinction or superior rank, by firing of guns, manning the yards and otherwise; from 17 to 21 guns.

Salvador. Anciently called Cuscatlan; smallest but most densely populated republic in America. Area 7,255 sq. m. The surface is high and mountainous, except a narrow strip along the Pacific: many of the mountains are volcanoes. The province was conquered for Spain by Alvaredo 1528. It became

Cathedral of San Miguel, San Salvador.

independent 1821; belonged to the Central American Confederacy 1823–39; and since 1853 has been an independent state. The country is greatly subject to earthquakes, and one volcano has been in constant activity for more than 100 years. Pop. ab. 800,000. San Salvador, the capital, has been repeatedly laid in ruins, the last time in 1873. In 1895 Nicaragua, Honduras and S. formed the Central American Union, which was joined by Costa Rica and Guatemala in 1897. Pop. ab. 25,000.

Salvadoraceæ. Natural family of flowering plants, of the class *Angiospermæ*, sub-class *Dicotyledons*, and series *Gamopetalæ*, comprising 3 genera and ab. 7 species, natives of the tropical and adjacent warm regions of e. Asia and of Africa; allied to the olive.

Salvage. Compensation, generally given by law, though sometimes agreed upon, for the saving of persons or property from sea perils. It is a lien on all the property benefited by the service, and is apportioned among claimants in proportion to the risk and responsibility borne by them.

Salvandy, NARCISSE ACHILLE, COMTE DE, 1796–1856. French historian of Poland 1827–29; Minister of Instruction 1837–39 and 1845–48; Envoy to Spain 1841–43, and to Piedmont 1843–45.

Salvatierra, JUAN MARIA DE, 1648–1717. Italian missionary to Mexico; apostle and historian (1698–99) of California; Provincial of the Jesuits 1704–7.

Salvation Army. Organized under this name 1878 by WILLIAM BOOTH (q.v.); outgrowth of a work begun 1865 in London, and called the Christian Mission 1869. Its labors have extended from England to all parts of the world, and have been efficient in aiding and reforming many whom the churches could not reach. Disregarding the conventional methods and employing a military system, street meetings, and plain and unprecedented means of attracting audiences, it has endured and surmounted much obloquy. It has some 11,000 officers, half of them women, with many corps and outposts, and circulates a multitude of papers and books. The founder and his sons direct its movements, and have outlined and attempted a gigantic philanthropic enterprise: see *In Darkest England*, 1890, and *Life of Catherine Booth*, 1893. Mr. and Mrs. Booth-Tucker, as commander and consul respectively, have had command in the U. S. since 1896. Mr. and Mrs. Ballington Booth, formerly in command, have been at the head of the Volunteers of America, a similar organization, since 1896.

Salvator Rosa. See ROSA.

Salvelinus. Genus of *Salmonidæ*, including fishes known as Char in England and Trout in e. U. S. (The true Trout is confined w. of the Plains.) This genus is characterized by a deep vomer armed only on the chevron with teeth, and with the shaft covered by skin. The spots are paler than the ground; besides, there are red spots, and the lower fins are edged with red. The scales are minute and hidden. *S. alpinus* of Europe is more graceful, shy, and slender than the American Char (*S. fontinalis*) or Brook Trout. The species most like the *S. alpinus* is *S. oquassa* of Rangeley Lakes, Me. The Brook Trout has no teeth on the vomer, and has large red spots on sides and black, mottled ones above. It spawns in Oct. and becomes mature at two years, when it is 6 in. long. In cold enough waters it may attain a weight of 10 lbs. The Great Lake (or Mackinaw) Trout has a strongly-toothed spur on the vomer. It attains a weight of from 20 to 80 lbs. It has no red spots; the dark ones are paler than the background.

Salverform. In Botany, corolla with a rotate or crateriform limb raised on a slender tube; also known as Hypocraterimorphous, or, erroneously, Hypocrateriform.

Salve Regina. One of the antiphons of Virgin Mary; appointed in the Roman Breviary to be sung from Trinity Sunday till Advent.

Salvi, GIAN. See SASSOFERRATO.

Salvianus, 5th cent. Of Marseilles; author of Latin treatises, pub. 1878, on Providence and against avarice.

Salvini, TOMMASO, b.1830. Italian actor of high rank, eminent in Othello, Hamlet, Lear, Macbeth, Sommet's *Gladiator*, and other tragic parts: known in the U. S. 1873–74, 1881–82, and 1885–86; retired 1886.—His son, ALEXANDER, 1861–1896, followed in his footsteps.

Salviniaceæ. Order of *Rhizocarpeæ*, comprising the genera *Salvinia* and *Azolla*, small vascular cryptogams of aquatic habit.

Sal Volatile. Solution of carbonate of ammonia and alcohol, with a small amount of some volatile oil, as lemon or nutmeg, added. It is used as a smelling salt.

Salwen, or SALWEEN. River flowing s.e. across Thibet, and s. through British Burmah to Gulf of Martaban. Length ab.700 m.

Salzburg. Old city of w. Austria, on the Salzach, 80 m. e.s.e. of Munich; long governed by its archbishops, whose minor coinage is abundant. The city is old, with crooked

Salzburg.

streets and many fine edifices and monuments. It is surrounded by a wall, pierced by 20 gates. It was the birthplace of Mozart. Pop., 1891, 27,644.

Samana Bay. Bay 37 m. long and 12 m. wide, on e. end of San Domingo. It forms a fine harbor and is on the route from New York to the Isthmus of Panama. The U. S. Senate refused to ratify a treaty for its purchase in 1870.

Samaniego, FELIX MARIA, 1742–1809. Spanish poetic fabulist.

Samara. Indehiscent dry fruit, containing a single seed and expanded at one end or all around into a flat wing-like structure, as in Maples, Elms, and Ashes.

Samara. City of e. Russia, on the Volga, at its junction with the S. Pop., 1891, 99,856.

Samarang. Town on n. coast of Java, capital of a Dutch residency. Pop., 1890, 71,440.

Samaria. Central division of Palestine, between Galilee and Judæa.

Samaria. City of central Israel, on a hill, surrounded by higher hills, with a fruitful valley between; built by Omri, King of Israel, ab.922 B.C.; capital of the Northern Kingdom until its overthrow 721; taken by Alexander 332, and twice by his successors; destroyed by John Hyrcanus 109 B.C.; rebuilt by Herod as Sebaste; now a petty village.

Samaritan. Semitic dialect, closely related to the Hebrew, but much influenced by the Aramaic.

Samaritan Pentateuch. Recovered at Damascus ab. 1620; pub. 1631. It varies from the Hebrew MSS.

Samaritans. Later inhabitants of middle Palestine, mingled Israelites and Assyrians. They accepted the Pentateuch, but rejected the Prophets, and worshiped on Mt. Gerizim. Mortal hatred existed between them and the Jews. A small remnant is still left at Nablous or Shechem.

Samarium. One of the doubtful elements, found in samarskite by Lecoq de Boisbaudran 1879; at. wt. 150.

Samarkand. Town of Turkestan, 130 m. e. of Bokhara; anciently Marcanda, capital of Sogdiana; taken by Alexander 330 B.C., by the Arabs 712, by Genghis Khan 1219; capital of Tamerlane 1370; long a center of learning and art; held by Russia since 1868. Pop. ab.40,000.

Samaroid. Resembling a samara.

Samarow, G. See MEDING, OSCAR.

Samarskite. Heavy black mineral, containing the rare chemical elements niobium and tantalum, in combination with uranium, cerium, yttrium, iron, and other bases. Its principal localities are in the Ural Mts. and in w. N. Carolina.

Sambation. In Oriental Folk-lore, a river which flowed during the week but rested on the Sabbath.

Samian Earth. Terra samia, probably equivalent of the modern kaolinite. Samos was famed for its clay and the ware made from it.

Samian Letter. The Greek Υ, selected by Pythagoras (of Samos) to symbolize the two paths, of wisdom and of folly, familiar in the story of the youthful Hercules at the cross-roads.

Samisen. Japanese musical instrument introduced ab. 1560, consisting of a square drum having a long neck or finger-board with three silk strings which the player strikes with an ivory pecten.

Sammonicus, QUINTUS SERENUS, 3d cent. Latin versifier. *De Medicina.*

Samnite Wars. 1st., 343–341 B.C., ended by a treaty, the Samnites withdrawing from Campania; 2d., 327–304, issuing in a formal alliance with Rome. After the 3d, 298–290, the Samnites became allies of Rome on equal terms.

Samnite Warrior.

Samnium. District of ancient Italy, n. of Campania. The Samnites were of Sabine stock, brave and independent; were long at war with Rome. Defeated by Sulla at the gates of Rome in 82, their towns were laid waste and the inhabitants sold as slaves.

Samoa (formerly NAVIGATORS' ISLANDS). Group, mainly volcanic, in the s. Pacific, with a total area of 1,700 sq. m., and a pop. of ab.35,000; discovered 1722, explored 1768, visited by missionaries 1830. Its independence is guaranteed by the U. S., Germany, and England. The king is chosen by popular vote; the Supreme Court is presided over by an American.

Samoans. Pure Polynesian tribe, regarded as the center from which this race spread. They are lighter than Chinese, athletic, with straight, almost blue-black hair and prominent noses. They use spears set with fish bones, and build oval houses without windows. Marriage ties are held lightly. Many are Christianized.

Samos. Island in the Ægean, s.w. from Ephesus; area 289 sq. m. It sent out many colonies; reached its height of splendor under Polycrates 532 B.C.; came under Persia, but regained its independence at the battle of Mycale 479; was conquered by Athens 440; changed masters frequently in the next 300 years, and was made a free state by Octavianus. Pop., 1889, 43,901.

Samothrace. Island in n.e. Ægean, anciently devoted to the Cabeiri; scene of Turkish massacres 1457 and 1821; devastated by an earthquake 1893. It yields some remains of antiquity, and bore a part in Greek legends. Area ab. 40 sq. m., pop. ab. 2,000.

Samoyeds. One of the five divisions of the Turanian family, in n.w. Siberia and n.e. Russia, numbering ab.22,000. In summer they live on the coast, but migrate to the forests in winter. Their Shamans torture reindeer to cure diseases in man, and if the patient recovers the animal is buried alive, that the evil spirit, which is supposed to have left the man and entered the animal, may not return. Images of the dead are offered food. The females are slaves, and can be sold by their male relatives. Suicide is regarded as pleasing to the gods. They are the relic of a race formerly more widely spread and semi-civilized. It has been thought that they inhabited w. and s. Europe in the Reindeer epoch.

Samoyed Sleigh.

Samphire. *Crithmum maritinum.* Fleshy-leaved herb of the Carrot family, occurring on the sea-shores of Europe.

Samphire, FALSE. See GLASSWORT.

Sampson, DEBORAH, 1760–1827. Mass. Amazon, who served 3 years in the Continental army.

Sampson, WILLIAM, 1764–1836. Irish-American lawyer and polemic writer. *Memoirs,* 1807; *Hist. Law,* 1826.

Sampler. Specimen of needlework executed by beginners, usually embroidered on coarse cloth, canvas or cardboard, and often including religious emblems, alphabets, and the name of the maker.

Samson. Last of the 12 judges of Israel; eminent for physical strength. His curious story is told in Judges xiii.–xvi.

Samson, GEORGE WHITEFIELD, D.D., 1819–1896. Pres. Columbian Coll., Washington, 1859–71; prolific writer.

Samson Post. Heavy post that supports the walking beam in the rig for drilling oil-wells.

Samuel. Judge of Israel, through whom the monarchy was introduced. He supported David against Saul, and was the founder of the Prophetic Order.

Samuel, BOOKS OF. 9th and 10th of O.T.; of unknown authorship and date. They relate the history of Samuel and David.

Samurai. Military class in Japan, formerly ranked separately, now included with the petty nobility, in the Shizoku, or second of three grades of the population.

Samydaceæ. Natural family of flowering plants, of the class *Angiospermæ* and sub-class *Dicotyledons,* comprising 20 genera and ab.180 species, growing in the tropical regions of the Old and New Worlds.

San'ai, ABULMAJD MAJDUD BEN ADAM, 11th cent. Persian Sufic poet.

San Antonio. Capital of Bexar co., Texas, on the S. A.; founded 1714. It has some manufactures, and a large trade in cotton, cattle, and hides. At the Alamo, then a fort, Santa Anna slew 188 Americans 1836. Pop., 1890, 37,673.

San Antonio River. Heading in s.e. Texas and flowing s.e. to the Gulf of Mexico. Drainage area 16,352 sq. m., length 200 m.

Sanballat. Moabite, who strove to hinder the rebuilding of the walls of Jerusalem 445 B.C. (Neh. iv. 2).

San Benito. Garment worn in Spain by the condemned before and at an auto-da-fé.

San Bernardino Mts. In s. Cal., between Mojave and Soda Lake deserts. Elevation 6,970 ft.

San Blas, BAY OF. On the n. side of the Isthmus of Pan ama, in 79° W. long.

San Blas, CAPE. On s. shore of Florida.

Sanborn, FRANKLIN BENJAMIN, b. 1831. American reformer and journalist, biographer of Thoreau 1882, and John Brown 1885.

Sanborn, JOHN BENJAMIN, b. 1826. Brig.-gen. U.S. Vols. 1863, serving in the West.

Sanchez, AFFONSO, ab.1430–ab.1486. Portuguese seaman, traditional discoverer of the Amazon and some of the W. Indies, whose papers guided Columbus.

Sanchez, THOMAS, 1550–1610. Spanish Jesuit, whose *De Sacramento Matrimonii*, 1592, was attacked by Voltaire.

Sanchuniathon. Phœnician writer, before the Trojan war. Fragments are found in Eusebius, the trustworthiness of which has been much debated.

Sancroft, WILLIAM, D.D., 1616–1693. Dean of St. Paul's 1664, Archdeacon of Canterbury 1668, Abp. 1677. He headed the 7 bishops who were tried and acquitted 1688 for resisting the tyranny of James II., and was deprived as nonjuror 1691.

Sanctification. Production of holiness in a believer's heart; regarded in Protestant theology as subsequent to justification.

Sanction, IN ETHICS. Body of recompenses and punishments attached to the execution or violation of any law.

Sanctuary. In ancient and mediæval times, refuge found in consecrated places by those pursued by the law or by private vengeance; or the places, as the Jewish Cities of Refuge, and Holyrood Abbey in Scotland.—In a church, the eastern part of the choir, containing the altar; also called the presbytery.

Sanctuary at Holyrood Palace, Edinburgh.

Sanctus. Portion of the Mass immediately preceding the consecration of the Host. In the Prayer Book it has a nearly similar position.

Sand. Aggregation of loose, uncompacted, mineral grains, usually of rounded form, derived from the wear of the older rocks. In common sand the grains are almost always quartz. Sandy soils are easily worked, but are often lacking in fertility and easily depleted of what they have, besides being quickly affected by droughts.

Sand, GEORGE. See DUDEVANT, MME.

Sandal-Wood. *Santalum album.* Small tree of the natural family *Santalaceæ*, native of India. Its fragrant wood is used as incense, as is that of several other trees of the same region.

Sandarac. Name given to REALGAR (q.v.).

Sandarach. Resin derived from the coniferous tree *Callitris quadrivalvis*, native of n. Africa; known as Arar. It is used in incense and varnishes.

Sand Augur. Augur inclosed in a cylindrical tube, by which holes may be sunk in soil or sand; used by engineers to ascertain the character of the earth under a proposed foundation.

Sand Bags. Canvas bags partially filled with sand, used in military operations.

Sand-Blast. Eroding process, in which the surface to be affected receives the impact of a jet of dry steam in which sand is suspended. A quarter-inch orifice receives grains of sand from a lateral inlet, and the steam at a pressure of 80 lbs. or over imparts to them its velocity as they strike the work. If stencils be cut out in some material not affected by the sand, it is possible to etch patterns and inscriptions on the unprotected places; the process has also been applied to renew the cutting edges of files. Air-blast is also used. First applied by Benjamin C. Tilghman 1870.

Sandbox Tree. *Hura crepitans.* Large tree of the natural family *Euphorbiaceæ*, native of tropical America. At maturity its large ridged fruit bursts with a loud noise, scattering the seeds.

Sandby, PAUL, R.A., 1725–1809. English painter, chiefly in water-colors, and art teacher.

Sand Crack. Fissure in the hoof of a horse, occurring mostly on the inner quarters of the fore-feet and toes of the hind-feet. See QUARTER CRACK.

Sandeau, LEONARD SYLVAIN JULES. 1811–1883. French novelist and dramatist, Academician 1858. *Mariana*, 1839; *Mlle. de la Seiglière*, 1848. His stories are free from eroticism; his plays were mostly produced in partnership with E. Augier.

Sandemanians, or GLASSITES. Scottish sect, founded ab. 1728 by John Glas, 1695–1773, and in London, 1760, and New England, 1764, by his son-in-law, Robert Sandeman, 1718–1771. It was never extensive, and has now but a few congregations. Its *Christian Songs*, 1749–94, had much devotional and poetic beauty. Faraday, the chemist, was a member.

Sanderling. Small snipe-like bird, gray and brown in color, with 3 toes, the hinder one being absent. *Calidris arenaria* has white belly, is variegated rusty and dusky white above. Length 8 in. It feeds on worms in sandy beaches, accompanying Sandpipers.

Sanders, DANIEL, 1819–1897. German lexicographer. *Wörterbuch*, 1859–63.

Sanders, GEORGE NICHOLAS, 1812–1873. U. S. Consul at Liverpool 1853–57; Commissioner C.S.A. 1861–64.

Sanders, JAMES HARVEY, b. 1832. Ed. *Live Stock Journal* and *Breeders' Gazette* (Chicago). *Horse Breeding*, 1885; *Breeds of Live Stock*, 1886.

Sanderson, JOHN, 1783–1844. Biographer (in part) of the *Signers of the Declaration of Independence*, 1820; prof. Phila. High School from 1836. *Paris*, 1838.

Sanderson, JOHN BURDON, M.D., b. 1828. Prof. Physiology Univ. Coll., London, 1884, and Oxford 1892.

Sanderson, ROBERT, D.D., 1587–1663. King's chaplain 1631, prof. Oxford 1646–48, Bp. of Lincoln 1660. *Cases of Conscience*, 1628. *Works*, 6 vols., 1854.

Sanderson, SYBIL, b. 1864. American soprano singer.

Sand-Grouse (PTEROCLES). Eighteen species of beautiful pigeon-like Old World Grouse. They deposit their eggs in sand. *Syrrhaptes paradoxus*, an allied genus of e. Asia, has feathered tarsi and toes and longer pointed wings. In 1863 this species temporarily invaded Europe.

Sand-Grouse (*Pterocles exustus*).

Sand-Hog (ARCTOMYS COLLARIS). Fierce Badger of Hindustan, more bear-like in appearance than the ordinary Badger. It is yellowish white.

Sandhurst. City of Victoria, Australia, on Bendigo Creek, in a placer gold mining region, opened 1851. Pop., 1891, 37,238.

San Diego. Capital of S. D. co., Cal., on S. D. Bay, near the Mexican border; settled 1769 as a mission, 1867 as a town. Pop., 1890, 16,159.

Sandiford, RALPH, 1693–1733. Pa. Quaker, writer against slavery 1729.

Sand-Myrtle. *Dendrium buxifolium.* White-flowered, low shrub of the natural family *Ericaceæ*, native of the s.e. U. S.

San Domingo. See HAITI.

Sandoval, GONZALO DE, ab.1496–1528. Officer under Cortez, prominent in the conquest of Mexico.

Sandoval, PRUDENCIO DE, ab.1560–1621. Spanish historian of Charles V.

Sandoval Silva y Mendoza, GASPAR DE, COUNT DE GALVE, ab.1640–ab.1705. Viceroy of Mexico 1688–96; founder of Indian schools there.

Sand Paper. Abrading material made by coating paper with glue and dusting fine sand over it. Thin cloth is sometimes used instead of paper. It is intermediate between glass paper and emery paper in its action on metals, but less energetic than glass paper on wood.

Sandpipers (TRINGIDÆ). Various genera of snipe-like birds, but with eyes normally placed. During the breeding season they sing. In *Tringa maculata*, the Pectoral Sandpiper, the male expands his œsophagus with air during courtship and performs various antics before the female. There are numerous species; they go in flocks on sandy shores, looking for worms, etc., which are taken by probing with the delicate long bill.

Common Sandpiper (*Totanus hypoleucus*).

Sand Pump. Cylindrical shell of iron provided with a valve at the bottom and a bail at the top, used in removing from the bottom of a bore-hole the sludge and fragments of rock produced and accumulated in the process of drilling the hole; also called shell pump.

Sandrart, JOACHIM VON, 1606–1688. German painter, best known as a biographer of artists; active at Nuremberg.

Sandringham. House built 1869–71 for the Prince of Wales, in a park of 200 acres, in Norfolk, 3 m. from the North Sea.

Sandrocottus, or CHANDRA GUPTA. Founder of the Maurya or Magadha kingdom in the Ganges valley, n. India. He ruled at Patná (Palibothra) 316–292 B.C.

Sands, BENJAMIN FRANKLIN, U.S.N., 1811–1883. Captain 1862, serving chiefly on the Atlantic coast; Commodore 1866, Rear-admiral 1871; supt. U. S. Naval Observatory 1867–73.

Sands, HENRY BERTON, M.D., 1830–1888. Prof. of Anatomy in New York 1869–79, and of Surgery from 1879; professional writer.

Sands, JOSHUA RATOON, U.S.N., 1795–1883. Commander 1841; prominent in the Mexican war; Captain 1854, Commodore 1862, Rear-admiral 1866.

Sands, ROBERT CHARLES, 1799–1832. American writer in verse and prose. *Works*, 1834.

Sand-Snake. See COLUBRIFORMIA.

Sand-Spurrey. Low herbs of the genus *Tissa*, natural family *Caryophyllaceæ;* of wide geographical distribution, occurring mainly in saline soil.

Sandstone. Rock consisting of sand bound together by some natural cementing material. The individual grains are usually, though not exclusively, quartz, and are approximately uniform in size in any given rock. The coarser sandstones are called grit. The cementing material, which may be siliceous, calcareous, ferruginous, or earthy, has an important bearing on the value of the rock for structural uses. Next to limestone, sandstone is the most widely used building stone. The product in the U. S. in 1895 was valued at $4,211,314.

Sandusky. Capital of Erie co., Ohio, on the shore of S. Bay, an arm of Lake Erie. It has some manufactures, and exports fish, wine, and fruit. Pop., 1890, 18,471.

Sandwich, EDWARD MONTAGU, EARL OF, 1625–1672. English military and naval commander, Earl 1661, Envoy to Spain 1666–69.

Sandwich Islanders (KANAKAS OF HAWAII). Of mixed Polynesian stock, with brown complexions and well formed, healthy bodies; leprosy has been introduced by Chinese immigrants. The victims are confined to the island Molokai. Their native language resembles that of the New Zealand Maoris, but is harsher. They are hospitable, lack perseverance, are vain, ape their superiors in many trifles, but they prefer to eat sitting on the floor. All are Protestants by profession, though old superstitions still linger. When Capt. Cook was killed by the Kanakas 1776, they were addicted to cannibalism, and offered many human sacrifices. They have been decreasing at a rate of over 1,000 annually, and now number ab.40,000. Immorality is prevalent, though not so great as in pagan times: intemperance has increased.

Sandwich Islands. See HAWAIIAN ISLANDS.

Sandwort. Low, white-flowered herbs of the genus *Arenaria*, natural family *Caryophyllaceæ*, of wide geographical distribution.

Sandy Hook. Narrow peninsula of Monmouth co., N. J., at entrance of New York harbor. Length ab. 6 m.

Sandys, GEORGE, 1577–1643. English poet; Treasurer of Va. 1621–24, where he built the first mill in America, and tr. the later books of Ovid's *Metamorphoses*, pub. 1626. His *Relation of a Journey* (in Turkey), 1615, is still valued; his *Paraphrase upon the Psalms*, 1637, contains some of the finest versions. Other paraphrases on the O. T. poems appeared 1638–42.—His brother, SIR EDWIN, 1561–1629, knighted 1603, pub. *Europa Speculum*, 1599, and *Sacred Hymns*, 1615, containing translations of 50 select Psalms.—Their father, EDWIN, D.D., 1519–1588, became Bp. of Worcester 1559, of London 1570, and Abp. of York 1576.

San Francisco. Largest and most important city and seaport of Cal.; on a sandy point which separates the s. part of S. F. Bay from the Pacific. It is rather irregularly laid out. Water is supplied by gravity. It has an extensive commerce and varied manufactures. It was first settled by Franciscan friars 1776. A town (Yerba Buena) was laid out 1836. A U. S. man-of-war took possession 1846; the name was changed 1847. It was incorporated 1850. It has a U. S. mint, and sends out several lines of ocean steamers. The shipping which comes to this port amounts to 1,100,000 tons annually. Pop., 1890, 298,997.

San Francisco—City Hall and Law Courts.

San Francisco Bay. Largest and finest harbor on the Pacific coast of the U. S. The entrance is narrow, but within it expands to an area of many square miles, with ample depth of water for the largest vessels.

San Francisco, MT. Central peak of a mass of volcanic mountains in n. Arizona. Altitude 12,562 ft.

Sanfuentes, SALVADOR, 1817–1860. Chilian poet, judge, and Minister of State.

Sangallo, GIULANO DI, 1443–1517. Florentine architect.

Sangaree. W. India beverage consisting of sugar, wine, water and nutmeg.

Sangha. Buddhist brotherhood, vowed to poverty and celibacy.

Sangir Islands. Ab. 50, between Celebes and the Philippines; partly volcanic. Area 323 sq. m., pop. ab. 80,000.

Sangreal. See HOLY GRAIL.

Sangre de Cristo Mts. Long narrow range of the Rocky Mt. system in Col. and New Mexico, e. of San Luis Valley. It contains many peaks exceeding 13,000 ft. in height, including Blanca Peak, the highest of the system, 14,464 ft.

Sangster, CHARLES, b. 1822. Canadian poet.

Sangster, MARGARET ELIZABETH (MUNSON), b. 1838, m. 1858. American poet: ed. Harper's *Young People* from 1882.

Sanhedrin. Highest Jewish council, composed of 71 rabbis or scribes, priests, and elders, sitting at Jerusalem. It condemned Jesus and persecuted the infant church. It appointed an inferior court of 23 members.

Sanicle. Herbs of the genus *Sanicula*, natural family *Umbelliferæ*, principally natives of the n. temperate zone.

Sanidine. Glassy variety of orthoclase feldspar, frequently found in trachyte and other acidic eruptive rocks.

Sanitarian. Person engaged in the investigation of the principles of public health and their application in practice.

Sanitary Commission, U. S. Organized 1861 to supplement the army medical dept. Its functions included the inspection of camps and hospitals, supply of medical and other stores, formation of convalescent camps, transportation and care of the wounded, and establishment of a bureau of vital statistics. It was supported by voluntary contributions, which at the close of the war had reached nearly $5,000,000, no account being taken of the sums raised and expended by the branches. Its contribution to the needs of the time has been computed at $25,000,000.

Sanitary Engineering. See SEWERAGE, DRAINAGE, HOUSE-DRAINAGE, and PLUMBING.

Sanitary Science. Application of the laws of health to the prevention of disease and the promotion of physical well-being in communities. It is sometimes called Public Hygiene and is included in State Medicine. See HEALTH, BOARDS OF.

San Jacinto, BATTLE OF. Fought April 21–22, 1836, on the S. J. River, Texas, between 1,536 Mexicans under Santa Anna and 783 Texans under Houston. It resulted in the defeat of the former and the independence of Texas.

San Joaquin River. Branch of the Sacramento, draining the s. half of the valley of California and the w. slopes of the s. Sierra. Length 350 m., drainage area 29,952 sq. m.

Sanjo Saneyoshi, 1836–1891. Prime Minister of Japan 1871–86, then Chancellor.

San José. Capital of Costa Rica; settled ab.1750. Pop. ab.20,000.

San José. Capital of Santa Clara co., Cal., 50 m. s.e. of San Francisco; founded 1782. It cans and ships large quantities of fruit. Pop., 1890, 18,060.

San Juan Mts. In s.w. Col.; group including 121 peaks above 13,000 ft. in height and 9 exceeding 14,000 ft.

San Juan River. Branch of the Colorado, flowing w., chiefly through n.w. New Mexico and s.e. Utah. Length 350 m.

Sankara. Hindu teacher, probably ab.800.

Sankey, IRA DAVID, b. 1840. Singing evangelist, associated with D. L. Moody from 1870.

Sankhya. Oldest system of Hindu philosophy.

San Lucas, CAPE. On s. coast of Lower California.

San Luis Park. In s. Col. and n. New Mexico. Elevation 7,000 to 8,000 ft. It is the largest of the Rocky Mt. parks.

San Luis Potosi. Capital of a State in Mexico; on the Santander. Pop., 1889, with suburbs, 62,573.

San Marino. Oldest of republics; in e. central Italy, 10 m. from the Adriatic. It consists of 5 villages; area 32 sq. m.,

San Marino.

pop. ab.8,000. It has been self-governing since ab.1300. Since 1847 it has been governed by a senate of 60 members, holding office for life, and 2 captains-regent, chosen for 6 months.

San Martin, JOSÉ. 1778–1850. Argentine general, liberator of Chili 1817–18 and Peru 1821; eminent for disinterestedness, reforming tendencies, and abstinence from civil war; in Europe from 1830.

San Martin, TOMAS DE, 1482–1554. Spanish missionary in San Domingo 1525–29, and Peru 1530; Dominican provincial 1540; Vice-gov. of Peru 1541; Bp. of La Plata 1551.

Sannazaro, JACOPO, 1458–1530. Neapolitan poet. *Arcadia,* 1502

Sanquhar Declaration. Put forth 1680 by Cameronians, renouncing allegiance to Charles II.

San Salvador. See SALVADOR.

Sans-Culottes. French lower classes ab.1793, who wore pantaloons, while the higher classes wore breeches; hence the name, at first opprobrious, but afterward accepted as a title of honor.

San Sebastian. Seaport of n. Spain, on Bay of Biscay; taken after heavy bombardment by the British and Allies under Wellington, Aug. 31, 1813.

Sanskrit. Oldest preserved form of Indo-European speech, with two forms: (1) Sanskrit of the Brahman priests, and of a rich and varied literature, but "for the last twenty-five centuries no longer a proper vernacular language" (Whitney); (2) Vedic, tongue of the Rig-Veda, written nearly 4,000 years ago. This language shows most primitive forms, and probably gives no very distant notion of the original Aryan or Indo-European.

Sanskrit Literature. Divided into two epochs: the ancient or Vedic, and the classical. The first comprises the four *Vedas*; *i.e.*, the *Rig-veda*, the *Sama-veda*, the *Yajur-veda*, and the *Atharva-veda*. The sacred texts with their commentaries inspired a literary development, which, in the second period, produced a vast literature, both in belles-lettres and in science. The *Ramayana* and the *Mahabharata* are the two great epics; the *Puranas* and *Tantras* are poems with theological purpose. The modern epics are the *Raghuvamsa* and the *Kumara-sambhava*, both attributed to Kalidasa, the *Nalodaya*, the *Kiratarjuniya*, the *Sisupala-badha*, the *Ravana-badha* and the *Naishadhiya*. The drama reached its height in Kalidasa ab.550. Lyric poetry is represented by numerous collections of songs, both erotic and religious. The *Hitopadesa* is the most important series of fables; others exist. Scientific literature covers a wide range of subjects, law and philosophy claiming the chief place, but medicine, astronomy, and mathematics are represented by many names.

Sanson. Family, who for many years gave Paris her executioners.

San Stefano, TREATY OF. Between Russia and Turkey, March 3, 1878; ending the Turko-Russian war. Its provisions were much modified by the Congress of Berlin a few months later.

Santa Anna, ANTONIO LOPEZ DE, 1795–1876. Mexican general 1821; prominent in overthrowing Iturbide 1822; leader of several revolts; Pres. or Dictator 1833, 1835–36, 1841–44, 1846–47,

Santa Anna.

and 1853–55; invader of Texas 1836, author of the massacre of the Alamo March 6, defeated and taken at San Jacinto April 22; defeated in sundry engagements 1846–47; in exile 1848–53, 1855–64, and 1865–67, ending a tortuous career with discredit.

Santa Barbara. City on s.w. coast of Cal., founded by Serra as a mission 1786; prominent as a health and pleasure resort. Pop., 1890, 5,864.

Santa Barbara Channel. Between the coast of Cal. and a series of islands, Santa Rosa, San Miguel, and Santa Cruz.

Santa Claus. St. Nicholas in Dutch.

Santa Cruz, or ST. CROIX. One of the Virgin Is., W. Indies; discovered 1493 by Columbus; held by Denmark since 1733. Sugar and rum are the chief products. Area 83 sq. m., pop. ab.19,000.

Santa Cruz, ANDRES, 1792–1865. Pres. of Bolivia 1829–39; author of a confederation with Peru 1836–39; Minister to France 1848.

Santa Cruz, MARIA DE LAS MERCEDES, 1789–1852. Author in French and Spanish, b. in Cuba, resident mainly in Paris; Countess Merlin 1810. *La Havane*, 3 vols., 1842.

Santa Fé. Capital of S. F. co. and of New Mexico; in the valley of a small tributary to the Rio Grande, near the center of the Territory. It was founded by the Spaniards ab.1605, previously an Indian village. Pop., 1890, 6,185.

Santalaceæ. Natural family of flowering plants, of the class *Angiospermæ* and sub-class *Dicotyledons*, comprising ab. 28 genera and 250 species, widely distributed throughout the tropical and temperate regions of the earth; called Sandal-wood family.

Santalin. $C_{15}H_{14}O_5$. Red crystalline acid, one of the important principles of sandal-wood and other red dye-woods; extracted from the wood with hot water.

Santa Maria, DOMINGO, 1825–1890. Pres. of Chili 1881–86.

Santa Maura. See LEUCADIA.

Santana, PEDRO, 1801–1864. Pres. of Dominica 1853–57 and 1858–61.

Santander. Seaport of Spain, on the Bay of Biscay; sacked by the French 1808. Pop. ab. 42,000.

Santander, FRANCISCO DE PAULA, 1792–1840. Vice-pres. of Colombia 1821–26, in authority during Bolivar's absence; banished 1828; Pres. of New Granada 1832–36.

Sant' Angelo, CASTLE OF. In Rome; circular structure, 72 ft. high and 220 ft. in diameter, resting on a square base whose sides measure 300 ft. It has suffered greatly from frequent attacks, and little of the original masonry is visible. It was constructed ab.550 from the Mausoleum of Hadrian, begun 135, which was covered with marble and ornamented with colonnades and statues.

Santarem, MANUEL FRANCISCO DE BARROS E SOUSA, VISCOUNT OF, 1791–1856. Portuguese official, in Paris from 1833. *Political Relations of Portugal*, 10 vols., 1836; *Cosmography of the Middle Ages*, 3 vols., 1849–52.

Santa Ritta Durâo, JOSE DA, 1737–1784. Portuguese poet, prof. Coimbra. His epic, *Caramurú*, 1781, deals with the early history of his native land, Brazil.

Santee River. In S. C.; formed by the Congaree and Wateree. It flows e. to the Atlantic. Drainage area 14,696 sq. m., length ab. 150 m.

Santerre, ANTOINE JOSEPH, 1752–1809. Parisian brewer, prominent in storming the Bastile 1789 and in the disorders of 1792; Commander of the National Guard 1792; Gen. of division; defeated by Vendeans Sept. 18, 1793.

Santi, GIOVANNI, 1435–1494. Mainly distinguished as the father of Raphael, but also a conscientious painter and court poet of Urbino.

Santiago. Capital of Chili, beautifully situated on the Maypocho, near the foot of the Andes and 68 m. s.e. of Valparaiso; founded 1541; repeatedly injured by earthquakes. Its university, opened 1842, has nearly 1,000 students. Pop. ab. 220,000.

Santiago de Compostella. James, son of Zebedee, as patron saint of Spain.

Santiago de Cuba. Seaport of s.e. Cuba. Pop. ab. 40,000.

Santillana, INIGO LOPEZ DE MENDOZA, MARQUIS OF, 1398–1458. Castilian poet, addicted to moralizing and allegory. His *Manual of Favorites*, 1453, is the earliest Spanish didactic poem. His *Centiloquia*, 1496, versified 100 proverbs.

Santley, CHARLES, b. 1834. English singer, prominent since 1857.

Santo Domingo. See HAITI.

Santonin. $C_{15}H_{18}O_3$. Active principle of wormseed; colorless crystals; mpt. 170° C.; prepared by treating the so-called seeds with lime-water.

Santorin, or THERA. One of the Cyclades, 70 m. n. of Crete; noted for prehistoric remains and volcanic eruptions, the last 1866–67. Thera on the n. coast is the capital. Excellent wine is grown on the volcanic soil. Area 29 sq. m., pop. ab.23,000.

Tomb of Cybele.

Sao Francisco. River of e. Brazil, rising in s.w. Minas Geraes and flowing n. and e. to the Atlantic; navigable for 150 m. Length ab.1,800 m., drainage area 250,000 sq. m.

Saone. River of e. France, rising in the Vosges and flowing s.e. and e. to the Rhone at Lyons. Length 282 m.

Sao Paulo. City of s. Brazil, 38 m. n.w. of Santos, its port; founded 1554; seat of an eminent law school. Pop. ab.75,000.

Sap. In sieges, a trench made for the purpose of approach.

Sap. Juices of plants. That which comes immediately from the roots is called Crude Sap: after passing through the chemical processes at work in the leaves it is called Elaborated Sap.

Sap Green. Pigment used in the manufacture of water-colors. It is obtained by boiling down the juice of buckthorn berries. It is not permanent.

Sapindaceæ. Natural family of flowering plants, of the class *Angiospermæ* and sub-class *Dicotyledons*, comprising ab.100 genera and 950 species, distributed throughout the tropics and the regions bordering thereon; called the Soap-berry family.

Sapodilla. *Achras sapota.* Large tree of the natural family *Sapotaceæ*, native of tropical America, esteemed for its large, sweet fruit; also called Naseberry tree.

Sap of Timber. Water and watery matter contained in timber, particularly in the exterior layers near the bark. This should be evaporated by seasoning or other treatment, in order to prevent decay of the timber. See PRESERVATION OF WOOD.

Saponification. Process by which soap is formed by combining a fatty acid and an alkali; also, the resolution of ethers and analogous substances into alcohols and acids.

Saponin. $C_{32}H_{54}O_{18}$. White, amorphous powder, which provokes sneezing. Mixed with water, it forms a strong lather, and hence is added to syrups sold at soda-water fountains. It is found in the roots of *Saponaria officinalis*, quillaja bark, and horse-chestnut seeds.

Saponite. Soft, soap-like mineral; impure hydrous magnesium aluminium silicate, found in several parts of the earth as a product of the decomposition of rocks.

Sapor. See SHAPUR.

Saporta, GASTON, MARQUIS DE, 1823–1895. French palæobotanist; author of the monograph on the Jurassic Flora of France pub. in the *Palæontologie Française*, and numerous works on other French fossil floras, on fossil *Algæ*, and on the origin of trees cultivated for the use of man.

Sapotaceæ. Natural family of flowering plants, of the class *Angiospermæ*, sub-class *Dicotyledons*, and series *Gamopetalæ*, comprising 38 genera and ab. 450 species, distributed throughout the tropics and the regions bordering thereon; called the Sapodilla family.

Sappan-Wood. *Cæsalpinia sappan.* Tree of the natural family *Leguminosæ*, native of the E. Indies. Its wood yields a red dye.

Sappers and Miners. Designation formerly applied to engineer troops, because of their being trained to construct approaches and parallels by means of the sap, in siege opera-

tions. In the U. S. army there is now a battalion of engineer troops of four companies, trained as sappers and miners, as well as in all other duties pertaining to engineer troops.

Sappey, MARIE PHILIBERT CONSTANT, b. 1810. Prof. Paris. *Anatomie descriptive*, 1847–63.

Sapphira. Wife of Ananias, and partner in his sin of lying and punishment (Acts v. 1–10).

Sapphire. Al_2O_3. Precious stone ranking with the diamond and ruby in value. The true sapphire is a blue, transparent variety of corundum, though mineralogically the term includes corundum of other colors as well. Among the ancients lapis lazuli was probably known as sapphire. The finest specimens are brought from India and the East, but stones of good quality have been found in Montana and elsewhere in the U. S.

Sapphire Quartz. Variety of quartz, in color deep blue.

Sapphirine. Magnesium aluminium silicate of pale blue color, found in Greenland; not valuable as a gem stone.

Sappho, ab.600 B.C. Greek lyric poet of Lesbos. The stories of her life and death are mainly mythical. Most of her work is lost, but enough remains to place her in the highest rank.

Sap-Pressure. Exerted by ascending sap on the tissues through which it flows, in young saplings sometimes equaling that of several atmospheres.

Saprolegnieæ. Order of minute *Fungi*, saprophytic on the dead bodies of animals and plants in water, or in a few cases parasitic on living fishes, as the Salmon disease and the spotting of Goldfish.

Saprophytes. Plants which live on the decaying bodies of other plants or animals, or on dead organic material to which they become attached, as many *Fungi*, the Indian Pipe (*Monotropa*), etc.

Sapsuckers (SPHYRAPICUS). Group of Woodpeckers, having tongues protrusible only a little way, the tip not barbed, but with a brush, and feeding on sap rather than insects,

Sapsucker (*Colaptes auratus*).

which are caught as food for the young. *Colaptes auratus*, the Golden-winged Woodpecker, or Yellow-hammer, destroys many insects. See WOODPECKER.

Sapucaia Nuts. See MONKEY POT.

Sapwood. See ALBURNUM.

Saraband. Saracenic dance, whose music, in slow time, has been used and developed by Bach and other composers.

Saracenic, MOHAMMEDAN, or ARABIAN ARCHITECTURE (q.v.). The architects of the Saracens were usually foreigners, and the Mosque of Touloun at Cairo, built 879, the first showing any originality, was designed by a Christian. The Arabian buildings of Cairo and the Moorish examples in Spain were derived from Persia and Byzantium, and were developed into the two corresponding types of the Saracenic art, the Arabian and the Moorish. Tombs and mosques are the chief buildings. The latter consist of an open space with a fountain, surrounded by colonnades, with a prayer niche and a pulpit, and a minaret at each corner; the founder's tomb was usually attached. The pointed arch, and dome elaborately decorated externally, the elaborate scroll work in place of a cornice, and the honeycomb work, connecting the square base with the circular dome, are peculiarities of this style. The windows were small, with bright-colored glass in elaborate patterns. The ceilings were richly painted and the walls and pavements were of marble mosaics and enameled earthenware tiles. The woodwork and bronze were delicately carved and wrought. The modern work of the successors of the Saracens is merely copied from their neighbors and has no claim to originality.

Saracens. Arabs who by 682 had subdued much of Asia, Africa and Europe. They conquered Spain 711, invaded France, and were defeated at Tours 732. Two caliphates, Bagdad (Abassides) and Cordova (Ommiades), divided their empire. Science and philosophy greatly flourished under their sway, and students were attracted from all Europe. They were overthrown by the Tartars 1258.

Saragossa. City of n.e. Spain, on the Ebro; founded from Carthage; Romanized as Cæsar Augusta 25 B.C.; taken by Goths 470, by Arabs 712, by Alfonso of Spain 1118; capital of Aragon till 1479; besieged 1808–9 by the French, who were fiercely resisted, with a loss of 60,000 lives; bombarded until entered by assault Jan. 27, 1809; defended street by street and house by house till Feb. 22, when it capitulated. Its university, founded 1474, has ab. 800 students. It has some manufactures and considerable trade. Pop. ab.93,000.

Leaning Tower of Saragossa.

Sarah, or SARAI. Wife of Abraham, mother of Isaac, and ancestress of Israel.

Saraiva, JOSÉ ANTONIO, b. 1823. Brazilian Minister of State, Premier 1880 and later.

Sarakhs. Village and fort of n.e. Persia, on the Heri-Rud; strategically important. Russia has had a post opposite since 1885.

Sarasate, PABLO MARTIN MELITON, b. 1844. Spanish violinist and composer.

Sarasvati. Word or Goddess of Wisdom of the Hindu pantheon, regarded as the daughter of Brahma, the Creator, who by incest with her gave birth to human kind.

Saratoff. City of e. Russia, on the Volga, 500 m. s.e. of Moscow. It has an extensive trade and considerable manufactures: its importance is of recent growth. Pop. ab.125,000.

Saratoga, BATTLE OF. Oct. 7, 1777; one of the most important and critical engagements of the American Revolution, resulting in the surrender of the British under Gen. Burgoyne Oct. 17. This victory restored the waning enthusiasm and confidence of the American people.

Saratoga Springs. Village of S. co., N. Y., 38 m. n. of Albany; noted for its mineral springs, which have long made it a place of extensive and fashionable resort. Pop., 1890, 11,975.

Sarawak. State of n.w. Borneo, governed by Sir James Brooke as Rajah 1842–68, and then by his nephew Sir Charles; British protectorate since 1888. Area ab.45,000 sq. m., pop. ab.300,000.

Sarbievski, CASIMIR, 1595–1660. Polish Latin poet, imitator of Horace.

Sarcenchyme. Modified collenchym of sponges, due to multiplication of minute granular cells throughout their substance.

Sarcina. See COCCUS BACTERIA.

Sarcobasis. Polycarpellary fruit whose carpels separate when ripe, as in many plants of the Spurge family.

Sarcocarp. Outer layer or exocarp of the pericarp or seed-vessel of plants, when it is soft and fleshy or pulpy.

Sarcocystidia. Sub-class of *Sporozoa*, including Gregarines that are parasitic in muscle-fibers. They are elongated, and produce many spores, from which falciform young escape.

Sarcode. Animal protoplasm; term introduced by Dujardin subsequent to the use of PROTOPLASM (q.v.) by von Mohl for the living matter of plant cells. Modern biologists, believing that the living matter of plants and of animals is fundamentally the same, have adopted the earlier term.

Sarcoderm. In Botany, fleshy seed-coat or fleshy layer in a seed-coat.

Sarcodina. See RHIZOPODA.

Sarcoids. See CHOANOCYTES.

Sarcolactic Acid. Acid of the same composition as LACTIC ACID (q.v.), occurring in muscular tissue and in blood after death, but not in living blood. It occurs with lactic acid as a product of fermentation and resembles it in its reactions.

Sarcoma. Several varieties of the graver forms of tumors, frequently malignant, and often confounded with cancer (carcinoma), especially by "Cancer-curers." Its minute structure has some resemblance to newly-formed flesh. An early and thorough removal offers the best chance for a cure.

Sarcophaga (FLESH-EATERS). Group of polyprotodont Marsupials, including the Tasmanian Wolf, native Cats, Devils, etc., of Australia, representing different carnivorous forms analogous to the groups of *Carnivora* of the remainder of the world, not found in Australia. While the essential structure of these animals is Monotrematous, the appearance, habits, form of teeth, etc., mimic the *Carnivora* so closely that the groups and species run closely, though not absolutely, parallel with those of *Carnivora*.

Tasmanian Devil (*Sarcophilus ursinus*).

Sarcophagus. Large coffin of stone or any other material: primarily a limestone found in Assos, from which coffins were made and supposed to have the property of quickly destroying the corpse. The interior was often adorned with sacred texts.

Sarcoptes Scabei (ITCH-MITE). Species of the *Acarina*. They are small oval animals with two anterior pairs of five-jointed stumpy legs that end in stalked suckers, and two pairs of legs posteriorly, ending in bristles: in the male the last pair bear suckers. The back is beset with spines. The female produces the itch by burrowing in the skin, forming tunnels at the forward end of which she lies, having laid many eggs in the burrow behind her. These hatch rapidly and the young emerge and spread the disease to other parts and other persons. Repeated use of sulphur ointment will kill these parasites. They are $\frac{1}{100}$ to $\frac{1}{50}$ in. long. See ITCH.

Sarcoptes Scabei (*Sarcoptes hominis*).

Sarcosine. $C_3H_7NO_2$. Methylamidoacetic acid. Colorless prismatic crystals, soluble in hot water, formed by the action of boiling baryta water on creatine or caffeine.

Sard. Red translucent quartz, nearly or quite the same as carnelian.

Sardanapalus. Traditional last king of Assyria, noted for voluptuousness and effeminacy; said to have perished by fire with his wives and treasures when besieged in Nineveh by revolted subjects. He was probably Asshurbanipal, King of Assyria 668–626 B.C.

Sardine. See CLUPEIDÆ.

Sardinia. 1. Island in the Mediterranean, held by Carthage 512–238 B.C., then by Rome and various later powers, by Spain 1416–1713, by the House of Savoy from 1720, and now by Italy. Its industries are chiefly agricultural. Area 9,294 sq. m.; pop., 1893, 741,362. 2. Kingdom created 1720, including the island and most of n.w. Italy. See SAVOY.

Sardis. Capital of Lydia in w. Asia Minor; on the river Pactolus; rich and important in antiquity; repeatedly destroyed, as by Greeks 500 B.C., and by Tamerlane 1402.

Sardonic Smile. Convulsive contortion of the face, sometimes occurring in an attack of tetanus. The lips are separated, the angles of the mouth are drawn outward and upward, the alæ of the nose are elevated and expanded, the horrid mockery of a smile. The name is given because of the reputed power of a Sardinian plant to produce this contortion.

Sardonyx. Variety of onyx, in which one of the layers has the red color of sard or carnelian.

Sardou, VICTORIEN, b. 1831. French dramatist, since 1860 a master of stage requirements and effects, successful alike in satirical comedy and historical plays; Academician 1878. *Fedora*, *Théodora*, and *La Tosca*, 1883–84–87, and others, were acted by Sara Bernhardt. His *Thermidor*, 1891, was suppressed. *Gismonda*, 1894.

Sargasso Sea. Area of some 200,000 sq. m. in the s. central Atlantic, overspread by the green seaweed *Sargassum bacciferum*, or GULF-WEED (q.v.).

Sargasso Weed.

Sargent, AARON AUGUSTUS, 1827–1887. M.C. from Cal. 1861–73; framer of the first Pacific R.R. law 1861; U.S. Senator 1873–79; Minister to Germany 1882–84.

Sargent, CHARLES SPRAGUE, b. 1841. American naturalist. *Silva of North America*, 9 vols., 1891–97.

Sargent, EPES, 1813–1880. American journalist, poet, dramatist, and novelist. *Velasco*, 1837; *Life of Clay*, 1843; *Arctic Adventures*, 1857–60.

Sargent, JOHN SINGER, b. 1856. N. A. 1897. American portrait painter of high rank, much influenced by Velasquez; mainly active in Europe. A fine exhibit of his work was made at the World's Columbian Exposition, Chicago.

Sargent, WINTHROP, 1753–1820. Officer in the Revolutionary and Indian wars; Gov. of Northwest Territory 1798–1801, and of Miss. 1801.—His grandson, WINTHROP, 1825–1870, pub. *Life of André*, 1861, and *Les États Confédérés*, 1864.

Sargon, d. 705 B.C. Assyrian king from 722; conqueror of Israel, Babylonia, and Media; father of Sennacherib.

Sarmatia. Region between the Vistula and Volga, extending s. to the Danube and the Euxine; named from the Sarmati, but mostly peopled of old by Scythian tribes.

Sarmatians. Ancient race who spoke the Scythian language. They were nomads and roamed over the plains of e. Europe. The name is rhetorically used for Poland; also applied to the region in which the S. roamed.

Sarment. Elongated runner or long, prostrate, slender branch.

Sarmiento, DOMINGO FAUSTINO, 1811–1888. Pres. of Argentina 1868–74; prolific writer, eminent for services to education. *Vida de Abram Lincoln*, 1866.

Sarmiento de Sotomayor, GARCIA, COUNT DE SALVATIERRA, ab. 1590–1655. Viceroy of Mexico 1642, and of Peru 1648.

Sarmiento Gamboa, PEDRO DE, ab.1530–ab.1590. Spanish explorer of the Strait of Magellan 1579–80; founder, by royal order, of a short-lived colony there 1583; prisoner in England 1584–88. *Voyages*, tr. 1895.

Sarmiento Valladares, JOSÉ, COUNT DE MONTEZUMA, ab.1650–1717. Viceroy of Mexico 1696–1701.

Saros. Cycle of 6,585⅓ days, or 18 years 11 days approximately, required for the earth, sun and moon to return to the same position with respect to the moon's nodes. Eclipses of the sun and moon occur in the same order in each of these periods. This cycle was known to the Chaldeans, who employed it in predicting eclipses. In a single period there are usually 70 eclipses, 40 of the sun and 30 of the moon. The numbers will vary slightly, as the periods of the sun and moon, though nearly commensurable, are not strictly so. The following tabular statement will illustrate the periodicity, and show how a future occurrence may be predicted when once the order has been established by observation or otherwise:

Moon	1876	Sept. 3.4	Mag. 0.35	1894	Sept. 14.7	Mag. 0.23
Sun		Sept. 17.4	Total		Sept. 28.7	Total
Moon	1877	Feb. 27.3	Mag. 1.67	1895	Mar. 10.6	Mag. 1.63
Sun		Mar. 14.6	Partial		Mar. 26.0	Partial
Sun		Aug. 8.7	Partial		Aug. 20.0	Partial
Moon		Aug. 23.3	Mag. 1.76		Sept. 5.7	Mag. 1.56
Sun		Sept. 7.0	Partial		Sept. 18.4	Partial
Sun	1878	Feb. 1.8	Annular	1896	Feb. 13.2	Annular
Moon		Feb. 16.9	Mag. 0.84		Feb. 28.3	Mag. 0.87
Sun		July 29.4	Total		Aug. 8.7	Total
Moon		Aug. 12.5	Mag. 0.60		Aug. 22.8	Mag. 0.73

Sarpi, PIETRO (FRA PAOLO), 1552–1623. Venetian Servite monk; champion of Venice in her quarrel with the Pope; excommunicated 1607; enemy of Ultramontanism. His *History of the Council of Trent*, 1619, tr. 1629, was widely read. *Works*, 6 vols., 1677; 24 vols., 1789–90.

Sarraceniaceæ. Natural family of flowering plants, of the class *Angiospermæ* and sub-class *Dicotyledons*, comprising 3 genera and ab.10 species of marsh herbs with hollow leaves, all growing in America; called PITCHER-PLANTS (q.v.).

Sarsaparilla. Vines of the genus *Smilax*, natural family *Liliaceæ*, having thick aromatic roots, from which the drug parillin is extracted; mainly from tropical America. It is possessed of diuretic and diaphoretic properties, and at one time was considered a remedy for syphilis.

Sarsaparilla officinalis.

Sarsaparilla, WILD. Herbs of the genus *Aralia* of the Ginseng family, with aromatic roots and foliage, of wide distribution. Several species are natives of N. America.

Sarsfield. PATRICK, ab.1645–1693. Irish Jacobite, made Earl of Lucan 1689; defender of Limerick in two sieges 1690–91; in the French service; killed at Neerwinden.

Sartain, JOHN, 1808–1897. English-American engraver, in Phila. from 1830; introducer of mezzotints; conductor of *Sartain's Magazine*, 1848–52.—His son WILLIAM, b. 1843, is a painter in New York.

Sarti, GIUSEPPE, 1729–1802. Italian operatic composer. *Armida*, 1786.

Sarto, ANDREA DEL, 1487–1531. Florentine painter, supereminent as a colorist. His best work is the beautiful frescoes in the court of Santa Annunziata at Florence. His altar pieces and Madonnas tend to sameness, but are excellent works.

Sartoris, ADELAIDE. See KEMBLE.

Sartwell, HENRY PARKER, 1792–1867. American botanist. *Carices*, 1848.

Sarum. See SALISBURY.

Saskatchewan. Province of Canada, comprising a portion of the Great Plains, e. of the Rocky Mts. Area 101,092 sq. m. Prince Albert is the capital. Pop., 1891, 11,150.

Saskatchewan River. In Canada. It heads in the Rocky Mts. in two large branches, and empties into Lake Winnipeg. Length ab. 1,300 m., drainage area 482,000 sq. m.

Sassafras. Large N. American tree, *Sassafras sassafras*, of the Laurel family, the foliage and bark aromatic. In different countries numerous other trees are given the same name.

Sassafras (*Sassafras sassafras*): *a*, branch of male tree in flower; *b*, branch with ripe fruit and developed foliage.

Sassafras, OIL OF. Obtained by distillation from the roots of the sassafras and wintergreen. The oil consists chiefly of Safrol, $C_{10}H_{10}O_2$, and ab.10 per cent Pinine, $C_{10}H_{16}$.

Sassanidæ. Dynasty which governed Persia 226–651.

Sassari. Old town of n.w. Sardinia, 12 m. from Gulf of Asinara. Its university, founded 1677, has ab.125 students. Pop., 1893, 41,200.

Sassoferrato (GIOVANNI BATTISTA SALVI), 1605–1685. Italian painter of the decadence period. His works are mainly Madonnas, superficially attractive in some cases, but of no great worth.

Sassolite. $B_2O_3.3H_2O$. Native boric acid, found occasionally in the solid state, but more commonly in aqueous solutions, and especially in the hot waters of the lagoons of Tuscany.

Sassy-Bark. Poisonous bark of *Erythrophleum guineense*, found in Western and Central Africa; used as an ORDEAL (q.v.). It is a very poisonous narcotic.

Satan. Chief of the fallen angels; tempter of Eve; accuser of the saints; embodiment of evil; called in N.T. prince of the power of the air (Eph. ii. 2) and god of this world (II. Cor. iv. 4). He is more minutely represented in *Paradise Lost* than in the Scriptures.

Satellite. Small planet revolving round a larger one. See MARS, JUPITER, etc.

Satin. Silk stuff, first imported from China, which is distinguished by its very smooth, polished, and glossy surface.

Satinet. Coarse fabric of wool and cotton, but the name was originally given to a poor grade of satin.

Satin Spar. Variety of gypsum, possessing a fine fibrous structure and a silky luster; also sometimes fibrous varieties of calcite and aragonite; the latter are harder, and thus easily distinguished from the former.

Satin-Wood. *Chloroxylon swietenia.* Large tree of the Mahogany family, native of India; from which a fine-grained, lustrous wood is obtained.

Satire. Form of literature, whether in verse or prose, which deals with folly and vice. Its modes and tempers are as various as its applications; it may be light and easy, or tragically earnest: it may employ delicate irony or fierce denunciation: it may attack in its own name, or under cover of the dramatic (as with Aristophanes and Molière) or some other literary form. Among the most memorable satires are those of the Roman Juvenal and Persius, the German *Reynard the Fox*, Butler's *Hudibras*, Pope's *Dunciad*, and Lowell's *Biglow Papers*.

Satire Ménippée. Pub. 1594 in France, against the Catholic League; of composite authorship; in mingled verse and prose, after the manner of the Greek Menippus.

Satisfaction. Pleasure attending on the attainment of a desired object or the fulfillment of a recognized need.

Satolli, FRANCESCO, b.1841. Representative of the pope in U. S. 1895–96; Cardinal 1896.

Satow, ERNEST MASON, b. 1842. English interpreter in Japan 1861; Envoy to Siam 1886, Uruguay 1888, and Morocco 1893; author of a Japanese dictionary.

Satpura. High lands in n. India, ab.600 by 100 m. in extent; greatest altitude 4,454 ft.

Satraps. Governors of ancient Persian provinces; in remote regions, as Asia Minor, sometimes almost independent despots, which several of them became.

Saturated Solution. When a solvent has dissolved the maximum amount of a given substance, the solution is said to be saturated.

Saturated Steam. Steam whose temperature is exactly

that of the boiling point due to its pressure. If the temperature of such steam be lowered, some of it will condense to water or mist; if raised, the steam is superheated. Steam in contact with the hot water from which it has been made is always saturated, since, if the temperature of the steam be raised, it will evaporate more water and return at once to the condition of saturation.

Saturated Vapor. Partially condensed by diminution of volume or decrease of temperature. See VAPOR.

Saturation (MAGNETIC). When a magnetic field has attained to the maximum state of magnetization which is theoretically possible, it is said to be saturated. *E.g.*, the soft iron core of an electromagnet is magnetized to saturation if the number of Ampère-turns Si (the current strength i multiplied by the number of turns of wire S) is large enough. Toward the point of saturation, however, the magnetic susceptibility greatly decreases, and it has been found convenient in practice to define a Coefficient of Saturation σ to be the reciprocal of that number of ampere-turns that will bring the magnet up to such a degree of saturation that its permeability is halved. The point at which this state of things is reached is termed by Thompson the Dia-critical point of Saturation of the magnet.

Saturation Point. Different magnetic substances, *e.g.*, iron and steel, differ from one another in the amount of magnetization they are capable of receiving. As the magnetizing force increases, the magnetization produced increases, at first rapidly and then more slowly. The point at which the effect ceases to increase is called the saturation point, and is a function of the magnetizing force. A sort of magnetic inertia appears to exist, which acts to resist magnetization at the outset and to retain it afterward. This action is called COERCIVE FORCE (q.v.), and is most strongly marked in the case of steel. It is not only more difficult to magnetize steel than iron, but the steel retains its magnetization permanently. The latter property Lamont has called Retentivity.

Saturation Pressure. See HYGROMETRY.

Saturday. Seventh or last day of the week; the Jewish Sabbath. Saturn's day.

Saturn. Mythical king, identified by the Romans with Cronos; supposed to have come to Italy in the golden age and taught agriculture, civilization, and morality. After death the god of agriculture. Hence Italy was called Saturnia by the poets.

Saturn. Sixth of the large planets in order of distance from the sun, 886,000,000 m.; diameter 71,000 m.; density 0.72 that of water; time of revolution about sun 29.46 years; revolution about axis 10h. 14m. 24 s.; gravity at surface 1.18 that of the earth. In the telescope the surface is diversified with

Saturn with its Rings.

belts like Jupiter, though much less conspicuous. The characteristic feature is the system of rings, so far not found elsewhere in the universe. The appearance is that of a thin plate of matter in the form of a ring surrounding the planet, coinciding in position with the plane of its equator. This was first seen by Galileo 1610, but its true character was first recognized by Huygens 1655. Close inspection shows this ring to be divided into three parts. The outside diameter is 168,000 m., internal diameter 95,000, breadth of rings 36,500 m. The thickness is small, 50 to 100 m. The inner one, called the gauze or crape ring, was discovered by W. C. Bond at Cambridge, Mass., Nov. 1850. The rings are probably formed of discrete solid particles like a swarm of meteors, or a cloud of dust, each moving like an independent satellite about the planet. There are eight satellites, as follows:

Name.	Discovery.	Distance from Saturn.	Time of revolution.	Diameter miles.
		Miles.	d. h. m. s	
Mimas	W. Herschel, 1789	117,000	0 22 37 5.7	600?
Enceladus	" "	157,000	1 8 53 6.9	800?
Tethys	J. D. Cassini, 1684	186,000	1 21 18 25.6	1,100?
Dione	" "	238,000	2 17 41 9.3	1,200?
Rhea	" 1672	332,000	4 12 25 11.6	1,500?
Titan	Huygens, 1655	771,000	15 22 41 23.2	3,500?
Hyperion	G. P. Bond, 1848	934,000	21 6 39 27.0	500?
Iapetus	J. D. Cassini, 1671	2,225,000	79 7 54 17.1	2,000?

Saturnalia. Festival in honor of Saturn, which began Dec. 17 and lasted originally 1 day, then 3, and finally 7 days; most remarkable season of freedom and festivity in the old Roman year.

Saturnian Verse. Oldest form of Latin meter.

Satyr Drama. In Greek Literature, a play in which the chorus was made up of satyrs. It held to the original character of the Dionysiac festival. Æschylus was the greatest master of the satyr drama, but Euripides' *Cyclops* is the only complete specimen extant.

Satyriasis. Name applied to two widely different forms of disease. 1. The true leprosy, elephantiasis Grecorum, because of the appearance of the patient: resembling a satyr. 2. The manifestation of morbid sexual desire in males; the complementary term is nymphomania, applied to females.

Satyrs. Spirits of the woodlands of Greek mythology, represented with pug noses, cloven hoofs, and ears like a goat; depicted as wanton, cunning, and cowardly, and considered as foes to mankind, whom they delighted to plague with roguish pranks. They stand for the luxuriant vital forces of nature, and are inseparably connected with the worship of Bacchus.

Sauces. Accompaniment to food, usually liquid or soft, highly seasoned, and used as a digestive or relish.

Sauerkraut. Red or white cabbage finely sliced and packed into a cask in layers, each layer being sprinkled with salt, and allowed to ferment. Sometimes juniper-berries, carraway or cumin seeds are added. It is eaten boiled.

Saul, d. ab.1055 B.C. First king of Israel; killed in battle with the Philistines, on Mount Gilboa.

Saul, OF TARSUS. See PAUL.

Saulcy, LOUIS FÉLICIEN JOSEPH CAIGNART DE, 1807–1880. French numismatist, antiquarian, and Orientalist.

Saulsbury, ELI, 1817–1893. U. S. Senator from Del. 1871–89, succeeding his brother, WILLARD, 1820–1892, who was Senator 1859–71, and Chancellor of Del. from 1873.

Sault Ste. Marie Canal. Ship canal, 1½ m. long, connecting Lakes Superior and Michigan, built 1855, enlarged 1870, and again 1894. It has the largest lock ever constructed, the length being 1,000 ft., width 100 ft., and lift 21 ft. The canal has marvelously increased the commerce on the great lakes. It is the greatest artificial waterway in the world, and passes far more vessels than the Suez Canal.—The town of the same name is on the canal and Lake Superior.

Saumarez, JAMES, R.N., 1757–1836. Commander 1781; knighted 1793; Vice-admiral and Baronet 1801; Admiral 1814; Baron 1831; distinguished in the wars with France, especially for a great victory near Cadiz, July 12, 1801, over a French and Spanish fleet.

Saumur. French town, on the Loire, 38 m. w. of Tours;

Saumur.

taken by the Vendeans 1793; noted for its Protestant Theol. Sem., 1598–1655, eminent in biblical criticism; also for its rosa-

ries made of cocoanut shells, and a white wine to which it has given its name. Pop., 1891, 12,825.

Saunders, FREDERICK, b. 1807 in London. Essayist and compiler; in Astor Library, New York, from 1859. *Salad for the Solitary*, 1853; *Salad for the Social*, 1856; *Evenings with Sacred Poets*, 1869–85.

Saunders, NICHOLAS, 1527–ab.1582. English R.C. theologian, prof. at Louvain 1566–79.

Saunders, ROMULUS MITCHELL, 1791–1867. M.C. 1821–27 and 1841–45; Attorney-gen. of N. C. 1828; Judge of N. C. Superior Court 1835–40 and 1851–65; U. S. Minister to Spain 1845–49.

Saunders, THOMAS WILLIAM, 1813–1890. English lawyer. Recorder of Bath 1860–78; prolific writer on law.

Saunderson, NICHOLAS, 1682–1739. Mathematician, blind from infancy; prof. Cambridge from 1711. *Algebra*, 1740; *Fluxions*, 1756.

Sauppe, HERMANN, 1809–1893. Prof. Zurich 1838–45, and Göttingen from 1856; editor of several classics; writer on Greek epigraphy.

Saurii, or LIZARDS. See LACERTILIA.

Saurin, JACQUES, 1677–1730. French Protestant, pastor in London 1701–5 and at the Hague; of notable eloquence. His *Sermons*, pub. in 12 vols., 1749, were tr. in 6 vols. 1775–76, and later.

Saurobatrachia. See URODELA.

Saurognathæ. See PICIDÆ.

Sauropsida (MONOCONDYLIA). Phylum of *Vertebrata*, characterized by the presence of one occipital condyle and oviparous reproduction. The quadrate bone is the suspensor of the lower jaw, and the third joint of the limbs falls between the proximal and distal mesopodials. There are two subphyla, REPTILIA and AVES (q.v.). See also CRANIOTA.

Sauropterygia. Group of extinct Reptiles, including Cretaceous fossils, of which the Old World PLESIOSAURUS (q.v.) and the New World Elasmosaurus are types. See also ENALIOSAURIA.

Saurornithes (SAURURÆ). Sub-class of Aves, including the Archæopteryx.

Saururæ. See ARCHÆOPTERYX.

Sausage Poison. Sausages in which certain alkaloids or PTOMAINS (q.v.) are developed by putrefaction. The symptoms are slow to appear and resemble poisoning by Belladonna. See TRICHINOSIS.

Saussure, HORACE BÉNÉDICT DE, 1740–1799. Swiss physicist, prof. Geneva 1762–86; well known for his original investigations into the nature of the strata, rocks, fossils, and minerals of the Alps. *Voyages dans les Alpes*, 4 vols., 1779–96; *L'Hygrometrie*, 1783.

Saussurite. Mineral related in composition to epidote and zoisite, first found near Lake Geneva. It is one of the constituents of the Alpine rock known as euphotide.

Savage, JAMES, LL.D., 1784–1873. American antiquarian. *First Settlers of New England*, 4 vols., 1860–64.

Savage, MINOT JUDSON, b.1841. Unitarian pastor in Boston 1874, in New York since 1896. *Religion of Evolution*, 1876; *Poems*, 1882; *Social Problems*, 1886; *My Creed*, 1887; *Evolution of Christianity*, 1892.

Savage, RICHARD, 1698–1743. English poet, memorable less for his works than for his misfortunes, recounted by Dr. Johnson. *The Bastard*, 1728; *The Wanderer*, 1729.

Savannah. Capital of Chatham co., Ga., on the S., 18 m. from the sea; founded 1733; taken by the English Dec. 29, 1778, after stout resistance; besieged by French and Americans in fall of 1779, bombarded Oct. 4–9, and unsuccessfully assaulted Oct. 9; taken by Sherman Dec. 21, 1864. It has an excellent harbor and a large commerce, chiefly in cotton shipments. Pop., 1890, 43,189, one-half colored.

Savannah River. Boundary between S. C. and Ga.; navigable to Augusta, Ga. Drainage area 11,402 sq. m., length 450 m.

Savart, FÉLIX, 1791–1841. Prof. Paris 1838. French physicist, in the branch of acoustics.

Savart's Wheel. Contrivance for determining the pitch of a musical note. It consists of a toothed wheel, capable of being turned rapidly by a multiplying arrangement, against the teeth of which a thin elastic card or plate may be placed. By knowing the number of turns per second and the number

Savart's Wheel.

of teeth in the wheel, the pitch of the note emitted by the card may be determined.

Savary, ANNE JEAN MARIE RENÉ, 1774–1833. French General 1803; victorious at Ostrolenka Feb. 16, 1807; Duke of Rovigo 1808; Napoleon's agent in Spain 1808; Minister of Police 1810–14; Commander in Algeria 1831.

Savary, NICOLAS, 1750–1788. French traveler in the East. *Letters on Egypt*, 1781–85; tr. *Koran*, 1783.

Savate. Method of defense and attack in which the feet are employed, peculiar to France, where the sailors in the navy are regularly trained in this art; practiced as an amusement by boys in Corea, whence it may have been introduced.

Save. Branch of the Danube, rising in Carniola, flowing s.e. through Croatia, and forming the n. boundary of Bosnia and part of Servia. Length 660 m.

Savery, THOMAS, ab.1650–1715. English engineer, who invented the engine bearing his name.

Savery's Engine. Prototyde of the PULSOMETER (q.v.) for pumping water (see ENGINE, HISTORY OF); invented ab.1697. Steam from a boiler passed through a throttle-valve in a pipe to a vessel shaped like the air-chamber of a pump; by its pressure on the surface of the water in it, the water was forced through a valve into the rising main. The throttle being closed, steam was condensed in the chamber, whereupon a foot valve was opened and water from the well forced in by atmospheric pressure, to fill the chamber. Savery improved on this engine by doubling the chamber and connections, by which a continuous stream was maintained, as in the Pulsometer. His boiler had a safety-valve, gauge-cocks to test the level of water in it, and a feed-heater.

Savery's Engine.

Savi, GAETANO, 1769–1844. Prof. in Pisa. *Flora Pisana*, 1798; *Botanicon Etruscum*, 1808–25; *Observationes in varias trifoliorum species*, 1810; *Lezioni di botanica*, 1811; *Flora Italiana*, 1818–24; *Nuovi elementi di botanica*, 1820.

Savigny, FRIEDRICH KARL VON, 1779–1861. Prof. of Jurisprudence at Marburg 1803, and Berlin 1810; Minister of Justice 1842–48. *Geschichte des Römischen Rechts im Mittelalter*, 6 vols., 1815–31; *System des Heutigen Römischen Rechts*, 8 vols., 1840–49.

Savile, GEORGE. See HALIFAX, MARQUIS OF.

Savile, SIR HENRY, 1549–1622. Provost of Eton 1596; knighted 1604; founder of two chairs at Oxford; tr. Tacitus, 1581; ed. *Rerum Anglicanum Scriptores*, 1596, and Chrysostom's works, 1610–13.

Savin. See CEDAR.

Savings Banks. Philanthropic institutions organized for the safe deposit of small sums and the payment on these of a low rate of interest. The first was established in Germany 1765. In 1810 one was organized in Scotland. In 1817 acts

were passed to regulate these institutions in England and Ireland. In 1861 England introduced them in connection with the post-office; in 1892 these had increased to 10,519. Savings banks went into operation in New York, Phila., and Boston 1816–17, and in Baltimore in 1818. Total amount of deposits in 1880 (629 banks) $819,106,973; in 1895 (1,017 banks) $1,810,597,-023; no. of depositors 4,875,519 (W. Va. and Tex. not included).

Savioli, FREDOVICO VITTORIO, COUNT, 1729–1804. Italian poet, historian of Bologna.

Savona. Old Italian seaport, 26 m. s. by w. of Genoa; noted for its pottery. Pop. ab.26,000.

Savonarola, GIROLAMO, 1452–1498. Dominican monk, at Florence from 1490; famous as preacher, patriot, and reformer, attacking the corruptions of the Church, not its doctrines. His zeal aroused powerful enemies, who procured his imprisonment. Claiming prophetic powers and a divine mission, he appealed to the ordeal of fire. His influence and popularity, long enormous, vanished, and he was strangled and burned. *Works*, 6 vols., 1633–40; *Triumph of the Cross*, tr. 1868. George Eliot celebrated him in *Romola*.

Savory. *Sutureia hortensis.* Aromatic herb of the Mint family, native of Europe; cultivated in gardens and locally escaped into waste places in N. America.

Savoy. Former province of n.w. Italy, ceded to France 1860; made a duchy 1416. Since 1720 the kings of Sardinia, and since 1861 those of Italy, have belonged to the House of Savoy.

Savoy. In London; formerly a palace, now a chapel royal; near the Thames. The grant was made 1246 to Peter of Savoy, uncle of Queen Eleanor. It was the prison of the captive King

The Savoy in 1650.

John of France after the battle of Poitiers, afterward the residence of John of Gaunt; burned in Wat Tyler's revolt 1381, rebuilt by Henry VII. as a hospital 1505, a chapel royal added 1515; restored by Queen Victoria after the fire of 1864.

Savoy Conference. Held 1661 in London for the revision of the Prayer Book, but with no result. Baxter, representing the Presbyterians, prepared a *Reformed Liturgy*.

Savoy Declaration. Issued 1658 in London by Independent ministers, as to Congregational doctrine and polity.

Sawatch Range. In Col.; part of the Rocky Mt. system. It contains numerous peaks exceeding 14,000 ft. in height.

Sawdust. Small fragments made in sawing wood, which is used as a stuffing material for dolls and cushions, for sprinkling the floors in public houses, the arenas in amphitheaters, and in the manufacture of oxalic acid. The sawdust of mahogany and rosewood is used by furriers and that of cedar in making perfumery. Sawdust sinks in the water while the wood from which it is made floats.

Sawfly. Hymenopterous insects injurious to plants. The currant and gooseberry sawflies resemble caterpillars. See WHEAT SAWFLY, TURNIP FLY and WILLOW SAWFLY.

Saw-Mill. Machinery worked by steam or water power for cutting, molding or planing wood by means of saws; and for sawing stone, slate and marble. Wood-saw mills, driven by water, were erected as early as the 4th century in Germany, on the Roer River. Stone and marble mills had been used many centuries previously in Pontus, Caria and Rome. See SAWS, GANG-DRILL, CHANNELING MACHINE and CIRCULAR SAW.

Saws. Tools for cutting wood or metals by the successive impact of small cutting surfaces upon the edge of a thin plate. The saw differs from a file or a milling cutter, when driven by hand or power respectively, only by the greater breadth of the latter tools at the cutting surfaces. The teeth of saws will differ according as they are to cut with or across the grain of wood. Ripping or slitting saws to cut with the grain cut at the front of the teeth, which are cut steeper here than at the back; for cross-cutting, the teeth cut at their sides, each tooth being set over alternately to project beyond the plane of the plate. The breadth of the line cut into wood by a saw is called its kerf. In all cases this should be no wider than necessary, because the saw works slower to reduce more wood to dust, and because, in valuable woods, less finished lumber can be made from a given log. For hand use, the hand saws and the keyhole or compass or scroll saws are the usual types for woods: for metal, the hack-saw is used, a thin blade strained by a frame. For power use, the circular, band, and jig-saws are the usual types, all three forms being used for metal when with proper forms of tooth. For presenting work to power saws, special forms of table are used, and often the name covers both the saw and its table and accessories. When the circular saw mandrel is stationary, the table top rises and falls to vary the projection of the saw disk above it for rabbeting, and a carriage or fence secures that the cut is at the required angle, line, or bevel. Grooves can also be cut, either by having the saw inclined to its axis so as to wobble, or by passing the work over the saw obliquely. Sometimes the saw mandrel is adjustable, and either a ripping or cross-cut saw is made to protrude through the table. For heavy work, railway saws are used, which move forward across the work as they revolve. For band saws, the table is made up of narrow strips glued together to prevent warping, and with a metal plate where the blade passes to prevent excessive wear at that point. Many table-tops are arranged to tilt for sawing bevels. The special points are the guiding of the blade, resisting of the thrust at the cut, and maintenance of constant tension on the blade. See RE-SAW, JIG-SAW, and BAND-SAW.

Sawyer, LEICESTER AMBROSE, b. 1807. Pres. Central Coll., Ohio, 1840–47. Tr. N. T., 1858; tr. Prophets and Apocrypha, 1860–64.—His cousin, LORENZO, LL.D., 1820–1891, was Judge Cal. Supreme Court 1863–68, Chief-justice 1869–70, and U. S. Circuit Judge from 1870.

Sawyer, LEMUEL, 1777–1852. M.C. from N. C. 1807–13, 1817–23, and 1825–29; biographer of John Randolph, 1844.

Sawyer, PHILETUS, b. 1816. M.C. from Wis. 1865–75; U. S. Senator 1881–93.

Sawyer, SYLVANUS, b. 1822. Mass. inventor of improvements in chair-cane manufacture, and in projectiles.

Sawyer, THOMAS JEFFERSON, D.D., b. 1804. Prof. Tufts Coll. 1869; writer in defense of Universalism.

Saxe, JOHN GODFREY, LL.D., 1816–1887. American poet. His works, chiefly humorous, had a large circulation. *Clever Stories of Many Nations*, 1865.

Saxe, MAURICE, 1696–1750. Son of Augustus II. king of Poland; distinguished in arms in youth; Duke of Courland 1726–29; in the French service from 1730; Lieut.-gen. 1736. He took Prague by storm 1741; fought in Flanders 1744–48, winning brilliant victories at Fontenoy May 11, 1745, and at Rancoux Oct. 11, 1746; conquered all Belgium, taking its chief cities, and was made marshal 1746.

Saxe-Altenburg. German duchy; smallest of the Saxon states. As a member of the German Empire it has one vote in Council, and one representative in the Diet. Area 511 sq. m.; pop., 1890, 170,864.

Saxe-Coburg-Gotha. German duchy. The two once belonged to the great duchy of Saxony, fell to Ernestine branch of House of Wettin, and were united under Ernest III. 1826. They have one vote in Council and two members in the Diet. Area 755 sq. m.; pop., 1890, 206,513.

Saxe Holm. Anonymous author of tales of New England life; by some identified with Mrs. Helen (Hunt) Jackson.

Saxe-Meiningen. German duchy, ruled since 1681 by descendants of Ernest I. It has one vote in Council and two deputies in the Diet. Area 953 sq. m.; pop., 1890, 223,832.

Saxe-Weimar. German grandduchy; area 1,388 sq. m. The principalities of Weimar, Eisenach, and Gotha were founded 1640, and the former two were united under Ernest Augustus, 1728–48. He established the law of primogeniture. The reign of Karl August, 1775–1828, was made illustrious by the presence at his court of the most famous literary circle Germany has produced, and by his efforts in behalf of education. He joined the Rhenish Confederation 1807; at the Congress of Vienna he received accession of territory with title of Grandduke, and granted a liberal constitution 1816. The grandduchy took part with Prussia, 1866, and afterward entered the N. German Confederation. As a member of the Em-

pire it has one vote in Council, and elects three deputies to the Diet. Pop., 1890, 326,091.

Saxhorn. Family of brass instruments with valves, invented by Adolphe Sax, 1814–1894, Belgian, in Paris after 1842. All instruments of this family obtain power and facility somewhat at the expense of quality. Their chief use is in military music, the Euphonium and Bombardon only having held their own in the orchestra.

Euphonium.

Saxicolous. Plants which grow naturally upon rocks.

Saxifragaceæ. Natural family of flowering plants, of the class *Angiospermæ* and sub-class *Dicotyledons*, comprising 87 genera and ab.700 species, growing in the temperate and cold regions of the whole earth; called the Saxifrage family.

Saxifrage. Herbs of the genus *Saxifraga*, mainly with showy flowers, inhabiting rocky places, and of wide geographical distribution.

Saxifrage, GOLDEN. Low, marsh plants of the genus *Chrysosplenium*, of the Saxifrage family, natives of the cooler portions of the n. hemisphere.

Saxo Grammaticus, d. ab.1208. Danish author of a Latin history of Denmark, extending to 1185, and pub. 1514. The later part of it is of great value.

Saxon. See DUTCH LANGUAGE and GERMANIC LANGUAGE.

Saxon Architecture. The remains which have lasted to modern times of the buildings reared in Gt. Britain before the Roman conquest are inconsiderable, with the exception of Roman works. The existing specimens of these consist mainly of foundation walls, with a few arches of tile and rubble work. The inhabitants before the Roman conquest seem to have built exclusively of wood. Their essays in masonry were accordingly largely in crude imitation of the Roman examples. In some cases fragments of Roman moldings are imbedded in Saxon work. The Saxon building which remains is nearly all assigned to the 11th century. In the following century the Norman conquest had established itself and gave their architectural character to new buildings. The Saxon work done under Edward the Confessor is rude, and shows scarcely anything of ornament. The towers are covered with trellises of shallow pilasters, supposed to be imitated from timber-framing, and the angles are strengthened with a peculiar quoining called long and short work. A few real arches are assigned to this period, but they are unskillfully constructed, and in many cases the openings are covered with stones simply leaned against each other. The principal Saxon monuments are the tower at Earls Barton, in Northamptonshire, and Sompting in Sussex.

Saxons. Powerful German tribe, who dwelt in what is now Holstein. After the 3d century they headed a confederacy of German peoples, known as Saxons, and with the Angli conquered Britain ab.450.

Saxony. Kingdom of Germany, having great mineral resources and extensive manufactures; area 5,787 sq. m. The earliest inhabitants of Upper S., the Hermanduri, were succeeded by Slavs, afterward displaced by Germans. The Mark was bestowed 1090 on the House of Wettin. Under Henry the Illustrious, 1221–88, it became a powerful state; great roads were constructed, and Leipzig Fair established. After frequent partitions it was again united under Frederic the Warlike, 1381–1428. Ernest, 1464–86, founded the electoral line. His son, Frederic the Wise, 1486–1525, protected Luther. His nephew, John Frederic, was forced to abdicate, after the defeat of Mühlberg, in favor of Maurice, a member of the younger line. John George I. joined the Swedes in the 30 Years' War, but made separate peace with Austria 1635. S. was now at the height of its power. Frederic Augustus II., 1694–1733, was chosen King of Poland; his war with Charles XII. laid Poland waste, and exhausted S. Under Frederic Augustus III. the country was ravaged during the 7 Years' War. Frederic Christian (1763–1827) was forced to join the Rhenish Confederation, and most of his territory was added to Prussia. Antony, 1827–36, granted a constitution 1831. In 1866 S. sided with Austria and shared her defeat; on being admitted into the new Confederation, she resigned some rights, and paid a large indemnity. Capital, Dresden; pop., 1890, 3,502,684.

Saxony, LOWER and UPPER. Lower S. included nearly the whole region between the Elbe, the Harz Mts., the Rhine, and Friesland; it was made a dukedom 850. The son of Ludolf, the first duke, refused the crown of Germany, bestowed 919 on his son Henry, first of this dynasty. Otto I. gave S. to Hermann Billung 960, whose family held it till 1106, when Lothaire became duke. Being elected emperor, he gave S., now reaching to Pomerania, to Henry the Proud, Duke of Bavaria, under

Saxon Milk-Seller.

whose son, Henry the Lion, the vast domain, including L. and U. S., was divided 1180, only a small portion of it retaining the name. E. S. was given as an electorate to Bernhard of Ascania. In 1260 what remained of S. was divided into two parts, Saxe Lauenburg and Saxe Wittenberg. The electoral dignity was confirmed to the latter, by the Golden Bull. The Ascanian line failed 1422, and S. passed to Frederic the Warlike, ancestor of the reigning line.

Saxony, PRUSSIAN. Most westerly undetached portion of Prussia; most of it taken from the kingdom of Saxony and given to Prussia by the Congress of Vienna 1815.

Saxophone. Musical instrument, used chiefly in military bands, invented by Adolphe Sax. It resembles a clarionet, in having a single reed, but is made of metal and in many sizes. See SAXHORN.

Saxophone.

Saxton, JOSEPH, 1799–1873. Inventor, especially of appliances for the Mint and Coast Survey; in U. S. service from 1837.

Saxton, RUFUS, U.S.A., b. 1824. Brig.-gen. U. S. Vols. 1862–66.

Say, JEAN BAPTISTE, 1767–1832. Prof. Paris 1819; advocate of Adam Smith's doctrines. *Economie Politique*, 1803; *De l'Angleterre*, 1816; *Melanges*, 1833.—His grandson, JEAN BAPTISTE LÉON, 1826–1896, was Deputy 1871, thrice Finance Minister, Envoy to England 1880, and a writer on finance.

Say, THOMAS, 1787–1834. Zoölogist of Long's expedition to the Rocky Mts. 1819–20, and others. *American Entomology*, 1824–28; *Conchology*, 1830–34, repub. 1858–59.

Saybrook Platform. Regulative plan formed 1708 for Conn. Congregationalism, establishing a more rigorous interdependence of the churches than in Mass.

Sayce, ARCHIBALD HENRY, D.D., LL.D., b. 1846. O. T. reviser 1874; prof. Oxford 1876–90. *Assyrian Grammar*, 1872; *Comparative Philology*, 1874; *Science of Language*, 1880; *Ancient Empires of the East*, 1884; *Ancient Babylonians*, 1887; *Hittites*, 1888; *Records of the Past*, 6 vols., 1888–92; *Egypt of the Hebrews*, 1896.

Sayre, LEWIS ALBERT, M.D., b. 1820. Prof. of Orthopedic Surgery at Bellevue Hospital, New York, 1861; eminent as an operator. *Club-foot*, 1869; *Diseases of the Joints*, 1876; *Spinal Curvature*, 1877.

Sayre, ROBERT HEYSHAM, b. 1824. Chief engineer and supt. Lehigh Valley R.R. 1855–83; vice-pres. 1885.

Scab, OF SHEEP. Disease of the head due to minute parasites (*Sarcoptes*), which are oval, with 3 to 4 pairs of legs. They begin at the lips or eyes, where the skin is but slightly

hairy, and thence rapidly spread, causing eruptions and itching.

Scabies. See ITCH and SARCOPTES SCABEI.

Scabious. Showy-flowered herbs of the genus *Scabiosa*, natural family *Dipsaceæ*, comprising numerous species, all natives of the Old World; extensively cultivated for ornament.

Scabious.

Scabrous. Surfaces of organs or organisms rough with short projections or wrinkles.

Scævola, MUCIUS. Legendary hero, who saved Rome from Porsena by the loss or mutilation of his right hand. Others of this name were consuls 117 and 95 B.C.

Scagliola. Preparation of plaster of Paris with glue, to imitate marble; useful only for interior decoration.

Scala, DELLA. See VERONA, SCALIGER.

Scala, MASTINO DELLA, d. 1277. Ruler of Verona from 1260. His descendants retained power till 1387.—His son, CANGRANDE, 1332–1359, increased his domains, and was a patron of Dante.

Scalar, IN QUATERNIONS. Ratio between parallel vectors integral, fractional, or incommensurable, positive or negative but always real.

Scalariform. Ladder-like markings on the surfaces of certain prosenchyma cells.

Scalar Quantities. In Higher Algebra, those which follow in their combinations the laws of elementary (or arithmetical) algebra.

Scala Santa. Holy staircase in the Lateran, Rome, reputed to be the stairs of Pilate's house at Jerusalem, which Christ is said to have ascended.

Scald Head. Called also Ringworm of the Scalp. Popular names for a disease of the scalp forming rounded crusts. It is caused by the growth of a fungus and is known to dermatologists as Favus.

Scalds. See BURNS AND SCALDS.

Scale. Small, thin, modified leaves, as those which envelop the buds of most flowering plants, and those which subtend the simple flowers of grasses and sedges, and the florets of many plants of the Composite family.

Scale. Law of relation in a series of related quantities; uniform when unchanged throughout; arbitrary when it changes irregularly, either by usage or by subdivisions, and multiples of a standard, as in denominate numbers; variant when it changes according to some known law, as in difference series of second and higher orders.

Scale. In Music, (1) series of tones with definite relationships, upon which both melody and harmony rest, usually within the limits of an octave and named, from its key-note, a tonic. Scales are purely matters of convention, being based either upon the taste of different peoples, or on the theories upon which they construct their melodies. In European music the diatonic major scale is that having whole tones for all the intervals, except those between the third and fourth and seventh and eighth. The diatonic minor scale has the half tone between the second and third and fifth and sixth. The chromatic scale proceeds uniformly by half tones, as does the inharmonic scale, which employs the nomenclature of both sharps and flats; *e.g.*, the second tone of the scale in C is C-sharp, and also D-flat, the sound being identical upon keyed instruments with the tempered scale; (2) Compass of a musical instrument, and relative adjustment of the length, thickness, tension, etc., of a pianoforte's strings.

Scale. Weighing machines of some form or another have been in use from time immemorial. Pliny says they were invented by Phidon of Argos, or, according to Gellius, by Palamedes. Many centuries before, Abraham, 1860 B.C., weighed out 400 shekels of silver to Ephron the Hittite, as payment for a piece of land. The Romans placed their scales in the public

Scales from Pompeii.

market and recourse was had to them by buyers and sellers; this practice still prevails in modern Egypt. The weights were in the form of rings. See BALANCE.

Scale Insects. Many species of somewhat injurious plant lice. The adult males are winged; the females average $\frac{1}{10}$ in. in diameter. Shortly after hatching, they pierce the epidermis of the plant with their beaks and suck its juices, sitting motionless, meanwhile producing a batch of eggs which they cover; their bodies become transformed into a protecting case, covering them until they hatch. They have many natural enemies among other insects. If they are not checked naturally, whale oil soap may be applied in summer, kerosene emulsion when the young are newly hatched, and the trees washed in winter with strong lye.

Scalene Triangle. Having no two sides equal; distinguished from isosceles and equilateral.

Scales, ALFRED MOORE, b. 1827. M.C. 1857–59 and 1875–85; Brig.-gen. C.S.A. 1864; Gov. of N. C. 1885–89.

Scaliger, JULIUS CÆSAR, 1484–1558. Italian scholar and poet, physician in France from 1528; assailant of Erasmus.—His son, JOSEPH JUSTUS, 1540–1609, prof. Geneva 1572–74 and Leyden from 1593, was the most learned man of his age, if not of all ages: Niebuhr placed him "on the summit of real and universal knowledge." He edited several Latin poets, promoted the study of the classics, and by his *De emendatione Temporum*, 1583, and *Thesaurus Temporum*, 1606, rendered eminent service to chronology.

Scalops. See TALPIDÆ.

Scalp. Covering of the bones of the cranium, more particularly the skin on the top of the head on which the hair grows. It differs slightly from ordinary skin, having also the expanded tendon of the occipito-frontalis and intermediate cellular tissue and blood-vessels.

Scalpellum. Barnacle belonging to the group *Pedunculata*, in which the peduncle is not much developed. It has many strong plates in its shell, and is noted for the presence of COMPLEMENTAL MALES (q.v.).

Scamander. River of the Troad, flowing from Mt. Ida to the Hellespont; celebrated by Homer.

Scammell, ALEXANDER, ab. 1746–1781. Aide to Washington; prominent at Saratoga; mortally wounded at Yorktown.

Scammon, ELIAKIM PARKER, U.S.A., 1816–1894. Brig.-gen. U. S. Vols. 1862–65.—His brother, JONATHAN YOUNG, 1812–1890, founded Dearborn Observatory in Chicago, and the *Inter-Ocean*, 1872.

Scammony. *Convolvulus scammonia.* Perennial vine of the natural family *Convolvulaceæ*, native of Asia Minor; its large roots yield a purgative drug.

Scammony: *a*, portion of root.

Scamozzi, VINCENZO, 1552–1616. Italian architect. He finished the library of St. Mark's, built the Conaro Palace at Venice and the Trissino Palace at Vicenza.

Scandalum Magnatum. Libel or slander affecting a peer, judge, or high officer; defined by English statute 1275–1887.

Scandent. See CLIMBING.

Scandentia. See CARPOPHAGA.

Scanderbeg (GEORGE CASTRIOT), 1404–1468. Son of an Albanian chief; hostage to the Turks; favorite of Murad II., and general. Deserting 1443, he roused the Albanians, became their leader, won many victories, secured independence 1461, and again vanquished the Turks 1463–64. His successes were wholly personal; Albania was conquered 1477.

Scanderoon, or ALEXANDRETTA. Port of Aleppo; 30 m. n. of Antioch; founded 333 B.C. Near it an English naval victory was won 1628, and a Turkish force defeated by Mehemet Ali 1832. Pop. ab. 1500.

Scandinavia. Peninsula comprising Norway and Sweden; extended to include also n. part of Denmark.

Scandinavian Language. Northern group of Germanic languages, preserved in its earliest forms by loan-words in neighboring languages, and by runic inscriptions. Scandinavian or Old Norse is closely allied with the Gothic. Norwegian, Swedish and Danish became more or less independent dialects; in the 9th century Iceland was settled from w. Norway, and early Icelandic, often called Old Norse, developed the richest literature of all the Scandinavian tongues. Even in its modern form, Icelandic retains many primitive features. At present, Denmark and Norway have practically the same literary language, while Swedish presents decided differences from Danish. Dialects of Norway, however, still resemble the Icelandic and keep up the tradition of the Icelandic-Norwegian group.

Scandinavian Literature. See SCANDINAVIAN LANGUAGE, ICELANDIC LITERATURE, DANISH LITERATURE and NORWEGIAN LITERATURE.

Scandinavian Mythology. In this were recognized Odin, the principal god, and numerous gods and goddesses presiding over natural phenomena and human affairs; and their enemies the giants and giantesses, who were older and wiser, and accomplish the destruction of the world. The chief gods were worshiped by all the Teutonic races. The EDDAS (q.v.) of Iceland are the sources of information on this subject.

Scandium. Sc. At. wt. 44, sp. gr. 3.86, valence III.; discovered by Nilson 1879. It has not yet been obtained in a pure condition. It is a rare metal, found in gadolinite and euxenite. It forms a sulphate $Sc_2(SO_4)_3$ and an oxide Sc_2O_3. Its discovery was predicted by Mendeléeff.

Scandium Chloride. $ScCl_3$. Straw-colored, somewhat hygroscopic needles, converted into a basic chloride on heating; made by dissolving the oxide or hydroxide in hydrochloric acid.

Scandium Hydroxide. $Sc(OH)_3$?. White, gelatinous precipitate, obtained by heating scandium salts with ammonia; soluble in the common acids.

Scandium Nitrate. $Sc(NO_3)_3$. Small, fine, deliquescent columns, obtained by dissolving the oxide or hydroxide in nitric acid.

Scandium Oxide. Sc_2O_3. White, loose, infusible powder, obtained by heating the hydroxide or nitrate; soluble in boiling hydrochloric or nitric acids.

Scandium Sulphate. $Sc_2(SO_4)_3$. White, opaque substance, obtained by treating the nitrate with sulphuric acid and evaporating to dryness; soluble in water. It forms a double sulphate with potassium sulphate.

Scansores (CLIMBING BIRDS). Sub-class or order, characterized by having four toes of which the inner and outer are turned backward; some members can turn the outer toe both forward and backward. Otherwise there is much dissimilarity among the different forms. The beak is always strong; it may be straight or curved, small or large. The plumage is stiff, having little down. They are monogamous, live in forests, nest in hollow trees, and feed on insects, fruit, or seeds. Two orders are included: the *Picariæ*, with sub-orders *Cypseli*, *Cuculi*, and *Pici* (Humming Birds, Cuckoos, and Woodpeckers), and the *Psittaci* (Parrots). A part of the *Picariæ* are also placed with the Fissirostres and Levirostres as Passerine birds.

Scansoria. See ENTOMOPHAGA.

Scansorii. Walking legs of birds having two toes directed forward and two backward. Sometimes the outer toe can be turned either forward or backward, adapting it for climbing. See SCANSORES.

Scanzoni, FRIEDRICH WILHELM VON, 1821–1891. Prof. Würzburg 1850–88; writer on gynæcology. *Lehrbuch der Geburtshülfe*, 1849.

Scape. 1. Peduncle of a flower or flower-cluster which rises immediately from the ground, as in the Hyacinth and Cowslip, the true stem of such plants being subterranean. 2. Main stem of a feather.

Scapegoat. Goat over whose head, on the Day of Atonement, the Highpriest of Israel confessed the sins of the people, and sent it into the wilderness.

Scaphognathite. Plate-like scoop attached to the second maxillæ in crabs; used for paddling the water forward through the respiratory chamber.

Scaphoid Bone. See NAVICULAR.

Scaphopoda, or SIPHONODENTALIA. Diœcious *Mollusca*, without head, eyes, or heart, and with a trilobed foot and a

Scaphopoda.

tubular, calcareous shell, open at both ends. They live buried in the sand. The shell is bivalved in the embryo. The group includes the order *Solenoconchæ* and family *Dentalidæ*.

Scapolite. Group of minerals, including several varieties closely analogous to the feldspars in general chemical composition, being aluminium silicates with some calcium and sodium, though characteristically differing from the feldspars in the percentages of the several elements and in crystalline form. The most abundant variety is Wernerite.

Scapose. Plants which bear scapes; also stems resembling scapes.

Scapula. The shoulder blade, a flat triangular bone extending on either side down the back from the first to the eighth ribs. It articulates with the humerus and the clavicle and affords attachment to numerous muscles.

Scapular. Strip of serge worn over the shoulder by members of several R.C. orders.—Also, string with cross, picture of the Virgin, or other emblem; used by a society said to have been founded by S. Stock ab.1240.

Scapulars. Feathers on upper end of humerus of a bird's wing.

Engraved Scarab.

Scarab. Engraved stone in form of the scarabæus, one of the dung beetles, which was venerated by the Egyptians. They attached many mystical ideas to the living beetle, and employed the gem cut to represent it as an amulet.

Scaramouch. Comic braggart in old Italian plays.

Scarborough. Coast town of Yorkshire, prominent as a summer resort, 233 m. n. of London. It has saline and chalybeate springs. Its old castle was repeatedly taken in civil wars; it dates from 1136. It has a tidal harbor, with three piers. Pop., 1891, 33,776.

The Keep, Scarborough Castle.

Scarcity-Value. See MONOPOLY-VALUE.

Scarfing. In timbering mines or tunnels, style of jointing where one piece is notched into another.

Scarf Joint. Joint formed by notching two timbers in a zigzag manner and then bolting them together. When plates of timber or iron are bolted on the sides, it is called a scarf and fish joint.

Scarf Joint.

Scarfoglio, SIGNORA, b. 1856. Italian novelist, writing as "Matilde Serao"; ed. *Corriere di Napoli*, 1887. *Fantasy*, 1883, tr. 1891.

Scarious. In Botany, thin, dry, hyaline structures.

Scarlatina. See SCARLET FEVER.

Scarlatti, ALESSANDRO, 1649–1725. Italian musician, founder of the Neapolitan School; pupil of Carissimi; teacher of Logroscino, Durante, and Hasse. He wrote 200 masses, over 100 operas, and many oratorios, cantatas, motets, etc.—His son, DOMENICO, 1683–1757, Chapelmaster of St. Peter's, Rome, 1715–19, and for two years in London, wrote operas, but his fame rests on his compositions for the clavecin and his part in the development of the technique of keyed instruments.

Scarlet Fever. Infectious eruptive fever accompanied by soreness of the throat. The disease begins suddenly, the temperature being high from the first; the eruption appears on the second day (the disease is named from its color) and lasts for 5 or 6 days: desquamation usually begins by the 7th day. The communicating power of the disease begins with the eruption and is most active during the desquamation. Flakes of the skin clinging to articles of clothing may carry the disease for long distances, and the virulency is maintained for a long time after they have scaled from the patient. The infecting power of different outbreaks and individual cases vary very much. The patient should be isolated in a plainly furnished, well ventilated room, have a light diet with plenty of water to drink; physicians vary greatly in their suggestions of medicines. The attendants should not mingle with the other members of the household without previous disinfection. Every article coming from the sick-room should be disinfected, as also the room before it is used again. While the young are more susceptible, adults are not exempt; the second attack in the same person is rare. The mortality rate varies in different outbreaks, while those that recover are often afflicted for the rest of their lives. Many cases of deafness have their cause in an attack of scarlet fever. The specific germ of contagion has not been isolated.

Scarlet-Runner. *Phaseolus multiflorus.* Vine of the Bean family, native of Mexico, extensively cultivated as a garden vegetable.

Scarlett, SIR JAMES, 1769–1844. M.P. 1818; Atty.-gen. 1827; Baron Abinger and chief of King's Bench 1834.

Scarpa, ANTONIO, 1747–1832. Prof. Pavia 1783–1812; writer on anatomy.

Scarpanto. Italian name for the Turkish Kerpe, an island belonging to Turkey, midway between Rhodes and Crete, ab. 30 m. long and from 3 to 7 m. wide. Area 150 sq. m., pop. 8,000, mostly engaged in wood-working.

Scarron, PAUL, 1610–1660. French humorist, author of poems, comedies, satires, and tales. *Le Roman Comique*, 1651–57. He was a paralytic.—His widow, MME. DE MAINTENON (q.v.), became the wife of Louis XIV.

Schacht, HERMANN, 1814–1864. Prof. of Botany at Bonn. *Entwicklungsgeschichte des Pflanzen-Embryon*, 1850; *Das Mikroskop und seine Anwendung*, 1851; *Physiologische Botanik*, 1852; *Der Baum*, 1860; *Anatomie und Physiologie der Gewächse*, 1859.

Schack, ADOLF FRIEDRICH, GRAF VON, 1815–1894. German philosophic poet and Orientalist. *Memnon*, 1885.

Schadow, FRIEDERICH WILHELM, 1789–1862. German painter, director of the Düsseldorf Academy from 1826; allied with Cornelius and Overbeck.—His father, JOHANN GOTTFRIED, 1764–1850, long connected with the Berlin Academy of Arts, and from 1805 its head, was an eminent sculptor, as was his eldest son, RUDOLF, 1786–1822.

Schaeffer, CHARLES FREDERICK, D.D., 1807–1879. Prof. Gettysburg 1855–64, and Phila. Theol. Sem. from 1864; theological writer and translator.—His father, DAVID FREDERICK, D.D., 1787–1837, and cousin, CHARLES WILLIAM, D.D., LL.D., 1813–1896, were also prominent Lutheran divines.

Schaeffer, JAKOB CHRISTIAN, 1718–1790. German botanist. *Erleichterte, Arzneikräuterwissenschaft*, 1759; *Botanica expeditior*, 1760; *Fungorum qui in Bavariæ et Palatinatu nescuntur icones*, 1762–74.

Schafarik, PAUL JOSEPH, 1795–1861. Slavonic philologist and archæologist.

Schaff, PHILIP, D.D., LL.D., 1819–1893. Swiss-American scholar; prof. Mercersburg, Pa., 1844–63, and Union Theol. Sem., N. Y., from 1869; organizer and pres. Am. Bible Revision Committee. *Hist. Christian Ch.*, 7 vols., 1858–92; *Person of Christ*, 1865; *Creeds of Christendom*, 3 vols., 1877; *Theol. Propædentis*, 1893. He edited Lange's and other commentaries; *Christ in Song*, 1869; *A Religious Encyclopædia*, based on Herzog's, 3 vols., 1883–84, and the *Nicene and Post-Nicene Fathers*, begun 1886.

Schäffle, ALBERT EBERHARD FRIEDRICH, b. 1831. German economist, prof. Tübingen 1861 and Vienna 1868. *Nationalökonomie*, 1861; *Kapitalismus und Sozialismus*, 1870; *Essence of Socialism*, 1874, tr. 1889.

Schall, JOHANN ADAM VON, 1591–1669. German Jesuit, missionary in China from 1622. He wrote a Latin history of the mission there, 1655, and after a period of success and imperial favor was twice imprisoned.

Schamyl, 1797–1871. Prophet and hero of the Caucasians in their struggle with Russia, 1834–59. Various generals were sent in succession to the Caucasus, and new plans of attack tried, without lasting result, till he was made prisoner Sept. 6, 1859.

Schandorph, SOPHUS KRISTIAN FREDERIK, b. 1834. Danish realistic novelist. *Quiet Folk*, 1889.

Scharf, JOHN THOMAS, LL.D., b. 1843. Historian of Md., 1874–82, Baltimore, 1881, and Phila., 1884.

Scharnhorst, GERHARD JOHANN DAVID VON, 1756–1813. Prussian commander and military writer; chief of Blücher's staff at Eylau 1807; Lieut.-gen.; leader in the reconstruction of the Prussian army 1807; author of the short-service system.

Scharwenka, LOUIS PHILIPP, b. 1847. Head of a conservatory in Berlin. His compositions are largely orchestral and in the larger forms: symphonies, symphonic poems, overtures, etc.—His brother, FRANZ XAVIER, b. 1850, pianoforte virtuoso, and composer, came to New York 1891, founded a conservatory, and has since remained there. His opera *Mataswintha* was performed at Weimar 1896 and in New York 1897.

Schaufelin, HANS LEONHARD, ab.1487–1540. Historical painter of the German school. He was a pupil of Durer, whose manner he imitated so well that many of his pictures have been accredited to his master.

St. Elizabeth, by Schaufelin.

Schauffler, WILLIAM GOTTLIEB, D.D., LL.D., 1798–1883. German-American missionary at Constantinople 1831–74. He tr. the Bible into Osmanli-Turkish.

Schaumberg-Lippe. Principality of n.w. Germany. Area 131 sq. m.; pop., 1890, 39,183.

Schedone, BARTOLOMMEO, 1560–1615. Italian painter.

Scheele, KARL WILHELM, 1742–1786. Swedish chemist, pioneer in nearly every branch, especially the organic. *Air and Fire*, 1777, tr. 1780; *Memoires*, 1785–88.

Scheele, KNUT HENNING GAZELIUS VON, b. 1838. Prof. Upsala 1879; Bp. of Gothland 1885; theological writer.

Scheele's Green. $CuHAsO_3$. Cupric arsenite, made by adding an ammoniacal solution of arsenious acid to copper sulphate; poisonous.

Scheelite. $CaWO_4$. Natural calcium tungstate, characterized by a specific gravity of ab. 6. Its usual mode of occurrence is in the older crystalline rocks, associated with several other minerals, in which tungsten or fluorine is a component.

Scheffel, JOSEPH VIKTOR VON, 1826–1886. German poet. His most important works were his first, *Der Trompeter von Säkkingen*, 1854, an epic, and *Ekkehard*, 1857, tr. 1896, a novel of the Middle Ages, which had an immense circulation. Next in popularity were his humorous lyrics, *Gaudeamus*, 1867, tr. 1872.

Scheffer, ARY, 1797–1858. French painter, chiefly of religious subjects, whose reputation is possibly due, in part, to court influence. He was a devoted adherent of the Orleans.

Weeping (at the Luxembourg), by Ary Scheffer.

He was not in sympathy with any of the schools of painting, but formed a style of his own, more sentimental than vigorous. Examples in the Louvre are *St. Monica* and *Christ's Temptation*.

Scheffler, JOHANN ("ANGELUS SILESIUS"), 1624–1677. German hymnist, converted to R. C. Ch. 1653. His lyrics have much sweetness and beauty; his *Ecclesiologia*, 1677, is vehemently polemic.

Scheldt. River of Belgium, rising in n. France, flowing n.e. to Antwerp, and thence n.w. to the North Sea. Length 200 m.

Schelling, FRIEDRICH WILHELM JOSEPH VON, 1775–1854. Prof. of Philosophy at Jena 1798, Würzburg 1803–8, Erlangen 1820, Munich 1827, and Berlin from 1841. His views were pantheistic in type. *Natural Philosophy*, 1797; *World-soul*, 1799; *Transcendental Idealism*, 1800; *Philosophy and Religion*, 1804.

Schem, ALEXANDER JACOB, 1826–1881. German-American journalist and cyclopedist; ed. *Conversations-Lexicon*, 1869–74.

Schemnitz. Hungarian town 66 m. n. of Budapest, noted as being the oldest and most famous mining town of Hungary. It produces silver chiefly, but copper and lead are also found. The town has a noted school of mines.

Schenck, JAMES FINDLAY, U.S.N., 1807–1882. Commander 1855, Commodore 1863; prominent in the attacks on Fort Fisher, N. C.; Rear-admiral 1868.—His brother, ROBERT CUMMING, 1809–1890, was M.C. from Ohio 1843–51 and 1863–70, Minister to Brazil 1851–53, Brig.-gen. U.S. Vols. 1861, Major.-gen. 1862–63, and Minister to England 1870–76.

Schenectady. Capital of S. co., N. Y., on the Mohawk, 17 m. w. of Albany; founded 1661; burned by Indians 1690; chartered 1798; site of Union Univ., founded 1795. General Electric Co. have their works here. Pop., 1890, 19,902.

Schenk, AUGUST, 1815–1891. Prof. of Botany in Leipzig 1868. *Flora der Umgebung von Würzburg*, 1848; *Die Spermatozoiden im Pflanzenreich*, 1864; *Die fossile Flora der Grenzschichten des Keupers und Lias Frankens*, 1867; *Mittheilungen aus dem Gesammtgebiete der Botanik*, 1871.

Schenkel, DANIEL, D.D., 1813–1885. Prof. Heidelberg from 1851; leader of the Protestantenverein; ed. *Kirchliche Zeitschrift*, 1860–72, and *Bibel-Lexicon*, 5 vols., 1869–75. *Das Wesen des Protestantismus*, 3 vols., 1846–51; *Dogmatik*, 1858–59; *Character of Jesus*, 1864, tr. 1866. His later works are strongly humanitarian.

Schenkendorf, MAX VON, 1783–1841. German patriot, whose songs were called forth by the war of liberation, and pub. 1815.

Scherer, EDMOND HENRI ADOLPHE, 1815–1889. French critic; prof. Geneva 1845–50; Deputy 1871. *A. Vinet*, 1853; *Critique Religieuse*, 1860; *Litterature Contemporaine*, 9 vols.

Scherer, WILHELM, 1841–1886. Prof. Vienna 1868–72, Strassburg 1872–77, and Berlin from 1877; historian of the German language (1868) and literature (1883). *Goethe*, 1886.

Schereschewsky, SAMUEL ISAAC JOSEPH, b. 1831. P. E. bp. to China 1877–83; tr. O. T. into Mandarin Chinese.

Scherr, JOHANNES, 1817–1886. German novelist and critic, historian of English literature (1854), biographer of Schiller, 1859, and Blücher, 3 vols., 1862–63; prolific writer.

Scherzer, KARL VON, b. 1821. Austrian traveler; descriptive and scientific writer.

Scherzo. Generally, third movement in a musical composition of a cyclical kind, as a sonata or symphony; so called because of its playful or jocose character. It is the successor of the minuet, which, as a rule, it follows in form. It is commonly written in triple time, but nationalism and other influences have led to great freedom in this respect.

Scheuchzer, JOHANN, 1684–1738. Botanist at Zurich. *Agrostographia*, 1719.

Scheveningen. Summer resort of s. Holland, near The Hague. Off it Van Tromp was defeated and slain by the English 1653.

Schiaparelli, GIOVANNI VIRGINIO, b. 1835. Director of Milan Observatory 1862. *Shooting Stars*, 1867.

Schidone, B. See SCHEDONE.

Schiedam. Town of s. Holland, near Rotterdam; noted for its production of gin (schnapps). Pop., 1891, 25,260.

Schiele-curve Pivot. Form for the end of thrust-shafts (see PIVOT), named from the inventor of a method for easy drawing of the tractrix, or curve of equal tangents. Let a T-square be laid upon a drawing-board, upon whose blade fits a sliding block: let a ruler bear at one end a tracing point and a sufficient weight to press it down, and let its other end fit upon a pin on the sliding block. If this ruler be adjusted to be at right angles with the blade of the T-square, and the slider be then moved along the blade, the tracing-point will then describe a tractrix. It has the property of having the tangents equal at every point, and therefore the thrust along the axis at each section varies as the area of the ring of contact at that point, and the bearing wears equally all over.

Schiff, MORITZ, b. 1823. Prof. Berne 1852, Florence 1862, and Geneva 1876; writer on physiology.

Schiller, HERMAN, b. 1839. Prof. Giessen 1876; writer on education and Roman history.

Schiller, JOHANN CHRISTOPH FRIEDRICH, 1759–1805. Greatest of German poets after Goethe, with whom he was associated at Weimar from 1800. His dramatic works are *The Robbers*, 1781; *Fiesco*, and *Intrigue and Love*, 1783; *Don Carlos*, 1787; the great trilogy of *Wallenstein*, 1799; *Mary Stuart*, 1800; *The Maid of Orleans*, 1801; *The Bride of Messina*, 1803; and *William*

Johann Schiller.

Tell, 1804. His minor poems include *The Song of the Bell* and some noble ballads. His chief prose work is a *History of the Thirty Years' War*, 1793. Through illness and poverty he was faithful to lofty standards; his character was worthy of his genius. His works filled 17 vols. in the edition of 1868–76. Most of his writings exist in English versions.

Schilling. Small base silver coin of Hamburg and some other German cities and states, value 2 cts.

Schilling, JOHANNES, b. 1828. German sculptor, prof. Dresden 1868. *Luther*, Worms; *Schiller*, Vienna.

Schimmelin, OEXMELIN, or ESQUEMELIN, ab.1645–1707. Flemish historian of the buccaneers. His book appeared in French 1684, and in Dutch 1700.

Schimmelpenninck, MARY ANN (GALTON), 1788–1856. English author.

Schimmelpfennig, ALEXANDER, 1824–1865. Brig.-gen. U. S. Vols. 1862–65.

Schimper, WILHELM PHILIPP, 1808–1880. Prof. at Strassburg. *Recherches anatomiques et morphologiques sur les mousses*, 1850; *Bryologia Europæa*, 1836–55; *Synopsis muscorum Europæorum*, 1860; *Le terrain de transition des Vosges*, 1862; *Paléontologie végétale*, 1869.

Schinkel, KARL FRIEDRICH, 1781–1841. German architect; prof. Berlin Academy 1820.

Schipperke. Breed of dogs found in Belgium, belonging to the same group as the Pomeranian and Eskimo dogs.

Schism. Division in or separation from a Church; frequent from ab.250. The Great Schism is (1) that between East and West, beginning ab.880; (2) that of 1378–1429, when there were at once two claimants of the popedom, one in Avignon and one in Rome, and sometimes more. It was virtually ended by Council of Constance 1417.

Schist. Foliated rock; one with a tendency to split readily in one direction, due to a parallelism of arrangement of cleavable mineral components, such as mica, talc, or chlorite.

Schistose. Breaking into slabs like flagging stone, usually confined to crystalline rocks.

Schizæaceæ. Family of ferns, mainly of tropical distribution, including various climbing species, as the Hartford Ferns. *Schizæa pusilla*, a minute fern with filiform leaves, occurring on the Atlantic seaboard of N. America, and known locally as Curley-grass, is one of the most interesting of the order.

Schizocarp. Dry fruits in which the carpels are indehiscent but split apart at maturity.

Schizocœl. Body-cavity formed by primary splitting of a mass of mesoderm cells into two layers, as in Rotifers and Nematodes. In Chætopods it is a secondary form of an ENTEROCŒL (q.v.).

Schizocœla. 1. Animals possessing a schizocœl. 2. Subgroup of *Vermes*, including the CHÆTOPODA (q.v.).

Schizogenesis. Reproduction by fission.

Schizogenic. Method of formation of intercellular spaces in vegetable tissue, which develops them coincidently with the tissue.

Schizognathous. Skulls of birds, in which the maxillopalatine processes are separated by a cleft in the roof of the mouth. The vomer is long, pointed in front, and narrow behind. Examples are Plovers, Gulls, Penguins, Cranes, Fowls, Pigeons, Grouse. These have been included in a group called *Schizognathæ* or *Schizorhina*. Of the natatorial birds included there are two sections, *Brevipennati* and *Longipennati*.

Schizomycetes. Class of *Protophyta*, including those microscopic organisms in which chorophyll is wanting, and propagation effected by cell-division or splitting; known as Bacteria and Microbes.

Schizonemertea. Group of nemertean worms, characterized by the presence of deep longitudinal ciliated fissures on the sides of the head; the mouth is behind the brain, and the proboscis is unarmed.

Schizopelmous (MONOPELMOUS). Common arrangement of the flexor tendons of the feet of birds, in which the first digit has its own tendon, the other toes a common tendon.

Schizophyceæ. Division of *Protophyta*, including only those which contain chlorophyll.

Schizopoda. 1. See TRAGULINA. 2. Small *Thoracostraca* with a large, soft, cephalothoracic shield, and eight pairs of biramous, thoracic feet, the anterior of which are not modified as maxillipeds, but, in many forms, bear gills. The abdomen ends in a strong telson, and bears appendages that are delicate in the female, but strong in the male. In *Mysis* the last appendages have auditory organs (otoliths) developed in the endopodite.

Schizotrocha. Order of Rotifers, including forms having an anus, and with the trochal disk notched or lobed.

Schkuhr, CHRISTIAN, 1741–1811. German botanist. *Botanisches Handbuch der mehrsten theils in Deutschland*, 1808; *Enchiridion botanicum*, 1805; *Beschreibung und Abbildung der theils bekannten*, 1801; *Deutschlands kryptogamische Gewächse*, 1810–47.

Schlagintweit, HERMANN VON, 1826–1882. Explorer of the Alps and Himalayas, and writer on their physical geography. *India and High Asia*, 1860–66. Associated in these tasks were his brothers ADOLF, 1829–1857, and ROBERT, 1833–1885. Robert became prof. at Giessen 1863, visited the U.S. 1869 and 1880, and pub. books on California, the Pacific R.R., and the Mormons. Their brother, EDUARD, 1831–1866, wrote on the Spanish war with Morocco, 1863, and the youngest, EMIL, b. 1835, on Thibet, 1860–66.

Schlatter, MICHAEL, 1716–1790. Organizer of the German Reformed Ch. in America 1747.

Schlechtendal, DIEDRICH FRANZ LEONHARD VON, 1794–1866. Prof. of Botany in Halle 1833. *Animadversiones botanicæ in Ranunculeas*, 1819–20; *Flora Berolinensis*, 1823–24.

Schlegel, AUGUST WILHELM VON, 1767–1845. German critic of high rank and great influence, translator of Shakespeare, Dante, and Camoens; prof. Bonn from 1818. *Dramatic Art and Literature*, 1808, tr. 1815. *Works*, 12 vols., 1846–47.—His brother, FRIEDRICH, 1772–1829, as gifted but more erratic, led the Romantic School and became a reactionist. He was one of the founders of comparative philology: his *Sprache und Weisheit der Indier*, 1808, was important for the study of Sanskrit. *Hist. Literature*, 1814, tr. 1859; *Philosophy of History*, 1827, tr. 1835. *Works*, 15 vols., 1846. His poetry, like his brother's, is unimportant.

Schlegel, ELIAS, 1718–1749. German dramatist.

Schleicher, AUGUST, 1821–1868. Prof. Prague 1850, Jena 1857. He wrote on the Latin, German, and Slavonic tongues, developed Indo-Germanic philology, and considered the study of language a natural science.

Schleiden, MATTHIAS JAKOB, 1804–1881. German botanist. *Grundzüge der wissenschaftlichen Botanik*, 1842–43; *Zeitschrift für wissenschaftliche Botanik*, with Karl Naegeli, 1844–46; *Grundriss der Botanik*, 1846; *Die Pflanze und ihr Leben*, 1847, tr. 1848; *Handbuch der medizinisch pharmaceutischen Botanik*, 1852–57.

Schleiermacher, FRIEDRICH ERNST DANIEL, 1768–1834. Prof. Halle 1804–6, and Berlin from 1810; foremost of German theologians. He sought to unite the Lutheran and Reformed Churches, aimed to reconcile the philosophic with the religious spirit, developed a system wherein the feelings have as large place as the intellect, and exerted a deep and wide influence, especially by his *Christian Faith*, 1821–22. *Monologues*, 1800;

tr. Plato, 1801–10; *Systems of Ethics*, 1803. His works, collected 1836–65, include 10 vols. of sermons, 11 on theology, and 9 on philosophy, besides letters, partly tr. 1860.

Schleswig-Holstein. Province of Prussia; held by Denmark till 1864; previously two duchies, at times united, oftener separate. Pop., 1890, 1,219,523.

Schliemann, HEINRICH, D.C.L., 1822–1890. German-Russian merchant, naturalized in Cal. 1850; enthusiast for the Trojan legend; excavator at Hissarlik 1870–82, and elsewhere. Most important were his discoveries at Mycenæ 1876–88. *Mykenæ*, tr. 1877; *Ilios*, 1880; *Orchomenos*, 1881; *Troja*, 1883; *Tiryns*, 1886.

Schlippe's Salt. Na_3SbS_4. Sodium sulphantimonate; made by dissolving antimony pentasulphide in sodium sulphide.

Schlosser, FRIEDRICH CHRISTOPH, 1776–1861. Prof. Heidelberg 1819. *Weltgeschichte*, 9 vols., 1817–24; do., 18 vols., 1844–56; *Hist. 19th Century*, 1823, tr. 1843–52; *Der alten Welt*, 1826–34; *Dante*, 1855. His works are highly moral and have been very popular.

Schlotheim, ERNST FRIEDRICH VON, 1764–1832. Chief-justice in Gotha. *Flora der Vorwelt*, 1804; *Die Petrefactenkunde*, 1820; *Nachträge zur Petrefactenkunde*, 1822.

Schlözer, AUGUST LUDWIG VON, 1735–1809. Prof. Göttingen 1764. *Allgemeine Nordische Geschichte*, 1772.

Schlüter, ANDREAS, ab.1662–1714. German architect and sculptor, whose works are among the noblest art productions

Dying Warriors, by Schluter, in the Berlin Arsenal.

of the epoch. His principal works are *The Great Elector* and the *Dying Warriors*, both in Berlin.

Schlyter, KARL JOHAN, 1795–1888. Compiler of old Swedish laws, pub. in 12 vols. 1827–77.

Schmalkald, ARTICLES OF. One of the Symbolical Books of the Lutheran Ch.; prepared by Luther at Wittenberg 1536; accepted by the League 1537.

Schmalkald, LEAGUE OF. Organized 1531 for defense of German Protestantism by nine princes and eleven imperial cities; soon joined by others; led by Elector of Saxony and Landgrave of Hesse; defeated at Mühlberg, April 24, 1547, by Charles V., and dissolved; revived 1552 by Maurice of Saxony.

Schmauk, THEODORE EMANUEL, b.1860. American Lutheran editor and author. Editor of *The Lutheran* since 1889. *Negative Criticism*, 1894.

Schmid, CHRISTIAN FRIEDRICH, 1794–1852. Prof. Tübingen 1821. *Biblical Theology of N. T.*, tr. 1870.

Schmid, HEINRICH, 1811–1885. Prof. Erlangen from 1848. *Dogmatik*, 1843, tr. 1875; *Dogmengeschichte*, 1860.

Schmid, LEOPOLD, 1808–1869. Prof. Giessen from 1839; opponent of ultramontanism. *Geist des Katholicismus*, 1848–50.

Schmidel, ULRICH, ab.1511–ab.1570. Bavarian soldier, in S. America ab.1535–52. His diary, pub. 1557, appeared in Latin 1599. It deals largely with Argentina.

Schmidt, CHARLES GUILLAUME ADOLPHE, D.D., b. 1812. Prof. Strassburg 1843–77. *Hist. des Cathares*, 1849; *Early Christianity*, 1853, tr. 1885.

Schmidt, HEINRICH JULIAN, 1818–1886. Prussian journalist and critic; historian of German literature, 1850–86.

Schmidt, HENRY IMMANUEL, D.D., 1806–1889. Prof. Columbia Coll. 1848–80. *Hist. Education*, 1842.

Schmidt, JOHANNES, b. 1843. Prof. Comparative Philology at Berlin 1876; writer on Indo-Germanic languages.

Schmidt-Rimpler, HERMANN, b. 1838. Prof. of Ophthalmology at Marburg 1873, and Göttingen 1891. *Augenheilkunde und Ophthalmoskopie*, 1885.

Schmitz, LEONHARD, 1807–1890. German-English teacher; editor or author of many school-books; tr. Niebuhr, and Zumpt's Latin Grammar.

Schmolck, BENJAMIN, 1672–1737. German hymnist. His lyrics are highly popular at home, and several are familiar in English versions.

Schmoller, GUSTAV, b. 1838. Prof. Halle 1864, Strassburg 1872, and Berlin 1882; writer on political economy. *Zur Geschichte der deutschen Kleingewerbe im 19 Jahrhundert*, 1870; *Ueberdie Resultate der Bevölkerungs und Moralstatistik*, 1871; *Strassburgs Blüthe und die Volkswirthschaftliche Revolution im 13 Jahrhundert*, 1875; *Strassburg zur Zeit der Zunftkämpfe*, 1875; *Die Strassburger Tücher und Weberzunft*, 1878; *Zur Sozial und Gewerbepolitik der Gegenwart*, 1890.

Schmucker, SAMUEL SIMON, D.D., 1799–1873. Prof. Gettysburg Theol. Sem., Pa., 1826–64; leader in the General Synod, and author of its formula of discipline, 1827, and of sundry doctrinal works. *American Lutheranism Vindicated*, 1856.—Of his sons, SAMUEL MOSHEIM, 1823–1863, was an industrious book-maker; BEALE MELANCTHON, D.D., 1827–1888, was eminent in liturgics, and a leader in the Pa. Synod and the General Council.

Schnabziger Cheese. Green cheese from the canton of Glaris, Switzerland. The milk is coagulated with vinegar instead of rennet, and treated with zigerlec, a plant. In the U. S. it is called Sago and Sap Sago cheese.

Schneeberg. Mining town of Saxony, 20 m. s.w. of Chemnitz, producing tin, cobalt and silver. It manufactures chemicals and laces. Pop. 8,200.

Schneekoppe. Highest point of the Riesengebirge, between Bohemia and Prussian Silesia. Altitude 5,260 ft.

Schneider, JOHANN GOTTLOB, 1750–1822. Prof. Frankfort 1776; editor of Theophrastus and other classics, and of a Greek lexicon, 1797–1821. *Scriptores Rei Rusticæ*, 4 vols., 1794–95.

Schneider, KARL ERNST CHRISTOPH, 1786–1856. Prof. Breslau from 1816; editor of Plato, Proclus, and Cæsar.

Schneidewin, FRIEDRICH WILHELM, 1810–1856. Prof. Göttingen from 1837; editor of Sophocles, Pindar, and other classics.

Schnetz, JEAN VICTOR, 1787–1870. French painter.

Schnitzer, EDUARD. See EMIN PASHA.

Schnizlein, ADELBERT, d. 1868. Prof. of Botany in Erlangen. *Die Flora von Bayern*, 1847; *Die Vegetationeverhältnisse der Jura-und Keuperformation*, 1848.

Schnorr von Karolsfeld, JULIUS, 1794–1872. Painter and illustrator; prof. Munich 1827, where he produced the

Cain slaying Abel, by Schnorr von Karolsfeld.

Nibelungen frescoes in the palace; prof. Dresden 1846. His *Luther at Worms* is familiar through engravings. *Bible Pictures*, 1860.

Schœlcher, VICTOR, 1804–1893. French author; Deputy 1848–51; in England 1851–70; life-senator 1875; biographer of Handel and of Toussaint l'Ouverture. His works are largely against slavery.

Schofield, JOHN MCALLISTER, U.S.A., b. 1831. Prof. West Point 1855–60; Brig.-gen. U. S. Vols. 1861, Major-gen. 1862; commanding in Mo. 1862–63; engaged under Sherman and Thomas 1864–65; Brig.-gen. U.S.A. 1864; Sec. of War 1868–69; Major-gen. 1869; Supt. at West Point 1876–81; Lieut.-gen. 1895.

Schoharie. Local bed of sandstone in e. N. Y. See DEVONIAN.

Scholarship. Proceeds of an investment paid to a student for his maintenance at a school or college.

Scholasticism. Philosophic doctrine and method of the Middle Ages. As a method it was deductive logic, or the attempt to deduce all truth independently of experience; as a doctrine it was a combination of theology and Aristotelian philosophy. Its great exemplar is Aquinas.

Scholiasts. Writers of notes or glosses on the margins of ancient MSS. They flourished especially at Alexandria, and were more concerned often with the text itself than with the ideas it conveyed.

Scholium. Statement following a demonstration to apply, restrict, generalize, or illustrate the truth established.

Schöll, MAXIMILIAN SAMSON FRIEDRICH, 1766–1833. German-French historian of Latin and Greek literature, 12 vols., 1815–25; compiler of *Cours d'histoire*, 46 vols., 1830–36, and sundry political documents.

Scholten, JAN HENDRIK, 1811–1885. Dutch rationalist, prof. Leyden 1843–81. *Theology of Reformed Ch.*, 1848–50; *Introduction to N. T.*, 1853; *Gospel of John*, 1864; *Pauline Gospel*, 1870. His books were widely read in Germany and France.

Schömann, GEORG FRIEDRICH, 1793–1879. Prof. Greifswald from 1823. *Greek Antiquity*, tr. 1880.

Schomberg, FREDERICH HERMANN, DUKE OF, 1616–1690. German officer, in the French service 1650–85; distinguished as a tactician. He secured the recognition of Portugal's independence 1668, became Marshal 1675, was next in command to William of Orange 1688, was made Duke 1689, and fell in the battle of the Boyne.

Schomburgk, SIR ROBERT HERMANN, Ph.D., 1804–1865. German-English traveler; explorer of Guiana; discoverer of the *Victoria regia*, 1837; knighted 1844; British representative in Siam 1857–64; author of a *History of Barbadoes*, 1847, and several books on Guiana.

Schönbein, CHRISTIAN FRIEDRICH, 1799–1868. Prof. Basel 1828; writer on chemistry; discoverer of ozone 1839; inventor of gun-cotton 1845.

Schönbein's Test. Paper prepared with starch and potassium iodide, sensitive to the presence of ozone, which sets free the iodine, turning the starch blue.

Schönberg, GUSTAV, b. 1839. Prof. Bonn 1868, Freiburg 1871, and Tübingen 1873; economist. *Arbeitsämter*, 1871; *Finanzverhältnisse der Stadt Basel im 14 und 15 Jahrhundert*, 1879. He was joint-compiler of *Handbuch der Politischen Oekonomie*, 1882.

Schönbrunn. Immense palace near Vienna, erected for Maria Theresa 1744. Here the treaty of Vienna was signed 1809 between Napoleon and Francis I. Cessions of territory were made by Austria to the Rhenish Confederation, to Napoleon, the King of Saxony, the Duke of Warsaw, and the Czar.

Schönfeld, EDUARD, 1828–1891. Assistant to Argelander in his great survey of the northern heavens: director of the observatory at Mannheim 1859–75, and at Bonn 1875; best known for his work in stellar astronomy, particularly variable stars.

Schongauer, MARTIN, 1446–1488. German painter, of Colmar in Alsace.

Schönlein, JOHANN LUCAS, 1793–1864. Prof. Würzburg 1820, Zurich 1833, and Berlin 1839–59; introducer of improved methods of medical study.

School, PUBLIC. First in America was established in Boston 1635. National Schools were instituted in England 1811, in Ireland 1831.

Schoolcraft, HENRY ROWE, LL.D., 1793–1864. Geologist with Gen. Cass to the Mississippi 1820; explorer of the Sources of the Mississippi 1832; in the U. S. service nearly 50 years; chiefly eminent as an ethnologist. His most important writings are on the history and customs of the aborigines. *Algic Researches*, 1839; *Indian Tribes*, 6 vols., pub. by Congress 1851–57.

Schoolmen. Leaders of thought in the Middle Ages, occupied almost wholly with theology and philosophy. They monopolized the limited learning of their times, and were pioneers in a manner; but their work was useful mainly for the avoidance of a mental vacuum. See SCHOLASTICISM.

School of Naples. See NATURALISTS.

Schools, BROTHERS OF CHRISTIAN. R. C. order founded at Rheims 1684 by De la Salle; confirmed by the pope 1725; now widely extended. A similar society was formed in Ireland 1802.

Schools of Painting. These include the painters of a country, province or city, or a group of painters under the influence of one man. In Italy, the Byzantine school was paramount in the 12th and early 13th centuries, with Giotto and Cimabue as the leading artists, and Pisa and Lucca the chief seats of this rude painting. In the 13th and 14th centuries, Siena, with Martino and Lorenzetti, was more productive in development of the art, inaugurated by Giotto at Florence. The Florence school was the most important in Italy, and in the 15th century reached its climax, with Leonardo da Vinci, Michelangelo and Andrea del Sarto as its great lights. In the 15th and 16th centuries the Umbrian school produced many painters of importance, with Piero della Francesco as its best example. In Padua was Andrea Mantegna, and at Arezzo, Spinello di Luca and Lorenzo di Bicci. The Venetian school was prominent in the 15th and 16th centuries, with Giorgione, Titian, Tintoretto and Paul Veronese. The Brescian school had Moretto in the 16th century, and Verona from the 13th to the 17th century had Pisanello, Domenico and Carazola. Bologna from the 14th to the 17th century produced the Caracci, Guido and Domenichino. Modena and Parma had many painters from the 14th to the 16th centuries, Correggio being the most prominent. Milan in the 15th and 16th centuries was an important school, created by Leonardo da Vinci. The Roman school consisted of the pupils of Raphael. The German school originated at Cologne in the 14th century; the leading artists here were Albert Durer, Hans Holbein and Overbeck. In the Flemish school, beginning with the 15th century, are the Van Eycks and the Van der Weydens, and later Rubens and Van Dyck. The Dutch school includes Rembrandt, its greatest painter, the Teniers and Wouverman in genre subjects; Ruysdael and Hobbema in landscape; Vandevelde in sea views, and Paul Potter in animal pictures. Spain produced Velasquez, Murillo and Fortuny. In France were Poussin, Lorrain, Vernet, Rousseau and Millet. England gave Lely, Hogarth, Reynolds, Gainsborough, Blake, Turner and Landseer.

Schooner. Vessel of small or moderate size, with two or sometimes more masts; classified as fore-and-aft and topsail;

Fore-and-aft Rigged Schooner.

the latter having on the foremast square topsail and topgallantsail, which gives it the advantage before the wind; on the wind the former can sail closer to the wind.

Schoonmaker, AUGUSTUS, 1828–1894. Atty.-gen. of N. Y. 1878–79; active for reform and education.

Schopenhauer, ARTHUR, 1788–1860. German thinker and author, founder of philosophic pessimism. He asserted, in opposition to Hegelianism, that will rather than intellect was the primary principle in nature. *Die Welt als Wille und Vorstellung*, 1819.

Schoppe, KASPAR. See SCIOPPIUS.

Schorl. Class of hard, dark-colored minerals; term now practically obsolete, except as indicating black tourmaline.

Schott, CHARLES ANTHONY, b. 1826 in Germany. Officer of U. S. Coast Survey from 1848; writer on meteorology.

Schott, HEINRICH WILHELM, 1794–1865. Director of Royal Garden in Schönbrunn. *Synopsis Aroidearum*, 1856; *Prodromus Systematis Aroidearum*, 1860.

Schottische. Dance introduced in England 1848, when it was also known as the German Polka. The music is almost the same as that of the polka, but should be played slowly.

Schouler, JAMES, LL.D., b. 1839. American writer on law. *Bailments*, 1880; *Wills*, 1887. His *Hist. U. S. under the Constitution*, 5 vols., 1880–91, is an important work.—His father,

WILLIAM, 1814–1872, journalist in Mass. and Ohio, pub. *Hist. Mass. in the Civil War*, 1868–71.

Schouten, WILLEM CORNELIS, 1567–1625. Dutch seaman, first to round Cape Horn 1615.

Schouvaloff, PETER, COUNT, 1827–1889. Russian Minister to England 1873 and 1878.—His brother PAUL, b. 1830, has been prominent as a general and diplomatist.

Schrader, EBERHARD, D.D., b. 1836. Prof. Zurich 1863, Giessen 1870, Jena 1873, and Berlin 1875; O. T. critic and Assyriologist. *Cuneiform Inscriptions and O. T.*, 1872, tr. 1885–86; *Antiquities of the Aryan Peoples*, tr. 1890.

Schrader, HEINRICH ADOLPH, 1767–1836. Prof. of Botany at Göttingen. *Journal für die Botanik*, 1799–1803 and 1806–10; *Flora Germanica*, 1806.

Schrader, JULIUS FRIEDRICH, b. 1815. Historical and portrait painter, prof. Berlin Academy 1851.

Schrader, OTTO, b. 1855. Prof. Jena; antiquarian and philologist. *Prehistoric Antiquities of the Aryan Peoples*, tr. 1890.

Schrank, FRANZ VON PAULA, 1747–1835. Prof. of Botany at Munich. *Naturhistorische Briefe über Oestrich*, 1785; *Anfangsgründe der Botanik*, 1785; *Baiersche Flora*, 1789; *Sammlung naturhistorischer und physikalischer Aufsätze*, 1796; *Grundriss einer Naturgeschichte der Pflanzen*, 1803; *Flora Monacensis*, 1811–18.

Schreber, JOHANN CHRISTIAN DANIEL VON, 1739–1810. Prof. at Erlangen. *Beschreibung der Gräser nebst ihren Abbildungen nach der Natur*, 1769–1810; *De Persea Ægyptiorum commentationes*, 1790–92.

Schreiner, OLIVE (now MRS. CRINWRIGHT), b. ab. 1863. Anglo-African novelist. *Story of an African Farm*, 1883; *Dreams*, 1890; *Trooper Peter Halket*, 1897.

Schrevelius, CORNELIS, 1615–1664. Prof. Leyden 1642; ed. sundry classics. His Greek-Latin lexicon, 1654, was long and widely used.

Schreyer, ADOLF, 1828–1895. German animal painter, especially of sheep.

Schröckh, JOHANN MATTHIAS, 1733–1808. Prof. Wittenberg 1761. *Ch. History*, 45 vols., 1768–1812.

Schröder, FRIEDRICH LUDWIG, 1744–1816. German actor, eminent in Lear and other Shakespearean parts; manager at Hamburg 1771.

Schröder, SOPHIE (BÜRGER), 1781–1868. German actress, noted till 1840 in tragic parts.—Her daughter, WILHELMINE (MME. DEVRIENT), 1804–1860, was a famous singer.

Schröter, JOHANN HIERONYMUS, 1745–1816. Oberamtmann at Lilienthal near Bremen: there he built a small observatory, and for 34 years pursued the study of the heavens, particularly the planets.

Schubart, CHRISTIAN DANIEL, 1739–1791. German poet and satirist, imprisoned 1777–87.

Schubert, FRANZ PETER, 1797–1828. Most fecund melodist of all times, pioneer in modern harmonization, and creator of

Franz Peter Schubert.

the modern German artistic song (*Lied*). He studied with Salieri, and till his death taught music and poured out a flood of compositions, but was very poor. He wrote much, but not successfully, for the stage; none of his operas are in the current lists of to-day. Of his orchestral compositions two symphonies, one in C (his last, No. 9) and an unfinished one in B minor, are in the repertoires of practically all concert institutions. Of his chamber music the best known pieces are 9 string quartets in A minor and D minor and a quintet in C (Op. 163). His pianoforte and church compositions are very numerous, but all this mass of music is left in the shade by his songs with pianoforte accompaniment, which number ab. 800.

Schuchardt, HUGO, b. 1842. Prof. Halle 1873, and Gratz 1876; writer on philology.

Schueller, GUSTAV, 1787–1834. Prof. Tübingen. *Grundsätze der Agriculturchemie*, 1831; *Flora von Würtemberg*, with George von Martius, 1834; and many dissertations.

Schuerer, EMIL, Ph.D., b. 1844. Prof. Giessen 1878, Kiel 1890. *Hist. Jewish People*, 1874, tr. 1886–90.

Schulte, JOHANN FRIEDRICH, b. 1827. Prof. Prague 1855, Bonn 1871; Old Catholic leader; prolific writer on Ch. history and law.

Schultens, ALBERT, 1686–1750. Prof. Franecker 1711, Leyden 1729. His *Origines Hebræa*, 1724–38, is of historical importance.

Schultes, JOSEPH AUGUST, 1773–1831. Prof. Landeshut. *Oestreichs Flora*, 1794; *Flora Austriaca*, 1800; *Geschichte und Literatur der Botanik*, 1817.

Schultz, HERMANN, b. 1836. Prof. Göttingen 1876; follower of Ritschl. *O. T. Theology*, 1869, tr. 1892.

Schultz, KARL HEINRICH, 1798–1871. Prof. Berlin. *Die Natur der lebendigen Pflanze*, 1823–28; *Natürliches System des Pflanzenreichs*, 1832; *Sur la circulation et sur les vaisseaux lactifères dans les plantes*, 1839; *Die Anaphytose oder Verjüngen der Pflanzen*, 1843; *Neues System der Morphologie der Pflanzen*, 1847.

Schultze, KARL AUGUST JULIUS FRITZ, b. 1846. Prof. Jena and Dresden; writer on philosophy and education.

Schultze-Delitzsch, HERMANN, 1808–1883. Founder of the German co-operative movement; prominent in the Parliament of 1848. He founded the first co-operative loan society 1850, on English models. He devoted his life to the advancement of this movement, acting as counsel for the united societies for many years, and editing a periodical in their interests. *Association*, 1862; *Vorschuss und Kreditvereine*, 1863; *Die Genossenschaften in den eingelnen Geuerbzweigen.*

Schultze's Powder. Explosive containing nitrolignin as its main ingredient, introduced in Germany by E. Shultze soon after gun-cotton was invented. It is used mainly as a sporting powder. Nitrolignin is made by nitrating wood, from which all resinous matter has been removed, and then granulating it by grinding. See GUN COTTON and NITROCELLULOSE.

Schumacher, HEINRICH CHRISTIAN, 1780–1850. Prof. Copenhagen 1810–21; he founded *Astronomische Nachrichten*, 1821, best known of astronomical journals.

Schumann, ROBERT, 1810–1856. German composer, leading spirit in the Romantic movement in music; profoundly poetical and original artist, keen and kindly critic. He founded a journal 1834 in which to champion musical progress, soon became a power, and was insane from 1854. Among his compositions are four symphonies, an opera, *Genoveva*, several concert overtures, one of the loveliest of pianoforte concertos, many small pieces for the pianoforte with poetical titles and contents, two cantatas, *Paradise and the Peri*, and *The Pilgrimage of the Rose*, music to part of Goethe's *Faust*, and to Byron's *Manfred*, three string quartets, other chamber pieces and many songs.—His wife, CLARA JOSEPHINE (WIECK), 1819–1896, m. 1840, was a pianoforte virtuoso. She played in public at 10, began her artistic travels at 13, and taught 1878–92 at a conservatory in Frankfort-on-the-Main.

Schürer, EMIL, b. 1844. Prof. Giessen 1878. *Hist. Jews*, tr. 5 vols. 1886–90.

Schurman, JACOB GOULD, LL.D., b. 1854 in Prince Edward Island. Prof. Cornell Univ. 1886, pres. 1892. *Kantian Ethics*, 1881; *Darwinism*, 1888.

Schurz, CARL, LL.D., b. 1829 in Germany. U. S. Minister to Spain 1861; Brig.-gen. U. S. Vols. 1862, Major-gen. 1863–65, serving in Va. and at Gettysburg and Chattanooga; U. S. Senator from Mo. 1869–75; Sec. Interior 1877–81; ed. N. Y. *Evening Post* 1881–84; active in all political reforms. *Life of Clay*, 1887.

Schussele, CHRISTIAN, 1824–1879. French-American historical painter, prof. Phila. Academy from 1868. Some of his works are well-known through engravings.

Schut, CORNELIS, 1597–1655. Historical painter of the Flemish school. Among his most famous paintings are *Hero*

Hero and Leander, by Cornelis Schut.

and Leander and *Tribute to Cæsar*. He was a student of Rubens, whose style he closely imitated.

Schütz, HEINRICH (SAGITTARIUS), 1585–1672. German composer, who introduced opera into Germany (*Dafne*, performed 1627), and in church music was a worthy predecessor of Bach.

Schuvalov. See SCHOUVALOFF.

Schuyler, EUGENE, LL.D., 1840–1890. U. S. Minister to Greece 1882–84; author of *Turkestan*, 1876; *Peter the Great*, 1884; *American Diplomacy*, 1886.—His father, GEORGE WASHINGTON, 1810–1888, pub. *Colonial New York*, 1885.

Schuyler, MONTGOMERY, b.1843. American journalist. *Studies in American Architecture*, 1892.

Schuyler, PETER, 1657–1724. First Mayor of Albany, N.Y., 1688; active in colonial affairs and in French and Indian wars, as was his nephew, PETER, 1710–1762.

Schuyler, PHILIP JOHN, 1733–1804. Major-gen. 1775–79; commanding on the N. Y. frontier; sacrificed to intrigues and misrepresentations, and superseded by Gates on the eve of Burgoyne's surrender; delegate to Congress 1777–81; U.S. Senator 1789–91 and 1797–98.

Schuylkill. River rising near Pottsville, Pa., and flowing s.e. past Reading and through Phila. to the Delaware. Length 130 m.

Schwab, GUSTAV, 1792–1850. Teacher and pastor at Stuttgart; lyric poet; biographer of Schiller, 1840.

Schwalbe, GUSTAV ALBERT, b. 1844. Prof. Jena 1873, Königsberg 1881, and Strassburg 1883. *Neurologie*, 1881; *Anatomie der Sinnesorgane*, 1887.

Schwalber, or CHELIDONIUS, d. 1521. German monk and Latin versifier.

Schwann, THEODOR, 1810–1882. Prof. of Anatomy at Louvain 1838 and Liège 1848; discoverer of pepsin; author of the cell-theory. *Structure of Plants and Animals*, 1839, tr. 1847.

Schwanthaler, LUDWIG MICHAEL, 1802–1848. Prolific Bavarian sculptor, prof. Munich Academy 1835.

Schwartz, CHRISTIAN FRIEDRICH, 1726–1798. German missionary in India from 1750.

Schwarz, BERTHOLD. German Franciscan monk, b. in Freiburg, Baden, in the 14th century, reputed inventor of gunpowder ab.1330; a monument was raised to his honor there 1853.

Schwarz, MARIE SOPHIE (BIRATH), 1819–1894. Swedish novelist. *Man of Birth*, 1858; *A Child of the Time*, 1873.

Schwarzburg-Rodolstadt AND **-Sondershausen.** German principalities, in the Saxon region. Areas, 363 and 333 sq. m.; pop., 85,863 and 75,510.

Schwarzenberg. German house, ennobled 1417.—ADAM, GRAF VON, 1584–1641, Premier of Brandenburg, attempted to keep his country neutral during the 30 Years' War.—KARL PHILIPP, PRINCE, 1771–1820, was Austrian Field-marshal 1800, Envoy to Russia and France 1808–9, and victor at Dresden and Leipzig 1813.—His nephew, FELIX LUDWIG JOHANN FRIEDRICH,

Felix Schwarzenberg.

1800–1852, was Austrian Chancellor from 1848.—His brother, FRIEDRICH JOHANN, 1809–1885, became Abp. of Salzburg 1836, of Prague 1849, and Cardinal 1842.

Schwatka, FREDERICK, U.S.A., 1849–1892. Arctic explorer. He found the remains of Sir John Franklin's party 1878–80, traced the course of the Yukon River 1883, and led other expeditions in Alaska 1886 and 1891, and one in n. Mexico 1889.

Schwegler, ALBERT, 1819–1857. Prof. Tübingen 1847. *Hist. Philosophy*, 1848, tr. 1856.

Schweigger, KARL ERNST THEODOR, b. 1830. Prof. Berlin 1873; writer on the eye.

Schweighauser, JOHANN, 1742–1830. Prof. Strassburg 1770; ed. Polybius, Epictetus, Athenæus, Herodotus, and other classics.

Schweinfurth, GEORG AUGUST, b. 1836. German traveler in the Nile region 1864, and in the Soudan 1869–71; director Cairo Museum 1880–88. *Plantæ Nilaticæ*, 1863; *Flora Æthiopicus*, 1867; *Heart of Africa*, tr. 1874; *Artes Africanæ*, 1875.

Schweinfurth Green, or PARIS GREEN. Aceto-arsenite of copper. Used on wall-papers, as a dye and to kill vermin. Made by treating a basic acetate of copper with arsenious acid; poisonous. It was first made at Schweinfurth 1811.

Schweinitz, LEWIS DAVID DE, 1780–1834. Moravian minister at Salem, N. C., and Bethlehem, Pa.; noted botanist. *Specimen Floræ Americæ septentrionalis cryptogamicæ*, 1821; *Monograph of the N. American species of the genus Carex*, 1825.—His son, EDMUND ALEXANDER, D.D., 1825–1887, became a Moravian bishop 1870. *Moravian Manual*, 1859; *Life of Zeisberger*, 1870; *Hist. Unitas Fratrum*, 1885.—His son, GEORGE EDMUND, M.D., b. 1858, Prof. of Ophthalmology in Jefferson Medical Coll. 1892, is prominent as a practitioner and writer.

Schweitzer's Reagent. Solution of hydrated cupric oxide in ammonia, used as a solvent for cellulose.

Schweizer-Sidler, HEINRICH, 1815–1894. Prof. Zurich 1871; writer on Latin grammar.

Schwendener, SIMON, b. 1829. Swiss botanist. Prof. Basel 1867, Tubingen 1877, Berlin 1878. *Die periodischen Erscheinungen der Natur insbesondere der Pflanzenwelt*, 1856; *Untersuchungen über den Flechtenthallus*, 1860; *Die Algentypen der Flechtengonidien*, 1869.

Schwenkfeld, HANS CASPAR VON, 1490–1561. German reformer, denounced by Luther for alleged heresies; author of 90 books or tracts, collected in 4 vols. 1564–70. His views in part anticipated those of the Quakers. He endured persecution from all sides, as did his followers, mostly in Silesia and Swabia. Some went to Holland, some to England, and a remnant exists in Pa. as a distinct sect.

Schwerin, KURT CHRISTOPH, GRAF VON, 1684–1757. Prussian Field-marshal; prominent under Frederic II.; killed at Prague.

Sciadiaceæ. Sub-order of *Protococcoideæ.*

Scialoia, ANTONIO, 1817–1877. Prof. Turin 1846–48 and 1852; Minister of Finance 1865, and of Instruction 1872; writer on political economy.

Sciatica. Disease whose chief symptom is pain in the back of the thigh, constant and gnawing, with exacerbations or paroxysms. As the disease progresses, the area of pain extends along the course of the sciatic nerve even to the foot. It is of long duration, and may be the result of several conditions or brought about by different causes.

Science. Systematic knowledge, distinguished from philosophy in that it investigates the laws rather than the nature of reality. Its method is that of observation, classification, and explanation by hypothesis and verification; its causes are antecedent conditions of phenomena, and not metaphysical entities.

Science, CHRISTIAN. Scheme propounded in Mass. 1866–67 by Mary Baker Glover, now Mrs. Eddy, and set forth in her *Science and Health*, 1875, and other books. It denies matter, claims that "God is Mind, and All-in-all," and includes "Metaphysical Healing," which refuses to be identified with Faith-cure. An Association was formed 1876, a Ch. founded in Boston 1879, and a *Journal* begun 1883 by Mrs. Eddy. The movement had, in 1894, 300 societies, 26 teaching institutes, and 66 dispensaries. Some allege that its ideas were first mooted by Dr. P. P. Quimby, who d. 1865.

Science, MILITARY. The fundamental principles of the art of war, and their application to the problems of war in actual service. It embraces (1) strategy, including logistics, by means of which the time, place and character of battles to be fought promise the greatest advantage in case of success and the least injury in case of defeat; (2) logistics, discipline, grand and minor tactics, and military engineering, by means of which an army can make itself stronger than the enemy at the time and place of actual combat. The principles never change, but the art undergoes important modifications with the improvements made in the material of war.

Scientific Frontier. Imagined 1878 by Beaconsfield as possible and desirable between India and Afghanistan.

Scilly Islands. Group ab. 27 to 35 m. w. by s. of Land's End, Cornwall. The chief are St. Mary's, Tresco, St. Martin's,

Scilly Islands.

St. Agnes, and Bryher. Sir C. Shovel and 2,000 men of his fleet were drowned here 1707. Area ab. 3,500 acres, pop. ab. 2,500.

Scimiter. Short Turkish sword, intended for cutting, and therefore having a curved and sharp blade.

Scincoidea. See BREVILINGUIA.

Scinde. See SINDE.

Scintillation. Twinkling of the stars. Its cause is somewhat uncertain, but is probably due to irregular refraction of the atmosphere, combined with interference of light.

Scio. Anciently CHIOS (q.v.).

Scion, or CION. Shoot taken from a plant for grafting on another. See GRAFTING.

Scioppius, or **Schoppe,** KASPAR, 1576–1649. Student of German birth, whose energies were divided between classical learning and furious wordy wars against Protestants, Latin authors, Scaliger, James I., and others. He lived in Italy from 1618. *Grammatica Philosophica*, 1628.

Scioptic Ball. Hollow wooden ball which fits a socket in the window-shutter and is capable of being turned in different directions. Within it is a convex lens, by which images of outside objects can be formed in a darkened room.

Sciothericum Telescopium. Instrument devised by Molyneux for indicating the time, whether of day or night. It consists of a horizontal dial with a telescope adapted to it.

Scioto. River rising in w. central Ohio, and flowing e. and then s. to the Ohio at Portsmouth. Columbus and Chillicothe are on its banks. Length 210 m., drainage area 6,480 sq. m.

Scipio, PUBLIUS CORNELIUS, d. 211 B.C. Roman Consul 218; twice defeated by Hannibal in n. Italy; killed in Spain.—His

Tomb of Scipio, at Tarragona, Spain.

son and namesake, AFRICANUS MAJOR, 237–ab.183 B.C., was proconsul in Spain 210, took Nova Carthage, conquered the country, became Consul 205, carried the war into Africa, by victories there compelled the recall of Hannibal, whom he routed near Zama 202, made peace 201, and was honored as the greatest general of his time. He shared with his brother Lucius the victory over Antiochus 190. A later prosecution against him was defeated through popular clamor. He was brilliant, accomplished, magnanimous, and haughty.—His name came by adoption to ÆMILIUS PAULUS (AFRICANUS MINOR), 185–129 B.C., Consul 148 and 134. His chief exploits were the siege and destruction of Carthage 146, and of Numantia in Spain 133. Like his predecessor, he was a student and patron of letters.

Scire Facias. Common law writ founded on some record, as a judgment, recognizance or letters-patent, issued to enforce them or set them aside; generally superseded in U. S. by execution or by a motion.

Scirocco. Abnormally warm, moist, sultry southerly wind over Italy and Sicily, formerly erroneously supposed to come from Africa, or again to be the same as the Föhn, but now believed to owe its oppressiveness entirely to its moisture. See SIROCCO.

Scitaminaceæ. Natural family of flowering plants, of the class *Angiospermæ* and sub-class *Monocotyledons*, comprising 36 genera and 450 species, widely distributed through the warmer regions of both hemispheres, including the Banana, Ginger, and Arrowroot.

Sciuromorpha. Section of the order *Rodentia*, including Squirrels, Marmots, Beavers, Prairie-dogs, Woodchucks, Gophers, etc. They have complete clavicles, four lower molars, and five (sometimes four) upper ones. The molars are tuberculate in the Squirrels.

Sclater, PHILIP LUBLEY, F.R.S., b. 1829. English naturalist, writing especially on ornithology; ed. *Ibis* since 1860.

Sclerenchyma. Calcareous tissue composing the hard parts of corals. See also SCLEROTIC PARENCHYMA.

Scleres. Small mineral deposit of definite shape, in the protoplasm of cell colonies; *e.g.*, spicules of sponges. See SPICULE SYSTEM.

Sclerites. See SCLERODERMITES.

Sclerobasic. Coral secreted as a central axis by the bases of the polyps, as in Alcyonarians.

Sclerobasica. See ANTIPATHARIA.

Sclerodermata (MADREPORARIA). Group of *Zoantharia*, including the Madrepore Corals.

Sclerodermeæ. Family of Gasteromycetes.

Sclerodermi. See PLECTOGNATHI.

Sclerodermic. Tissue composed of Sclerites.

Sclerodermites. Calcareous spicules of the outer crust of sea fans. In the red coral they form a rigid skeleton.

Sclerotic Parenchyma. Vegetable tissue composed of short cells with greatly thickened walls, as in the grit-cells of the pear and the dense tissues of nut-shells.

Sclerotium. 1. Case containing spores and having a wall of tough material, half animal, half vegetable in nature, which protects the spores through a dry season; formed in the *Mycetozoa*. 2. Compact form of the mycelium of *Fungi*.

Sclerotoid. In Botany, structures resembling a sclerotium.

Sclopis, FEDERIGO PAOLO, COUNT, 1798–1878. Historian of Italian law, 1840–64; pres. Senate 1861–64; pres. Geneva Tribunal of Arbitration 1871.

Sclot, BERNAT. See D'ESCLOT, BERNAT.

Scoke. See POKEWEED.

Scolecida. Group of Vermes, including the ENTOZOA and ROTIFERS (q.v.).

Scolecite. Archicarp of certain *Fungi*.

Scolex. Tapeworm head, produced by budding from the walls of the cyst or bladder-worm in its first host.

Scollard, CLINTON, b. 1860. American poet; prof. Hamilton Coll. 1888. *Under Summer Skies*, and *On Sunny Shores*, 1895, describe his Eastern and Italian travels.

Scollops. See PECTINIDÆ.

Scolopacidæ (SNIPE). Family of Grallatores with long slender bill covered with soft sensitive skin. The legs are short in some forms, long in others.

Scolopendra. See CHILOPODA.

Scopas, d. ab.350 B.C. Greek sculptor and architect, associated with Praxiteles.

Scopoli, JOHANN ANTON, 1723–1788. Prof. Pavia 1777. *Flora carniolica*, 1760; *Introductio ad historiam naturalem*, 1777; *Fundamenta botanica*, 1783.

Scopularia. Form of spicule with four short tylote arms and one long needle-shaped arm; derived from a hexactine; present in the sponge *Eurete*.

Score. In Music, collocation of all the parts of a composition, *i.e.*, the voices, for the different performers; used by the conductor in studying a work and in directing its performance. The rule followed in bringing the parts together is to group the wind instruments of wood, flutes, oboes, clarionets, bassoons, etc., on the uppermost staves of the page, the brass instruments, trumpets, horns, trombones, etc., in the middle, with the drums above the trombones, and the strings on the lowest five staves. When voices are employed, their parts appear between those of the brass and string choirs. In the case of an opera or other work employing a number of singers and an orchestra, an arrangement showing the vocal parts intact and the orchestral part transcribed for pianoforte is called a vocal score.

Scorel, JAN VAN, 1495–1562. Dutch painter, active before the time of a distinct Dutch School; for some time in Rome, and historically important as a transmitter of Italian influence.

Scoresby, WILLIAM, D.D., F.R.S., 1789–1857. English explorer and scientist. *Arctic Regions*, 1820; *Journal*, 1823; *Magnetical Investigations*, 1839–52.

Scoriæ. Volcanic slags and cinders which are more or less porous, due to the expansion of the gases in the melted material.

Scorpio. See ZODIAC.

Scorpioid. In Botany, inflorescence of many plants in the natural family *Boraginaceæ* and some other plants. It is a false raceme, coiled in the bud (and hence also known as helicoid).

Scorpion Grass. See FORGET-ME-NOT.

Scorpionidea, or SCORPIODEA (SCORPIONS). Arachnids with chelate cheliceræ, foot-like chelate pedipalps, the abdomen divided into an anterior broad præabdomen of seven segments and a narrow post-abdomen of six segments, with poison spine at the hind end, and with four pairs of lungs on the præabdomen. They reproduce viviparously, the sting is fatal

Scorpion and Spider Fighting.

to small animals, serious to children, but not fatal to adult man. Ammonia applied to the sting is a good antidote.

Scorza. Variety of epidote sand found in the beds of some Transylvanian gold-bearing streams.

Scot, REGINALD, ab.1538–1599. English author. His *Discoverie of Witchcraft*, 1584, was far in advance of the time, and called forth answers from King James and many others.

Scotch Confession of Faith. Prepared by Knox Aug. 1560, in a preface and 25 articles; adopted by Parliament; confirmed 1567; standard till 1688, though displaced in effect by the Westminster Confession 1646–48.

Scotch Mist. Fine rain, whose particles of water are large enough to have a visible rate of descent and to slightly wet the surface of exposed objects.

Scotch Paraphrases. Pub. 1745 by a Committee of General Assembly; in number 45; little used; revised and enlarged 1781 to 67, with 5 hymns; appended to Scotch Psalms, and widely used.

Scotia. Concave molding, which, when seen from above, produces a strong shadow and is therefore commonly used in bases.

Scotists. Followers of Duns Scotus; largely Franciscans.

Scotland. Northern portion of the island of Great Britain and a part of the United Kingdom. The surface is hilly, becoming mountainous in the north. The coast is broken with numerous fiords and rocky islets. It was originally inhabited by Celts and was called Caledonia by the Romans, who subjugated only the s. portion. The Scots (Irish Celts) under Fergus invaded the Highlands 503 and founded a Scotch kingdom. Norwegians and Anglo-Saxons introduced Teutonic influences. William the Conqueror compelled Malcolm III. to do homage 1072. The effort of Edward I. to maintain supremacy was resisted by Wallace; Bruce achieved independence 1328. The Stuart dynasty began with Robert II. 1371–90. The contests over succession caused many troubles and a border feud raged intermittently along the English boundary. The enmity of England drove S. into close relations with France; royalty allied itself with the Church, and alienated the nobles, who, embracing Protestantism, were drawn toward England, and a reaction began against

Fall of Foyers, near Inverness.

France, represented in Mary of Guise, wife of James V. Their daughter Mary was educated at the French court and married the Dauphine Francis; thus the two crowns seemed on the point of being united. On the premature death of Francis, Mary returned, and, after many tribulations, was imprisoned and beheaded in England for conspiring against Elizabeth. Mary's son, James VI., succeeded to the throne of England 1603. His son and grandsons ruled both countries, but the two were not definitively united in Great Britain until 1707. Area 29,785 sq. m.; pop., 1891, 4,033,103.

Scotland, CHURCH OF. Established since 1557, with intervals of Episcopal intrusion under the Stuarts; model of Anglo-Saxon Presbyterianism everywhere.

Scotland, FREE CHURCH OF. Secession 1843 from the established Ch. on the right of congregations to a voice in choosing their ministers, embracing 470 out of over 1,200 ministers, and a third of the people.

Scotland, NATIONAL COVENANT OF. See NATIONAL COVENANT.

Scotland, UNITED PRESBYTERIAN CHURCH IN. Formed 1847 by union of the Associate and Relief bodies. See PRESBYTERIANS.

Scott, ANDREW, 1757–1839. Scottish peasant-poet.

Scott, CHARLES, 1733–1813. Col. 3d Va. regiment 1776, Brig.-gen. 1777; active in Pa., N. J., and N. Y., and against Indians 1791–94; Gov. of Ky. 1808–12.

Scott, DAVID, 1806–1849. Scottish historical painter and illustrator.—His brother and biographer, WILLIAM BELL, 1811–1890, was a poet, painter, and art-critic. *Lectures*, 1861; *Little Masters*, 1879.

Scott, DRED. See DRED SCOTT CASE.

Scott, ELIZABETH, ab.1708–1776. English hymnist, m. 1751 to ELISHA WILLIAMS (q.v.) of Conn.—Her brother, THOMAS, 1705–1775, pub. *Job in Verse*, 1771, and *Lyric Poems*, 1773. Two of his sacred songs are still in extended use.

Scott, SIR GEORGE GILBERT, 1811–1878. English architect, restorer or builder of 26 cathedrals; R.A. 1861, knighted 1872.

Scott, GUSTAVUS HALL, U.S.N., 1812–1882. Commander 1856, Captain 1863, serving on the Atlantic coast; Commodore 1869, Rear-admiral 1873.

Scott, HUGH S. See MERRIMAN, HENRY S.

Scott, JOHN MORIN, 1730–1784. Delegate to Congress 1775 and 1780–83; Brig.-gen. 1776–77; N. Y. Sec. of State 1777–79.

Scott, LEVI, D.D., 1802–1882. M. E. bishop 1852.

Scott, MICHAEL, 13th cent. Semi-mythical magician, said to have tr. works of Aristotle from the Arabic; mentioned in Dante's *Inferno;* prominent figure in border traditions and ballads; used by Sir W. Scott.

Scott, MICHAEL, 1789–1835. Scottish nautical novelist. *Tom Cringle's Log*, 1829; *Cruise of the Midge*, 1833.

Scott, ROBERT, D.D., 1811–1887. Prof. Oxford 1861; Dean of Rochester 1870; ed., with Dr. H. G. Liddell, a *Greek Lexicon*, 1845.

Scott, ROBERT HENRY, F.R.S., b. 1833 in Dublin. Head of British weather service 1867. *Meteorology*, 1883.

Scott, ROBERT KINGSTON, b. 1826. Brig.-gen. U. S. Vols. 1861–63; Gov. of S. C. 1868–72.

Scott, THOMAS, D.D., 1747–1821. English divine, practical commentator of the Evangelical School. His *Family Bible with Notes*, 1788–92, was widely circulated. *Works*, 10 vols., 1823–25.

Scott, THOMAS ALEXANDER, 1824–1881. Vice-pres. Pa. R. R. 1859; Asst. Sec. of War 1861–62; eminent in public services during the war; pres. Union Pacific R. R. 1871–72; pres. Pa. R. R. 1874–80.

Scott, SIR WALTER, 1771–1832. Scottish poet and novelist; Baronet 1820. Beginning with translations from the German, 1796, and ballads, he pub. *Minstrelsy of the Border*, 1802–3, and won fame by *The Lay of the Last Minstrel*, 1805; *Marmion*, 1808; and *The Lady of the Lake*, 1810. His other metrical romances are inferior, and Byron soon surpassed him in poetry, though many of his lyrics have a peculiar charm. His chief fame rests upon the brilliant series, largely historical, and long anonymous, of "Waverley Novels," 1814–31. Among the finest are *Guy Mannering*, 1815; *Old Mortality*, 1817; *Rob Roy* and *The Heart of Midlothian*, 1818; *The Bride of Lammermoor*, 1819; *Ivanhoe*, 1820; *Kenilworth*, 1822. His *Life of Bonaparte*, 1827, and other solid works are less memorable. He spent large sums on building Abbotsford, and in 1826 the failure of publishing firms in which he was a silent partner burdened him with an enormous debt: refusing offers of aid, he labored for its payment with a heroic energy which shortened his life. His character commanded general respect and affection; his influence was long paramount in English, French, and German fiction. Literary fashions have changed: judged by later standards, his style is loose, his plots sometimes careless, his history often inaccurate, his delineation limited to externals and lacking in psychologic depth and delicacy. For these reasons his works are less read than formerly, and little esteemed by realists; but they still have warm admirers, and

Sir Walter Scott.

fill a prominent place in the vast treasure-house of English literature. Their effect is visible in the recent revival of historical and romantic fiction by Conan Doyle, Weyman, Hope, and others. The vast popularity which caused each of Scott's novels to be eagerly awaited by thousands is a thing of the past; but he remains "the Wizard of the North" and master in his own field. His *Journal* was pub. 1890.

Scott, W. BELL. See SCOTT, DAVID.

Scott, WINFIELD, U.S.A., 1786–1866. Brig.-gen. 1814, Major-gen. 1815; prominent on the Canadian border 1813–14; General-in-chief of the U. S. Army 1841; leader in the war with Mexico 1846–47, which resulted in the cession of Cal. and New Mexico to the U. S.; Whig candidate for Pres. 1852; Brevet-lieut.-gen. 1855; retired 1861.

Scottish Language. This is n. English modified by Celtic and Scandinavian influences and, as spoken in Edinburgh from 1450, this was the literary language of Scotland. Wyntoun, Dunbar, Douglas and James I. are among the chief contributors to this literature. See ENGLISH LITERATURE.

Scotus, JOHANNES. See ERIGENA.

Scotus, JOHANNES DUNS. See DUNS SCOTUS.

Scourge of God. Title of Attila, king of the Huns; said to have been conferred by a hermit.

Scouring Rushes. Plants of the genus *Equisetum*, natural family EQUISETACEÆ (q.v.). The stems are rough from the abundance of silica in the epidermis, and are sometimes employed for scouring floors. *E. hyemale* is known also as Shave-grass.

Scour of Streams. Process of washing away a bed or bank by the current. A velocity of 1 ft. per sec. will move small gravel, of 2 ft. pebbles ab. an inch thick, and of 20 ft. stones 2 ft. in diameter.

Scranton. Capital of Lackawanna co., Pa., on the Lackawanna, in a region devoted to coal mining; settled 1840, chartered 1854 and 1866. Its industries consist mainly in the shipping of coal and the manufacture of iron and steel. Pop., 1890, 75,215.

Screen. In Architecture, any partition subdividing an apartment which is less than its entire height. It may be either solid or perforated, as in a rood-screen, which does not shut off the view, but merely marks the subdivision, and may be either of masonry or woodwork. In Gothic Architecture, screens were elaborately designed and carved, and often became features of architectural importance.

Screw. Right circular cylinder on the convex surface of which is a uniform projecting thread in the form of a helix. A cross section of the thread may be of several different forms, the rectangular and the triangular being commonest. The distance between two adjacent threads measured parallel to the axis of the screw is called the pitch. The screw is usually

used as a mechanical power to move a body through a small space with great force, as in the copying-press.

Screw-Gearing. Method of transmitting motion and power from one shaft to another by toothed wheels (see GEAR WHEELS), in which one or both has for its driving profiles the elements of a helix or screw. The shafts may be parallel, or not parallel and not intersecting. The former case is called transmission by helical gear; the latter is screw-gearing properly so called. In screw-gearing (sometimes called also worm-and-wheel), the velocity transmitted from one shaft to another does not depend on the relative radii of the worm and wheel, but the driving shaft which carries the screw moves the wheel in one revolution through an angle subtended by the pitch of the wheel, which is the same as the linear pitch of the screw; that is, the number of turns will be as the fraction $\left(\frac{1}{\text{no. of teeth of wheel}}\right)$. The wheel can drive the worm only when the pitch of the screw is so steep that the projected angle between the axis and the tangent to the helical elements is less than the angle of friction between the two surfaces of contact. Hence the adaptation of screw-gearing to hoisting machinery, since it can also hold the load when raised. The face of the worm wheel is often curved to the arc of the worm to give greater bearing surface, and the teeth elements made parts of the complementary helix to that of the worm.

Screw Pile. Iron pile furnished with screw blades at its foot, and sunk into the soil by turning it like a screw; used for foundations of lighthouses and ocean piers.

Screw Pine. Trees of the genus *Pandanus*, natives of the Malayan and Polynesian islands, producing a great abundance of aerial roots, forming structures of strange appearance.

Screw Pine.

Screw Turbine. Water wheel which moves by the pressure of water upon helicoidal blades attached to a vertical shaft. It is of low efficiency and but little used.

Screw-Worm. Larva of a green fly with red eyes, common in s.w. U.S., which lays its eggs in wounds, nostrils, etc., of man and other animals. The eggs hatch in a few hours into larvæ that bore into the flesh, making a putrescent, non-healing sore, and death ultimately ensues from blood poisoning. Carbolic acid should be applied, and the wound dressed with oil of tar and fish oil, to repel the flies.

Scribe, AUGUSTIN EUGÈNE, 1791–1861. French dramatist, producer, alone or in partnership with others, of some 250 plays, from one act to five; best in light comedy. He never attained greatness, but was very successful in meeting stage requirements.

Scribes. Jewish scholars who devoted themselves to transcribing and interpreting the Mosaic Law. Their influence was great and ultimately eclipsed that of the priests. Their casuistry and worship of the letter drew down on them our Lord's severest indignation.

Scribner, CHARLES, 1821–1871. Publisher in New York; founded *Scribner's Mag.* 1870, which became *The Century* 1881.

Scribonius Largus, 1st cent. Roman writer on medicine.

Scrivener, FREDERICK HENRY AMBROSE, LL.D., D.C.L., 1813–1891. Anglican divine, who wrote much on the N.T. and was one of its revisers; pensioned 1872.

Scrivener's Cramp. See NEUROSIS.

Scrobiculate. In Botany, pitted surfaces.

Scrofula. Constitutional condition manifested by the peculiar character of the processes of inflammation, particularly a degeneration of the lymphatic glands into cheese-like masses. The presence of Koch's bacillus of consumption in these products of inflammation makes it probable that it is a manifestation of tuberculosis.

Scroggs, SIR WILLIAM, ab.1623–1683. Chief-justice of King's Bench 1678; impeached 1680 for misconduct during the Popish Plot trials; pensioned.

Scroll. In Architecture, a spiral ornament often applied to consoles and like features. Its most common employment is in the Ionic capital, and when thus employed it is known as a volute.

Scrope, GEORGE POULETT, F.R.S., 1797–1876. M.P. 1883–68; born in London; best known for his *Volcanoes of Central France*, 1827. He studied the probable cause of their phenomena and their connection with the present state and past history of the earth.

Scrophulariaceæ. Natural family of flowering plants, of the class *Angiospermæ*, sub-class *Dicotyledons*, and series *Gamopetalæ*, comprising ab.175 genera and ab.2,500 species, distributed throughout all parts of the globe; called the Figwort family.

Scruple. In Apothecaries' Weight, $\frac{1}{3}$ of a drachm, $\frac{1}{288}$ of a lb. Troy, 20 grs.

Scruples of Conscience. Doubts as to what is right and what wrong in the case of special points in any given course of action.

Scud. Small detached clouds beneath any mass of clouds from which rain is falling; also called wrack.

Scudder, HORACE ELISHA, b. 1838. Biographer of Noah Webster, 1882, and (in part) of Bayard Taylor, 1884; author of *Dream Children*, 1863, and other juvenile books; ed. *Riverside Mag.* 1867–71, and *Atlantic Monthly* since 1890. *Man and Letters*, 1888.—His brother, SAMUEL HUBBARD, paleontologist of U. S. Geological Survey 1886–92. and ed. *Science* 1883–85, has pub. much on Entomology. — Their niece, VIDA DUTTON, b. 1861, pub. *Life of the Spirit in English Poets*, 1893.

Scudder, JOHN, M.D., 1793–1855. American missionary in Ceylon 1820–36, and at Madras; founder of schools and hospitals; father of ten more missionaries, of whom HENRY MARTYN, D.D., b. 1822, labored in India 1844–63, and wrote much in Tamil and Sanskrit.

Scudéry, MADELEINE DE, 1607–1701. French romancer, whose characters were real personages of her own time under ancient names; thus Condé is Artamène in *Le Grand Cyrus*, 1649–53. This and *Clélie*, 1654–60, bore the name of her brother GEORGES, 1601–1667, who furnished the plots; they filled 10 vols. each, as did her *Conversations*. Her works were once highly esteemed.

Sculptured Stone at Nigg, Ross-shire.

Scudo. Italian coin, equal to five lire or francs, and U. S. dollar; so named as originally bearing a prince's shield or coat of arms.

Sculling. The propelling of a boat by an oar placed over the taff-rail of a boat and plied from side to side; also applied to the rowing of boats, in which the oarsman uses a pair of sculls or short oars.

Sculpture. See the APPENDIX.

Sculptured Stones. General name given to a class of monuments of the early Christian period, many being unhewn stone with rude inscriptions or ornamental designs. Those of Scotland are mostly uninscribed, but usually decorated; one of the most ornate being at Nigg.

Scup. See PORGY.

Scurf. In Botany, epidermal scales.

Scurvy. Constitutional disease characterized by great debility, with anæmia, spongy condition of the gums and a tendency to hemorrhages. It prevails among those who are forced to subsist for a long time on a diet which is lacking in fresh vegetables or their substitute. Hence it has been most prevalent among soldiers and sailors. The present precaution to provide the proper variety of diet for camps and vessels has made the disease a rare one. The juice of two or three lemons daily with plenty of fresh vegetables will suffice to cure, unless the disease is of long standing.

Scurvy Grass. Plants of the genus *Cochlearia*, ab. a foot high and having a small white flower. They have an acrid, biting taste and were of great benefit to sailors, before modern precautions against scurvy were known, for their antiscorbutic properties.

Scuta. Anterior ventral pieces of the shell of Barnacles.

Scutari. 1. Town of Asiatic Turkey, on the Bosphorus, opposite Constantinople; famed for its cemetery. Pop.

Cypresses in the Cemetery at Scutari.

ab.70,000. 2. Town of n. Albania, on Lake Suctari; besieged 1477 by the Turks, and soon after ceded to them. Pop. ab.35,000.

Scutate. In Botany and Zoölogy, shield-shaped organs.

Scutch-Grass. See GRASS, BERMUDA.

Scutellate. Diminutive of Scutate.

Scutellated. Tarsi and feet of birds when clothed with scutella. See SCUTELLUM.

Scutellum. In Botany, (1) shield-like cotyledon of certain grasses; (2) shield-shaped sessile apothecia in lichens.—In Zoölogy, piece between the scutum and the post scutellum in the dorsal part of the insect's thorax; (3) scales on a bird's foot.

Scutes (OF SNAKES). Broad scales on the head and ventral surface of snakes. The labials line the margins of the jaws. The most anterior on the upper jaw is the rostral: this is followed in the median line by the anterior and posterior nasals, and the frontal, flanked on each side by the supra-ciliary; next come the parietals, and finally the many small occipitals. Between this series and the labials there are on each side the nasals, loreal, præorbitals, postorbitals, temporals, and occipitals. Behind the chin scute come the anterior labials, then a double series of mental scutes, followed by the small cervicals, and finally the ventrals under the belly. The number and arrangement varies in different species.

Scutibranchia. Broadly, Mollusks like the *Patellidæ* and *Aspidobranchia:* in a restricted sense, subdivision of *Aspidobranchia*, including forms like *Trochus*.

Scutum. In Zoölogy, largest piece, always present in the back (dorsum) of the insect's thoracic segments.—In Botany, ciliated, shield-like organs, especially the stigma of certain plants.

Scylax, ab.600 B.C. Greek of s.w. Asia Minor, who sailed from the Indus to the Red Sea. The *Periplus*, long credited to him, deals with a later and longer voyage.

Scylla and Charybdis. Two rocks in the strait between Sicily and Italy. In Homer, S. is a monster voiced

Rock and Promontory of Scylla.

like a dog, with 12 feet and 6 heads, which reach out and seize each a man from every passing ship. C., on the opposite side, absorbs and regorges the waters of the sea thrice every day.

Scyphistoma. Young polyp that arises from the egg through the planula and gastrula stages in discophorous Jelly-fish. It has 16 tentacles, the first 4 of which were produced successively.

Scyphomedusæ (ACRASPEDA, ACALEPHS). Large Jelly-fish with gastric filaments and covered sense organs on the lobed umbrella margin. The embryo develops through Scyphistoma, Strobila, and Ephyra forms, instead of hydroid stocks. The wide manubrium has 4 radial, oval arms or tentacles, often branched and sometimes fusing. The gastral filaments and generative organs are interradial in position. The sense organs are tentaculocysts. The groups included are *Lucernariæ*, *Peromedusæ*, *Charybdeidæ*, and *Discophora*.

Scythe. Long, sharp, curved instrument for cutting grass. The shorter and stronger kind are used for cutting bushes. The introduction of mowing machines has almost put away its use.

Scythia. Ancient name for the region extending n., e. and s. of the Caspian Sea and the Sea of Aral. It was used by the Romans to designate the savage tribes from those regions. Its boundaries were undefined.

Scythian. Sometimes called Turanian or Mongolian; family of languages comprising the Finnish and Hungarian, Samoyedic, Turkish, Mongolian proper, and Tungusic. Of all these, the last has the most meager development.

Scythians. Probably part of the Mongol race from the steppes of central Asia. They were nomads, expert horsemen and bowmen, and lived in covered wagons. The Scythia of Herodotus is, in the main, the s.e. parts of Europe. That of later Roman writers is the region e. of the Volga and w. of China.

Scytonemaceæ. Order of *Cyanophyceæ*, comprising forms with filaments divided by transverse septæ, the ends being alike.

Scytonemin. Brownish pigment contained in the cells of the *Scytonemaceæ*.

Sea. The sea covers 137,200,000 sq. m. of the 192,200,000 sq. m. comprising the earth's surface, or nearly three-fourths. Its mean depth is 12,480 ft. It is separated by land bodies into four great divisions, the Pacific (area 67,500,000 sq. m.), Atlantic (area 36,000,000 sq. m.), the Indian (area 28,700,000 sq. m.), and the Arctic oceans (area 5,000,000 sq. m.). A fifth division is sometimes added, comprising the southern parts of the first three, and known as the Southern or Antarctic Ocean. The differential action of the sun's heat upon the surface water of the sea produces currents, which, modified in direction by the earth's rotation and by the land outline, keep up a constant circulation. The specific gravity is ab.1.027, being greater than that of pure water, owing to the salts held in solution. The surface temperature is at the equator ab 80° F., in the Polar regions ab.28° F. In confined bodies near the equator it rises higher. At great depths it falls to 35° F., and is nearly constant in all latitudes. See OCEAN.

Sea, GREAT. In O. T., the Mediterranean, as opposed to the Dead Sea.

Sea, MOLTEN. Huge bronze laver in the court of the Temple of Solomon. It rested on twelve bronze oxen, and was used for washing the sacrifices. Capacity 17,000 gals.

Sea-Anemone. See ACTINIDÆ.

Sea-Bear. See FUR SEALS.

Sea Beggars. See BEGGARS OF THE SEA.

Seabury, SAMUEL, D.D., 1729–1796. First P.E. bishop in the U. S.; elected in Conn. 1783, consecrated at Aberdeen, Nov. 14, 1784.—His grandson, SAMUEL, D.D., 1801–1872, edited *The Churchman* 1831–49, and was prof. General Theol. Sem., New York, from 1862, where his son, WILLIAM JONES, D.D., b. 1837, became prof. 1873.

Sea-Cats. See CHIMÆRA.

Sea-Coast Artillery. Cannon of the heaviest caliber for the defense of harbors; that of the U. S. consists of the 8, 10, 12 and 16-in. caliber steel breech-loading rifled guns, and the 10 and 12-in. breech-loading rifled mortars. There are also some obsolete 15-in. smooth-bore cast iron Rodman guns, and some old 10-in. smooth-bore Rodmans converted into 8-in. rifled guns for the defense of secondary harbors.

Sea-Coast Carriages. Machines to maneuver the heavy guns by a small gun detachment. They are the barbette, to fire over the parapet; the casemate or turret, to fire through a port or embrasure; the disappearing, to fire over the parapet and to recoil under cover after discharge; and the mortar carriage.

Sea-Cow. See SIRENIA (*Cetacea-herbivora*), and MANATEE.

Sea-Cucumber. See HOLOTHUROIDEA.

Sea-Dove. See ALCIDÆ.

Sea-Elephant (MACRORHINUS ANGUSTIROSTUS). Large seals. The males attain a length of 20 to 30 ft., and have an

Sea-Elephant (*Macrorhinus leoninus*).

extensible proboscis. They inhabit the Antarctic and the American coasts of the Pacific, and are now scarce from over-hunting for their oil. See PHOCIDÆ.

Sea-Fan. See GORGONIDÆ.

Sea Fog. Fog driven by wind from the ocean over the land.

Seagrave, ROBERT, 1693–ab.1760. English hymnist.

Sea-Hedgehog. See PLECTOGNATHI.

Sea-Horse. See LOPHOBRANCHII.

Sea Islands. On s. coast of S. C.; noted for their superior cotton and large negro population.

Seal. At Common Law, impression on an adhesive substance, attached to a legal document. Its form and its legal consequences have been modified by modern statutes.

Seal. See SEALS.

Sea-Lavender. Species of *Limonium*, delicate salt-marsh herbs of the natural family *Plumbaginaceæ*, of wide geographical distribution; called also Marsh-rosemary.

Sea Laws. Early collections of maritime usages which had acquired the force of laws. Those of Oléron were received in England ab.1175; in Flanders ab.1350 or earlier. The Gothland (Wisby) sea laws may be traced back to 1240; an edition was printed at Copenhagen 1505, and they were accepted in Scotland before 1583.

Sealed Orders. In the navy, orders given to the commanding officer which are not to be opened until the ship has put to sea.

Sea-Lettuce. Various large light-green seaweeds of the genus *Ulva*.

Sea Level. Mean height of the surface of the sea when tranquil. If we suppose a canal cut across a continent deep enough for the waters of the ocean to enter and fill it, the surface would mark the sea level along its line. This surface, either of our supposed canal or of mid-ocean, does not of necessity conform to that of an ellipsoid, for in consequence of want of homogeneity of the earth, and of the attractions of continental masses, the waters are in a manner heaped up where the attraction is greatest and depressed where it is least. Thus the mean surface in mid-ocean is believed to be many feet lower than along the shores of the great continents. This difference cannot be determined instrumentally, for the instruments are affected in precisely the same manner as the surface of ocean.

Sealing-Wax. The Hindus from time immemorial were accustomed to use LAC (q.v.) for sealing manuscripts. A good sealing wax is made by melting together 48 parts of shellac, 12 of Venice turpentine, 1 of Peru balsam and 36 of vermilion. The introduction of gummed envelopes has, to a great extent, superseded the use of sealing-wax.

Sea-Lion. Breeding places and habits are much like those of fur seals. They are larger than the latter, and have only coarse hair as a covering. The male sea-lion of the n. Pacific (*Eumetopias stelleri*) attains a length of 14 ft. and wt. of 1,000 lbs.: the female is much smaller. They are invaluable to the subsistence of the Aleuts, who drive them overland to their villages, where they are slaughtered at leisure. The sea-lion most common off San Francisco is *Zalophus*. 9 ft. long. Other

Sea-Lion (*Otaria stelleri*).

species live in the temperate parts of the Southern Oceans. See OTARIADÆ.

Seal Islands. See LOBOS ISLANDS.

Seal of Confession. Obligation of a R. C. priest to reveal communications of a penitent to no human being without the consent of the penitent.

Seal of Solomon. In Magic, six-rayed figure, composed of two superimposed or interlaced triangles; frequently confused with the pentacle, which is employed as a defense against demons.

Seals. See PINNIPEDIA, WALRUS, SEA-LION, FUR SEALS and SEA-ELEPHANT.

Sealsfield, CHARLES (KARL POSTEL), 1793–1864. Austrian ex-monk, traveler and novelist, for some years in America. *Works*, 18 vols., 1846.

Seam. Relatively thin layer in a series of strata, strikingly different in appearance from the adjacent layers; *e.g.*, a seam of coal.

Seamen. Statutes generally require written contracts between sailors and their employers and contain various provisions for their protection; but while at sea they are subject to disciplinary punishment, not permitted in case of employés on shore.

Seamen, MISSIONS TO. Begun in London ab.1812, and in New York 1818; since carried on by various societies in these and other cities, American, British, Scandinavian, and German.

Seamless Tube. Wrought-iron or steel tube, made without joints or seams: this may be done by forging it upon a mandrill, or by a special machine for hollow rolling.

Sea of Cortes. See CALIFORNIA, GULF OF.

Sea of Sodom. See DEAD SEA.

Sea-Otter. Valuable fur otter, hunted on islands off Alaskan coast. It is very shy, and attains a length of 4 ft.; its

Sea-Otter (*Enhydris lutris*).

hind feet are webbed. It feeds on clams, etc., and is said to sleep in the water, lying on its back, with its young clasped in its arms. It is monogamous, and bears but one young at a time,

but at no set season. Full growth is not attained until it is 5 yrs. old, but the fur is valuable after 2 yrs.

Search (AT SEA). Boarding a neutral vessel and examining her papers and cargo for the purpose of discovering whether she is violating her neutral duties.

Search Warrant. Judicial authority to search and seize persons or property. Its exercise is carefully regulated by constitutional and statutory provisions in the U.S.

Searles, WILLIAM HENRY, b. 1837. American civil engineer; author of *Field Engineering*, 1879; *Railroad Spiral*, 1882.

Sea-Rochet. Fleshy herbs of the genus *Cakile*, natural family *Cruciferæ*, natives of the sea-coast; of wide geographical distribution.

Sears, BARNAS, D.D., LL.D., 1802–1880. Prof. Newton Theol. Inst. 1836–48; pres. Brown Univ. 1855–67. *Luther*, 1850.

Sears, EDMUND HAMILTON, D.D., 1810–1876. New England divine, author of two greatly admired Christmas hymns. *Regeneration*, 1853; *4th Gospel*, 1872.

Sea-Serpents. Those now existing belong to the family HYDROPHIDÆ (q.v.), but those of the cretaceous period, the PYTHONOMORPHA (q.v.), realized the wildest imaginings of those who in modern times report having seen sea-serpents of unknown length and undescribed species. They were true air breathers. Some scientists think it possible that monstrous serpent-shaped fish may exist at great depths in the ocean, and possibly visit the surface at times.

Sea-Shore. At Common Law, space between ordinary high and low water mark. It belongs to the State or its grantee, except in Mass. and a few other States, where it is the property of the littoral proprietor.

Sea-Sickness. Well known nausea and discomfort produced by the motion of a vessel in rough water; or (car-sickness) the swing of a rapidly moving railway train. Its pathology is uncertain, but is possibly a disorder of the sympathetic nervous system. No certain cure has as yet been devised, despite the many suggested.

Sea-Snakes. See PROTEROGLYPHA and HYDROPHIDÆ.

Seasons, CHANGE OF. Due to the fact that the earth's axis is not perpendicular to the plane of the orbit, the angle being 66° 33′. When the earth is in that part of its orbit which causes the sun to appear above the equator, the result is summer; in the opposite case winter follows.

Sea-Swallow. See SOLAN-GOOSE.

Seaton, WILLIAM WINSTON, 1785–1866. Ed. Washington *Intelligencer* 1812–64; congressional reporter, with J. Gales, 1812–20. *Register of Debates*, 14 vols., 1829–37.

Seattle. Capital of King co., Wash., on an arm of Puget Sound; settled 1852, incorporated 1880; heavily injured by fire 1889; site of the State Univ. and several colleges. It exports large quantities of lumber, coal, fish, and grain; its manufactures are extensive and varied. Its recent growth has been rapid. Pop., 1890, 42,837, since much increased.

Sea-Urchins. See ECHINOIDEA.

Sea-Wall. Retaining wall built to prevent waves from washing away earth. The front is often curved to lessen the force of impact.

Sea-Wall.

Sea-Water. See WATER and SALT WATER.

Sea-Weeds. Marine plants of the class ALGÆ (q.v.).

Seawell, MOLLY ELLIOTT, b. 1859. American novelist. *The Berkeleys*, 1888; *Throckmorton*, 1890; *Maid Marion*, 1891; *Marsac*, 1896.

Sea-Worms. Worms living in salt water which eat timber; the most destructive one is *Teredo navalis*, which, however, is not a true worm, but a mollusk. See SHIP-WORM.

Seba. Ancient kingdom of Ethiopia or Abyssinia, not far from the cognate Sheba. See Ps. lxxii. 10.

Sebaceous Glands. Glandular organs distributed through the skin, except on the palms of the hands or soles of the feet, secreting an oily substance which, for the most part, discharges into hair follicles. This oily secretion is composed of stearin 24, extractin 12, salivary matter 11, albumen 24, calcium phosphate 20, calcium and magnesium carbonates 3.7, sodium chloride 3.7.

Sebacic Acid. $C_{10}H_{18}O_4$. Shining laminæ, mpt. 127° C.; obtained by the oxidation of stearic acid and spermaceti, and by fusing castor oil with caustic potash.

Sebaldus, ST. Patron of Nuremberg; canonized 1425. His history is legendary. His day is Aug. 19.

Sebastian, ST. Soldier of Gaul, martyred ab.287; depicted bound to a tree and pierced by arrows. His day is Jan. 20, and in the East Dec. 18.

Sebastian, 1554–1578. King of Portugal 1557. He took Tangier 1574, again invaded Africa 1578, and was defeated and slain Aug. 4 at Alcazar. His people believed him still alive, and five impostors personated him.

Sebastiani, FRANÇOIS HORACE BASTIEN, COMTE, 1772–1851. Corsican soldier and diplomatist, prominent in Napoleon's wars; General 1803, Marshal 1840.

Sebastiano del Piombo (LUCIANI). See PIOMBO.

Sebastopol, or SEVASTOPOL. Seaport of the Crimea, besieged by the allied armies of France and England Oct. 1854–Sept. 1855. 120,000 French and 27,000 English were engaged in the siege. The Russian works were garrisoned by ab.

Sebastopol.

30,000 men, and mounted 800 guns. The Russians lost 84,000 men, the French 44,500, the British ab. 15,000. Since its restoration the town is important commercially and as a summer resort. Pop. ab. 30,000, besides a garrison of 12,000.

Sebiferous. Wax-bearing organs, as the fruit of the Bayberry.

Sebillot, PAUL, b. 1843. French student of folk-lore; author of many books and papers on popular legends and superstitions, especially in Brittany.

Secant, IN GEOMETRY. Straight line which cuts a curve in two or more points, or plane which has two or more elements in common with a curved surface.

Secant, IN TRIGONOMETRY. Ratio of the distance of any point on the terminal line of an angle from its vertex, to the projection of that distance on the initial line of the angle.

Secchi, PIETRO ANGELO, 1818–1878. Director of the observatory at Rome 1850; eminent for scientific activity, particularly in solar physics and meteorology.

Secession. Voluntary separation from any body by some of its members; as, most eminently, that of the Southern States from the federal Union 1860–61. The doctrine had been anticipated by that of the S. C. nullifiers 30 years before.

Seckendorf, VEIT LUDWIG VON, 1626–1692. German official, author of *Deutsche Fürstenstaat*, 1656, and *De Lutheranismo*, 1688, the latter in answer to L. Maimbourg.—His nephew, COUNT FRIEDRICH HEINRICH, 1673–1763, was a general and diplomatist in the service of Austria and Bavaria, twice in chief command, and twice imprisoned.

Secker, THOMAS, D.D., LL.D., 1693–1768. Bp. of Bristol 1735, of Oxford 1737; Dean of St. Paul's, London, 1750; Abp. of Canterbury 1758. *Works*, 12 vols., 1795.

Secohm. See SELF-INDUCTION.

Second. $\frac{1}{86400}$th part of a mean solar day.

Second Advent. Final coming of Christ to judge the world; predicted in the Gospels. Many in all ages have expected it to occur speedily, and some have vainly fixed its date. See ADVENTISTS.

Secondaries. Quill-feathers (remiges) borne on the antebrachium (middle joint or section) of the bird's wing.

Secondary. In early geological science, all then known fossiliferous rocks; later, all strata containing extinct species of plants and animals; now nearly equivalent to Mesozoic.

Secondary, or SECONDARY CYCLONES. Small barometric depressions, usually marked by local rains or thunderstorms, and producing minor irregularities in the course of the general isobars.

Secondary Alcohols. Derived from methyl alcohol, $CH_3.OH$, by replacing two hydrogen atoms with two hydrocarbon radicals. Upon oxidation they yield a ketone, and then an acid or acids containing a smaller number of carbon atoms. They do not yield aldehydes. Example, secondary butyl alcohol: $CH_3.C_2H_5.CHOH$.

Secondary Battery. See ACCUMULATOR and STORAGE BATTERY.

Secondary Coil. See INDUCTORIUM.

Secondary Compounds. Formed by replacing hydrogen in a CH_2 group by a group or radical. Thus from propane, $CH_3.CH_2.CH_3$, secondary propyl alcohol, $CH_3.CHOH.CH_3$, is derived.

Secondary Generator. See TRANSFORMER and CONVERTER (ELECTRIC).

Secondary Roots. Those other than the PRIMARY ROOT (q.v.), appearing on various portions of the plant, as the climbing roots of the Ivy and Poison Vine, etc.

Secondary Sexual Characters. Any characteristics (as color markings, etc.), except those of the reproductive organs themselves, which distinguish males and females. An example is the spurs present on male fowl.

Seconds Pendulum. See PENDULUM.

Secret, DISCIPLINE OF THE. See ARCANI DISCIPLINA.

Secretaries OF STATE, WAR, ETC., OF U.S. These officials are appointed by the President and confirmed by the Senate. The salary of the office is $8,000 per annum. See CABINET.

Secretary-Bird (SERPENTARIUS). S. African, raptorial bird, with long legs (especially the tarsal portion), rather long neck and wings, and the two middle tail feathers much elongated. The back of the head bears a plume of backwardly

Secretary-Bird (*Serpentarius secretarius*).

directed feathers. The color is white in front and black behind. Length 4 ft., of which half is tail. They are not common. When pursued they run, though good flyers. They nest in tree tops. For food they prefer serpents: even those 5 ft. long are eaten.

Secretion. Production of definite fluid or semi-fluid substances by various organs of the body, more especially the glands, as their normal function; also, the substance so produced.

Secret Nailing. Boards so laid and nailed that the heads of the nails cannot be seen; also called blind nailing.

Secret Service Moneys. In England, funds placed at the disposal of the Ministers of State, to be expended at their discretion, without giving an account.

Secret Writing. See CRYPTOGRAPHY.

Section. In Architecture, an actual or imagined representation of a building or part of a building as it would appear if cut through at a certain line of the plan so as to expose its interior arrangement and construction. In important and complicated buildings, it is customary to prepare two drawings of vertical sections, one on the longer axis, called the longitudinal, and another at right angle to it, called the transverse section.

Section. Portion of surface included within lines of intersection with other surfaces. A plane section is formed by a plane cutting a surface.

Sectional Boilers. Form in which the generating elements are small and separate units, connecting together into one chamber, from which the outlets take off the steam. The units are spherical in cast-iron boilers, and of lap-welded tube in wrought-iron types. These boilers are portable when transportation is lacking for great weights; an accident to one part does not usually entail loss of the whole structure nor so appalling a disaster, since the water escapes gradually through a small outlet, and repair to the damaged part makes the whole boiler as good as before. The small diameters of the units insure quick transfer of heat through the thinner metal possible, whence the boilers are also light. The difficulties come from leakage of the increased joint area, from unequal expansion of different parts, and from insufficient disengagement area for steam from the water, whence wet steam and overheated metal will result, since the circulation will not be normal. In bad waters, also, scale will deposit in inconvenient places in such boilers. A sectional boiler is successful in proportion as it avoids or diminishes these difficulties. See BOILERS.

Sectional Boiler.

Sector, PLANE. Portion of plane surface bounded by an arc and the two radii or radii vectors at its extremities. Its revolution about the axis of the curve produces a solid sector.

Secular Acceleration OF THE MOON'S MEAN MOTION. Halley found, by comparing the ancient records of eclipses with those observed in the Middle Ages, and these in turn with modern observations, that a change was going on in the moon's velocity. This has since been shown to be due to the change in the eccentricity of the earth's orbit, and possibly in part to a lengthening of the day.

Secular Games. Supposed to be celebrated in Rome at the commencement of each Sæculum or period. From 249 B.C., a law made them obligatory every 100 years; but Augustus had this changed to 110 years. Horace wrote the *Carmen Sæculare* for this celebration, as is recorded upon a tablet discovered recently in Rome.

Secularism. Humanitarian scheme devised in London 1844, and pushed by local and national societies, led by G. J. Holyoake and later by C. Bradlaugh. It aimed at ethical and social improvement, on temporal grounds, and in a spirit essentially democratic and anti-theological.

Secularization. Conversion of Ch. property to other uses, as in England under Henry VIII., and later in France, Italy, and other countries; also transfer of authority, as over education and marriage, from Ch. to State.

Secular Perturbations OF COMETS AND PLANETS. Such as go on for ages in the same direction; distinguished from periodic, which complete their cycle in the course of a few years at most.

Seculars. 1. Priests not bound by monastic vows. 2. Bulk of Catholics, as living in the world and not following a special rule of piety beyond their necessary Christian obligations.

Secund. Axes of plants bearing lateral organs on one side only, or when these are all turned to one side, as the flower-heads in many kinds of Golden-rod.

Secundine. Inner coat of the ovule.

Secundus, JOHANNES (JAN EVERTS), 1511–1536. Dutch author of Latin poems. *Basia*, 1539.

Secundus, PUBLIUS POMPONIUS, 1st cent. Roman tragic poet, Consul 44. Fragments only remain.

Securite. Flameless powder, consisting of granulated yellow grains, composed of a mixture of 218 parts of dinitronaphthalene with 720 parts of ammonium nitrate.

Security. Property of any kind, set aside as the basis on which a loan is made, to guarantee the creditor's rights.

Sedalia. Capital of Pettis co., Mo., 95 m. e. of Kansas City; founded 1861. It has some manufactures. Pop., 1890, 14,068.

Sedan. Town of n.e. France, on the Meuse, near the Belgian border; seat of a Huguenot theol. sem. till 1685; scene of a momentous battle Sept. 1, 1870, following on a series of desperate conflicts in the vicinity, Aug. 29, 30, 31. It lasted from 5 A.M. to 4 P.M., and involved 150,000 French under MacMahon and 250,000 Germans under the king and crown prince of Prussia. 14,000 French were wounded and 25,000 made prisoners; Napoleon III. surrendered next day with 83,000 more, 70 mitrailleuses, and 550 cannon.

Sedan Chair. Covered vehicle borne on poles by two men, conveying one seated passenger; familiar in England ab. 1600–1800, and not yet entirely disused. It took its name from

A Sedan Chair.

Sedan in France, where it was invented. They were often decorated with paintings by artists of note. Similar chairs carried on the shoulders by two or more men have long been in use in China.

Sedatives. Medicines which directly depress the vital forces, the chief of which are aconite, chloroform and hemlock. The term is rather loosely employed.

Seddon, JAMES ALEXANDER, 1815–1880. M.C. from Va. 1845–47 and 1849–51; Sec. of War C.S.A. 1862–64.

Sedeno, ANTONIO. d. 1538. Spanish conqueror of the Caribs of Trinidad 1530, and later.

Sedentaria. Fixed, as distinguished from free-swimming animals, belonging to the same group; *e.g.*, the *Vorticellidæ*, a division of order *Peritricha* of ciliated Infusorians.

Sedentaria (ASCIDIÆ COMPOSITÆ). See ASCIDIACEA.

Sedentaria (TUBICOLÆ, CEPHALOBRANCHIA, CEPHALOBRANCHIATA). Polychætous Annelids that live in tubes. They have an indistinct head, which bears numerous thread-like tentacles and branched cirri, one of which may bear an operculum for closing the tube. They have a short proboscis, no jaws, and the branchiæ, parapodia, etc., are not largely developed. The body is often differentiated into thoracic, abdominal, and caudal regions. See ARENICOLA, CHÆTOPTERUS, SABELLA, and SERPULA.

Sedge. Grass-like plants of the natural family *Cyperaceæ*, growing mainly in wet places in all parts of the world.

Sedgemoor. In Somersetshire, near Bridgewater; scene of Monmouth's defeat by royal troops July 6, 1685, and the collapse of his rebellion.

Sedgwick, ADAM, LL.D., F.R.S., 1786–1873. English geologist, to whom we owe our knowledge of the true position and succession of the Paleozoic strata of Devon and Cornwall, of the geological relation of beds in n. and n.w. England, afterward called Permian, and of the general structure of N. Wales. Prof. Cambridge from 1818. He made the Woodwardian Museum one of the most complete in the kingdom.

Sedgwick, CATHERINE MARIE, 1789–1867. American novelist and author of tales for the young. *Redwood*, 1824; *Hope Leslie*, 1827; *Live and Let Live*, 1837; *Letters to my Pupils*, 1862.—Her father, THEODORE, LL.D., 1746–1813, was M.C. 1789–96 and 1799–1802, U. S. Senator 1796–99, and Judge of Mass. Supreme Court from 1802.—His grandson, THEODORE, 1811–1859, pub. *Measure of Damages*, 1847, and *Statutory and Constitutional Law*, 1857.—Their ancestor, ROBERT, d.1656, was a general under Cromwell.

Sedgwick, DANIEL, 1815–1879. London bookseller, whose collections, studies, and reprints supplied a nucleus and almost a basis for English hymnology.

Sedgwick, JOHN, U.S.A., 1813–1864. Brigade and division commander in the Army of the Potomac 1861–63; in command of the Sixth Corps Feb. 1863; distinguished at Fair Oaks, Antietam, Chancellorsville, Gettysburg and the Wilderness; killed at Spottsylvania.

Sedilia. In Ecclesiastical Architecture, the seats provided for the persons who take part in the performance of the service. They are sometimes incorporated with the walls and of the same material, but more often are movable and constructed of wood.

Sedimentary. Rocks formed by sedimentation.

Sedimentation. Settling down of rock material suspended in water.

Sedition. Acts or words tending toward treason, but not legally reaching its guilt and penalties. It tends to incite resistance to lawful authority. In the military service it is associated with mutiny, and military persons when found guilty of crimes of this nature by courts-martial are punished under the provisions of the Articles of War.

Sedley, SIR CHARLES, 1639–1701. English dramatist and poet.

Sedley, WILLIAM HENRY, 1806–1872. British-American actor.

Seduction. Illegal enticement of a servant from the master, especially that of a daughter and her sexual defilement; resulting in legal damage to the master: by statute often made a criminal offense.

Sedulius, CŒLIUS, ab.450. Latin poet, whose *Carmen Paschale* is chiefly a harmony of the Gospels. His hymn, *A solis ortus cardine*, is used in English versions.

See, APOSTOLICAL. Bishopric of Rome, as the only apostolically founded church in the West.

See, HORACE, b.1835. American designer of improvements in the engines of U. S. navy and other vessels.

Seed. Ripened plant ovule containing an embryo. The embryo is the essential part of the seed; the other structures are subsidiary to its protection, nurture, and germination.

Diagram showing general structure of Seed.

A, section of ovule: *b*, pollen-tube; *e*, nucellus; *f*, accessory cells or synergidæ; *g*, ovum or egg-cell; *h*, central nucleus of embryo-sac; *i*, antipodal cells of embryo-sac; *k*, embryo-sac.
B, embryo-sac, showing *a*, suspensor; *b*, embryo or segmented ovum; *c*, nuclei; *d*, vacuoles.
C, section of a seed, showing *a*, the micropyle; *b*, embryo with embryonic root; *c*, embryonic stem; *d*, cotyledons; *e*, external seed-coat; *f*, endosperm; *g*, perisperm.

Seeds rich in ferment readily lose their power of germination; those rich in starch survive longest. See the various terms relating to the structure of seed above.

Seed-Bagging. Method of introducing and establishing a water-tight packing at any desired point in an artesian-, salt-, or oil-well, between the central tubing and the rock wall, by means of a strong bag fastened to the outside of the tube and filled with flaxseed. The seed, on swelling, adapts itself to the irregularities of the rock surface and thus prevents the downflow of water into the well's surface. Rubber and leather are also used.

Seed-Coats. Integuments of a seed, Testa and Tegmen.

Seedling. Young plant produced from a seed.

Seed-Vessel. Ripened wall of the ovary in plants; pericarp.

Seekers. English Puritan sect ab. 1650.

Seeland, or ZEALAND. Largest island of Denmark, opposite s. extremity of Sweden. Area 2,713 sq. m., pop. ab. 750,000.

Seeley, SIR JOHN ROBERT, 1834–1895. Prof. Univ. Coll., London, 1863, and Cambridge 1869; knighted 1894. His *Ecce Homo*, 1865, a book of great power and brilliancy, was anonymous, as was *Natural Religion*, 1882. *Roman Imperialism*, 1869; *Life of Stein*, 1879; *Goethe*, 1893; *Growth of British Policy*, 1896.

Seelye, JULIUS HAWLEY, D.D., LL.D., 1824–1895. Prof. Amherst Coll. 1858, and its pres. 1877–90; M.C. from Mass. 1875–77. *Christian Missions*, 1875; *Duty*, 1891.—His brother, LAURENS CLARK, D.D., b. 1837, was prof. Amherst 1865–74; organizer and pres. of Smith Coll. 1874.

Seeman, BERTHOLD, 1825–1871. German-English traveler and botanist. *Die Volksnamen der Amerikanischen Pflanzen*, 1851; *Botany of the Voyage H.M.S. Herald*, 1852–57; *Palms and their Allies*, 1856; *Die Palmen*, 1857.

Seer. Earlier name of prophets in Israel. I. Sam. ix. 9.

See-Saw. Children's sport, known to the Greeks; also called teeter. It consists of a reciprocal motion up and down of a balanced board on a support so placed that the ends may be occupied and swayed up and down. It is a common sport in Corea, where it is especially practiced by girls, and is known as "board jumping," the players standing erect on the ends of the board. It is also played in China and Japan.

See, the Conquering Hero Comes. Song composed by Handel for his oratorio *Joshua*, 1748, and afterward introduced in his *Judas Maccabæus*, an earlier work. It has won world-wide popularity, and is frequently heard as a greeting to a popular hero at celebrations.

Seetzen, ULRICH JASPER, 1767–1811. German explorer in Syria, Egypt, and Arabia. *Diary*, 1854–55.

Seewarte. German naval observatory, founded at Hamburg by Van Freeder 1867; reorganized 1875 by the German government under the admiralty, and devoted to every branch of marine meteorology.

Segeste. Ruined city of n. w. Sicily, held by Carthage, Syracuse, and from 206 B.C. by Rome. There are hot springs

Theater at Segeste.

near the site, which was 6. m. from the sea. The place now shows nothing but fine ruins, including a Doric temple and a theater.

Seggars. See PORCELAIN.

Segment. In Zoölogy, (1) ring-like parts or body-joints of an articulated animal; (2) parts of any organism which has become divided into pieces, as an egg (during early development and cell division) or a jointed limb.

Segment. One of two or more geometric magnitudes which added form a given whole. When direction is considered (indicated by + and — signs), either segment or both may in magnitude exceed the whole. In connection with specific forms, the term has limited meanings: a segment of a circle is limited by parallel chords; of a sphere, by parallel planes. Linear segments are limited by points, regardless of the manner of their determination. Surface and volume segments are limited by parallels.

Segmental Arch. One whose intrados is an arc of a circle less than ab. 70 degrees.

Segmental Organs, or DUCTS. 1. Tubes situated, a pair, usually in each segment of worms and other Invertebrates, and functioning as excretory organs (invertebrate kidneys or nephridia). 2. Tubules of the embryonic kidney of Vertebrates. See WOLFFIAN BODY.

Segmentation. See LOBATION.

Segmentation. 1. Division into parts of equal rank, as when structures are repeated in the embryonic development of an animal (like successive rings of an articulated animal, vertebræ of Vertebrates, and joints of limbs). 2. Cell division in the egg, which leads to the formation of the blastoderm or a MORULA (q.v.).

Segmentation Cavity, or BLASTOCŒL. Space left between the cells (blastomeres) of the segmenting egg.

Segneri, PAOLO, 1624–1694. Italian Jesuit, eminent as a preacher. Some of his works, collected 1712, were tr. 1857–81.

Segner's Wheel. See BARKER'S MILL.

Segovia. Ancient city of central Spain, 32 m. n.n.w. of Madrid; important in the Middle Ages; pillaged by the French 1808. It has an old castle and a 16th-century cathedral. It is

Alcazar of Segovia.

surrounded by walls. The aqueduct which carried the waters of the Rio Frio into the city is the best specimen of Roman Architecture in Spain. Pop. ab.14,500.

Segregata. Order of the Linnæan class *Syngenesia* (natural family *Compositæ*), having a double involucre.

Segregated Vein. Body of mineral, or ore, resembling a true fissure vein in general form, but without the well-defined walls of such veins. It usually represents a local accumulation of mineral matter, a part or all of which may have been concentrated from portions of the adjacent country rock.

Segregation. Mass of ore of irregular shape, filling some previously existing opening, or derived from the surrounding rock.

Seguin, ÉDOUARD, 1812–1880. French physician, in U. S. from 1849; eminent for his treatment of the feeble-minded. *Éducation des Idiots*, 1839–43; *Idiocy*, 1866.

Segur, LOUIS PHILIPPE, COMTE DE, 1753–1830. French author, envoy to Russia 1783–88. *Galerie Morale et Politique*, 1817–23; *Mémoires*, 1825. His works, collected 1824–30, fill 33 vols.—His father, PHILIPPE HENRI, 1724–1801, and grandfather, HENRI FRANÇOIS, 1689–1751, were distinguished generals; his son, PHILIPPE PAUL, 1780–1873, wrote a notable account of the Russian campaign, 1824, histories of Russia, 1829, and of Charles VIII., 1835, and memoirs, 1873.

Segura, JUAN LORENZO, 13th cent. Spanish poet, author of an epic on Alexander the Great.

Seidl, ANTON, b.1850 at Pesth. Conductor, especially of Wagner's music; pupil and sec. of Wagner 1872–78; conductor in Leipzig, Bremen, and since 1885 in New York.

Seidlitz Powders. Composed of 120 grs. tartrate of soda and potash and 40 grs. bicarbonate of soda, inclosed in blue paper, and 38 grs. tartaric acid in a white paper. Each is separately dissolved in water, mixed, and taken while the effervescence is going on. They are so named from Seidlitz in Bohemia, which has a mineral spring of similar constituents. It acts as an aperient.

Seigniorage. Amount of metal deducted by government before coinage to pay expenses of the process; equivalent to the difference between the face value of the coin and the bullion value of the silver or gold contained in it.

Seine. River of France, heading in the e. part and flow-

ing n.w. through Paris to its mouth at Havre. Length 482 m., of which ab. 380 are navigable; drainage area 26,767 sq. m.

Seir. Mountain s.e. of Palestine, occupied by Edomites. See EDOM and ESAU.

Seirospore. Kind of spore developed in the necklace-like chains in some of the red *Algæ* or *Rhodophyceæ*.

Seisin. Possession of a freehold estate in land.

Seismograph. Instrument for recording the time of occurrence or direction of motion of any earth disturbance; *e.g.*, an earthquake or vibration caused by a distant explosion.

Seismology. Science of earthquakes. This branch of geology is of quite recent origin, but its development has been rapid. It is at present in the observational stage for the most part. Italy and Japan are the nations in which the most and best work is now done. Both are favorably situated for the purpose, being the seats of active volcanic action. The cause of the earthquake has long been one of Nature's grand secrets, but modern investigation has detected a sufficient cause in the movements that take place in the solid crust in consequence

Seismograph.

of contraction. The accumulating strains and stresses result at last in causing slips among the strata. The jar thus produced is propagated through the rocks in the form of a wave of small height but great length. In a recent earthquake, *e.g.*, the height of the wave was estimated at half an in. and its length as 28 m. The rate of propagation is usually ab. one m. per sec. Seismological observatories are now established in various parts of the world, and instruments of precision, whose principle is usually that of the pendulum, are employed to detect and register the intensity and direction of the shocks. See EARTHQUAKE.

Seismometer. Instrument for recording the intensity of any earth disturbance.

Seismoscope. Device for detecting the occurrence of any vibration or disturbance of the earth.

Seiss, JOSEPH AUGUSTUS, D.D., LL.D., b.1823. Pastor in Phila. from 1858; ed. *Prophetic Times*, 1863–75, and *Lutheran*, 1873–79; prolific writer. *Apocalypse*, 1869–81; *Miracle in Stone*, 1877.

Sejanus, ÆLIUS, d.31. Prefect of prætorians under Tiberius. He gained vast influence, aspired to imperial power, and had Tiberius' son Drusus poisoned, Agrippina and her sons banished. Tiberius, who had shut himself up in Capreæ, sent a letter to the Senate which resulted in his execution. His body was dragged through the streets and thrown into the Tiber.

Sekigahara. In Japan; scene of a battle. See DAIMIOS.

Selachii (SELACHEA, SELACHOIDEA, ELASMOBRANCHII, CHONDROPTERYGII; SHARKS). Fishes, with cartilaginous skeleton, a segmented, vertebral column, and undivided brain-capsule; with large paired fins and heterocercal caudal fin. The skin is shagreened with placoid scales, which in the transverse and ventrally placed mouth are transformed into several rows of characteristic teeth. There are five (sometimes six or seven) branchial pouches and clefts; also spiracles, which represent rudimentary hyoid clefts. There is no swim-bladder. A spiral-valve is present in the small intestine. The sense organs and brain are highly developed; the latter presents traces of convolutions. The heart possesses a muscular conus arteriosus, which contains several rows of valves. The pelvic fins of the male are modified to form copulatory organs. The eggs may be laid in a capsule, or be retained in the uterus, and then the fœtus may have a true placenta. Two sub-orders are included, *Holocephali* and *Plagiostomi*. See SQUALI.

Selachostomi. See CHONDROSTEI.

Selaginaceæ. Natural family of flowering plants, of the class *Angiospermæ*, sub-class *Dicotyledons*, and series *Gamopetalæ*, comprising 9 genera and ab. 140 species, natives of all parts of the Old World, the tropics and Australia excepted.

Selaginellaceæ. Class of the heterosporous *Pteridophyta*, comprising the orders *Selaginelleæ* and *Isoeteæ;* also called *Ligulateæ*.

Selah. Term of common occurrence in the Psalms, probably indicating a pause, while the instruments played an accompaniment, as signified in the Septuagint translation, *Diapsalma*.

Selangor. Malay state, in the peninsula, n. of Malacca; under British protection since 1874; noted for its tin mines. Area ab. 3,000 sq. m.; pop., 1891, 81,592.

Selborne, ROUNDELL PALMER, EARL OF, D.C.L., b.1812. M.P. 1847–52, 1853–57, 1861–72; knighted 1861, made Baron 1872 and Earl 1882; Solicitor-gen. 1861, Atty.-gen. 1863–66, Lord Chancellor 1872–74 and 1880–85. He compiled the familiar *Book of Praise*, 1862, and pub. *Memorials*, 1896.

Selden, JOHN, 1584–1654. English antiquarian of great learning, imprisoned 1621 and 1629–31 for opposing royal encroachments; M. P. from 1623; lay member Westminster Assembly 1643. *Titles of Honor*, 1614; *De Diis Syriis*, 1617, partly tr. 1880; *History of Tithes*, 1618; *Mare Clausum*, 1635; *De Jure Naturali*, 1640; *Table-talk*, 1689.

Selection. See NATURAL SELECTION, SEXUAL SELECTION, and HYBRIDIZATION.

Selenates. Salts of selenic acid.

Selene. Greek moon-goddess, daughter of Hyperion and Theia.

Selenga. River of Mongolia flowing into Lake Baikal. Length 700 m.

Selenic Acid. H_2SeO_4. Liquid resembling sulphuric acid, unstable, readily passing to selenious acid; made by treating selenium with strong oxidizing agents in the presence of moisture; dibasic.

Selenides. Derivatives of hydrogen selenide or compounds formed by the direct union of selenium with some other element.

Selenious Acid. H_2SeO_3. Crystallized, deliquescent solid, made by dissolving selenium dioxide in water; dibasic.

Selenite. Variety of gypsum, that occurs in crystals or in foliated forms, transparent, and with a prominent pearly luster.

Selenites. Salts of selenious acid.

Selenium. Se. At. wt. 79, sp. gr. 4.5–4.8, sp. ht. 5.92, mpt. 217° C. for cryst. selenium, valence II., IV., VI.; discovered by Berzelius 1817. It occurs in two modifications. Soluble selenium is a brick red or black powder; non-conductor of electricity. Insoluble or metallic selenium is obtained by cooling melted selenium rapidly to 210° C. It crystallizes from carbon disulphide, like sulphur. Selenium occurs in small quantities in a number of sulphides, and is extracted from the flue-dust of sulphuric acid factories by treating with oxidizing agents.

Selenium Bromide. Se_2Br_2. Selenium monobromide. Dark-red liquid; sp. gr. 3.60, bpt. 225° to 230° C.; made by bringing bromine and selenium together in the proper proportions.

Selenium Dioxide, or SELENIUM ANHYDRIDE. SeO_2. Solid, crystallized substance, made by burning selenium; soluble in water, forming selenious acid. It has the odor of rotten radish.

Selenium Iodides. Compounds of the formulas Se_2I_2 and SeI_4 are known. They are wholly similar in properties to the BROMIDES (q.v.).

Selenium Monochloride. Se_2Cl_2. Transparent, dark-brown, oily liquid, decomposing on boiling; obtained by passing chlorine over heated selenium.

Selenium Nitride. Se_2N_2. Bright, orange-yellow, amorphous powder, soluble in benzene and acetic acid; made by dissolving the tetrachloride in carbon bisulphide and passing ammonia into the solution.

Selenium Tetrabromide. $SeBr_4$. Bright reddish-brown powder, crystallizing from carbon disulphide in dark orange-red crystals; volatile at ordinary temperatures; made by treating the monobromide with bromine.

Selenium Tetrachloride. $SeCl_4$. Bright yellow crystals which volatilize without melting; soluble in hot phosphorous oxychloride; made by treating selenium dioxide with phosphorous pentachloride.

Seleniureted Hydrogen. H_2Se. Colorless gas of an

unpleasant odor. It destroys the sense of smell temporarily, and is made by treating ferrous selenide with an acid.

Selenocentric. Pertaining to the center of the moon; *e.g.*, selenocentric place of a heavenly body, place as seen from the moon's center.

Selenodont Dentition. Teeth with the crowns adapted for grinding, as in the Ruminants. The ridges of enamel upon the crowns are disposed into crescentic lobes, the convexities of which are turned inward in the upper teeth and outward in the lower.

Selenodontia (RUMINANTIA). Section of artiodactyl (even-toed) Ungulates, whose molar teeth are adapted for cud-chewing and conform to the selenodont type. They have the metapodials united into a cannon-bone bearing four toes, the middle two alone reaching the ground. Molars are 6 times 4; upper incisors are absent, and frequently canines also. The stomach is differentiated into compartments to subserve rumination. See TYLOPA, TRAGULINA, PECORA, and CAVICORNIA.

Ravine of Seleucia.

Selenography. Description of the moon's surface, as geography is of the earth's.

Selenyl Chloride. $SeOCl_2$. Faintly yellow fuming liquid, solidifying below 0° to a crystalline mass which melts at 10° C.; bpt. 179.5° C. (cor.); decomposed by water; made by heating sodium chloride with selenium dioxide.

Seleucia. City on the Tigris, 40 m. n.e. of Babylon; built by Seleucus I.; important in first century; destroyed 165. Others of this name were in Syria and s. Asia Minor.

Seleucidæ. Syrian dynasty 312–65 B.C.

Seleucus I., NICATOR, d.280 B.C. General under Alexander; Satrap of Babylonia 321. The year of his recovery of Babylon from Antigonus, 312, was the starting-point of the era of the Seleucidæ, long used. He took the title of king 306,

Tetradrachmon of Seleucus I., Nicator.

and extended his sway to the Oxus and Indus. By 281 he was master of so much of Asia as Alexander had conquered. In 280 he made an attempt to gain the vacant throne of Macedonia, but was assassinated.

Self-Conceit. Unduly high opinion of one's gifts or abilities.

Self-conjugate Triangle, or SELF POLAR. One whose vertices are respectively the poles of the opposite sides in reference to a given conic.

Self-Consciousness. State or act of being aware of one's self. Many psychologists deny the existence of a direct sense of reaction or any immediate knowledge of anything but an object of knowledge. See CONSCIOUSNESS.

Self-Control. Habit of mind by which we resist the impulses of desire and affection, so as to conform to rules of virtue or prudence.

Self-Defense. See ASSAULT.

Self-denying Ordinance. Passed in Parliament at Cromwell's instance, April 3, 1645. It required "that no member of either House should, during the war, enjoy or execute any office or command, civil or military." Cromwell was made an exception.

Self-Development. Process of growth toward the highest perfection of which any given soul is capable.

Self-Esteem. Approval of one's own character, often, but not necessarily, exaggerated.

Self-Fertilization. That of the ovules of a flower by means of pollen from the anthers of the same flower.

Self-Heal. See HEAL-ALL.

Self-Induction. Faraday observed 1831 that on completing or breaking the current flowing in a helix an induced current is generated in a second wire wound outside the first. Henry showed 1832 that any variation in the strength of a current in a helix is also capable of inducing currents in the contiguous spires of the helix. The former is called MUTUAL INDUCTION (q.v.). The latter is called self-induction, as representing the action of a coil on itself. It is also called Inductance. The coefficient of self-induction, L, depends on the coil itself, and is sometimes called its INDUCTANCE (q.v.). Since the quantity of electrification is proportional to the flow of force, Φ, we may write $\Phi = IL$, I being the current strength, or $L = \Phi/L$; *i.e.*, this coefficient may be defined as the ratio of a flow of force to a current strength. Since the dimensions of Φ are $M^{\frac{1}{2}} L^{\frac{3}{2}} T^{-1}$, and those of I, $M^{\frac{1}{2}} L^{\frac{1}{2}} T^{-1}$, the dimension of inductance being the quotient is simply a length. Therefore in the C.G.S. system the unit coefficient of inductance is a centimeter. For practical purposes a QUADRANT (q.v.) has been adopted. Since an ohm is a quandrant per second (10^9 C.G.S. units), an ohm-second, or a secohm (so called by Ayrton and Perry), is the equivalent of a quadrant. In U. S. the unit coefficient of self-induction is called a Henry. See COEFFICIENT OF MUTUAL INDUCTION.

Self-Interest. One's own advantage considered as an end, as opposed to altruistic gratification.

Selfishness. Habit, principle, or instinct of making ourselves the principal object of our attention and solicitude.

Self-Love. Desire of one's own pleasure or gain, considered as an ethical end; almost identical with egoism.

Self-regarding Duties. Those the performance of which tends directly or indirectly to promote one's own happiness.

Self-Sacrifice. Virtue of one who willingly incurs pain or dispenses with pleasure to procure benefits for another.

Seligman, JESSE, 1827–1894. New York banker.

Selim I., 1467–1520. Sultan from 1512; conqueror of Syria, Egypt, and Arabia; head of Islam; noted for ability, energy, and cruelty.—II., 1524–1574. Sultan from 1566. His fleet sus-

Selim II.

tained a memorable defeat at Lepanto 1571.—III., 1761–1808. Sultan 1789–1807; deposed for attempting unpopular reforms.

Selinus. Greek city of s.w. Sicily, founded ab.625 B.C., taken by Carthage 409, destroyed 249 B.C. Its ruined temples are of great size.

Seljuks. Turkish-Tartarian tribe which arose in Turkestan; embraced Mohammedanism, absorbed neighboring tribes, and subjugated central and s.w. Asia, founding a vast empire. Bagdad fell 1055; the Greek Emperor Romanos was captured

1071; Asia Minor was subjugated 1074–84, whence the Crusades. The Sultanate of Iconium (Konich) was the starting point of the Ottoman dynasty.

Selkirk, or **Sealchraig**, ALEXANDER, 1676–1723. Scottish seaman, who lived alone on JUAN FERNANDEZ (q.v.), near Chili, 1704–9; afterward Lieut. R.N.; supposed original of Robinson Crusoe.

Selkirk, THOMAS DUNDAS, EARL OF, 1771–1820. Colonizer of Manitoba 1811. *Red River Settlement*, 1817.

Selkirk Mts. In s. British Columbia. Length ab.175 m., greatest elevation 9,940 ft.

Sellaite. MgF_2. Magnesium fluoride. Rare mineral occuring with sulphur and anhydrite near Montiers, France.

Sellar, WILLIAM YOUNG, 1825–1890. Prof. St. Andrews 1853, and Edinburgh from 1863. *Roman Poets*, 1863–81.

Sellers, COLEMAN, b.1827. American mechanical engineer, as is his cousin, WILLIAM, b.1824.

Selma. Capital of Dallas co., Ala.; on the Alabama, here navigable; important during the civil war. Pop., 1890, 7,626.

Selnecker, NICOLAUS, 1532–1592. German hymnist.

Selters. Cold acidulous springs near Limburg, Prussia. They chiefly contain carbonate of soda, chloride of sodium, sulphates of soda, lime, magnesia and iron, and much carbonic acid. They are refrigerant, tonic, diuretic, and aperient.

Seltzer Water. See SELTERS.

Selvage. Layer of clayey material, frequently found along the walls of metalliferous veins.

Selvas. Densely forested plains; especially the basin of the Amazon, which is covered with rich tropical forests.

Selwyn, ALFRED RICHARD CECIL, F.R.S., b.1824. Chief of the Geological Survey of Victoria, Australia, 1852–69; since 1869 director of the Canadian Survey.

Selwyn, GEORGE, 1719–1791. English wit and social celebrity, M.P. from 1747.

Selwyn, GEORGE AUGUSTUS, D.D., 1809–1878. Bp. of New Zealand 1841, and of Lichfield 1867; eminent for missionary zeal and efficiency. His son, JOHN RICHARDSON, b. ab.1840, became Bp. of Melanesia, N. Z., 1872.

Semæostomeæ, or SEMOSTOMEÆ. *Discophora* with a large central mouth surrounded by four large, often multilobed, arms. The number of marginal tentacles, etc., varies greatly. *Pelagia* and *Aurelia* are examples. The former has wide gastric pouches and eight interradial marginal tentacles; the latter has branched radial canals, two marginal tentacles, and a fringe of small tentacles.

Semaphore. Device for producing signals by the various positions and motions of a set of arms which may be viewed from the distant station by a telescope. A similar method is employed for signaling between ships at sea, the arms being replaced by colored lights. The railroad signal presents the appearance of a horizontal arm when set "at danger." When lowered at an angle of 45 degrees it indicates "caution"; when vertical, "safety."

Semaphore at "Danger." Semaphore at "Caution."

Semele. Daughter of Cadmus, beloved by Zeus, who, at her rash request, visited her in his terrible splendors. She was consumed by the lightning, but her unborn child Dionysus was saved by the god.

Semi-Anthracite AND **Semi-Bituminous.** Varieties of coal whose properties place them between the true anthracite and the true bituminous coals. See COAL.

Semi-Arians. Those who, denying, with the Arians, that Christ is of one substance with the Father, maintained that He is of like substance; prominent at the Synod of Ancyra, 358. The compromise, being distasteful to both Arians and Catholics, gradually disappeared.

Semicircular Deviation. Deviation from its normal position, produced upon a magnetic needle by vertical masses of iron or steel magnetized inductively by the earth. The phenomenon occurs on shipboard in the case of the compass needle. In swinging the ship around there are two positions in which the influence would be a maximum, and two in which it would disappear; hence the name.

Semicolligati. Grallatory feet of birds, having one toe behind and three in front, of which the middle and outer are united by a short web.

Semi-cubical Parabola. Curve of the third order, having, with the origin at the vertex, the rectangular equation, $y^2=2px^3$.

Semi-diameter OF SUN AND MOON. Angle subtended by the radius as seen from the earth. Mean semi-diameter of the sun, 16′ 02″; of the moon, 15′ 33″.5.

Seminal. Anything pertaining to seeds.

Semini, ANDREA, ab. 1525–1591. Painter of the Genoese school, who imitated Raphael. Most of his works are at Genoa

Andrea Semini.

and Milan.—His father, ANTONIO, ab.1485–1547, was a pupil of Brea, whose style he modernized. His *Nativity*, at Savona, is in the style of Perugino.

Seminoles. Appalachian Indians of Muscogee stock, who lived in n. Florida. They differed from the allied Creek Indians in being hunters rather than agriculturists. Those now in Indian Territory number 3,000.

Seminole War. On the cession of Florida to the U. S., 1823, the Seminoles agreed to retire to the interior and not to molest the settlers. A treaty was made with some of their chiefs 1832 providing for the removal of the tribe to lands west of the Mississippi River. In 1835 troubles began, the treaty being repudiated by Osceola, whose wife was stolen and enslaved. Hostilities continued for several years. Osceola was captured 1837 under a flag of truce, and imprisoned: the tribe was driven into the everglades. In 1839 the chiefs signed another treaty, and after much delay were removed to the Indian Territory.

Semipalmati. Swimming feet of birds that have three anterior toes, webbed half way, and a posterior toe.

Semi-Pelagians. School teaching that the Fall has weakened but not extinguished man's capacity for good, and that, though needing grace, he can co-operate with it; condemned 529, though its founder, CASSIANUS (q.v.), is in several dioceses honored as a saint.

Semiplumæ. Feathers that possess stiff stems like the pennæ and soft vanes like the plumulæ, as do most of those beneath the contour feathers in birds.

Semiramis. Legendary queen of Ninus, founder of Nineveh, after whose death she built great cities and opened roads in all parts of the empire, conquered Egypt and most of Ethiopia, but failed in an attempt on India; famed for her voluptuousness. The legend combines historical and mythical elements in inextricable confusion. She is said to have built a tomb for Ninus 10 stadia wide and 9 high, the city of Babylon, the hanging gardens, etc. Most of the stupendous works in Iran and by the Euphrates seem to have been ascribed to her.

Semitæ. See FASCIOLES.

Semites. Name given by J. G. Eichorn, 1787, to designate

a group of nations closely allied in manners, physical features and religion, who are descended from Shem.

Semitic Languages. Most important group outside the Indo-European. Its divisions are well marked. Syrian and Assyrian make up the Aramaic; Hebrew and Phœnician, the latter scantily represented, but giving us the priceless boon of the alphabet, are closely related; while Arabic, with related dialects, forms a third and important group. Oldest of the records are the famous cuneiform inscriptions; of literature, most venerable in every way are the Hebrew Scriptures. In like manner, the Koran practically begins Arabic literature.

Semitic Races. Supposed descendants of Shem; Hebrews, Syrians, Mesopotamians, Arabs, Abyssinians, and some others, so far as originally speaking languages akin to Hebrew.

Semler, JOHANN SALOMO, 1725–1791. Prof. Halle from 1752; precursor of biblical criticism, moderate rationalist, and voluminous writer.

Semmering. Mountain of Austria, 60 m. s. of Vienna; ht. 4,416 ft.; traversed by a railway to Trieste, built 1850–54.

Semmes, RAPHAEL, U.S.N. and C.S.N., 1809–1877. Commander of the *Alabama*, most destructive of Confederate cruisers, from Aug. 1863 till her destruction by the *Kearsarge* off Cherbourg June 19, 1864. See WINSLOW, JOHN A.

Semnopithecidæ. Family of *Cynomorpha* or dog-like Apes, having long tails, natal callosities, but no cheek-pouches. The fore limbs are shorter than the hind, progression on the ground is quadrupedal. Here are included, first, the genus *Semnopithecus* of s.e. Asia, including the Entellus or Sacred Monkey of the Hindus, and the Proboscis Monkey of Borneo, with its greatly prolonged nose; second, *Colubus* of Africa, which differs from Semnopithecus in having a still shorter or rudimentary thumb.

Semolina. Middlings of wheat, or flour thereof, used in Italy. France, and elsewhere, for soups and desserts.

Sempach. Village of Switzerland, 9 m. n.w. of Lucerne. Here, July 9, 1386, 1,300 Swiss peasants defeated with great

Battle at Sempach.

slaughter Leopold, Duke of Austria, and the flower of his chivalry, 4,000 horsemen, thus securing Swiss freedom. See WINKELRIED.

Semper, GOTTFRIED, 1803–1879. German architect, prof. Zurich 1856–69.—His nephew, KARL, 1832–1893, prof. Würzburg from 1866, pub. books of travel and on zoölogy.

Sempringham. See GILBERTINES.

Sen, KESHUB CHUNDER, 1838–1884. Hindu reformer; founder of the Brahmo Somaj of India, 1866.

Sénancour, ETIENNE PIVERT DE, 1770–1846. French author, notable for deep and sincere melancholy long before pessimism came into fashion; overlooked in his productive period, and of chiefly posthumous repute. His *Obermann*, 1804, called forth two of Matthew Arnold's finest poems.

Senarmont, HENRI HURRAN DE, 1808–1862. Prof. in Paris School of Mines; eminent as a crystallographer; author of many papers of much scientific value.

Senarmontite. Sb_2O_3. Antimony oxide, crystallizing in the isometric system; usually regarded as a product of alteration of the antimony sulphide, and not often found by itself in quantity to pay for working. Valentinite is a mineral of the same chemical composition, crystallizing in orthorhombic forms.

Senate. Supreme administrative council of ancient Rome, dating from the time of the kings. It proposed legislation to the assemblies of the people, took measures against sudden danger, and, through the annual magistrates, governed the state. Its functions were nearer those of a ministry than of a legislature. The members held office for life, unless removed by the censor, or, in later times, by the emperor.

Senate OF THE U. S. This consists of two Senators from each State, a total of 88 in 1897, who are elected by the State Legislatures for terms of six years. They receive $5,000 per annum, 20 cents a mile for traveling expenses to and from home, and $125 per annum for stationery. See CONGRESS OF THE U. S.

Senebier, JEAN, 1742–1809. French naturalist. *Sur l'influence de la lumière solaire*, 1782–83; *Expériences sur l'action de la lumière solaire dans la végétation*, 1788; *Physiologie végétale*, 1800.

Seneca, LUCIUS ANNÆUS. 3 B.C.–65. Roman courtier and Stoic philosopher, one of the most brilliant men of his time; in banishment 41–49; tutor of Nero, and reluctant adviser of some of his misdeeds; Consul 57; self-executed by Nero's order, opening the veins of his feet and arms in a hot bath. As a moralist his intentions and sympathies were good, but his practice fell much below his theories; his character lacked the strength, consistency, and noble simplicity of his great successors in Roman stoicism, Epictetus and Marcus Aurelius. His prose works have often been edited; some were tr. ab.1680 and later. His nine tragedies follow Greek models.—His father, ANNÆUS, ab.54 B.C.–39, a rhetorician from Spain, wrote several treatises, of which five books of *Controversiæ* survive.

Seneca Lake. In w. central N. Y.; length 36 m. n. to s.

Seneca Oil. Small quantities of surface petroleum, collected in early days in w. N. Y.

Senecas. See HURONS and IROQUOIS.

Senefelder, ALOYS, 1771–1834. German printer, inventor of lithography. *Lehrbuch*, 1818, tr. 1819.

Seneffe. Town of Belgium, 27 m. s.w. of Brussels; scene of two French victories, that of Condé over the Prince of Orange, Aug. 11, 1674, and that of Marceau over an Austrian force, July 2, 1794.

Senegal. River of w. Africa, rising in the Kong Mts. and flowing n.w. to the Atlantic. Length ab. 1,000 m. The country is very picturesque, resembling in its physical features all

Rock Scenery of Upper Senegal.

sorts of architectural forms, ruined castles, spires and pyramids; so much so, that it oftentimes is necessary to approach quite close to satisfy one's self to the contrary.

Senegambia. Region of w. Africa, between the Sahara and the Gambia, held in part by France since ab.1600, and more fully since ab.1855; area and pop. uncertain.

Senegambians. The natives are numerous tribes of negroes, some Mohammedans, others fetichists. Arabic is spoken n. and e. of the Senegal and a Berber admixture is there present. On the coast and s. of the Senegal are the Wolofs, tall, glossy black negroes. In the center are the Mandingoes, Mohammedans, muscular, tall, and very cruel. In the s. are the gentler Fulah, also Mohammedans, of a reddish complexion and with straight hair, of Hamitic descent. Most of the negroes are polygamists; circumcision is widely practiced. A few hold the land; the rest are slaves.

Senescence. See OLD AGE, DISEASES OF.

Seneschal. Household servant of the Frankish kings, corresponding to the English steward.

Seney, GEORGE INGRAHAM, 1826–1893. Banker in New York; founder of a hospital in Brooklyn: benefactor of colleges, etc.; former of a noted collection of paintings, dispersed 1884.—His father, JOSHUA, 1750–1799, was in Congress from Md. 1787–92.

Senesino, FRANCESCO BERNARDI, ab.1680–ab.1750. Opera singer; artificial mezzo soprano; in London 1720–35.

Senft, KARL FRIEDRICH FERDINAND, 1810–1893. German mineralogist and geologist, teacher of natural sciences at Eisenach. *Synopsis der Mineralogie und Geologie*, 1876–78.

Senior, NASSAU WILLIAM, 1790–1864. Prof. of Political Economy at Oxford 1825–30 and 1847–62. Author of lectures, parliamentary reports, and essays. *Journals*, 1868–71; *Conversations*, 4 vols., 1878–80.

Seniority. Priority of rank in the military service, so that no doubt shall arise as to which officer shall command the troops.

Senlac, BATTLE OF. See HASTINGS.

Senlis. Old town of France, 33 m. n.n.e. of Paris. A treaty signed here, May 23, 1493, between Maximilian and Charles VIII. of France, settled the Burgundian inheritance.

Senna. Dried leaves of *Cassia*, imported from India and Egypt, and variously prepared for use in medicine.

Cassia obovata.

Sennaar. Former African state of e. Soudan, largely between Blue and White Nile, held by Egypt 1820–84, and since by the Mahdists.

Sennacherib, d.681 B.C. King of Assyria 705 B.C.; son of the usurper Sargon; famous as a conqueror, but defeated in his siege of Jerusalem under Hezekiah; assassinated by two of his sons. Many inscriptions and other relics of his are extant.

Sensation. Simple mental element; phenomenon of mind brought about by stimulation of an afferent nerve, transmitted to the sensory center, the brain. It has two marked aspects, the presentative, which gives us information as to the external object responsible for the sensation, and the affective, which indicates the elementary feeling tone which accompanies every sensation. Sensations are of two general classes, common and special. Common sensation is not dependent apparently upon specially modified end organs, and refers to such comparatively vague phenomena as tickling, nausea, and thirst. It has thus little of a definitely presentative character, and affords little knowledge of the external world, but is of considerable importance as an indication of the condition of the body. Special sensation, on the other hand, is dependent upon specially modified sense organs, and is distinctly presentative. The special senses are those of sight, hearing, taste, smell, skin senses (touch and temperature), and the muscle and joint sense. The most important characters of sensation are intensity, quality, extensity, and duration.

Sensationalism. Theory of knowledge which derives all abstract conceptions from associated sensations; opposed to intellectualism, which supposes an original and independent action of the understanding, supplying data and functions not found in either sensation or association.

Sensation Areas. Areas of skin of more or less circular shape, within which two points (as of compasses) pressed upon the skin are felt as one. Their magnitude varies with the different parts of the body, and corresponds to the fineness of sensibility of the region, being smallest on the tip of the tongue and largest on the back.

Sense. Sum of the simple mental states brought about by the stimulation of a particular sense organ. The experience of one sense differs qualitatively from that of another. See SENSATION.

Sense Capsules. Cartilaginous boxes or skeletons that form around the ear and eye in the vertebrate embryo. That around the ear incloses the essential organ of hearing (inner ear), and is closed except for three perforations; viz., foramen for the auditory nerve, foramen ovalis, and foramen rotundum.

Sense of Duty. Feeling of approval and acceptance of the propriety of fulfilling our obligations and duties.

Sense of Responsibility. Recognition that we have to answer for our actions, whether they are conformable to or in violation of the rules of duty.

Sensitive Flames. When a jet of gas issuing from a fine vertical opening under a considerable pressure is on the point of flaring, it is sensitive to certain sounds, as the rattling of keys or the sound of the letter s, the flames shortening and roaring as shown in the experiments of Prof. Tyndall. Barratt showed also that if the flame be lighted above a sheet of wire gauze arranged horizontally about two inches above the jet, the flame, which is luminous only at the tip, is a sensitive flame and responds readily by sinking down to the gauze when certain sound waves strike it. If it be surrounded by a wide tube, it will sing spontaneously. By delicate adjustment, as shown by Geyer, such a device may become extraordinarily sensitive to all very high sounds, such as hissing or rattling of keys, and also to certain sounds too acute to be perceptible to the ear.

Sensitiveness. That quality of a physical instrument in virtue of which it gives its indications quickly. A thermometer with a small bulb of cylindrical form is sensitive.

Sensitive Plant. Plants of the natural family *Leguminosæ* which fold or droop their leaves on being shocked. *Mimosa pudica* is the one most commonly cultivated. *Cassia nictitans* of the Middle and Southern States is slightly sensitive.

Sensitive Plant (*Mimosa pudica*).

Sensitivity. Ease with which a body yields to any outside influence; especially in thermometers, where it is indicated by a numerical coefficient, sometimes awkwardly called the coefficient of sensitiveness. It is the reciprocal of sluggishness or retardation.

Sensualism. Low conception of morality, which makes the pleasures of sense the chief end of man.

Sentence. Final judicial decision, especially in a criminal case.

Sentiment. High form of emotion attaching to ideal objects. Sentiments may be classified as intellectual, æsthetic, ethical and religious.

Sentiment of Rights. Feeling of pleasure in contemplating a regard in another for the rights of ourselves or of others.

Sentiment of Wrongs. Feeling of indignation roused by a violation of rights, whether our own or others.

Sentinel. Armed soldier, posted under the orders of an officer of the guard, to keep a watchful outlook within the limits of his post, and to carry out his orders with unswerving fidelity. During the night no one can approach the post of a sentinel without challenge, nor pass without the countersign. Sleeping on post in time of active service is punishable with death.

Senussi. Moslem society of austere and fanatical doctrines, with ramifications all over N. Africa; it has helped much in uniting the Mohammedan population and in resisting foreign and infidel influence.

Seoul. Capital of Corea, since ab.1600; near the center of the kingdom, on the Han-Kiang; founded 1397; closed against aliens till recent years; taken by Japanese 1894. Pop. ab. 250,000.

Sepalody. Change of the petals of a flower to sepals.

Sepals. Divisions of the calyx of a flower.

Separate Baptists. Denomination which sprang up in New England, due to Whitefield's preaching; they separated from the churches of the Standing Order. Ab. 1750 a large number again joined the Baptist Church. In 1895 there were 24 churches, with ab.1,600 members in U. S.

Separate Lutherans OF PRUSSIA. Name given to those Lutherans who refused to comply with the order of Frederick William III., uniting the Reformed and Lutheran Churches.

Separate Touch. One of the three principal methods of magnetization; first used by Gowin Knight (1713–1772), 1745. It consists in drawing the two opposite poles of a pair of equal magnets from the middle to the opposite ends of the

bar to be magnetized. The process must be repeated several times and on the different sides of the bar.

Separator. Mechanical apparatus of several types, differing in mode of construction; used in the concentration of ores,

Separator.

and designed to effect a separation of coarser and lighter from finer and heavier grains of ore with the aid of water.

Sepher Yetzirah. Book of Formation, or Creation, commonly regarded as the oldest book of the Jewish Kabbalah and attributed by tradition to Abraham. The date of its actual authorship is disputed. Critical authorities assert that it belongs to post-talmudic time. It consists in an exposition of the relations assumed to exist between small whole numbers, the letters of the Hebrew alphabet and certain divine truths. Its meaning is extremely obscure.

Sepia. Cephalopod of the division *Decapoda* and sub-group *Calciphora*, differing from the Squid mainly in that the pen or internal skeleton is calcareous, of a broad shape, of spongy texture, has chambers in its apex, and is known as a sepiostaire. The body is plumper than in squids: the lateral fins extend sometimes the entire length of the body.

Sepiolite. See MEERSCHAUM.

Sepiostaire. Cuttle bone of *Sepia; i.e.*, internal skeleton or pen of cuttle-fishes.

Sepoy. Native of India serving in the British army. The Sepoy Mutiny occurred 1857–58, when the natives in the army outnumbered the Europeans nearly 6 to 1. The present ratio is about 2 to 1.

Septa. Partitions, plate-like structures, especially those that stand (like spokes in a wheel) around the wall in the coral cup.

Septamerous. Flowers whose parts are in cycles of sevens.

Septate. In Botany and Zoölogy, organs or organisms separated by diaphragms or membranes into a series of cavities.

Septata. See GREGARINIDÆ.

September. Seventh Roman month, and the ninth month in the Gregorian calendar.

Septembrists. Murderers of over 1,300 royalists and others in Parisian prisons Sept. 2–7, 1792.

Septicemia. Disease characterized by a general fever caused by the absorption of poisonous products of inflammation, or of the microbes themselves, into the blood, but without a distinct suppurating wound. The fevers produced by an unremoved blood-clot in a wound, or by a dissecting wound, are examples. See BLOOD POISONING and PYEMIA.

Septicidal. Dehiscence or splitting of a seed-vessel into its constituent carpels, *i.e.*, through its septæ or dissepiments, as in Laurel.

Septifragal. Dehiscence or splitting of a seed-vessel, so that the valves of the pericarp break away from the dissepiments, as in Morning Glory.

Septimania. Ancient district in the s.w. of France, taking its name from its seven cities: Toulouse, Agen, Bordeaux, Poitiers, Saintes, Angouleme and Perigueux.

Septuagesima. Third Sunday before Lent.

Septuagint. Greek version of O. T., probably made in Egypt ab.260 B.C. The legend says it was done in 72 days by 72 learned Jews imported from Jerusalem by Ptolemy Philadelphus. It is unequal and free, in parts differing widely from the received Hebrew text, but is of great historical importance.

Septum. In Botany and Zoölogy, a membrane or diaphragm separating two cavities.

Sepulveda, JUAN GINES, ab.1490–1574. Spanish humanist, tutor of Philip II. His *Historia Caroli V.* and other works were pub. 1780.

Sequence. Unrhymed and unmetrical Latin hymn, sung after the Epistle; introduced by Notker ab.900.

Sequence. Quantities in succession, whose relations are undetermined or disregarded, form a sequence, as distinguished from a series. A sequence becomes a series whenever the relation between its terms becomes known or is considered.

Sequin. Gold ducat of Venice, 13th century and later.

Sequoia. Genus of trees, consisting of two species; *S. sempervirens*, the Redwood, and *S. wellingtonia*, the Mammoth tree. The latter is found in comparatively few places, the largest being found in Calaveras, Cal. Trees 112 ft. in circumference at the base, 450 ft. high, and estimated to be 1,100 years old, have been found.

Sequoia wellingtonia—the "Three Graces."

Sequoyah (GEORGE GUESS), ab. 1770–1843. Cherokee, who, on learning that the white man's book represented spoken words by printed symbols, invented ab.1826 an alphabet for his own people, partly phonetic and partly syllabic, using the Roman letters and arbitrary symbols, 85 characters in all.

Seraglio. Old palace of the Sultan of Turkey; improperly applied to that portion inhabited by the women of the imperial court. It is not now occupied by the Sultans; the Harem is here. It was once used to designate any inclosure, as the Jews' Ghetto at Rome.

Serao, MATILDE. See SCARFOGLIO.

Serapeum. 1. Sanctuary near Memphis, Egypt, where the Apis-bulls were buried; now covered by sand; a collection of temples and tombs, explored by Mariette 1851–55. 2. Temple at Alexandria, which contained a library of ab.50,000 vols.

Seraphim. Order of heavenly beings described symbolically by Isaiah, vi. 1–7.

Seraphim, ORDER OF. Founded in Sweden ab.1285, suppressed ab.1610, revived 1748.

Seraphine. Musical instrument which was the precursor of the Harmonium. The sounds were produced by the action of wind on free vibratory reeds.

Serapis. Deity of the Egyptian pantheon, regarded as a combination of Osiris with the bull Apis, sacred to Ptah. His principal temple, the Serapeum, was at Memphis, where the Apis-bulls were buried in stone sarcophagi in rock-hewn chambers. His worship spread from Alexandria over the Asiatic coast, the Greek islands and mainland, and was introduced at Rome along with that of Isis. He was lord of the lower world, and thus identified with Pluto or Hades; also, god of healing. His emblem was a bull with the sun-disk and sacred serpent, token of supreme power, between his horns. His bust in the Vatican shows a corn-measure, symbol of the nether world.

Serenade. Music performed in the open air on a clear or serene night, especially a concert given by gentlemen in a spirit of gallantry, under the windows of ladies. Formerly much in vogue in Italy and Spain, and still so in German and other university towns.

Sereth. River rising in the s. of Austria and emptying into the Danube above Galatz. Length 300 m.

Serfdom. Institution in which laborers, though without freedom of settlement or occupation, yet practically possessed property and contributed to the national wealth directly, as well as through their lords. It was abolished in England before 1600, and latest in Russia, where emancipation was proclaimed March 3, 1861, to be completed within 2 years. The number thus set free was 23,000,000. The serfs on the imperial domains had been liberated by Nicholas 1842.

Serge. Twilled fabrics, usually made of wool, but sometimes of silk. Silk serge is used for linings and woolen serge for cloaks.

Sergeant. Non-commissioned officer appointed by the colonel of a regiment from the enlisted men: he ranks next above a corporal. From the sergeants the colonel selects one, the color-sergeant. Commissary-sergeants are selected by the Sec. of War to assist with the stores. A lance-sergeant is a corporal temporarily assigned to the office of sergeant. A quartermaster-sergeant is appointed by the colonel to assist the quartermaster. His rank is next below that of the sergeant-major, who is the senior non-commissioned officer of the regiment: the duties of the latter are to keep the duty roster of sergeants and corporals, to transmit to them the adjutant's orders, and to supervise the proper proportion of men from the several companies for details of the day. The orderly-sergeant is the first sergeant of a company, and his duties require him to supervise the roll-calls, to maintain the discipline of his company, see to the execution of the orders of his captain and to carry out his wishes in the management of his men.

Sergeant, ADELINE, b. 1851. English novelist. *Jacob's Wife*, 1880.

Sergeant, JONATHAN DICKINSON, 1746–1793. Delegate to Congress 1776–77; Atty.-gen. of Pa. 1777–80.—His son, JOHN, 1779–1852, was M.C. 1815–23, 1827–29, and 1837–42, and a leader of the Phila. bar.—His brother, THOMAS, 1782–1860, was justice Pa. Supreme Court 1834–46. *Land Laws of Pa.*, 1838.

Sergi, GIUSEPPE, b.1841. Prof. Bologna 1880, and Rome 1884; writer on psychology.

Sergius. Patriarch of Constantinople 610–641; author of a hymn in praise of the Virgin.

Sergius, ST. Martyr at Cæsarea 304.

Sergius, TYCHICUS, d.835. Reviver of the Paulician sect; persecuted by Byzantine emperors.

Sergius I. Pope 687–701.—II. 844–847.—III. 904–911.—IV. 1009–12; first to assume a new name with the papacy.

Sergius Paulus. Proconsul of Cyprus, converted by St. Paul. Acts xiii. 7, 12.

Serial Homology (HOMOTYPY). Structural likeness between corresponding parts of one individual; *e.g.*, its metameres, appendages, etc. Thus in man the wrist bones are serially homologous with those of the ankle.

Sericite. Variety of Muscovite mica, characterized by a peculiar silky luster; one of the components of the sericite schists found in some parts of Europe. See MICA.

Sericteria. Spinning glands of insect larvæ, either in the position of the salivary glands, or else sacs attached to the rectum.

Series. Quantities in sequence related by some known law. Series are convergent in which the sum of the first n terms approaches a constant limit, as n increases. They are increasing or decreasing as the terms are successively greater or less. The most familiar series are difference, recurring, and harmonic. Specific series are named from their relation to special functions, as logarithmic.

Series. In Botany, row or circle of parts, as the bracts of the involucre in *Compositæ*.

Seringapatam. Former capital of Mysore, s. India; besieged by the British 1791 and 1792; taken by storm, and Tippoo Saib killed, May 3, 1799; once populous, now mainly ruined. Pop. ab. 12,000.

Seringe, NICOLAS CHARLES, 1776–1858. Prof. in Lyons 1829. *Mélanges botaniques*, 1818–31; *Elémens de botanique*, 1841; *Flore des jardins*, 1847–49.

Serna, JOSÉ DE LA, 1770–1832. Spanish general in Peru 1816, viceroy 1821; defeated by Sucre Dec. 1824.

Serotinous. Plants or flowers which develop late in the season.

Serous Membrane. Tissue whose use is to diminish the friction of the movement of the various parts of the body. It is always a closed sac, one side enveloping the moving organ, *e.g.*, the lungs; the other side, the walls of the cavity in which the organ moves, the thorax. This arrangement causes the inside of the sac to glide over itself, which it is enabled to do easily by its polished surface kept moistened by a serous secretion.

Serpa Pinto, ALEXANDRE ALBERTO DA ROCHA, b.1846. Portuguese explorer of Africa 1877–79 and 1884–86.

Serpent. Obsolete instrument forming the natural bass of the ancient cornet family. It was invented by Edme Guillaume of Auxerre in 1590.

Serpent Charming. Art practiced in the East from remote antiquity. In India the profession is hereditary. Serpent charmers of the East have a power of knowing where a serpent is concealed, probably distinguishing the musky smell which the serpents generally emit. They accompany their words with strange whistling sounds; what the tones of their voice may effect is uncertain. The serpents erect themselves

Indian Serpent Charmers.

partially, and in this position perform strange movements to the sound of a pipe on which the charmer plays.

Serpentine. $MgSiO_3.H_2O$. Mineral and rock. In composition it is essentially a hydrous magnesium silicate. Though there has been considerable speculation among geologists as to its origin, it may be regarded, in general terms, as a product of the alteration of magnesian minerals. It occurs in many distinct varieties, but is usually amorphous, of dull green or reddish color, and about as hard as common limestone. It takes a good polish, and is used considerably for building purposes. The so-called noble or precious serpentine is a bright green, translucent variety, of some value as an ornament.

Serpents. See OPHIDIA.

Serpent Worshipers. See OPHITES.

Serpula. Tubicolous Annelid worm, whose body is divided into a thorax and an abdomen. The head is provided with a collar: on each side of the mouth are two spirally coiled plates, bearing gills. It lives in little crooked tubes attached to sea-shells, rocks, etc.

Serpula contortuplicata (with expanded gills), on the back of an Oyster-shell.

Serra. See OVIPOSITOR.

Serra, JUNIPERO, 1713–1784. Franciscan priest, in Mexico from 1749; founder of the missions in California 1769 and later.

Serranidæ. Family of fishes, including *Centropistes* (Black-fish or Sea Bass), *Epinephelus* (Red Grouper), and *Promicrops* (Jew-fish). The grouper is abundant near Florida, and attains a weight of 40 lbs. It is more easily transported in warm climates than most fish, being very tenacious of life. The jew-fish of the same region attains the remarkable weight of over 500 lbs. See ACANTHOPTERI and BASS.

Serrano y Dominguez, FRANCISCO, DUKE DE LA TORRE, 1810–1885. Spanish general, favorite of Queen Isabella, whom he expelled 1868; Captain-gen. of Cuba 1860-62; Duke 1862; Regent 1869; Prime Minister 1871, 1872, and 1874; commander against the Carlists 1872 and 1874.

Serrate. Saw-toothed; in Botany and Zoölogy, margins of leaves, membranes, and other structures having small teeth projecting forward, as in the chestnut.

Serres, OLIVIA. See OLIVE, PRINCESS.

Serrulate. Diminutive of Serrate.

Sertorius, QUINTUS, ab.121–72 B.C. Roman general, who served with distinction against the Teutones, and commanded one of 4 armies which besieged Rome under Marius and Cinna; Prætor 83; sent to Spain 82; outlawed by Sulla. He successfully resisted Metellus and Pompey in Spain until assassinated.

Sertularida. *Calyptoblastica*, in part, the other group included being the *Campanularida*.

Sertularidæ. Family of campanularian *Hydromedusæ*, which has flask-shaped sessile hydrothecæ on opposite sides of

the branched stem. In *Sertularia*, the gonophores do not become detached medusæ as in *Campanularia*.

Serum. Light yellow fluid, one of the constituents of blood. It is separated by permitting blood to stand exposed to the air until it coagulates and the clot contracting squeezes out the serum. Its main constituent is ALBUMEN (q.v.).

Serum Therapeutics. Method of treating diseases caused by micro-organisms, as diphtheria and tetanus, by the hypodermic injection of serum derived from the blood of some animal, usually a horse, previously inoculated to generate an antitoxin in his blood. Only a comparatively few of the germ diseases can, as yet, be so treated. See ANTITOXIN.

Servant. See MASTER AND SERVANT.

Servetus, MICHAEL, 1511–1553. Spanish physician and theological inquirer, author of two anti-Trinitarian tracts 1531–32, and of *Christianismi Restitutio*, 1553. For this, at Calvin's instance, he was arrested at Vienne and condemned by the Inquisition. Escaping, he was caught in Geneva, prosecuted by Calvin, and burned by the city authorities. In that persecuting age the German reformers approved the sentence and the deed.

Servia. Kingdom of s. Europe, between Hungary and Turkey. It is mountainous and covered with forests. The chief industry is the raising of cattle, agriculture being in a very primitive condition. The Serbs (Croats) drove out the Avars ab.638, and rid themselves of their Byzantine governors in the 11th century. Their power was broken by the Turks at the battle of Kossova 1389. Austria held most of the territory 1718–39; the Turks were driven out 1804, but regained possession 1813. In 1830 the Porte was compelled to recognize the quasi-independence of S., and in 1867 the Turkish garrisons

Servians.

were withdrawn; in 1876 it declared war on Turkey. Russia intervened to save it from ruin. It became autonomous 1878, with extension of territory on the s. boundary, and in 1882 a kingdom. A war with Bulgaria in Nov. 1885 resulted disastrously. Prince Milan IV. came into power 1868, proclaimed himself king 1882, and abdicated in favor of his son, ALEXANDER I. (b.1876), 1889 (see NATALIE). A liberal constitution was adopted 1889, but that of 1869 was restored 1894 by a coup d'etat. Capital, Belgrade. Area 19,050 sq. m.; pop., 1894, 2,256,084.

Servian. Branch of the Slavonic family of languages, with literature a thousand years old, and rich in modern ballads.

Service. Active service means to be subject at all times to such orders as the military superior may issue, and is in contradistinction to retired service, where only extraordinary conditions may require the status of active service to supervene. When a person in the military service is employed to obtain information clandestinely he is upon secret service: while to act as a spy is not obligatory, any military person may be sent upon a scout or other dangerous service.

Service-Berry. *Amelanchier canadensis.* Shrub or small tree of the Apple family, native of e. N. America: known as Juneberry, and along the coast as Shad-bush.

Service Pipes. Those which convey water from street mains to houses. Lead was used by the Romans, but modern pipes are usually of wrought-iron.

Service-Tree. *Pyrus domestica.* Large, spreading tree of the Apple family, native of Europe; valued for its hard wood.

Servile Wars. Those in which the Roman slaves were led by SPARTACUS (q.v.).

Servites. Augustinian order founded 1233 by Florentine merchants; sanctioned by the pope 1255; devoted to the Virgin. It spread through Europe, and now has houses in England and the U. S.

Servitudes. In Roman Law, more than easements, extending to interests for life in both land and chattels.

Servius, ab.380. Latin commentator upon Virgil.

Servius Tullius. Sixth king of Rome, 578–534 B.C. These dates, and the whole story of his life and tragic end, are largely mythical.

Sesame-Grass. See GAMA-GRASS.

Sesamoid Bones. Small bones developed in the midst of a tendon where there is especial pressure on an adjoining part when the tendon's muscle is contracted. They vary in number in different individuals usually directly as the muscular development. The most pronounced example is the knee-cap, which is always present.

Sesamum. *Sesamum indicum.* Annual herb of the natural family *Pedaliaceæ*, native of India, cultivated for its seeds, from which Benne-seed oil is derived, a constituent of artificial butter.

Sesostris. Egyptian king, probably Rameses II. of the 19th dynasty; alleged conqueror of Ethiopia, Arabia, Thrace, and Scythia; builder of temples, towns, canals, and roads. His dates, exploits, and even his identity, are doubtful.

Sessile. In Botany and Zoölogy, stalkless organs or organisms.

Session. Presbyterian council, consisting of Pastor and Ruling Elders. It has the exclusive competency (saving appeal to Presbytery) of admitting or excluding communicants.

Sestertius. or SESTERCE. Roman coin, at first struck in silver and later in bronze as well, valued originally at 2½ asses, and, when the standard was reduced so that the denarius contained 16 asses instead of 10, at 4 asses.

Sesto, CESARE DA, ab.1470–ab.1524. Italian painter, probably a disciple of Leonardo da Vinci, but later affected by

Youthful Head of Christ, by Cesare da Sesto.

Raphael. The *Vierge aux Balances* of the Louvre, formerly ascribed to Leonardo, is probably his. His *Youthful Head of Christ* is in the Ambrosiana at Milan.

Sestos. Town of Thrace, on the Hellespont opposite Abydos, 7 stadia distant; famous for Xerxes' bridge of boats; also for the loves of Hero and Leander.

Set. In Mining, combination of horizontal and vertical or inclined pieces of timber, so arranged as to support the overlying rock and prevent its falling in. As the work of excavation proceeds, additional sets of similar construction are put in place when needed.

Seta. In Bryology, slender stalk of the sporange in mosses; also more broadly, in Botany and Zoölogy, bristle-like organs.

Setaceous. Bristle-like; in Botany, very slender and pointed leaves.

Setæ. Stiff hairs on worms and other invertebrate animals.

Seth. Third son of Adam, ancestor of Noah and of all mankind since the flood.

Seth, ANDREW, LL.D., b. 1856. Prof. St. Andrews 1887, Edinburgh 1891. *Kant to Hegel*, 1882; *Hegelianism and Personality*, 1887.

Sethites. Division of Ophites, so called because their doctrines were taught in a book bearing the name of Seth.

Setigera. See SUIDÆ.

Set-off. Statutory defense which may be interposed to cut down or wipe out a plaintiff's claim.

Seton. Slender skein of silk or cotton thread passed, by means of a needle, into the connective tissue under the skin and permitted to remain with the ends of the skein sticking out on either side. It is so applied to produce irritation to draw the blood to the part and thereby diminish the blood supply in a neighboring diseased part.

Seton, ELIZABETH ANN (BAYLEY), 1774–1821. Founder, 1809–12, at Emmetsburg, Md., of the American order of Sisters of Charity.

Settembrini, LUIGI, 1812–1876. Neapolitan patriot, imprisoned 1839–42 and 1849; Senator 1873. *Letteratura Italiana,* 1869–72.

Setter. Dog used as is the pointer in hunting: of three main varieties, English, black and white, or black, white and tan; Irish, solid mahogany-red; and Gordon or Scottish,

Irish Setter.

black with tan spots on sides of muzzle and lower part of legs. The first was bred from a spaniel and pointer; the latter was a cross of the setter with a collie ab.1800. The origin of the Irish setter is not known.

Settignano, DECIDERIO DA, 1428–1464. Italian sculptor.

Settle, ELKANAH, 1648–1723. English playwright and versifier, satirized by Dryden in *Absalom and Achitophel.*

Settle, THOMAS, 1791–1857. M.C. 1817–21; Judge N. C. Supreme Court 1832–54.—His son. THOMAS, 1831–1888, filled the latter office 1868–71 and 1873–76, and became U. S. District Judge for n. Fla. 1877.

Settlement, LAW OF. English statute of the reign of Charles II., making it legal to return any person without means to the parish where he originally belonged. It was intended to prevent paupers from becoming dependent on parishes not responsible for them.

Seubert, MORITZ, b. 1818. Prof. Polytechnic School, Karlsruhe. *Flora azorica,* 1844; *Die Pflanzenkunde gemeinfasslich dargestelt,* 1849–50; *Lehrbuch der gesammten Pflanzenkunde,* 1853.

Sevagee, 1627–1680. Founder of the Mahratta empire; son of an officer of the last Mohammedan king of Bejapoor. He overturned that kingdom with an army gathered in the mountains, and united the petty States of the Mahrattas under his sway.

Sevastopol. See SEBASTOPOL.

Seven. Sacred number of the Hebrews; commonly deduced from the 7 planets of antiquity, the Sun, Moon, Mercury, Venus, Mars, Jupiter, Saturn. Others declare it the combination of 3, symbolical of God, and 4, of the World.

Seven Bishops. Abp. Sancroft, Bps. Ken, Lloyd, Turner, Lake, White, and Trelowney, who refused to read James II.'s Declaration of Indulgence. They were sent to the Tower June 8, 1687, tried and acquitted June 30. The nation stood by them, and the incident hastened the king's downfall.

Seven Champions of Christendom. St. George (England), St. Andrew (Scotland), St. Patrick (Ireland), St. David (Wales), St. Denys (France), St. James (Spain), St. Anthony (Italy).

Seven Christian Virtues. On the left are the Theological Virtues: Faith, dressed as a nun, holding a church, a New Testament, and a wax taper; Hope, with a beehive and a spade in her hands; Charity, standing upon a hot oven, etc. Then come the Cardinal Virtues; Temperance, with a bridle in her mouth and telescope in her hand; Justice, standing on the seat of justice and balancing swords; Prudence, in the garb of a nun and weighed down under her symbols, a coffin, mirror, sieve and the shield of faith; and Strength, mounted on a screw-press, with an anvil on her head, is holding a donjon in one hand and strangling a dragon with the other.

The Seven Christian Virtues with their Symbols.

Seven Churches. Christian communities of Asia Minor, to which, in the Rev. ii., iii., epistles of mingled praise and warning were addressed. They were Ephesus, Smyrna, Pergamum, Thyatira, Sardis, Philadelphia, and Laodicea. The two specially commended, Smyrna and Philadelphia, still exist.

Seven Cities, ISLAND OF. Imaginary island in the Atlantic, in which a body of Christians, under the guidance of their 7 bishops, were said to have found safety after the Saracen invasion of Spain.

Seven Days' Retreat. Battle in Va., including Mechanicsville, Gaines' Mills, Chickahominy, Peach Orchard, Savage Station, Charles City Cross Roads, and Malvern Hill, June 26 to July 1, 1862. Union loss in killed, 1,582, wounded 7,709, missing 5,958; total Confederate loss 17,583.

Seven Deadly Sins. Pride, covetousness, lust, anger, gluttony, envy, and sloth.

Seven Dolors of the Virgin Mary. R. C. festival, kept on Friday before Holy Week; instituted 1423. Another, dating from 1814, occurs in September.

Seven Gifts of the Holy Ghost. Wisdom, Understanding, Counsel, Ghostly Strength or Fortitude, Knowledge, Godliness, and the fear of the Lord.

Seven Gods of Good Fortune. Group of divinities which form a sort of popular appendage to Japanese Buddhism. They comprise Fuku-roku-jiu, whose pseudonym signifies "Wealth, Prosperity, and Longevity"; Daikoku, represented as standing upon a pair of rice bales; Ebisu, the fisherman; Hotei, a laughing priest; Bishamon Ten, the Brahminic Kuvera; Benten, a goddess identified with Sarasvati; and Ju-ro-jin, genius of longevity.

Seven Last Words. Composition of Haydn for use at Cadiz, originally a series of orchestral pieces designed to follow the reading by the priest of each of the last utterances of Christ; changed to a cantata.

Seven Liberal Arts. In the Middle Ages, Grammar, Dialectic or Logic, Rhetoric (the Trivium), with Arithmetic, Geometry, Music, and Astronomy (the Quadrivium).

Seven Pines. Battle in Va., May 31, 1862. See FAIR OAKS.

Seven Rivers, LAND OF. Region of the Indus, with the PUNJAB (q.v.). Five streams flow into the Indus from the East; the seventh is the Sarasvati.

Seven Sleepers. Christian youths of Ephesus who, in the Decian persecution, 251, fled into a cave and were walled in. A tradition dating from ab.500 says they slept till 447, when they were brought out and seen by many. They are celebrated in Dr. J. M. Neale's longest poem.

Seven Stars. Sun, Moon, Mercury, Venus, Mars, Jupiter, Saturn; sometimes, the constellation Ursa Major or Charles's Waine; and again, the seven may mean the Pleiades.

Seventeen-Year Locust. This insect is also known as the periodical cicada. The larva of the northern species remains below ground for 17 years, that of the southern species 13. Several distinct broods inhabit different parts of the country, and in places overlap. As each brood comes to the surface to metamorphose in a different year, there are irregular periods of years separating the times of their appearance in certain lo-

calities. Stories about the stinging powers or habits of cicadas are not credited by scientists. They certainly do not sting

The 17-year Cicada (*c*) and pupa (*a*, *b*); *d*, position of eggs (*e*); *f* larva.

with their beaks. The ovipositor is a sort of pointed saw, by means of which a double row of punctures is made in twigs to receive the eggs. See HOMOPTERA.

Seventh-Day Adventists. See ADVENTISTS.

Seventh-Day Baptists. Denomination founded in England 1650, in America 1665–71; called Sabbatarians till 1818. U. S. had, 1895, ab. 90 congregations, 8,531 members, a college and publishing house at Alfred Center, N. Y., and colleges at Milton, Wis., and Salem, W. Va.—A German sect of this name was founded 1728 at Ephrata, Pa., by C. BEISSEL (q.v.). A small remnant still exists.

Seven Up. See ALL FOURS.

Seventh Son. In popular superstition, probably derived from the East, thought to possess peculiar powers of divining the future and revealing past events. Still greater powers are attributed to the seventh son of a seventh son, and so on. The survival of the notion is constantly illustrated by advertisements of astrologers and other charlatans.

Seven Wise Masters. Oriental tales of 10th century or earlier, existing in various forms in Arabic, Hebrew, Persian, and many languages of Europe. The chief is that of Sindbad.

Seven Wise Men. Traditional sages of ancient Greece; Thales of Miletus, Solon of Athens, Chilon of Sparta, Pittacus of Mitylene, Bias of Priene, Cleobulus of Lindus, and Periander of Corinth. Their chief maxims respectively were: Suretyship is the precursor of ruin; Know thyself; Consider the end; Know thy opportunity; Most men are bad; Avoid excess; Nothing is impossible to industry.

Seven Wonders of the World. In Antiquity, Pyramids of Egypt, Hanging Gardens of Babylon, Mausoleum at Halicarnassus, Temple of Diana at Ephesus, Colossus of Rhodes, Statue of Zeus by Phidias, and Pharos of Alexandria. These are variously given. In the Middle Ages, the Colosseum of Rome, Catacombs of Alexandria, Great Wall of China, Stonehenge, Leaning Tower of Pisa, Porcelain Tower of Nankin, and Mosque of St. Sophia at Constantinople.

Seven Years' War. 1756–63; third and final contest for Silesia, between Maria Theresa of Austria, in alliance with Russia, Poland, Saxony, France, and, from 1757, Sweden, and Frederick the Great, assisted by England. The first campaign, Frederick having anticipated his enemies and marched on Dresden, ended with the surrender of the Saxons. The campaigns of 1757 and 1758 ended with a slight advantage to the Prussians. See battles of PRAGUE, KOLIN, ROSSBACH, LEUTHEN, GROSSJAGERNDORF, ZORNDORF, HOCHKIRCH. In the campaign of 1759 Frederick suffered many reverses and the severe defeat of Kunersdorf: the treasury was exhausted. See battles of BERGEN, MINDEN, and KUNERSDORF. In 1760 Frederick, with an army reduced, gained the victory of Liegnitz, and drove the Russians and Bohemians across the frontier; but Oct. 3 the Russians and Austrians took and plundered Berlin; the Swedes came down from the North, and Loudon from the South; Frederick turned upon and routed Daun, and drove out the rest; the French were defeated at Einsdorf and Marbourg. The campaign of 1761 opened well for Frederick on the Rhine; but the Russians and Austrians effected a junction in Silesia. Reverses in Pomerania and Silesia and the failure of subsidies from Britain made Frederick's prospects almost hopeless, when the death of the Czarina converted Russia into an ally, and Sweden retired from the contest. The campaign of 1762 was a series of successes for Frederick; France gave up the contest, and Maria Theresa reluctantly signed the peace of Hubertsberg, Feb. 15, 1763. Frederick was now Lord of Silesia. The prestige of the Prussian army was not lost till 1806.

Severinus. Pope May 28–Aug. 1, 640. He condemned the Monothelites.

Severinus, ST., d.482. Patron of Austria and Bavaria; missionary in Pannonia and Noricum.

Severn. 1. River of England, rising in Wales and flowing e., s., and s.w. into Bristol Channel. Length 210 m.; mainly navigable. 2. River rising in n. Manitoba, and flowing n. and n.e. to Hudson's Bay. Length ab. 350 m.

Severn, JOSEPH, 1796–1879. English artist, friend of John Keats; Consul at Rome 1861–72.

Severus, FLAVIUS VALERIUS, d.307. Cæsar 306.

Severus, MARCUS AURELIUS ALEXANDER. See ALEXANDER SEVERUS.

Severus, LUCIUS SEPTIMIUS, 146–211. Emperor 193; commander of an army in Pannonia when proclaimed. He defeated his rivals, Pescennius Niger, at Issus 194, and Albinus at Lyons 197; fought the Parthians 197–198; reformed the prætorians, deprived the Senate of power, and went to Britain 208, where he built the famous wall (see WALL OF HADRIAN) and died at York.

Laurel-crowned bust of Severus.

Sevier, JOHN, 1745–1815. Pioneer and Indian fighter, eminent for military and civil services during the Revolution and later; chief founder and organizer, with James Robertson, of Tenn.; Gov. of the State of Franklin 1785, and of Tenn. 1796–1801 and 1803–9; Brig.-gen. 1786; M.C. 1811–15. His is the greatest name in the early history of that region.—His nephew, AMBROSE HUNDLEY, 1801–1848, was M.C. from Ark. 1827–36, and U. S. Senator from 1836.

Sevier Lake. In w. Utah; salt; fed by S. River, and without outlet. Area ab. 200 sq. m.

Sévigné, MARIE (DE RABUTIN-CHANTAL), MARQUISE, 1626–1696. French writer, famous for her *Letters* to her daughter, pub. 1726 and later.

Seville. Ancient city of s. Spain, on the Guadalquivir; important since Roman times; held by Moors 712–1248. It has a celebrated cathedral and some manufactures. Pop. ab. 150,000.

Door of Cathedral at Seville.

Seville, TREATY OF. Signed Nov. 9, 1729, between Spain, France, Holland and England, in opposition to PRAGMATIC SANCTION (q.v.). It guaranteed the succession of Don Carlos to the Italian duchies.

Sevres. Town of France, 10 m. s.w. of Paris, famous since 1756 for its porcelains. Seat of the national artistic porcelain works, founded 1745 at Vincennes and transferred here 11 years later, to which is attached a museum of ceramic art, the first in Europe. Pop., 1891, 6,902.

Sewage. Foul matter and water carried away by sewers,

View of interior of sewage purification works at Long Branch, N. J.

including the discharge of water-closets and kitchens, but not solid refuse like garbage. The amount is usually taken the

same as that of the water supplied to the town. Sewage may be regarded as water holding many foul materials both in suspension and in solution. It is carried away from the town or city by sewer pipes and usually emptied into a stream or harbor. Sometimes it is collected in tanks, where it is chemically precipitated, the precipitated sludge being used as a fertilizer, while the liquid effluent is so pure that it may be allowed to run into a stream without danger of pollution. The foul gases arising in sewers from the decomposition of sewage are a source of danger if allowed to enter the houses, but are comparatively harmless if allowed to escape into the streets, where thorough dilution with air occurs. See SEWERAGE and SEWER.

Sewall, SAMUEL, 1662–1730. Judge at Boston 1692–1718; Chief-justice of Mass. 1718–28; noted for his *Diary*, 1673–1729, pub. 1878.—His grandnephew, JONATHAN, 1728–1796, Loyalist, was Atty.-gen. of Mass. 1767, and Judge of Admiralty in New Brunswick from 1788.—A cousin, STEPHEN, 1734–1804, prof. Harvard 1764–85, pub. a Hebrew Grammar 1763.

Seward, ANNA, 1747–1809. English poet. *Letters*, 6 vols., 1811–13.

Seward, WILLIAM HENRY, LL.D., 1801–1872. Gov. of N. Y. 1837–43; U. S. Senator 1849; anti-slavery and Republican leader; prominent candidate for presidential nomination 1860; Sec. of State 1861–69; wounded by an assassin April 14, 1865; a statesman of earnest convictions and moderate temper. *Works*, 5 vols., 1853–84.—His cousin, THEODORE FRELINGHAUSEN, b.1835, musician, writer, and compiler, introduced the Tonic sol fa system 1877.—A cousin, GEORGE FREDERICK, b.1840, was U. S. Consul at Shanghai 1861–76, and Minister to China 1876–80.

Sewell, ELIZABETH MISSING, 1815–1884. English writer of novels, histories, and devotional books. *Amy Herbert*, 1844.

Sewell, JONATHAN, LL.D., 1766–1839. Chief-justice of Lower Canada 1808–38.

Sewell, WILLIAM, 1650–ab.1725. Historian of the Quakers 1717–22; resident in Holland.

Sewer. Large pipe or brick tunnel constructed to carry sewage away from a town. The first sewers built were by the Romans; some of these are still in service. Sewers were not built in London until ab.1670; these were drains for removing surplus surface water. Till 1815 it was forbidden by law to discharge sewage into them, this being required to be conveyed into cesspools; after 1815 it was permitted to drain the houses into sewers, and in 1847 it was made compulsory. Sewers of small size are made circular in section, those of large size are of circular, oval or ∩ shape in cross-section, as may be required by the nature of the soil and foundation. The velocity of flow in a sewer is usually limited to 5 or 6 ft. per second, and it should be more than 2 ft. per second to prevent deposit. Sewers are frequently designed to carry the storm water of the streets as well as the house sewage; this is the combined system. See CLOACA MAXIMA.

Sewerage. Plant whereby sewage is conveyed out of a town, consisting of the main and lateral sewers, with their manholes, basins, tanks, and other appurtenances. All systems may be classed under two principles; removal by water under gravity, and removal by the use of air compression or exhaustion. Water carriage systems are of two kinds, the combined and the separate.

In the combined system the sewers carry not only the house sewage, but also the storm water of the streets. Basins are provided at the street corners to receive the storm water and collect the sand or gravel. Manholes are built at frequent intervals on the sewer line to allow deposits to be removed. The sewers are only partially filled with sewage under ordinary conditions, while during a storm they are fully filled and thorougly flushed. In a seacoast city collecting tanks are sometimes built where the sewage accumulates at high tide; these are provided with automatic gates, which open as the tide goes out. Large cities usually have the combined system.

In the separate system the sewers carry only the house sewage, while the rain water is conveyed away on the surface of the streets or by another system of drains. The sewer pipes are hence much smaller than in the combined system, and in order to flush them water is discharged into them at intervals from automatic tanks. This system is adapted to small cities and towns, particularly where the surface is hilly, so that the storm water can be led away without underground drains. Manholes are built on the main sewer lines, and lamp holes are sometimes put intermediate to them, so that obstructions can be detected and removed.

The pneumatic systems of sewerage are of two kinds, vacuum and plenum methods. The Liernur and Berlier systems, used in Holland and in France to a limited extent, collect the sewage in street basins; these are connected with pipes from which the air is exhausted by pumps at a central station. At stated intervals the matter in the basins is drawn by the suction into the pipes and carried to a central station, whence it is conveyed away by gravity or by pumping. The Shone system, used in England and in a few American cities, collects the sewage in basins, from which it is forced to a central station by compressed air. The Shone system was used at the World's Columbian Exposition of 1893 in Chicago with very satisfactory results; its cost, however, is greater than that of the combined or separate system. From Berlin the sewage is conducted to sewage-farms and the resulting crops partially repay the expense. This plan is also used to some extent in Paris.

Sewing-Machine. Invented by Elias Howe 1845. A machine for sewing was first patented in England 1755. Sewing machines have sometimes been classified into two groups, the single thread and the double thread: sometimes into four classes, those which send the needle completely through the cloth as in hand sewing those which hook the thread into a

Elias Howe's Original Sewing Machine. Invented 1845, patented 1846.

chain-stitch by a sort of crochet needle, those which form a loop by a second thread carried across the first by a shuttle, and those making the lock stitch, the same on both sides. The last is the best. Sewing machines have arrived at that state of perfection that they can do almost every kind of work that can be done with the needle.

Sex. Philosophers have believed that in the universe are two distinct principles, male and female, the co-operation of which was essential to creation of new forms. It was said, "the soul comes from the father, the body from the mother, in the creation of an individual." But modern biology has shown that, taking the living world as a whole, most reproduction takes place non-sexually; and also that when in sexual reproduction the egg is fecundated by a sperm, the essential phenomenon is the union of idioplasm derived from the father with a similar amount of idioplasm derived from the mother. This idioplasm is itself not sexed, but simply capable of assimilation and production of protoplasm of certain characteristics, including those of both sexes, on both the father's and the mother's side. Sexual differentiation is determined by external conditions, and is a special dimorphic case of polymorphic differentiation. Thus among bees, different treatments cause the eggs to develop into females, neuters, or drones, as the case may be. The object of sex is to produce offspring containing protoplasm united from two different sources or strains, in order to cause variation, and thus progress. To effect this the two sexes are more or less differentiated to perform special parts in the work.

Sexagenary. By sixties; applied to the division of the circle into six equal parts (sextants), of which the subdivisions have a scale of sixty.

Sexagesima. 2d Sunday before Lent.

Sexagesimal Arithmetic. See LOGISTIC.

Sexivalent. Elements having a valence of VI.

Sextans. Constellation lying across the celestial equator s. of Leo. Mean right ascension 10h., declination 0.

Sextant. See QUADRANT.

Sextic. Quantic of 6th degree.

Sexton. Subordinate officer of the church, whose duty it is to take care of the sacred vessels and vestments, to keep the church clean, etc. Also called a sacristan.

Sextus Empiricus, ab.200. Empirical physician and skeptical or anti-dogmatic philosopher at Alexandria and Athens. His *Hypotyposes* and *Adversus Mathematicos* were pub. 1842.

Sexual Dimorphism. See DIMORPHISM.

Sexual Generation. Stage of certain plants in which the sexual organs are borne and fecundation accomplished, there being in these plants another state or Asexual Generation where they are absent. The term is of especial application in the *Bryophyta* and *Pteridophyta.*

Sexual Reproduction. Production of offspring from fertilized eggs. The eggs are cells more or less loaded with food yolk, for the early nourishing of the embryo; the fertilizing element is the sperm, a cell consisting of a head of nearly pure chromatin or idioplasm, and a propelling flagellum or tail. Fecundation consists in the union of the chromatin of the egg nucleus with that brought by the sperm, to form a new nucleus, whose subsequent divisions produce all the cells of the developing body. Much speculation has been given to explain the reason for this union, as many organisms hold their own by the much more efficient asexual reproduction. It has been supposed to confer variability, and thus give a chance for natural selection to secure adaptability to a changing environment. It has also been supposed to be a rejuvenescence. Males and females are organisms specialized to produce each sort of cell, but in many cases both ova and sperms are produced by each organism, though self-fertilization rarely takes place. This in fact would defeat the object of sex. See POLAR GLOBULES, GEMMULES, HEREDITY, and VARIATION.

Sexual Selection. Selection that arises during mating-time among animals, by which the strongest and best adapted males secure the females and so transmit these characters to the young; most efficient form of natural selection.

Seybert, ADAM, M.D., 1773–1825. M.C. from Pa. 1809–15 and 1817–19; naturalist. *Statistical Annals of U.S.*, 1818.—His son, HENRY, 1802–1883, was a mineralogist.

Seychelles. Group of 30 islets in the Indian Ocean, 600 m. n.e. of Madagascar; colonized from France 1742; held by Gt. Britain since 1794. It is a dependency of Mauritius. Mahé

Seychelles Islands—Native turning Turtle.

is the largest, having an area of ab. 59 sq. m. The chief products are tropical fruits. Rain is frequent, and the regularity of the winds makes the islands healthful. Area ab. 100 sq. m.; pop., 1891, 16,440.

Seyffarth, GUSTAVUS, D.D., 1796–1885. Prof. Leipzig 1825–55, and Concordia Theol. Sem., St. Louis, 1855–71; archæologist.

Seymour, HORATIO, LL.D., 1810–1886. Gov. of N. Y. 1853–55 and 1863–64; active in support of government; Democratic candidate for Pres. 1868.

Seymour, JANE, ab.1510–1537. Maid of honor to Anne Boleyn, and her successor 1536 as (3d) queen of Henry VIII.

Seymour, ORIGEN STORRS, LL.D., 1804–1881. M.C. 1851–55; Judge Conn. Superior Court 1855–63, and Supreme Court 1870; Chief-justice 1873–74.—His uncle, HORATIO, LL.D., 1778–1857, was U. S. Senator from Vt. 1821–33.

Seymour, THOMAS DAY, b.1848. Prof. Yale 1880; ed. *Iliad*, 1887–91.

Seymour, THOMAS HART, 1808–1868. Gov. of Conn. 1850–53; U. S. Minister to Russia 1853–57.

Seymour, TRUMAN, U.S.A., 1824–1891. Brig.-gen. U. S. Vols. 1862, serving chiefly in Va., Md., and S. C.

Sfax. Seaport of Tunis, 74 m. s. of Susa. It is famous for its olive gardens. Sponges, woolen stuffs, camels and olive oil are its chief articles of commerce. It is supposed to be the Taphroura of Ptolemy, and is principally inhabited by Jews. Pop. 42,500.

Sforza, FRANCESCO, 1401–1466. Italian leader of condottieri, whose father was ennobled ab.1420; Duke of Milan (by usurpation) from 1450.—His grandson, LODOVICO, 1451–1510, became Duke by murder and usurpation 1494, was attacked by the French, and imprisoned from 1500.—Of his sons, MASSIMILIANO, 1491–1530, was twice expelled; FRANCESCO II., 1492–1535, Duke from 1522, was the last of his line: after him Austria seized Milan.

Sgambati, GIOVANNI, b.1843 at Rome. Pianist and composer, of German tastes; pupil of Liszt. His principal works are two quintets for pianoforte and strings, a concerto for pianoforte in G minor, and a symphony in D.

Sgraffito, or SCRATCHED WORK. Italian method of decorating a plain surface. Colored plaster is laid on and this covered with a white one, after which the design is scratched through with an iron bodkin. The colored work shows through and makes the contrast.

Shabbatai Tsevi, 1626–1676. Jewish impostor, proclaimed as Messiah in Asia Minor 1665.

Shad. See ISOSPONDYLI and CLUPEIDÆ.

Shad-Bush. See SERVICE-BERRY.

Shaddock. *Citrus decumana.* Tree of the Orange family, native of China, cultivated in tropical regions for its pulpy, edible fruit, which sometimes attains the diameter of 18 in.

Shadow. Portion of space from which illumination from a source of light is cut off by an opaque body. See UMBRA.

Shadow Pictures. Made with the hands on the wall, or by means of designs cut from paper and placed behind a screen. Both methods are common in e. Asia. In Corea, children make shadow pictures with their hands, invariably to represent a Buddhist priest. In Japan, a bird-catcher is the usual figure. Japanese children also have a great variety of paper shadow pictures. In Siam and Java large images with movable limbs are employed in regular shadow dramas. A common name for such performances is Chinese Shadows.

Shadwell, THOMAS, 1640–1692. English dramatist; poet laureate 1688; satirized by Dryden in *MacFlecknoe.*

Shaffner, TALIAFERRO PRESTON, 1818–1881. American writer on telegraphy and inventor of methods of blasting.

Shafiites. One of the four principal sects of the Sunnites, the orthodox Moslems.

Shaft. Opening, vertical or nearly so, through which communication is maintained between the surface and the interior of a mine, and in which the operations of hoisting, pumping, etc., are carried on. Shafts vary in shape and in dimensions according to the extent of the mine and the purposes for which they are to be used, some being circular, some rectangular, and some having other polygonal shapes. A common diameter for a circular shaft is from 12 to 15 ft.

Sinking a Shaft.

Shaft. The portion of a column between the base and capital, often polished, if of different material, and octagonal, as in late Norman work. In Early English they are of round, separate stones. In the Decorated style they are very small and not separate. In the Perpendicular style they are round, filleted, and not separate.

Shaft and Shafting. Cylindrical rods for the transmission of the effort of the motor to the working point by means of their resistance to torsion. Older shafts were

also square or polygonal: modern shafts are always round. Largest shafts are those for marine practice either from engine crank to propeller wheel or to side paddle-wheel. Propeller shafts are forged with flanges on each end of the lengths to couple them together by means of bolts. The length nearest the wheel has the rings made upon it for the thrust bearing, and ends in the taper fit for the wheel. Some of the newest modern ones are hollow, to avoid the defective center likely to occur in large forgings. They are made of iron or of steel. Crank-shafts for engines are either forged solid or are built up by shrinking and keying the crank-arms upon the pins and shaft. Smaller shafting for transmission of power in shops is made either of turned or cold-rolled bars (see COLD-ROLLED) of solid iron or steel, and recently of hollow tubes for lightness with equal torsional stiffness. Such shafting is supported upon hangers, and carries the pulleys (see HANGERS and PULLEY) necessary for the tools in use. Such shafting, being exposed both to twisting and bending from the weight of pulleys and strain of belts, will need to be stronger than if under torsion only. A solid shaft 22 in. in diameter is a very large one.

Shaftesbury, ANTHONY ASHLEY COOPER, 1ST EARL, 1621–1683. M.P. 1640 and 1653; Baron and Chancellor of the Exchequer 1661; Earl 1672; Lord Chancellor 1672–73; thenceforth active in opposition; imprisoned 1677–78 and 1681; in exile 1682; brilliant and energetic, but selfish and changeable; satirized by Dryden as Achitophel.—His grandson and namesake, 3D EARL, 1671–1713. M.P. 1695–98, Earl 1699; philosophic writer of the freethinking or "Deist" school, advocating the doctrine of a moral sense. His works were mostly collected in *Characteristics*, 3 vols., 1711–14.—7TH EARL, D.C.L., 1801–1885. M.P. 1826, Earl 1851; chairman of the Lunacy Commission from 1828; active in philanthropy; prominent in the extreme Evangelical school.

Shagreen. Leather made from skins of sharks and other fish, and used for covering boxes, etc. In Asia it is employed for shoes, binding of MSS., and other purposes.

Shah. Sovereign of Persia. See NASR-ED-DIN.

Shahjahanpur. City of n. India, on a branch of the Ganges; founded 1647. Pop., 1891, 78,522.

Shah Jehan, d.1666. Mogul emperor of Delhi 1627; conqueror of neighboring kingdoms; able ruler, who had a splendid court, and built many notable edifices.

Shah-Nameh. Persian national epic. See FIRDAUSI.

Shairp, JOHN CAMPBELL, 1819–1885. Scottish essayist, critic, and poet; prof. St. Andrews 1861, principal 1868; prof. Oxford from 1877. *Culture and Religion*, 1870; *Poetic Interpretation of Nature*, 1877; *Aspects of Poetry*, 1881; *Burns*, 1884.

Shakers. Community of English origin, rejecting marriage, private property, war, and oaths; organized in America by Ann Lee 1776; nicknamed from the "dancing" at their services. Their chief seats are at New Lebanon and Watervliet, N. Y. They have fifteen societies and ab. 1,728 members.

Shakespeare, WILLIAM, 1564–1616. Greatest of dramatists, and most consummate master of expression of all English writers; born at Stratford-on-Avon; married to Anne Hathaway 1582; in London as actor and manager from ab.1586 till ab.1611, when he retired to New Place in his native town. The records of his life are scanty, and in part (as the tale of deer-stealing) legendary and dubious. His magnificent *Sonnets*, pub. 1609, dedicated and mainly addressed to "Mr. W. H." (probably Wm. Herbert, later Earl of Pembroke), are intensely individual, and show that, while his conduct was not always exemplary, his soul was worthy of his genius. His early poems, *Venus and Adonis* and *Lucrece*, are less important. These are supposed to date from 1590–94; most of the sonnets are not much later. The plays, classified as tragedies, comedies, and histories, were not collected till 1623; 20 (out of 37 usually credited to him) were printed in his lifetime. Their respective dates are matters of controversy. Prof. Dowden places them under four periods, thus: — I., 1590–95. *Titus Andronicus* (if his at all), *1 Henry VI.*, *Love's Labor's Lost*, *Comedy of Errors*, *Two Gentlemen of Verona*, *Midsummer Night's Dream*, *2* and *3 Henry VI.*, *Richard III.*, *Romeo and Juliet*, *Richard II.*, *King John*, *Merchant of Venice*.—II., 1595–1601. *1* and *2 Henry IV.*, *Henry V.*, *Taming of the Shrew*, *Merry Wives of Windsor*, *Much Ado About Nothing*, *As You Like It*, *Twelfth Night*, *All's Well that Ends Well*, *Measure for Measure*, *Troilus and Cressida*.—III., 1601–8. *Julius Cæsar*, *Hamlet*, *Othello*, *Lear*, *Macbeth*, *Antony and Cleopatra*, *Coriolanus*, *Timon*.—IV., 1608–11. *Pericles*, *Cymbeline*, *Tempest*, *Winter's Tale*. *Henry VIII.* is Shakespeare's only in part. Other plays are doubtfully ascribed to him.

William Shakespeare (from the second folio).

Shaking Table. Form of ore-dressing apparatus in which the pulp flows slowly over a plane surface, to which a shaking motion is imparted to facilitate the sorting of the material.

Shale. Clay more or less hardened, easily splitting into somewhat even flakes of stratification.

Shale, ALUM. Formed of coal, clay, and iron pyrites; occurring in nature in large quantities. Treated with sulphuric acid, it yields alum.

Shaler, ALEXANDER, b.1827. Brig.-gen. U. S. Vols. 1863–65; engineer.

Shaler, NATHANIEL SOUTHGATE, b.1841. Assistant in Museum of Comparative Zoölogy, Cambridge, 1865; Prof. of Paleontology at Harvard 1868; director of Ky. Geological Survey 1873–80; geologist to U. S. survey, Atlantic division, from 1884; Prof. of Geology at Harvard 1887; author of geological reports and popular scientific works.

Shallon. *Gaultheria shallon.* Evergreen shrub of the natural family *Ericaceæ*, native of n.w. N. America. Its fruit is used as food by Indians.

Shalloon. Worsted cloth made at Chalons-sur-Marne, France.

Shallot. *Allium asalonicum.* Biennial, bulbous herb of the Onion family, native of Palestine; cultivated and used as food by eastern nations.

Shalmaneser. King of Assyria 727–722 B.C.; conqueror of Israel; deposed and succeeded by Sargon.

Shamanism. Primitive type of religion still generally existing among Ural-Altaic peoples; also, with the Eskimo and many aboriginal American tribes. The Shaman, or wizard priest, is believed to have the power of controlling the spirits and various powers to which all the occurrences of life are supposed to be due. By the aid of magic he exorcises demons, procures oracles, and harmonizes the relations of the spiritual with the living world. His practices frequently rest upon an elaborate cosmogony.

Shame. Disagreeable feeling accompanying the consciousness of action contrary to the standard of conduct or morality held by the agent. The ordinary feeling which accompanies a violation of decency is a product of social life and cannot be considered as innate.

Shammai, 1st cent. Jewish Pharisee of high degree, whose severity was opposed to Hillel's gentleness. The schools founded by these two doctors lasted 200 yrs. or more.

Shamo. See GOBI.

Shamokin. Borough of Northumberland co., Pa., 19 m. e. of the Susquehanna; important for its anthracite coal mines. Pop., 1890, 14,403.

Shamrock. National emblem of Ireland; plant with trifoliolate leaves, a clover, of which several varieties are used. Tradition declares that it was employed by

Lesser Yellow Trefoil (*Trifolium minus*).

St. Patrick to illustrate the doctrine of the Trinity. The Lesser Yellow Trefoil is the plant usually sold in Dublin on St. Patrick's Day.

Shamyl. See SCHAMYL.

Shanghai. City of China, the most important of its seaports; on the Wu-sung River, 12 m. above its mouth. It was first opened to foreign trade 1843. It has a foreign quarter, comprising British, French, and American "Concessions," stretching ab. 2 m. along the Wu-sung. The tonnage of ships sailing hence was, in 1893, 3,264,985 tons. Pop. ab. 400,000.

Tower of Long-Hua, Shanghai.

Shannon. Chief river of Ireland, rising in the Cuilcagh Mts. and flowing s. and s.w. to the Atlantic. Length 254 m., including lakes and canals; partly navigable.

Shannon, WILSON, 1802–1877. Gov. of Ohio 1838–40 and 1842–44; U. S. Minister to Mexico 1844; M.C. 1853–55; Gov. of Kansas 1855–56.

Shans. Siamese race, of Chinese origin, living in Indo-China since ab. 100 B.C. Their various tribes are scattered, but chiefly on the borders of Burmah, Siam, Tongkin, and China.

Shaper. 1. Friezing machine for wood. 2. Properly, tool for metal, which reciprocates in straight lines over the stationary work which receives the feed motions. The casting which carries and guides the reciprocating tool sometimes can be fed laterally on shears or a bed (traveling-head shaper) to finish extended surfaces whose straight line elements are short. The tool is usually driven with a Whitworth quick-return crank motion. Such tools are specially adapted for surfaces of incomplete revolution (as crank-hubs and rod-ends), and for small pieces where the traverse of the entire planer bed would entail a waste of power, and the necessity for accuracy and planeness of surface is not great. It is a combined lathe and planer.

Shaper.

Shapur, or SAPOR. I. Son of Ardashir, founder of the Sasanian empire of Persia. He reigned 242–272, and captured the Emperor Valerian 260, but seems not to have permanently extended his boundaries.—S. II., King 310–379. He maintained a war with the e. Roman Empire 337–363; Constantius was repeatedly defeated, Julian mortally wounded while on the retreat from Ctesiphon, and Jovian consented to a shameful peace. Later S. attempted the conquest of Armenia.—His son, S. III., King 384–389, at once made peace with the Romans, but was slain by his nobles.

Sharks (SQUALIDES). Spindle-shaped Plagiostomes, with lateral gill-slits, eyelids with free edges, incomplete shoulder girdle, and no cranial fin-cartilages. The pectoral fins are borne more or less vertically. The teeth are in numerous rows and are dagger-shaped. The group falls into two subgroups, *Cestraphori*, including *Cestracion*, the Port Jackson Shark of Australia, the only living representative of a fossil group furnished with crushing teeth, and the *Squali* proper, which are subdivided into *Cyclospondyli* (Dog-fishes, Greenland Shark), *Asterospondyli* (Tropical sharks, Hammerhead), *Dispondyli* (*Notidanus*), and *Tectospondyli* (*Squatinidæ*). The genera *Carcharias* and *Carcharinus* include the Maneaters. The former contains a single species, *C. rondetetii*, which attains or exceeds a length of 40 ft. (The Basking Shark, *Cetorhinus maximus*, sometimes attains a length of 30 ft., but it rarely attacks man.) The second genus includes many species,

Hammerhead Shark (*Zygaena malleus*).

of which the Great Blue Shark and the White Shark are the most formidable, approaching at times a length of 35 ft. They are very voracious and follow ships, swallowing anything thrown overboard.

Sharon. Fertile plain near the coast of Samaria and n. Judæa.

Sharon, WILLIAM, 1821–1885. Senator from Nev. 1875–81; banker and mine owner.

Sharon Springs. Summer resort in Schoharie co., N.Y., with sulphur springs, 59 m. w. of Albany.

Sharp, ABRAHAM, 1651–1742. English mechanician and mathematician, connected with the Greenwich Observatory 1676–90. *Geometry*, 1717.

Sharp, GRANVILLE, 1734–1813. English philanthropist, prominent in opposition to slavery.—His grandfather, JOHN, D.D., 1644–1714, was Dean of Norwich 1681–86 and Abp. of York from 1691.

Sharp, JAMES, 1618–1679. Abp. of St. Andrews 1661; detested as an apostate from the Scottish cause and tool of tyranny; murdered by Covenanters.

Sharp, WILLIAM, 1749–1824. English engraver, remarkable for the cleanness and purity of his line. He engraved many plates after Guido, West, and Reynolds.

Sharpe, CHARLES KIRKPATRICK, 1781–1851. Scottish collector, compiler, and lyric poet. *Etchings*, 1869; *Correspondence*, 1888.

Sharpe, DANIEL, 1806–1856. English geologist and paleontologist, author of two important papers upon cleavage and the contortion of shells and trilobites under pressure.

Sharpe, SAMUEL, 1799–1881. English Orientalist; voluminous writer on Egyptian and biblical topics. *Hist. Hebrew Nation and Literature*, 1869.

Sharpless, JAMES, ab. 1750–1811. Anglo-American portrait-painter.

Sharpshooter. Expert rifleman in the U. S. service. With the present .30 caliber rifle a sharpshooter must attain an aggregate of at least 480 points in firing at ranges 200, 300, 500, 600, 800, and 1,000 yds., and at skirmish firing of 20 shots for each run down and back starting from 600 yds. and going to 200 yds., and then back. The target for 200 and 300 yd. range is 6 ft. by 4, bull's-eye 10 in. by 8, 4 ring 30 in. by 24, 3 ring 50 in. by 24; that for 500 and 600 yd. range is 6 ft. by 6, with bull's-eye 24 in. by 18, 4 ring 48 in. by 36, and 3 ring 54 in. by 72; that for 800 and 1,000 yd. range is 6 ft. by 12, with bull's-eye 32 in. by 45, 4 ring 6 ft. by 51 in., and 3 ring 6 ft. by 6; bull's-eye counts 5, 4 ring 4, 3 ring 3, and outside of the 3 ring 2. In the skirmish firing, a standing, a kneeling and a lying down figure are grouped together 3 ft. apart and, when hit, count respectively 3, 4 and 5; 30 seconds only are allowed at a halt in skirmish firing and 20 shots in each run.

Sharp's Rifle. One of the earliest breech loaders, used in the Mexican war and during the civil war. The breech-block is hinged to the trigger guard and when the latter is pushed forward the block slides vertically downward and opens the breech; for the paper cartridge, its end being cut off by the sharp upper edge of the block when the guard is pulled back. It is fired by a percussion cap on the nipple of the block. The gas check is an undercut hollow in the front face of the block.

Sharswood, GEORGE, LL.D., 1810–1883. Pres. Phila. District Court 1848–67; law prof. Univ. Pa. 1850–67; Justice Pa. Supreme Court 1867; Chief-justice 1878–82. *Professional Ethics*, 1854; *Lectures on Common Law*, 1856. His edition of Blackstone, 1859, is much used.

Shasta, MT. Extinct volcanic peak in n. Cal. Elevation 14,442 ft.

Shastras, or SHASTERS. Commentaries on the Vedas, regarded as partaking of their sacredness and authority.

Shaubena, ab.1775–1859. Ottawa chief, lieutenant to Tecumseh 1807–13; opposed to Black Hawk 1832.

Shave-Grass. See SCOURING-RUSHES.

Shaving. See BEARD.

Shaw, ALBERT, b.1857. Ed. Minneapolis *Tribune* 1884–91. *Icaria*, 1884; *Co-operation*, 1886; *Revenues*, 1888; *Municipal Government in Europe*, 1895–96.

Shaw, ALBERT DUANE, b. 1841. U. S. Consul at Toronto 1868–78, and at Manchester 1878–85.

Shaw, GEORGE, M.D., 1751–1813. Keeper in British Museum from 1791. *Naturalist's Library*, 24 vols., 1790–1813; *Zoölogy*, 11 vols., 1800–19; *Lectures*, 1809.

Shaw, HENRY, b.1800. Anglo-American, founder of the St. Louis Botanic Garden 1870.

Shaw, HENRY WHEELER ("JOSH BILLINGS"), 1818–1885. American humorist. *Works*, 1877.

Shaw, LEMUEL, LL.D., 1781–1861. Chief-justice of Mass. 1830–60.

Shaw, ROBERT GOULD, 1837–1863. Col. 54th Mass., a colored regiment; killed at Fort Wagner, S. C.—His father, FRANCIS GEORGE, 1809–1882, was active in philanthropy.

Shaw, THOMAS, b.1843. Prof. of Husbandry in Ontario 1888, and Minn. 1893. *Agriculture*, 1890; *Weeds*, 1893.

Shawl. Article of fine wool, silk, or wool and silk, manufactured in the fashion of a large handkerchief, used in female dress. The principal varieties are: those of Cashmere (see CASHMERE GOAT); Crape shawls woven of hard-spun silk yarn in the gum or natural condition; Grenadines, made of silk; Chiné, made with the warp printed before weaving; Barege, a woolen fabric made at Bareges, France; and woolen shawls of various kinds. During the last thirty years the fashion for shawls has quite passed away.

Shawnees (SHAWANOES). Algonquin tribe of Indians of N. Y., driven before the invading Iroquois ab.1590. Some went s. and joined the Creeks (Tecumseh was half Shawnee, half Creek); some moved w. into Wis.; some joined the Delawares, and were concerned in Penn's treaty. The Western Shawnees moved e. and were driven into Tenn. by the Iroquois. The Southern Shawnees also emigrated n. and were driven s.w. into Ohio. They sided with the English in the Revolution. They now number ab. 1,600, prosperous and civilized, but much scattered among other tribes.

Shawmut. Indian village on site of Boston.

Shays's Rebellion. Outbreak in Mass. 1786–87, led by Daniel Shays (1747–1825); occasioned by the hard times after the Revolution. An attempt was made to seize the Springfield arsenal, but the militia put down the insurrection. Several of the insurgents were captured and sentenced to death, but afterward pardoned.

Shea, JOHN DAWSON GILMARY, LL.D., 1824–1892. American writer, chiefly on R. C. history in the New World.

Sheaf. Figure composed of lines or planes all passing through the same point, its center.

Sheaffe, SIR ROGER HALE, 1763–1851. B. in Boston; British officer from 1778; Major-gen. 1811; victorious at Queenstown 1812; defender of York (Toronto), and Baronet 1813; Lieut.-gen. 1821; General 1828.

Shear. Stress caused by two parallel forces acting in opposite directions and very near together, as that exerted by the blades of a pair of shears. Shearing stresses are of frequent occurrence in all engineering constructions; the shearing strength of materials is usually much less than the tensile strength.

Shear. Tool for shaping plate metal, and cutting off bar-metal by the action of a plane of metal. The shearing edge may be plane or curved, as for ship-plate work; it may be short, when the single driving mechanism used in punches will suffice (see PUNCH), or it may be long, when the holder must be driven at several points by such motions. The punch and shear are often combined in one machine, the driving mechanism as far as the last shaft being in common; the last shaft has the punch at one end and the shear at the other. Shears for angle iron and other special shapes require complementary shapes for the two shear planes. Rotary shears are used for thin metal, like zinc, and consist of two disks with beveled edges which revolve in parallel planes, and slightly overlap each other. Such shears will cut to varying or compound curved lines, which reciprocating shears will not do even with curved blades, but they are applicable to thin work only. Where curves are to be sheared in heavy work, it has to be done by punching round holes on the perimeter, and cutting out the serrations afterward.

Plate Shearing Machine.

Shearman, THOMAS GASKELL, b. 1824 in England. Legal and political writer in New York. *Free Trade*, 1881; *Single Tax*, 1887; *Taxation*, 1890–91.

Shears. 1. Bed of a machine tool, upon which the tool carriages slide, guided by the beveled edges or by the tracks on it. 2. Plural of shear, for shearing metal by power, and for the ordinary hand-implements. 3. Pair of long spars, framed together by iron bracing so as to resemble a very slender capital A, by which heavy weights of boiler and engine are put into vessels, and the masts of such vessels are stepped. The upper end of the frame carries a purchase block, and the lower end is pinned to the ground. The spars have a slight slant forward from the bottom, and, by means of the guy ropes, a slight horizontal adjustment of the load is possible. Such temporary frames are used for erecting vertical poles or stacks; often called gin poles in this case.

Shears.

Shearwater. See SKIMMER, FULMAR, and RAZOR-BILL.

Sheath. In Agrostology, basal portion of the leaf of grasses, which clasps the stem above the node from which the leaf is developed.

Sheathbill. Antarctic Ralline bird, with pigeon-like appearance, white color, and a sheath on the base of the upper mandible. It feeds on sea-weeds, crustaceans, and eggs.

Sheathing. Material used for protecting ships' bottoms from the attacks of the teredo and other marine animals. Lead was first used, then sheet copper, but now sheet yellow metal, composed of copper 60, zinc 40 parts. It also prevents fouling by sea-weeds. See MUNTZ METAL.

Sheba. Kingdom of s. Arabia, whose queen visited Solomon (I. Kings x.).

Shebeen. Houses in Ireland and Scotland, where intoxicating liquors are sold without a license.

Sheboygan. Capital of S. co., Wis., on Lake Michigan, 52 m. n. of Milwaukee; incorporated 1853. Its manufactures are chiefly of furniture. Pop., 1890, 16,359.

Shechem. City of Samaria, in a fruitful valley between Mts. Ebal and Gerizim; now Nablous. Here Christ met the Samaritan woman (John iv.). In its most flourishing age, it

Nablous—Ancient Shechem.

was larger and had a greater population than the present Nablous. Nearby are various Scriptural localities, including Jacob's Well and the holy place of the Samaritans. Nablous pop. ab. 20,000.

Shechinah. Divine Indwelling or Presence in a visible form in Israel, as in the cloud and fire in the wilderness, or at the dedication of Solomon's temple; absent in the second temple.

Shecut, JOHN LINNÆUS, M.D., 1770–1836. Physician at Charleston, S. C.; writer on medicine and electricity. *Flora Caroliniensis*, 1806.

Shedd, JOEL HERBERT, b.1834. Civil and hydraulic engineer; designer of the water-works at Providence, R. I.

Shedd, WILLIAM GREENOUGH THAYER, D.D., LL.D., 1820–1894. Prof. Univ. Vt. 1845–52, Auburn 1852, Andover 1853, and Union Theol. Sem., New York, 1863–90. *Hist. Christian Doctrine*, 1863; *Homiletics and Pastoral Theology*, 1867; *Dogmatic Theology*, 1889–94.

Shee, SIR MARTIN ARCHER, R.A., 1770–1850. Irish portrait-painter, pres. Royal Academy from 1830; knighted 1830.

Sheeahs. See SHIITES.

Sheep. The Himalaya Mts. appear to be the center from which sheep of all species have originally spread. In N. America is *Ovis montana*, the Big Horn and the Musk-Ox. They seem to have come from Siberia. A few stragglers occupy the mountains of Europe and n. Africa. All the other wild species are Asiatic, and confined to elevated peaks. Both male and

Big Horn (*Ovis montana*).

female of wild forms have horns, but these are larger in the male. The coat of wild forms has more hair than wool. The Big Horn attains a wt. of 350 lbs. They rut in December; the lambs are born in March. The Maned Sheep of the Atlas Mts. is 3 ft. high, 6 ft. long, and has long hair pendent from the neck and breast. The original color of domestic sheep was probably dark brown. Its domestication was prehistoric. Wool and mutton, the two products of sheep, have given rise to the types of the different breeds, though there has been an effort, attended with some success, to produce both profitably in one animal. The different breeds are treated under their respective names. An adult male is properly a ram, and when castrated a wether; the female is a ewe, the young a lamb. In England various terms are used to denote various ages and sexes, but they are unknown in the U. S.

CHEVIOT.—Breed of long-wooled English mutton sheep, with

Cheviot Ewe.

Leicester Ram.

white faces. They come from the border between England and Scotland, and are active, hardy, and vigorous.

COTSWOLD.—Breed of long-wooled, white-faced English mutton sheep, much resembling the Leicesters. The wool grows more on the top of the head, and they are coarser-limbed and more robust. In U. S. they are generally preferred to the Leicester.

DORSET.—English breed of mutton sheep. The wool is medium in length and rather coarse. The face and legs are white, and both males and females have horns. Their bodies are long and well-formed, and they take on flesh readily and rapidly. They are chiefly valued for their prolificacy and heavy milking qualities, usually bearing two and often three lambs at a birth, and breeding twice a year.

DOWN SHEEP.—Class of English mutton sheep. Several different breeds are recognized, differing in size and intensity of black markings. In general they bear wool of medium length and fineness. They are short-legged and squarely built, and the legs and faces are brown, gray-brown or black. The lambs are often dark-colored at birth. The best-known breeds are the Southdown, Shropshire Down, Hampshire Down and Oxford Down.

LEICESTER.—Breed of long-wooled, white-faced English mutton sheep. Their characteristics were greatly improved by Robert Bakewell, largely by means of close inbreeding. They are still one of the largest breeds, but somewhat lacking in vigor, though they have been used to improve most of the long-wooled breeds.

MERINO.—Breed of sheep chiefly valued for wool. They originated in Spain, but have been carefully bred and improved in U. S. nearly 100 years. The wool is very fine and

Merino Sheep (*Ovis aries hispanica*).

abundantly supplied with oily secretions. The skin is thrown in folds about the neck and shoulder, so that the animal has a wrinkled appearance. The rams usually have horns.

MERINO-MUTTON.—Branch of the Merino produced by careful breeders, in which, while the superior weight and fineness of

the wool have been largely retained, the carcass has been increased in size and the folds of the skin have been obliterated. Several families of this breed, differing but slightly in character, are known by separate names, as Blacktop, Dickinson, and Delaine Merinos. In 1896 there were 38,298,783 sheep in U. S. valued at $65,167,755. See OVIDÆ and WOOL.

Sheep-Berry. *Viburnum lentago.* Small tree of the natural family *Caprifoliaceæ*, native of the e. U. S.; known as Sweet Viburnum and Nanny-berry. The latter also indicates a related species, *V. prunifolium.*

Sheep Rot. Distemper caused by the presence of liver-flukes, *Distoma hepaticum*, in the liver. The germs are swallowed with the food. Humid soil, herbage, and atmosphere also promote it. See DISTOMUM.

Sheepshanks, JOHN, 1787–1863. Art-patron who made a collection of the paintings of modern English artists and presented them to the English nation in 1856. They are stored at S. Kensington.

Sheepshead (DIPLODUS). Acanthopterygian fish of the family *Sparidæ*. It has broad cutting teeth in front and several rows of grinders like the Porgy. It is strictly confined to salt water in the North, but in Florida has been known to ascend rivers. Oyster and clam beds form its favorite feeding grounds. It bites off barnacles and young oysters when attached to rocks and timber. It is a game fish, and is caught with strong tackle. It averages 6 or 8 pounds in weight, and spawns at the mouths of rivers (probably in the South) early in the spring.

Sheep Stealing. Felony in Gt. Britain, formerly punishable with death.

Sheep-Tick. See HIPPOBOSCIDÆ.

Sheeraz. See SHIRAZ.

Sheerness. Seaport in Kent, 52 m. e. of London; taken by the Dutch 1657; scene of a mutiny 1798; noted for its harbor and dockyard. Pop., 1891, 13,841.

Sheet. Rope fastened to one or both the lower corners of a sail for extending and retaining it in a particular position.

Sheet Piling. Planks or timbers driven in close contact to form a coffer dam; to retain the sides of a trench in position,

Coffer Dam of Wakefield Sheet Piling.

or to sustain a filling in of earth, masonry, or other material. The planks are usually tongued and grooved and driven between two principal piles.

Sheffey, DANIEL, d.1830. M.C. from Va. 1809–17; noted for oratory.

Sheffield. City of w. Yorkshire, on the Don, at the mouth of the Sheaf, Eng.; celebrated for its manufactures of cutlery and hardware. Its importance is chiefly recent. Pop., 1891, 324,243.

Sheffield, JOHN, DUKE OF BUCKINGHAMSHIRE, 1649–1721. Official in three reigns; author of plays and poems.

Sheffield, JOSEPH EARLE, 1793–1882. Benefactor of the Yale scientific school, named from him 1860.

Sheffield Scientific School. See YALE UNIVERSITY.

Sheikh. Chief of an Arab tribe; also Mohammedan scholar, saint, or head of an order.

Sheil, RICHARD LALOR, 1791–1851. Irish M.P. 1829–38; eminent as an orator, and, in early life, as an agitator; author of several successful plays. *Sketches of the Irish Bar*, 1822, repub. 1855.

Shekel. Hebrew weight, ab.220 grains; later, ab.150 B.C., a silver coin, usual value ab. 50c.; struck also in gold and copper.

Shelburne, WILLIAM PETTY FITZ-MAURICE, EARL OF, 1737–1805. Cabinet Minister 1763, 1766–68, and 1782; Premier 1782–83; Marquis of Lansdowne 1784.

Shelby, ISAAC, 1750–1826. Officer in border wars from 1774, and in S. C. 1780–82; prominent at King's Mountain Oct. 7, 1780; Gov. of Ky. 1792–96 and 1812–16; in arms with Gen. Harrison in Canada 1813. A college and nine counties are named from him.—His father, EVAN, 1720–1794, pioneer and Indian fighter, won the battle of Point Pleasant 1774.—His descendant, JOSEPH ORVILLE, 1831–1897, was a Confederate general.

Sheldon, EDWARD L., 1849–1892. American writer and financier, in London from 1876. His *Pocket Encyclopedia* circulated widely.—His wife, MAY FRENCH, m. 1876, is an African traveler.

Sheldon, EDWARD STEVENS, b.1851. Prof. Harvard since 1884; philological writer.

Sheldon, GILBERT, D.D., 1598–1677. Bp. of London 1660, Abp. of Canterbury 1663; founder of the Sheldonian theater at Oxford 1669.

Sheldon, HENRY CLAY, D.D., b.1845. Prof. Boston Univ. since 1875. *Hist. Doctrine*, 1886; *Hist. Ch.*, 5 vols., 1894.

Sheldrake. 1. *Tadorna.* Large European marine duck, with head and neck green-black, white collar around lower neck, and broad chestnut-brown one at shoulders; primaries of wing green, the middle of under parts black, rest of plumage white. In Jutland the Danes protect this duck, providing holes for it to breed in; they remove the eggs, beyond six, of each nest, and after the nest is abandoned remove the fine down which lines it. 2. *Lophodytes.* Hooded or crested merganser of America. It has a black bill, white crest in male, reddish in female, and upper parts black or grayish brown respectively. See ANATINÆ.

Shell. Hollow projectile with a bursting charge to be ignited by a fuse at or before striking. Shell-proof applies to magazines, covers for men and material, which will prevent shells from penetrating; more particularly applied to spherical shells, now practically obsolete, and specifically called bomb-proof.

Shellac. See LAC.

Sheller, ALEXANDER, b.1838. Russian novelist, poet, and historian of Communism.

Shelley, HARRY ROWE, b.1858. American organist, composer of many secular and sacred songs, a cantata, *Vexilla regis prodeunt*, two symphonies, and many smaller pieces.

Shelley, PERCY BYSSHE, 1792–1822. English poet of delicate genius and lofty purposes, but erratic in opinions and conduct; expelled from Oxford 1811; resident in Italy from 1817; drowned in the Bay of Spezia. His chief works are *Queen Mab*, 1813; *Alastor*, 1816; *Revolt of Islam*, 1818; *Prometheus Unbound*, 1820;

Percy Bysshe Shelley.

The Cenci, 1820; *Adonais*, on Keats, and *Hellas*. Some of his lyrics, as *The Cloud* and *To a Skylark*, are of exceeding beauty. The history of his first marriage with Harriet Westbrook (1795–1816), 1811, deserted 1814, is a lamentable tragedy.—His second wife, MARY WOLLSTONECRAFT (GODWIN), 1797–1851, wrote the famous *Frankenstein*, 1818, and other novels.

Shell-Flower. See BALMONY.

Shell Glands. Those within the shell of *Crustacea* that have a kidney function. See GREEN GLAND.

Shell-Heaps. Heaps of shells occupying an area of 10 to 40 acres and from 10 to 100 ft. deep are found on the Atlantic coast of the western hemisphere, and are the deposits of the North American aborigines; the KITCHEN-MIDDENS (q.v.) of Mollusk-eating peoples. Upon decomposition they yield a rich marl which is very fertile. The shells are also calcined and used for fertilizer.

Shell Lime. Made by calcining oyster shells; used like common lime for making mortar and purifying illuminating gas.

Shell Pump. See SAND PUMP.

Shell-Sand. Sand consisting of shell fragments and containing some organic matter, found on the British coast. It is used as a manure, for soils deficient in lime and on reclaimed peat bogs, the lime neutralizing the organic acids in the peat and forming plant food.

Shelook. Hot dry wind in s. Arabia, not essentially different from the Sirocco.

Shelta, or SHELRU. Secret jargon spoken by Irish beggars, tinkers and pipers.

Shelter. Any cover to protect troops while in active service, as tents; also, irregularities of the ground by which troops are protected from the direct fire of the enemy.

Sheltered Thermometer. One inclosed in any sort of shelter that protects it from the direct radiation of sun, sky, and ground, yet allows free access of air or wind and the attendant convection of heat.

Shelter Island. Summer resort w. of Gardiner's Bay, e. Long Island, 14 m. long by 4 m. wide. Pop., 1890, 920.

Shelton, FREDERICK WILLIAM, 1814–1881. American author of tales and sketches.

Shem. Eldest of the three sons of Noah, and ancestor of the Hebrews and their related tribes.

Shenandoah. River of Va., w. of Blue Ridge, flowing n.e. to the Potomac at Harper's Ferry. Length 170 m. Its valley was much fought over 1862–64.

Shenandoah. Borough of Schuylkill co., Pa., in one of the anthracite coal fields. Pop., 1890, 15,944.

Shenandoah. Confederate cruiser, which sailed from London as the *Sea King*, Oct. 8, 1864, destroyed a number of U. S. merchant ships, and did much damage to the whaling vessels in Bering Sea; a total of 38 ships were captured.

Shenshin, AFANASY, b.1820. Russian poet and translator.

Shenstone, WILLIAM, 1714–1763. English descriptive poet. *The Schoolmistress*, 1742.

Sheol. Place of departed spirits, alike good and bad. See HADES.

Shepard, CHARLES UPHAM, M.D., LL.D., 1804–1886. Assistant in geological survey of Conn. 1835; Prof. of Chemistry at Amherst 1845–52, and in S.C. Medical Coll. 1854–61; student especially of meteorites: discoverer of phosphatic deposits in S. C. *Mineralogy*, 1832–55.—His son and namesake, b.1842, was also prof. at Charleston 1867–83, and continued his work.

Shepard, ELLIOT FITCH, 1833–1893. Ed. New York *Mail and Express* from 1888.

Shepard, THOMAS, 1605–1649. Pastor at Cambridge, Mass., from 1636. His writings were collected 1853.

Shepardson College. See DENISON UNIVERSITY.

Shepherd Dog. Dark-colored, shaggy dog ab. 15 in. high, with semi-erect ears, and recurved bushy tail. It is very intel-

Shepherd Dog (*Canis familiaris domesticus pecuarius*).

ligent, courageous, quiet, but suspicious of strangers. The Scottish collie is one variety. In S. America these dogs attend to sheep without the aid of man. They have a good deal of the wolf nature, and will kill sheep in a stranger's flock.

Shepherd Kings, or HYKSOS. From the East, according to Manetho; conquered Egypt without a battle, destroyed the temples, enslaved the people, and ruled 511 years. Eusebius assigns to them one dynasty and 103 years. R. S. Poole says dynasties XV. and XVI. were probably theirs. Rawlinson thinks they were Hittites. The last of them was Apepi or Apophis, under whom Joseph may have ruled Egypt. Their rule began, some say, 2200, some 1720 B.C.

Shepherd of Hermas. See HERMAS.

Shepherd's-Purse. *Bursa-bursa pastoris.* Weed of the natural family *Cruciferæ*, bearing white flowers and triangular pods; native of Europe, but now found almost everywhere.

Shepley, ETHER, LL.D., 1789–1877. U. S. Senator 1833–36; Judge Me. Supreme Court 1836; Chief-justice 1848–55.—His son, GEORGE FOSTER, LL.D., 1819–1878, was U. S. Dist.-atty. for Me. 1853–61; Brig.-gen. U. S. Vols. 1862; military gov. of New Orleans 1862, La. 1862–64, and Richmond 1865; Judge Me. Supreme Court 1865, and U. S. circuit judge from 1869.

Sheppard, ELIZABETH ("E. BERGER"), 1830–1862. English novelist. *Charles Auchester*, 1853; *Counterparts*, 1854.

Sheppard, JACK, 1702–1724. English robber and jail-breaker, hero of many legends; celebrated by H. Ainsworth 1839.

Sheppey, ISLE OF. At the mouth of the Medway, Kent; noted for its fossils and the gradual encroachment of the sea. Extent 9 m. by 4 m.

Sherbet. Sweetened fruit juices, diluted with water and cooled or frozen; in the latter case called Ices.

Sherbrooke, ROBERT LOWE, VISCOUNT, LL.D., D.C.L., 1811–1892. M.P. 1852; Chancellor of the Exchequer 1868–73; Home Sec. 1873–74; Viscount 1880.

Sheridan, PHILIP HENRY, U.S.A., 1831–1888. Brig.-gen. U. S. Vols. 1862. Major-gen. 1863; serving in the West till 1864; distinguished at Murfreesboro, Chickamauga, and Missionary Ridge, Tenn.; commander of cavalry in Va. 1864, and next of the Army of the Shenandoah, with which he thrice

General Sheridan.

defeated Gen. Early, turning the rout at Winchester, Oct. 19, into victory; Brig.-gen. U.S.A. Sept. 20. Major-gen. Nov. 8; prominent in the last actions of the war, Feb.–April 1865, especially at Five Forks; Lieut.-gen. 1869; Commander U.S.A. 1883; General 1888.

Sheridan, RICHARD BRINSLEY BUTLER, 1751–1816. Irish dramatist, orator, and wit. M.P. 1780–1812; owner of half Drury Lane Theater, London, from 1776, and later of the whole. His chief plays, *The Rivals*, 1775, *School for Scandal*, 1777, and *The Critic*, 1779, are notable for brilliant dialogue and characterization, but loose in plot. His habits were easy, and his later life was clouded by debts and poverty. *Speeches*, 5 vols., 1816. His grandfather, THOMAS, D.D., 1684–1738, was a friend of Swift; his father, THOMAS, 1721–1788, actor and elocutionist, pub. a *Life of Swift* and an English *Dictionary*, 1780; his mother, FRANCES (CHAMBERLAINE), 1724–1766, wrote several novels and plays.

Sherif, or SHEREEF. Descendant of Fatima, Mohammed's daughter.

Sheriff. Chief executive officer and conservator of the peace of a county. In Gt. Britain he is appointed by the Crown, and often possesses judicial functions, being the chief county judge in Scotland; in the U. S. he is generally elected by popular suffrage, and rarely has judicial powers.

Sheriffmuir. Near Dumblane, Perthshire, Scot.; scene of an indecisive engagement, Nov. 13, 1715, between the royalist troops under the Duke of Argyll and 8,400 Scottish rebels under the Earl of Mar.

Sherlock, WILLIAM, D.D., 1641–1707. Dean of St. Paul's, London, 1691; prolific writer. His *Discourse concerning Death*, 1689, was much admired.—His son, THOMAS, D.D., 1678–1761, Bp. of Bangor 1728, of Salisbury 1734, and of London 1748, declined the primacy 1747, and was an eminent preacher and controversialist. *Prophecy*, 1725; *Trial of the Witnesses of the Resurrection of Jesus*, 1729.

Sherman, FRANK DEMPSTER, b. 1860. American poet. *Madrigals*, 1887; *Lyrics*, 1890.

Sherman, JOHN, b.1823. Brother of the general; M.C. from Ohio 1855–61; U. S. Senator 1861–77 and 1881–97; pres. Senate 1885–87; Sec. Treasury 1877–81; Sec. of State 1897. *Speeches*, 1879; *Recollections of Forty Years*, 1895.

Sherman, ROGER, 1721–1793. Judge Conn. Superior Court 1766–89; assistant 1766–85; in Congress 1774–91; signer of the Declaration of Independence; one of the (official) framers of that document, of the Articles of Confederation, 1777, and of the Constitution, 1787; Mayor of New Haven from 1784; U. S. Senator from 1791.

Sherman, THOMAS WEST, U.S.A., 1813–1879. Brig.-gen. U. S. Vols. 1861, serving in S. C., Tenn., and La.; Major-gen. U.S.A. 1870.

Sherman, WILLIAM TECUMSEH, U.S.A., 1820–1891. Brig.-gen. U. S. Vols. 1861; Major-gen. May 1862, after the battle of Shiloh, Tenn.; prominent under Grant at Vicksburg and Chattanooga; commander of the Southwest 1864; famous for his

General Sherman.

march through Ga. and to the sea; captor of Atlanta Sept. 1, 1864, and of Savannah Dec. 21; Major-gen. 1864, Lieut.-gen. 1866, General 1869; in Europe 1872; retired 1874. *Memoirs*, 1875–86.

Sherry. Wine grown in Spain in the neighborhood of Jerez. It is originally white, made from white grapes, chiefly the Pedro Ximenes. It becomes dark with age or by the addition of arrope, made by boiling down grape juice. The grapes remain on the vines until they begin to dry, then are sprinkled with gypsum, pressed, and the juice left in the fermenting tubs till March. For Amontillado wines the grapes are gathered three weeks earlier, therefore the wine is drier. Montilla wines have more flavor and are used in the soleras or old stocks. Manzanilla wines are so called from the resemblance of their flavor to chamomile; they are generally lighter wines. Sherries have from 15 to 25 per cent of alcohol, from none up to 18 grs. of sugar per oz., and acidity equal to 3.5 to 5 grs. per oz. of tartaric acid. For export it is usually fortified by the addition of brandy. It is chiefly exported to England, 2,135,969 gals. being sent there 1891.

Sherwood, MARY MARTHA (BUTT), 1775–1851. English author, mainly of religious tales for the young. *Lady of the Manor.*

Sherwood, SIDNEY, b.1860. Prof. of Political Economy at Johns Hopkins Univ. 1892.

Sherwood Forest. In w. Nottinghamshire; once a royal hunting-ground; scene of Robin Hood's legendary deeds. Extent 8 m. by 25 m.

Shetland. See HORSE.

Shetland Islands. N.e. of Scotland; over 100, 23 inhabited; originally occupied by Picts; visited by Christian missionaries ab.800; rendezvous for northern vikings. They were under the rule of Norway in 876; and were annexed to Scotland 1471, and again in 1615. The Norse language had not quite died out ab.1775. Area 551 sq. m.; pop., 1891, 28,711. See ORKNEY ISLANDS.

Shevchenko, TARAS GRIGOROVICH, 1814–1861. Russian lyric and epic poet, in youth a serf, and under government censure 1847–57.

Shewbread. Twelve unleavened cakes, renewed daily or weekly in the Jewish tabernacle and temple.

Shibboleth. Watchword or test of a party; first used by the Gileadites after routing the Ephraimites, who, being unable to pronounce the *sh*, were slain.

Shield. Piece of defensive armor, held on the left arm, from earliest times till firearms came into use, to protect the body in war; of various materials and sizes; still used by savages, and in heraldry.—Also steel plates to protect men serving machine-guns from small-arm projectiles; and rope mantlets, metal plates and similar devices to cover the embrasure throat in siege batteries.

Shield, WILLIAM, 1748–1829. English composer of songs, anthems, and operas.

Shield-Fern. Ferns of the genus *Dryopteris* (*Aspidium*), growing in nearly all parts of the world; distinguished by the shield-shaped indusia which cover the sporangia when young; known also as Wood-fern.

Shields, CHARLES WOODRUFF, D.D., LL.D., b.1825. Prof. Princeton since 1865; writer on liturgics, 1864, and Ch. unity, 1891–94. *Philosophia Ultima*, 1877–89; *United Ch. of the U. S.*, 1896.—His father, PATRICK HENRY, 1773–1848, was a pioneer and judge in Indiana.

Shields, JAMES, 1810–1879. B. in Ireland; Judge Ill. Supreme Court 1843; Brig.-gen. 1846–48, in war with Mexico; U. S. Senator from Ill. 1849–55, and from Minn. 1858–59; Brig.-gen. U. S. Vols. 1861–63, serving in Va.

Shields, NORTH. Town of Northumberland, on the Tyne, near its mouth; old, but of recent commercial importance; part of TYNEMOUTH (q.v.).

Shields, SOUTH. Seaport of Durham, dating from Roman times; on s. bank of the Tyne, opposite N. Shields. It has a pier a mile long, and large shipping interests. Pop., 1891, 78,431.

Shiites, or SHEAHS. Adherents of the great Mohammedan heresy, principally represented by Persia, which maintains Ali, Mohammed's cousin and son-in-law, to have been his true successor, rejecting the three intermediate caliphs. See MOHAMMEDANISM.

Shillaber, BENJAMIN PENHALLOW, 1814–1890. American humorist. *Life and Sayings of Mrs. Partington*, 1854.

Shillelagh. Irish cudgel, named from a forest in s.w. Wicklow.

Shilleto, RICHARD, 1810–1876. English editor of Thucydides and Demosthenes.

Shilling. English silver coin, since 1504 $\frac{1}{20}$ pound or 12 pence; equal to 24.3 cents U. S.

Shiloh. Ancient city of Ephraim and sanctuary of Israel; site of the tabernacle and ark ab.1444–1116 B.C.; 20 m. n. of Jerusalem; ruined before 600 B.C.

Shiloh, BATTLE OF. In Hardin co., Tenn., near Pittsburg Landing on the Tennessee, April 6–7, 1862. Gen. Grant, with ab. 33,000 men, was attacked and driven back by over 40,000 Confederates under Gen. A. S. Johnston, who was killed and succeeded by Gen. Beauregard. On the 7th the Union army, being heavily re-enforced, was victorious, with a loss of 1,754 killed and ab. 13,000 in all. The Southern losses were nearly equal.

Shim. Thin block of wood placed upon a cross tie under a railroad rail, to keep it in line and grade temporarily. Shims are mostly used in the winter, when it is difficult to move the cross tie.

Shimeall, RICHARD CUNNINGHAM, 1803–1874. American writer on prophecy. *Bible Chronology*, 1859.

Shimonoseki. Town of Japan, at s.w. end of Nippon: bombarded by European and American vessels 1864; made a port of entry 1890. Pop. ab. 15,000.

Street in Shimonoseki

Shimonoseki, TREATY OF. Signed April 17, 1895. Corea was declared independent, Formosa and Manchuria ceded to Japan, and China opened to foreign commerce and manufactures. Russian interference modified these results.

Shinar. Mesopotamian plain around Babylon.

Shindler, MARY STANLEY BUNCE (PALMER), (MRS. C. E. DANA), b.1810. American poet. *Northern Harp*, 1841. Two of her hymns have been much used.

Shingles (HERPES ZOSTER). Eruption of vesicles on a reddened surface, usually located at the waist and extending half around the body; it is frequently accompanied by neuralgic pain. See HERPES.

Shin-Leaf. Low perennial herbs of the genus *Pyrola*, natural family *Pyrolaceæ*, natives of n. temperate zone; erroneously called Wintergreen.

Shinn, WILLIAM POWELL, 1834–1892. American civil and mining engineer.

Shinney. See HOCKEY.

Shin-Shiu. Reformed Buddhist sect, founded in Japan ab.1250.

Shintoism. Official and national religion of Japan, called by the Japanese *Kami no michi*, "way," or "doctrine of the gods." Its chief book is the *Ko-ji-ki*, or *Records of Ancient Matters*, a collection of cosmical myths and legendary history in which many generations of deities are enumerated, down to Jimmu Tenno, the first mikado and founder of the present imperial family, who is said to have reigned 660–585 B.C. Shintoism has no idols. It teaches the immortality of the soul and an eternal future life of recompense or punishment. It ordains purity of life, and respect, almost adoration, to the emperor, the direct descendant of the gods and spiritual and temporal chief. Its priests are not required to submit to obligations of celibacy or abstinence, and their office is usually hereditary.

Shipbuilding. The earliest ship known is Egyptian, dating 3,000 B.C. It was of considerable size, with 52 oars and a mast, sail and 5 oars steering on either side. The two ends rose to a point, or the rear end was rounded for the stern. War vessels had a metal prow, used as a ram. The Greek and Roman war vessels were propelled by oars. The trireme was 150 ft. long and 18 ft. beam, with 174 rowers; this dates from 700 B.C. The Phœnician ships had sails, and Herodotus describes vessels with rudders on the Nile. The Viking warship had both rowers and a sail; one has been found 78 ft. long and 7 ft. beam, with 32 oars. The Byzantine war vessels of Leo VI., ab.900, were biremes and galleys propelled by oars. The English ships of 1190 were small sailing vessels. In the 15th century considerable progress was made by the French and Spaniards, and some large ships were built in England, one of which was 165 ft. long and 46 ft. beam. The *Santa Maria* of Columbus was 90 ft. keel and 29 ft. beam. In the 17th century the English made much advance in shipbuilding, but in the following century Spain, France, Denmark and Sweden were far in the lead, both as regards speed and behavior of their ships. In the 19th century the British have become the largest shipbuilders, now mostly using iron and steel in their construction. The first ship built in America was the *Virginia*, 60 ft. long, on the Kennebec River 1640. From 1812 to 1850 shipbuilding flourished in U. S. In 1841 the first China clipper-ship was built by Webb of New York, and also in 1849 the first three-deck ship. The clippers were fast sailers, the *Sovereign of the Seas* making 5,391 m. in 22 days; the *Great Republic* was 325 ft. long, 53 ft. beam, and 4,000 tons burden. In New England many vessels for the whale fishery were built. Many of the English merchantmen now have auxiliary steam-power, by which 7 m. per hour can be attained without the sails. The first steamboat was made by Denis Papin 1707, who propelled a boat with paddlewheels on Fulda River. James Rumsey, an American, propelled a vessel 4 m. per hour by forcing a jet of water through the stern with steam-pumps in 1786. John Fitch, also an American, propelled a vessel with paddlewheels in 1785. Robert Fulton, an American, built a steamboat in Paris in 1803. In 1807 he built the *Clermont*, 133 ft. long, which steamed from New York to Albany, 142 m., in 32 hours. This was the first commercial success of this class of boats. Iron canal-boats were made in England 1787, and iron steamboats with paddlewheels in 1821. John Ericsson used the screw-propeller on the Thames 1836. The Cunard line of Atlantic steamships was established 1840, and the Collins line of American-built steamships in 1850. The Pacific Steam-Navigation Co. in 1856 used a compound engine. The *Aberdeen* in 1881 used a triple-expansion engine, and the New Zealand Shipping Co. employ the quadruple-expansion engines. In 1888 the American line introduced the twin-screw. In 1856 the Atlantic voyage westward was made by steamships in 11d. 19h.; in 1874 the *Britannic* made it in 8d. 6h.; in 1886 the average time, between Queenstown and Sandy Hook, was 6d. 15h. In 1897 the *Kaiser Wilhelm der Grosse*, of the North German Lloyd Steamship Co., made the passage from Southampton to New York in 5d. 22h. 45m. This is the largest ship afloat, being 648 ft. long, 66 ft. beam, 43 ft. deep, and of 14,000 tons burden; her speed per hour is 22 knots, and her engines are triple expansion. The shipbuilding in 1896 was: Great Britain 1,316,906 tons; United States, year ending June 30, 1897, 177,643 tons; Germany, 54,075 tons; Norway, 2,522 tons; Denmark, 13,190 tons; Austria, 6,686 tons. The price in 1897, in Great Britain, for building vessels of medium size, was £7 per ton, an increase over 1896 of £1. In 1896 the tonnage of merchant ships in trade was: Great Britain, 13,563,597; United States, 4,703,880; Germany, 1,930,460; Norway, 1,705,722; France, 1,148,970; Italy, 821,553; Sweden, 552,888; Netherlands, 497,451; Denmark, 388,540; Greece, 385,935; Austria-Hungary, 295,805; Belgium, 132,464. The United States had 1,193 vessels, tonnage 829,833, in foreign trade, and 20,030 vessels, tonnage 3,790,296, in coastwise trade; there were 64 vessels engaged in whale-fishing, and 1,621 vessels in cod and mackerel fishing. In 1850 the tonnage of merchant ships in trade was: Great Britain, 4,232,962; United States, 3,485,266; France, 688,153; Norway, 298,315; Holland, 292,576; Belgium, 34,919. See BARK, BIREME, BRIG, BULKHEADS, CANOE, CARAVEL, COLUMBUS, CUTTER, GALLEY, GREAT EASTERN, MARINE BOILER, MARINE ENGINES, RIGGING, SCHOONER, SCREW-PROPELLER, SLOOP, STEAMBOATS, TRIREME, VIKINGS and YACHT.

Ship Canals. The Languedoc Canal, between the Bay of Biscay and the Mediterranean, was completed 1681, at a cost of $7,200,000; it is 140 m. long and has 119 locks. The Caledonia Canal, in Scotland, finished 1823, cost $5,000,000; it is 60 m. long, 38 m. of which are a chain of lakes, and it has 28 locks. The North Holland Canal, built 1825 as an approach to Amsterdam, is 52 m. long, with two entrance locks at the ends; its cost was ab. $5,000,000. The Corinth Canal, begun by Nero, was completed 1892; it is 4 m. long, and cost nearly $9,000,000. The Baltic Canal, completed 1895, is 61 m. long, and has 4 large tidal locks. See also CALEDONIAN CANAL, CHICAGO CANAL, MANCHESTER CANAL, NICARAGUA CANAL, NORTH SEA AND BALTIC CANAL, PANAMA CANAL, SAULT STE. MARIE CANAL, SUEZ CANAL, and WELLAND CANAL.

Ship Fever. See TYPHUS FEVER.

Shipka Pass. In Balkan Mts., 50 m. n.e. of Philippopolis; held by Russians against Turks Aug. 21–26 and Sept. 9–17, 1877.

Shipley, ORBY, b.1832. High Anglican writer and compiler, R.C. since 1878.

Ship-Money. Tax arbitrarily levied by Charles I. 1634–40, to furnish a navy; opposed by Hampden and others; one of the main abuses leading to the revolt of Parliament and the civil war.

Ship of Fools. See BRANT, S.

Shipp, ALBERT MICAIAH, 1819–1887. Prof. in N. C. and S. C., and from 1874 at Vanderbilt Univ. *Hist. Methodism in S. C.*, 1882.

Shippen, EDWARD, 1639–1712. Mayor of Phila. 1701; acting gov. of Pa. 1703.—His great-grandson, EDWARD, LL.D., 1729–1806, was a judge of Pa. Supreme Court 1791–99, and Chief-justice 1799–1805.—His cousin, WILLIAM, M.D., 1736–1808, was the first lecturer on anatomy in U. S. 1762, prof. in the first medical school (incorporated in Univ. Pa. 1791) 1765–1806, and director-gen. of military hospitals 1777–81.

Shipping, LAW OF. Legal rules governing those engaged in the business of navigation; many of them are purely statutory. The master of a ship bears great responsibilities and is clothed with extraordinary authority over the crew, passengers, cargo, and vessel.

Shipping Master. See SHIPPING, LAW OF.

Ship-Railways. These are designed to transport vessels overland from one waterway to another. There was one at Corinth, Greece, 400 B.C., on which ships 150 ft. long were carried. In 1438 and 1440 war vessels were carried overland 90 m. to Lake Garda by the Venetians. Canal-boats are carried on inclined planes from one level to another of the Morris and Essex Canal, N. J. The Chignecto ship-railway, to transport ships of 1,000 tons' weight of cargo, 2,500 tons total, from the Gulf of St. Lawrence to the Bay of Fundy, 17 m. in length, was under construction 1888. Lifting-docks are provided at each terminus and a large basin in the Bay of Fundy to protect vessels from the tides. It is not yet completed. A ship-railway for the Isthmus of Suez was proposed 1860, and for the Isthmus of Tehuantepec, Mexico, 1879, the latter by James B. Eads.

Ship's Husband. Part-owner or other person who has authority to act for all owners in providing for the general affairs of the ship.

Ship's Magnetism. This is chiefly due to the permanent magnetism of the iron in the ship, and is therefore much greater in iron than in wooden vessels. The deviation of the compass on wooden vessels, due to this cause, is not more than 10°; in iron ships it is sometimes 30°. This may be corrected by magnets. The quadrantal deviation of the compass is due to induced magnetism, and in wooden ships may amount to 2°, in iron ships to 8°.

Ships of War. See BATTLESHIP, CRUISER, GUNBOAT, ARMOR PLATES FOR WARSHIPS, TORPEDO BOAT, CORVETTE, and MONITOR.

Shipton, URSULA (SOUTHIEL), 1488–ab.1560. English "prophetess" of posthumous fame, heroine of many apocryphal tales, mostly collected or invented by R. Head 1684.

Shipworm. Lamellibranch Mollusks of the genus *Teredo*, which bore into the sides of wooden ships and timber constructions in salt water. In warm climates timber may be destroyed

Common Shipworm (*Teredo navalis*).

in a few months. The only effective remedy is to impregnate the timber with creosote, or protect it with copper or yellow metal. See PHOLADIDÆ.

Shiras, ALEXANDER EAKIN, U.S.A., 1812–1875. Commissary of subsistence from 1847; Brig.-gen. 1874. His services were important during the Civil War.

Shiras, GEORGE, LL.D., b.1832. Lawyer of Pittsburg, Pa.; Justice U. S. Supreme Court 1892.

Shiraz. Capital of Fars, Persia, and long of the Muzaffar dynasty; founded ab. 700, and for 500 years a splendid city, famous for its wine and roses, and for the tombs of Hafiz and Saadi; praised by poets; taken by Tamerlane ab.1380; damaged by earthquakes 1812, 1824, and 1853. Pop. ab. 30,000.

Shire. In England, a county.

Shiré. River of s.e. Africa, flowing from Lake Nyassa s. to the Zambesi. Length ab.370 m.

Shirlaw, WALTER, b.1838, N. A. 1888. Painter, b. in Scotland; active in New York since 1877, and prominent as an instructor; fine colorist and draughtsman.

Shirley, JAMES, 1596–1666. English dramatist and poet, now remembered chiefly for one or two lyrics. *The Traitor*, 1631; *The Gamester*, 1633; *The Example*, 1634; *The Lady of Pleasure*, 1635.

Shirley, WILLIAM, 1693–1771. Gov. of Mass. 1741–45 and 1753; Commander-in-chief 1755, Lieut.-gen. 1759.

Shirwa. Lake of s.e. Africa, s.e. of Lake Nyassa. Area ab. 350 sq. m., and dwindling.

Shishak. First king of the 22d Egyptian dynasty, 966 B.C.; conqueror of Palestine and much of Syria; spoiler of the temple at Jerusalem.

Shittim. Plain near Jericho, where the Israelites were led astray by Moabite wiles.

Shittim-Wood. That of *Acacia seyal;* used for the Hebrew tabernacle.

Shoa. S. part of Abyssinia, conquered by King Theodore ab. 1856; nominal Italian protectorate 1889–96. Capital is Lecheh, pop. 3,000. Area 15,000 sq. m., pop. 2,000,000.

Shoad Ore, or SHODE ORE. Fragments of ore broken from a main deposit and distributed irregularly over the surface by the action of natural causes. Shoading is a search for ore, guided by indications given by these fragments.

Shoals, ISLES OF. See ISLES OF SHOALS.

Shober, WILLIAM BUSH, Ph.D., b. 1864. American chemist, instructor in organic chemistry at Lehigh Univ. since 1892. Tr. *Practical Methods of Organic Chemistry*, by Gattermann, 1896.

Shock. Marked condition of depression occurring after an accident or an operation. Various explanations are given of its cause. A very satisfactory working hypothesis, in accident cases, is that it is an acute anæmia caused by loss of blood. Many lives have been saved after railway accidents by the use of emergency-cases as provided by some roads. The bleeding is sooner checked and the shock is usually less severe than in those cases where the means of prompt bandaging are not at hand.

Shock, WILLIAM HENRY, U.S.N., b.1821. Engineer of Farragut's fleet at Mobile 1863; Engineer-in-chief 1877–83.

Shoddy. 1. Orig., waste wool; in commerce, cuttings, ground and mixed with fresh wool to make rugs, flannels, etc. 2. In 1861, worthless clothing furnished to the soldiers by dishonest contractors.

Shoe. See STAMP MILL.

Shoeburyness. Promontory in Essex, England, on the n. shore of the Thames. It is used by the government as a proving ground, and also as the seat of a school of gunnery.

Shoeing of Horses. See HORSESHOEING.

Shoes. Covering for the feet, made of leather in Europe, America and some other parts; of paper and various fabrics in China and Japan; of wood in Holland and France; of dressed skins among the N. American Indians. Shoemaking was practiced by the Egyptians in the time of Moses and illustrated in the tombs of Thebes. Homer, Ovid and Pliny agree in celebrating the skill of Tychius, the Bœotian, in the art of shoe-

Shoes worn at various times.

making, and the latter credits him with the invention of leather shoes. The Romans wore an ivory crescent on their shoes; and Caligula enriched his with precious stones. In England, ab. 1462, the people wore beaks or points on their shoes so long that they encumbered themselves in walking, and were forced to tie them up to their knees. The buckle was introduced 1688, and as at present worn ab.1633. Shoes are now largely made by machinery; a great variety of machines being used.

Shoes for Piles. Funnel-shaped irons for protecting the lower ends of wooden piles.

Shogun. Japanese military chief, practically supreme ab. 1200–1650.

Sholapur. Town of s. India, 150 m. s.e. of Poona. It has manufactures of cotton and silk. Pop., 1891, 63,312.

Sholes, CHRISTOPHER LATHAM, b.1819. Journalist at Milwaukee; inventor of the first typewriter, 1868.

Shoot. Stem of a plant, as distinguished from the root; also, more usually, young growing twigs or branches.

Shooting-Star. *Dodecatheon meadia.* Showy herb of the natural family *Primulaceæ*, with rose-colored flowers, native of the central U. S.; called American Cowslip.

Shooting Stars. See METEORS.

Shop Signs. The use of pictorial and emblematic signs dates from the period of general illiteracy. Among the surviving conventional signs are the barber's pole, representing the staff held by persons in venesection, the spirals being the two bandages; this dates from the time barbers were also surgeons. On the continent of Europe, a notched basin is more

common. The pawnbroker's three balls are said to be borrowed from the arms of the Medici. A bush hung without the door is still used by inns in parts of rural Europe. Tobacconists

The Sign of "The Running Footman."

cling to the old custom, with their images of Indians, etc. At one period, it was customary to give fanciful names to shops, as still to taverns, and carved emblems, such as the Golden Eagle, displayed.

Shore, JANE, ab. 1445–1527. Mistress of Edward IV., charged with sorcery by Richard III.; imprisoned in the Tower, and forced to do public penance.

Short, CHARLES, LL.D., 1821–1886. Pres. Kenyon Coll., Ohio, 1863; Prof. of Latin at Columbia Coll. from 1868; N. T. reviser 1871; editor of several text-books.

Short, CHARLES WILKINS, M.D., 1794–1863. Prof. Transylvania Univ. 1825, and Univ. of Louisville 1838–49; botanist.

Short, WILLIAM, 1759–1849. American envoy to France 1789, Holland 1792, and Spain 1794.

Shorthand. Known in some form to the Greeks; perhaps used by Xenophon in recording the sayings of Socrates. Galen (d.200) speaks of a copyist who could "write swiftly in signs." The Romans made much use of abbreviations. Ennius (d.169 B.C.) is said by Suetonius to have introduced and used signs (*notæ*); but Cicero's freedman and secretary, Tiro, is commonly credited with the invention of a system of rapid writing. Seneca (d.32) is said to have collected 5,000 different signs in use in his day. In England the system of T. Bright appeared 1588, that of P. Bales 1590. Some 80 different methods had appeared by 1850. Pitman's phonetic system was pub. 1837, and largely used; in the U. S., that of K. A. Bayley was the earliest, 1831. Lyndsey's Tachygraphy (including the vowels) dates from 1864. Graham's system, 1858, and Munson's, 1866, are founded on Pitman's.

Short-Horn. See CATTLE.

Shorthouse, JOHN HENRY, b.1834. English novelist, whose works display deep spiritual feeling and broad modern sympathies, with marked archaic and ecclesiastical tastes. His *John Inglesant*, 1881, grew out of long study of the 17th century. The others are brief: *Little Schoolmaster Mark*, 1883–84; *Sir Percival*, 1886; *A Teacher of the Violin*, 1888; *Countess Eve*, 1888; *Blanche, Lady Falaise*, 1891.

Shortsightedness. See MYOPY.

Shoshone Falls. On Snake River, in s. Idaho; ab.1,000 ft. wide and 1,000 high, with a sheer fall of 210 ft. Little Shoshone Falls, 4 m. e., are 182 ft. high.

Shoshones. Linguistic group of Indians, represented by tribes ranging from central Mexico n. almost to Canada. Among them were the Bannacks, Utes, Comanches, and Moquis. The S. proper (Snake Indians), related to the Pawnees, number less than 8,000, on reservations, mainly in w. Indian Territory. They practiced no agriculture, and have often been in want. They were enemies of the Texans, and in 1873 assisted the Modocs in their wars with the whites.

Shot. Solid projectiles, hollow projectiles, specifically classed as shell, and the minute projectiles used in fowling pieces. See CASE-SHOT and CHAIN-SHOT.

Shoulder Girdle. The three bones, scapula, clavicle and coracoid, which meet at the shoulder to support the arm or fore-leg. The coracoid is rudimentary in most Mammals, and the clavicle also in *Carnivora* and Rodents, and absent in Ungulates and *Cetaceæ*.

Shoulder Joint. Articulation of the bone of the arm with the shoulder blade. It is a ball and socket joint; the shallow socket being made deeper by projecting processes of the shoulder blade.

Shoup, FRANCIS ASBURY, 1834–1896. Brig.-gen. C.S.A. 1862–64; Prof. Univ. Miss. 1866, and at Sewanee, Tenn., 1883–88. *Artillery Drill*, 1864; *Algebra*, 1874.

Shovel, SIR CLOUDESLEY, R.N., ab.1650–1707. Knighted 1689; Rear-admiral 1690; distinguished at Bantry Bay, La Hogue, and Malaga; shipwrecked near the Scilly Isles.

Showers of Fishes. Instances of this kind have occurred in various places, but mostly in tropical countries. Sometimes the fish are alive, weighing from 1 to 3 lbs., and are usually the kind found in nearby waters. They are picked up from the water by the partial vacuum produced in the center of a whirling column of air, like that of a tornado. Showers of frogs and of pollen from pine-trees have also occurred. In U. S. the latter has been transported by upper air currents more than 100 m.

Shrapnel. See CASE-SHOT.

Shreve, HENRY MILLER, 1785–1854. Introducer of the first steamboat on the Mississippi 1815; inventor of improvements in steam vessels, of a snag-boat, and a marine battering ram; remover of obstructions in Red River.

Shreve, SAMUEL HENRY, 1829–1884. American civil engineer. *Bridges and Roofs*, 1873.

Shreveport. City of Caddo parish, n.w. La., on Red River, here navigable; chartered 1839; important shipping point for cotton. Pop., 1890, 11,979.

Shrews. Mouse-like *Insectivora*, with elongated muzzles; including many species living in woods and fens, feeding on small animals and nesting in the ground. Each female has 5 to 7 young in the spring. *Sorex* has well developed ears and

Pointed House Mouse (*Crocidura aranea*), Pointed Wood Mouse (*Sorex vulgaris*).

moderate tail; *Blarina* has short tail and small ears. The common European Shrew and the Mole Shrew are examples. *Neosorex*, the Marsh Shrew, has fringed toes. *Crossopus* is the European Water Shrew. See MACROSCELIDÆ AND SORICIDÆ.

Shrewsbury. Capital of Shropshire; on the Severn. Near S., July 21, 1403, Henry IV. defeated the nobles, led by Percy (Hotspur), who was slain. Pop., 1891, 26,967.

Shrikes (LANIIDÆ). Passerine birds with hawk-like bills, short rounded wings, and long tail. Ab. 100 species exist, mostly Old World forms; also known as BUTCHER-BIRDS (q.v.). *Lanius borealis*, the Northern Shrike, is bluish ash above, with rump and shoulders whitish, wings black, and wavy white and black below: it is distinguished from the Loggerhead Shrike in having the black bars on side of head, meeting in front. The Drongo Shrike, Cuckoo Shrike, etc., are birds of other families that resemble shrikes superficially.

Shrimp (CRANGON VULGARIS). Small, long-tailed crustacean much used for food in England and France; they are in season during the whole year, but the chief demand is in spring. In the U. S. they are eaten somewhat, but used chiefly for bait.

Shrine. Repository for the bones of saints and martyrs and other relics.

Shrouds. Range of large ropes extending from the mast-heads to right and left sides of a ship, to support the masts. —Also the dresses of the dead.

Shrovetide. Specifically the period between the Saturday evening before Quinquagesima Sunday and the morning of Ash Wednesday; often restricted to Shrove Tuesday.

Shrove Tuesday. Day before Ash Wednesday; on it R. Catholics are shriven or confessed. The Mardi Gras of the French, with its merry-making, is Shrove Tuesday. It is a popular festival at New Orleans.

Shrubs. Woody plants, branching from the ground; generally less than 25 ft. high.

Shubrick, WILLIAM BRANFORD, U.S.N., 1790–1874. Commander 1820, Captain 1831, Rear-admiral 1862.—His brothers, JOHN TEMPLAR, 1788–1815, EDWARD RUTLEDGE, 1794–1844, and IRVINE, 1798–1849, were also naval officers.

Shufeldt, ROBERT WILSON, U.S.N., 1822–1895. Consul-gen. at Havana 1861; Commander 1863, Captain 1869, Commodore 1876, Rear-admiral 1883.

Shuffle-Board. Old English game, long a common amusement in taverns; played by two or four persons with a set of iron weights of a lb. or less each, which are slid along a board some 30 ft. long and 20 in. wide. The board is covered with fine sand and has slightly raised edges to prevent the weights from sliding off. Ab. 5 in. from each end lines are drawn, which serve alternately as starting and finishing lines.

Shumagin Islands. Group of islands in lat. 55° N., long. 160° W., s.w. of the Alaska Peninsula, inhabited by seal hunters and fishermen. They were discovered in 1741 by Waxel. Coal is mined on one of the islands. Area ab. 600 sq. m.

Shumard, B. F., 1820–1869. Assistant geologist in the survey of Iowa, Wis., and Minn.; later under Profs. Swallow and Pumpelly in Mo.; State Geologist of Texas 1858.

Shunk, FRANCIS RAWN, 1788–1848. Gov. of Pa. from 1844.

Shunt. If in an electric circuit any two points be joined by an extra wire or conductor, a part of the current is deflected through this new channel, which is called a shunt. The application is very useful in reducing the strength of a current that is to pass through a galvanometer or other delicate instrument.

Shur. Name applied by the Hebrews to the desert bordering Egypt on the e. of the southern half of the Isthmus of Suez (Ex. xv. 22).

Shurtleff, NATHANIEL BRADSTREET, M.D., 1810–1874. Boston genealogist and antiquarian.

Shushan. Ancient capital of Persia. See SUSA.

Shute, SAMUEL, 1653–1742. Gov. of Mass. 1716–27; at odds with the general court, and in England from 1723.

Shuttlecock. Probably introduced as a plaything from the East, though found among the Zuni Indians of New Mexico as a familiar toy, and, made of corn cob, stuck with a feather, among the remains of the Cliff Dwellers of Colorado.

Playing Shuttlecock with the Feet, in China.

The Chinese variety is made of snake skin, weighted with a coin, has feathers inserted, and is kicked with the feet, as in Corea, and among the Pueblo Indians. A battledore is used in Japan and Europe. In Japan it is always made of the seeds of the soap-berry tree, and is played by girls on New Year's Day. See BATTLEDORE AND SHUTTLECOCK.

Shwan-Pan. ABACUS (q.v.) of the Chinese.

Sialagogues. Mercury, and other substances which increase the flow of saliva.

Sialkot. Town of n.w. India, 72 m. n. of Lahore. Its fort was defended against Sepoys 1857. Pop., 1891, 54,930.

Siam. Kingdom of Indo-China, between Burmah and Anam. It became known to the Portuguese 1511, and was explored by Mendez Pinto ab.1550. The Dutch traders gradually supplanted the Portuguese in the 17th century. Commerce with England was not much developed until the treaty of 1855; in 1856 the U. S. negotiated a similar treaty. The language indicates derivation from the same stock as the Hindus, in spite of the Mongolian type of features. The tradition is that the Siamese were freed from the Cambodian yoke in the 7th century, at which time many towns were founded, and they began to crowd the Cambodians toward the s. The Malay annals have it that they reached the end of the peninsula ab.1160. Ab.1340 they invaded Cambodia; the wars lasted some 400 years. In the 15th and 16th centuries, S. was often invaded by Burmese and Peguans, and in 1555 was reduced to dependence, from which it was soon delivered by a national hero. From 1592 to 1632 there was much intercourse with Japan. The present dynasty was founded by a successful general ab.1775. Some of her kings have been of quite different sort from the typical Oriental monarch, taking an enlightened interest in science and education. Area ab.250,000 sq. m., pop. ab.6,000,000.

Siam, GULF OF. Inlet in s. Asia from the China Sea, washing the shores of Siam, Cambodia, and French Cochin-China.

Siamang (HYLOBATES SYNDACTYLUS). Gibbon Ape of Sumatra, whose second and third toes are united as far as the outer joint.

Siamese. Chinese form nearly a third of the population of Siam; another third includes the Laos, who came originally from Thibet, and occupy the n. and mountainous portion. There are also Malays and less important tribes that suggest interesting ethnological questions. The Siamese proper are inferior to the Laos, who are proud, independent, intelligent, and tolerant. The Siamese in general are passionless, will sell their children into slavery for debt, love gambling and amusements, are submissive and hospitable but idle, and though Buddhists nominally, have many superstitions. They are inclined to agnosticism, and favor the introduction of European culture. In color they are between the Chinese and the Malays. Their chief occupation is agriculture, producing cotton, hemp, coffee and tobacco.

Siamese. Monosyllabic language of Farther India, subjected to strong Buddhistic influences in its linguistic forms and in its literature.

Siamese Twins. Chang and Eng (Left and Right), 1811–1874; connected at breast-bones; exhibited from 1829; settled in N. C., and married to sisters.

Sibbald, SIR ROBERT, 1641–1722. Scottish geographer, antiquary, and naturalist. *Scotia Illustrata*, 1684; *Autobiography*, 1837.

Sibbes, RICHARD, 1577–1635. English Puritan, whose works, collected in 7 vols. 1862–64, were once influential.

Siberia. That part of Russia within the limits of Asia.

Traveling in Siberia—Changing Horses at a Post-Station.

The surface is exceedingly varied. The s. part is made up of high plateaus and mountain ranges, the n. slopes of the great

mass of elevation of Asia. This elevated region extends n.e. along the borders of the Sea of Okotsk and Bering Sea, diminishing in height and in breadth. N. of this elevated country the level drops gradually to a great plain, the Steppes, which extend n. to the Arctic Sea, forming near the coast vast areas of frozen swamp or Tundra. The climate varies with the latitude and the elevation, and is everywhere marked by great extremes of heat and cold. S. is sparsely populated, mainly in the s. and w. Agriculture is the chief occupation. There is some cattle-raising, mining in a few localities, and a considerable trade. A railroad across the country is in process of construction. Area 4,826,287 sq. m.; pop., 1892, 4,539,000, mainly in the s. and w., but increasing rapidly of late, through voluntary immigration from Russia and deportation of criminals and political prisoners. The treatment of the latter has made S. notorious. Principal towns, Omsk, Irkutsk, and Tomsk.

Siberians. In n. Siberia the chief tribe is the Chukchee. They are nomadic fishers, but some possess reindeer. Both sexes dress alike, and usually go bareheaded. They are quick-tempered, abhor a natural death, and, when infirmity comes, voluntarily submit to be harpooned. There are ab. as many Russians in Siberia as aborigines, and in the e. part intermarriage has occurred extensively. See KAMCHATKA, OSTIAKS, TUNGUS, SAMOYEDS, MONGOLIANS, KALMUKS, HYPERBOREANS, TARTARS, and YAKUTS.

Sibilants. In Phonetics, letters uttered with the hissing of the voice, as *s*.

Sibley, HENRY HASTINGS, LL.D., b.1811. Pioneer settler of Minn.; M.C. 1849–53; Gov. 1858; commander against the Sioux, whom he defeated Sept. 1862; opposer of State railway bonds 1858, and of their repudiation 1871.—His father, SOLOMON, 1769–1846, was M.C. 1820–23, and Judge of Mich. Supreme Court till 1836.

Sibley, HENRY HOPKINS, 1816–1886. Officer U.S.A., distinguished in the Mexican war; inventor of the S. tent; Brig.-gen. C.S.A. 1861–65; in the Egyptian service 1869–74.—His father, GEORGE CHAMPLAIN, 1782–1863, was an explorer in the West and Indian commissioner.—Their cousin, HIRAM, 1807–1888, long pres. Western Union Telegraph Co., constructed a line to the Pacific 1861.

Sibthorp, JOHN, F.R.S., 1758–1796. Prof. of Botany at Oxford 1784. *Flora Oxoniensis*, 1794; *Flora Græca*, 20 vols., 1806–40.

Sibyl. Prophetess in ancient mythology, supposed to deliver inspired oracles. The number is first stated as one, but the sibyllæ afterward became localized, and later ten are designated. They are regarded as of Asiatic origin, and are said to have wandered with their sacred books from place to place. One of the most famous is the Cumæan sibyl, who, according to the legend, offered the Sibylline books to Tarquin. Her price being refused, she burned 3, and then 3 more, still demanding the original price, which the king at last paid. They were kept in the temple of Jupiter, consulted on emergencies, and burned with the temple 83 B.C. A later collection was destroyed in the 5th century. The later Sibylline Oracles are a collection of Greek verses, composed chiefly in the 2d and 3d centuries, apparently by Christians or Jews.

Sicilian Vespers. Massacre of the French (who acquired Sicily 1266) by the exasperated natives; it began at Palermo March 30, 1282, and 8,000 perished.

Sicilies, TWO. Kingdom of Naples and Sicily from ab.1130. The Norman and Suabian kingdoms passed to Charles of Anjou 1265. The revolt of the island, 1282, split the kingdom into two sections, each called the kingdom of Sicily. The island passed to Aragon (1296–1458), Naples remaining in another branch of the same house. Both were united as the T. S. to Spain 1504. The island passed to the Duke of Savoy 1713, was again united to Naples under Charles VI. of Austria 1720, and transmitted to the Neapolitan Bourbons 1738–1860. At the last date they were joined to the kingdom of Italy. See SICILY.

Sicily. Island in the Mediterranean, off the extremity of Italy, from which it is separated by the Strait of Messina. Originally held by Sicani or Siculi, it was partly colonized by Phœnicians 800 B.C. or earlier, and by Greeks, who founded Syracuse and other cities ab.750–579. A Carthaginian invasion was repelled at Himera 480 B.C., and an Athenian fleet and army destroyed at Syracuse 413. The island was mainly held by Rome from 241, and became a province 210 B.C. It was conquered by Vandals 440, recovered by Belisarius 535, and held by Saracens 827–ab.1080. It is noted for fertility, and notorious as the home of the Mafia. Length 185 m., greatest breadth 120 m., area 9,936 sq.m.; pop., 1890, 3,285,472. See SICILIES, TWO.

Ancient Greek Theater at Taormina, Sicily.

Sickel, HORATIO GATES, 1817–1890. Brigade commander 1861–65, serving chiefly in Va.

Sickingen, FRANZ VON, 1481–1523. German knight and warrior, protector of Reuchlin and Œcolampadius; associated with Von Hutten in an aggressive but futile campaign against the Abp. of Treves; besieged and killed at Landstuhl.

Sickle-Pod. *Arabis canadensis.* Woodland herb of the natural family *Cruciferæ*, with curved pods and small greenish-white flowers, native of e. N. America.

Sickles, DANIEL EDGAR, b.1823. M.C. 1857–61 and 1893–95; Brig.-gen. U. S. Vols. 1861; Major-gen. 1862–68; distinguished in the Va. battles and at Gettysburg; Col. U.S.A. 1866–69; Minister to Spain 1869–73; prominent in Democratic politics; sheriff of New York 1890.

Sickles' Cut-off. Form of valve-gear for steamboat engines, in which the stem of the STEAM POPPET-VALVE (q.v.) was released from its valve-rod (see STEVENS' VALVE-GEAR), so that the valve might close by gravity more quickly than it would if attached positively to a continuously moving gear. The descent should be retarded by a DASH-POT (q.v.). See also DROP CUT-OFF.

Sicula. Dagger-shaped spine, found at the proximal end of the polypary of a Graptolite, and representing the embryonic skeleton.

Sicyon. Ancient Greek city, 7 m. n.w. of Corinth; noted for bronze work and paintings. Apelles and Aratus were born here.

Siddhartha. See BUDDHA.

Siddim, VALE OF. Scene of a conflict recorded in Gen. xiv.; supposed to be covered by the Dead Sea.

Siddons, SARAH (KEMBLE), 1855–1831. English actress of highest rank, supreme in Shakespearean and other tragic parts 1782–1812; at Covent Garden Theater 1803–12.

Side Arms. Such as are worn at the side, as the bayonet and sword, but not the revolver or pistol.

Side-Lever Engine. Form for paddle-wheel ships of war; the head-links from the end of the piston rod, instead of passing upward to a single-beam overhead, passed downward to a double-beam, whose center was on the sole-plate of the engine. The pitman or connecting-rod rose from the beam or side-levers to the crank shaft above it. Such engines had a low center of gravity, and no part of them protruded above the deck exposed to hostile shot. See BEAM and BACK-ACTING ENGINE.

Sidereal. Relating to the stars. Sidereal time is that reckoned by the apparent revolution of the stars.

Sidereal Clock. See CLOCKS.

Sidereal Period of a Planet. Time required to perform a complete revolution as seen from the sun.

Siderite. $FeCO_3$. Native ferrous carbonate, commonly called spathic iron ore. It is a frequent mineral in veins of lead or silver ore; when found by itself in sufficient quantity and free from deleterious impurities, it is an important source

of iron. The iron in the clay iron stones is generally in this form. See IRON, METALLURGY OF.

Side-saddle Flower. See PITCHER PLANT.

Sidgwick, HENRY, LL.D., D.C.L., b.1838. Prof. Cambridge 1883. *Methods of Ethics*, 1874; *Political Economy*, 1883; *Hist. Ethics*, 1886; *Politics*, 1891.

Sidmouth, HENRY ADDINGTON, VISCOUNT, 1757–1844. M.P. 1783; Speaker 1789–1801; Premier 1801–4; Viscount 1805; Privy Seal 1806–7; Home Sec. 1812–21; reactionary.

Sidney, or **Sydney,** ALGERNON, 1622–1683. Officer in Parliamentary army; Gov. of Dublin 1646; a judge at the trial of Charles I. 1648; member of Long Parliament, of Council of State, and Ambassador to Denmark 1659; in exile until 1677; charged with high treason (Rye House Plot) 1683, and beheaded Dec. 7. *Discourses concerning Government*, 1698.

Sidney, SIR PHILIP, 1554–1586. English poet and courtier, admired and remembered not more for his gifts and accomplishments than for the beauty of his character; knighted 1583; mortally wounded at Zutphen, fighting for Dutch liberty. His romance, *Arcadia*, *Defense of Poesy*, sonnets, psalm versions, and songs appeared posthumously, and were collected 1725.

Sidon. Long most powerful, and perhaps oldest, city of Phœnicia, on the coast ab. 22 m. n. of its colony, TYRE (q.v.),

Sarepta and Coast of Sidon.

by which it was eclipsed; famed for its maritime power and for the manufacture of glass: conquered by Cyrus ab.537 B.C.; taken from the pasha of Egypt by Turkey, aided by British ships, Sept. 1840.

Sidonius Apollinaris, ab.430–483. Son-in-law of the Emperor Avitus; Bp. of Clermont 472; author of panegyrics, epithalamiums, and letters.

Sidra, GULF OF. See SYRTIS.

Siebengebirge. Seven mountains in Rhenish Prussia on the right bank of the Rhine 20 m. above Cologne. The highest is Olberg, 1,522 ft., and the most famous DRACHENFELS (q.v.).

Siebold, PHILIPP FRANZ VON, 1796–1866. German botanist, in Japan 1823–30; Dutch Baron 1831. *Flora Japonica*, 1835–44. — His brother, KARL THEODOR ERNST, 1804–1885, prof. Munich 1853, wrote on natural history. *Invertebrata*, tr. 1857.

Siege. Operations of placing an army before a military position and attempting its capture by the method of regular approaches. Lines of circum- and counter- vallation are first established as a security against sorties from the besieged and attacks from the enemy's forces from without. After the investment is complete and depots are established the first parallel is constructed. This is a line of intrenchment of sufficient extent to embrace at least the capitals of the two salients adjacent to that of attack. At least three parallels are required, although there are instances of five or more having become necessary: the first should be beyond the destructive cannon range of the besieged, the second at the limit of the dangerous zone of small-arm fire, and the third where the full protection of the double sap is needed to protect the sappers from the direct front and slant fire of the infantry. Connecting the parallels and advancing upon the capitals are the zigzags or boyaux, by means of which the besiegers are enabled to gain ground toward the fortified place.

Siege Artillery. Pieces of heavier weight and greater caliber than those required for field service: designed to batter down the permanent defenses of a fortified place, and to destroy or dismount its armament. These are, in the U. S. service, 5-in. and 7-in. steel breech-loading rifles and 7-in. steel mortars, weighing 3,660, 3,710, and 1,715 lbs. respectively; the projectiles for them weigh 45, 105, and 125 lbs. respectively.

Siege Carriages. The 5-in. gun and 7-in. howitzer carriages are mounted on wheels and when united to their limbers form wheeled carriages. When in place the carriage is connected with platform by hydraulic buffers to check recoil. The mortar carriage is not wheeled; when in position it rests on three traverse circles to obtain the proper azimuth for firing, and its recoil is checked by hydraulic buffers and coiled springs inclosed in a strong case.

Siegfried. See NIBELUNGENLIED.

Siemens, SIR WILLIAM, F.R.S., 1823–1883. German engineer and electrician, in England from 1844. His greatest invention is the regenerative gas furnace, invented with his brother Friedrich 1857, and first successfully applied 1861. In 1862 he took up making steel by fusing malleable iron with cast-iron, and after several years perfected the Siemens' steel process. He was one of the earliest workers at the electric light, designed the steamer *Faraday*, which laid the first transatlantic cable, devised an electric furnace, an electric pyrometer, a direct process of making iron and steel from their ores, and a regenerative gas-burner.—His brother ERNST WERNER, 1816–1892, shared in several of his inventions.

Siena, GUIDO DA, 13th cent. Italian painter.

Sienkiewicz, HENRYK, b.1845. Polish novelist; ed. *Slowo*, 1880. *With Fire and Sword*, 1884, *The Deluge*, 1890, and *Pan Michael*, tr. 1894, form a long historical romance of great power. *Pisma*, 1880; *Without Dogma*, tr. 1894; *Quo Vadis*, tr. 1897.

Sienna. Old Tuscan city, 60 m. s. of Florence, with which it was long at war; besieged and taken by imperial troops

Cathedral at Sienna.

1555; held by Florence from 1557; once an important art center; noted for its duomo or cathedral. Its univ. was founded 1203. Pop. ab.28,000.

Sierra. Applied to a range of mountains in Spanish-speaking countries.

Sierra Leone. British colony on w. coast of Africa, w. of Liberia; area ab.15,000 sq. m. Along the shore the land is low and unhealthy, rising inland into hills. The rainfall reaches 170 in. annually. Pop., 1890, 75,000, including 224 whites, the balance negroes, one-half of whom are the descendants of liberated slaves.

Sierra Madre. Mountain range of w. Mexico, extending from the U. S. border to Guadalaxara, ab.300 m.; height seldom over 10,000 ft.

Sierra Morena. Mountain range of s. Spain, separating the basins of the rivers Guadiana and Guadalquivir. The highest summit, Aracena, is ab. 5,500 ft. above sea.

Sierra Nevada. 1. Range of s. Spain, s. of the Guadal-

quivir; greatest altitude 11,660 ft. 2. Principal range of Cal. It extends along most of the e. border, with long spurs descending w. to the valley of Cal., and a short precipitous descent e. Its height increases s., and reaches its maximum in Mt. Whitney, near its s. end, 14,898 ft.

Sieve-Cells. Elongated cells of the fibro-vascular system of plants, characterized by their walls being finely perforated in certain well-defined panels or plates, called sieve-plates; also known as cribrose-cells and sieve-tubes.

Sieveking, AMALIE, 1794–1859. Founder of a nursing sisterhood at Hamburg 1832, nucleus and model of others throughout Germany.

Sievers, EDUARD, b. 1850. Prof. Jena 1876, Tübingen 1883, Halle 1887, and Leipzig 1892; prolific writer on philology. *Anglo-Saxon Grammar*, 1881, tr. 1887.

Sievershausen. Near Hanover; scene of a defeat of Albert of Culmbach, 1553, by the imperial troops under Maurice of Saxony, who was slain.

Sieve-Tubes. See SIEVE-CELLS.

Sieyès, EMMANUEL JOSEPH, 1748–1836. French priest, who, by pamphlets on human rights and the Third Estate, 1788–89, profoundly influenced the early course of the Revolution; Deputy 1789; one of the Directory 1799, and of the three Consuls,

Emmanuel Joseph Sieyes.

having planned the movement of 18th Brumaire with Bonaparte, who made him a count. Thinker rather than politician, the servant of fixed ideas, he bore no part in the Reign of Terror, lived in retirement under Napoleon, and was in exile 1815–30.

Sigel, FRANZ, b. 1824. Leader in German insurrections 1848–49; in America from 1852; Brig.-gen. U. S. Vols. 1861, Major-gen. 1862–65; prominent in Mo. and Va.; journalist, lecturer, and official in New York since 1867.

Sighing. Deep and long-drawn inspiration chiefly through the nose, followed by a somewhat shorter, but correspondingly large, and audible expiration; it is manifested frequently during profound mental impressions, as of grief.

Sight. SENSATIONS OF. Changes of consciousness aroused by stimulation of the retina of the eye; of two distinct kinds, sensations of light, supposed to be due to rapid vibrations of luminous ether, and of color, due to differences in rapidity of vibration. Sight is probably the most presentative of all the senses by which we acquire direct knowledge of the external world. See EYE, AFTER IMAGES, COLOR, COLOR-BLINDNESS, DOUBLE IMAGES, and HOROPTER.

Sights. Attachments used for pointing a gun. The front sight is a fixed point, a thin edge, or cross wires in a protecting tube; the rear sight consists of a rod, bar or standard, graduated in degrees or ranges, fixed in a socket on the breech of the gun corresponding in position with the front sight. It carries a sliding notch or small aperture which can be adjusted to any height corresponding to a given range or elevation: the notch has also a motion at right angles to the rod to correct for drift, wind velocity, or other causes of lateral deflection. The sights used in small arms consist of a fixed point of metal for the front sight and a graduated metal leaf carrying a notch arranged for adjustment for all ranges.

Sigillaria. Genus of extinct LEPIDODENDREÆ (q.v.).

Sigillum Confessionis. Seal of confession. In R. C. Ch., the obligation of a confessor not to divulge the secrets of the confessional.

Sigismund, 1368–1437. German emperor from 1411; son of Charles IV.; King of Hungary 1387; defeated at Nicopolis, by the Turks, 1396; imprisoned by the usurper Ladislaus of Naples, 1401–3. He convoked the Council of Constance 1414; consented to the condemnation of Huss, in violation of his own safe-conduct; sold Brandenburg to Frederic of Zollern, and defeated the Turks, 1416 and 1419. His succession to the Bohemian throne, 1419, was successfully resisted by the HUSSITES (q.v.), but obtained 1436, by concessions to the Calixtines, which he afterward withdrew. His death averted civil war. He did little for the empire.

Sigismund I., 1466–1548. King of Poland from 1507; able and prosperous ruler, patron of letters and of the Reformation.—II. (AUGUSTUS), 1520–1572, his son and worthy successor.—III., 1566–1632; his nephew, King of Poland 1587, and of Sweden 1592–1604. His reign was warlike and injurious.

Sigmaringen. See HOHENZOLLERN.

Sigmoid. In Botany and Geology, S-shaped structures.

Signay, JOSEPH, D.D., 1778–1850. Bp. of Quebec 1833; Abp. of the province 1844.

Sign. Symbol of operation, direction, character, relation, as distinguished from symbols of quantity or mere abbreviations.

Signal Code. Signals by means of which messages may be sent in the presence of the enemy without being intelligible to them. The code is usually based upon a small number of elementary signals; that of the army is one of three elements, a motion to the right, one to the left, and a forward motion. The first two signals, designated 1 and 2, may by combination give all the letters of the alphabet and the third designate the completion of a word or sentence. The code may be transmitted by flags, torches, semaphores or telegraph. The signals are interpreted by a signal book.

Signal Service. Organization for display of signals for any purpose; especially, meteorological branch of office of Chief Signal Officer U.S.A., the military duties of which were imposed on it 1862: the meteorological work was added in February 1870. The chief is by law a brig.-gen. The chiefs have been: A. J. Meyer 1862–80; Wm. B. Hazen 1880–87; A. W. Greely, since 1887. The meteorologists have been: Wm. Ferrel, 1881–87, Cleveland Abbé, since 1871. By act of Congress all the meteorological duties of this service were July 1, 1891, transferred to the new weather bureau of the Department of Agriculture.

Signature. In Printing, the figure or letter at the lower part of the first page of a sheet, intended to facilitate the gathering of the sheets for binding them.—Also the sheet when folded ready to gather.

Signature of Plants. In early medicine, a belief that the external formation or color of plants indicated that they were adapted for particular diseases; as Lungwort and Liverwort.

Sign Boards. House signs were indispensable in city life when few could read and write. As education spread, they were less needed, and when the system of numbering houses was introduced in the last century, their original value lingered on, usually as business advertisements. Sign boards appear to have been adopted from the Romans, examples of whose pictorial signs have been excavated at Herculaneum. See SHOP SIGNS.

Signet. In England, the king's seal, used in sealing his private letters, and all such grants as pass his majesty's hand by bill signed.

Significant Figures. In Arithmetic, those having quantitative value; distinguished from zero and other symbols of position in the scale.

Sign Language. See DEAF MUTES.

Sign Manual, ROYAL. The signature or subscription of the king or queen is termed the sign manual. This is done

as a personal act of the sovereign, but when the great seal is employed it is an act of state.

Signorelli, LUCA, ab.1441–1523. Tuscan painter, enthusiastic student of the nude form, and predecessor of Michelangelo. He has frescoes at Orvieto and in the Sistine

Communion of the Apostles—Cathedral of Cortona, by Signorelli.

chapel. His great work is the series of frescoes in the chapel of the cathedral of Orvieto painted after 1499. In painting them he was assisted by his pupil Girolamo Genga.

Sigourney, LYDIA HOWARD (HUNTLEY), 1791–1865. American poet, once very popular. *Letters of Life*, 1866.

Siguenza y Gongora, CARLOS, 1645–1700. Mexican author.

Sigwart, CHRISTOPH VON, Ph.D., b.1830. Prof. Tübingen 1863. *Logic*, 1873–78, tr. 1894.

Sikes, WILLIAM WIRT, 1836–1883. U. S. Consul at Cardiff from 1876; journalist and author.—His wife, OLIVE (LOGAN), b.1841, m. 1871, is an actress and writer.

Sikhs. Sect in India, rejecting idolatry and caste distinctions, and infusing much of Buddhism and Mohammedanism into Hinduism; founded by Nanak, a Hindu, 1469–1538. They became a great military power in the 18th century; but submitted to the English 1848, when the Punjab was annexed to the British empire, and furnish ab. 14,000 soldiers to the British army.

Silage. Fodder material preserved in the fresh state in a silo by the process of ENSILAGE (q.v.). It usually takes also the name of the fodder so preserved: *e.g.*, corn silage, clover silage. The former is the best silage plant in America.

Silenus. Satyr, companion and instructor of Bacchus; gifted with the power of prophecy; represented as a fat, bald, jovial, old man, intoxicated, and often riding on an ass.

Silesia. S.e. province of Prussia; early occupied by German tribes, succeeded, as they moved w., by Slavs; joined, successively, to Moravia, Bohemia, and Poland; separated from Poland 1163, but ruled by dukes of the Piast line, who encouraged German colonies; then held by Bohemia, and thus connected with Germany. An agreement of succession, made 1587, made Prussia heir to parts of it; but Austria seized them as a lapsed fief of Bohemia, the remaining portions having previously fallen to her. This claim was resisted by Frederick II., and after the SEVEN YEARS' WAR (q.v.), Silesia was ceded, 1763, to Prussia. Capital Breslau. Area 15,557 sq. m.; pop., 1890, 4,224,458.

Silesia, AUSTRIAN. Duchy and crown-land in the n.e. of Moravia; province of Austrian empire. Area 1,987 sq. m.; pop., 1890, 602,117.

Silesius, ANGELUS. See SCHEFFLER, J.

Silex. See SILICA.

Silhouette. Profile drawn in black, the shadows and extreme depths being indicated by the heightening effect of gum or some other shining material; named from Étienne de Silhouette, 1709–1767, French Minister of Finance 1759, and noted

Silhouette Portraits.

for reforms in the interest of economy. Silhouettes were known to the ancients, as is shown on vases.

Silica. SiO_2. Chemical compound consisting of silicon and oxygen, occurring in nature by itself in the three forms of quartz, opal, and tridymite, and in combination with various bases in the class of minerals known as silicates; made by melting sand with sodium carbonate, and treating with hydrochloric acid; insoluble in water and the ordinary acids, soluble in alkalies and hydrofluoric acid; fusible with difficulty; found in plants, straw, and eggs; used extensively in the manufacture of glass and porcelain.

Silicate Cotton. This was first made by a steam-blast on a stream of melted slag; invented by John Player, of England, as made at the present. Owing to sulphur in furnace slags, which when wetted would corrode iron, rocks are fused and treated in the same manner, 4 parts of orthoclase with 6 parts of dolomite. It is usually white, and is used as a non-conductor to prevent freezing of water pipes, cooling of steam pipes and dampness in buildings, to keep out vermin, and to prevent the spread of fire, it being non-combustible. It came into general use 1871. It occurs in nature as PELE'S HAIR (q.v.).

Silicates. Derivatives of silicic or of the polysilicic acids; family of minerals, numbering several hundred species, consisting of silicon and oxygen, combined in many different proportions with aluminium, calcium, magnesium, sodium, potassium, iron, and many other chemical elements. Except sandstones and limestones, almost all the common rocks are made up to a large extent of silicates.

Silicic Acids. These are numerous. All may be regarded as derived from normal silicic acid, $Si(OH)_4$. The simplest form is H_2SiO_3, made by decomposing a silicate in solution with dilute hydrochloric acid. When the solution is evaporated to dryness, the residue is no longer soluble. Disilicic acid, $H_2Si_2O_5$, is derived from two molecules of the ordinary form by abstracting one molecule of water; trisilicic acid, $H_4Si_3O_{10}$, from three molecules of the ordinary acid by abstracting two molecules of water. Other trisilicic acids are derived in a similar way. Many minerals are derivatives of some form of silicic acid.

Silicide of Carbon. See CARBORUNDUM.

Silicified Wood. Wood in which the organic matter has been removed and its place taken by silica, usually in the form of agate (agatized wood), or of opal. Tree trunks, three or four feet in diameter or more, have been found in considerable quantity in the silicified condition in Arizona and elsewhere. When polished, these masses exhibit a beautiful variety of colors. See PETRIFIED WOOD.

Silicle. Short form of the fruit called a silique, found in Peppergrass, Shepherd's Purse, and other plants of the Mustard family.

Silicon. Si. At.wt. 28.4, sp. gr. 2.49, sp. ht. .167, Valence IV.; discovered by Berzelius 1823. Next to oxygen it is the

chief constituent of the earth's crust, probably one-fourth. It occurs in crystallized and amorphous forms. The former may be made by fusing potassium fluosilicate with sodium and zinc. As a brown amorphous powder, it is obtained by passing the vapor of silicon tetrachloride over heated sodium. Amorphous silicon is not dissolved by sulphuric or nitric acids, but is readily soluble in hydrofluoric acid and potassium hydroxide.

Silicon Bromoform. $SiHBr_3$. Colorless liquid, spontaneously inflammable in the air; bpt. 115°–117° C.; sp. gr. 2.7; formed by treating silicon chloroform with hydrobromic acid; analogous to bromoform, $CHBr_3$.

Silicon Carbide. SiC. Transparent, rhombic tablets, of brilliant luster, not soluble in the common acids; decomposed by fusion with caustic alkalies; hardness 9.5, sp. gr. 3.22; made by treating silica with carbon at a temperature of ab. 3,500° C.; used for polishing purposes and for the manufacture of polishing apparatus. See CARBORUNDUM.

Silicon Chloroform. $SiHCl_3$. Colorless, mobile, fuming liquid of a strong odor, very inflammable and unstable; so called on account of its compositional resemblance to chloroform.

Silicon Hexabromide. Si_2Br_6. Liquid boiling at 240° C. It forms a white substance with water, and is made by the action of bromine upon silicon hexiodide dissolved in carbon disulphide.

Silicon Hexachloride. Si_2Cl_6. Colorless, mobile, fuming liquid; bpt. 146°–148° C. It solidifies at 14° to large white leaf-like crystals. It is made by passing the tetrachloride over fused silicon.

Silicon Hexiodide. Si_2I_6. Colorless, doubly refracting prisms or rhombohedra; mpt. 250° C. (in vacuum); made by heating the tetraiodide with finely divided silver to 290°–300° C.

Silicon Hydride. SiH_4. Colorless gas, made by treating a compound of magnesium and silicon with hydrochloric acid. Prepared in this way, it takes fire in the air.

Silicon Iodoform. $SiHI_3$. Colorless, strongly refractive liquid; bpt. 220° C., sp. gr. 3.36; made by passing hydriodic acid gas over heated silicon.

Silicon Tetrabromide. $SiBr_4$. Colorless, fuming liquid; bpt. 149° C., sp. gr. 2.81; made by heating the elements together.

Silicon Tetrachloride. $SiCl_4$. Acrid, fuming, colorless liquid, made by passing chlorine over a strongly heated mixture of silica and charcoal; decomposed by water.

Silicon Tetrafluoride. SiF_4. Strongly fuming, colorless gas of a pungent odor, made by treating calcium fluoride and silica with sulphuric acid.

Silicon Tetraiodide. SiI_4. Colorless, transparent, regular octahedra, isomorphous with carbon tetraiodide; mpt. 120.5° C., bpt. 290° C.; made by passing iodine vapors over heated silicon.

Silicoskeleta. Sub-class of *Radiolaria*, including the orders PERIPYLÆA, MONOPYLÆA, and PHÆODARIA (q.v.).

Siliculosa. Order of the Linnæan class *Tetradynamia*, including those cruciferous plants which bear short round pods called silicles.

Silique. Two-valved, capsular fruit, each valve having a parietal placenta, from which the valves break away when mature, as in many plants of the Mustard family.

Siliquosæ. Order of the Linnæan class *Tetradynamia*, including those cruciferous plants which bear elongated, slender pods called siliques.

Silistria. Town of Bulgaria on the Danube; besieged in

Silistria.

vain by the Russians 1773 and 1810; taken by them June 30, 1829, but restored to the Turks later; besieged again by 30,000 Russians 1854 and many times assaulted in vain. June 15th the garrison assumed the offensive, crossed the river, defeated the Russians, destroyed the siege works, and raised the siege. Its principal redoubt was ordered to be destroyed by the Congress of Berlin, 1878. Pop., 1893, 11,710.

Silius Italicus, 25–101. Latin epic poet, Consul 69. His *Punica*, in 17 books, describing the second Punic war, is extant. His meter is good, but the work is too close an imitation of Virgil and Homer to claim much originality.

Silk. Fine, lustrous fiber produced by the larvæ of certain moths, the best by the Silkworm (see BOMBYCINA), an annual, and a native of China. The moth is white, about 1 in. long, and lays many eggs, as large as mustard seeds. About six weeks after hatching the worm begins to spin the cocoon, which is completed in a week. The worm is 3½ in. long, of a cream color, and feeds on white-mulberry leaves. The silk is produced by the two glands opening in the underlip. The cocoon is egg-shaped, and about 1¼ in. long. An equal number of male and female cocoons are selected for breeding, the latter being the larger, and placed in a room ab. 70° F., when the moth develops, lays its eggs, and dies. The diseases of the silkworm are muscadine, due to a fungus, and pebrine and flacherie, due to bacteria; they have entailed great losses on silk growers. Pasteur suggested remedies, which have been largely efficacious. The remainder of the cocoons are placed in hot water or an oven to kill the chrysalis. The fiber is as fine as $\frac{1}{400}$ in. diameter, each cocoon yielding ab. 300 yds. The outer floss silk is separated, the cocoons floated in hot water and the silk reeled off, 2 to 6 cocoons being run into one thread. The cocoons yield ab. 10 per cent of raw silk. The raw silk contains up to 25 per cent of gum, which is removed by boiling with soap. The silk is used in the raw and in the boiled state, several threads being twisted into one. It is dyed in the thread, or in the piece after weaving. The fabrics are often loaded with tannic acid and metallic salts in the dyeing to increase their weight. The world's annual production of raw silk is estimated at 30,000,000 lbs., China and Japan furnishing one-half, Italy one-third, and France, the Levant and India the balance. The annual silk manufactures of the world are valued at $320,000,000, of which $120,000,000 are by France, $80,000,000 by the U. S., Switzerland and Germany each $20,000,000, and England $5,000,000; Japan also largely manufactures. In 1896 there was imported into the U. S. silk manufactures valued at $26,652,768, and unmanufactured silk valued at $26,753,428. The price of raw silk in New York, Jan. 1898, was from $2.25 to $4.50 per lb. Good silk, rated as No. 1, was from $3.50 for Japanese to $3.90 for Piedmont, Italian.

Silk. In Botany, long styles of the flowers in an ear of maize.

Silk-Cotton Trees. Of the Mallow family, of the genera *Bombax*, *Pachira* and *Eriodendron*, natives of tropical Asia and America, bearing very large flowers and seeds provided with long, silky hairs.

Silkweed. See MILKWEED.

Silkworm. See BOMBYCINA.

Silkworm Gut. Material prepared in Italy and Sicily, and used by anglers for dressing the hook end of a fishing line. The worms, about to begin spinning, are immersed in vinegar for ab. 12 hours, when they are pulled apart, exposing two transparent yellowish-green cords, which are stretched on a board to dry.

Sill. In Mining, horizontal piece of timber laid to support the vertical or inclined legs of a set of timbers.

Sill, EDWARD ROWLAND, 1841–1887. Prof. Univ. Cal. 1874–82; poet.

Sill, JOSHUA WOODROW, U.S.A., 1831–1862. Brig.-gen. U. S. Vols.; killed at Murfreesboro.

Sillery. Village near Rheims, France, famous for its champagne. Pop. 400.

Silliman, BENJAMIN, M.D., LL.D., 1779–1864. Prof. of Chemistry at Yale 1802–53; founder of its museum of geology, and of the *American Journal of Science and Arts*, 1818; eminent as a physicist and geologist. *Chemistry*, 1830.—His son, BENJAMIN, M.D., LL.D., 1816–1885, was Prof. Yale from 1846, co-editor *Journal of Science* from 1845, and author of several text-books and many monographs.

Sillimanite. Al_2SiO_5. Aluminium silicate, commonly found as an accessory ingredient in several kinds of metamorphic rock; also called fibrolite.

Silo. See ENSILAGE and SILAGE.

Siloam. Fountain and pool of Jerusalem, connecting with a second pool by an aqueduct, mentioned in O. T. and

N. T. It is intermittent. Here in 1880 a Hebrew inscription was found, dating from ab.700 B.C., describing the making of

Pool of Siloam.

a tunnel from a spring to the pool. In 1889 a second conduit was discovered 20 ft. below the ground.

Silt. Fine, impalpable mud collecting in lakes and estuaries; often all calm and gradual deposits of mud, clay, or fine sand.

Silures. Ancient people, probably of a non-Aryan stock, being dark and curly-haired, inhabiting the s.e. of South Wales. They were warlike and resisted fiercely the Roman generals who invaded their territory.

Silurian. Series or system of fossiliferous rocks lying immediately below the Devonian; first studied in Wales by Murchison, who named them from the Silures, an ancient British tribe. This term has been gradually restricted, and is now applied only to Murchison's upper division, the lower being called Ordovician. See COLUMN.

Siluridæ. See NEMATOGNATHI.

Silva, ANTONIO JOSÉ DA, 1705–1739. Portuguese dramatist, b. in Brazil; burned at Lisbon, with his mother and wife, as Jews.

Silva, JOSÉ LAURENCIO, 1792–1873. Venezuelan officer, prominent in the liberation of Colombia and Peru; Major-gen. 1828; exiled 1831–35; Lieut.-gen. and Sec. of War 1855.

Silva Lisboa, JOSÉ DA, 1756–1835. Brazilian historian and statesman, Senator 1826.—His brother, BALTHAZAR, 1761–1840, pub. *Annals of Rio Janeiro*, 7 vols., 1834.

Silver (ARGENTUM). Ag. At.wt. 107.92, sp. gr. 10.5, sp. ht. .057, mpt. 954° C., valence I. It unites directly with the halogens, forming insoluble compounds. Treated with hydrochloric acid, it becomes covered with a layer of the insoluble chloride. It is soluble in concentrated sulphuric acid; the best solvent is nitric acid. It is used for coins and silverware. Its salts, which are affected by light, are used in photography.
